CR53341.01

689. Excavation of the house of a third-century Camarnian official revealed that he had served four magistrates—public officials who administer the law—over his thirty-year public career, in four provincial capital cities. However, given the Camarnian administrative system of that era, it is unclear whether he served them simultaneously, as a traveling administrator living for part of the year in each provincial capital, or else did so sequentially, leaving one magistrate after several years to join another.

Which of the following would, if found in the excavation, most likely help reveal the pattern of the official's administrative service?

(A) Maps and documents describing each of the four provincial capitals

(B) A cache of the official's documents related to work from early in his career

(C) A set of cups of a type made only in the city of the first magistrate whom the official is known to have served

(D) Several pieces of furniture in the styles of two of the provincial capital cities

(E) Heavy clothing appropriate only for the coldest of the four cities

Argument Construction

Situation Evidence from an excavation makes clear that a particular third-century Camarnian official served four magistrates in four provincial capitals over his thirty-year career, but it is unclear whether he served the magistrates simultaneously or sequentially.

Reasoning *What evidence, if it were also found in the excavation, would be most helpful in determining whether the official served the magistrates simultaneously or sequentially?* It would be helpful to find documents from throughout the magistrate's career indicating at what times he worked for each magistrate, or even documents from just one period, as long as there were a large number, because this would likely show whether he was working for just one magistrate or for all four.

A We already know that the official worked in each of the four capitals. The fact that maps and documents describing the capitals were at his house tells us nothing about whether he worked for magistrates in these capitals simultaneously or not.

B **Correct.** Presumably the work-related documents would show whom he was working for at the time, and for how long—and would provide evidence as to whether he was working for multiple magistrates or for just one.

C Merely finding a set of cups made only in one of the cities tells us little. Even if we knew when he acquired the set, he need not have been working for the magistrate of that city at the time he acquired it; perhaps he had simply traveled to that city.

D One frequently moves furniture when moving from one city to another, so the fact that the official had pieces of furniture that may have come from different cities does not give us any indication of whether the official worked for all four magistrates simultaneously or not.

E The fact that heavy clothing appropriate only for the coldest of the four cities was found in the excavation of the official's house does not imply that other clothing, appropriate for one or more of the other cities, was not found. Consistent with the finding of the heavy clothing, the official may have worked exclusively in the city for which that clothing was appropriate, or worked intermittently in this city.

The correct answer is B.

CR80531.01

690. In 1563, in Florence's Palazzo Vecchio, Giorgio Vasari built in front of an existing wall a new wall on which he painted a mural. Investigators recently discovered a gap between Vasari's wall and the original, large enough to have preserved anything painted on the original. Historians believe that Leonardo da Vinci had painted, but left unfinished, a mural on the original wall; some historians had also believed that by 1563 the mural had been destroyed. However, it is known that in the late 1560s, when renovating another building, Santa Maria Novella, Vasari built a façade over its frescoes, and the frescoes were thereby preserved. Thus, Leonardo's Palazzo Vecchio mural probably still exists behind Vasari's wall.

Which of the following is an assumption on which the argument depends?

(A) Leonardo rarely if ever destroyed artworks that he left unfinished.

(B) Vasari was likely unaware that the mural in the Palazzo Vecchio had willingly been abandoned by Leonardo.

(C) Vasari probably would not have built the Palazzo Vecchio wall with a gap behind it except to preserve something behind the new wall.

(D) Leonardo would probably have completed the Palazzo Vecchio mural if he had had the opportunity to do so.

(E) When Vasari preserved the frescoes of Santa Maria Novella he did so secretly.

Argument Construction

Situation Georgio Vasari built a new wall in front of an existing wall in the Palazzo Vecchio that historians believe had had an unfinished mural by Leonardo da Vinci painted on it. Some historians, however, believe the mural had been destroyed by the time Vasari built the new wall. There is a gap between the old and new wall, large enough to have preserved anything painted on it, as there is in Santa Maria Novella, where Vasari also constructed a new wall in front of an old wall; on that wall, the building's frescoes were preserved.

Reasoning *What claim needs to be true for the cited facts to support the conclusion that Leonardo's Palazzo Vecchio mural likely still exists behind Vasari's wall?* If there are other equally likely reasons that Vasari would have left a gap between the old wall and a new wall, besides preserving any painting on the old wall, the stated facts would not support the conclusion. After all, it may be only fortuitous that the frescoes in the Santa Maria Novella were preserved when Vasari built the new wall with a gap between it and the old wall. Therefore, the argument depends on assuming that it is unlikely that Vasari would have created a gap between the old and new walls unless he had been trying to preserve something painted on the old wall.

A The argument does not depend on the claim that Leonardo rarely if ever destroyed his unfinished artworks. Obviously, it does depend on the claim that he did not always do so, but even if he fairly regularly destroyed unfinished artworks, this mural could be one of the ones he did not—perhaps the reason the mural was left unfinished was that he died before completing it.

B The argument does not depend on Vasari knowing that Leonardo had willingly abandoned the mural. Even if Leonardo did willingly leave it unfinished, Vasari could nonetheless have thought the mural was of value and wanted to preserve it.

C **Correct.** If there had been other likely reasons for Vasari to have built a gap behind the new wall other than to preserve something painted on the old wall, the cited facts would not be a good reason to believe that Vasari built the gap for the purpose of preserving anything painted on it.

D Leonardo may have had no interest in finishing the mural. Vasari could nevertheless have thought that there was value in preserving it.

E There is no need to assume that Vasari preserved the frescoes at Santa Maria Novella secretly. Even if he did not do so in this instance, he could have preserved other paintings secretly by the same means, or he may have let others know that he was preserving Leonardo's mural, although there is no historical record that he did let them know.

The correct answer is C.

CR09534

691. Coffee shop owner: A large number of customers will pay at least the fair market value for a cup of coffee, even if there is no formal charge. Some will pay more than this out of appreciation of the trust that is placed in them. And our total number of customers is likely to increase. We could therefore improve our net cash flow by implementing an honor system in which customers pay what they wish for coffee by depositing money in a can.

Manager: We're likely to lose money on this plan. Many customers would cheat the system, paying a very small sum or nothing at all.

Which of the following, if true, would best support the owner's plan, in light of the manager's concern?

(A) The new system, if implemented, would increase the number of customers.

(B) By roasting its own coffee, the shop has managed to reduce the difficulties (and cost) of maintaining an inventory of freshly roasted coffee.

(C) Many customers stay in the cafe for long stretches of time.

(D) The shop makes a substantial profit from pastries and other food bought by the coffee drinkers.

(E) No other coffee shop in the area has such a system.

Evaluation of a Plan

Situation The owner and the manager of a coffee shop disagree about whether allowing customers to pay for coffee on an honor system would increase or decrease profits.

Reasoning *What would be the best evidence that the honor-system plan would increase profits even if many customers cheated the system?* The owner argues that profits would increase because many customers will choose to pay as much or more than before and the total number of customers will likely increase. But the manager points out that many customers would also choose to pay little or nothing. Assuming that the manager is correct about that, what further support could the owner present for the claim that the plan would still be profitable?

A Since the owner has already basically asserted this, asserting it again would not provide any significant additional support for the plan.

B This suggests that the shop is already profitable, not that the honor-system plan would make it more profitable.

C Customers who stay in the cafe for long stretches would not necessarily pay any more per cup on the honor-system plan than other customers would.

D **Correct.** If the customer base increases (as both the owner and the manager seem to agree), more customers will likely purchase highly profitable pastries and other foods, thus boosting profits.

E The reason no other coffee shop in the area has an honor system may be that their owners and managers have determined that it would not be profitable.

The correct answer is D.

CR01900

692. The city of Workney, in raising bus fares from $1.00 to $1.25, proposed that 18 fare tokens be sold for $20.00 to alleviate the extra burden of the fare increase on the city's poor people. Critics suggested alternatively that 9 fare tokens be sold for $10.00, because a $20.00 outlay would be prohibitive for poor riders.

The alternative proposal depends on which of the following assumptions?

(A) Poor residents of Workney will continue to ride the buses in the same numbers despite the fare increase.

(B) Riders who are poor would be more likely to take advantage of the savings afforded by the 9-token offer than would riders who are not poor.

(C) The outlay of $10.00 for the purchase of 9 fare tokens would not be prohibitive for bus riders who are poor.

(D) The proposed fare increase is needed for the purchase of new buses for the city's bus system.

(E) Fewer riders would regularly purchase 18 fare tokens at once than would purchase only 9 fare tokens at once.

Evaluation of a Plan

Situation The city of Workney raised bus fares from $1.00 to $1.25. To help poor people, the city proposed allowing people to block-purchase 18 tickets for $20.00. But critics argued that poor people could ill-afford to pay $20.00 at one time. Their alternative proposal was: allow block-purchase of 9 tickets for $10.00.

Reasoning *What did the critics assume in making their alternative proposal?* The city's block-purchase proposal would result in a saving of $4.50 over the cost of purchasing 18 tickets separately, and the critics' alternative block-purchase proposal would result in a saving of $2.25 over the cost of purchasing 9 tickets separately. The savings per ticket on either proposal would be identical. But the critics' proposal assumes that people who would not be able to block-purchase 18 tickets for $20.00 would be able to block-purchase 9 tickets for $10.00.

A The critics assume something incompatible with this. Their alternative was proposed because they believed that some poor residents would otherwise, at least sometimes, be unable to purchase bus tickets.

B Nothing in the critics' proposal allows only poor people to benefit from the proposal. No information is given about the relative likelihoods of poor or nonpoor riders availing of the block-purchase option perhaps for convenience rather than for savings.

C **Correct.** The critics' proposal depends on the assumption that poor bus riders would generally be able to block-purchase 9 tickets for $10.00.

D The alternative proposal does not depend on assuming this. The proposal could still make sense even if the additional revenue from the fare increases was needed to pay higher wages to bus drivers.

E The critics' proposal does not depend on assuming this. How many riders would block-purchase 18 tickets? How many would block-purchase 9 tickets? These are open questions, as far as the critics' proposal is concerned. The 9-ticket option might or might not turn out to be more frequently purchased than the 18-ticket option. The critics' concern is to make the 9-ticket option available to poor riders, not to prevent nonpoor riders from availing of it.

The correct answer is C.

CR03272

693. Birds have been said to be descended from certain birdlike dinosaur species with which they share distinctive structural features. The fossil record, however, shows that this cannot be so, since there are bird fossils that are much older than the earliest birdlike dinosaur fossils that have been found.

Which of the following is an assumption on which the argument relies?

(A) The birdlike dinosaurs have no living descendants.

(B) There are no flightless dinosaur species that have the distinctive structural features shared by birds and birdlike dinosaurs.

(C) There are no birdlike dinosaur fossils that are older than the bird fossils but have not yet been unearthed.

(D) It could not have been the case that some birds were descended from one of the birdlike dinosaur species and other birds from another.

(E) Birds cannot have been descended from dinosaur species with which the birds do not share the distinctive structural features.

Argument Construction

Situation Although birds have been said to be descended from birdlike dinosaurs, some bird fossils predate the earliest known birdlike dinosaur fossils.

Reasoning *What must be true in order for the premise that some bird fossils predate the earliest known birdlike dinosaur fossils to support the conclusion that birds are not descended from birdlike dinosaurs?* The argument implicitly reasons that since the cited bird fossils predate the earliest known birdlike dinosaur fossils, they must be from birds that lived before the earliest birdlike dinosaurs, and which therefore could not have been descended from birdlike dinosaurs. This reasoning assumes that any birdlike dinosaurs that lived before the first birds would have left fossils that still exist. It also assumes that no undiscovered birdlike dinosaur fossils predate the cited bird fossils.

A The argument is only about whether birds are descended from birdlike dinosaurs. Whether birdlike dinosaurs have any living descendants other than birds is irrelevant.

B The argument is only about birds and birdlike dinosaurs. It is not about other types of dinosaurs that were not birdlike.

C **Correct.** If any undiscovered birdlike dinosaur fossils predate the cited bird fossils, then the latter fossils' age does not support the conclusion that birds are not descended from birdlike dinosaurs.

D The argument purports to establish that the relative ages of bird fossils and birdlike dinosaur fossils show that birds cannot be descended from any of the known birdlike dinosaur species. In doing this, it acknowledges multiple birdlike dinosaur species and leaves open the question of whether some birds may be descended from one such species and other birds from another such species.

E The argument does not claim that the known fossil record shows that birds cannot be descended from dinosaurs. It only claims that the record shows that they cannot be descended from the birdlike dinosaurs that shared their distinctive structural features.

The correct answer is C.

CR08239

694. City council member: Demand for electricity has been increasing by 1.5 percent a year, and there simply is no more space to build additional power plants to meet future demand increases. We must therefore begin to curtail usage, which is why I propose passing ordinances requiring energy-conservation measures in all city departments.

The city council member's proposal assumes which of the following?

(A) Existing power plants do not have the capacity to handle all of the projected increase in demand for electricity.

(B) No city departments have implemented energy-conservation measures voluntarily.

(C) Passing ordinances designed to curtail electricity usage will not have negative economic consequences for the city.

(D) Residential consumers are not responsible for the recent increases in demand for electricity.

(E) City departments that successfully conserve energy will set a good example for residential and industrial consumers of electricity.

Argument Construction

Situation A city council member proposes energy-conservation measures for all city government departments because there is no room to build new power plants to meet future increases in the demand for electricity.

Reasoning *What must be true in order for the factors the city council member cites to help justify the proposal?* The city council member says electricity usage must be curtailed on account of an increasing demand for electricity and a lack of space for new power plants that could meet future demand increases. In order for this reasoning to help justify the proposal, the cited factors must actually establish a need to curtail electricity usage.

A **Correct.** If current power plants could satisfy the projected increased demand for electricity, then the increasing demand and the lack of room to build new plants would not establish a need to curtail electricity usage.

B The proposed ordinances could still be necessary even if one city department had voluntarily implemented energy-conservation measures.

C Passing the ordinances could still be necessary even if they would have some negative economic effects.

D No matter who is responsible for the recent increases in demand, curtailing the city government's electricity usage could still help to reduce demand.

E Ordinances to curtail the city government's energy usage could be economically necessary regardless of whether or not departments that obey the ordinances set a good example.

The correct answer is A.

CR32441.01

695. Certain groups of Asian snails include both "left-handed" and "right-handed" species, with shells coiling to the left and right, respectively. Some left-handed species have evolved from right-handed ones. Also, researchers found that snail-eating snakes in the same habitat have asymmetrical jaws, allowing them to grasp right-handed snail shells more easily. If these snakes ate more right-handed snails over time, this would have given left-handed snails an evolutionary advantage over right-handed snails, with the left-handed snails eventually becoming a new species. Thus, the snakes' asymmetrical jaws probably helped drive the emergence of the left-handed snail species.

Which of the following would, if true, most strengthen the argument that asymmetrical snake jaws helped drive left-handed snail evolution?

(A) In one snake species, the snakes with asymmetrical jaws eat snails, while the snakes with symmetrical jaws do not eat snails.

(B) Some species of Asian snails contain either all right-handed snails, or all left-handed snails.

(C) Anatomical differences prevent left-handed snails from mating easily with right-handed snails.

(D) Some right-handed snails in this habitat have shells with a very narrow opening that helps prevent snakes from extracting the snails from inside their shells.

(E) Experiments show that the snail-eating snakes in this habitat fail more often in trying to eat left-handed snails than in trying to eat right-handed snails.

Argument Evaluation

Situation There are both Asian snails with shells that coil to the right and Asian snails with shells that coil to the left, and the latter have evolved from the former; furthermore, there are snakes that have asymmetrical jaws that allow the snakes to grasp the snails with right-coiled shells more easily.

Reasoning *What fact would help support the claim that the snakes' asymmetrical jaws helped drive the emergence of species of snails with left-coiled shells?* We are told that if over time the snakes with asymmetrical jaws ate more snails with right-coiled shells than snails with left-coiled shells, then this would give snails with left-coiled shells an evolutionary survival advantage. So, if some evidence showed that the snakes with such jaws in fact were more likely to have successfully eaten the snails with the right-coiled shells, then we would have good reason to think the snakes' asymmetrical jaws helped drive the emergence of snails with left-coiled shells.

A The fact that snakes with asymmetrical jaws eat snails and other snakes do not does not give any indication as to whether snails with left-coiled shells have any evolutionary advantages over snails with right-coiled shells. At best it only tells us that if snakes drove the evolution of snails with left-coiled shells, it would likely have been the snakes with asymmetrical jaws.

B The fact that some species of Asian snails have no variation in the direction in which their shells coil tells us nothing about what, if any, evolutionary advantages they have relative to other snails, or whether the snakes' asymmetrical jaws had any effect on any such evolutionary advantages.

C The inability of snails with left-coiled shells to mate easily with snails with right-coiled shells in and of itself tells us nothing about whether the snakes' asymmetrical jaws had any effect on the emergence of snails with left-coiled shells. Although it does suggest a different factor that could have contributed to the emergence of the snail species with left-coiled shells, it does not exclude the possibility that the snakes were also a factor.

D The fact that snakes cannot extract some snails with right-coiled shells from their shells would suggest that these snails might have an evolutionary advantage; but the argument's conclusion is about an evolutionary advantage that snails with left-coiled shells presumably have, not an advantage that snails with right-coiled shells would have.

E **Correct.** The fact that experiments show that the snakes are more successful at eating snails with right-coiled shells than they are at eating snails with left-coiled shells would support the claim that these snakes did in fact eat more snails with right-coiled shells, and hence the snails with left-coiled shells would as a result have an evolutionary advantage.

The correct answer is E.

CR95631.01

696. A moderately large city is redesigning its central downtown area and is considering a plan that would reduce the number of lanes for automobiles and trucks and increase those for bicycles and pedestrians. The intent is to attract more workers and shoppers to downtown businesses by making downtown easier to reach and more pleasant to move around in.

Which of the following would, if true, most strongly support the prediction that the plan would achieve its goal?

(A) People who make a habit of walking or bicycling whenever feasible derive significant health benefits from doing so.

(B) Most people who prefer to shop at suburban malls instead of downtown urban areas do so because parking is easier and cheaper at the former.

(C) In other moderately sized cities where measures were taken to make downtowns more accessible for walkers and cyclists, downtown businesses began to thrive.

(D) If the proposed lane restrictions on drivers are rigorously enforced, more people will likely be attracted to downtown businesses than would otherwise be.

(E) Most people who own and frequently ride bicycles for recreational purposes live at a significant distance from downtown urban areas.

Evaluation of a Plan

Situation A moderately large city desires to attract more workers and shoppers to downtown businesses by making the downtown area more pleasant and easier to travel to. In light of this goal, the city is considering a plan that would reduce the number of lanes for automobiles and trucks and increase those for bicycles and pedestrians.

Reasoning *What would most strongly support the prediction that reducing the number of lanes for automobiles and trucks and increasing those for bicycles and pedestrians would achieve the goal of attracting more people to downtown businesses?* If other moderately sized cities that have improved the accessibility of their downtown areas to pedestrians and cyclists have seen increased downtown business, then it is reasonable to think that the city in question will have improved downtown business as well.

A If people who make a habit of walking or bicycling derive significant health benefits, that would provide further motivation for trying to encourage people to walk or ride a bicycle, but it does not provide much support for the claim that adding lanes for pedestrians and cyclists will successfully bring people to shop or work more in the city's downtown. Perhaps people will merely use the new lanes for exercise, but not to get to the downtown area to do business.

B Because the plan as described does not provide for additional parking, the fact that parking is a major concern motivating people to shop at suburban malls does not give us good reason to think that the city's plan will help achieve the city's goal.

C **Correct.** If other moderately sized cities that have made their downtown areas more accessible to pedestrians and cyclists have seen their downtown businesses begin to thrive soon afterwards, this is evidence—even if not conclusive—that the changes produced the thriving. Consequently, it is reasonable to think that the same will result for the city in question.

D It might be the case that rigorously enforcing lane restrictions will attract more people to downtown businesses than would otherwise be the case, but the information provided does not indicate how strictly lane restrictions will be enforced.

E The city's plan is aimed at increasing the use of bicycles for the purposes of shopping or getting to work, not only for recreational purposes. And even if people who use their bicycles for recreational purposes would also be likely to use them for shopping or getting to work, the fact that most recreational cyclists live at a significant distance from the city's downtown area may suggest that the city's plan will not be successful, because the cyclists may live too far away to use their bicycles for these purposes, even if it would be somewhat easier for them to do so once the plan has been implemented.

The correct answer is C.

CR00713

697. Previously, Autoco designed all of its cars itself and then contracted with specialized parts suppliers to build parts according to its specifications. Now it plans to include its suppliers in designing the parts they are to build. Since many parts suppliers have more designers with specialized experience than Autoco has, Autoco expects this shift to reduce the overall time and cost of the design of its next new car.

Which of the following, if true, most strongly supports Autoco's expectation?

(A) When suppliers provide their own designs, Autoco often needs to modify its overall design.

(B) In order to provide designs for Autoco, several of the parts suppliers will have to add to their existing staffs of designers.

(C) Parts and services provided by outside suppliers account for more than 50 percent of Autoco's total costs.

(D) When suppliers built parts according to specifications provided by Autoco, the suppliers competed to win contracts.

(E) Most of Autoco's suppliers have on hand a wide range of previously prepared parts designs that can readily be modified for a new car.

Evaluation of a Plan

Situation A car manufacturer plans to have its parts suppliers start helping to design the parts they build for the manufacturer. Many parts suppliers have more designers with specialized experience than the manufacturer has.

Reasoning *What would make it more likely that having the parts suppliers help design the parts will reduce the time and cost of designing the manufacturer's next new car?* In order for the change to reduce the time and cost, the parts suppliers involved in designing the next car will probably have to do their portion of the design process faster and cheaper than the manufacturer would have, and the design collaboration process will have to avoid producing substantial new inefficiencies.

A The additional need to modify the overall design would probably make the design process slower and more expensive, not faster and cheaper.

B The additional need to hire more designers would probably increase design costs, not reduce them.

C Although this suggests that the change is likely to substantially affect the design's expense, it does not indicate whether the expense will increase or decrease.

D If anything, this competition probably made Autoco's previous design process cheaper. It does not suggest that the new design process, which may involve less competition, will be faster or cheaper than the previous one.

E **Correct.** Modifying the previously prepared parts designs will probably be faster and cheaper than creating new designs from scratch.

The correct answer is E.

CR02830

698. In response to viral infection, the immune systems of mice typically produce antibodies that destroy the virus by binding to proteins on its surface. Mice infected with the herpesvirus generally develop keratitis, a degenerative disease affecting part of the eye. Since proteins on the surface of cells in this part of the eye closely resemble those on the herpesvirus surface, scientists hypothesize that these cases of keratitis are caused by antibodies to the herpesvirus.

Which of the following, if true, most helps to support the scientists' reasoning?

(A) Other types of virus have surface proteins that closely resemble proteins found in various organs of mice.

(B) Mice that are infected with the herpesvirus but do not develop keratitis produce as many antibodies as infected mice that do develop keratitis.

(C) Mice infected with a new strain of the herpesvirus that has different surface proteins did not develop keratitis.

(D) Mice that have never been infected with the herpesvirus can sometimes develop keratitis.

(E) There are mice that are unable to form antibodies in response to herpes infections, and these mice contract herpes at roughly the same rate as other mice.

Argument Evaluation

Situation Mice infected with the herpesvirus tend to develop keratitis, an eye disease. The surface of the eye cells have proteins that resemble those on the herpesvirus surface. Based on this finding, scientists have hypothesized that keratitis develops in mice because antibodies that attack herpesvirus surface proteins can also attack eyes.

Reasoning *What other information, if correct, would provide the strongest support for the scientists' hypothesis?* The clue that led the scientists to form their hypothesis was the close resemblance of the proteins on the mouse eye surface to those on the herpesvirus surface. The resemblance could cause antibodies to bind to both types of proteins, in one case eliminating the herpesvirus and in the other case causing keratitis.

A Even if this is correct, we lack information as to whether the antibodies to those other types of virus can damage the organs that display the closely resembling proteins. If such a damage process were confirmed, it could count as evidence—even if not sufficient—to confirm the scientists' hypothesis.

B If anything, this would, absent further information, raise doubts about the correctness of the scientists' proposed explanation.

C **Correct.** This provides strong confirmation of the scientists' hypothesis. The proteins on the new strain of the herpesvirus no longer sufficiently resemble the proteins on the eye surface to cause the antibodies to attack those proteins and cause keratitis.

D For all we know, keratitis may have multiple independent causes and may sometimes be caused by processes other than the protein misidentification hypothesized by the scientists. This information neither confirms nor refutes the scientists' hypothesis.

E The rates at which mice contract herpes is not discussed. We lack any information as to whether mice that lack antibodies to the herpesvirus sometimes contract keratitis along with herpes infection.

The correct answer is C.

CR38931.01

699. One might expect that within a particular species, any individuals that managed to slow down the aging process would leave more offspring. Natural selection should therefore favor extreme longevity—but this does not seem to be the case. A possible explanation is that aging is a product of the inevitable wear and tear of living, similar to how household appliances generally accumulate faults that lead to their eventual demise. However, most researchers do not find this analogy satisfactory as an explanation.

Which of the following would, if true, provide the strongest explanation for the researchers' reaction?

(A) Some organisms are capable of living much longer than other organisms.

(B) Some organisms reproduce very quickly despite having short lifespans.

(C) There are several ways of defining "extreme longevity," and according to some definitions it occurs frequently.

(D) Organisms are capable of maintenance and self-repair and can remedy much of the damage that they accumulate.

(E) Some organisms generate much more wear and tear on their bodies than others.

Argument Construction

Situation One possible explanation for the fact that natural selection does not favor extreme longevity, despite the fact that a slowed-down aging process would leave more offspring, is that aging is the product of wear and tear, much like household appliances eventually no longer function because of wear and tear; most researchers, however, reject this analogy as an explanation.

Reasoning *What would explain the researchers' rejection of the explanation?* The explanation is based on analogy between organisms and household appliances. If there were a crucial difference between appliances and organisms, such as the fact that organisms are capable of self-repair in a way that household appliances are not, then it would be reasonable for the researchers to reject the explanation.

A The fact that some organisms can live much longer than other organisms is not a good reason to reject the analogy; after all, some household appliances may last much longer than others, perhaps because they receive a different amount of wear and tear.

B Even if some organisms reproduce very quickly despite having short lifespans, that does not mean that they would not have even more offspring if they lived longer; also, this is irrelevant as to whether the analogy between the aging process and the wear and tear on household appliances is any good.

C It is unclear what these different ways of defining "extreme longevity" are—perhaps the definition is merely a relative one; some organisms live much longer than others, and those that do have "extreme longevity." But presumably some household appliances last much longer than others, so this would not indicate a difference, and thus would not explain why most researchers reject the analogy.

D **Correct.** Household appliances cannot repair themselves as organisms can, so the wear and tear of living is quite different from the wear and tear in household appliances.

E Presumably some household appliances receive much more wear and tear than other household appliances, so the fact that some organisms generate more wear and tear on their bodies than others does not indicate a difference between appliances and organisms, and thus does not explain why the researchers reject the analogy.

The correct answer is D.

CR02885

700. Last year a record number of new manufacturing jobs were created. Will this year bring another record? Well, **any new manufacturing job is created either within an existing company or by the start-up of a new company**. Within existing firms, new jobs have been created this year at well below last year's record pace. At the same time, there is considerable evidence that the number of new companies starting up this year will be no higher than it was last year and **there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups**. So clearly, the number of new jobs created this year will fall short of last year's record.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first provides evidence in support of the main conclusion of the argument; the second is a claim that the argument challenges.

(B) The first is a generalization that the argument seeks to establish; the second is a conclusion that the argument draws in order to support that generalization.

(C) The first is a generalization that the argument seeks to establish; the second is a judgment that has been advanced in order to challenge that generalization.

(D) The first is presented as an obvious truth on which the argument is based; the second is a claim that has been advanced in support of a position that the argument opposes.

(E) The first is presented as an obvious truth on which the argument is based; the second is a judgment advanced in support of the main conclusion of the argument.

Argument Construction

Situation Manufacturing jobs are created either within existing companies or in start-ups. Manufacturing jobs are being created at a much slower rate this year than last year. It seems likely that the number of new start-ups will not exceed last year's number and that the average number of manufacturing jobs per start-up will not exceed last year's number. So fewer manufacturing jobs are likely to be created this year than last year.

Reasoning *What function is served by the statement that any new manufacturing job is created either within an existing company or by the start-up of a new company? What function is served by the statement that there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups?* The first statement makes explicit a general background assumption that there are just two ways in which manufacturing jobs are created. This assumption is used, along with other information, to support the argument's main conclusion, i.e., the prediction about job creation this year. The second statement gives a premise meant to help support the prediction about this year's manufacturing-job creation.

A The first is a general statement making explicit an assumption on which the argument's reasoning depends, but the second is a statement affirmed as part of the argument and does not express a claim that the argument challenges.

B The first is a generalization that is simply stated, without any support being offered. The second is not a conclusion and is not offered in support of the first.

C The second is not presented as a challenge to the generalization that is given in the first statement. The argument does not seek to establish the first statement, but merely asserts it.

D The second is information offered in support of the argument's main conclusion rather than a statement offered in support of a position opposed by the argument.

E **Correct.** The first, stating a truism, is merely asserted and requires no support in the argument, for which it provides a foundation; the second is a piece of information meant to support the prediction that is the argument's main conclusion.

The correct answer is E.

CR02886

701. Last year a record number of new manufacturing jobs were created. Will this year bring another record? Well, **any new manufacturing job is created either within an existing company or by the start-up of a new company**. Within existing firms, new jobs have been created this year at well below last year's record pace. At the same time, there is considerable evidence that the number of new companies starting up will be no higher this year than it was last year and there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups. So clearly, **the number of new jobs created this year will fall short of last year's record**.

In the argument given, the two portions in boldface play which of the following roles?

(A) The first is presented as an obvious truth on which the argument is based; the second is the main conclusion of the argument.

(B) The first is presented as an obvious truth on which the argument is based; the second is a conclusion drawn in order to support the main conclusion of the argument.

(C) The first and the second each provide evidence in support of the main conclusion of the argument.

(D) The first is a generalization that the argument seeks to establish; the second is the main conclusion of the argument.

(E) The first is a generalization that the argument seeks to establish; the second is a conclusion that has been drawn in order to challenge that generalization.

Argument Construction

Situation Manufacturing jobs are created either within existing companies or in start-ups. Manufacturing jobs are being created at a much slower rate this year than last year. It seems likely that the number of new start-ups will not exceed last year's number and that the average number of new manufacturing jobs per start-up will not exceed last year's number. So fewer manufacturing jobs are likely to be created this year than last year.

Reasoning *What function is served by the statement that any new manufacturing job is created either within an existing company or by the start-up of a new company? What function is served by the statement that the number of new jobs created this year will fall short of last year's record number?* The first statement makes explicit a general background assumption that manufacturing jobs are created in just two ways. This assumption is used, along with other information, to support the argument's main conclusion. The second statement gives the argument's main conclusion, a prediction about how this year's manufacturing-job creation will compare with last year's.

A **Correct.** The first statement states a truism that is meant to provide support for the second statement; the second statement is the argument's main conclusion.

B The second statement is the argument's main conclusion, not an intermediate conclusion used to support the argument's main conclusion.

C The second statement is the main conclusion of the argument, not a statement used as support for the main conclusion.

D The argument merely asserts, and does not "seek to establish," the first statement. The first statement is a truism that does not need to be supported with evidence.

E The second statement is the argument's main conclusion and is not meant to present a challenge to the first statement. The first statement serves to provide partial support for the argument's main conclusion.

The correct answer is A.

CR00827

702. In Stenland, many workers have been complaining that they cannot survive on minimum wage, the lowest wage an employer is permitted to pay. The government is proposing to raise the minimum wage. Many employers who pay their workers the current minimum wage argue that if it is raised, unemployment will increase because they will no longer be able to afford to employ as many workers.

Which of the following, if true in Stenland, most strongly supports the claim that raising the minimum wage there will not have the effects that the employers predict?

(A) For any position with wages below a living wage, the difficulty of finding and retaining employees adds as much to employment costs as would raising wages.

(B) Raising the minimum wage does not also increase the amount employers have to contribute in employee benefits.

(C) When inflation is taken into account, the proposed new minimum wage is not as high as the current one was when it was introduced.

(D) Many employees currently being paid wages at the level of the proposed new minimum wage will demand significant wage increases.

(E) Many employers who pay some workers only the minimum wage also pay other workers wages that are much higher than the minimum.

Argument Evaluation

Situation Stenland's government proposes to raise the minimum wage because many workers have complained they cannot survive on it. But many employers claim that raising the minimum wage will increase unemployment.

Reasoning *What evidence would most strongly suggest that raising the minimum wage will not increase unemployment?* The employers with minimum-wage workers implicitly reason that because raising the minimum wage will increase the wages they have to pay each worker, it will reduce the number of workers they can afford to employ, and thus will increase unemployment. Evidence that the increased wage would not actually increase the employers' expenses per employee would cast doubt on their prediction, as would evidence that reducing the number of minimum-wage workers would not increase the nation's overall unemployment rate.

A **Correct.** This suggests that raising the minimum wage would make it easier for employers to find and retain minimum-wage employees, and that the savings would fully offset the cost of paying the higher wages. If there were such offsetting savings, the employers should still be able to afford to employ as many workers as they currently do.

B Even if raising the minimum wage does not increase employers' costs for employee benefits, paying the higher wage might still in itself substantially increase employers' overall costs per employee.

C For all we know, the current minimum wage might have substantially increased unemployment when it was introduced.

D These additional demands would probably raise employers' overall costs per employee, making it more likely that increasing the minimum wage would increase overall unemployment.

E Even if some workers receive more than the minimum wage, raising that wage could still raise employers' expenses for employing low-wage workers, making it too expensive for the employers to employ as many workers overall.

The correct answer is A.

CR07810

703. Biologists with a predilection for theory have tried—and largely failed—to define what it is that makes something a living thing. Organisms take in energy-providing materials and excrete waste products, but so do automobiles. Living things replicate and take part in evolution, but so do some computer programs. We must be open to the possibility that there are living things on other planets. Therefore, we will not be successful in defining what it is that makes something a living thing merely by examining living things on Earth—the only ones we know. Trying to do so is analogous to trying to specify _____.

Which of the following most logically completes the passage?

(A) the laws of physics by using pure mathematics
(B) what a fish is by listing its chemical components
(C) what an animal is by examining a plant
(D) what a machine is by examining a sketch of it
(E) what a mammal is by examining a zebra

Argument Construction

Situation Some biologists have tried, unsuccessfully, to find a theoretically defensible account of what it means for something to be a living thing. Some of the suggested definitions are too broad, because they include things that we would not regard as living. To find life on other planets, we must not narrow our conception of life by basing it simply on the kinds of life encountered on Earth.

