

SUBJECT INDEX

Page references followed by *fig* indicate an illustrated figure; followed by *t* indicate a table.

The Abilities of Man: Their Nature and Measurement (Spearman), 673

Academic failure. *See* School failure risk factors

Academic-Q (Child and Adolescent Academic Questionnaire)

conclusions on using the, 206–207

examining the process of creating the, 175, 194

form used for the, 195*fig*–197*fig*

reliability of, 200, 201*t*–202

validity of the, 202*t*–206

ADHD (attention-deficit/hyperactivity disorder), 140–141, 155, 177, 230

ADHD–IV Rating Scale, 499

ADHD–related case reports

Case 1–Liam, Age 9, 265–282, 551

Case 6–Tom, Age 8, 372–403*t*, 551

Case 9–Isabella, Age 13, 448–458*t*, 551

Administration (WISC–V test kit format)

changes from the WISC–IV, 623–624

common errors, 85–88

complementary subtests, 80–85

digital administration and scoring, 139–155

Fluid Reasoning subtests, 63–68*t*

frequently asked questions on subtest administration, 88–89

general information, 46–55

most frequent errors, 37–38*t*

pre-administration considerations, 38–46

Processing Speed subtests, 74–80

Quick Reference on frequently asked questions, 88–89

selection of the subtests, 43

standard order and domain membership of the subtests, 42*t*

subtest-by-subtest, 55–88

Verbal Comprehension subtests, 55–61

Visual Spatial subtests, 61–63

Working Memory subtests, 69–74

See also WISC–V Administration and Scoring Manual

Administration—general information (WISC–V test kit version)

discontinue rules and stop points, 47, 49–51*t*

qualifying, demonstration, sample, and teaching items, 51–52

queries, 53

recording responses and commonly used abbreviations, 53–55

repetitions, 52–53

reverse rule, 47, 48*t*–49*t*

start points by age, 46–48*t*

subtest-specific prompts, 53

subtest time limits, 50–51, 52*t*

Adolescent limited (AL) offenders, 184

Adolescent Resiliency Attitudes Scale (ARAS), 191

Adolescents

general strain theory on behavior of, 186

limited research on youth risk assessment, 177

review of research on youth risk assessment, 192–193

See also Juvenile delinquency risk factors; School failure risk factors

African Americans. *See* Racial/ethnic differences

AL (adolescent limited) offenders, 184

Alicia, Age 13 case report

background, 283–284

conclusions, 292–293

current evaluation, 284–292*t*

listed with other cases, 551

recommendations, 293–296

summary, 283

tests taken, 302–303

American Board of Clinical Neuropsychology (ABCN), 408

American Board of Professional Neuropsychology (ABPN), 408

American Board of School Neuropsychology (ABSNP), 408

American Educational Research Association (AERA), 44, 140, 625, 689, 701

American Psychological Association (APA), 44, 140, 405, 407–408, 625, 689, 701

Ancillary index scales (WISC–V)

Auditory Working Memory subtests, 2*fig*

Cognitive Proficiency subtests, 2*fig*

description and list of, 1

General Ability subtests, 2*fig*

McCloskey's review of, 675–676

Nonverbal subtests, 2*fig*

Quantitative Reasoning subtests, 2*fig*

review of the WISC–V composite scores, 622

review of the WISC–V organizational framework, 649*t*

scores and scoring of, 120–121, 631

See also specific case report; subtest

Anti-IQ–testing

Dan Rather and, 717–718

post-IDEA sentiment of, 5

Anxiety

Case 9–Isabella, Age 13, 448–458*t*, 551

Case 10–John, Age 12, 471–492, 551

ARAS (Adolescent Resiliency Attitudes Scale), 191

Arithmetic subtest scoring (WISC–V)

comparing WISC–IV scoring and, 98*t*

scoring key, 99

Arithmetic subtest (WISC–V)

administration of, 67–68*t*

ancillary index scores and, 120

- Intelligent testing basic tenets
 1: intelligence testing with the WISC–V requires training, experience, and flexibility, 20–24
 2: the WISC–V measures what the individual has learned and predicts future learning, 24–25
 3: the WISC–V subtests are samples of behavior and are not exhaustive, 25–27
 4: the WISC–V assesses cognitive functioning under fixed experimental conditions, 27–28
 5: the WISC–V is optimally useful when it is interpreted from a theoretical basis, 28–29
 6: hypotheses generated from WISC–V profiles should be supported with data from multiple sources, 29–32
 7: results from WISC–V profiles must be tied to educational interventions, 32–34

