

SUBJECT INDEX

- A**
- ABA research design, 375
 - Ability traits, 240
 - Abortion, 434
 - Academic challenges, 509–510
 - Acquiescence, 59
 - Adler, Alfred, 134–136. *See also* Psychoanalytic theory
 - Adolescence, five-factor model of personality and, 277
 - Adoption studies, 323
 - Adult attachment types, 148–151
 - Affective memories, repression and, 95
 - Age
 - agreeableness and, 276
 - five-factor model of personality and, 273–277
 - psychologic resilience and, 516–517
 - socioemotional selectivity and, 517–518
 - Alcohol abuse, 197
 - Allport, Gordon W., 232–233
 - Allport's trait theory, 233–236
 - cardinal traits and, 234
 - central traits and, 234
 - comment on, 236
 - functional anatomy of human motives and, 234–235
 - idiographic research and, 235–236
 - personality structure and, 233–234
 - secondary dispositions and, 234
 - Amygdala
 - emotional learning and, 339
 - fear responses and, 308
 - Anal personality type, 121–122
 - Anal stage of development, 98–99
 - Anchoring manipulations, 432–434
 - Animal personality studies, 264–265
 - Anticipating events, personal construct theory and, 400–403
 - Anxiety
 - anxious-ambivalent infants, 148
 - anxious-avoidant infants, 148
 - defense mechanisms and, 89–96
 - personal construct theory and, 403–406
 - psychoanalytic concept of, 89
 - social-cognitive theory and, 481
 - Applications
 - behaviorism and, 379–380
 - Big Five model and, 280–282
 - Kelly's personal construct theory and, 415
 - psychoanalytic theory and, 155
 - Rogers person-centered theory and, 222
 - social-cognitive theory and, 498–499
 - trait theory and, 294
 - Archetypes, 137
 - Architecture of mental systems, 310–311
 - Attachment behavior, psychoanalytic theory and, 106
 - Attachment behavioral system (ABS), 147
 - Attachment theory, 147–152
 - adulthood and, 148–151
 - anxious-ambivalent attachment type, 148
 - anxious-avoidant attachment type, 148
 - developmental processes and, 147–148
 - individual differences and, 151–152
 - internal working models, 147–148
 - parenting environment and, 180–181
 - secure attachment type, 148
 - "strange situation" procedure and, 148
 - style continuity and, 152
 - Authenticity
 - feelings of, 164–165
 - internally motivated goals and, 215–216
 - Awareness, varying states of, 23–24
- B**
- Bali social practices, 521–522
 - Bandura, Albert, 422–423. *See also* Social-cognitive theory
 - Beck, Aaron, 491–494. *See also* Cognitive theory of depression
 - Behavior. *See also* Behaviorism; Psychopathology and change
 - internal and external determinants of, 20–21
 - stability and variability in, 243
 - token economy programs and, 375–376
 - Behavioral Avoidance Test (BAT), 485–486
 - Behavioral genetics, 320–328
 - adoption studies, 323
 - heritability coefficient and, 324–325
 - heritability estimates and, 326
 - heritability of personality findings, 325
 - important caveats and, 325–326
 - molecular genetic paradigms, 327–328
 - selective breeding studies, 321
 - twin studies, 321–323
 - Behavioral signatures, 443
 - Behaviorism
 - applications and, 379–380
 - classical conditioning and, 354–357
 - comprehensiveness and, 379
 - determinism and, 347–348
 - environmental determinism and, 348–350
 - experimentation and, 350–352
 - observable variables and, 350–352
 - Pavlov's theory of classical conditioning and, 354–357
 - science of personality and, 348–350
 - scientific observation and, 378
 - simple system strategy and, 351–352
 - situational specificity and, 350
 - Skinner's theory of personality and, 365–377
 - strengths and limitations summary, 380
 - systematic theory and, 378
 - testability and, 379
 - view of the person and, 347–348
 - Watson's behaviorism, 352–353
 - Beliefs about self. *See* Self-schemas
 - Big Five model. *See* Five-factor model of personality
 - Biochemical processes, classical conditioning and, 364
 - Biological bases of personality traits, 251
 - Biological foundations
 - behavioral genetics, 320–328
 - data interpretation on personality, 307–308
 - environmental interactions and, 328–334
 - evolutionary psychology and, 309–320
 - neuroscience and personality, 334–336
 - plasticity and, 339–342
 - proximate causes and, 309
 - suggested links and, 339
 - temperament and, 300–308
 - ultimate causes and, 309
 - Brain plasticity, 339
 - Brain regions, inhibition and, 307
 - Broaden-and-build theory, 206