Reasoning *Which of the five choices would be the logically most appropriate completion of the argument?* The argument points out that life-forms elsewhere in the universe may be very different from any of the life-forms on Earth. Both life-forms on Earth and life-forms discovered elsewhere would all qualify as members of a very large class, the class of all life-forms. Taking life-forms on Earth, a mere subset of the class of all life-forms, as representative of all life-forms would be a logical mistake and would not lead to success in defining what it means for something to be a living thing.

A This would not involve a logical mistake like the one already identified.
B This would not involve a logical mistake closely resembling the one already identified.
C Plants are not a subclass of the class of animals, so this does not involve the logical mistake of taking a subclass as representative of a larger class.
D This does not involve a logical mistake closely resembling the one already discussed.
E **Correct.** This involves the logical mistake of taking the class of zebras, a subclass of the class of mammals, as representative of the class of mammals. Logically, it resembles taking the class of life-forms on Earth as representative of the class of all life-forms.

The correct answer is E.

CR74541.01

704. For the period from the eighth century through the eleventh century, the shifting boundaries between Kingdom F and Kingdom G have not been well charted. Although a certain village in a border region between the two kingdoms usually belonged to Kingdom G, ninth-century artifacts found in the village were in the typical Kingdom F style of that time. It is unclear whether the village was actually a part of Kingdom F in the ninth century or whether it was a part of Kingdom G but had merely adopted Kingdom F's artistic styles under Kingdom F's cultural influence.

Which of the following would, if found in ninth-century sites in the village, best help in determining whether the village was a part of Kingdom F or Kingdom G in the ninth century?

(A) A trading contract written in the Kingdom G dialect

(B) A drawing of a dwelling complex known to have existed on the border of Kingdom F and Kingdom G in the ninth century

(C) Knives and other utensils made from metal typical of ninth-century mining sites in Kingdom F

(D) Some fragments of pottery made in the Kingdom G style from the seventh century out of materials only found in Kingdom F

(E) Numerous teeth from the ninth century with a chemical signature typical only of teeth from people who had grown up in the heart of Kingdom F

Argument Construction

Situation From the eighth century to the eleventh century, the boundaries between two kingdoms, F and G, shifted, but these shifts are not well documented. A certain village in a border region was usually part of Kingdom G, but ninth-century artifacts in the village are typical of the style of ninth-century artifacts from Kingdom F.

Reasoning *What evidence, if it were found in the ninth-century sites in the village, would be most helpful in determining which of the two kingdoms the village was a part of during that century?* Information strongly indicating that during the ninth century the village was primarily settled by people clearly from Kingdom F would lend support to the claim that the village was part of Kingdom F in the ninth century.

A A trading contract found at a ninth-century site in the village written in Kingdom G dialect would not settle whether the village was part of Kingdom G, because it could be the case that such a document would be written in that dialect even if the village were part of Kingdom F but regularly traded with Kingdom G.

B Finding at a ninth-century site in the village a drawing of a dwelling complex known to have been on the border of Kingdom F and Kingdom G would not be useful in determining to which kingdom the village belonged at the time. We are not told in which kingdom that dwelling complex existed, and even if we were told, it could be that a villager in the other kingdom had a drawing of that complex for some reason (e.g., the villager could have had it because that complex was going to be attacked in a skirmish between the kingdoms).

C Because there could have been trade between Kingdom F and Kingdom G, the fact that utensils made from metal typical of ninth-century mining sites in Kingdom F would not be very helpful in determining to which of the two kingdoms the village belonged in that century.

D If fragments of pottery from the seventh century made in the Kingdom G style but from materials found only in Kingdom F were discovered, it would be unclear in which kingdom the pottery had been made. Given that the fragments may be from two centuries earlier than the period in question, and that we do not even know what kingdom the pottery was created in, these fragments would be of no use in determining to which kingdom the village belonged in the ninth century.

E **Correct.** Although the mere presence of people from Kingdom F in the village would not provide strong support for the claim that the village was part of Kingdom F during the ninth century—the village could have shifted from Kingdom F to Kingdom G while maintaining much of its Kingdom F population—the presence of significant numbers of people from the heart of Kingdom F would support the claim that there was widespread migration of people from Kingdom F to the village. This is what one might reasonably expect if the village was part of Kingdom F during the ninth century. The discovery of numerous teeth that clearly belonged to people who grew up in the heart of Kingdom F in the ninth century would support the claim that many such people lived in the village during that century.

The correct answer is E.

CR02829

705. Sammy: For my arthritis, I am going to try my aunt's diet: large amounts of wheat germ and garlic. She was able to move more easily right after she started that diet.

Pat: When my brother began that diet, his arthritis got worse. But he has been doing much better since he stopped eating vegetables in the nightshade family, such as tomatoes and peppers.

Which of the following, if true, would provide a basis for explaining the fact that Sammy's aunt and Pat's brother had contrasting experiences with the same diet?

(A) A change in diet, regardless of the nature of the change, frequently brings temporary relief from arthritis symptoms.

(B) The compounds in garlic that can lessen the symptoms of arthritis are also present in tomatoes and peppers.

(C) Arthritis is a chronic condition whose symptoms improve and worsen from time to time without regard to diet.

(D) In general, men are more likely to have their arthritis symptoms alleviated by avoiding vegetables in the nightshade family than are women.

(E) People who are closely related are more likely to experience the same result from adopting a particular diet than are people who are unrelated.

Argument Construction

Situation Sammy's aunt's arthritis apparently improved after she consumed large amounts of wheat germ and garlic. Pat's brother's arthritis deteriorated after he followed the same diet. Since he stopped eating vegetables in the nightshade family, such as tomatoes and peppers, his arthritis has improved.

Reasoning *What could account for the fact that Sammy's aunt's arthritis improved and Pat's brother's arthritis got worse after they both followed the wheat germ and garlic diet?* The fact that a person has a health improvement following a diet is, by itself, very weak evidence for the claim that the diet caused the improvement. More generally, the fact that one event follows another is seldom, by itself, evidence that the earlier event caused the later. This applies to both the experience of Sammy's aunt and that of Pat's brother with the wheat germ and garlic diet.

A In theory, this could be somewhat relevant to Sammy's aunt's experience but not to Pat's brother's experience. It is, however, insufficient to explain either.

B Even if this is true, it might be the case that a large quantity of the compounds in question must be consumed in concentrated form to benefit arthritis. No evidence is given to indicate whether this is so. Regardless, the puzzle as to why the wheat germ and garlic diet was followed by arthritis improvement in one case and not in the other remains.

C **Correct.** If we know there are typically fluctuations in the severity of arthritis symptoms and these can occur independent of diet, then the divergent experiences of the two people can be attributed to such fluctuations—even if it is conceded that some diets can affect arthritis symptoms in some manner. The wheat germ and garlic diet may, or may not, be such a diet.

D This could throw light on Pat's brother's experience but not on Sammy's aunt's experience.

E If this is correct, it is still far too general to provide a basis for explaining why the experiences of the two people were different. Does it apply to arthritis? We're not told. Nor are we told that it applies to the wheat germ and garlic diet. Is Pat's brother closely related to Sammy's aunt? We don't know.

The correct answer is C.

CR05756

706. Infotek, a computer manufacturer in Katrovia, has just introduced a new personal computer model that sells for significantly less than any other model. Market research shows, however, that very few Katrovian households without personal computers would buy a computer, regardless of its price. Therefore, introducing the new model is unlikely to increase the number of computers in Katrovian homes.

Which of the following is an assumption on which the argument depends?

(A) Infotek achieved the lower price of the new model by using components of lower quality than those used by other manufacturers.

(B) The main reason cited by consumers in Katrovia for replacing a personal computer is the desire to have an improved model.

(C) Katrovians in households that already have computers are unlikely to purchase the new Infotek model as an additional computer for home use.

(D) The price of other personal computers in Katrovia is unlikely to drop below the price of Infotek's new model in the near future.

(E) Most personal computers purchased in Katrovia are intended for home use.

Argument Construction

Situation In Katrovia, a new personal computer model costs less than any other model. But market research shows that very few Katrovian households without personal computers would buy even cheap ones.

Reasoning *What must be true in order for the stated facts to support the conclusion that introducing the new computer model is unlikely to increase the overall number of computers in Katrovian homes?* The market research supports the conclusion that no new computer model is likely to significantly increase the number of computers in Katrovian homes that currently lack computers. But the overall number of computers in Katrovian homes will still increase if Katrovian homes that already have computers buy additional computers while keeping their existing ones. So the argument has to assume that the new computer model will not increase the number of additional computers purchased for Katrovian homes that already have computers.

A Even if Infotek used high-quality components in the new computer model, Katrovians might still refuse to buy it.

B Replacing a personal computer does not change the overall number of personal computers in homes, so Katrovians' motives for replacing their computers are irrelevant to the argument.

C **Correct.** As explained above, unless computers of the new model are purchased as additional computers for Katrovian homes that already have computers, the new model's introduction is unlikely to increase the overall number of computers in Katrovian homes.

D The assumption that other personal computer prices would stay relatively high does not help establish the link between its premises and its conclusion. If answer choice D were false, the argument would be no weaker than it is without any consideration of other computers' potential prices.

E If most personal computers purchased in Katrovia were not intended for home use, then the new model's introduction would be even less likely to increase the number of personal computers in Katrovian homes. So the argument does not depend on assuming that most of the computers purchased are for home use.

The correct answer is C.

CR05501

707. Fast-food restaurants make up 45 percent of all restaurants in Canatria. Customers at these restaurants tend to be young; in fact, studies have shown that the older people get, the less likely they are to eat in fast-food restaurants. Since the average age of the Canatrian population is gradually rising and will continue to do so, the number of fast-food restaurants is likely to decrease.

Which of the following, if true, most seriously weakens the argument?

(A) Fast-food restaurants in Canatria are getting bigger, so each one can serve more customers.

(B) Some older people eat at fast-food restaurants more frequently than the average young person.

(C) Many people who rarely eat in fast-food restaurants nevertheless eat regularly in restaurants.

(D) The overall population of Canatria is growing steadily.

(E) As the population of Canatria gets older, more people are eating at home.

Argument Evaluation

Situation In Canatria, the older people get, the less likely they are to eat in fast-food restaurants. The average age of Canatrians is increasing.

Reasoning *What evidence would most weaken the support provided by the cited facts for the prediction that the number of fast-food restaurants in Canatria is likely to decrease?* The argument implicitly reasons that since studies have shown that Canatrians tend to eat in fast-food restaurants less as they get older, and since Canatrians are getting older on average, the proportion of Canatrians eating in fast-food restaurants will decline. The argument assumes that this means the overall number of fast-food restaurant customers will decline and that demand will decrease enough to reduce the number of fast-food restaurants that can sustain profitability. Consequently, fewer new fast-food restaurants will open or more old ones will close, or both. Thus, the number of fast-food restaurants in Canatria will fall. Any evidence casting doubt on any inference in this chain of implicit reasoning will weaken the argument.

A This strengthens the argument by providing additional evidence that the total number of fast-food restaurants will decrease. If the average number of customers per fast-food restaurant is increasing, then fewer fast-food restaurants will be needed to serve the same—or a lesser—number of customers.

B Even if a few individuals do not follow the general trends described, those trends could still reduce the overall demand for and number of fast-food restaurants.

C The argument is only about fast-food restaurants, not restaurants of other types.

D **Correct.** This suggests that even if the proportion of Canatrians eating at fast-food restaurants declines, the total number doing so may not decline. Thus, the total demand for and profitability of fast-food restaurants may not decline either, so the total number of fast-food restaurants in Canatria may not decrease.

E If anything, this strengthens the argument by pointing out an additional trend likely to reduce the demand for, and thus the number of, fast-food restaurants in Canatria.

The correct answer is D.

CR04805

708. Last year a chain of fast-food restaurants, whose menu had always centered on hamburgers, added its first vegetarian sandwich, much lower in fat than the chain's other offerings. Despite heavy marketing, the new sandwich accounts for a very small proportion of the chain's sales. The sandwich's sales would have to quadruple to cover the costs associated with including it on the menu. Since such an increase is unlikely, the chain would be more profitable if it dropped the sandwich.

Which of the following, if true, most seriously weakens the argument?

(A) Although many of the chain's customers have never tried the vegetarian sandwich, in a market research survey most of those who had tried it reported that they were very satisfied with it.

(B) Many of the people who eat at the chain's restaurants also eat at the restaurants of competing chains and report no strong preference among the competitors.

(C) Among fast-food chains in general, there has been little or no growth in hamburger sales over the past several years as the range of competing offerings at other restaurants has grown.

(D) When even one member of a group of diners is a vegetarian or has a preference for low-fat food, the group tends to avoid restaurants that lack vegetarian or low-fat menu options.

(E) An attempt by the chain to introduce a lower-fat hamburger failed several years ago, since it attracted few new customers and most of the chain's regular customers greatly preferred the taste of the regular hamburgers.

Argument Evaluation

Situation Last year a fast-food restaurant chain specializing in hamburgers started offering a low-fat vegetarian sandwich and marketed it heavily. The new sandwich's sales are far too low to cover the costs associated with including it on the menu.

Reasoning *What evidence would most weaken the support provided by the cited facts for the prediction that it would be more profitable for the chain to drop the sandwich?* The implicit argument is that since the new sandwich's sales are too low to cover the costs associated with including it on the menu, offering the sandwich diminishes the chain's profitability and will continue to do so if the sandwich continues to be offered. This reasoning assumes that the sandwich provides the chain no substantial indirect financial benefits except through its direct sales. It also assumes that the sandwich's sales will not increase sufficiently to make the sandwich a viable product. Any evidence casting doubt on either of these assumptions will weaken the argument.

A This gives information only about the respondents to the survey who had tried the sandwich (possibly very few), who were probably already more open to liking a vegetarian sandwich than any of the chain's other customers. So their responses are probably unrepresentative of the chain's customers in general and do not suggest that the sandwich has enough market potential.

B Although the issue of competition with other restaurants is not raised in the information provided, this new information, if anything, strengthens the argument, by suggesting that the introduction of the new sandwich has not significantly enhanced customer preference for eating at the restaurants that offer the new sandwich.

C This suggests that the cause of stagnation in fast-food restaurants' hamburger sales has been competition from non-fast-food restaurants, but not that the non-fast-food restaurants competed by offering vegetarian options.

D **Correct.** This suggests that even if the sandwich's sales are low, it may indirectly increase the chain's overall profits by encouraging large groups to eat at the chain.

E This strengthens the argument by suggesting that the chain's customers are generally not interested in low-fat menu options such as the new sandwich.

The correct answer is D.

CR03727

709. Transportation expenses accounted for a large portion of the total dollar amount spent on trips for pleasure by residents of the United States in 1997, and about half of the total dollar amount spent on transportation was for airfare. However, the large majority of United States residents who took trips for pleasure in 1997 did not travel by airplane but used other means of transportation.

If the statements above are true, which of the following must also be true about United States residents who took trips for pleasure in 1997?

(A) Most of those who traveled by airplane did so because the airfare to their destination was lower than the cost of other available means of transportation.

(B) Most of those who traveled by airplane did so because other means of transportation to their destination were unavailable.

(C) Per mile traveled, those who traveled by airplane tended to spend more on transportation to their destination than did those who used other means of transportation.

(D) Overall, people who did not travel by airplane had lower average transportation expenses than people who did.

(E) Those who traveled by airplane spent about as much, on average, on other means of transportation as they did on airfare.

Argument Construction

Situation In 1997, about half of total transportation spending by U.S. residents taking trips for pleasure was for airfare. But the large majority of U.S. residents who took trips for pleasure in 1997 did not travel by airplane.

Reasoning *What can be deduced from the stated facts?* The information provided indicates that among U.S. residents who took trips for pleasure in 1997, those who traveled by airplane were a small minority. Yet this small minority's spending for airfare accounted for half of all transportation spending among residents taking trips for pleasure. It follows that on average, those who traveled by airplane must have spent far more per person on transportation than those who did not travel by airplane.

A This does not follow logically from the information given. Most of those who traveled by airplane may have done so even if flying was more expensive than other modes of transportation—for example, because flying was faster or more comfortable.

B This does not follow from the information given. Most of those who traveled by airplane may have done so even if many other modes of transportation were available—the other modes may all have been less desirable.

C This does not follow from the information given. Those who traveled by airplane may have traveled much farther on average than those who used other means of transportation, so their transportation spending per mile traveled need not have been greater.

D **Correct.** As explained above, those who traveled by airplane must have spent more per person on transportation than those who did not travel by airplane, on average. In other words, those who did not travel by airplane must have had lower average transportation expenses than those who did.

E This does not follow from the information given. Although half the total dollar spending on transportation was for airfare, much of the transportation spending that was not for airfare was by the large majority of U.S. residents who did not travel by airplane.

The correct answer is D.

CR12051

710. Voters commonly condemn politicians for being insincere, but politicians often must disguise their true feelings when they make public statements. If they expressed their honest views—about, say, their party's policies—then achieving politically necessary compromises would be much more difficult. Clearly, the very insincerity that people decry shows that our government is functioning well.

Which of the following, if true, most seriously undermines this reasoning?

(A) Achieving political compromises is not all that is necessary for the proper functioning of a government.

(B) Some political compromises are not in the best long-term interest of the government.

(C) Voters often judge politicians by criteria other than the sincerity with which they express their views.

(D) A political party's policies could turn out to be detrimental to the functioning of a government.

(E) Some of the public statements made by politicians about their party's policies could in fact be sincere.

Argument Evaluation

Situation Politicians must often make insincere public statements because expressing their true feelings would make it harder for them to achieve politically necessary compromises.

Reasoning *What would suggest that the argument's premises do not establish that politicians' insincerity shows our government is functioning well?* The implicit reasoning is that insincerity helps politicians achieve politically necessary compromises, and these compromises help our government to function well, so insincerity must show that our government is functioning well. Evidence that these necessary compromises do not ensure that our government functions well would undermine the argument's reasoning, as would evidence that politicians' insincerity has other substantial effects that hinder the government's functioning.

A **Correct.** If governments may function poorly even when insincerity allows necessary political compromises to be made, then the argument's premises do not establish that politicians' insincerity shows our government is functioning well.

B The argument does not require that all political compromises help government to function well, only that politically necessary compromises do.

C Even if voters often judge politicians by criteria other than their sincerity, they may also often decry politicians' insincerity, not realizing or caring that such insincerity helps the government function well.

D Even if a political party's policies impair the government's functioning, politically necessary compromises by politicians in that party could improve the government's functioning.

E Even if politicians sometimes speak sincerely about their party's policies, their general willingness to be insincere as needed to achieve politically necessary compromises could be a sign that the government is functioning well.

The correct answer is A.

CR06728

711. To reduce waste of raw materials, the government of Sperland is considering requiring household appliances to be broken down for salvage when discarded. To cover the cost of salvage, the government is planning to charge a fee, which would be imposed when the appliance is first sold. Imposing the fee at the time of salvage would reduce waste more effectively, however, because consumers tend to keep old appliances longer if they are faced with a fee for discarding them.

Which of the following, if true, most seriously weakens the argument?

(A) Increasing the cost of disposing of an appliance properly increases the incentive to dispose of it improperly.

(B) The fee provides manufacturers with no incentive to produce appliances that are more durable.

(C) For people who have bought new appliances recently, the salvage fee would not need to be paid for a number of years.

(D) People who sell their used, working appliances to others would not need to pay the salvage fee.

(E) Many nonfunctioning appliances that are currently discarded could be repaired at relatively little expense.

Evaluation of a Plan

Situation A government is considering requiring household appliances to be broken down for salvage when discarded. To cover the salvage costs, the government plans to charge a fee on appliance sales.

Reasoning *What would suggest that charging the fee at the time of salvage would less effectively reduce waste than charging the fee at the time of sale would?* The argument is that charging the fee at the time of salvage would reduce waste of raw materials because it would encourage consumers to keep their appliances longer before salvaging them. This argument could be weakened by pointing out other factors that might increase waste if the fee is charged at the time of salvage or reduce waste if the fee is charged at the time of sale.

A **Correct.** This suggests that charging the fee at the time of salvage rather than the time of sale would encourage consumers to discard their appliances illegally, thereby increasing waste of raw materials by reducing the proportion of discarded appliances that are salvaged.

B This factor would remain the same regardless of whether the fee was charged at the time of sale or the time of salvage.

C This might be a reason for consumers to prefer the fee be charged at the time of salvage rather than the time of sale, but it does not suggest that charging the fee at the time of salvage would reduce waste less effectively.

D This provides an additional reason to expect that charging the fee at the time of salvage would help reduce waste, so it strengthens rather than weakens the argument.

E This would give consumers an additional reason to keep using their old appliances and postpone paying a fee at the time of salvage, so it strengthens rather than weakens the argument.

The correct answer is A.

CR02866

712. When there is less rainfall than normal, the water level of Australian rivers falls and the rivers flow more slowly. Because algae whose habitat is river water grow best in slow-moving water, the amount of algae per unit of water generally increases when there has been little rain. By contrast, however, following a period of extreme drought, algae levels are low even in very slow-moving river water.

Which of the following, if true, does most to explain the contrast described above?

(A) During periods of extreme drought, the populations of some of the species that feed on algae tend to fall.

(B) The more slowly water moves, the more conducive its temperature is to the growth of algae.

(C) When algae populations reach very high levels, conditions within the river can become toxic for some of the other species that normally live there.

(D) Australian rivers dry up completely for short intervals in periods of extreme drought.

(E) Except during periods of extreme drought, algae levels tend to be higher in rivers in which the flow has been controlled by damming than in rivers that flow freely.

Argument Construction

Situation When Australian rivers flow slowly due to little rain, algae populations in those rivers increase. But after periods of extreme drought, algae levels are low even in water moving at speeds that would normally show population increases.

Reasoning *What would explain the contrast between algae levels in slow-moving water resulting from little rain and slow-moving water after a drought?* There must be some difference between what happens during periods in which there is simply less rainfall than normal and periods in which there is extreme drought, a difference that affects the algae population.

A This indicates one of the consequences of drought, and slightly suggests that this might be due to a lower algae level. But it does nothing to explain why algae levels might be lower after a drought.

B This could explain why some rivers that are slow-moving and have little water might have a high algae level—but not why the algae level is low in such rivers after a period of drought.

C This explains why levels of other species might be low when algae populations are high, not why algae populations are high when there is little rain, but low following a period of extreme drought.

D **Correct.** This statement properly identifies something that helps explain the contrast. According to the information given, the habitat of the algae under discussion is river water. If the river dries up, the algae will probably not survive. Then after the drought, algae population levels would likely take a while to rise again.

E This emphasizes that there is a contrast between what happens to algae during periods of extreme drought and what happens to them at other times, but it does not help explain that contrast.

The correct answer is D.

CR04924

713. Increased use of incineration is sometimes advocated as a safe way to dispose of chemical waste. But opponents of incineration point to the 40 incidents involving unexpected releases of dangerous chemical agents that were reported just last year at two existing incinerators commissioned to destroy a quantity of chemical waste material. Since designs for proposed new incinerators include no additional means of preventing such releases, leaks will only become more prevalent if use of incineration increases.

Which of the following, if true, most seriously weakens the argument?

(A) At the two incinerators at which leaks were reported, staff had had only cursory training on the proper procedures for incinerating chemical waste.

(B) Other means of disposing of chemical waste, such as chemical neutralization processes, have not been proven safer than incineration.

(C) The capacity of existing incinerators is sufficient to allow for increased incineration of chemical waste without any need for new incinerators.

(D) The frequency of reports of unexpected releases of chemical agents at newly built incinerators is about the same as the frequency at older incinerators.

(E) In only three of the reported incidents of unexpected chemical leaks did the releases extend outside the property on which the incinerators were located.

Argument Evaluation

Situation Last year, at two chemical waste incinerators, there were forty reported incidents involving unexpected releases of dangerous chemicals. Designs for proposed new incinerators include no additional safeguards against such releases. Therefore, increased use of incineration will likely make such releases more prevalent.

Reasoning *What would undermine the support provided for the conclusion that leaks will become more prevalent if more chemical waste is disposed of through incineration?* The argument draws a general conclusion about chemical waste incineration from evidence about only two particular incinerators. This reasoning would be undermined by any evidence that the leaks at those two incinerators were the result of something other than insufficient safeguards against such releases.

A **Correct.** If the staff training at the two incinerators was cursory, then the leaks may have been the results of staff not knowing how to use safeguards with which the incinerators are equipped that, if properly used, would have prevented the release of dangerous chemicals. Therefore, if staff at newer incinerators will be better trained, leaks might not become more prevalent even if chemical waste incineration becomes more common.

B Other chemical waste disposal methods may be safer than incineration even if no one has proven so; and even if they're not safer overall, they may involve fewer leaks.

C Continuing to use existing incinerators might well produce just as many leaks as switching to new incinerators would.

D This suggests that new incinerators produce as many leaks as older incinerators do, a finding that provides additional evidence that increased incineration even with proposed new incinerators would lead to more leaks.

E The argument is not about how far the releases from leaks extend, only about how many of them are likely to occur.

The correct answer is A.

CR10049

714. Public health expert: **Increasing the urgency of a public health message may be counterproductive**. In addition to irritating the majority who already behave responsibly, **it may undermine all government pronouncements on health by convincing people that such messages are overly cautious**. And there is no reason to believe that those who ignore measured voices will listen to shouting.

The two sections in boldface play which of the following roles in the public health expert's argument?

(A) The first is a conclusion for which support is provided, but is not the argument's main conclusion; the second is an unsupported premise supporting the argument's main conclusion.

(B) The first is a premise supporting the only explicit conclusion; so is the second.

(C) The first is the argument's main conclusion; the second supports that conclusion and is itself a conclusion for which support is provided.

(D) The first is a premise supporting the argument's only conclusion; the second is that conclusion.

(E) The first is the argument's only explicit conclusion; the second is a premise supporting that conclusion.

Argument Construction

Situation A public health expert argues against increasing the urgency of public health messages by pointing out negative effects that may arise from such an increase, as well as by questioning its efficacy.

Reasoning *What roles are played in the argument by the two claims in boldface?* The first claim in boldface states that increasing the urgency of public health messages may be counterproductive. After making this claim, the public health expert mentions two specific reasons this could be so: it could irritate people who already behave responsibly, and it could convince people that all public health messages are too cautious. (The latter reason in the second claim in boldface). The phrase [*i*]*n addition to* indicates that neither claim in the second sentence is intended to support or explain the other. However, since each claim in the second sentence gives a reason to believe the claim in the first sentence, each independently supports the first sentence as a conclusion. The word [*a*]*nd* beginning the third sentence reveals that its intended role in the argument is the same as that of the two claims in the second sentence.

A Everything stated after the first sentence is intended to help support it, so the first sentence is the argument's main conclusion.

B Everything stated after the first sentence is intended to help support it, so the first sentence is a conclusion, not a premise.

C Each of the three claims in the second and third sentences is presented as an independent reason to accept the general claim in the first sentence. Therefore, nothing in the passage is intended to support the second statement in boldface as a conclusion.

D Everything stated after the first sentence is intended to help support it, so the first sentence is a conclusion, not a premise.

E **Correct.** Each of the three claims in the second and third sentences is presented as an independent reason to accept the general claim in the first sentence. Thus, each of those claims is a premise supporting the claim in the first sentence as the argument's only conclusion.

The correct answer is E.

CR01163

715. Several industries have recently switched at least partly from older technologies powered by fossil fuels to new technologies powered by electricity. It is thus evident that less fossil fuel is being used as a result of the operations of these industries than would have been used if these industries had retained their older technologies.

Which of the following, if true, most strengthens the argument above?

(A) Many of the industries that have switched at least partly to the new technologies have increased their output.

(B) Less fossil fuel was used to manufacture the machinery employed in the new technologies than was originally used to manufacture the machinery employed in the older technologies.

(C) More electricity is used by those industries that have switched at least partly to the new technologies than by those industries that have not switched.

(D) Some of the industries that have switched at least partly to the new technologies still use primarily technologies that are powered by fossil fuels.

(E) The amount of fossil fuel used to generate the electricity needed to power the new technologies is less than the amount that would have been used to power the older technologies.

Argument Evaluation

Situation Several industries have now switched, at least partly, to technologies using electricity rather than fossil fuels. Thus, less fossil fuel will be consumed as a result of the operation of these industries than otherwise would have been.

Reasoning *Which option most strengthens the argument?* One way to strengthen an argument is to eliminate or minimize one of its flaws or weaknesses. Because the conclusion is stated in terms of "fossil fuel consumed *as a result* of the operation of these industries," the claim would encompass even any fossil fuel that might be used to generate the electricity that the newer technologies use. Yet the premise of the argument does not address this issue. So the argument is strengthened if it turns out that less fossil fuel was used to produce the electricity than would have been used to power the older technologies.

A In an indirect way, this option slightly weakens rather than strengthens the argument. For *if* fossil fuels are used to produce the electricity now used by the industries and *if* it is because of these newer technologies that output has increased, the argument's conclusion is *less* likely.

B It does not matter how much fossil fuel was used to manufacture the older technologies *originally*. That has no bearing on whether more fossil fuel would have been expended as a result of the *continued operation* of the industries if the partial switch to newer technologies had not occurred.

C This is what we would expect, but it in no way strengthens the argument.

D This may seem to weaken the argument by indicating that the switch from older technologies will have less of an impact on fossil fuel consumption by these industries than we might have assumed. But since the conclusion makes no claim about how much consumption has been reduced, it is not clear that this option has any bearing on the strength of the argument one way or the other.

E **Correct.** This is the option that most strengthens the argument.

The correct answer is E.

CR00792

716. The difference in average annual income in favor of employees who have college degrees, compared with those who do not have such degrees, doubled between 1980 and 1990. Some analysts have hypothesized that increased competition between employers for employees with college degrees drove up income for such employees.

Which of the following, if true, most seriously undermines the explanation described above?

(A) During the 1980s a growing percentage of college graduates, unable to find jobs requiring a college degree, took unskilled jobs.

(B) The average age of all employees increased slightly during the 1980s.

(C) The unemployment rate changed very little throughout most of the 1980s.

(D) From 1980 to 1990 the difference in average income between employees with advanced degrees and those with bachelor's degrees also increased.

(E) During the 1980s there were some employees with no college degree who earned incomes comparable to the top incomes earned by employees with a college degree.

Argument Evaluation

Situation The amount by which average annual income for employees with college degrees exceeds that for employees without such degrees doubled between 1980 and 1990.

Reasoning *What evidence would most strongly suggest that increased competition among employers for employees with college degrees does not explain the relative increase in those employees' incomes?* Such increased competition could not explain the relative increase in income for employees with college degrees if the competition did not actually increase, or if such competition occurred but did not result in employers paying higher wages or salaries, or if the increase in competition to hire employees without college degrees was even greater. So evidence that any of those conditions existed would undermine the analysts' explanation.

A **Correct.** This suggests that the supply of college graduates grew relative to employers' demand for them, and hence that employers' competition for college-educated employees did not actually increase.

B The average age might have increased equally for employees with college degrees and for those without them, so the increase is not clearly relevant to explaining why the difference between these two groups' average incomes grew.

C Even if the overall unemployment rate did not change, competition for college-educated employees could have increased while competition for other employees decreased.

D This statement gives information comparing income trends among two groups of those with college degrees, and is irrelevant to the comparison of income trends for those with college degrees and those without college degrees.

E Even if there was strong competition and high pay for certain unusual types of employees without college degrees, increasing competition for employees with college degrees might have explained the overall growing difference in average pay between employees with college degrees and those without.

The correct answer is A.

CR01239

717. Which of the following most logically completes the passage?

According to the last pre-election poll in Whippleton, most voters believe that the three problems government needs to address, in order of importance, are pollution, crime, and unemployment. Yet in the election, candidates from parties perceived as strongly against pollution were defeated, while those elected were all from parties with a history of opposing legislation designed to reduce pollution. These results should not be taken to indicate that the poll was inaccurate, however, since _____.

(A) some voters in Whippleton do not believe that pollution needs to be reduced

(B) every candidate who was defeated had a strong antipollution record

(C) there were no issues other than crime, unemployment, and pollution on which the candidates had significant differences of opinion

(D) all the candidates who were elected were perceived as being stronger against both crime and unemployment than the candidates who were defeated

(E) many of the people who voted in the election refused to participate in the poll

Argument Construction

Situation A pre-election poll indicated that most voters believed the three problems government needs to address, in order of importance, are pollution, crime, and unemployment. But in the election, candidates from parties with a history of opposing anti-pollution legislation beat candidates from parties perceived as more strongly against pollution.

Reasoning *What would most help explain how the poll might have been accurate despite the election results?* Since the poll indicated that voters were most concerned about pollution, it suggested that candidates from anti-pollution parties would be more likely to be elected, other things being equal—and yet those candidates were not elected. There are many possible explanations for this outcome that are compatible with the poll having been accurate. For example, voters might have been swayed by the candidates' personalities, qualifications, or advertising more than by their positions on the issues. Or some candidates might have convinced voters that their personal positions on the issues were different from those of their parties. Or voters might have chosen candidates based on their positions on crime and unemployment, considering those issues together more important than pollution alone. Any statement suggesting that any such factors explained the election results would logically complete the passage by providing a reason to believe that the poll could have been accurate despite those results.

A If the number of voters who did not believe that pollution needed to be reduced was large enough to explain the election results, then the poll was probably inaccurate. So this does not explain how the poll might have been accurate despite those results.

B This eliminates the possibility that candidates were defeated for having weak antipollution records conflicting with their parties' antipollution stances, so it eliminates one explanation of how the poll might have been accurate despite the election results. Thus, it slightly weakens the conclusion of the argument instead of providing a premise to support it.

C This eliminates the possibility that differences of opinion among the candidates on these other issues might explain the election results, but it does not explain how the poll could have been accurate despite the election results.

D **Correct.** The poll indicated that voters believed that the government needs to address crime and unemployment as well as pollution. So if the poll was accurate, the election outcome might have resulted from voters considering candidates' positions on crime and unemployment to be jointly more important than their positions on pollution.

E If anything, this provides a reason to doubt that the poll accurately reflected voters' opinions. It does not explain how the poll might have accurately reflected those opinions despite the election results.

The correct answer is D.

CR01153

718. Manufacturing plants in Arundia have recently been acquired in substantial numbers by investors from abroad. Arundian politicians are proposing legislative action to stop such investment, justifying the proposal by arguing that foreign investors, opportunistically exploiting a recent fall in the value of the Arundian currency, were able to buy Arundian assets at less than their true value.

Which of the following, if true, casts the most serious doubt on the adequacy of the Arundian politicians' justification for the proposed legislation?

(A) The Arundian government originally welcomed the fall in the value of the Arundian currency because the fall made Arundian exports more competitive on international markets.