 - Case 3-Luke, Age 9, 304-329*t*, 551
 - Case 4-Josh, Age 8, 348-361, 551
 - Case 5-Tawna, Age 13, 362-371, 551
 - Case 6-Tom, Age 8, 372-403*t*, 551
 - Case 7-Jaime, Age 10, 425-436, 551
 - Case 8-Christopher, Age 11, 437-447*t*, 551
 - Case 9-Isabella, Age 13, 448-458*t*, 551
 - Case 10-John, Age 12, 471-492, 551
 - Case 11-Colin, Age 8, 497-522*t*, 551
 - Case 12-Derek, Age 13, 523-547*t*, 551
 - Case 13-Ellie, Age 10, 551, 557-567*t*
 - Case 14-Jordan, Age 15, 551, 568-577*t*
 - Case 15-Jane, Age 8, 551, 578-586*t*
 - Case 16-Lizzie, Age 8, 551, 587-599*t*
 - Case 17-Patrick, Age 9, 551, 600-612*t*
 - conceptual and clinical integration of all 17 of the, 550-556
- WISC-V *Interpretive Assistant 1.0*, 43, 44, 237, 241, 242, 246, 247
- WISC-V Q-interactive administration
 - access to manuals in Central, 153
 - advanced scoring output, 152-153
 - audio recording use during, 146-147
 - basic scoring output, 152
 - potential clinical applications and digital enhancements, 153, 155
 - practitioner-client device interaction during, 148-149
 - practitioner tablet functions, 142-143
 - sample administration and scoring features, 142
 - swiping backward during, 147
- WISC-V Q-interactive administration screens
 - Assess Discontinue Popovers on Practitioner's Screen, 148*fig*
 - Assess Start Popover on Practitioner's Screen, 147*fig*
 - assess "Swiping Backward" Popover on Practitioner's Screen, 149*fig*

 - on difference and WISC–V measurement of cognition and intelligence, 678–681
 - on difference between an ability and a process, 676–678
 - on differences between primary, ancillary, and complementary indexes, 675–676
 - domains in the factor–analytic model of intelligence, 679*fig*
 - on Full Scale IQ and what it should encompass, 670–675*t*
 - possible index structure based on the 16 subtests, 676*t*
 - on subtests that do not contribute to any of the indexes, 676
 - WISC–V Technical and Interpretive Manual's* staged approach to WISC–V interpretation, 669–670*fig*, 676
- WISC–V review (Miller & McGill)
 - contributions the WISC–V will make to the field, 661–662
 - family of related products, 651
 - five-factor WISC–V validation model for subtests, 657–659*fig*
 - interpretative options, 653–654
 - organization of the WISC–V, 645–647
 - psychometric adequacy of the WISC–V, 654–661
 - quality of testing materials, 652
 - strengths and weakness of the WISC–V, 646*t*–647*t*
 - theoretical foundation of WISC–V, 647–648, 651
 - WISC–V subtests and subtest categories, 648*t*, 652–653
- WISC–V review (Naglieri)
 - on the evolution of WISC–V, 663–665
 - impact of WISC–V on field of psychology and education, 668
 - WISC–V and achievement, 666
 - WISC–V and eligibility determination, 667
 - WISC–V and race/ethnicity differences, 667–668
 - WISC–V and theory, 665
- WISC–V review (Reynolds & Hadorn)
 - approach to item bias, 625
 - on changes made from WISC–IV to, 615–616
 - commentary and final thoughts on the, 632–635
 - general description of WISC–V, 616–624
 - norming sample of the WISC–V, 625
 - reliability and validity evidence, 625–630
 - scores differences and test interpretation, 630–632
 - technical information on WISC–V, 624–630
 - test criteria of, 630
- WISC–V test reviews
 - by Canivez and Watkins, 683–702, 705, 706
 - comments on responsiveness to feedback by the test developers, 705–706
 - by Dumont and Willis, 637–644, 704, 706
 - on if the WISC–V is user-friendly or not, 706–710
 - by McCloskey, 669–681, 705
 - by Miller and McGill, 645–662, 704
 - by Naglieri, 663–668, 704–705
 - overview and integration of the independent, 703–712
 - on Perceptual Reasoning Index split into Fluid Reasoning and Visual Spatial, 706
 - by Reynolds and Hadorn, 615–635, 704, 706
- WISC–V Technical and Interpretive Manual*
 - Appendix C to derive the contrast scores, 116
 - “Consequences of Testing” section on WISC–V score differences for diverse populations, 667–668
 - on continuing problems with the Arithmetic subtest, 695–696
 - description of, 683
 - explanations for inclusion of five specific subtests, 677
 - not required for administration of test, 39
 - on PSW (pattern of strengths and weaknesses) analyses, 699–700
 - qualitative descriptors listed in, 236
 - review on preference of CFA method used in WISC–V, 692–694, 701
 - review on selective reporting and review of scientific literature in, 697–700
 - review on variance decomposition in WISC–V, 694

WISC-V Technical and Interpretive Manual (Continued)