- Buddhist cultures, 520
Business executives characteristics of success, 244–245
- C**
Cardinal traits, 234
Cardiovascular disease and hostility, 51–52
Case studies
 as research approach, 44–47
 strengths and limitations of, 55–57
Castration anxiety, 99
Catharsis, 72–73
Cattell, Raymond B., 239
Cattell's factor-analytic trait theory, 239–245
 ability traits and, 240
 behavioral stability and variability and, 243
 comment on, 243–245
 dynamic traits and, 240
 evidence sources and, 240–243
 five-factor model of personality and, 268–269
 life record data (L-data) and, 240–243
 objective-test data (T-data) and, 240–243
 self-report questionnaire data (Q-data) and, 240–243
 surface and source traits and, 239–240
 temperament traits and, 240
Central traits, 234
Childhood, five-factor model of personality and, 277
Chinese culture, 424
Classical conditioning, 354–357.
 See also Skinner's theory of personality
 basic neural and biochemical processes and, 364
 conditioned emotional reactions and, 358–359
 counterconditioning and, 360
 discrimination and, 355
 extinction and, 355
 generalization and, 355
 principles of, 354–357
 psychopathology and change and, 357–362
 recent developments and, 363–365
 self-esteem and, 364
 systematic desensitization and, 360–362
 unconditioning of fear and, 359
Client-centered therapy, 191, 194–196
Clinical research
 as research approach, 44–47
 strengths and limitations of, 55–57
Cognitive-affective processing systems (CAPS), 440–443
Cognitive complexity
 leadership and, 401–402
 personal construct theory and, 397–400
 simplicity of construct systems and, 397–400
Cognitive therapy for depression (Beck), 491–494
 approach to, 493–494
 cognitive triad and, 492
 faulty cognitions research and, 492–493
Cognitive unconscious, 82–84
Collective unconscious concept, 137–138
Compensatory striving, 134–136
Competencies, social-cognitive theory and, 427–428
Concept of self. *See* Self-concept
Conditioned emotional reactions, 358–359
Conditioned food responses, 361
Conditions of worth, 179–180
Conflict, intrapsychic, 122–123
Congruence between self and experience, 174–178
 defensive processes and, 174–175
 self-consistency and, 175–178
 social roles and, 176–177
Consciousness levels. *See* Levels of consciousness
Construct system, 393–400
 cognitive complexity/simplicity, 397–400
 core constructs and, 393
 peripheral constructs and, 393
 preverbal constructs and, 393
 Role Construct Repertory test and, 395–396
 submerged constructs and, 393
 subordinate constructs and, 394
 superordinate constructs and, 393–394
 unique information revealed by, 396–397
 verbal constructs and, 393
Construct validity, 42
Constructive alternativism, 388
Constructs, defined, 391
Contemporary experimental existentialism, 210–212
Context specificity, social-cognitive theory and, 428
Contingencies of self-worth, 213–214
Contrast poles, 391
Cool attentional focus, 507–508
Coping, social-cognitive therapy and, 488–494
Core constructs, 393
Correlation coefficient, 48
Correlational research
 as research approach, 47–50
 strengths and limitations, 58–60
Cortisol, 339
Counterconditioning, 360
Creative potential, fostering, 183
Cross-cultural research
 five-factor model of personality and, 261–266
 positive self-regard and, 217–219
 the self and, 216–219
Cross-situational consistency, personality traits and, 287–290
Culture and personality, 519–524
 Big Five model of personality and, 519–520
 cognitive processes and, 524
 cultural psychology field, 521
 culture as core concept and, 520–522
 growth and development and, 17–18
 independent and interdependent views of self and, 522–524
 karma concept and, 520
 new exposures and, 524
 questions of “generalizability” and, 519
 strategies and, 519–522
 supplemental treatment of culture, 520
 views of self and, 522–524
- D**
Data of personality psychology, 35–41
 fixed vs. flexible measures, 39–40
 idiographic measures, 40
 LOTS categories and, 36–38
 nomothetic measures, 40
 personality theory and assessment, 40–41
 relationships between, 38–39
Death anxiety, 210–211
Death instincts, 87–88
Defense mechanisms, 89–96
 behavior consequences of, 123
 denial, 89–90, 175
 distortion, 175
 isolation, 92
 projection, 91–92
 rationalization, 93
 reaction formation, 92–93
 repression, 93–95
 states of incongruence and, 174–175
 sublimation, 93