(B) Foreign investors who acquired Arundian manufacturing plants generally did so with no intention of keeping and running those plants over the long term.

(C) Without the recent fall in the value of the Arundian currency, many of the Arundian assets bought by foreign investors would have been beyond the financial reach of those investors.

(D) In Concordia, a country broadly similar to Arundia, the share of manufacturing assets that is foreign-controlled is 60 percent higher than it is in Arundia.

(E) The true value of an investment is determined by the value of the profits from it, and the low value of the Arundian currency has depressed the value of any profits earned by foreign investors from Arundian assets.

Argument Evaluation

Situation After a recent fall in the value of Arundian currency, foreign investors have been acquiring many Arundian manufacturing plants. Arundian politicians are proposing legislation to stop such investment.

Reasoning *What would most undermine the Arundian politicians' justification for the proposed legislation?* The politicians are justifying their proposal by claiming that foreign investors have been exploiting the fall in the currency's value by buying Arundian assets at less than their *true value* (whatever that means). Any evidence that their claim is false or meaningless would undermine their justification for the proposal, as would any evidence that the claim, even if true, does not provide a good reason to stop the foreign investments.

A This suggests that the foreign investors got a good deal on the manufacturing plants, since it provides evidence that those plants will now be more competitive and profitable. So, if anything, it supports the politicians' justification for their proposal rather than undermining it.

B This suggests that the foreign investors generally believe the manufacturing plants are undervalued, and intend to sell them at a profit as soon as the currency rises enough. So it supports the politicians' justification for their proposal rather than undermining it.

C This suggests that the recent fall in the currency's value made Arundian assets cost less than usual for foreign investors, thus arguably allowing the investors to buy the assets at less than their *true value*. So, if anything, it supports the politicians' justification for their proposal rather than undermining it.

D The Arundian politicians might consider the example of Concordia to be a warning of the disaster that could befall Arundia unless the legislation is enacted. So the situation in Concordia might be cited as support for the politicians' justification of their proposal.

E **Correct**. This implies that the fall in the Arundian currency's value has reduced the *true value* of Arundian manufacturing plants and any profits they may make, so it undermines the politicians' claim that the foreign investors exploited the fall in the currency's value to acquire the plants for less than their *true value*.

The correct answer is E.

CR04964

719. Proposed new safety rules for the Beach City airport would lengthen considerably the minimum time between takeoffs from the airport. In consequence, the airport would be able to accommodate 10 percent fewer flights than currently use the airport daily. The city's operating budget depends heavily on taxes generated by tourist spending, and most of the tourists come by plane. Therefore, the proposed new safety rules, if adopted, will reduce the revenue available for the operating budget.

The argument depends on assuming which of the following?

(A) There are no periods of the day during which the interval between flights taking off from the airport is significantly greater than the currently allowed minimum.

(B) Few, if any, of the tourists who use the Beach City airport do so when their main destination is a neighboring community and not Beach City itself.

(C) If the proposed safety rules are adopted, the reduction in tourist numbers will not result mainly from a reduction in the number of tourists who spend relatively little in Beach City.

(D) Increasing the minimum time between takeoffs is the only way to achieve necessary safety improvements without a large expenditure by the city government on airport enhancements.

(E) The response to the adoption of the new safety rules would not include an increase in the number of passengers per flight.

Argument Construction

Situation Proposed safety rules for a city airport would reduce the number of daily flights the airport can accommodate. The city's operating budget depends heavily on taxes generated by tourists, who mostly come by plane. Therefore, adopting the safety rules will result in lower revenue available for the operating budget.

Reasoning *What must be true in order for the cited facts to support the conclusion that the proposed rules would reduce the revenue for the operating budget?* The implicit reasoning is that since the rules would reduce the number of flights that can be accommodated, they would thereby reduce the number of tourists arriving by plane, which in turn would reduce the tax revenue that tourist spending generates for the operating budget. This assumes that the actual number of daily flights would fall along with the number that the airport can accommodate; that fewer daily flights would mean fewer people flying into the airport; that fewer people flying into the airport would mean fewer tourists flying into the airport; that fewer tourists flying into the airport would mean fewer tourists visiting the city; that fewer tourists visiting the city would mean less taxable spending by tourists; and that less taxable spending by tourists would mean less revenue overall for the operating budget.

A Even if flights depart the airport less frequently during some periods of the day, increasing the minimum time between flights at busy times of day could reduce the total number of daily flights from the airport.

B Even if half the tourists flying into the airport were bound for other nearby towns, the other half could still spend enough in town to generate lots of revenue for the operating budget.

C It is possible that most tourists spend relatively little in the city, but a few spend a lot. In that case, even if a reduction in tourist numbers resulted mainly from a declining number of tourists who spend relatively little, it could also greatly reduce the already small number of tourists who spend a lot.

D This suggests that the proposed rules might be financially better for the city than any alternative way to improve safety, whereas the argument's conclusion is that the proposed rules are financially disadvantageous.

E **Correct.** If adopting the proposed rules would result in a large increase in the number of passengers per flight, fewer daily flights would not necessarily mean fewer passengers or fewer tourists overall.

The correct answer is E.

CR01096

720. The introduction of new drugs into the market is frequently prevented by a shortage of human subjects for the clinical trials needed to show that the drugs are safe and effective. Since the lives and health of people in future generations may depend on treatments that are currently experimental, practicing physicians are morally in the wrong when, in the absence of any treatment proven to be effective, they fail to encourage suitable patients to volunteer for clinical trials.

Which of the following, if true, casts most doubt on the conclusion of the argument?

(A) Many drugs undergoing clinical trials are intended for the treatment of conditions for which there is currently no effective treatment.

(B) Patients do not share the physician's professional concern for public health, but everyone has a moral obligation to alleviate suffering when able to do so.

(C) Usually, half the patients in a clinical trial serve as a control group and receive a nonactive drug in place of the drug being tested.

(D) An experimental drug cannot legally be made available to patients unless those patients are subjects in clinical trials of the drug.

(E) Physicians have an overriding moral and legal duty to care for the health and safety of their current patients.

Argument Evaluation

Situation A shortage of human subjects for clinical trials needed to show that new drugs are safe and effective often prevents those drugs from being introduced into the market. The lives and health of future generations may depend on treatments that are now experimental.

Reasoning *What would cast doubt on the judgment that doctors are morally obligated to encourage their patients to volunteer for clinical trials?* Note that the argument's conclusion, unlike its premises, is a moral judgment. This judgment could be cast into doubt by a moral principle that would be likely to conflict with it under the conditions described. For example, a principle suggesting that it is sometimes morally unacceptable for doctors to encourage their patients to volunteer for clinical trials would also suggest that they are not morally obligated to encourage their patients to volunteer for clinical trials, since anything morally obligatory must also be morally acceptable.

A If anything, this highlights how important it is to ensure that these drugs undergo clinical trials to benefit future generations, so it supports rather than casts doubt on the argument's conclusion.

B This suggests that patients are morally obligated to volunteer for clinical trials to help prevent suffering in future generations. If anything, this supports the claim that doctors are morally obligated to encourage their patients to volunteer.

C The clinical trial will probably not harm any patients in the control group, yet their participation will benefit future generations. So, if anything, this supports the claim that doctors should encourage their patients to volunteer.

D This legal barrier makes it even more essential for the drugs to undergo clinical trials in order to benefit patients, so it supports rather than casts doubt on the argument's conclusion.

E **Correct.** Since the experimental drugs' safety is being tested during the trials, the drugs may prove unsafe for subjects in the trials. If doctors have an overriding moral duty to keep their current patients safe, then it may be morally unacceptable for them to encourage those patients to volunteer for the trials.

The correct answer is E.

CR01285

721. As a construction material, bamboo is as strong as steel and sturdier than concrete. Moreover, in tropical areas bamboo is a much less expensive construction material than either steel or concrete and is always readily available. In tropical areas, therefore, building with bamboo makes better economic sense than building with steel or concrete, except where land values are high.

Which of the following, if true, most helps to explain the exception noted above?

(A) Buildings constructed of bamboo are less likely to suffer earthquake damage than are steel and concrete buildings.

(B) Bamboo is unsuitable as a building material for multistory buildings.

(C) In order to protect it from being damaged by termites and beetles, bamboo must be soaked, at some expense, in a preservative.

(D) In some tropical areas, bamboo is used to make the scaffolding that is used during large construction projects.

(E) Bamboo growing in an area where land values are increasing is often cleared to make way for construction.

Argument Construction

Situation Bamboo is as strong as steel and sturdier than concrete when used as a construction material. In tropical areas, bamboo is much less expensive and is always readily available.

Reasoning *What explains the exception specified in the conclusion?* The argument's conclusion is that in tropical areas bamboo is a more economical building material than steel or concrete, *except where land values are high*. The information in the passage makes clear why bamboo is a more economical building material in tropical areas than are concrete or steel. So the question is: Why must an exception be made for areas where land values are high? Multistory buildings are particularly desirable in areas where land values are high, but bamboo may not be suitable for such buildings.

A This explains why bamboo would be preferable to steel or concrete in tropical areas especially prone to earthquakes. However, there is no clear connection to be made between areas where land values are high and areas especially prone to earthquakes.

B **Correct.** Multistory buildings provide a greater area of floor space for a given site area, and in that sense are more economical. A single-story building with the same floor space will occupy a much bigger site, so the higher the land values, the more likely it is that a multistory building will be built on that land. Thus, given this information, bamboo is less suitable for areas where land values are high.

C This undermines, to some extent, the claim that bamboo is an economical building material. But it does nothing to explain why it would be less economical specifically in areas where land values are high.

D This is irrelevant. Bamboo is used to build scaffolding for construction projects and as a building material for permanent structures. There is no way to infer from this that bamboo is less economical specifically in areas where land values are high.

E The fact that bamboo is cleared from an area to make room for construction in no way implies that bamboo would not be a suitable and economical building material for the area once it has been cleared.

The correct answer is B.

CR00788

722. Newspaper editors should not allow reporters to write the headlines for their own stories. The reason for this is that, while the headlines that reporters themselves write are often clever, what typically makes them clever is that they allude to little-known information that is familiar to the reporter but that never appears explicitly in the story itself.

Which of the following, if true, most strengthens the argument?

(A) The reporter who writes a story is usually better placed than the reporter's editor is to judge what the story's most newsworthy features are.

(B) To write a headline that is clever, a person must have sufficient understanding of the story that the headline accompanies.

(C) Most reporters rarely bother to find out how other reporters have written stories and headlines about the same events that they themselves have covered.

(D) For virtually any story that a reporter writes, there are at least a few people who know more about the story's subject matter than does the reporter.

(E) The kind of headlines that newspaper editors want are those that anyone who has read a reporter's story in its entirety will recognize as clever.

Argument Evaluation

Situation The headlines newspaper reporters write for their own stories are often clever only because they allude to little-known information that never appears explicitly in the stories themselves.

Reasoning *What would most help the argument support the conclusion that newspaper editors should not allow reporters to write headlines for their own stories?* The argument's only explicit premise is that the headlines newspaper reporters write for their own stories are often clever only because they allude to little-known information that never appears explicitly in the stories themselves. In order for this premise to support the conclusion that newspaper editors should not allow reporters to write their own headlines, it would be helpful to be given a reason why editors should avoid headlines alluding to such little-known information.

A This suggests that reporters are likely to write better headlines for their stories than editors are, so it weakens the argument that editors should not allow reporters to write their own headlines.

B Since a reporter who wrote a story is likely to understand that story well, this does not provide a reason why editors should not allow reporters to write their own headlines.

C If most reporters did what is suggested, they could perhaps hone their headline-writing skills—unless almost all reporters are weak in such skills, as suggested in the given information. The fact that they do not bother to do so may help explain why reporters' headline-writing skills are weak. An explanation of why this is so does not provide additional support for the argument's conclusion.

D The people who know more about a story's subject matter than the reporter writing the story might be just as likely to see the cleverness of allusions to little-known information as the reporters are. So, to the extent that this is relevant at all, it slightly weakens the argument by suggesting that obscurely clever headlines sometimes function as intended.

E **Correct.** The argument's explicit premise suggests that typically a reporter's headline for his or her own story cannot be recognized as clever by a reader who has read the whole story. So if editors want headlines that anyone who has read the accompanying stories would recognize as clever, they have a reason not to let reporters write the headlines.

The correct answer is E.

CR03251

723. Scientists have modified feed corn genetically, increasing its resistance to insect pests. Farmers who tried out the genetically modified corn last season applied less insecticide to their corn fields and still got yields comparable to those they would have gotten with ordinary corn. Ordinary corn seed, however, costs less, and what these farmers saved on insecticide rarely exceeded their extra costs for seed. Therefore, for most feed-corn farmers, switching to genetically modified seed would be unlikely to increase profits.

Which of the following would it be most useful to know in order to evaluate the argument?

(A) Whether there are insect pests that sometimes reduce feed-corn yields, but against which commonly used insecticides and the genetic modification are equally ineffective

(B) Whether the price that farmers receive for feed corn has remained steady over the past few years

(C) Whether the insecticides typically used on feed corn tend to be more expensive than insecticides typically used on other crops

(D) Whether most of the farmers who tried the genetically modified corn last season applied more insecticide than was actually necessary

(E) Whether, for most farmers who plant feed corn, it is their most profitable crop

Argument Evaluation

Situation Farmers who grew feed corn genetically engineered to be pest resistant got yields comparable to those of farmers growing ordinary feed corn, but did so while using less pesticide. Since the amount saved on pesticide was rarely in excess of the extra costs for the genetically modified corn, most farmers will probably not increase profits by choosing the genetically engineered variety.

Reasoning *Which would be most useful to know in evaluating the argument?* To answer a question such as this, one should look for information that would strengthen or weaken the argument. If one had information that the farmers growing the genetically modified corn could have increased their yields last year at lower cost, this would be helpful in evaluating the argument, because this would show that the argument is weak.

A It does not matter to the argument whether there are pests against which pesticides and genetic resistance are equally ineffective, because that is compatible with there being pests against which they are not equally effective.

B Whether prices of feed corn go up or down affects the comparison groups equally.

C The relative cost of insecticides for other crops has no bearing on the argument because the argument is concerned with only feed corn.

D **Correct.** This option provides the information that it would be most useful to know in evaluating the argument. It shows that farmers growing genetically modified corn last year could have attained higher profits than they in fact did.

E The argument concerns only the relative profitability of growing one variety of feed corn versus another.

The correct answer is D.

CR07318

724. Debater: The average amount of overtime per month worked by an employee in the manufacturing division of the Haglut Corporation is 14 hours. Most employees of the Haglut Corporation work in the manufacturing division. Furthermore, the average amount of overtime per month worked by any employee in the company generally does not fluctuate much from month to month. Therefore, each month, most employees of the Haglut Corporation almost certainly work at least some overtime.

The debater's argument is most vulnerable to criticism on which of these grounds?

(A) It takes for granted that the manufacturing division is a typical division of the corporation with regard to the average amount of overtime its employees work each month.

(B) It takes for granted that if a certain average amount of overtime is worked each month by each employee of the Haglut Corporation, then approximately the same amount of overtime must be worked each month by each employee of the manufacturing division.

(C) It confuses a claim from which the argument's conclusion about the Haglut Corporation would necessarily follow with a claim that would follow from the argument's conclusion only with a high degree of probability.

(D) It overlooks the possibility that even if, on average, a certain amount of overtime is worked by the members of some group, many members of that group may work no overtime at all.

(E) It overlooks the possibility that even if most employees of the corporation work some overtime each month, any one corporate employee may, in some months, work no overtime.

Argument Evaluation

Situation Most of the employees of the Haglut Corporation work in the manufacturing division, where employees average 14 hours per month in overtime. The average amount of overtime per month for employees at Haglut does not fluctuate much from month to month.

Reasoning *What is the argument's greatest weakness?* The argument's conclusion is that almost certainly each month most of the employees of Haglut work at least some overtime. Answer choice (D) identifies the argument's greatest weakness because it points out how the conclusion of the argument could be false even if all of the supporting information were true. For example, it could be that less than half of the employees work any overtime at all, but those that do work overtime work much more than 14 hours per month.

A The argument leaves open the possibility that in some divisions of the corporation, the average monthly overtime of its employees is quite different from 14 hours, even if (as the argument states) that average does not change much from month to month.

B The argument does not assume that there is a monthly amount of overtime worked by each employee of the manufacturing division equivalent to the company-wide average monthly overtime per employee.

C This does not identify a weakness that can be detected in the argument. Since the claims mentioned here are not specified, the passage provides no evidence that clearly indicates that this type of confusion is playing a role in the argument.

D **Correct.** The argument ignores the possibility that most of the employees of Haglut work no overtime at all in a particular month—which is quite consistent with the argument's assertion that the average number of monthly overtime hours per employee within the manufacturing division is 14.

E The possibility described by this is not overlooked by the argument, because this possibility is consistent with the conclusion. It could easily be that most employees of the corporation work some overtime each month—as the conclusion envisions—but that there are always some employees who do not work any overtime.

The correct answer is D.

CR05446

725. Proponents of the recently introduced tax on sales of new luxury boats had argued that a tax of this sort would be an equitable way to increase government revenue because the admittedly heavy tax burden would fall only on wealthy people and neither they nor anyone else would suffer any economic hardship. In fact, however, 20 percent of the workers employed by manufacturers of luxury boats have lost their jobs as a direct result of this tax.

The information given, if true, most strongly supports which of the following?

(A) The market for luxury boats would have collapsed even if the new tax on luxury boats had been lower.

(B) The new tax would produce a net gain in tax revenue for the government only if the yearly total revenue that it generates exceeds the total of any yearly tax-revenue decrease resulting from the workers' loss of jobs.

(C) Because many people never buy luxury items, imposing a sales tax on luxury items is the kind of legislative action that does not cost incumbent legislators much popular support.

(D) Before the tax was instituted, luxury boats were largely bought by people who were not wealthy.

(E) Taxes can be equitable only if their burden is evenly distributed over the entire population.

Argument Construction

Situation Proponents of a recently introduced tax on sales of new luxury boats argued that it would be an equitable way to increase government revenue because the tax would fall only on the wealthy and cause no economic hardship. But because of the tax, 20 percent of luxury-boat manufacturing workers have lost their jobs.

Reasoning *What conclusion do the statements about the proponents' argument and the tax's effects support?* Since the tax caused many workers to lose their jobs, apparently the proponents were incorrect in asserting that it would cause no one to suffer any economic hardship. Thus, their justification for concluding that the tax is an equitable way to increase government revenue is factually inaccurate, casting doubt on that conclusion.

A The passage indicates that the tax directly caused a significant decrease (though not necessarily a collapse) in the market for luxury boats. But the passage contains no evidence about whether such a decrease might not have occurred if the new tax had been somewhat lower.

B **Correct.** Since the tax caused the workers to lose their jobs, it might have made the government lose revenue from payroll taxes that the laid-off workers would have paid if they had kept their jobs. So if the yearly total revenue generated directly and indirectly by the tax were less than those total yearly payroll taxes and any other tax revenue that was lost as a result of the tax, the tax would have caused a net loss in tax revenue.

C The passage contains no information about what types of legislative actions cost, or do not cost, incumbent legislators popular support.

D Although the passage suggests that some of the tax proponents' assumptions were wrong, it contains no information suggesting that those proponents were wrong in thinking that luxury boats are purchased mainly by wealthy people.

E The passage does not provide any basis for determining what makes a tax equitable or about whether the luxury boat tax is equitable. The tax's proponents evidently felt that a tax whose burden falls only on the wealthy rather than evenly on the entire population can be equitable.

The correct answer is B.

CR05191

726. In Wareland last year, 16 percent of licensed drivers under 21 and 11 percent of drivers ages 21–24 were in serious accidents. By contrast, only 3 percent of licensed drivers 65 and older were involved in serious accidents. These figures clearly show that the greater experience and developed habits of caution possessed by drivers in the 65-and-older group make them far safer behind the wheel than the younger drivers are.

Which of the following is an assumption on which the argument depends?

(A) Drivers 65 and older do not, on average, drive very many fewer miles per year than drivers 24 and younger.

(B) Drivers 65 and older do not constitute a significantly larger percentage of licensed drivers in Wareland than drivers ages 18–24 do.

(C) Drivers 65 and older are less likely than are drivers 24 and younger to drive during weather conditions that greatly increase the risk of accidents.

(D) The difference between the accident rate of drivers under 21 and of those ages 21–24 is attributable to the greater driving experience of those in the older group.

(E) There is no age bracket for which the accident rate is lower than it is for licensed drivers 65 and older.

Argument Evaluation

Situation Last year in Wareland, a much higher percentage of drivers 24 and under than of drivers 65 and older were in serious accidents.

Reasoning *What must be true for the observation about the accident rates to support the conclusion that the greater experience and caution of drivers 65 and older make them safer behind the wheel than the younger drivers?* Several factors other than greater experience and caution could explain the lower accident rate among the older drivers. For example, the older drivers might simply drive much less than the younger ones, but still get in just as many accidents per mile driven. Or perhaps because the older drivers are more often retired, their schedules less often lead them to drive at times of day when accident rates are greater for everyone. Or they might be more likely to live in rural areas with less traffic and lower accident rates. The argument depends on assuming that none of these factors fully explains the difference in accident rates.

A **Correct.** Although we are given no information about the possible extent of any difference in average miles driven, the (somewhat vague) information that drivers 65 and older drive *very many fewer miles per year*, on average, than drivers 24 and younger would cast serious doubt on the statistical argument given. The argument assumes that the difference in miles driven is not sufficiently substantial to undermine the argument.

B The argument is only about the discrepancy between the percentages of the drivers in two specific age groups who were in serious accidents last year. The percentages of licensed drivers who fall in these age groups are irrelevant.

C Even if drivers 65 and older are just as likely as younger drivers to drive in inclement weather, they may do so far more carefully than the younger drivers, so the older drivers' greater experience and caution could still explain their lower accident rates.

D Even if greater experience does not explain the difference between the accident rates of the two younger groups of drivers, it might still explain the differences between the accident rate of those two younger groups taken together and that of drivers aged 65 and older.

E The accident rate could be lower for drivers in late middle age than for those 65 and older because drivers in late middle age are also cautious and experienced, but their reflexes and vision tend to be less impaired. Even if that were true, the experience and caution of the drivers 65 and older might still make them safer than drivers 24 and under.

The correct answer is A.

CR05614

727. In the past the country of Malvernia has relied heavily on imported oil. Malvernia recently implemented a program to convert heating systems from oil to natural gas. Malvernia currently produces more natural gas each year than it uses, and oil production in Malvernian oil fields is increasing at a steady pace. If these trends in fuel production and usage continue, therefore, Malvernian reliance on foreign sources for fuel is likely to decline soon.

Which of the following would it be most useful to establish in evaluating the argument?

(A) When, if ever, will production of oil in Malvernia outstrip production of natural gas?
(B) Is Malvernia among the countries that rely most on imported oil?
(C) What proportion of Malvernia's total energy needs is met by hydroelectric, solar, and nuclear power?
(D) Is the amount of oil used each year in Malvernia for generating electricity and fuel for transportation increasing?
(E) Have any existing oil-burning heating systems in Malvernia already been converted to natural-gas-burning heating systems?

Argument Evaluation

Situation Malvernia has relied heavily on imported oil, but recently began a program to convert heating systems from oil to natural gas. Malvernia produces more natural gas than it uses, so it will probably reduce its reliance on imported oils if these trends continue.

Reasoning *Which option provides the information that it would be most useful to know in evaluating the argument?* In other words, we are looking for the option which—depending on whether it was answered yes or no—would either most weaken or most strengthen the argument. The argument indicates that Malvernia will be using less oil for heating and will be producing more oil domestically. But the conclusion that Malvernia's reliance on foreign oil will decline, assuming the current trends mentioned continue, would be seriously undermined if there was something in the works that was bound to offset these trends, for instance, if it turned out that the country's need for oil was going to rise drastically in the coming years.

A Since both counteract the need for imported oil, it makes little difference to the argument whether domestic oil production exceeds domestic natural gas.

B Whether there are many countries that rely more on foreign oil than Malvernia would have little impact on whether Malvernia's need for foreign oil can be expected to decline.

C Since there is no information in the argument about whether Malvernia can expect an increase or decrease from these other energy sources, it does not matter how much they now provide.

D **Correct.** This option provides the information that it would be most useful to know in evaluating the argument.

E The argument tells us that a program has begun *recently* to convert heating systems from oil to gas. So, even if no such conversions have been completed, the argument still indicates that they can be expected to occur.

The correct answer is D.

CR03618

728. Exposure to certain chemicals commonly used in elementary schools as cleaners or pesticides causes allergic reactions in some children. Elementary school nurses in Renston report that the proportion of schoolchildren sent to them for treatment of allergic reactions to those chemicals has increased significantly over the past ten years. Therefore, either Renston's schoolchildren have been exposed to greater quantities of the chemicals, or they are more sensitive to them than schoolchildren were ten years ago.

Which of the following is an assumption on which the argument depends?

(A) The number of school nurses employed by Renston's elementary schools has not decreased over the past ten years.

(B) Children who are allergic to the chemicals are no more likely than other children to have allergies to other substances.

(C) Children who have allergic reactions to the chemicals are not more likely to be sent to a school nurse now than they were ten years ago.

(D) The chemicals are not commonly used as cleaners or pesticides in houses and apartment buildings in Renston.

(E) Children attending elementary school do not make up a larger proportion of Renston's population now than they did ten years ago.

Argument Construction

Situation Some children have allergic reactions to some of the chemicals commonly used in elementary schools as cleaners and pesticides. The number of children sent to elementary school nurses in Renston for allergic reactions to such chemicals has risen significantly over the past ten years.

Reasoning *What must the argument assume?* The argument's conclusion presents just two alternatives: either the children are exposed to more of the chemicals than children in earlier years *or* they are more sensitive. But there is a third possible explanation for the significant increase in school-nurse visits that the school nurses have reported: that children are just more inclined to go to the school nurse when they experience an allergic reaction than were children several years ago. For the conclusion to follow from its premises, the argument must assume that this is not the correct explanation.

A If the number of elementary school nurses in Renston elementary schools had decreased over the past ten years, that would in no way explain the rise in the proportion of children reporting to school nurses for allergic reactions.

B Only school-nurse visits for allergic reactions to the cleaners and pesticides used in elementary schools are in question in the argument. Of course there could be school-nurse visits for allergic reactions to other things, but that issue does not arise in the argument.

C **Correct.** This can be seen by considering whether the argument would work if we assume that this were false, i.e., that a school-nurse visit *is* more likely in such cases. As noted above, this provides an alternative to the two explanations that the conclusion claims are the sole possibilities.

D This does not need to be assumed by the argument. The argument's conclusion suggests that children may in recent years have had greater exposure to the chemicals, not that this exposure has occurred exclusively in the schools. The argument does not rely on this latter assumption.

E The argument does not need to make this assumption. The argument is framed in terms of proportions of children having school-nurse visits for certain allergic reactions. *How many* children there are or what proportion such children are of Renston's total population is not directly relevant to the argument.

The correct answer is C.

CR01854

729. Normally, the pineal gland governs a person's sleep-wake cycle by secreting melatonin in response to the daily cycle of light and darkness as detected by the eye. Nonetheless, many people who are totally blind due to lesions in the visual cortex of the brain easily maintain a 24-hour sleep-wake cycle. So the neural pathway by which the pineal gland receives information from the eye probably does not pass through the visual cortex.

For purposes of evaluating the argument it would be most useful to establish which of the following?

(A) Whether melatonin supplements help people who have difficulty maintaining a 24-hour sleep cycle to establish such a pattern

(B) Whether the melatonin levels of most totally blind people who successfully maintain a 24-hour sleep-wake cycle change in response to changes in exposure to light and darkness

(C) Whether melatonin is the only substance secreted by the pineal gland

(D) Whether most people who do not have a 24-hour sleep-wake cycle nevertheless have a cycle of consistent duration

(E) Whether there are any people with normal vision whose melatonin levels respond abnormally to periods of light and darkness

Argument Evaluation

Situation Normally, a person's sleep-wake cycle is governed by the pineal gland secreting melatonin in response to the daily cycle of light and darkness as detected by the eye. Yet many people who are totally blind due to lesions of the visual cortex easily maintain a 24-hour sleep-wake cycle.

Reasoning *What additional information would be most helpful in evaluating the argument?* The argument's conclusion is that the neural pathway by which the pineal gland receives information probably does not pass through the visual cortex. This is suggested by the fact that people without a well-functioning visual cortex (e.g., people with a certain type of blindness) can nonetheless maintain a 24-hour sleep-wake cycle. Is it by the pineal gland's secretion of melatonin that they do so? The argument tells us that *normally* (i.e., in sighted people), this is the mechanism for sleep regulation. But the argument depends on assuming that a similar mechanism is operating in people who are blind but have well-regulated sleep cycles. The best choice will be the one that helps us decide whether that assumption is correct.

A This question would not give us an answer that would help in evaluating the argument. A "no" answer would not clarify whether the pineal gland-melatonin mechanism operates in people who are blind. A "yes" answer would do no better. The question refers only to people who have sleep dysfunctions (which the argument does not address).

B **Correct.** Answering this question would provide the most useful information for evaluating the argument. A "yes" answer would help confirm a key assumption of the argument: that blind people rely on the pineal gland-melatonin mechanism for sleep regulation. A "no" answer would help disconfirm that assumption.

C Whether or not there are other substances secreted by the pineal gland makes no difference to the reasoning. The argument relies on the premise that the pineal gland governs the sleep cycle *by secreting melatonin*. For example, if the pineal gland sometimes secreted adrenaline, that would still have no bearing on the argument.

D The consistency or inconsistency of the duration of some people's sleep patterns has no relevance to the reasoning. Their sleep patterns could be due to any of a number of factors.

E This does not help, for there could be sighted people whose melatonin levels respond abnormally simply because of a pineal-gland abnormality.

The correct answer is B.

CR00942

730. **In countries where automobile insurance includes compensation for whiplash injuries sustained in automobile accidents, reports of having suffered such injuries are twice as frequent as they are in countries where whiplash is not covered**. Presently, no objective test for whiplash exists, so it is true that spurious reports of whiplash injuries cannot be readily identified. Nevertheless, these facts do not warrant the conclusion drawn by some commentators that in the countries with the higher rates of reported whiplash injuries, half of the reported cases are spurious. Clearly, **in countries where automobile insurance does not include compensation for whiplash, people often have little incentive to report whiplash injuries that they actually have suffered.**

In the argument given, the two boldfaced portions play which of the following roles?

(A) The first is a claim that the argument disputes; the second is a conclusion that has been based on that claim.

(B) The first is a claim that has been used to support a conclusion that the argument accepts; the second is that conclusion.

(C) The first is evidence that has been used to support a conclusion for which the argument provides further evidence; the second is the main conclusion of the argument.

(D) The first is a finding whose implications are at issue in the argument; the second is a claim presented in order to argue against deriving certain implications from that finding.

(E) The first is a finding whose accuracy is evaluated in the argument; the second is evidence presented to establish that the finding is accurate.

Argument Evaluation

Situation Reported whiplash injuries are twice as common in countries where car insurance companies pay compensation for such injuries as they are in countries where insurance companies do not. Although there is no objective test for whiplash, this does not mean, as some suggest, that half of the reports of such injuries are fake. It could simply be that where insurance will not pay for such injuries, people are less inclined to report them.

Reasoning *What roles do the two boldfaced portions play in the argument?* The first portion tells us about the correlation between reported cases of whiplash in countries and the willingness of insurance companies in those countries to compensate for whiplash injuries. The argument next states that whiplash is difficult to objectively verify. The argument then asserts that *although* this last fact, taken together with the first boldfaced portion, has led some to infer that over half of the reported cases in countries with the highest whiplash rates are spurious, such an inference is unwarranted. The second boldfaced portion then helps to explain why such an inference is not necessarily warranted by offering an alternative explanation.

A The claim made in the first boldfaced portion is never disputed in the argument; at dispute is how to account for the fact that this claim is true. The second is not the argument's conclusion.

B In a manner of speaking, perhaps, the argument uses the first portion to support its conclusion; but there is no indication that it has been used elsewhere to do so. In any case, the second boldfaced portion is not the argument's conclusion.

C The first has been used to support a conclusion that the argument *rejects*; the second boldfaced portion is not the argument's conclusion.

D **Correct.** This option correctly identifies the roles played in the argument by the boldfaced portions.

E The accuracy of the first boldfaced portion is never questioned in the argument; nor is the second intended to somehow help show that the first is accurate. Rather, the argument assumes that the first portion is accurate.

The correct answer is D.

CR03859

731. Last year Comfort Airlines had twice as many delayed flights as the year before, but the number of complaints from passengers about delayed flights went up three times. It is unlikely that this disproportionate increase in complaints was rooted in an increase in overall dissatisfaction with the service Comfort Airlines provides, since the airline made a special effort to improve other aspects of its service last year.

Which of the following, if true, most helps to explain the disproportionate increase in customer complaints?

(A) Comfort Airlines had more flights last year than the year before.

(B) Last year a single period of unusually bad weather caused a large number of flights to be delayed.

(C) Some of the improvements that Comfort Airlines made in its service were required by new government regulations.

(D) The average length of a flight delay was greater last year than it was the year before.

(E) The average number of passengers per flight was no higher last year than the year before.

Argument Construction

Situation Last year Comfort Airlines had twice as many delayed flights as it did the year before, but three times as many passenger complaints about delayed flights. The airline made a special effort to improve other aspects of its service last year.

Reasoning *What could explain why the number of complaints about delayed flights increased disproportionately to the number of delayed flights last year?* In other words, why did the average number of passenger complaints per delayed flight go up last year? One obvious possibility is that the average number of passengers per delayed flight was greater last year than it had been the year before. Another is that the flight delays tended to cause worse problems for passengers last year than they had the year before, so that on average each delay was more upsetting for the passengers.

A This helps explain why the airline had more delayed flights last year, but not why the increase in complaints about delayed flights was disproportionate to the increase in delayed flights.

B This helps explain why the airline had more delayed flights last year. But, if anything, the situation should have reduced the number of passenger complaints per delayed flight, since many passengers should have realized that the unusually bad weather was not the airline's fault.

C If any of the improvements concerned handling of flight delays, for example, and passengers were aware that government regulations addressed this, then passengers might have complained more than previously. But the information we are given here is too general and too vague to explain the disproportionate increase in complaints.

D **Correct.** Longer flight delays would have more severely inconvenienced passengers and thus would probably have generated more passenger complaints per delay.

E This rules out the possibility that an increased number of passengers per delayed flight could have caused the disproportionate increase in the number of complaints about delayed flights. But no alternative explanation is offered.