- reviews on WISC-V score reliability and validity, 623, 624–625, 625, 627, 628, 629, 631, 633, 634, 645, 653, 654, 655–656, 660, 661, 687–692, 696
- reviews on WISC-V standardization information in, 686, 687
- on revision of the goals of WISC-V, 684
- on deriving the Nonverbal Index, 230
- staged approach for interpretation of the test results in, 669–670*fig*, 676, 681, 697
- subtest reliability coefficients for special groups table in, 228
- tables on composite scores in the, 655
- on WISC-V scores used to generate hypotheses, 667
- on WISC-V used to identify specific learning disabilities (SLDs), 667

WISC-V Technical and Interpretive Manual Supplement, 626, 635

WISC-V structure

- introduction to the ancillary index scales, 1, 2*fig*
- introduction to the complementary index scales, 2*fig*, 3
- introduction to the Full scale, 1, 2*fig*
- introduction to the primary index scales, 1, 2*fig*
- scores, 3

See also specific index scale

WISC-V (Wechsler Intelligence Scale for Children–Fifth Edition)

- administration of the subtests, 41–43, 63–89, 139–155
 - applying CHC theory to construction of the, 12–15
 - basic neurocognitive constructs of WISC-V Integrated, WIAT–III, and, 460–470
 - basic steps for interpretation of the, 227–247
 - CHC (Cattell-Horn-Carroll) theory application by, 12–15, 255–263, 414, 415, 417, 678
 - compared to earlier editions, 16–17
 - confirmatory factor analysis (CFA) for, 15, 689–694, 701
 - description and overview of, 5, 15–17
 - examining the scatter issue of, 209–225
 - intertwining theoretical foundations of the CAS2, WJ IV, and, 11
 - list of subtests of, 17
 - multiple assessment and practice effects on, 419–424
 - normative sample composite score means and standard deviations by parent education level, 165*t*–166*t*
 - ongoing terminology changes evident in, 12
 - Q-interactive iPad to iPad format (digital) format of, 1, 139–155
 - Q-global software to obtain the score report, 125–137
 - scoring, 91–125
 - selecting between WISC-V and other batteries when testing children at the extremes of the age range, 44*t*
 - sex, ethnic, and socioeconomic status (SES) differences in, 159–174
 - three complementary index scores measuring CHC abilities, 16–17
 - traditional “test kit” format of, 1, 37–137
- See also* Child assessment; *specific subtest*; Wechsler test products; WISC-V interpretation

WJ III (Woodcock-Johnson–Third Edition), 11

WJ IV (Woodcock-Johnson–Fourth Edition)

- comparing WISC-V FSIQ with GIA subtests of, 672*t*
- description of the, 11
- functional emphasis of the, 14
- ongoing terminology evident in the, 12

WJ-R (Woodcock-Johnson Tests of Cognitive Ability–Revised), 8, 11

WMS-IV (Wechsler Memory Scale–Fourth Edition), 459

WNV (Wechsler Nonverbal Scale of Ability), 724

Woodworth, R. S., 721–722, 723, 724

Word Reasoning subtest (WISC-IV), 618–619, 639, 653, 684, 692

The Working Brain (Luria), 406Working memory (*Gsm*) measure, 16, 416

Working Memory subtests (WISC-V)

- ancillary index scores and, 120
 - common errors made in administration of, 86–87
 - Digit Span, 15, 69–70*t*, 87, 100*t*–101, 116, 117
 - index scores applied to WISC-V interpretation, 245
 - Letter–Number Sequencing, 48*t*, 72–74, 87, 100*t*, 102, 116
 - Picture Span, 48*t*, 70–72, 87, 101, 116
 - primary Index scores and, 120
 - scoring the, 100–102, 116, 120–121
- See also* Scoring subtests (WISC-V)

WPPSI-IV (Wechsler Preschool and Primary Scale of Intelligence–Fourth Edition)

- Canivez’s arguments on need for hierarchical multiple regression analyses in, 696
- consistency of the FSIQ composition with related scales of, 229
- development of the, 5
- new WISC-V subtests adapted from the, 618
- often no sex difference in some young children, 160
- replacement approach comparison studies of, 122–123
- review comparing WISC-V and, 651
- for testing children at the younger extreme of the age range, 43–44
- for testing children with limited motor skills, 45

WPPSI-R (Wechsler Preschool and Primary Scale of Intelligence–Revised Edition), 164

WRAML-2 (Wide Range Assessment of Memory and Learning–Second Edition), 459

Writing difficulties

- Case 1–Liam, Age 9, 265–282, 551
- Case 6–Tom, Age 8, 372–403*t*
- Case 10–John, Age 12, 471–492

Youth Level of Service/Case Management Inventory (YLS/CMI), 192

Youth risk assessment

- limited research on, 177
- review of research on, 192–193