SUBJECT INDEX

597

- Defensive pessimism, 509–510
 Delay of gratification, 452–457
 attractive qualities of rewards and, 455
 cognitive process and, 454–457
 later personality development and, 456
 live-model conditions and, 453
 observed consequences and, 453–454
 paradigm, 454–457
 social bases and, 452
 Demand characteristics, 60–61
 Denial, 89–90, 175
 Depression
 cognitive therapy and, 493–494
 cognitive triad of, 491–494
 faulty cognitions and, 492–493
 older adults and, 516
 social-cognitive theory and, 481–482
 Determinism, 347–348
 Development in psychoanalytic theory, 96–108
 anal stage, 98–99
 early experience importance and, 104–106
 genital stage, 100–101
 instinct development, 96–106
 latency stage, 100
 oral stage, 96–98
 phallic stage, 99–100
 thinking process development, 106–108
 Diary methods, 37–38
 Direct conditioning, 359
 Discrepancies among parts of the self, 212–213
 Discriminant validity, 42
 Discrimination process, classical conditioning and, 355
 Distortion of experiences, 175
 Dopamine, 336–339
 Dreams
 interpretation of, 124
 psychoanalytic theory and, 76–77
 Dynamic traits, 240
 Dynamics of functioning, 88–89
 Dysfunctional expectancies, 480
 Dysfunctional self-evaluations, 480–481
- E**
 Early experience, importance in psychoanalytic theory, 104–106
 Eastern cultures, 218, 522–524
 Ego, 85–86
 Ellis, Albert. *See* Rational-emotive therapy
 Emotion-focused coping, 489
 Emotional infidelity, 317
 Empathic understanding, 191–194
- Energy-system view of the mind, 71–73
 Environmental determinism, 15–19, 348–350
 Environmental interactions, 328–334
 nature-nurture interactions, 331–334
 shared and nonshared environments, 328–330
 understanding nonshared environment effects, 330–331
 Erikson, Erik, 101–104. *See also* Psychosocial stages of development
 Erogenous zones, 96
 Ethics, research and, 43–44
 European-American cultures, 522–524
 Evaluative standards, social-cognitive theory and, 428, 436–438, 474–479
 Evolution of mind and personality, 16–17
 Evolutionary psychology, 309–320
 analysis and, 14–15
 architecture of mental systems and, 310–311
 Big Five personality dimensions and, 318–319
 comments regarding, 319–320
 domain specificity and, 310
 evolved tendencies and, 310
 jealousy and, 314–317
 male-female mate preferences and, 312–314
 parental investment theory and, 313–314
 parenthood probability theories and, 313–314
 sex differences and, 312–318
 social exchange and cheating detection, 311–312
 Evolved psychological mechanisms, 309
 Executions, moral disengagement and, 438
 Existentialism, 207–212
 contemporary experimental existentialism, 210–212
 major aspects of, 207–208
 mortality salience and, 211–212
 of Sartre, 208–210
 terror management theory and, 210–211
 Expectancies, social-cognitive theory and, 428–434
 Experience, subjectivity of, 164–166
 Experiential thinking, 107
 Experimental research
 as research approach, 50–54
 strengths and limitations of, 60–61
 Experimentation, behaviorism and, 350–352
- Experimenter expectancy effects, 61
 Explicit motives, 83
 Extinction process, classical conditioning and, 355
 Extraversion, social behavior and, 252–253
 Eysenck, Hans J., 246–247
 Eysenck's personality theory, 247–254
 biological bases of personality traits and, 251
 comment on, 253–254
 extraversion and social behavior, 252–253
 factor measurement and, 250–251
 five-factor model of personality and, 268–269
 introversion-extraversion and, 247–248
 lemon drop test and, 250
 neuroticism and, 247–248
 personality structure and, 247–251
 psychopathology and behavior change, 253
 psychoticism and, 249–250
 superfactors and, 247–251
- F**
 Factor analysis, 237–239
 advantages of, 238
 covariation patterns and, 238
 identifying trait dimensions and, 237
 mathematical statistics and, 238
 subjective decisions and, 238–239
 typical study and, 237–238
 Falsified conclusions, 43–44
 Familial IQ correlations, 324
 Family influence, 18–19
 Fantasy, 190
 Faulty cognitions, depression and, 492–493
 Fear, personal construct theory and, 403–406
 Fear responses, amygdala and, 308
 Feared self, 192–193
 Feelings of authenticity, 164–165
 Five-factor model of personality (Big Five)
 age differences and, 273–277
 applications of, 280–282
 Big Five trait factors and, 261–263
 biological basis and, 270–271
 career choice and, 280
 case study and, 282–287
 causal structure and, 271–272
 childhood and adolescence and, 277
 clinical diagnosis and treatment and, 282
 cross-cultural research and, 263–266