The correct answer is D

CR01337

732. Last year a global disturbance of weather patterns disrupted harvests in many of the world's important agricultural areas. Worldwide production of soybeans, an important source of protein for people and livestock alike, was not adversely affected, however. Indeed, last year's soybean crop was actually slightly larger than average. Nevertheless, the weather phenomenon is probably responsible for a recent increase in the world price of soybeans.

Which of the following, if true, provides the strongest justification for the attribution of the increase in soybean prices to the weather phenomenon?

(A) Last year's harvest of anchovies, which provide an important protein source for livestock, was disrupted by the effects of the weather phenomenon.

(B) Most countries that produce soybeans for export had above-average harvests of a number of food crops other than soybeans last year.

(C) The world price of soybeans also rose several years ago, immediately after an earlier occurrence of a similar global weather disturbance.

(D) Heavy rains attributable to the weather phenomenon improved grazing pastures last year, allowing farmers in many parts of the world to reduce their dependence on supplemental feed.

(E) Prior to last year, soybean prices had been falling for several years.

Argument Construction

Situation A weather disturbance last year disrupted harvests worldwide but did not reduce production of soybeans, a protein source for both people and livestock. Soybean prices increased nonetheless, likely a result of the weather.

Reasoning *What evidence would suggest that the weather disturbance caused the increase in soybean prices even though it did not reduce soybean production?* Prices tend to increase when the supply of a product falls relative to the demand for the product. But the production of soybeans did not fall. Evidence that the weather disturbance either hindered the global distribution of soybeans or increased global demand for soybeans could support the claim that the weather disturbance caused the increase in soybean prices.

A **Correct.** If the weather disturbance reduced the anchovy harvest, and anchovies provide protein for livestock just as soybeans do, then more soybeans for livestock feed would be needed to compensate for the lack of anchovies. The resulting increase in demand for soybeans could thus have increased global soybean prices.

B This is not surprising, given that the weather disturbance did not severely affect the soybean-producing countries, but it does not explain how the weather disturbance could have caused soybean prices to increase.

C The rise in soybean prices after the earlier weather disturbance could easily have been a coincidence. Or, unlike last year's disturbance, the earlier disturbance could have reduced soybean production.

D This suggests that demand for soybeans should have fallen as a result of the weather disturbance, so it does not explain why soybean prices rose.

E If soybean prices were unusually low for some temporary reason when the weather disturbance occurred, they might have been likely to rise back to normal levels even without the weather disturbance.

The correct answer is A.

CR03541

733. Most of the year, the hermit thrush, a North American songbird, eats a diet consisting mainly of insects, but in autumn, as the thrushes migrate to their Central and South American wintering grounds, they feed almost exclusively on wild berries. Wild berries, however, are not as rich in calories as insects, yet thrushes need to consume plenty of calories in order to complete their migration. One possible explanation is that berries contain other nutrients that thrushes need for migration and that insects lack.

Which of the following, if true, most seriously calls into question the explanation given for the thrush's diet during migration?

(A) Hermit thrushes, if undernourished, are unable to complete their autumn migration before the onset of winter.

(B) Insect species contain certain nutrients that are not found in wild berries.

(C) For songbirds, catching insects requires the expenditure of significantly more calories than eating wild berries does.

(D) Along the hermit thrushes' migration routes, insects are abundant throughout the migration season.

(E) There are some species of wild berries that hermit thrushes generally do not eat, even though these berry species are exceptionally rich in calories.

Argument Evaluation

Situation Hermit thrushes are songbirds that usually eat insects but switch to eating berries when migrating. The thrushes need lots of calories to migrate, but berries contain fewer calories than insects do. Perhaps the berries contain nutrients that insects do not provide.

Reasoning *What would cast doubt on the claim that the thrushes switch to berries because berries contain nutrients that insects lack and that the thrushes need for their migration?* Evidence that berries do not contain such nutrients or that thrushes do not decrease their net calorie consumption by eating berries would cast doubt on the proposed explanation. So would any evidence that supported an alternative explanation for the diet change during migration—for example, seasonal or regional differences in the amount or quality of berries or insects available for the thrushes to consume.

A Even if thrushes need to be well-nourished to finish migrating before winter, extra nutrients found in berries but not insects might help provide the nourishment they need.

B Even if insects contain *certain nutrients* not found in wild berries, those specific nutrients may not be the ones the thrushes need for their migration.

C **Correct.** This suggests that the thrushes might gain more net calories from eating berries than from eating insects, which could explain why they switch to eating berries even if the berries contain no extra nutrients.

D By ruling out a lack of insects to eat while migrating as an alternative explanation for why the thrushes switch to eating berries, this would support the proposed explanation.

E The calorie-rich species of berries the thrushes do not eat might be poisonous or indigestible for them, even if the species of berries the thrushes do eat contain nutrients they need to migrate.

The correct answer is C.

CR01879

734. The kinds of hand and wrist injuries that result from extended use of a computer while maintaining an incorrect posture are common among schoolchildren in Harnville. Computers are important to the school curriculum there, so instead of reducing the amount their students use computers, teachers plan to bring about a sharp reduction in the number of these injuries by carefully monitoring their students' posture when using computers in the classroom.

Which of the following would it be most useful to know in order to assess the likelihood that the teachers' plan will be successful?

(A) Whether extended use of a computer while maintaining incorrect posture can cause injuries other than hand and wrist injuries

(B) Whether hand and wrist injuries not caused by computer use are common among schoolchildren in Harnville

(C) What proportion of schoolchildren in Harnville with hand and wrist injuries use computers extensively outside the classroom

(D) Whether changes in the curriculum could reduce the schools' dependence on computers

(E) What proportion of schoolchildren in Harnville already use correct posture while using a computer

Evaluation of a Plan

Situation Hand and wrist injuries from using computers while maintaining poor posture are common among schoolchildren in Harnville. Teachers plan to greatly reduce the number of such injuries by monitoring their students' posture while the students use computers in the classroom.

Reasoning *What would be most helpful to know to determine the likelihood that the teachers' plan will succeed?* The primary concern is the *posture* students adopt while using computers. To succeed, the teachers' plan must reduce the time students spend with poor posture while using computers and reduce it enough to greatly reduce the number of injuries. To know how likely this is, it would help to know how effectively the teachers will be able to monitor and improve their students' posture inside the classroom. But how many of the students use computers *outside of school* while maintaining poor posture and how often do they do so? If many students do so quite often, they may develop hand and wrist injuries regardless of what happens in school.

A The teachers do not plan to reduce any injuries other than hand and wrist injuries, so whether computer use with poor posture causes any such other injuries is irrelevant to the likelihood that their plan will produce its intended effect.

B The plan being discussed concerns only the reduction of hand and wrist injuries caused specifically by computer use with poor posture, so the frequency of hand and wrist injuries from other causes is irrelevant to the likelihood that the plan will produce its intended effect.

C **Correct.** If the students' school use of computers is a large part of their overall computer use, any retraining that accompanies the monitoring might have some effect on their posture and related injury rates overall. However, the greater the proportion of children with hand and wrist injuries who use computers extensively outside the classroom, the more children are likely to keep developing the injuries regardless of any monitoring at school, so the less effective the teachers' plan involving only computer use at school is likely to be.

D Knowing whether this is the case might help in developing a potential alternative to the teachers' plan, but if it did, this would not help significantly toward assessing the likelihood that the actual plan will succeed. The teachers' actual plan involves monitoring computer use in school without reducing such use. Other possible means of achieving the plan's goal are not part of the plan and are therefore irrelevant to the likelihood that the teachers' actual plan will succeed.

E The passage indicates that the proportion of the schoolchildren maintaining poor posture while using computers is high enough for many to develop hand and wrist injuries as a result. Whatever the exact proportion is, the teachers' plan may or may not succeed in reducing it.

The correct answer is C.

CR04718

735. A certain cultivated herb is one of a group of closely related plants that thrive in soil with high concentrations of metals that are toxic to most other plants. Agronomists studying the growth of this herb have discovered that it produces large amounts of histidine, an amino acid that, in test-tube solutions, renders these metals chemically inert. Hence, the herb's high histidine production must be the key feature that allows it to grow in metal-rich soils.

In evaluating the argument, it would be most important to determine which of the following?

(A) Whether the herb can thrive in soil that does not have high concentrations of the toxic metals

(B) Whether others of the closely related group of plants also produce histidine in large quantities

(C) Whether the herb's high level of histidine production is associated with an unusually low level of production of some other amino acid

(D) Whether growing the herb in soil with high concentrations of the metals will, over time, reduce their concentrations in the soil

(E) Whether the concentration of histidine in the growing herb declines as the plant approaches maturity

Argument Evaluation

Situation A certain herb and closely related species thrive in soil full of metals toxic to most plants. The herb produces much histidine, which makes those metals chemically inert. Histidine production, therefore, is largely what accounts for the herb's thriving in metal-rich soils.

Reasoning *What evidence would help determine whether the herb's histidine production is what enables it to thrive in metal-rich soils?* The argument is that since the herb's histidine chemically neutralizes the metals that are toxic to most plants, it must explain why the herb can thrive in metal-rich soils. To evaluate this argument, it would be helpful to know about the relationship between other closely related plant species' histidine production and the ability to thrive in metal-rich soils. It would also be helpful to know about any other factors that might plausibly explain why the herb can thrive in those soils.

A Whether or not the herb thrives in metal-free soils, histidine production could enable it to thrive in soils that contain toxic metals.

B **Correct.** If the closely related plants do not produce much histidine, whatever other factor allows them to thrive in metal-rich soils would likely account for why the herb thrives in those soils as well.

C The given information suggests no particular reason to suppose that a low level of some unspecified amino acid would enable a plant to thrive in metal-rich soils.

D The herb might absorb metals from any metal-rich soil it grows in, regardless of why it thrives in that soil.

E Whether or not histidine concentrations in the herb decline as it approaches maturity, there could still be enough histidine in the growing herb to neutralize the metals and explain why it can grow in metal-rich soil.

The correct answer is B.

CR01293

736. Many people suffer an allergic reaction to certain sulfites, including those that are commonly added to wine as preservatives. However, since there are several winemakers who add sulfites to none of the wines they produce, people who would like to drink wine but are allergic to sulfites can drink wines produced by these winemakers without risking an allergic reaction to sulfites.

Which of the following is an assumption on which the argument depends?

(A) These winemakers have been able to duplicate the preservative effect produced by adding sulfites by means that do not involve adding any potentially allergenic substances to their wine.

(B) Not all forms of sulfite are equally likely to produce the allergic reaction.

(C) Wine is the only beverage to which sulfites are commonly added.

(D) Apart from sulfites, there are no substances commonly present in wine that give rise to an allergic reaction.

(E) Sulfites are not naturally present in the wines produced by these winemakers in amounts large enough to produce an allergic reaction in someone who drinks these wines.

Argument Construction

Situation People who are allergic to certain sulfites can avoid risking an allergic reaction by drinking wine from one of the several producers that does not add sulfites.

Reasoning *On what assumption does the argument depend?* Drinking wine to which no sulfites have been *added* will not prevent exposure to sulfites if, for instance, sulfites occur naturally in wines. In particular, if the wines that do not have sulfites added have sulfites present naturally in quantities sufficient to produce an allergic reaction, drinking these wines will not prevent an allergic reaction. The argument therefore depends on assuming that this is not the case.

A The argument does not require this because the conclusion does not address allergic reactions to substances other than sulfites.

B The argument specifically refers to "certain sulfites" producing allergic reactions. It is entirely compatible with certain other forms of sulfites not producing allergic reactions in anyone.

C This is irrelevant. The argument does not claim that one can avoid having an allergic reaction to sulfites *from any source* just by restricting one's wine consumption to those varieties to which no sulfites have been added.

D Once again, the argument's conclusion does not address allergic reactions to substances other than sulfites in wine.

E **Correct.** The argument relies on this assumption.

The correct answer is E.

CR11447

737. A new law gives ownership of patents—documents providing exclusive right to make and sell an invention—to universities, not the government, when those patents result from government-sponsored university research. Administrators at Logos University plan to sell any patents they acquire to corporations in order to fund programs to improve undergraduate teaching.

Which of the following, if true, would cast the most doubt on the viability of the college administrators' plan described above?

(A) Profit-making corporations interested in developing products based on patents held by universities are likely to try to serve as exclusive sponsors of ongoing university research projects.

(B) Corporate sponsors of research in university facilities are entitled to tax credits under new federal tax-code guidelines.

(C) Research scientists at Logos University have few or no teaching responsibilities and participate little if at all in the undergraduate programs in their field.

(D) Government-sponsored research conducted at Logos University for the most part duplicates research already completed by several profit-making corporations.

(E) Logos University is unlikely to attract corporate sponsorship of its scientific research.

Evaluation of a Plan

Situation Universities own the patents resulting from government-sponsored research at their institutions. One university plans to sell its patents to corporations to fund a program to improve teaching.

Reasoning *Which point casts doubt on the university's plan?* The university's plan assumes there will be a market for its patents, and that the corporations will want to buy them. What might make this untrue? If some of the corporations have already done the same or similar research, they will not be prospective buyers of the university's patents.

A This point is irrelevant to the plan to sell patents in order to fund a program.

B The university plans to sell the patents to the corporations, not to invite the corporations to sponsor research.

C This point is irrelevant to the university's plan to sell off patents since the plan does not specify that the research scientists will be involved in the programs to improve undergraduate teaching.

D **Correct**. This statement properly identifies a factor that casts doubt on the university's plan to sell its patents to corporations.

E The plan concerns selling patents resulting from government-sponsored research, not attracting corporate sponsorship for research.

The correct answer is D.

CR01848

738. Since it has become known that **several of a bank's top executives have been buying shares in their own bank**, the bank's depositors, who had been worried by rumors that the bank faced impending financial collapse, have been greatly relieved. They reason that, since top executives evidently have faith in the bank's financial soundness, those worrisome rumors must be false. Such reasoning might well be overoptimistic, however, since **corporate executives have been known to buy shares in their own company in a calculated attempt to dispel negative rumors about the company's health.**

In the argument given, the two boldfaced portions play which of the following roles?

(A) The first describes evidence that has been taken as supporting a conclusion; the second gives a reason for questioning that support.

(B) The first describes evidence that has been taken as supporting a conclusion; the second states a contrary conclusion that is the main conclusion of the argument.

(C) The first provides evidence in support of the main conclusion of the argument; the second states that conclusion.

(D) The first describes the circumstance that the argument as a whole seeks to explain; the second gives the explanation that the argument seeks to establish.

(E) The first describes the circumstance that the argument as a whole seeks to explain; the second provides evidence in support of the explanation that the argument seeks to establish.

Argument Evaluation

Situation Top executives at a bank that has been rumored to be in financial trouble have been buying shares in the bank. Bank depositors see this as a good sign, because they believe that it indicates that the executives have faith in the bank. However, corporate executives sometimes do this just to dispel rumors about a company's health.

Reasoning *What is the role that the two boldfaced portions play in the argument?* The first boldfaced portion states that bank executives are buying bank shares, which the passage indicates is taken by bank depositors to be evidence of the executives' faith in the bank. The passage then tells us what some have inferred from this, and finally offers in the second boldfaced statement evidence that undermines this inference.

A **Correct.** This option correctly identifies the roles played by the boldfaced portions.

B This correctly describes the first statement's role, but the second statement is not offered as a conclusion—no evidence is given for it; rather it is evidence for something else.

C The second statement is not offered as a conclusion; no evidence is given for it.

D The second statement is not itself offered as an explanation of why these bank executives are investing in the bank; if it were, that would mean that the bank executives are doing so *because* corporate executives are known to do such things in a calculated effort to dispel worries. Furthermore the argument does not conclude that this other explanation (which the boldfaced portion points to) is correct, only that the one inferred by depositors may not be.

E The argument is not so much seeking to establish an explanation of its own as it is trying to undermine that inferred by the depositors.

The correct answer is A.

CR03814

739. Between 1980 and 2000 the sea otter population of the Aleutian Islands declined precipitously. There were no signs of disease or malnutrition, so there was probably an increase in the number of otters being eaten by predators. Orcas will eat otters when seals, their normal prey, are unavailable, and the Aleutian Islands seal population declined dramatically in the 1980s. Therefore, orcas were most likely the immediate cause of the otter population decline.

Which of the following, if true, most strengthens the argument?

(A) The population of sea urchins, the main food of sea otters, has increased since the sea otter population declined.

(B) Seals do not eat sea otters, nor do they compete with sea otters for food.

(C) Most of the surviving sea otters live in a bay that is inaccessible to orcas.

(D) The population of orcas in the Aleutian Islands has declined since the 1980s.

(E) An increase in commercial fishing near the Aleutian Islands in the 1980s caused a slight decline in the population of the fish that seals use for food.

Argument Evaluation

Situation A sea otter population declined even though there were no signs of disease or malnutrition. The local seal population also declined. Orcas eat otters when seals are unavailable, and thus are probably the cause of the decline in the otter population.

Reasoning *What would be evidence that predation by orcas reduced the sea otter population?* Disease and malnutrition are ruled out as alternative explanations of the decline in the sea otter population. The argument could be further strengthened by casting doubt on other possible explanations, such as predation by other animals, or by presenting observations that predation of otters by orcas would help to explain.

A Regardless of whether or not orcas ate the sea otters, the sea urchin population would most likely have increased when the population of sea otters preying on them decreased.

B Because the seal population declined during the initial years of the otter population decline, predation by and competition with seals were already implausible explanations of the otter population decline.

C **Correct.** Orcas eating most of the accessible otters could plausibly explain this observation, which therefore provides additional evidence that orca predation reduced the sea otter population.

D If the orca population declined at the same time as the sea otter population, it would be less likely that increasing predation by orcas reduced the otter population.

E Since the sea otters showed no signs of malnutrition, they were probably getting enough fish. But if they were not, commercial fishing rather than orcas might have caused the otter population decline.

The correct answer is C.

CR05960

740. Studies in restaurants show that the tips left by customers who pay their bill in cash tend to be larger when the bill is presented on a tray that bears a credit-card logo. Consumer psychologists hypothesize that simply seeing a credit-card logo makes many credit-card holders willing to spend more because it reminds them that their spending power exceeds the cash they have immediately available.

Which of the following, if true, most strongly supports the psychologists' interpretation of the studies?

(A) The effect noted in the studies is not limited to patrons who have credit cards.

(B) Patrons who are under financial pressure from their credit-card obligations tend to tip less when presented with a restaurant bill on a tray with a credit-card logo than when the tray has no logo.

(C) In virtually all of the cases in the studies, the patrons who paid bills in cash did not possess credit cards.

(D) In general, restaurant patrons who pay their bills in cash leave larger tips than do those who pay by credit card.

(E) The percentage of restaurant bills paid with a given brand of credit card increases when that credit card's logo is displayed on the tray with which the bill is presented.

Argument Evaluation

Situation Studies have found that restaurant customers give more generous tips when their bills are brought on trays bearing a credit-card logo. Psychologists speculate that this is because the logo reminds customers of their ability to spend more money than they have.

Reasoning *Which of the options most helps to support the psychologists' explanation of the studies?* The psychologists' hypothesis is that the credit-card logos on the trays bring to the minds of those who tip more the fact that they have more purchasing power than merely the cash that they have at hand. This explanation would not be valid even if those people who are *not* reminded of their own excess purchasing power—if in fact they have any such power—when they see such a logo nonetheless tip more in such trays. Thus, if restaurant patrons who are under financial pressure from their credit-card obligations do not tip more when their bills are presented on trays bearing credit-card logos, then the psychologists' interpretation of the studies is supported.

A This undermines the psychologists' interpretation, for it shows that the same phenomenon occurs even when the alleged cause has been removed.

B **Correct.** This option identifies the result that would most strengthen the psychologists' interpretation.

C This undermines the psychologists' interpretation by showing that the same phenomenon occurs even when the alleged cause has been removed; patrons cannot be reminded of something that is not there.

D To the extent that this bears on the interpretation of the study, it weakens it. Patrons *using* credit cards are surely aware that they have credit, and yet they spend *less* generously.

E This does not support the idea that being reminded that one has a credit card induces one to be *more generous*, only that it induces one to *use* that credit card.

The correct answer is B.

CR11633

741. In an experiment, each volunteer was allowed to choose between an easy task and a hard task and was told that another volunteer would do the other task. Each volunteer could also choose to have a computer assign the two tasks randomly. Most volunteers chose the easy task for themselves and under questioning later said they had acted fairly. But when the scenario was described to another group of volunteers, almost all said choosing the easy task would be unfair. This shows that most people apply weaker moral standards to themselves than to others.

Which of the following is an assumption required by this argument?

(A) At least some volunteers who said they had acted fairly in choosing the easy task would have said that it was unfair for someone else to do so.

(B) The most moral choice for the volunteers would have been to have the computer assign the two tasks randomly.

(C) There were at least some volunteers who were assigned to do the hard task and felt that the assignment was unfair.

(D) On average, the volunteers to whom the scenario was described were more accurate in their moral judgments than the other volunteers were.

(E) At least some volunteers given the choice between assigning the tasks themselves and having the computer assign them felt that they had made the only fair choice available to them.

Argument Construction

Situation In an experiment, most volunteers chose to do an easy task themselves and leave a hard task for someone else. They later said they had acted fairly, but almost all volunteers in another group to which the scenario was described said choosing the easy task would be unfair, indicating that most people apply weaker moral standards to themselves.

Reasoning *What must be true in order for the facts presented to support the conclusion that most people apply weaker moral standards to themselves than to others?* One set of volunteers said they had acted fairly in taking the easy task, whereas different volunteers said that doing so would be unfair. In neither case did any of the volunteers actually judge their own behavior differently from how they judged anyone else's. So the argument implicitly infers from the experimental results that most of the volunteers would judge their own behavior differently from someone else's if given the chance. This inference assumes that the volunteers in the second group would have applied the same moral standards that those in the first group did if they had been in the first group's position, and vice versa.

A **Correct.** If none of the volunteers who said their own behavior was fair would have judged someone else's similar behavior as unfair, then their relaxed moral judgment of themselves would not suggest that they applied weaker moral standards to themselves than to others.

B Even if this is so, the experimental results could still suggest that the volunteers would apply weaker moral standards to themselves than to others.

C The argument would be equally strong even if volunteers who were assigned the hard task did not know that someone else had gotten an easier task—or even if no volunteers were actually assigned the hard task at all.

D Even if the moral standards applied by the volunteers who judged themselves were as accurate as those applied by the volunteers to whom the scenario was described, the former standards were still weaker.

E Even if all the volunteers in the first group had felt that all the choices available to them would have been fair for them to make personally, they might have applied stricter moral standards to someone else in the same position.

The correct answer is A.

CR08527

742. Country X's recent stock-trading scandal should not diminish investors' confidence in the country's stock market. For one thing, **the discovery of the scandal confirms that Country X has a strong regulatory system**, as the following considerations show. In any stock market, some fraudulent activity is inevitable. If a stock market is well regulated, any significant stock-trading fraud in it will very likely be discovered. This deters potential perpetrators and facilitates improvement in regulatory processes.

In the argument, the portion in boldface plays which of the following roles?

(A) It is the argument's only conclusion.

(B) It is a conclusion for which the argument provides support and which itself is used to support the argument's main conclusion.

(C) It is the argument's main conclusion and is supported by another explicitly stated conclusion for which further support is provided.

(D) It is an assumption for which no explicit support is provided and is used to support the argument's only conclusion.

(E) It is a compound statement containing both the argument's main conclusion and an assumption used to support that conclusion.

Argument Construction

Situation Country X recently had a stock-trading scandal.

Reasoning *What role does the statement that the scandal's discovery confirms that Country X has a strong regulatory system play in the argument?* In the sentence containing the boldface statement, the phrase *For one thing* indicates that the statement is being used to justify the claim in the preceding sentence. Thus, the boldface statement must support that preceding sentence as a conclusion. Directly after the boldface statement, the phrase as *the following considerations show* indicates that the subsequent sentences are being used to support the boldface statement. Thus, the boldface statement is a conclusion supported by the sentences following it, and this statement itself supports the sentence preceding it, which must be the argument's main conclusion.

A As explained above, the boldface statement supports the claim in the preceding sentence, so it cannot be the argument's only conclusion.

B **Correct.** As explained above, the boldface statement is supported by the statements following it and in turn is used to support the argument's main conclusion in the statement preceding it.

C As explained above, the boldface statement cannot be the argument's main conclusion, because it supports a further conclusion presented in the sentence preceding it.

D As explained above, the sentences following the boldface statement are the explicit support provided for it.

E As explained above, the argument's main conclusion is stated only in the first sentence, which precedes the boldface statement. It is not repeated anywhere in the boldface statement.

The correct answer is B.

CR05644

743. **Delta Products Inc. has recently switched at least partly from older technologies using fossil fuels to new technologies powered by electricity.** The question has been raised whether it can be concluded that **for a given level of output Delta's operation now causes less fossil fuel to be consumed than it did formerly.** The answer, clearly, is yes, since the amount of fossil fuel used to generate the electricity needed to power the new technologies is less than the amount needed to power the older technologies, provided level of output is held constant.

In the argument given, the two boldfaced portions play which of the following roles?

(A) The first identifies the content of the conclusion of the argument; the second provides support for that conclusion.

(B) The first provides support for the conclusion of the argument; the second identifies the content of that conclusion.

(C) The first states the conclusion of the argument; the second calls that conclusion into question.

(D) The first provides support for the conclusion of the argument; the second calls that conclusion into question.

(E) Each provides support for the conclusion of the argument.

Argument Evaluation

Situation Delta switched from technologies using fossil fuels to ones using electricity. It has been asked whether this results in less fossil fuel used per level of output. The answer is that it does.

Reasoning *What roles do the two boldfaced portions play in the argument?* The first boldfaced statement is simply asserted by the passage. But the second boldfaced statement, when it is first introduced, is not asserted to be true, but rather is identified as something that might be inferred from the first statement. By the end of the passage the argument concludes that the second statement is true.

A This option simply reverses the roles that the statements play in the argument.

B **Correct.** This option identifies the roles the boldfaced portions play.

C Nothing in the passage is intended to support the first statement; and the second statement is not supposed to call the first into question.

D This correctly identifies the role of the first statement, but the second boldfaced portion does not call the argument's conclusion into question—it is part of a sentence that refers to the question whether that conclusion can be drawn from the first statement.

E Again, this is only half right. The second boldfaced portion is not offered as support for the conclusion; if it were offered as such support, the argument would be guilty of circular reasoning, since the second boldfaced portion states exactly what the argument concludes.

The correct answer is B.

CR00907

744. Theater Critic: The play *La Finestrina*, now at Central Theater, was written in Italy in the eighteenth century. The director claims that this production is as similar to the original production as is possible in a modern theater. Although the actor who plays Harlequin the clown gives a performance very reminiscent of the twentieth-century American comedian Groucho Marx, Marx's comic style was very much within the comic acting tradition that had begun in sixteenth-century Italy.

The considerations given best serve as part of an argument that

(A) modern audiences would find it hard to tolerate certain characteristics of a historically accurate performance of an eighteenth-century play

(B) Groucho Marx once performed the part of the character Harlequin in *La Finestrina*

(C) in the United States the training of actors in the twentieth century is based on principles that do not differ radically from those that underlay the training of actors in eighteenth-century Italy

(D) the performance of the actor who plays Harlequin in *La Finestrina* does not serve as evidence against the director's claim

(E) the director of *La Finestrina* must have advised the actor who plays Harlequin to model his performance on comic performances of Groucho Marx

Argument Construction

Situation The director of the local production of *La Finestrina* says it is as similar to the original production as is possible in a modern theater. The actor playing Harlequin gives a performance reminiscent of Groucho Marx, whose comic style falls within an acting tradition which began in sixteenth-century Italy.

Reasoning *For which of the options would the consideration given best serve as an argument?* The actor's performance was reminiscent of someone who fell within a tradition going back to sixteenth-century Italy. The play was written, and therefore was likely first performed, in eighteenth-century Italy. All of this suggests that there could be a similarity between the performances of Harlequin in the local production and in the original production. While the two performances *might* have been quite dissimilar, there is nothing *here* that supports that.

A Regardless of how plausible this option might be on its own merits, the passage provides no support for it because the passage provides no information about the characteristics of a historically accurate performance of an eighteenth-century play.

B The passage neither says this nor implies it.

C The passage says nothing about the training of actors, so this option would be supported by the passage only in a very roundabout, indirect way.

D **Correct.** This is the option that the considerations most support.

E That the performance reminded the theater critic of Groucho Marx hardly shows that the similarity was intentional, let alone that it was at the director's instruction.

The correct answer is D.

CR07257

745. Although the discount stores in Goreville's central shopping district are expected to close within five years as a result of competition from a SpendLess discount department store that just opened, those locations will not stay vacant for long. In the five years since the opening of Colson's, a nondiscount department store, a new store has opened at the location of every store in the shopping district that closed because it could not compete with Colson's.

Which of the following, if true, most seriously weakens the argument?

(A) Many customers of Colson's are expected to do less shopping there than they did before the SpendLess store opened.

(B) Increasingly, the stores that have opened in the central shopping district since Colson's opened have been discount stores.

(C) At present, the central shopping district has as many stores operating in it as it ever had.

(D) Over the course of the next five years, it is expected that Goreville's population will grow at a faster rate than it has for the past several decades.

(E) Many stores in the central shopping district sell types of merchandise that are not available at either SpendLess or Colson's.

Argument Evaluation

Situation Due to competition from a recently opened SpendLess discount department store, discount stores in Goreville's central shopping district are expected to close within five years. But those locations will not be vacant long, for new stores have replaced all those that closed because of the opening five years ago of a Colson's nondiscount department store.

Reasoning *The question is which option would most weaken the argument?* The arguer infers that stores that leave because of the SpendLess will be replaced in their locations by other stores because that is what happened after the Colson's department store came in. Since the reasoning relies on a presumed similarity between the two cases, any information that brings to light a relevant dissimilarity would weaken the argument. If the stores that were driven out by Colson's were replaced mostly by discount stores, that suggests that the stores were replaced because of a need that no longer exists after the opening of SpendLess.

A The fact that Colson's may be seeing fewer customers does not mean that the discount stores that close will not be replaced; they might be replaced by stores that in no way compete with Colson's or SpendLess.

B **Correct.** This option most seriously weakens the argument.

C If anything, this strengthens the argument by indicating that Goreville's central shopping district is thriving.

D This, too, strengthens the argument because one is more likely to open a new store in an area with a growing population.

E Because this statement does not indicate whether any of these stores that offer goods not sold at SpendLess or Colson's will be among those that are closing, it is not possible to determine what effect it has on the strength of the argument.

The correct answer is B.

CR05685

746. Last year all refuse collected by Shelbyville city services was incinerated. This incineration generated a large quantity of residual ash. In order to reduce the amount of residual ash Shelbyville generates this year to half of last year's total, the city has revamped its collection program. This year city services will separate for recycling enough refuse to reduce the number of truckloads of refuse to be incinerated to half of last year's number.

Which of the following is required for the revamped collection program to achieve its aim?

(A) This year, no materials that city services could separate for recycling will be incinerated.

(B) Separating recyclable materials from materials to be incinerated will cost Shelbyville less than half what it cost last year to dispose of the residual ash.

(C) Refuse collected by city services will contain a larger proportion of recyclable materials this year than it did last year.

(D) The refuse incinerated this year will generate no more residual ash per truckload incinerated than did the refuse incinerated last year.

(E) The total quantity of refuse collected by Shelbyville city services this year will be no greater than that collected last year.

Argument Construction

Situation To cut in half the residual ash produced at its incinerator, the city will separate for recycling enough refuse to cut in half the number of truckloads of refuse going to the incinerator.

Reasoning *Which option is required if the city's revamped collection program is to achieve its aim?* Cutting the number of truckloads of refuse in half must reduce the amount of residual ash to half last year's level. But if removal of the recycled refuse does not proportionately reduce the amount of ash, this will not happen. So if the amount of residual ash produced per truckload increases after recycling, then the amount of ash produced will not be cut in half by cutting in half the number of truckloads.

A This merely indicates that no further reduction of ash through recycling could be achieved this year; it indicates nothing about how much the ash will be reduced.

B This suggests a further benefit from recycling, but does not bear on the amount of ash that will be produced.

C Since no information is provided about how much, if any, recyclable materials were removed from the refuse last year, this does not affect the reasoning.

D **Correct.** This states a requirement for the collection program to achieve its aim.

E This is not a requirement because even if the city collects more refuse this year, it could still cut in half the amount of residual ash by cutting in half the number of truckloads going to the incinerator.

The correct answer is D.

CR01801

747. Veterinarians generally derive some of their income from selling several manufacturers' lines of pet-care products. Knowing that pet owners rarely throw away mail from their pet's veterinarian unread, one manufacturer of pet-care products offered free promotional materials on its products to veterinarians for mailing to their clients. Very few veterinarians accepted the offer, however, even though the manufacturer's products are of high quality.

Which of the following, if true, most helps to explain the veterinarians' reaction to the manufacturer's promotional scheme?

(A) Most of the veterinarians to whom the free promotional materials were offered were already selling the manufacturer's pet-care products to their clients.

(B) The special promotional materials were intended as a supplement to the manufacturer's usual promotional activities rather than as a replacement for them.

(C) The manufacturer's products, unlike most equally good competing products sold by veterinarians, are also available in pet stores and in supermarkets.

(D) Many pet owners have begun demanding quality in products they buy for their pets that is as high as that in products they buy for themselves.

(E) Veterinarians sometimes recommend that pet owners use products formulated for people when no suitable product specially formulated for animals is available.

Evaluation of a Plan

Situation Veterinarians generally derive some income from selling various manufacturers' pet-care products, but very few veterinarians accepted free promotional materials from one such manufacturer to mail to their clients.

Reasoning *What would most help explain why so few veterinarians accepted the free promotional materials to mail to their clients?* The passage says that veterinarians generally derive income from selling pet-care products, which suggests that it should have been in many veterinarians' financial interest to accept and mail out the free promotional materials to increase sales. Any evidence that mailing out these specific promotional materials from this manufacturer would not actually have been in many veterinarians' financial interest could help explain why so few veterinarians accepted the materials.

A This suggests that most of the veterinarians should have had a financial interest in accepting and mailing out the promotional materials in order to increase their sales of the manufacturer's products.

B Even if the promotional materials supplemented the manufacturer's usual promotional activities, they could still have increased the veterinarians' sales of the manufacturer's products and thus generated more income for the veterinarians.

C **Correct.** If this manufacturer's products are available in pet stores and supermarkets but most other products sold by veterinarians are not, then distributing the manufacturer's promotional materials could have encouraged customers to buy this manufacturer's products from pet stores and supermarkets rather than to buy competing products from the veterinarians. Thus, the veterinarians may have been concerned that the promotions would reduce their profits.

D The passage says the manufacturer's products are of high quality, so we have no reason to suppose that clients' demand for quality products would discourage veterinarians from accepting the manufacturer's promotional materials.

E Presumably the manufacturer's products are specially formulated for pets, so any products veterinarians recommend only when no specially formulated pet-care products are available would not reduce the veterinarians' interest in promoting the manufacturer's products.

The correct answer is C.

CR00778

748. The average hourly wage of television assemblers in Vernland has long been significantly lower than that in neighboring Borodia. Since Borodia dropped all tariffs on Vernlandian televisions three years ago, the number of televisions sold annually in Borodia has not changed. However, recent statistics show a drop in the number of television assemblers in Borodia. Therefore, updated trade statistics will probably indicate that the number of televisions Borodia imports annually from Vernland has increased.

Which of the following is an assumption on which the argument depends?

(A) The number of television assemblers in Vernland has increased by at least as much as the number of television assemblers in Borodia has decreased.

(B) Televisions assembled in Vernland have features that televisions assembled in Borodia do not have.

(C) The average number of hours it takes a Borodian television assembler to assemble a television has not decreased significantly during the past three years.

(D) The number of televisions assembled annually in Vernland has increased significantly during the past three years.

(E) The difference between the hourly wage of television assemblers in Vernland and the hourly wage of television assemblers in Borodia is likely to decrease in the next few years.

Argument Construction

Situation Television assemblers in Vernland are paid less than those in neighboring Borodia. The number of televisions sold in Borodia has not dropped since its tariffs on Vernlandian TVs were lowered three years ago, but the number of TV assemblers in Borodia has. So TV imports from Vernland have likely increased.

Reasoning *What assumption does the argument depend on?* The fact that fewer individuals in Borodia are working as TV assemblers is offered as evidence that TV imports from Vernland into Borodia have likely increased. That piece of evidence is relevant *only* as an indication that the number of TVs being produced within Borodia has decreased. But a drop in the number of TV assemblers does not indicate a drop in the number of TVs being assembled *if* the number of TVs an average assembler puts together has increased. Thus, the argument must be assuming that the average time it takes an assembler to put together a TV has not significantly decreased.

A The argument does not rely on any information about the number of television assemblers in Vernland nor for that matter on the number of TVs assembled in Vernland.

B The argument need not assume there is any difference in the features of the TVs produced in the two countries. Increased sales of Vernlandian TVs in Borodia could be due to any number of other reasons, such as price or quality.

C **Correct.** This option states an assumption on which the argument depends.

D The argument does not depend upon this being so: Vernland's domestic TV sales (or perhaps its exports to countries other than Borodia) may have decreased by more than its imports into Borodia have increased.

E The argument's conclusion addresses what *has* happened; the argument in no way relies on any assumptions about what may or may not happen in the coming years.

The correct answer is C.

CR05725

749. Guidebook writer: I have visited hotels throughout the country and have noticed that in those built before 1930 the quality of the original carpentry work is generally superior to that in hotels built afterward. Clearly carpenters working on hotels before 1930 typically worked with more skill, care, and effort than carpenters who have worked on hotels built subsequently.

Which of the following, if true, most seriously weakens the guidebook writer's argument?

(A) The quality of original carpentry in hotels is generally far superior to the quality of original carpentry in other structures, such as houses and stores.

(B) Hotels built since 1930 can generally accommodate more guests than those built before 1930.

(C) The materials available to carpenters working before 1930 were not significantly different in quality from the materials available to carpenters working after 1930.

(D) The better the quality of original carpentry in a building, the less likely that building is to fall into disuse and be demolished.

(E) The average length of apprenticeship for carpenters has declined significantly since 1930.

Argument Evaluation

Situation The original carpentry in hotels built before 1930 shows superior care, skill, and effort to that in hotels built after 1930. This leads to the conclusion that carpenters working on hotels before 1930 were superior in skill, care, and effort to those that came after.

Reasoning *Which option most seriously weakens the argument?* The argument draws an inference from a comparison between carpentry in hotels of different eras to a judgment about the carpenters working on hotels in those eras. One way to weaken this inference is by finding some way in which the carpentry in the hotels may be unrepresentative of the skill, care, and effort of the carpenters working in the eras. The comparison is between the carpentry evident in hotels of the two eras *that still exist*. Thus, if there is some reason to think that hotels with good carpentry survive longer than those with bad carpentry, then still-existing hotels from the older era will have disproportionately more good carpentry, even assuming no difference between the skill, care, and effort of the carpenters from the two eras.

A This option applies equally to both eras, so it has no bearing on the argument.

B It is not clear whether carpenters working on larger hotels would exercise more, less, or the same skill and care as those working on smaller hotels; thus this option does not weaken the argument.

C The argument does not rely, even implicitly, on there being any difference in the quality of materials used in the two eras, so it does not weaken the argument to point out that no such difference exists.

D **Correct.** This weakens the reasoning in the argument by showing a respect in which the comparison between *existing* hotels is unrepresentative.

E The longer a carpenter works as an apprentice, the more skill he or she is apt to have upon becoming a full-fledged carpenter. So this option would tend to slightly strengthen rather than weaken the argument.

The correct answer is D.

CR02997

750. Scientists typically do their most creative work before the age of forty. It is commonly thought that this happens because aging by itself brings about a loss of creative capacity. However, studies show that **of scientists who produce highly creative work beyond the age of forty, a disproportionately large number entered their field at an older age than is usual.** Since by the age of forty the large majority of scientists have been working in their field for at least fifteen years, the studies' finding strongly suggests that the real reason why scientists over forty rarely produce highly creative work is not that they have aged but rather that **scientists over forty have generally spent too long in their field.**

In the argument given, the two portions in boldface play which of the following roles?

(A) The first is a claim, the accuracy of which is at issue in the argument; the second is a conclusion drawn on the basis of that claim.

(B) The first is an objection that has been raised against a position defended in the argument; the second is that position.

(C) The first is evidence that has been used to support an explanation that the argument challenges; the second is that explanation.

(D) The first is evidence that has been used to support an explanation that the argument challenges; the second is a competing explanation that the argument favors.

(E) The first provides evidence to support an explanation that the argument favors; the second is that explanation.

Argument Evaluation

Situation It is generally thought that the reason scientists tend to do their most creative work before age forty is that creative capacity declines with age. Yet those scientists who do creative work after forty tend, disproportionately, to have started their careers in science later in life. So a better explanation is that many scientists over forty have just been at it too long.

Reasoning *What roles do the two portions of the argument that are in boldface play?* The argument describes a phenomenon and what is commonly thought to explain it. Then, the first boldfaced statement introduces evidence that suggests that there may be another explanation. After this evidence is further developed, the argument then concludes that there is indeed a better explanation for the phenomenon; that explanation is stated in the second boldfaced portion.

A The accuracy of the first statement is never called into question by the argument; rather, it is relied upon as the basis for the argument's conclusion.

B The first statement is not an objection against the position the argument defends; instead, it is a basis for that position.

C The first statement is not used to support a position the argument challenges, and the second statement is the explanation the argument supports, not the one it challenges.

D The second statement is indeed an explanation that the argument favors; but the first statement is not used to support a competing explanation that the argument challenges.

E **Correct.** This option correctly identifies the roles played by the boldfaced portions of the argument.

The correct answer is E.

CR03818

751. NorthAir charges low fares for its economy-class seats, but it provides very cramped seating and few amenities. Market research shows that economy passengers would willingly pay more for wider seating and better service, and additional revenue provided by these higher ticket prices would more than cover the additional cost of providing these amenities. Even though NorthAir is searching for ways to improve its profitability, it has decided not to make these improvements.

Which of the following, if true, would most help to explain NorthAir's decision in light of its objectives?

(A) None of NorthAir's competitors offers significantly better seating and service to economy-class passengers than NorthAir does.

(B) On many of the routes that NorthAir flies, it is the only airline to offer direct flights.

(C) A few of NorthAir's economy-class passengers are satisfied with the service they receive, given the low price they pay.

(D) Very few people avoid flying on NorthAir because of the cramped seating and poor service offered in economy class.

(E) The number of people who would be willing to pay the high fares NorthAir charges for its business-class seats would decrease if its economy-class seating were more acceptable.

Evaluation of a Plan

Situation Market research shows that improving some amenities for economy-class passengers would allow NorthAir to raise its economy ticket prices more than enough to cover the additional cost of providing those amenities. But NorthAir has decided not to improve those amenities, even though it is looking for ways to improve its profitability.

Reasoning *What would most help explain why NorthAir decided not to improve the seating and other amenities, even though the resulting increase in economy-class ticket prices would more than cover the expense?* NorthAir is looking for ways to improve its profitability. Making improvements that would increase ticket prices enough to generate more revenue than they cost should improve profitability, other things being equal. But if improving the amenities would generate side effects that reduced profitability, those side effects would provide a good reason for NorthAir's decision not to improve the amenities and hence would help explain why NorthAir made that decision.

A The passage says that for NorthAir, the cost of providing better economy seating and other amenities would be more than met by the increased revenue from the higher ticket prices that passengers would be willing to pay. This could give NorthAir a competitive edge, with improved profitability.

B Even if NorthAir faces little or no competition on certain routes, offering extra amenities might increase passengers' interest in flying those routes. It might also lead passengers to choose NorthAir on other routes that competing airlines also serve. Both of these effects could improve NorthAir's profitability.

C Even if a few NorthAir economy passengers would not pay more for extra amenities, the market research indicates that most of them would, so offering the amenities could still improve NorthAir's profits attributable to economy-class seating.

D This suggests that improving the amenities would not increase the total number of NorthAir passengers. But improving the amenities might still enable the airline to increase its ticket prices per passenger enough to improve its profitability.

E **Correc**t. This suggests that improving the economy-class amenities would reduce NorthAir's revenue from sales of business-class tickets, which are likely much more expensive than economy-class tickets. This reduction in revenue could be enough to reduce NorthAir's total profitability despite the increased revenue from economy-class ticket sales.

The correct answer is E.

CR00774

752. Which of the following most logically completes the argument given?

Asthma, a chronic breathing disorder, is significantly more common today among adult competitive swimmers than it is among competitive athletes who specialize in other sports. Although chlorine is now known to be a lung irritant and swimming pool water is generally chlorinated, it would be rash to assume that frequent exposure to chlorine is the explanation of the high incidence of asthma among these swimmers, since _____.

(A) young people who have asthma are no more likely to become competitive athletes than are young people who do not have asthma

(B) competitive athletes who specialize in sports other than swimming are rarely exposed to chlorine

(C) competitive athletes as a group have a significantly lower incidence of asthma than do people who do not participate in competitive athletics

(D) until a few years ago, physicians routinely recommended competitive swimming to children with asthma, in the belief that this form of exercise could alleviate asthma symptoms

(E) many people have asthma without knowing they have it and thus are not diagnosed with the condition until they begin engaging in very strenuous activities, such as competitive athletics

Argument Construction

Situation Asthma is more common among competitive swimmers than among other competitive athletes. Chlorine is a lung irritant generally present in swimming pool water.

Reasoning *What would cast doubt on the hypothesis that exposure to chlorine in swimming pools accounts for the high incidence of asthma among adult competitive swimmers?* Evidence of any other factor that would provide an alternative explanation of why asthma is more common among adult competitive swimmers than among other competitive athletes would make it rash to assume that frequent exposure to chlorine explains the high incidence of asthma among these swimmers, so a statement providing such evidence would logically fill in the blank at the end of the passage to complete the argument.

A This might help explain why competitive athletes in general are not especially likely to have asthma, but it does not explain why adult competitive swimmers are more likely to have asthma than other competitive athletes are.

B This provides additional evidence that exposure to chlorine explains why adult competitive swimmers are more likely to have asthma than other competitive athletes are, so it does not cast doubt on that hypothesis.

C A lower incidence of asthma among competitive athletes than among nonathletes does not help explain the higher incidence of asthma among adult competitive swimmers than among other competitive athletes.

D **Correct.** Routinely encouraging children with asthma to take up competitive swimming would likely have made the proportion of adult competitive swimmers with asthma exceed the proportion of other competitive athletes with asthma, even if chlorine in swimming pool water never causes asthma in swimmers.

E This might help explain why people with asthma are just as likely as other people to become competitive athletes, but it does not help explain why adult competitive swimmers are more likely to have asthma than other competitive athletes are.

The correct answer is D.

CR01289

753. In the country of Marut, the Foreign Trade Agency's records were reviewed in 1994 in light of information then newly available about neighboring Goro. The review revealed that in every year since 1963, the agency's projection of what Goro's gross national product (GNP) would be five years later was a serious underestimate. The review also revealed that in every year since 1963, the agency estimated Goro's GNP for the previous year—a Goro state secret—very accurately.

Of the following claims, which is most strongly supported by the statements given?

(A) Goro's GNP fluctuated greatly between 1963 and 1994.

(B) Prior to 1995, Goro had not released data intended to mislead the agency in making its five-year projections.

(C) The amount by which the agency underestimated the GNP it projected for Goro tended to increase over time.

(D) Even before the new information came to light, the agency had reason to think that at least some of the five-year projections it had made were inaccurate.

(E) The agency's five-year projections of Goro's GNP had no impact on economic planning in Marut.

Argument Construction

Situation A review in 1994 revealed that every year since 1963, Marut's Foreign Trade Agency had seriously underestimated what Goro's GNP would be five years later, but accurately estimated what Goro's GNP had been the previous year.

Reasoning *What conclusion do the stated facts most strongly support?* Goro's GNP in each year at least from 1969 through 1993 had been seriously underestimated by the agency five years in advance, yet was then accurately estimated by the agency one year after the fact. It follows that for each of these years, the agency's earlier projection of Goro's GNP must have been much lower than its later estimate.

A This is not supported by the information given. The fact that the agency consistently underestimated each year's GNP in its five-year projections and then correctly estimated it after the fact does not indicate that Goro's GNP fluctuated greatly.

B This is not supported by the information given. The reason the agency's five-year projections were inaccurate might well have been that Goro deliberately released data intended to mislead the agency in making those projections.

C This is not supported by the information given. The fact that the underestimates remained large throughout the years in question does not indicate that the underestimates increased over time.

D **Correct.** As explained above, for many years there were serious discrepancies between the agency's five-year projections of Goro's GNP and its retrospective estimates of each previous year's trade. In any year at least from 1970 through 1993, these discrepancies, if noticed, would have given the agency reason to doubt some of the five-year projections.

E This is not supported by the information given. Even though at least some of the five-year projections were eventually known to be serious underestimates, they could still have affected Marut's economic planning. The economic planners might have retained an unreasonable faith in the accuracy of the most recent projections.

The correct answer is D.

CR05082

754. Vargonia has just introduced a legal requirement that student-teacher ratios in government-funded schools not exceed a certain limit. All Vargonian children are entitled to education, free of charge, in these schools. When a recession occurs and average incomes fall, the number of children enrolled in government-funded schools tends to increase. Therefore, though most employment opportunities contract in economic recessions, getting a teaching job in Vargonia's government-funded schools will not be made more difficult by a recession.

Which of the following would be most important to determine in order to evaluate the argument?

(A) Whether in Vargonia there are any schools not funded by the government that offer children an education free of charge

(B) Whether the number of qualified applicants for teaching positions in government-funded schools increases significantly during economic recessions

(C) What the current student-teacher ratio in Vargonia's government-funded schools is

(D) What proportion of Vargonia's workers currently hold jobs as teachers in government-funded schools

(E) Whether in the past a number of government-funded schools in Vargonia have had student-teacher ratios well in excess of the new limit

Argument Evaluation

Situation During a recession, the number of children in government-funded schools in Vargonia tends to increase. Vargonian children are entitled to a free education in these schools. A new law requires student-teacher ratios in these schools to remain below a certain limit.

Reasoning *Which of the five questions would provide us with the best information for evaluating the argument?* The argument's conclusion is that recessions do not make teaching jobs in Vargonia's government-funded schools harder to get. During recessions, the reasoning goes, more students will enroll in Vargonia's government-funded schools than in nonrecession times. Implicit in the argument is the thought that, because the new law sets an upper limit on the average number of students per teacher, schools that get an influx of new students would have to hire more teachers. During a recession, however, there might be much more competition in the labor market for teachers because many more qualified people are applying for teaching jobs.

A This information is not significant in the context of the argument, which does not need to assume that only government-funded schools provide free education.

B **Correct.** Getting an answer to this question would provide us with specific information useful in evaluating the argument. A "yes" answer to this question would suggest that competition for teaching jobs in Vargonian government-funded schools would be keener during recessions. A "no" answer would suggest that the level of competition would decrease during recessions.

C Discovering the current student-teacher ratio in Vargonia's schools would be of no value, by itself, in evaluating the argument. We do not know what the new upper limit on the student-teacher ratio is, and we do not know whether Vargonia is currently in a recession.

D Finding out whether the proportion this refers to is 1 percent, for example, or 4 percent, would tell us nothing about whether getting teaching jobs at government-funded schools in Vargonia becomes more difficult during a recession. Among other things, we do not know whether Vargonia is currently in a recession, and we do not know what proportion of Vargonia's workers would be qualified candidates for teaching jobs.

E This is of no relevance in evaluating the argument because, presumably, the new limit on student-teacher ratios will be complied with. Thus, even if student-teacher ratios in the past would have exceeded the new limit, the argument concerns whether, *in the future*, getting a teaching job in Vargonia's government-funded schools will be made more difficult by a recession.

The correct answer is B.

CR09951

755. In Colorado subalpine meadows, nonnative dandelions co-occur with a native flower, the larkspur. Bumblebees visit both species, creating the potential for interactions between the two species with respect to pollination. In a recent study, researchers selected 16 plots containing both species; all dandelions were removed from eight plots; the remaining eight control plots were left undisturbed. The control plots yielded significantly more larkspur seeds than the dandelion-free plots, leading the researchers to conclude that the presence of dandelions facilitates pollination (and hence seed production) in the native species by attracting more pollinators to the mixed plots.

Which of the following, if true, most seriously undermines the researchers' reasoning?

(A) Bumblebees preferentially visit dandelions over larkspurs in mixed plots.

(B) In mixed plots, pollinators can transfer pollen from one species to another to augment seed production.

(C) If left unchecked, nonnative species like dandelions quickly crowd out native species.

(D) Seed germination is a more reliable measure of a species' fitness than seed production.

(E) Soil disturbances can result in fewer blooms, and hence lower seed production.

Argument Evaluation

Situation Bumblebees visit both larkspur and dandelions in certain meadows. A study found that more larkspur seeds were produced in meadow plots in which both larkspur and dandelions grew than in similar plots from which all dandelions had been removed. The researchers inferred that dandelions facilitate larkspur pollination.

Reasoning *What evidence would cast the most doubt on the inference from the study's findings to the conclusion that dandelions facilitate larkspur pollination by attracting more pollinators?* The argument assumes that the only relevant difference between the two types of plots was whether dandelions were present. Evidence that the plots differed in some other way that could provide a plausible alternative explanation of why more larkspur seeds were produced in the plots with dandelions would weaken the argument.

A This would suggest that the larkspur pollination should have been lower in the plots with dandelions, so it does not provide a plausible alternative explanation for the study's findings.

B This is fully compatible with the claim that the dandelions attracted more pollinators to the mixed plots, and it would also help to support the argument's conclusion that dandelions facilitated larkspur pollination in those plots.

C Although this suggests that the mixed plots won't remain mixed for long, it does not provide a plausible alternative explanation for the study's finding that larkspur seed production was higher in the mixed plots.

D The argument is not about how fit larkspurs are as a species, but about why they produced different numbers of seeds in the different plots.

E **Correct.** This provides a plausible alternative explanation for why larkspur seed production was lower in the plots from which dandelions had been removed, since digging them out would have disturbed the soil.

The correct answer is E.

CR11453

756. An experiment was done in which human subjects recognize a pattern within a matrix of abstract designs and then select another design that completes that pattern. The results of the experiment were surprising. The lowest expenditure of energy in neurons in the brain was found in those subjects who performed most successfully in the experiments.

Which of the following hypotheses best accounts for the findings of the experiment?

(A) The neurons of the brain react less when a subject is trying to recognize patterns than when the subject is doing other kinds of reasoning.

(B) Those who performed best in the experiment experienced more satisfaction when working with abstract patterns than did those who performed less well.

(C) People who are better at abstract pattern recognition have more energy-efficient neural connections.

(D) The energy expenditure of the subjects' brains increases when a design that completes the initially recognized pattern is determined.

(E) The task of completing a given design is more capably performed by athletes, whose energy expenditure is lower when they are at rest.

Argument Construction

Situation Experimental subjects worked with pattern recognition and completion. The subjects who performed best showed the lowest expenditure of energy in neurons in the brain.

Reasoning *Which hypothesis best accounts for the findings?* In order to account for the findings, the hypothesis must suggest a plausible link between successful performance and the energy expenditure of neurons in the brain. Consider each answer choice, and evaluate its plausibility and logic. Where is there a reasonably direct relationship between the given factors and the conclusion that is drawn? Understand that hypotheses based on factors not included in the experiment cannot be used to account for the findings.

A The experiment did not compare types of reasoning so this hypothesis does not account for the results.

B No information is provided about subjects' satisfaction, so this hypothesis is not warranted.

C **Correct.** This statement properly identifies a hypothesis that connects subjects' performance with their energy expenditure and so could account for the experiment's results.

D The most successful subjects would presumably not have completed fewer patterns than average, so the posited increase in energy would likely lead to higher energy expenditures for them, not lower.

E No information is offered on the subjects, so no hypothesis about athletes is warranted.

The correct answer is C.

CR01202

757. With seventeen casinos, Moneyland operates the most casinos in a certain state. Although intent on expanding, it was outmaneuvered by Apex Casinos in negotiations to acquire the Eldorado chain. To complete its acquisition of Eldorado, Apex must sell five casinos to comply with a state law forbidding any owner to operate more than one casino per county. Since Apex will still be left operating twenty casinos in the state, it will then have the most casinos in the state.

Which of the following, if true, most seriously undermines the prediction?

(A) Apex, Eldorado, and Moneyland are the only organizations licensed to operate casinos in the state.

(B) The majority of Eldorado's casinos in the state will need extensive renovations if they are to continue to operate profitably.

(C) Some of the state's counties do not permit casinos.

(D) Moneyland already operates casinos in the majority of the state's counties.

(E) Apex will use funds it obtains from the sale of the five casinos to help fund its acquisition of the Eldorado chain.

Argument Evaluation

Situation Moneyland operates seventeen casinos, the most in a certain state, and is intent on expanding. Another operator, Apex Casinos, is acquiring the Eldorado casino chain, but must sell five casinos to comply with a state law forbidding any owner to operate more than one casino per county. After these transactions, Apex will operate twenty casinos in the state.

Reasoning *What observation would cast the most doubt on the prediction that Apex will have the most casinos in the state after the transactions?* Apex will operate twenty casinos, whereas Moneyland now operates just seventeen, and no one else operates even that many. It follows that Apex will operate more casinos after its transactions than Moneyland or any other one owner now operates. However, if Moneyland also acquires three or more casinos during the transactions, then Apex will not have the most casinos in the state afterward. Thus, any observation suggesting that Moneyland is about to acquire several casinos would undermine the prediction.

A **Correct.** Since Apex is acquiring Eldorado, Moneyland and Apex will be the only remaining licensed casino operators in the state. Therefore, Moneyland is the only likely buyer for the five casinos Apex needs to sell. So Moneyland is likely to acquire the five casinos during the sale and end up with twenty-two casinos—more than Apex.

B This does not undermine the prediction. Even if the Eldorado casinos cannot operate profitably for long without extensive renovations, Apex will still have twenty casinos immediately after its transactions.

C This supports rather than undermines the prediction. If fewer counties permit casinos, there will be fewer opportunities for Moneyland or any other operator to acquire more casinos to surpass the twenty Apex will own.

D This supports rather than undermines the prediction. If Moneyland's seventeen casinos are in most of the state's counties already, then there are fewer counties in which Moneyland could acquire additional casinos to surpass the twenty Apex will own.

E This supports rather than undermines the prediction. Apex's use of the funds from selling the five casinos to acquire the Eldorado chain will not help anyone else to acquire more casinos to surpass the twenty Apex will own.

The correct answer is A.

CR05093

758. It is widely assumed that people need to engage in intellectual activities such as solving crossword puzzles or mathematics problems in order to maintain mental sharpness as they age. In fact, however, simply talking to other people—that is, participating in social interaction, which engages many mental and perceptual skills—suffices. Evidence to this effect comes from a study showing that the more social contact people report, the better their mental skills.

Which of the following, if true, most seriously weakens the force of the evidence cited?

(A) As people grow older, they are often advised to keep exercising their physical and mental capacities in order to maintain or improve them.

(B) Many medical conditions and treatments that adversely affect a person's mental sharpness also tend to increase that person's social isolation.

(C) Many people are proficient both in social interactions and in solving mathematical problems.

(D) The study did not itself collect data but analyzed data bearing on the issue from prior studies.

(E) The tasks evaluating mental sharpness for which data were compiled by the study were more akin to mathematics problems than to conversation.

Argument Evaluation

Situation A study shows that the more social contact people report, the better their mental skills are, so engaging in social interaction is sufficient for maintaining mental sharpness.

Reasoning *What would suggest that the study does not establish the truth of the conclusion?* The study shows a correlation between mental sharpness and social interaction but does not indicate why this correlation exists. Evidence that mental sharpness contributes to social interaction or that some third factor affects both mental sharpness and social interaction, could provide an alternative explanation for the correlation and thus cast doubt on the explanation that social interaction contributes to mental sharpness.

A People are often wrongly advised to do things that are not actually beneficial. And even if exercising mental capacities does help to maintain them, the passage says that social interaction provides such exercise.

B **Correct.** This provides evidence that the correlation observed in the study results from mental sharpness facilitating social interaction, in which case the study results do not indicate that social interaction facilitates mental sharpness.

C This would be expected, given the argument's conclusion that social interaction helps to maintain better mental skills overall.

D A study that analyzes data from prior studies can provide evidence just as well as a study that collects its own data can.

E The argument's conclusion would be compatible with this observation, and would then suggest that social interaction contributes to the mental sharpness needed for tasks similar to math problems.

The correct answer is B.

9.0 Sentence Correction

9.0 Sentence Correction

Sentence correction questions appear in the Verbal Reasoning section of the GMAT™ exam. The Verbal Reasoning section uses multiple-choice questions to measure your ability to read and comprehend written material, to reason and evaluate arguments, and to correct written material to express ideas effectively in standard written English. Because the Verbal Reasoning section includes passages from several different content areas, you may be generally familiar with some of the material; however, neither the passages nor the questions assume detailed knowledge of the topics discussed. Sentence correction questions are intermingled with critical reasoning and reading comprehension questions throughout the Verbal Reasoning section of the test. You will have 65 minutes to complete the Verbal Reasoning section or about 1¾ minutes to answer each question.

Sentence correction questions present a statement in which words are underlined. The questions ask you to select the best expression of the idea or relationship described in the underlined section from the answer options. The first answer choice always repeats the original phrasing, whereas the other four provide alternatives. In some cases, the original phrasing is the best choice. In other cases, the underlined section has obvious or subtle errors that require correction. These questions require you to be familiar with the stylistic conventions and grammatical rules of standard written English and to demonstrate your ability to improve incorrect or ineffective expressions. Sentence correction questions may include English-language idioms, which are standard constructions not derived from the most basic rules of grammar and vocabulary, but idioms are not intended to measure any specialized knowledge of colloquialisms or regionalisms.

You should begin these questions by reading the sentence carefully. Note whether there are any obvious grammatical errors as you read the underlined section. Then read the five answer choices carefully. If there was a subtle error you did not recognize the first time you read the sentence, it may become apparent after you have read the answer choices. If the error is still unclear, see whether you can eliminate some of the answers as being incorrect. Remember that in some cases, the original selection may be the best answer.

9.1 Some Comments About How It Works

Sentence Correction questions require a good understanding of how the conventions of standard written English can be used for effective communication. However, that understanding does not have to come from extensive explicit training in grammar and usage or from knowledge of specialized linguistic terminology. Many people may have the needed insights without being able to explain them in technical terms. Analogously, without knowing the scientific name of baker's yeast or the chemistry of the Maillard reaction, a talented baker or food critic may be able to tell whether a loaf of bread was properly prepared. This is not to say that explicit training in grammar and usage is unhelpful. As an adjunct to critical reading and writing experience, it can be a useful approach to developing insights into good written communication. It is good to be cautious, though; books and websites offering advice about how to write may occasionally stipulate outmoded or idiosyncratic rules that are not generally followed in effective professional writing.

The problems posed in Sentence Correction take a different approach and fall within a different domain from those in the other Verbal Reasoning section types. But like those other types, they test skills of critical reasoning, problem solving, and reading comprehension. Sentence Correction tasks can be aptly thought of as requiring detective work. A key part of this work consists in understanding the differences among formulations offered in the answer choices and in seeing that some do not make sense when they are plugged into the larger sentence. In this way, the Sentence Correction questions pose some of the most refined and closely targeted reading comprehension tasks in the GMAT exam. To see why certain

wordings do not work, you will need to use critical analysis, forming hypotheses about what the writer is trying to express and being ready to revise the hypotheses as you read through the answer choices.

The more difficult questions are not essentially designed to test for knowledge of rules or facts that are harder to learn or that require more technical training. Difficulty often stems from complexity and subtlety among the interconnected parts of the sentence and involves critical application of principles that all astute users of English should understand. Sentence Correction tasks are puzzles of a sort, but they are not merely arbitrarily contrived. Typically, the incorrect answer choices represent flaws that even an experienced writer might introduce by temporarily losing track of the structure of a sentence or by accidentally moving a piece of text to an unintended position.

Sometimes you may be able to think of a wording that works better than any of the options presented, but the task is to find the most effective of the available choices within the parameters of the problem posed. In writing, there are almost always tradeoffs. For example, conciseness is sometimes the enemy of precision and adequate specificity. Certain types of redundancy can be annoying and can make the writer seem inept, but other types of repetition and paraphrasing can improve readability and comprehension. Language serves many purposes, not all of which are cooperative or directly informative. In sincere straightforwardly informative writing—although not in all advertising, entertainment, and poetry—one should minimize ambiguity, yet in the end every sentence is at least somewhat open to multiple interpretations. Because one can never absolutely eliminate the risk of unintended interpretations, Sentence Correction answers should minimize that risk relative to the context, setting, and ordinary assumptions about the intent of the writer. It is safe to assume that any GMAT Sentence Correction sentence you encounter will be intended to sincerely inform, instruct, or inquire, rather than to parody bad writing, confuse the reader, or provoke laughter, outrage, or derision.

You will not be expected to take sides in contentious controversies about grammar, usage, or style or to apply rules that are widely regarded as highly pedantic or outdated. A few of these are mentioned in the discussions of the specific categories that follow.

9.2 The Eight Sentence Correction Categories

The problems to be solved in Sentence Correction questions are classified into eight grammar and usage categories. Each incorrect answer choice contains a flaw in at least one of these categories, and some span two or more categories. Each test contains questions representing a wide range of different types of problems. In the answer explanations in section 9.9, the categories shown in the heading for each question are the most salient, but many of the questions contain problems in other categories as well. Although these eight categories represent the full range of Sentence Correction problems, the discussions within each category below are not exhaustive and are not intended as a comprehensive guide to English grammar and usage. For each category, the discussion aims to provide a general understanding of the kinds of reasoning that may be involved in solving Sentence Correction problems of that type.

Agreement

Effective verbal communication requires clarity about how the elements of a sentence relate to one another. The conventions of agreement help maintain such clarity; constructions that violate these conventions can be confusing or even nonsensical. There are two types of agreement: subject-verb agreement and agreement of terms that have the same referent.

Subject–verb agreement: Singular subjects take singular verbs, whereas plural subjects take plural verbs. Standard contemporary English makes few distinctions in verb form among persons and numbers,

but most English verbs do have a distinct present-tense form for third person singular, and *to be* has distinctive forms for first person singular (*am*, *was*).

Examples:
Correct: "I **walk** to the store."
Incorrect: "I **walks** to the store."

Correct: "Each of the circuits **has** its own switch."
Incorrect: "Each of the circuits **have** its own switch."

Correct: "The masses **have** spoken."
Incorrect: "The masses **has** spoken."

Agreement between terms that have the same referent: A pronoun that stands for another element in the discourse—a noun, a noun phrase, or another pronoun—must agree with its antecedent in person, number, and gender. Where a noun or noun phrase has the same referent as another noun or noun phrase, the two terms should agree in number.

Examples:
Correct: "When **you** dream, **you** are usually asleep."
Incorrect: "When **one** dreams, **you** are usually asleep."

The incorrect version is by no means ungrammatical, but it is puzzling and appears not to be intended to mean what it literally says. Thus, it is also a matter of logical predication and rhetorical construction, categories that are discussed under those headings below.

Correct: "I threw away the banana and the mango because **they were** both spoiled."
Incorrect: "I threw away the banana and the mango because **it was** both spoiled."

Correct: "The engineers are **friends** of mine."
Incorrect: "The engineers are **a friend** of mine."

Almost all educated users of English have internalized the conventions of agreement, yet we all occasionally make mistakes of this sort by accident or because we lose track of the structure of our wording. Keep in mind that as you evaluate different wording choices, context is vitally important. We can see immediately that an entire clause consisting of the words "You is working" would be incorrect. On the other hand, that same sequence of words is correct in the following sentence: "The team member who used to assist you is working on a different project now." This is easy to see, but doing so depends on recognizing that the subject of *is* is not *you* but rather the entire noun phrase preceding the verb. This recognition may be either intuitive or based on explicit analysis.

Similarly, no one would seriously claim that the plural *they* should stand for the singular noun *proposal*, but one might more easily overlook the failure of agreement in the following sentence: "From among the six submitted proposals, they chose number four, believing that they could be more easily implemented than the other five." Many readers may see the problem quickly, but in doing so they are noting some complex features of the sentence structure. In principle, *they* could refer to the six proposals or to those who chose from among them, but neither of those tentative interpretations makes sense. Here the reasoning overlaps with that involved in the category of logical predication. The choosers are not the sorts of things that could be implemented, and the comparative phrase *than the other five* rules out the hypothesis that the antecedent of *they* is the plural *six submitted proposals*. Changing *they* to *it* resolves the discrepancy by using a pronoun that clearly has the singular noun phrase *number four* as its antecedent.

Some complicating factors to consider:

When analyzing potential agreement issues in Sentence Correction, keep in mind that not all cases conform obviously and straightforwardly to the most basic rules of agreement. Here are a few special considerations. These are not intended to be exhaustive.

Quantities and quantifying phrases: In some cases, formally plural quantities may take plural verbs, and in other cases they are construed as singular. For example, "Six dollars were withdrawn from the box, one at a time" is correct, but so is "Six dollars is a high price for that."