- Five-factor model of personality (Big Five) (*Contd.*)
Eysenck's and Cattell's factors and, 268–269
factor-analytic trait-based assessment, 282–284
fundamental lexical hypothesis and, 263
health applications and, 280–281
illustrative scales and, 261
limitations of, 272–273
NEO-Personality Inventory and, 266–269
personality stability and, 284–286
planning psychological treatments and, 282
proposed theoretical model for, 269–273
questionnaires and, 266–269
representation of, 270
research evidence and, 259–269
self-ratings and, 286–287
stability and change in personality and, 277–278
subjective well-being and, 280
trait term analysis and, 259–263
validity and, 273
- Fixations, 121
Fixed assessment methods, 39–40
Fixed-role therapy, 408–409
Fixed schedules, operant conditioning and, 369–370
Flexible assessment methods, 39–40
Flow experiences, positive psychology and, 206–207
Focus of convenience, 388
Food tastes, classical conditioning and, 361
Foresight, 450
Fraudulent data, 43–44
Free association technique, 69–70, 74, 124
Free-floating anxiety, 89
Free will, 376–377
Freud, Sigmund, 68–70. *See also* Psychoanalytic theory
Functional analysis of behavior, 373
Functional anatomy of human motives, 234–235
Fundamental lexical hypothesis, 263
- G**
Gender, self-concept and, 171
General principles approach, 478–479
Generalization, classical conditioning and, 355
Generalized reinforcers, operant conditioning and, 369
- Genetic determinants, growth and development and, 14–15
Genetics. *See* Behavioral genetics
Genital stage of development, 100–101
Goals, social-cognitive theory and, 435–436, 450–452
Gratification. *See* Delay of gratification
Growth and development, 13–19.

SUBJECT INDEX

599

- Kelly's personal construct theory
anticipating events and, 400–403
anxiety and, 403–406
applications and, 415
case study and, 410–411
change and fixed-role therapy and,
408–409
clinical applications and, 407–410
cognitive complexity vs. simplicity
and, 397–400
comprehensives, 414–415
construct system and, 393–400
construct types and, 393–400
constructive alternativism and, 388
constructs and interpersonal
consequences, 392–393
contrast pole and, 391
fear and, 403–406
focus of convenience and, 388
fundamental postulate and, 400
growth and development and,
406–407
major contributions and, 415–416
person-as-scientist view, 390
process and, 400–406
psychopathology and, 407–408
range of convenience and, 388
recent developments and,
412–413
Rep test for children, 398
Role Construct Repertory Test,
395–396, 398
science of personality and,
387–389
scientific observation and, 413
similarity pole and, 391
strength and limitations summary,
416
structure of, 391–400
systematic theory and, 413
testability and, 413–414
threats and, 403–406
unique information and personal
construct testing, 396–397
view of person and, 389–391
- Knowledge-and-appraisal personality
architecture (KAPA), 511–514
Knowledge and appraisal processes,
511–512
- L**
Laboratory studies
as research approach, 50–54
strengths and limitations of, 60–61
Latency stage of development, 100
Learning goals, 470–474
Left and right hemispheric dominance,
334–336
Lemon drop test, 259
- Levels of consciousness, 75–84
concept of unconscious and, 75–76
conscious level, 75–76
dreams and, 76–77
motivated unconscious and, 77
perception without awareness and,
78–79
perceptual defense and, 79
preconscious level, 76
psychoanalytic and cognitive views
of unconscious, 82–84
relevant psychoanalytic research
and, 77–79
subliminal psychodynamic activation
and, 79
unconscious level, 76
- Libido, 88
Life and death instincts, 87–88
Life course, trait consistency across,
277–278
Life record data (L-data), 36, 240–243
Little Albert case, 358–359
Little Hans case, 126–130, 362–363
Longevity, personality characteristics
and, 49–50
Longitudinal stability, personality traits
and, 287–290
LOTS categories of data, 36–38
Low-reactive infants, inhibition and,
305–306
- M**
Major contributions
behaviorism and, 380
Kelly's personal construct theory and,
415–416
psychoanalytic theory and, 155–157
Rogers person-centered theory and,
222–223
social-cognitive theory and, 499
trait theory and, 294–295
Major theoretical concepts, 533
Maladaptive environments,
behaviorism and, 350
Maladaptive responses, 372
Male-female mate preferences, 312–314
Maslow, Abraham, 202–204. *See also*