Quantifying phrases (such as *a number of* and *a percentage of*) often function as subject modifiers in what could appear to be a subject position. In such cases, they are treated similarly to numbers. "A large proportion of the trees are flowering" is essentially like "Three of the trees are flowering." In other cases, similar phrases function as subjects. Consider, for example, the following correct phrases: "a small percentage of our profits is reinvested" and "a small percentage of our employees oppose the new plan."

As a pronoun, *each* is singular, distributing individually to the members of the set or collection referred to, as illustrated in "Each of the circuits has its own switch." When *each* is used as an adjective before a noun, the noun is singular ("Each machine has been inspected"), but in the predicate position *each* modifies the entire plural collection ("The machines have each been inspected").

Plurals that appear singular: All English users are aware that for some words the plural is the same as the singular (*sheep* and *deer*, for example), but there are subtle cases, as when a formally singular noun referring to a group or culture is construed as plural. No simple rule governs the use of such terms; one can say, for example, "the British are" or "the Inuit are" but not "the German are" or "the Cuban are." *Police* is plural, but many similar group words, such as *navy*, are typically construed as singular.

Collective nouns construed as singular or plural: Many nouns referring to groups of people or collections of things have a singular form (team, choir, platoon, crew, assembly, for example). In some editorial styles—and especially in British usage—these can sometimes be construed as plural. This occurs where the writer's intention is to distribute the predicate to the individual members of the group rather than to refer to the group as a single abstract entity. Thus, one may say "the staff are working in small groups" but also "the staff is larger than it used to be."

Plurals construed as singular: Some formally plural nouns, such as *news*, are construed as singular in normal usage. A title that has a plural form (such as *The Grapes of Wrath*) takes a singular verb if it refers to a single work, and some names of organizations or political entities may be construed as singular even though they have a plural form. For example, the phrase *the Cayman Islands* may be singular when referring to the country as a political entity and plural when referring to the islands as multiple pieces of land.

Singular verbs that could appear plural: For most English verbs (with the notable exception of *to be*), the infinitive is the same as the present plural, and the present subjunctive for all persons is the same as the infinitive. Furthermore, the singular past subjunctive is the same as the plural. Thus, there is a risk that at first glance a correct verb form used with a singular subject may appear plural. "The researcher suspend further testing" and "I were you" would be incorrect as complete sentences, but in the following sentences they are in the subjunctive mood and are correct: "We considered it imperative that the researcher suspend further testing." "I wouldn't do that if I were you." As a complete sentence, "The mayor attend the hearings" would be incorrect, but in the sentence, "In none of these cases will either the councilor or the mayor attend the hearings," the verb form is correct; it is an infinitive preceded by the auxiliary verb *will*.

Some issues that are not tested:

The following are a few examples of issues that are outside the scope of the agreement-related Sentence Correction questions.

Especially in informal discourse, the plural pronoun *they* and related forms *them*, *their*, and *theirs* are sometimes used as nonspecific, genderless ways of referring to a singular person. Consider, for example, "Somebody left their notebook on the conference room table." The reasoning surrounding such usage and the alternatives (*he*, *she*, s*he or he*, *she/he*) is complex and evolving. You should not expect to see questions that require you to judge which usage is preferable.

Although you should be able to recognize commonly used irregular plurals or special classes of plurals (such as *phenomena*, *cacti*, *genera*), you will not be asked to correct an improper plural spelling. For example, you will not be asked to correct "the genuses are" to "the genera are."

You will also not be expected to know whether certain highly technical terms or local organization names take singular or plural verbs and pronouns unless the context makes it clear whether they are singular or plural. For example, those who are very familiar with the Centers for Disease Control (a U.S. government organization) will know that it is normally referred to in the singular, but others would not be able to determine this merely from seeing the name.

Diction

Sentences that are structurally well formed can still be confusing, or can make the writer seem inept, if the words are not chosen appropriately and effectively. Effective diction involves using the right part of speech and observing other conventions regarding which words to use in which contexts. Word choices involving agreement and verb form may also be thought of partly as matters of diction, but they are treated separately under the Agreement and Verb Form headings. The diction issues you may encounter in Sentence Correction are too many and varied to list here, but here are a few salient categories into which risks of ineffective diction may fall:

Parts of speech: Even accomplished writers sometimes accidentally use an inappropriate part of speech, such as an adjective where an adverb is needed or a preposition where a conjunction is needed.

Examples:
Correct: "I could **easily** tell that the cat was friendly."
Incorrect: "I could **easy** tell that the cat was friendly."

Correct: "The concerto was **beautiful**."
Incorrect: "The concerto was **beautifully**."

Pronoun cases: Pronouns should be in the right case. A writer might compromise clarity by using a subject form of a pronoun as an object or vice versa or a reflexive pronoun in a nonreflexive context.

Examples:
Correct: "**She** and her friend were walking in the park."
Incorrect: "**Her** and her friend were walking in the park."

Correct: "We sent an email to **them**."
Incorrect: "We sent an email to **they**."

Correct: "I gave **him** a good performance rating."
Incorrect: "I gave **himself** a good performance rating."

Counting and quantifying: Although the conventions for quantification of mass nouns and count nouns have some subtle complexities, keep in mind the general rule that mass nouns are quantified by an amount, whereas count nouns are quantified by numbers or by words (such as *many*) that indicate multiple units. Except in certain technical mathematical contexts, *less* and *least* are typically reserved for comparisons of amount or degree, whereas *fewer* and *fewest* express comparisons of number. However, *more* and *most* are used for both comparisons of number and comparisons of degree. *Both* is appropriate only in referring to two entities or qualities.

Examples:
Correct: "We bought only a **small amount of** rice." "She wished me **much happiness**."
Incorrect: "We bought only **a few** rice." "She wished me **many happinesses**."

Correct: "**Fewer** deliveries arrived today than yesterday."
Incorrect: "**Less** deliveries arrived today than yesterday."

Correct: "**All five of the** trees in the garden need pruning."
Incorrect: "**Both of the five** trees in the garden need pruning."

Prepositions: Subtle differences of relationship are often expressed by different prepositions that function similarly to one another. Consider, for example, in/into/within, to/toward, on/onto/above, through/throughout, beside/besides, beside/along/against, and on/over/above.

Examples:
Correct: "We were standing **beside** the river."
Incorrect: "We were standing **besides** the river."

The incorrect version can also be thought of as displaying a problem of logical predication in that it appears to say illogically that the river was also standing.

Correct: "The editor was sitting **in** his office all afternoon."
Incorrect: "The editor was sitting **into** his office all afternoon."

Word choices that are inherently very simple and obvious can become a little more difficult in complex settings, and a Sentence Correction answer choice that appears appropriate on its own may not work when plugged into the larger sentence. In isolation, "distributed throughout" is recognizable as a standard phrase, but in the following sentence it does not make sense: "The computers were distributed throughout the generosity of a group of donors." Replacing *throughout* with *through* solves the problem. The issue here is a matter not only of diction but also of logical predication: the wording causes the sentence to make an illogical claim about the computers.

"We were confident" is fine as a freestanding sentence, but it is nonsense in the following context: "The lawyer who consulted with we were confident that we could negotiate a settlement." This displays combined problems of diction (*with we*), agreement (the plural *were* with the singular subject *lawyer*), and grammatical construction. "Us was confident" is strange out of context, but substituting *us was* for the offending part of the sentence solves the problem: "The lawyer who consulted with us was confident that we could negotiate a settlement."

Some complicating factors to consider:

The following are only a few examples of the types of subtleties and complexities that may be involved in deciding what words are appropriate.

Potentially misleading grammatical constructions: In some contexts, a verb might superficially appear to require an adverb in the predicate position when in fact a predicate adjective is appropriate. For example, it is correct to say "The surface feels rough" rather than "The surface feels roughly." "The animal does not smell well" means something very different from "The animal does not smell good." Both can be correct depending on what the writer wants to convey.

Words ending in *ing* that are derived from verbs (such as *going*, *assessing*, and *hurting*) can often be either gerunds or participles. Generally, in carefully crafted formal writing, a pronoun or noun that modifies a gerund will be possessive ("The schedule depends on our receiving the materials on time," not "depends on us receiving"). However, in similar constructions the *ing* word is intended as a participle with the noun or pronoun as its subject. This can be seen in the following two examples: (1) "I was concerned about my friend's lying on the ground." Here the focus of the concern is on the situation the friend was in. (2) "I was concerned about my friend lying on the ground." In this case, the writer may intend the focus to be explicitly on the friend who was in that situation.

Words with multiple functions: In English, almost any noun can function as an adjective. Nouns that function also as verbs are well known (as in "she chaired the meeting" or "he tabled the motion"), but words that are not normally used as verbs can also be pressed into special service as verbs on an ad hoc basis. One could say, for example, "She plans to greenhouse her tender plants when the weather turns cold." Some words regularly function as both adjectives and adverbs. One can say, for example, both "This is a hard job" and "We are working hard." Likewise, *fast* is used correctly as both adjective and adverb in the following sentence: "This is not usually a fast train, but it is moving fast at this moment."

Considerations in applying between and among: Among is generally not appropriate for relationships that involve only two entities. It is standard to say "the distance between my house and yours," not "the distance among my house and yours." *Among* is usually needed instead of *between* for relationships involving more than two entities, but there are exceptions. *Between* is sometimes the more accurate preposition to use where the relationship holds, independently, between each member of the group and some other member. Thus, for example, it would be appropriate to say, "In planning your trip to the five destinations, consider the distances between cities and the driving conditions you may encounter."

Some issues that are not tested:

The following are a few examples of issues that are outside the scope of the diction-related Sentence Correction questions.

Which/that: Some American publishers have adopted the convention that *which*, used as a relative pronoun, should always be nonrestrictive and should be replaced with *that* in restrictive contexts (as in "Laws which have been repealed are no longer enforced" versus "laws that have been repealed are no longer enforced"). You should not expect to see questions for which the deciding factor is merely whether the writer adheres to this convention.

Object words with to be: Some usage advisors prescribe the use of nominative (subject) pronouns in both the subject position and the object position with the verb *to be.* According to this convention, "If I were her, I would be happy to accept the job" is incorrect; it should be "If I were she, I would be happy to accept the job." In some contexts, this latter form of expression could seem annoyingly stilted and pedantic and thus could violate other standards of effective expression. You should not expect to see questions for which the deciding factor is merely whether the writer adheres to this convention.

Slang, archaic diction, and words that are distinctively regional or limited to certain subsets of English: You will not be expected, for example, to correct *thou* or *you-all* to *you*, to understand that *skint* could be

paraphrased as *lacking resources*, to judge whether *mickle* is a synonym of *muckle* or whether either of these should be paraphrased with *large*, or to understand that *give* (a test) in some usages is synonymous with *take* (a test) in others.

Variant forms and spellings: You will not be asked to choose between variant forms that have the same function and meaning. Some examples of such variant pairs are: *whilst/while*, *toward/towards*, *until/till*, and *outward/outwards*.

Grammatical Construction

Many issues of agreement, verb form, parallelism, diction, and idiom can be described as matters of grammar, but those categories by no means cover the full range of grammar-related tasks in Sentence Correction. The Grammatical Construction category concerns issues of grammar that are not treated elsewhere in this classification scheme. For the most part, these are matters of syntax—the ways in which the elements of a sentence are arranged. Effective communication depends on shared understandings between the writer and reader about how the relative positions of words and phrases help convey meaning. A series of words and punctuation marks that does not follow predictable conventions of syntax can be puzzling, annoying, or even incomprehensible. Here are a few major principles guiding effective grammatical construction:

Complete structure: In English, a well-formed sentence or independent clause needs both a subject and a predicate containing a main verb.

Examples:
Correct: "The shipping **company promised that** the package would be delivered on time."
Incorrect: "The shipping **company that** the package would be delivered on time."

Here the main subject, *the shipping company*, has no verb; the only verb phrase, *would be delivered*, has *the package* as its subject and is embedded in the clause beginning with *that*.

Correct: "**In any case, the contract is** acceptable."
Incorrect: "**In any case is** acceptable." In this incorrect example, there is no discernible subject.

Correct: "**Rushing to defend its nest, the swan** pecked at the intruder."
Incorrect: "**Rushing to defend its nest. The swan** pecked at the intruder."

The first part of this incorrect example represents a stereotypical variety of incompletely formed sentence known as a sentence fragment. Sentence fragments are punctuated as sentences but are grammatically incomplete and often seem to be left stranded from a preceding or following sentence.

Clear and correct linkages and punctuation: For clarity of meaning, the elements of a sentence need to be linked to, and separated from, one another with standard punctuation and with appropriate links such as conjunctions and relative pronouns.

Examples:
Correct: "The cupboard **contained two boxes of tea, a bag of rice, and a jar of pickles**."
Incorrect: "The cupboard **contained two boxes of tea a bag of rice, and contained a jar of pickles**."

In this case, the structure is both ungrammatical and confusingly nonparallel. Issues of the latter type are discussed under the Parallelism heading below.

Correct: "The weather yesterday was **hot, and there were** thunderstorms in the evening."
Incorrect: "The weather yesterday was **hot there were** thunderstorms in the evening."

Correct: "We should cancel the **cricket match; the rain will continue** all afternoon."
Incorrect: "We should cancel the **cricket match the rain will continue,** all afternoon."

Proper ordering of words and phrases: A sentence whose components do not follow standard conventions for English governing the sequence of parts can be confusing and can make the writer appear unfamiliar with the language.

Examples:
Correct: "The director's name is Juan."
Incorrect: "Is Juan, the director's name."

Correct: "The geranium has outgrown its pot and will need to be transplanted to a larger container."
Incorrect: "Outgrown its pot to a larger container and the geranium will need to be transplanted."

Correct: "Please call me tomorrow to discuss the contract."
Incorrect: "To discuss me please the contract tomorrow call."

This is an extreme case of obviously ungrammatical word arrangement. Incoherent word sequences such as this are sometimes described as "word salad." To the extent that this example makes any sense, it also appears illogically to be asking someone to telephone a contract and thus displays a problem of logical predication (discussed later under that heading).

To see how an answer choice affects a sentence's grammatical construction, you may need to analyze the relationship between widely separated parts. Consider the sentence, "If you clean the filter before it becomes so clogged that it impedes the flow can prevent costly repairs in the long run." It is important to see that the main verb phrase is *can prevent*; the intervening verbs are embedded in the clause modifying *clean the filter*. The opening phrase, *if you clean* . . . is not grammatically structured to function as a subject, but if that phrase is replaced with *cleaning*, the sentence becomes well-formed and makes sense: "Cleaning the filter before it becomes so clogged that it impedes the flow can prevent costly repairs in the long run." The problem with *if you clean* involves both grammatical construction and verb form (discussed later under that heading).

Consider also the following ungrammatical sentence: "The headphones provided with the audio player that **although she bought them last year, they never worked**." The phrase "she bought last year never worked" would be ungrammatical in isolation, but if substituted for the boldface phrase, it makes the sentence grammatically correct: "The headphones provided with the audio player that **she bought last year never worked**." The crucial relationship here is between the opening words (*the headphones*) and the final phrase of the sentence.

Some complicating factors to consider:

Idiomatic constructions: Some idiomatic wording formats, especially those that use parallel structure to express comparisons, are widely treated as well-formed sentences even though they do not follow the basic conventions of grammatical construction. Some examples are: "The greater the thread count, the higher the price." "Better a small nutritious meal than a large unwholesome one." "Here today, gone tomorrow."

Inverted structures: In contemporary English, standard sentence structure puts subjects ahead of their verbs, but there are many exceptions for special purposes, including some quotations, negative constructions, and questions. Each of the following is readily recognizable as a well-formed sentence: "'Tell me about it,' said his uncle." "Were you at the meeting?" "In neither case could I find the needed information."

Elliptical constructions: In informal contexts and in many formal contexts where economy of words and smoothness of flow are key considerations, certain sentence elements may be omitted when the writer's intent is entirely clear without them. For example, *that* is often omitted at the start of a relative clause, as in "The film I saw last night was boring" or "I was afraid they might be angry." It is also often considered acceptable to omit infinitive verbs in some cases to avoid awkward repetition, with the preposition *to* left dangling, as in "I reviewed the report even though I didn't want to."

Some issues that are not tested:

The following are a few examples of issues that are outside the scope of the grammatical-construction-related Sentence Correction questions.

Fragments that function as complete sentences in special contexts: A group of words that has no subject or no verb can sometimes stand as a well-formed sentence. "No" can be a complete sentence in answer to a stated or hypothetical question, as can "The one on the left." Similarly, a clause beginning with a conjunction and not followed by any other clause can sometimes be an acceptable sentence, as, for example, "Because the delivery was late." Exclamations such as "Not again!" are also complete and well formed in special contexts. You should not expect to see a Sentence Correction question that appears likely to be drawn from a context in which it is intended to function in any of these ways or as a headline, title, or line of poetry.

Punctuation as editorial style: You will need to judge issues of punctuation only insofar as they involve standard conventions that make a difference for the meaning and coherence of the sentence. Beyond the basic grammatical principles, some punctuation conventions vary by region or academic discipline, are matters of pure style, or are determined by publishers or editors for their own purposes. You will not need to judge, for example, whether a comma should be inside or outside a closing quotation mark, whether emphasis should be indicated by italics, or whether an apostrophe should be inserted before the *s* in a plural non-word such as *IOUs/IOU's* or *1980s/1980's*.

Idiom

Idioms are standard forms of expression that consist of ordinary words but whose uses cannot be inferred from the meanings of their component parts or the basic conventions of grammar and usage. There is ultimately no logical reason why English speakers say "on average" rather than "at average" or "depending on" rather than "depending from." This is simply how we do things. Thus, knowing idiomatic constructions is rather like knowing vocabulary words. Accidentally using the wrong combination of words in an idiomatic construction or structuring a phrase in an unidiomatic way can make it difficult for readers to discern the writer's intended meaning. Here are a few major categories of idiomatic wording issues that you may encounter in Sentence Correction:

Prepositions with abstract concepts: For abstract concepts, there is no top, bottom, inside, or outside, yet with these we often use the same prepositions that denote spatial relationships between concrete objects. There are some patterns, but for the most part knowing which preposition to use with which abstract noun or verb depends on familiarity. The idiomatic pairings of prepositions with abstract concepts are far too many and varied to list here. A few illustrations are: *in* love, different *from* (also different *to* in British usage), *in* a while, *on* guard, *at* work.

Examples:
Correct: "**With regard to** your party invitation, I may not be able to go, because I will be **on call** at the clinic that evening."
Incorrect: "**On regard with** your party invitation, I may not be able to go, because I will be **in call** at the clinic that evening."

Correct: "The cost of the repairs will **depend on** what clever solutions the contractors **come up with**."
Incorrect: "The cost of the repairs will **depend from** what clever solutions the contractors **come out through**."

Correlatives: Certain standard correlative structures provide economical ways of expressing relationships between concepts. For example, it can be more efficient to say "Neither she nor he is going" than to say "He is not going, and she is also not going." However, if such structures are not skillfully handled in accordance with standard conventions, they can be puzzling and misleading. Other examples of such idiomatic correlative structures are *as . . . as, more/less/greater/smaller/etc. . . . than*, and *not only . . . but also*.

Examples:
Correct: "**Neither** the pomegranates **nor** the melons have arrived yet from the vendor."
Incorrect: "**Neither** the pomegranates have arrived yet **neither** the melons from the vendor."

Correct: "She was almost **as** sure that if we installed this system it would fail **as** that we would need some such system."
Incorrect: "She was almost **as** sure that if we installed this system it would fail **than** that we would need some such system."

Correct: "The prolonged drought is stressing **not only** the rabbits **but also** the wallabies."
Incorrect: "The prolonged drought is stressing the rabbits, **not** the wallabies **just only**."

Verb phrases: Many combinations of verbs with adverbs or prepositions, or with both adverbs and prepositions, have conventional meanings that do not follow directly from the meanings of their component parts. These include such phrases as *give up*, *give up on*, *come through with*, *come up*, *come up with*, *come down with*, *do without*, *have at*, *get over*, *get on with*, *go through*, *go through with*, and *get through with*. Similarly, there are many idiomatic combinations of verb and object, such as *have had it*, *make waves*, *make one's mark*, and *put one's finger on*.

Examples:
Correct: "The investigator has **given up on** determining what **happened to** the missing funds."
Incorrect: "The investigator has **given through over** determining what **happened on** the missing funds."

Correct: "When they checked the patient's temperature, it **turned out** that he was **running a fever**."
Incorrect: "When they checked the patient's temperature, it **veered off** that he was **doing a fever**."

Pronouns with no reference: English requires stated subjects in most sentences with active verb forms. Where there is no real subject, one uses specific referentless placeholder pronouns: *it* and *there*.

Examples:
Correct: "**It was raining** yesterday."
Incorrect: "**They were raining** yesterday."

Correct: "**There are** several reasons to prefer this theory over the proposed alternative."
Incorrect: "**Several reasons are** to prefer this theory over the proposed alternative."

Compound modifiers: Some adverbs and adjectives are idiomatically built out of multiple words. A few examples are: *all in all*, *by and by*, *by and large*, *on the whole*, *through and through*, *on the up and up*, and *on the other hand* (sometimes, but not always, correlated with *on the one hand*).

Examples:
Correct: "She listened to the radio **off and on** throughout the day."
Incorrect: "She listened to the radio **off but again on** throughout the day."

Correct: "You wondered whether anyone would mention you at the meeting; **in fact**, two people **did so**."
Incorrect: "You wondered whether anyone would mention you at the meeting; **in the fact**, two people **did thus and so**."

Idiom-related problems do not always involve identifying malformed idioms. Sometimes the crucial insight may involve determining which of multiple idiomatic meanings is intended or whether a phrase should be treated as an idiom or a non-idiom. The meaning of the sentence "She asked for information **on** purpose of the order I had submitted" is unclear. However, a plausible hypothesis is that the writer meant to say "information on the purpose," with *on* serving as an informal equivalent of *regarding*. On that reading, the apparent use of the idiom *on purpose* results from an accidental juxtaposition of the two words. Substituting a phrase such as *regarding the* for the boldface word *on* can turn this into a meaningful, well-formed sentence: "She asked for information **regarding the** purpose of the order I had submitted."

In the following sentence, *as long as* could appear at first glance to refer to a length of time: "We should be able to restart our assembly line tomorrow **as long as receiving** the replacement parts today." However, on that interpretation the temporal relationship does not make sense. The sentence can be made coherent by replacing *receiving* with *we receive*, but doing so requires reinterpreting the phrase *as long as* so that it functions as an idiom equivalent to *provided that*. The sentence then becomes "We should be able to restart our assembly line tomorrow **as long as we receive** the replacement parts today."

Some complicating factors to consider:

Here are just a few of the many subtleties that one may encounter in judging whether idiomatic usages are correct and effective:

Similar phrases often have very different idiomatic uses and meanings; consider, for example, *come through with*, *come down with*, and *come up with*. Some idiomatic preposition-plus-noun phrases have alternate forms. For example, it is correct to say either "with regard to" or "in regard to." Many idiomatic phrases have multiple meanings, which are not always similar. For example, *come out with* in some contexts means *express* and in others *publish* or *begin marketing*.

For many idiomatic expressions, there are special exceptions to the standard forms. For example, *not only . . . but* phrases are standardly completed with *also*, but there are special cases in which *also* is unnecessary or misleading. This can be seen in the following sentence: "Surprisingly, the endangered species was found not only at the lowest elevations but throughout the entire valley." If the lowest elevations referred to are in the valley, *but also* would misleadingly seem to indicate that the entire valley was a separate category rather than a more general category encompassing the lower elevations.

Words that form standard pairs, such as *neither* and *nor,* often have other meanings and uses as well. In some contexts, *neither* or *nor* might appear at first glance to need the other term. However, *neither* often

occurs as an adjective (as in "neither book has been opened"), a pronoun (as in "neither of them has been opened"), or a freestanding clause negator (as in "My supervisor is not fond of filing reports, but neither am I"). Similarly, *nor* can occur without *neither* (as in "None of the strata in the escarpment were fractured in the earthquake, nor were any of the exposed formations displaced").

Some issues that are not tested:

GMAT Sentence Correction questions neither assess nor presuppose knowledge of obsolete forms of idiomatic expression, highly specialized technical jargon, distinctive dialect constructions, or slang idioms that have not become standard forms of expression.

Logical Predication

Correct grammar is by no means the only type of structural relationship that matters for effective communication. Logical relationships among sentence elements are also crucial. A writer may accidentally structure a completely grammatical sentence in a way that has unintended meanings or implications. Issues of logical predication intersect with all the other categories discussed here and are involved in many of the Sentence Correction questions. Here are a few ways in which they may occur:

Position and scope of modifiers: Modifiers should be positioned so it is clear what word or words they are meant to modify. If modifiers are not positioned clearly, they can cause illogical references or comparisons or otherwise distort the meaning of the sentence.

Examples:
Correct: "I put **the cake that I baked** by the door."
Incorrect: "I put the cake by **the door that I baked**."

Although the better-worded version contains the potentially ambiguous phrase *I baked by the door*, the meaning is made clear by the fact that *put the cake* requires completion by an indication of where or how the cake was put. Therefore, *by the door* binds to the verb *put*.

Correct: "**Concerned that the snake might be venomous, the workers** left it in the crate untouched."
Incorrect: "**Concerned that it might be venomous, the snake** was left untouched by **the workers in the crate**."

Pronoun–antecedent relationships: A misplaced pronoun can bind to the wrong noun, pronoun, or noun phrase and thus create an unintended meaning.

Examples:
Correct: "The baker informed the customers **that the cakes were moldy** and would have to be discarded."
Incorrect: "The baker informed **the customers that they were moldy** and the cakes would have to be discarded."

Correct: "**After reviewing** the report from the consultants, **the company** may consider changing the logo."
Incorrect: "**After it has reviewed** the report from the consultants, **the logo** may be considered for changing by the company."

Compatibility of concepts: Careless wording can cause a predicate to say something inconsistent with the nature of the subject and vice versa.

Examples:
Correct: "The **three types** of wildlife most often seen in the park are sparrows, mallards, and squirrels, **in that order**."
Incorrect: "The **single** most often **type** of wildlife seen in the park is the sparrow, the mallard, and the squirrel, **in that order**."

Correct: "Stock prices **rose** abruptly today **to an all-time high**."
Incorrect: "Stock prices **dropped** abruptly today **to an all-time high**."

Ellipses and extraneous elements: Omission of a crucial word or phrase or inclusion of an extraneous element can shift the subject to an unintended element while leaving the sentence grammatically well formed. Accidents of this sort can also make an unintended noun or pronoun the subject or object of a verb.

Examples:
Correct: "Work on the stadium renovations **is temporarily at** a standstill."
Incorrect: "Work on the stadium renovations **is temporarily** a standstill."

Here the omission of *at* causes the sentence to make an illogical claim about the work (that it is a standstill).

Correct: "**The car was traveling** slowly along the highway."
Incorrect: "**The car's speed was traveling** slowly along the highway."

The redundant reference to speed causes this sentence to say, absurdly, that the speed was traveling along the highway.

Reversed relationships: An unintended meaning can result from accidentally or misguidedly reversing a relationship between sentence elements.

Examples:
Correct: "Last week's unusually high sales of electric fans can almost certainly be **blamed on** the unseasonably hot weather."
Incorrect: "Last week's unusually high sales of electric fans can almost certainly be **blamed for** the unseasonably hot weather."

This also involves an issue of idiomatic usage of prepositions (discussed under the Idiom category above).

Correct: "**Forecasters said the cold front** will move through the region tomorrow."
Incorrect: "**Forecasters, said the cold front,** will move through the region tomorrow."

Ambiguous words and phrases: Writers should be cautious in using words or phrases that have multiple standard meanings. Often the context makes it clear which meaning is intended, but sometimes it does not. Paraphrasing to rule out unwanted meanings can sometimes require adding words or increasing the structural complexity of a sentence.

Examples:
Correct: "She has studied Greek and **speaks** that language **in addition to** Gujarati."
Incorrect: "She has studied Greek and **speaks** it **as well as** Gujarati."

As well as is an entirely acceptable equivalent of *and also* or *in addition to*, but it can be an unfortunate choice of words for a context in which *well* makes perfect sense as an evaluative judgment. Since there is no firm basis for deciding which way the latter version is intended, an alternate correct version could be "She has studied Greek and speaks it as well as she speaks Gujarati."

Correct: "Although visitors **are not permitted to** enter the loading docks, they **might** occasionally wander into the area."
Incorrect: "Although visitors **may not** enter the loading docks, they **may** occasionally wander into the area."

Here again, there is no firm basis for deciding which way the latter version is intended. In the incorrect version, both occurrences of *may* could mean either *are permitted to* or *might*.

Few incorrect answers in actual Sentence Correction questions will be as easy to dismiss as the most obvious of these illustrative examples. Most logical predication decisions will require careful analysis of the relationships between the answer choice and the nonunderlined portions of the sentence. Be alert for all types of problematic relationships among sentence parts, not just for stereotypical dangling modifiers.

Some complicating factors to consider:

Given that all Sentence Correction questions are presented out of context, there may be no basis for certainty about which of several possible interpretations the writer intended to convey. You will not be given multiple equally good versions of a sentence and asked to guess which one accurately represents the writer's true intention. In principle, almost any illogically constructed sentence could be intended to convey a bizarre meaning. One could hypothesize that the writer of the first example under *Position and scope of modifiers* really did intend to say that she or he had baked the door. Even on that hypothesis, the most reasonable judgment for Sentence Correction purposes would be that the sentence is poorly constructed. A careful writer who wants to convey a straightforward message should make it clear that the unusual meaning is the intended one instead of leading the reader to believe that she or he is ineptly trying to convey the more plausible meaning.

Some issues that are not tested:

Occasionally, you may find a poorly worded version of a sentence amusing. However, you should not expect to see Sentence Correction sentences that can be most charitably interpreted as jokes. Among the answer choices, there will always be a serious way of resolving ambiguities and illogical meanings.

Parallelism

Words or phrases that have similar roles in a sentence should be treated in ways that make the similarity clear. This often requires ensuring that parallel clauses have parallel structure, that verbs having the same function are in the same form, and that elements within the scope of a modifier all relate to the modifier in the same way. Here are some major categories in which parallelism can be an issue:

Elements of a series: Where the elements of a series all have the same role or function, they should be in parallel form.

Examples:
Correct: "I **ate** supper, **went** for a walk, and then **visited** some friends."
Incorrect: "I **ate** supper, then **walking**, and then **visitation** of some friends."

Correct: "She tackled the problem **calmly**, **efficiently**, and **analytically**."
Incorrect: "She tackled the problem **calmly**, **by being efficient in tackling it**, and **was analytic**."

In both these examples, the nonparallel version is also awkward and wordy. Problems of these types are further discussed under the category of rhetorical construction.

Correlations and comparisons: The sides of a correlative structure often need parallel treatment to make the relationship clear and accurate.

Examples:
Correct: "We are neither **planning to** hire any new developers nor **trying to** find ways to reduce the workloads of the current staff."
Incorrect: "We are planning neither **to hire** any new developers nor **attempts at finding ways to** reduce workloads of the current staff."

Correct: "We were impressed not only **by the** beauty of the inlets and beaches but also **by the** diversity of the plant life."
Incorrect: "We were impressed not only **by the** beauty of the inlets and beaches but also **the diversity** of the plant life **impressed us**."

Issues of scope and repetition of elements: To determine what elements of a sentence should be made parallel to each other, it is sometimes necessary to determine how much of the wording should fall within the scope of a verb, preposition, or modifier. The scope may determine which elements need to be in parallel form and whether certain elements need to be repeated. Issues of this type overlap with those illustrated above.

Examples:
Correct: "He mended the torn fabric with **a needle and thread**."
Incorrect: "He **mended** the torn fabric **with a needle** and **mended** it **with thread**."

Assuming that the needle and thread were used together as a unit, the repetition of *with* misrepresents the relationship. In the correct version, the parallelism is between the two nouns, which are both within the scope of *mended with*. In the incorrect version, the parallelism is between the two verb phrases *mended with . . .* and *mended with . . .*

Correct: "He **punched holes** in the decoration **with a needle** and **tied** it to the lamp **with thread**."
Incorrect: "He **punched holes** in and **tied** the decoration to the lamp with **a needle and thread**."

Correct: "The house that was **on fire** was **on the list** of historically significant buildings."
Incorrect: "The house was **on fire and the list** of historically significant buildings."

On functions so differently in the two phrases that it makes no sense to subsume both the fire and the list under a single occurrence of the preposition. Therefore, we need the repetition of *on*.

Correct: "The mixture contains **dates, raisins, and figs**."
Incorrect: "The mixture **contains** dates, **contains** raisins, and **contains** figs."

The correct version has a parallelism among the three objects of the verb *contains*. In the incorrect version, the verb is awkwardly repeated, creating an unnecessary parallelism among three verb phrases. This also displays a problem of rhetorical construction.

Corresponding series: Where the elements of one series are supposed to correspond to those of another series, the order of elements in each series should parallel the order of elements in the other. This parallelism can help prevent confusion about how the two series relate to each other without using cumbersome repetition.

Example:
Correct: "Last week we had four meetings, of which the **first, second, and third** were on **Tuesday, Wednesday, and Thursday** and the last on Friday."
Incorrect: "Last week we had four meetings, of which the last was on Friday, with the **first, second, and third** being on **Thursday, Tuesday, and Wednesday**."

Grammatical considerations: Some requirements of parallelism, including some of those illustrated above, are also requirements of grammatical construction.

Examples:
Correct: "If **the warranty has expired**, **we will have to pay** for the repairs."
Incorrect: "If **the warranty has expired**, **our paying** for the repairs."

In the correct version, the two sides of the conditional are parallel in that each is a complete clause with a subject and predicate.

Correct: "**The shipping delays** and **the** two-day **closure** have caused a backlog of orders."
Incorrect: "**The shipping delays** and **we were closed** for two days have caused a backlog of orders."

To function properly as subjects of *have caused*, both of the stated causes need to be in the form of noun phrases.

Some complicating factors to consider:

Problems of idiomatic structure and of logical predication sometimes involve parallelism as well. The following sentence displays all three: "Not only the CEO, and also the executive vice president's proposed policies, have been distributed to the relevant people in middle management." In presenting a faulty parallelism between the *not only* term and the *and also* term, it appears illogically to claim that the CEO has been distributed. It also falls short of the clarity that could be achieved with a more standardly idiomatic *not only . . . but also* structure.

Agreement, as discussed under that heading above, represents a special kind of parallelism. For example, where a singular noun and a pronoun refer to the same thing, the two terms should be parallel in both being singular, and when a verb has a plural subject, the two should be parallel in both being plural. However, in the Sentence Correction classification scheme, agreement is treated as a distinct category. Thus, agreement-related answer explanations in section 9.9 of this book will not automatically carry the parallelism label as well.

Some issues that are not tested:

Sentence Correction questions do not require decisions about purely aesthetic or decorative types of parallelism. For example, you will not be asked to decide whether a rhymed pair such as *highways and byways* would be preferable to another phrase that is equivalent in meaning and function.

Rhetorical Construction

A sentence that is grammatically and idiomatically correct and conforms to good standards of parallelism and logical predication may still be unclear or annoying or may appear ineptly written. Rhetorical construction problems arise in many ways, including the following.

Economy of wording: Superfluous words or unneeded punctuation, pointless redundancies, or convoluted structures that do not enhance precision and adequacy of detail can make a sentence confusing or simply annoying.

Examples:
Correct: "Bananas are almost always harvested green and allowed to ripen in transit or on supermarket shelves."
Incorrect: "With regard to the ways in which people harvest bananas, people almost always harvest such fruits—fruits of the banana variety—in a green condition, and since the thus-harvested bananas have a low ripeness level, people allow these unripe future-delectable-golden morsels to do their ripening while traveling ensconced in cargo devices after harvest, or even when, after transit, they have landed serenely on supermarket shelves."

Correct: "We will carefully review your memo and let you know whether we are interested in the solutions you propose."
Incorrect: "We will 'review'—i.e., carefully scrutinize—your memo submitted, letting you know, vis-à-vis the memo's contained proposal details, whether there is interest, on our part, or not, in those."

Precision and adequacy of detail: Wording that is too vague, sparse, indeterminate, or incomplete can fail to effectively communicate the intended message. Precision often requires the inclusion of details and qualifying phrases. How much specificity and qualification are required depends on the purpose of the communication. Scientific and legal contexts, for example, often require far more precision than do casual communications between friends.

Examples:
Correct: "In medical diagnosis, influenza can be understood as an acute respiratory infection caused by any of the influenza viruses."
Incorrect: "In medical diagnosis, influenza can be understood as when a virus affects you."

Correct: "The contractor shall deliver the completed materials, as defined in Section 5 of this agreement, no later than the thirtieth calendar day after the date on which the signed and ratified contract is distributed to the contracting parties."
Incorrect: "The contractor shall finish taking the actions for relevant agreement sections in a month of distribution and related events."

The latter version of this sentence is indisputably badly constructed and very vague. The judgment that the former version is acceptable is based on the adequacy of the wording for the apparently intended purpose, but there is no way to tell, without background information, whether it refers to the right agreement section or delivery deadline.

Active and passive voice: The better-worded version of the "banana" sentence above uses passive verbs (*are harvested and [are] allowed*). Passive voice is a means of bringing the object of a verb into the subject position. It can sometimes be more straightforward and economical than active voice where the cause of an effect is unknown or irrelevant. However, passive-voice constructions are often objectionably vague, awkward, or indirect.

Examples:
Correct: "We **had** lunch in the hotel and then **spent** the afternoon **looking** at paintings and sculptures in the museum."
Incorrect: "Lunch **was had** in the hotel **by** us before the afternoon **was spent** in the museum where there were paintings and sculptures **being looked at**."

Correct: "The fruits **are left** to dry for two weeks and then **collected**, **sorted**, and **packaged** for shipment."
Incorrect: "**Relevant people leave** the fruits to dry for two weeks, and then **people, devices, and systems collect** and sort them and package them before **someone or something ships** them."

Other types of awkwardness and inelegance: Problems of rhetorical construction take many different forms, some of which do not fall neatly into standard categories.

Examples:
Correct: "As expected, she did the job very well."
Incorrect: "Expectedly, the goodness of her doing the job was considerable."

Correct: "She hoped that humans would be able to explore some of the planets in other solar systems."
Incorrect: "Her hope was for other solar systems' planets' possible human exploration."

Some complicating factors to consider:

Because rhetorical construction is one of the points tested in Sentence Correction, some people might be tempted to guess that shorter answer choices are a safer bet than longer ones. Wordiness is a stereotypical feature of some inelegant writing, and teachers and writing coaches often emphasize conciseness as a goal. Conversely, some might guess that a longer version or one with more qualifiers and caveats is more likely correct. No such guessing strategy is justified. Sentence Correction questions are designed to represent a wide range of issues. Highly professional expert question writers and test assemblers would be extremely unlikely to create predictable patterns that could be exploited in guessing. There is simply no substitute for careful analysis and understanding of the content of each question and answer choice.

Some issues that are not tested:

Sentence Correction questions do not require judgments about rhetorical appropriateness that depend on knowledge of highly technical or specialized vocabulary or syntax. Similarly, you should not expect to see questions for which the deciding factor is merely whether the writer uses jargon or buzzwords. For example, you would not be asked to determine whether *contact* might be preferable to *reach out to*—or whether *sunsetting* might be an effective substitute for *phasing out*—in a sentence such as: "I will reach out to various stakeholders to leverage decisions about the timeframe for phasing out the product."

Verb Form

Verbs should be in the right tenses and moods and should have the right relationships to other verbs. Uses of infinitives and participles should follow standard conventions so that the intended meanings are clear. Some of the problems posed in Sentence Correction questions involve choices among verb tenses, but many are concerned with other verb-form issues. Here are some categories in which verb-form problems may occur:

Temporal relationships: Because Sentence Correction questions are presented without any context, it is sometimes impossible to tell when they were written or whether the events they refer to were in the

past, present, or future from the writer's point of view. Therefore, to the extent that verb tenses are at issue, they are often a matter of internal coherence of the parts of the sentence.

Examples:
Correct: "Chili peppers **belong** to the Solanaceae family of flowering plants."
Incorrect: "Chili peppers **are belonging** to the Solanaceae family of flowering plants."

The present progressive form is used unidiomatically in the incorrect version. That form indicates that the event or condition referred to is ongoing at the time of writing and may not continue. The simple present form *belong* is coherent with the permanence and timelessness of the stated fact.

Correct: "I am looking forward to my stay in Tianjin, a city that I **have never visited** before."
Incorrect: "I am looking forward to my stay in Tianjin, a city that I **will never visited** before."

In the correct version, the present perfect form *have never visited* effectively describes the writer's relationship to unspecified times in the past. In the incorrect version, the future form *will* is incompatible with the past-looking perspective indicated by *before* and *visited*.

Correct: "When the researcher **begins** the next phase of the experiment, she **will have been working** on the experiment for six weeks."
Incorrect: "When the researcher **will begin** the next phase of the experiment, she **had been working** on the experiment for six weeks."

The simple present, as used in the correct version, is the appropriate way in English to express a future event on which another future event is predicated. One could similarly use the present perfect *has begun*, which would have a slightly different nuance of meaning. In the incorrect version, *when . . . will begin* is unidiomatic, and the past perfect *had been working* makes no sense in this future context.

Correct: "When I **arrived** at the office, my colleagues **had** already **left**."
Incorrect: "When I **arrived** at the office, my colleagues **will** already **have been leaving**."

In the correct version, the past perfect form *had left* clearly indicates that the action of leaving was already completed at the past time referred to by the simple past form *arrived*. In the incorrect version, the future perfect progressive form makes no sense in relation to the overall past setting established by the verb *arrived*.

Conditionals and subjunctives: Conditional verb forms referring to conjectural or counterfactual events are typically created with the auxiliary *would*. *Would* constructions often require the antecedent (the "if" clause) to be in subjunctive form, but subjunctives have other purposes as well. Although English uses subjunctives less commonly than do some other languages, such forms are sometimes needed to clarify the meaning of a sentence. They appear in prescriptive and conjectural contexts and make no commitment to whether an action will occur. Consider the difference between the following two sentences: "It is important that he eats high-calorie meals." "It is important that he eat high-calorie meals." The former presupposes that the person actually does eat such meals, and it says that the fact that he does so is important. Using the subjunctive form, the latter prescribes his eating high-calorie meals but makes no commitment to whether he actually does so. For some persons and tenses, the subjunctive is indistinguishable from the past or some other indicative forms.

Examples:
Correct: "If the piano **needed** tuning, I would pay to have that done, but I don't believe it needs tuning."
Incorrect: "When the piano **will need** tuning, I would pay to have that done, but I don't believe it needs tuning."

Correct: "**Were the piano** out of tune, **I would pay** to have it tuned."
Incorrect: "**The piano be** out of tune, **I pay** to have it tuned."

Correct: "If the piano **is** out of tune, I **will pay** to have it tuned."
Incorrect: "If the piano **were** out of tune, I **am going to pay** to have it tuned."

Auxiliary verbs: English uses auxiliary verbs for many purposes, some of which are mentioned in the discussions of temporal relationships and conditionals above. For effective communication, the use of auxiliary verbs should conform to standard conventions.

Examples:
Correct: "**Does the professor teach** that course often?"
Incorrect: "**Teaches** the professor that course often?"

In contemporary English, interrogative forms of most verbs are created using appropriate forms of the auxiliary verb *to do*. The simple inversion of subject and verb seen in the incorrect version is an obsolete form.

Correct: "We **cannot** find the website you recommended."
Incorrect: "We **do not can** find the website you recommended."

Can is a modal verb whose negative and interrogative forms are not created with *do*. Furthermore, *can* is one of a few verbs that have no infinitive form; its infinitive is expressed by a phrase such as *to be able*.

Correct: "The new book **might** turn out **to be** a best seller."
Incorrect: "The new book **might will** turn out **being** a best seller."

Treatment of participles, gerunds, and infinitives: Present participles (such as *finding* and *taking*) are used with the verb *to be* to express progressive verb forms (*is finding*, *had been taking*). They also function as modifiers in phrases such as "he bought the book, hoping he would like it" and as nouns in phrases such as "his buying the book was unexpected." When used as nouns, they are known as gerunds. Past participles (such as *found* and *taken*) are used with the verb *to have* to express perfect verb forms (*has found*, *will have taken*). They also function as adjectives in phrases such as "the book published last year" and "The plant is withered." The infinitive form is used for verbs that are modified by other verbs. With some modifying verbs, the infinitive must be preceded by *to*. With other verbs (certain modal and auxiliary verbs) it must not. With yet others (such as *help*, *go*, and *need*) it can be used either with or without *to*. Infinitives can be treated as nouns, serving as subjects or objects of verbs, as in "to laugh at one's own mistakes can be therapeutic."

Examples:
Correct: "**Having** nowhere else to go, **I wandered** through the airport all day."
Incorrect: "**My having** nowhere else to go **wandered** through the airport all day."

In that the incorrect version makes *having* the subject of *wandered*, it also exemplifies a problem of logical predication (discussed under that heading above).

Correct: "**Widely disliked**, the software went unused."
Incorrect: "**To have widely disliked it**, the software went unused."

Like the one above, this example contains a problem of both verb form and logical predication.

Correct: "You **must make** the reservation at least two days in advance."
Incorrect: "You **must to make** the reservation at least two days in advance."

Correct: "My colleague **went to find** another microphone."
Incorrect: "My colleague **went find** another microphone."

Although such expressions as *go find* and *go get* are standard, they are unidiomatic in affirmative past tenses, which require the preposition *to* with the infinitive ("went to find").

Some complicating factors to consider:

English verb forms and surrounding idiomatic wording conventions have many peculiarities and nuances. The following are reminders of just a few such complications.

It is important to keep in mind that the subtleties of how English tenses are used cannot always be inferred from the names of the tenses. For example, in some other European languages, actions that are currently occurring are indicated by the simple present tense. English typically uses the present progressive form for that purpose, as in "The dog is barking" or "The car is running." The simple present tense in English is typically reserved instead for events and conditions that occur at indefinite or unspecified times or that recur, as in "Dogs bark for various reasons" or "The car runs on unleaded fuel."

"Going to (do or happen)" is a standard way of expressing the future tense, but unlike in French, there is no parallel form "coming from (doing or happening)." To indicate that an action was recently completed, English uses the idiom *has/have/had just*, as in "I had just finished composing the email."

The preposition *to* has many different uses in combination with verbs. These differences can sometimes lead to ambiguous constructions and potential confusion. Stereotypically, *to* before a verb is thought of as an infinitive marker, but it can also indicate purpose or intention. Thus, for example, "I need your truck to haul the boxes" is indeterminate between two meanings. More precise expressions of these could be "I need your truck so that I can haul the boxes" and "It is essential for me that your truck haul the boxes." The latter may seem very formal but could be appropriate where precision is needed. *To* with a verb can also be prescriptive, as in "The borrower is to pay a fine if the materials are not returned by the due date," or simply predictive, as in "The visitors are to arrive soon." It can even express a past tense in a construction such as "but I was never to see him again" or "she was the last one to leave the building."

Shall also has multiple meanings. As a simple future-tense indicator, it is an alternative to *will* for first person verbs ("I shall tell you about it tomorrow"). However, it can also be used prescriptively, similarly to *must*, as in "The borrower shall pay a fine if the materials are not returned by the due date."

Some issues that are not tested:

You may hear that some usage advisors object to placing anything between *to* and an infinitive verb, as in "To finally reach the destination." You should not expect to see Sentence Correction questions for which the deciding factor is merely whether the writer follows this advice. However, you might encounter a sentence that is awkward and unclear because too many words—or words that would go better elsewhere—are crammed in between the preposition and the verb. This occurs in the following sentence: "I try to remember to scrupulously every day before I leave work log off my computer." This is an issue of general unclarity and inelegance falling under the heading of rhetorical construction, and not a mere case of "split infinitive."

9.3 Study Suggestions

There are two basic ways you can study for sentence correction questions:

- **Read material that reflects standard usage.**
  One way to gain familiarity with the basic conventions of standard written English is simply to read. Suitable material will usually be found in good magazines and nonfiction books, editorials in outstanding newspapers, and the collections of essays used by many college and university writing courses.
- **Review basic rules of grammar and practice with writing exercises.**
  Begin by reviewing the grammar rules laid out in this chapter. Then, if you have school assignments (such as essays and research papers) that have been carefully evaluated for grammatical errors, it may be helpful to review the comments and corrections.

9.4 What Is Measured

Sentence correction questions test three broad aspects of language proficiency:

- **Correct expression**
  A correct sentence is grammatically and structurally sound. It conforms to all the rules of standard written English, including noun-verb agreement, noun-pronoun agreement, pronoun consistency, pronoun case, and verb tense sequence. A correct sentence will not have dangling, misplaced, or improperly formed modifiers; unidiomatic or inconsistent expressions; or faults in parallel construction.
- **Effective expression**
  An effective sentence expresses an idea or relationship clearly and concisely as well as grammatically. This does not mean that the choice with the fewest and simplest words is necessarily the best answer. It means that there are no superfluous words or needlessly complicated expressions in the best choice.
- **Proper diction**
  An effective sentence also uses proper diction. (Diction refers to the standard dictionary meanings of words and the appropriateness of words in context.) In evaluating the diction of a sentence, you must be able to recognize whether the words are well chosen, accurate, and suitable for the context.

9.5 Test-Taking Strategies

1. **Read the entire sentence carefully.**
   Try to understand the specific idea or relationship that the sentence should express.

2. **Evaluate the underlined passage for errors and possible corrections before reading the answer choices.**
   This strategy will help you discriminate among the answer choices. Remember, in some cases the underlined passage is correct.

3. **Read each answer choice carefully.**
   The first answer choice always repeats the underlined portion of the original sentence. Choose this answer if you think that the sentence is best as originally written, but do so *only after* examining all the other choices.

4. **Try to determine how to correct what you consider to be wrong with the original sentence.**
   Some of the answer choices may change things that are not wrong, whereas others may not change everything that is wrong.

5. **Make sure that you evaluate the sentence and the choices thoroughly.**
   Pay attention to general clarity, grammatical and idiomatic usage, economy and precision of language, and appropriateness of diction.

6. **Read the whole sentence, substituting the choice that you prefer for the underlined passage.**
   A choice may be wrong because it does not fit grammatically or structurally with the rest of the sentence. Remember that some sentences will require no correction. When the given sentence requires no correction, choose the first answer.

9.6 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

9.7 Practice Questions

Each of the sentence correction questions presents a sentence, part or all of which is underlined. Beneath the sentence you will find five ways of phrasing the underlined part. The first of these repeats the original; the other four are different. Follow the requirements of standard written English to choose your answer, paying attention to grammar, word choice, and sentence construction. Select the answer that produces the most effective sentence; your answer should make the sentence clear, exact, and free of grammatical error. It should also minimize awkwardness, ambiguity, and redundancy.

*SC01527

759. According to some critics, watching television not only undermines one's ability to think critically but also impairs one's overall ability to perceive.

(A) not only undermines one's ability to think critically but also impairs one's
(B) not only undermines one's ability of critical thinking but also impairs the
(C) undermines not only one's ability to think critically but also impairs one's
(D) undermines not only one's ability of critical thinking but also impairs the
(E) undermines one's ability not only to think critically but also impairs one's

SC12999

760. In her presentation, the head of the Better Business Bureau emphasized that companies should think of the cost of conventions and other similar gatherings as not an expense, but as an investment in networking that will pay dividends.

(A) as not an expense, but as
(B) as not expense but
(C) not an expense, rather
(D) not as an expense, but as
(E) not in terms of expense, but

SC15382

761. Recent interdisciplinary studies advance the argument that emotions, including those deemed personal or private is a social phenomenon, though one inseparable from bodily response.

(A) private is a social phenomenon, though one inseparable
(B) private, are social phenomena that are inseparable
(C) private are a social phenomenon but are not those separable
(D) private—are social phenomena but not separable
(E) also as private emotions, are social phenomena not inseparable

SC01455

762. In a speech before the Senate Banking Committee, the chairman of the Federal Reserve painted an optimistic picture of the economy, suggesting to investors the central bank in the near future is not lowering interest rates.

(A) suggesting to investors the central bank in the near future is not lowering interest rates
(B) suggesting to investors that the central bank would not lower interest rates in the near future
(C) which suggests that to investors in the near future interest rates will not be lowered by the central bank
(D) with the suggestion to investors in the near future that interest rates would not be lowered by the central bank
(E) with the suggestion to investors of interest rates not being lowered in the near future by the central bank

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

SC03014

763. As with ants, the elaborate social structure of termites includes a few individuals reproducing and the rest serve the colony by tending juveniles, gathering food, building the nest, or battling intruders.

(A) As with ants, the elaborate social structure of termites includes a few individuals reproducing

(B) As do ants, termites have an elaborate social structure, which includes a few individuals to reproduce

(C) Just as with ants, termite social structure is elaborate, including a few individuals for reproducing

(D) Like ants, termites have an elaborate social structure in which a few individuals reproduce

(E) Like that of ants, the termite social structure is elaborate, including a few individuals that reproduce

SC02078

764. While Noble Sissle may be best known for his collaboration with Eubie Blake, as both a vaudeville performer and as a lyricist for songs and Broadway musicals, also enjoying an independent career as a singer with such groups as Hahn's Jubilee Singers.

(A) and as a lyricist for songs and Broadway musicals, also enjoying

(B) and writing lyrics for songs and Broadway musicals, also enjoying

(C) and a lyricist for songs and Broadway musicals, he also enjoyed

(D) as well as writing lyrics for songs and Broadway musicals, he also enjoyed

(E) as well as a lyricist for songs and Broadway musicals, he had also enjoyed

SC03881

765. Air traffic routes over the North Pole are currently used by only two or three planes a day, but it was found by a joint Canadian–Russian study to be both feasible as well as desirable if those routes are opened to thousands more commercial planes a year.

(A) Air traffic routes over the North Pole are currently used by only two or three planes a day, but it was found by a joint Canadian–Russian study to be both feasible as well as desirable if those routes are opened to thousands more commercial planes a year.

(B) Currently used by only two or three planes a day, a joint Canadian–Russian study has found that if air traffic routes over the North Pole are opened to thousands more commercial planes a year, it would be both feasible and desirable.

(C) A joint Canadian–Russian study, finding it to be both feasible as well as desirable to open air traffic routes over the North Pole, which are currently used by only two or three planes a day, to thousands more commercial planes a year.

(D) Although air traffic routes over the North Pole are currently used by only two or three planes a day, a joint Canadian–Russian study has found that opening those routes to thousands more commercial planes a year is both feasible and desirable.

(E) With air traffic routes over the North Pole currently used by only two or three planes a day, opening those routes to thousands more commercial planes a year has been found by a joint Canadian—Russian study as both feasible and desirable.

SC01680

766. From an experiment using special extrasensory perception cards, each bearing one of a set of symbols, parapsychologist Joseph Banks Rhine claimed statistical proof for subjects who could use thought transference to identify a card in the dealer's hand.

(A) for subjects who could use thought transference to identify a card in the dealer's hand

(B) for a card in the dealer's hand to be identified by subjects with thought transference

(C) of subjects able to identify with thought transference a card in the dealer's hand

(D) that subjects could identify a card in the dealer's hand by using thought transference

(E) that subjects are capable to use thought transference for identifying a card in the dealer's hand

SC02272

767. A long-term study of some 1,000 physicians indicates that the more coffee these doctors drank, the more they had a likelihood of coronary disease.

(A) more they had a likelihood of coronary disease
(B) more was their likelihood of having coronary disease
(C) more they would have a likelihood to have coronary disease
(D) greater was their likelihood of having coronary disease
(E) greater was coronary disease likely

SC02096

768. Hurricanes at first begin traveling from east to west, because that direction is the way the prevailing winds in the tropics blow, but they then veer off toward higher latitudes, in many cases changing direction toward the east before dissipating over the colder, more northerly waters or over land.

(A) Hurricanes at first begin traveling from east to west, because that direction is the way the prevailing winds in the tropics blow, but
(B) At first, hurricanes travel from east to west, because that is the direction of the prevailing winds in the tropics, but
(C) While hurricanes travel from east to west at first, the direction of the prevailing winds blowing in the tropics, and
(D) Because hurricanes at first travel from east to west, since it is the direction of the prevailing winds in the tropics,
(E) Hurricanes, beginning by traveling from east to west, because this is the direction of the prevailing winds in the tropics,

SC03083

769. Travelers from Earth to Mars would have to endure low levels of gravity for long periods of time, avoiding large doses of radiation, plus contending with the chemically reactive Martian soil, and perhaps even ward off contamination by Martian life-forms.

(A) Mars would have to endure low levels of gravity for long periods of time, avoiding large doses of radiation, plus contending
(B) Mars would have to endure low levels of gravity for long periods of time, avoid large doses of radiation, contend
(C) Mars, having to endure low levels of gravity for long periods of time, would also have to avoid large doses of radiation, plus contending
(D) Mars, having to endure low levels of gravity for long periods of time, avoid large doses of radiation, plus contend
(E) Mars, who would have to endure low levels of gravity for long periods of time, avoid large doses of radiation, contend with

771. Although Alice Walker published a number of essays, poetry collections, and stories during the 1970s, her third novel, *The Color Purple*, which was published in 1982, brought her the widest acclaim in that it won both the National Book Award as well as the Pulitzer Prize.

(A) which was published in 1982, brought her the widest acclaim in that it won both the National Book Award as well as the Pulitzer Prize
(B) published in 1982, bringing her the widest acclaim by winning both the National Book Award and the Pulitzer Prize
(C) published in 1982, brought her the widest acclaim, winning both the National Book Award and the Pulitzer Prize

(D) was published in 1982 and which, winning both the National Book Award and the Pulitzer Prize, brought her the widest acclaim

(E) was published in 1982, winning both the National Book Award as well as the Pulitzer Prize, and bringing her the widest acclaim

SC01436

772. Heating oil and natural gas futures rose sharply yesterday, as long-term forecasts for much colder temperatures in key heating regions raised fears of insufficient supplies capable of meeting the demand this winter.

(A) of insufficient supplies capable of meeting

(B) of supplies that would be insufficient for meeting

(C) of insufficient supplies that are unable to meet

(D) that there would be supplies insufficient for meeting

(E) that supplies would be insufficient to meet

SC00970

773. Because it regarded the environmentalists as members of an out-of-state organization, the city council voted that they are denied permission for participating in the parade.

(A) that they are denied permission for participating

(B) that they be denied permission for participating

(C) denying them permission for participation

(D) the denial of permission that they participate

(E) to deny them permission to participate

SC07348

774. In 1913, the largely self-taught Indian mathematician Srinivasa Ramanujan mailed 120 of his theorems to three different British mathematicians; only one, G. H. Hardy, recognized the brilliance of these theorems, but thanks to Hardy's recognition, Ramanujan was eventually elected to the Royal Society of London.

(A) only one, G. H. Hardy, recognized the brilliance of these theorems, but

(B) they were brilliant, G. H. Hardy alone recognized, but

(C) these theorems were brilliant, but only one, G. H. Hardy recognized;

(D) but, only one, G. H. Hardy, recognizing their brilliance,

(E) only one G. H. Hardy recognized, but these theorems were brilliant

SC05201

775. Cost cutting and restructuring has allowed the manufacturing company to lower its projected losses for the second quarter, and they are forecasting a profit before the end of the year.

(A) has allowed the manufacturing company to lower its projected losses for the second quarter, and they are forecasting

(B) has allowed for the manufacturing company to lower its projected losses in the second quarter and to forecast

(C) have allowed that the manufacturing company can lower the projected losses for the second quarter, and to forecast

(D) have allowed the manufacturing company to lower its projected second-quarter losses and to forecast

(E) have allowed for the manufacturing company to lower the projected losses in the second quarter, as well as forecasting

SC13010

776. The Life and Casualty Company hopes that by increasing its environmental fund reserves to $1.2 billion, that it has set aside enough to pay for environmental claims and no longer has to use its profits and capital to pay those claims bit by bit, year by year.

(A) that it has set aside enough to pay for environmental claims and no longer has

(B) enough has been set aside with which environmental claims can be paid and it will have no longer

(C) it has set aside enough for payment of environmental claims and thus no longer having

(D) enough has been set aside to pay for environmental claims, thus no longer having

(E) it has set aside enough to pay for environmental claims and will no longer have

SC03079

777. Like ancient Egyptian architectural materials that were recycled in the construction of ancient Greek Alexandria, so ancient Greek materials from the construction of that city were reused in subsequent centuries by Roman, Muslim, and modern builders.

(A) Like ancient Egyptian architectural materials that were recycled in the construction of

(B) Like recycling ancient Egyptian architectural materials to construct

(C) Just as ancient Egyptian architectural materials were recycled in the construction of

(D) Just as they recycled ancient Egyptian architectural materials in constructing

(E) Just like ancient Egyptian architectural materials that were recycled in constructing

SC09877

778. Especially in the early years, new entrepreneurs may need to find resourceful ways, like renting temporary office space or using answering services, that make their company seem large and more firmly established than they may actually be.

(A) that make their company seem large

(B) to make their companies seem larger

(C) thus making their companies seem larger

(D) so that the companies seem larger

(E) of making their company seem large

SC01975

779. Unlike the nests of leaf cutters and most other ants, situated underground or in pieces of wood, raider ants make a portable nest by entwining their long legs to form "curtains" of ants that hang from logs or boulders, providing protection for the queen and the colony larvae and pupae.

(A) the nests of leaf cutters and most other ants,

(B) the nests of leaf cutters and most other ants, which are

(C) leaf cutters and most other ants, whose nests are

(D) leaf cutters and most other ants in having nests

(E) those of leaf cutters and most other ants with nests

SC04452

780. Turtles, like other reptiles, can endure long fasts, in their ability to survive on weekly or even monthly feedings; however, when food is readily available, they may eat frequently and grow very fat.

(A) fasts, in their ability to survive

(B) fasts, having their ability to survive

(C) fasts, due to having the ability of surviving

(D) fasts because they are able to survive

(E) fasts because of having the ability of surviving

SC02025

781. Thai village crafts, as with other cultures, have developed through the principle that form follows function and incorporate readily available materials fashioned using traditional skills.

(A) as with

(B) as did those of

(C) as they have in

(D) like in

(E) like those of

SC01554

782. To estimate the expansion rate of the universe is a notoriously difficult problem because there is a lack of a single yardstick that all distances can be measured by.

(A) To estimate the expansion rate of the universe is a notoriously difficult problem because there is a lack of a single yardstick that all distances can be measured by.

(B) Estimating the expansion rate of the universe is a notoriously difficult problem because there is no single yardstick by which all distances can be measured.

(C) Because there is a lack of a single yardstick to measure all distances by, estimating the expansion rate of the universe is a notoriously difficult problem.

(D) A notoriously difficult problem is to estimate the expansion rate of the universe because a single yardstick is lacking by which all distances can be measured.

(E) It is a notoriously difficult problem to estimate the expansion rate of the universe because by no single yardstick can all distances be measured.

SC01059

783. The Commerce Department reported that the nation's economy grew at a brisk annual pace of 3.7 percent in the second quarter, but that while businesses were expanding their production, unsold goods piled up on store shelves as consumer spending is slowed sharply.

(A) unsold goods piled up on store shelves as consumer spending is slowed sharply

(B) unsold goods were piling up on store shelves as consumer spending slowed sharply

(C) unsold goods had piled up on store shelves with a sharp slowing of consumer spending

(D) consumer spending was slowing sharply, with the piling up of unsold goods on store shelves

(E) consumer spending has slowed sharply, with unsold goods piling up on store shelves

SC01470

784. Thomas Mann's novel Doctor Faustus offers an examination not only of how difficult it is to reconcile reason, will, and passion together in any art form, but also a skillfully navigated exploration of the major concerns of modernism.

(A) an examination not only of how difficult it is to reconcile reason, will, and passion together in any art form, but

(B) an examination not only about the difficulty of reconciling reason, will, and passion in any art form, and

(C) not only an examination of how difficult it is to reconcile reason, will, and passion in any art form, and

(D) not only an examination about the difficulty with reconciling reason, will, and passion together in any art form, but

(E) not only an examination of the difficulty of reconciling reason, will, and passion in any art form, but

SC00981

785. According to a recent study, retirees in the United States are four times more likely to give regular financial aid to their children as to receive it from them.

(A) retirees in the United States are four times more likely to give regular financial aid to their children as

(B) retirees in the United States are four times as likely to give regular financial aid to their children as it is for them

(C) retirees in the United States are four times more likely to give regular financial aid to their children than

(D) it is four times more likely for retirees in the United States to give regular financial aid to their children than they are

(E) it is four times as likely that retirees in the United States will give their children regular financial aid as they are

SC04093

786. Discussion of greenhouse effects have usually had as a focus the possibility of Earth growing warmer and to what extent it might, but climatologists have indicated all along that precipitation, storminess, and temperature extremes are likely to have the greatest impact on people.

(A) Discussion of greenhouse effects have usually had as a focus the possibility of Earth growing warmer and to what extent it might,

(B) Discussion of greenhouse effects has usually had as its focus whether Earth would get warmer and what the extent would be,

(C) Discussion of greenhouse effects has usually focused on whether Earth would grow warmer and to what extent,

(D) The discussion of greenhouse effects have usually focused on the possibility of Earth getting warmer and to what extent it might,

(E) The discussion of greenhouse effects has usually focused on whether Earth would grow warmer and the extent that is,

SC02102

787. In the seventh century B.C., the Roman alphabet was adapted from the Etruscan alphabet, which in turn had been adapted in the previous century from a western Greek alphabet, which itself had been adapted earlier in the same century from the Phoenician alphabet.

(A) which itself had been adapted earlier

(B) adapting itself earlier

(C) itself being adapted earlier

(D) having been earlier adapted itself

(E) earlier itself having been adapted

829. The final decades of the twentieth century not only saw an explosion of the literary production among women, but there was also an intense interest in the lives and works of women writers.

(A) not only saw an explosion of the literary production among women, but there was also

(B) not only saw an explosion of literary production in women, but there was also

(C) saw not only an explosion of literary production among women, but also

(D) saw not only an explosion of the literary production by women, but it also saw

(E) saw not only an explosion of literary production by women, but also saw

SC01070

830. Covering 71 percent of Earth's surface, the oceans play an essential role in maintaining the conditions for human existence on land, moderating temperature by the absorption of heat and carbon dioxide, and giving pure water back to the atmosphere through evaporation.

(A) Covering 71 percent of Earth's surface, the oceans play an essential role in maintaining the conditions for human existence on land, moderating

(B) Covering 71 percent of Earth's surface and playing an essential role in maintaining the conditions for human existence on land, the oceans moderate

(C) The oceans cover 71 percent of Earth's surface and play an essential role in maintaining conditions for human existence on land, and by moderating

(D) The oceans cover 71 percent of Earth's surface, play an essential role in maintaining the conditions for human existence on land, and moderate

(E) The oceans cover 71 percent of Earth's surface, playing an essential role in maintaining the conditions for human existence on land, and they moderate

SC11850.01

831. Although the rise in the Producer Price Index was greater than expected, most analysts agreed that the index was unlikely to continue going up and that inflation remained essentially under control.

(A) that the index was unlikely to continue going up and that inflation remained

(B) that it was unlikely for the index continuing to go up and for inflation to remain

(C) that the index was unlikely to continue to go up, with inflation to remain

(D) on the unlikelihood that the index would continue going up and that inflation remained

(E) on the unlikelihood that the index would continue to go up and for inflation to remain

SC17041.01

832. Severely hindered by problems with local suppliers, the fact that the AQ division also had a new management team to adapt to was not seen by the board of directors as a legitimate excuse for such low productivity.

(A) Severely hindered by problems with local suppliers, the fact that the AQ division also had a new management team to adapt to

(B) Though severely hindered by local supply problems, the fact that the AQ division also had a new management team to which to adapt

(C) Severely hindered by problems with local suppliers, the AQ division also had to adapt to a new management team, but this

(D) Severely hindered by local supply problems, that the AQ division also had to adapt to a new management team

(E) Though severely hindered by problems with local suppliers, the AQ division's also having a new management team to which it had to adapt

SC01037

833. The Eastern State Penitentiary was established in 1822 by reformers advocating that prisoners be held in solitary confinement and hard labor so as to reform them.

(A) advocating that prisoners be held in solitary confinement and hard labor so as to reform them

(B) who were advocating prisoners to be held in solitary confinement and hard labor for their reform

(C) advocating solitary confinement and hard labor as the means to reform prisoners

(D) who advocated solitary confinement and hard labor for the means of prisoner reform

(E) advocating as the means for prisoner reform solitary confinement and hard labor

SC03288

834. Some anthropologists believe that the genetic homogeneity evident in the world's people is the result of a "population bottleneck"—at some time in the past our ancestors suffered an event, greatly reducing their numbers and thus our genetic variation.

(A) at some time in the past our ancestors suffered an event, greatly reducing their numbers

(B) that at some time in the past our ancestors suffered an event that greatly reduced their numbers

(C) that some time in the past our ancestors suffered an event so that their numbers were greatly reduced,

(D) some time in the past our ancestors suffered an event from which their numbers were greatly reduced

(E) some time in the past, that our ancestors suffered an event so as to reduce their numbers greatly,

SC01493

835. Through experimenting designed to provide information that will ultimately prove useful in the treatment of hereditary diseases, mice have received bone marrow transplants that give them a new gene.

(A) Through experimenting designed to provide information that will ultimately prove
(B) Through experiments designed to provide information ultimately proving
(C) In experimentation designed to provide information that ultimately proves
(D) In experimenting designed to provide information ultimately proving
(E) In experiments designed to provide information that will ultimately prove

SC48420.01

836. Linking arrangements among secondary schools and the workplace never evolved in the United States as they have in most other developed countries.

(A) among secondary schools and the workplace never evolved in the United States as they have
(B) in the United States among secondary schools and the workplace never evolved as they did
(C) between secondary schools and the workplace never evolved in the United States as
(D) in the United States between secondary schools and the workplace never evolved as they have
(E) between secondary schools and the workplace never evolved in the United States as they did

SC01603

837. The United Parcel Service plans to convert its more than 2,000 gasoline-powered trucks in the Los Angeles area to run on cleaner-burning natural gas.

(A) to convert its more than 2,000 gasoline-powered trucks in the Los Angeles area to
(B) to convert its more than 2,000 trucks in the Los Angeles area that are powered by gasoline to
(C) on converting its more than 2,000 gasoline-powered trucks in the Los Angeles area that will
(D) for its more than 2,000 gasoline-powered trucks in the Los Angeles area to convert to
(E) that its more than 2,000 trucks in the Los Angeles area that are powered by gasoline will convert to

SC02443

838. Foraging at all times of the day and night, but interspersing their feeding with periods of rest that last between one and eight hours, a sperm whale could eat so much as a ton of squid a day.

(A) between one and eight hours, a sperm whale could eat so
(B) between one and eight hours, sperm whales can eat as
(C) between one to eight hours, sperm whales could eat as
(D) from one to eight hours, sperm whales could eat so
(E) from one to eight hours, a sperm whale can eat so

SC14796

839. In some types of pine tree, a thick layer of needles protects the buds from which new growth proceeds; consequently they are able to withstand forest fires relatively well.

(A) a thick layer of needles protects the buds from which new growth proceeds; consequently they are able to withstand forest fires relatively well
(B) a thick needle layer protects buds from where new growth proceeds, so that they can withstand forest fires relatively well
(C) a thick layer of needles protect the buds from which new growth proceeds; thus, they are able to withstand relatively well any forest fires
(D) since the buds from which new growth proceeds are protected by a thick needle layer, consequently they can therefore withstand forest fires relatively well
(E) because the buds where new growth happens are protected by a thick layer of needles, they are able to withstand forest fires relatively easily as a result

SC08577

840. The tourism commission has conducted surveys of hotels in the most popular resorts, with the ultimate goal of reducing the guests who end up expressing overall dissatisfaction with the service in the hotels.

(A) with the ultimate goal of reducing the guests who end up expressing overall dissatisfaction with the service in the hotels
(B) with the goal to ultimately reduce the number of guests who end up expressing overall dissatisfaction with the hotels' service

(C) ultimately with the goal to reduce expressions of overall dissatisfaction by the guests with the hotel service

(D) in an ultimate attempt to reduce the number of guests that ends up expressing overall dissatisfaction with the hotels' service

(E) with the ultimate goal of reducing the number of guests who express overall dissatisfaction with the hotels' service

SC01607

841. A new study suggests that the conversational pace of everyday life may be so brisk it hampers the ability of some children for distinguishing discrete sounds and words and, the result is, to make sense of speech.

(A) it hampers the ability of some children for distinguishing discrete sounds and words and, the result is, to make

(B) that it hampers the ability of some children to distinguish discrete sounds and words and, as a result, to make

(C) that it hampers the ability of some children to distinguish discrete sounds and words and, the result of this, they are unable to make

(D) that it hampers the ability of some children to distinguish discrete sounds and words, and results in not making

(E) as to hamper the ability of some children for distinguishing discrete sounds and words, resulting in being unable to make

SC07035

842. The nineteenth-century chemist Humphry Davy presented the results of his early experiments in his "Essay on Heat and Light," a critique of all chemistry since Robert Boyle as well as a vision of a new chemistry that Davy hoped to found.

(A) a critique of all chemistry since Robert Boyle as well as a vision of a

(B) a critique of all chemistry following Robert Boyle and also his envisioning of a

(C) a critique of all chemistry after Robert Boyle and envisioning as well

(D) critiquing all chemistry from Robert Boyle forward and also a vision of

(E) critiquing all the chemistry done since Robert Boyle as well as his own envisioning of

SC02280

843. To attract the most talented workers, some companies are offering a wider range of benefits, letting employees pick those most important to them.

(A) benefits, letting employees pick those most important to them

(B) benefits, letting employees pick the most important of them to themselves

(C) benefits and letting employees pick the most important to themselves

(D) benefits and let employees pick the most important to them

(E) benefits and let employees pick those that are most important to themselves

(D) appeared as equipped to face any obstacle the environment could put in their paths,

(E) appeared to have been equipped for facing any obstacle the environment could put in their path,

SC02135

857. To map Earth's interior, geologists use a network of seismometers to chart seismic waves that originate in the earth's crust and ricochet around its interior, most rapidly traveling through cold, dense regions and slower through hotter rocks.

(A) interior, most rapidly traveling through cold, dense regions and slower

(B) interior, which travel most rapidly through cold, dense regions, and more slowly

(C) interior, traveling most rapidly through cold, dense regions and more slowly

(D) interior and most rapidly travel through cold, dense regions, and slower

(E) interior and that travel most rapidly through cold, dense regions and slower

SC02470

858. Prices at the producer level are only 1.3 percent higher now than a year ago and are going down, even though floods in the Midwest and drought in the South are hurting crops and therefore raised corn and soybean prices.

(A) than a year ago and are going down, even though floods in the Midwest and drought in the South are hurting crops and therefore raised

(B) than those of a year ago and are going down, even though floods in the Midwest and drought in the South are hurting crops and therefore raising

(C) than a year ago and are going down, despite floods in the Midwest and drought in the South, and are hurting crops and therefore raising

(D) as those of a year ago and are going down, even though floods in the Midwest and drought in the South hurt crops and therefore raise

(E) as they were a year ago and are going down, despite floods in the Midwest and drought in the South, and are hurting crops and therefore raising

SC07117

859. Fossils of the arm of a sloth found in Puerto Rico in 1991, and dated at 34 million years old, made it the earliest known mammal of the Greater Antilles Islands.

(A) sloth found in Puerto Rico in 1991, and dated at 34 million years old, made it the earliest known mammal of

(B) sloth, that they found in Puerto Rico in 1991, has been dated at 34 million years old, thus making it the earliest mammal known on

(C) sloth that was found in Puerto Rico in 1991, was dated at 34 million years old, making this the earliest known mammal of

(D) sloth, found in Puerto Rico in 1991, have been dated at 34 million years old, making the sloth the earliest known mammal on

(E) sloth which, found in Puerto Rico in 1991, was dated at 34 million years old, made the sloth the earliest known mammal of

SC01550

860. Recently physicians have determined that stomach ulcers are not caused by stress, alcohol, or rich foods, but a bacterium that dwells in the mucous lining of the stomach.

(A) not caused by stress, alcohol, or rich foods, but

(B) not caused by stress, alcohol, or rich foods, but are by

(C) caused not by stress, alcohol, or rich foods, but by

(D) caused not by stress, alcohol, and rich foods, but

(E) caused not by stress, alcohol, and rich foods, but are by

SC05848

861. The eyes of the elephant seal adapt to darkness more quickly than any other animal yet tested, thus allowing it to hunt efficiently under the gloomy conditions at its feeding depth of between 300 and 700 meters.

(A) The eyes of the elephant seal adapt to darkness more quickly than any other animal yet tested, thus allowing it

(B) The eyes of the elephant seal adapt to darkness more quickly than does any other animal yet tested, allowing them

(C) The eyes of the elephant seal adapt to darkness more quickly than do those of any other animal yet tested, allowing it

(D) Because they adapt to darkness more quickly than any other animal yet tested, the eyes of the elephant seal allow it

(E) Because the eyes of the elephant seal adapt to darkness more quickly than do those of any other animal yet tested, it allows them

SC01068

862. A mutual fund having billions of dollars in assets will typically invest that money in hundreds of companies, rarely holding more than one percent of the shares of any particular corporation.

(A) companies, rarely holding more than one percent

(B) companies, and it is rare to hold at least one percent or more

(C) companies and rarely do they hold more than one percent

(D) companies, so that they rarely hold more than one percent

(E) companies; rarely do they hold one percent or more

SC08083

863. Positing an enormous volcanic explosion at the end of the Permian period would explain the presence of a buried crater, account for the presence of the element iridium (originating deep within the earth), and the presence of quartz having been shattered by high-impact shock waves.

(A) account for the presence of the element iridium (originating deep within the earth), and the presence of quartz having been

(B) of the element iridium (originating deep within the earth), and of quartz

(C) the element iridium (originating deep within the earth), and explain the presence of quartz having been

(D) the presence of the element iridium (originating deep within the earth), and explain the presence of quartz

(E) explain the element iridium (originating deep within the earth), and the presence of quartz

SC01561

864. The 19-year-old pianist and composer performed his most recent work all over Europe, Asia, and North America last year, winning prestigious awards in both London as well as Tokyo for his achievement at so young an age, and he is hoping to continue composing now that he has returned to Chicago.

(A) winning prestigious awards in both London as well as Tokyo for his achievement at so young an age, and he is hoping

(B) winning prestigious awards both in London and Tokyo for his achievement at such a young age, and hoping

(C) having won prestigious awards both in London and Tokyo for his achievement at so young an age, hoping

(D) winning prestigious awards in both London and Tokyo for his achievement at such a young age, and he hopes

(E) having won prestigious awards both in London as well as Tokyo for his achievement at so young an age, and he hopes

SC01474

865. Starfish, with anywhere from five to eight arms, have a strong regenerative ability, and if one arm is lost it quickly replaces it, sometimes by the animal overcompensating and growing an extra one or two.

(A) one arm is lost it quickly replaces it, sometimes by the animal overcompensating and

(B) one arm is lost it is quickly replaced, with the animal sometimes overcompensating and

(C) they lose one arm they quickly replace it, sometimes by the animal overcompensating,

(D) they lose one arm they are quickly replaced, with the animal sometimes overcompensating,

(E) they lose one arm it is quickly replaced, sometimes with the animal overcompensating,

SC04249

866. In 2000, a mere two dozen products accounted for half the increase in spending on prescription drugs, a phenomenon that is explained not just because of more expensive drugs but by the fact that doctors are writing many more prescriptions for higher-cost drugs.

(A) a phenomenon that is explained not just because of more expensive drugs but by the fact that doctors are writing

(B) a phenomenon that is explained not just by the fact that drugs are becoming more expensive but also by the fact that doctors are writing

(C) a phenomenon occurring not just because of drugs that are becoming more expensive but because of doctors having also written

(D) which occurred not just because drugs are becoming more expensive but doctors are also writing

(E) which occurred not just because of more expensive drugs but because doctors have also written

SC05393

867. Similar to other early Mississippi Delta blues singers, the music of Robert Johnson arose from an oral tradition beginning with a mixture of chants, fiddle tunes, and religious music and only gradually evolved into the blues.

(A) Similar to other early Mississippi Delta blues singers, the music of Robert Johnson arose from an oral tradition beginning with

(B) Similar to that of other early Mississippi Delta blues singers, Robert Johnson made music that arose from an oral tradition that began with

(C) As with other early Mississippi Delta blues singers, Robert Johnson made music that arose from an oral tradition beginning as

(D) Like other early Mississippi Delta blues singers, Robert Johnson's music arose from an oral tradition beginning with

(E) Like the music of other early Mississippi Delta blues singers, the music of Robert Johnson arose from an oral tradition that began as

SC03805

868. Thelonious Monk, who was a jazz pianist and composer, produced a body of work both rooted in the stride-piano tradition of Willie (The Lion) Smith and Duke Ellington, yet in many ways he stood apart from the mainstream jazz repertory.

(A) Thelonious Monk, who was a jazz pianist and composer, produced a body of work both rooted

(B) Thelonious Monk, the jazz pianist and composer, produced a body of work that was rooted both

(C) Jazz pianist and composer Thelonious Monk, who produced a body of work rooted

(D) Jazz pianist and composer Thelonious Monk produced a body of work that was rooted

(E) Jazz pianist and composer Thelonious Monk produced a body of work rooted both

SC06898

869. Nobody knows exactly how many languages there are in the world, partly because of the difficulty of distinguishing between a language and the sublanguages or dialects within it, but those who have tried to count typically have found about five thousand.

(A) and the sublanguages or dialects within it, but those who have tried to count typically have found

(B) and the sublanguages or dialects within them, with those who have tried counting typically finding

(C) and the sublanguages or dialects within it, but those who have tried counting it typically find

(D) or the sublanguages or dialects within them, but those who tried to count them typically found

(E) or the sublanguages or dialects within them, with those who have tried to count typically finding

SC08719

870. Although a number of excellent studies narrate the development of domestic technology and its impact on housewifery, these works do not discuss the contributions of the women employed by manufacturers and utility companies as product demonstrators and publicists, who initially promoted new and unfamiliar technology to female consumers.

(A) by manufacturers and utility companies as product demonstrators and publicists,

(B) to be product demonstrators and publicists by manufacturers and utility companies,

(C) to demonstrate and publicize their products by manufacturers and utility companies

(D) by manufacturers and utility companies to be demonstrators and publicists of their products

(E) by manufacturers and utility companies to demonstrate and publicize their products

SC01577

871. The absence from business and financial records of the nineteenth century of statistics about women leave us with no record of the jobs that were performed by women and how they survived economically.

(A) from business and financial records of the nineteenth century of statistics about women leave us with no record of the jobs that were performed by women and

(B) from business and financial records of statistics about women from the nineteenth century leave us with no record of what jobs women performed or

(C) of statistics for women from business and financial records in the nineteenth century leaves us with no record of either the jobs that women were performing and of

(D) of statistics on women from business and financial records in the nineteenth century leave us with no record of the jobs that women performed or of

(E) of statistics about women from business and financial records of the nineteenth century leaves us with no record of either what jobs women performed or

SC02138

872. Heating-oil prices are expected to be higher this year than last because refiners are paying about $5 a barrel more for crude oil than they were last year.

(A) Heating-oil prices are expected to be higher this year than last because refiners are paying about $5 a barrel more for crude oil than they were

(B) Heating-oil prices are expected to rise higher this year over last because refiners pay about $5 a barrel for crude oil more than they did

(C) Expectations are for heating-oil prices to be higher this year than last year's because refiners are paying about $5 a barrel for crude oil more than they did

(D) It is the expectation that heating-oil prices will be higher for this year over last because refiners are paying about $5 a barrel more for crude oil now than what they were

(E) It is expected that heating-oil prices will rise higher this year than last year's because refiners pay about $5 a barrel for crude oil more than they did

SC01443

873. Even though Clovis points, spear points with longitudinal grooves chipped onto their faces, have been found all over North America, they are named for the New Mexico site where they were first discovered in 1932.

(A) Even though Clovis points, spear points with longitudinal grooves chipped onto their faces, have been found all over North America, they are named for the New Mexico site where they were first discovered in 1932.

(B) Although named for the New Mexico site where first discovered in 1932, Clovis points are spear points of longitudinal grooves chipped onto their faces and have been found all over North America.

(C) Named for the New Mexico site where they have been first discovered in 1932, Clovis points, spear points of longitudinal grooves chipped onto the faces, have been found all over North America.

(D) Spear points with longitudinal grooves that are chipped onto the faces, Clovis points, even though named for the New Mexico site where first discovered in 1932, but were found all over North America.

(E) While Clovis points are spear points whose faces have longitudinal grooves chipped into them, they have been found all over North America, and named for the New Mexico site where they have been first discovered in 1932.

SC04408

874. Heavy commitment by an executive to a course of action, especially if it has worked well in the past, makes it likely to miss signs of incipient trouble or misinterpret them when they do appear.

(A) Heavy commitment by an executive to a course of action, especially if it has worked well in the past, makes it likely to miss signs of incipient trouble or misinterpret them when they do appear.

(B) An executive who is heavily committed to a course of action, especially one that worked well in the past, makes missing signs of incipient trouble or misinterpreting ones likely when they do appear.

(C) An executive who is heavily committed to a course of action is likely to miss or misinterpret signs of incipient trouble when they do appear, especially if it has worked well in the past.

(D) Executives' being heavily committed to a course of action, especially if it has worked well in the past, makes them likely to miss signs of incipient trouble or misinterpreting them when they do appear.

(E) Being heavily committed to a course of action, especially one that has worked well in the past, is likely to make an executive miss signs of incipient trouble or misinterpret them when they do appear.

SC06740

875. According to recent studies comparing the nutritional value of meat from wild animals and meat from domesticated animals, wild animals have less total fat than do livestock fed on grain and more of a kind of fat they think is good for cardiac health.

(A) wild animals have less total fat than do livestock fed on grain and more of a kind of fat they think is

(B) wild animals have less total fat than livestock fed on grain and more of a kind of fat thought to be

(C) wild animals have less total fat than that of livestock fed on grain and have more fat of a kind thought to be

(D) total fat of wild animals is less than livestock fed on grain and they have more fat of a kind thought to be

(E) total fat is less in wild animals than that of livestock fed on grain and more of their fat is of a kind they think is

SC03292

876. Yellow jackets number among the 900 or so species of the world's social wasps, wasps living in a highly cooperative and organized society where they consist almost entirely of females—the queen and her sterile female workers.

(A) wasps living in a highly cooperative and organized society where they consist almost entirely of

(B) wasps that live in a highly cooperative and organized society consisting almost entirely of

(C) which means they live in a highly cooperative and organized society, almost all

(D) which means that their society is highly cooperative, organized, and it is almost entirely

(E) living in a society that is highly cooperative, organized, and it consists of almost all

SC02539

877. Before 1988, insurance companies in California were free to charge whatever rates the market would bear, needing no approval from regulators before raising rates.

(A) needing no approval from regulators before raising

(B) and it needed no approval by regulators before raising

(C) and needing no approval from regulators before they raised

(D) with approval not needed by regulators before they raised

(E) with no approval needed from regulators before the raising of

SC01022

878. Marconi's conception of the radio was as a substitute for the telephone, a tool for private conversation; instead, it is precisely the opposite, a tool for communicating with a large, public audience.

(A) Marconi's conception of the radio was as a substitute for the telephone, a tool for private conversation; instead, it is

(B) Marconi conceived of the radio as a substitute for the telephone, a tool for private conversation, but which is

(C) Marconi conceived of the radio as a tool for private conversation that could substitute for the telephone; instead, it has become

(D) Marconi conceived of the radio to be a tool for private conversation, a substitute for the telephone, which has become

(E) Marconi conceived of the radio to be a substitute for the telephone, a tool for private conversation, other than what it is,

SC02611

879. Because there are provisions of the new maritime code that provide that even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas, they have already stimulated international disputes over uninhabited islands.

(A) Because there are provisions of the new maritime code that provide that even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas, they have already stimulated

(B) Because the new maritime code provides that even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas, it has already stimulated

(C) Even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas under provisions of the new maritime code, already stimulating

(D) Because even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas under provisions of the new maritime code, this has already stimulated

(E) Because even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas under provisions of the new maritime code, which is already stimulating

880. Unlike the automobile company, whose research was based on crashes involving sport utility vehicles, the research conducted by the insurance company took into account such factors as a driver's age, sex, and previous driving record.

(A) company, whose research was based on

(B) company, which researched

(C) company, in its research of

(D) company's research, having been based on

(E) company's research on

SC12131

881. Gusty westerly winds will continue to usher in a seasonably cool air mass into the region, as a broad area of high pressure will build and bring fair and dry weather for several days.

(A) to usher in a seasonably cool air mass into the region, as a broad area of high pressure will build and

(B) ushering in a seasonably cool air mass into the region and a broad area of high pressure will build that

(C) to usher in a seasonably cool air mass to the region, a broad area of high pressure building, and

(D) ushering a seasonably cool air mass in the region, with a broad area of high pressure building and

(E) to usher a seasonably cool air mass into the region while a broad area of high pressure builds, which will

SC02008

882. With the patience of its customers and with its network strained to the breaking point, the on-line service company announced a series of new initiatives trying to relieve the congestion that has led to at least four class-action lawsuits and thousands of complaints from frustrated customers.

(A) the patience of its customers and with its network strained to the breaking point, the on-line service company announced a series of new initiatives trying to relieve

(B) the patience of its customers and its network strained to the breaking point, the on-line service company announced a series of new initiatives that try to relieve

(C) its network and the patience of its customers strained to the breaking point, the on-line service company announced a series of new initiatives to try to relieve

(D) its network and with the patience of its customers strained to the breaking point, the on-line service company announced a series of initiatives to try relieving

(E) its network and its customers' patience strained to the breaking point, the on-line service company announced a series of new initiatives to try relieving

SC02094

883. November is traditionally the strongest month for sales of light trucks, but sales this past November, even when compared with sales in previous Novembers, accounted for a remarkably large share of total vehicle sales.

(A) but sales this past November, even when compared with sales in previous Novembers,

(B) but even when it is compared with previous Novembers, this past November's sales

(C) but even when they are compared with previous Novembers, sales of light trucks this past November

(D) so that compared with previous Novembers, sales of light trucks this past November

(E) so that this past November's sales, even compared with previous Novembers' sales,

SC05760

884. Most of the country's biggest daily newspapers had lower circulation in the six months from October 1995 through March 1996 than a similar period a year earlier.

(A) a similar period

(B) a similar period's

(C) in a similar period

(D) that in a similar period

(E) that of a similar period

SC01714

885. Mauritius was a British colony for almost 200 years, excepting for the domains of administration and teaching, the English language was never really spoken on the island.

(A) excepting for

(B) except in

(C) but except in

(D) but excepting for

(E) with the exception of

SC04853

886. Although appearing less appetizing than most of their round and red supermarket cousins, heirloom tomatoes, grown from seeds saved during the previous year—they are often green and striped, or have plenty of bumps and bruises—heirlooms are more flavorful and thus in increasing demand.

(A) Although appearing less appetizing than most of their round and red supermarket cousins, heirloom tomatoes, grown from seeds saved during the previous year

(B) Although heirloom tomatoes, grown from seeds saved during the previous year, appear less appetizing than most of their round and red supermarket cousins

(C) Although they appear less appetizing than most of their round and red supermarket cousins, heirloom tomatoes, grown from seeds saved during the previous year

(D) Grown from seeds saved during the previous year, heirloom tomatoes appear less appetizing than most of their round and red supermarket cousins

(E) Heirloom tomatoes, grown from seeds saved during the previous year, although they appear less appetizing than most of their round and red supermarket cousins

SC01987

887. The World Wildlife Fund has declared that global warming, a phenomenon most scientists agree to be caused by human beings in burning fossil fuels, will create havoc among migratory birds by altering the environment in ways harmful to their habitats.

(A) a phenomenon most scientists agree to be caused by human beings in burning fossil fuels,

(B) a phenomenon most scientists agree that is caused by fossil fuels burned by human beings,

(C) a phenomenon that most scientists agree is caused by human beings' burning of fossil fuels,

(D) which most scientists agree on as a phenomenon caused by human beings who burn fossil fuels,

(E) which most scientists agree to be a phenomenon caused by fossil fuels burned by human beings,

SC02216

888. The largest of all the planets, not only is Jupiter three times so massive as Saturn, the next larger planet, but also possesses four of the largest satellites, or moons, in our solar system.

(A) not only is Jupiter three times so massive as Saturn, the next larger

(B) not only is Jupiter three times as massive as Saturn, the next largest

(C) Jupiter, not only three times as massive as Saturn, the next largest

(D) Jupiter not only is three times as massive as Saturn, the next largest

(E) Jupiter is not only three times so massive as Saturn, the next larger

SC01587

(A) seem more likely at this stage that they will inflame debates over the origin of birds rather than

(B) seem more likely that it will inflame debates over the origin of birds at this stage than

(C) seems more likely to inflame debates on the origin of birds at this stage rather than

(D) seems more likely at this stage to inflame debates over the origin of birds than to

(E) seems more likely that it will inflame debates on the origin of birds at this stage than to

SC01622

890. Found only in the Western Hemisphere and surviving through extremes of climate, hummingbirds' range extends from Alaska to Tierra del Fuego, from sea-level rain forests to the edges of Andean snowfields and ice fields at altitudes of 15,000 feet.

(A) Found only in the Western Hemisphere and surviving through extremes of climate, hummingbirds' range extends

(B) Found only in the Western Hemisphere, hummingbirds survive through extremes of climate, their range extending

(C) Hummingbirds, found only in the Western Hemisphere and surviving through extremes of climate, with their range extending

(D) Hummingbirds, found only in the Western Hemisphere and surviving through extremes of climate, their range extends

(E) Hummingbirds are found only in the Western Hemisphere, survive through extremes of climate, and their range extends

SC01761

891. She was less successful after she had emigrated to New York compared to her native Germany, photographer Lotte Jacobi nevertheless earned a small group of discerning admirers, and her photographs were eventually exhibited in prestigious galleries across the United States.

(A) She was less successful after she had emigrated to New York compared to

(B) Being less successful after she had emigrated to New York as compared to

(C) Less successful after she emigrated to New York than she had been in

(D) Although she was less successful after emigrating to New York when compared to

(E) She had been less successful after emigrating to New York than in

SC02259

892. Scientists have recently found evidence that black holes—regions of space in which matter is so concentrated and the pull of gravity so powerful that nothing, not even light, can emerge from them—probably exist at the core of nearly all galaxies and the mass of each black hole is proportional to its host galaxy.

(A) exist at the core of nearly all galaxies and the mass of each black hole is proportional to

(B) exist at the core of nearly all galaxies and that the mass of each black hole is proportional to that of

(C) exist at the core of nearly all galaxies, and that the mass of each black hole is proportional to

(D) exists at the core of nearly all galaxies, and that the mass of each black hole is proportional to that of

(E) exists at the core of nearly all galaxies and the mass of each black hole is proportional to that of

SC02346

893. The use of lie detectors is based on the assumption that lying produces emotional reactions in an individual that, in turn, create unconscious physiological responses.

(A) that, in turn, create unconscious physiological responses

(B) that creates unconscious physiological responses in turn

(C) creating, in turn, unconscious physiological responses

(D) to create, in turn, physiological responses that are unconscious

(E) who creates unconscious physiological responses in turn

SC04213

894. Australian embryologists have found evidence that suggests that the elephant is descended from an aquatic animal, and its trunk originally evolving as a kind of snorkel.

(A) that suggests that the elephant is descended from an aquatic animal, and its trunk originally evolving

(B) that has suggested the elephant descended from an aquatic animal, its trunk originally evolving

(C) suggesting that the elephant had descended from an aquatic animal with its trunk originally evolved

(D) to suggest that the elephant had descended from an aquatic animal and its trunk originally evolved

(E) to suggest that the elephant is descended from an aquatic animal and that its trunk originally evolved

SC01957

895. Most efforts to combat such mosquito-borne diseases like malaria and dengue have focused either on the vaccination of humans or on exterminating mosquitoes with pesticides.

(A) like malaria and dengue have focused either on the vaccination of humans or on exterminating

(B) like malaria and dengue have focused either on vaccinating of humans or on the extermination of

(C) as malaria and dengue have focused on either vaccinating humans or on exterminating

(D) as malaria and dengue have focused on either vaccinating of humans or on extermination of

(E) as malaria and dengue have focused on either vaccinating humans or exterminating

SC02344

896. Among the Tsonga, a Bantu-speaking group of tribes in southeastern Africa, dance teams represent their own chief at the court of each other, providing entertainment in return for food, drink, and lodging.

(A) the court of each other, providing entertainment in return for

(B) the court of another and provide entertainment in return for

(C) the court of the other, so as to provide entertainment as a return on

(D) each other's court, entertainment being provided in return for

(E) another's court and provide entertainment as a return on

SC06633

897. Almost like clones in their similarity to one another, the cheetah species' homogeneity makes them especially vulnerable to disease.

(A) the cheetah species' homogeneity makes them especially vulnerable to disease

(B) the cheetah species is especially vulnerable to disease because of its homogeneity

(C) the homogeneity of the cheetah species makes it especially vulnerable to disease

(D) homogeneity makes members of the cheetah species especially vulnerable to disease

(E) members of the cheetah species are especially vulnerable to disease because of their homogeneity

SC04330

898. As sources of electrical power, windmills now account for only about 2,500 megawatts nationwide, but production is almost expected to double by the end of the year, which would provide enough electricity for 1.3 million households.

(A) almost expected to double by the end of the year, which would provide

(B) almost expected that it will double by the end of the year, thus providing

(C) expected that it will almost double by the end of the year to provide

(D) expected almost to double by the end of the year and thus to provide

(E) expected almost to double by the end of the year, which would thus be providing

SC03154

899. While most of the earliest known ball courts in Mesoamerica date to 900–400 B.C., waterlogged latex balls found at El Manati and representations of ballplayers painted on ceramics found at San Lorenzo attest to the fact that the Mesoamerican ballgame was well established by the mid-thirteenth century B.C.

(A) waterlogged latex balls found at El Manati and representations of ballplayers painted on ceramics found at San Lorenzo attest

(B) waterlogged latex balls found at El Manati and the painting of representations of ballplayers on ceramics found at San Lorenzo attests

(C) waterlogged latex balls found at El Manati and ceramics painted with representations of ballplayers found at San Lorenzo attests

(D) the finding of waterlogged latex balls at El Manati and the painting of representations of ballplayers on ceramics found at San Lorenzo attests

(E) the finding of waterlogged latex balls at El Manati and of representations of ballplayers painted on ceramics at San Lorenzo attest

9.9 Answer Explanations

The following discussion of sentence correction is intended to familiarize you with the most efficient and effective approaches to these kinds of questions. The particular questions in this chapter are generally representative of the kinds of sentence correction questions you will encounter on the GMAT exam.

*SC01527

759. According to some critics, watching television not only undermines one's ability to think critically but also impairs one's overall ability to perceive.

(A) not only undermines one's ability to think critically but also impairs one's

(B) not only undermines one's ability of critical thinking but also impairs the

(C) undermines not only one's ability to think critically but also impairs one's

(D) undermines not only one's ability of critical thinking but also impairs the

(E) undermines one's ability not only to think critically but also impairs one's

Grammatical Construction; Parallelism

The sentence correctly uses the structure *not only … but also …* to convey two points about the effects that critics believe result from watching television. The phrases placed in the blanks must be in parallel form.

A **Correct.** Two verbal phrases *undermines …* and *impairs …* are coordinated and placed in the correct positions, in parallel form. Also, *ability to think* (where *to think* is the infinitive form of the verb) is the idiomatically correct usage, parallel with *ability to perceive*.

B The phrase *ability of thinking* is unidiomatic. The use of *the* instead of *one's* impairs the parallelism.

C The phrase *not only* should precede the verb *undermines*. This obliterates the parallelism and makes the sentence incoherent.

D This makes the sentence incoherent because it obliterates the parallelism: the phrase *not only* should precede the verb *undermines*. A further deficiency is the use of *the* instead of *one's*.

E This obliterates the parallelism and makes the sentence incoherent. The phrase *not only* should precede the verb *undermines*.

The correct answer is A.

SC12999

760. In her presentation, the head of the Better Business Bureau emphasized that companies should think of the cost of conventions and other similar gatherings as not an expense, but as an investment in networking that will pay dividends.

(A) as not an expense, but as

(B) as not expense but

(C) not an expense, rather

(D) not as an expense, but as

(E) not in terms of expense, but

Parallelism; Idiom

This sentence is constructed around *not as X, but as Y*, which must start with the word *not* in accordance with this idiomatic pattern, and express both parts in a parallel way.

A This sentence improperly places *as* before *not*.

B This sentence improperly places *as* before *not*.

C This version lacks the required words *as* and *but*.

D **Correct.** The idiom has all of its parts and expresses the two opposed concepts in parallel terms.

E Although *in terms of* is an acceptable substitute for *as,* the construction is no longer parallel due to the lack of a second *in terms of* (or *as*) after *but*.

The correct answer is D.

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

SC15382

761. Recent interdisciplinary studies advance the argument that emotions, including those deemed personal or private is a social phenomenon, though one inseparable from bodily response.

(A) private is a social phenomenon, though one inseparable

(B) private, are social phenomena that are inseparable

(C) private are a social phenomenon but are not those separable

(D) private—are social phenomena but not separable

(E) also as private emotions, are social phenomena not inseparable

Agreement; Rhetorical Construction

The main problem is one of agreement: in the subordinate clause starting with *that*, the subject is the plural *emotions*, which demands the verb *are*, not *is*. Also, the phrase starting with *including* is a parenthetical expression that needs to be set off from the rest of the clause, with some punctuation to indicate a pause at its end (after *private*).

A The verb form *is* is incorrect, and should instead be *are*; the parenthetical expression is not separated at its end from the rest of the clause.

B **Correct.** *Are* is the correct agreeing verb form, and the comma after *private* correctly sets off the parenthetical expression.

C *Are* is correct, but nothing after *private* sets off the parenthetical expression from the subsequent material. In addition, *not those separable* is awkwardly phrased; it would be better as *not separable* or *inseparable* as in the correct answer choice B.

D The dash would be correct to set off the parenthetical expression only if *including* had been immediately preceded by a dash; otherwise a comma is needed. The phrase *not separable* is awkward; it would be better as *are not separable* or *are inseparable*.

E The phrase *also as private emotions* is wordy and unidiomatic. The phrase *social phenomena not inseparable* not only does not express the intended meaning, but is also awkward without a verb and a relative pronoun such as *that*: a better phrasing is *social phenomena that are not separable*.

The correct answer is B.

SC01455

762. In a speech before the Senate Banking Committee, the chairman of the Federal Reserve painted an optimistic picture of the economy, suggesting to investors the central bank in the near future is not lowering interest rates.

(A) suggesting to investors the central bank in the near future is not lowering interest rates

(B) suggesting to investors that the central bank would not lower interest rates in the near future

(C) which suggests that to investors in the near future interest rates will not be lowered by the central bank

(D) with the suggestion to investors in the near future that interest rates would not be lowered by the central bank

(E) with the suggestion to investors of interest rates not being lowered in the near future by the central bank

Grammatical Construction; Verb Form

The sentence seeks to report, in indirect-speech form (i.e., using a *that*-clause), a thought expressed by the chairman of the United States Federal Reserve (the central bank) concerning the central bank's intentions. For example, the chairman might have said: "The central bank will not lower interest rates in the near future." In simplified form, the report of that past speech would have been correct as follows: "The chairman said that the central bank would not lower interest rates in the near future." Notice how *will not lower* has to morph into *would not lower* in the indirect-speech transformation of the past direct speech. However, in the indirect-speech report that is given, the sequence of the verb forms is incorrect.

A The present-continuous form *is not lowering* is incorrect because the report refers to a past speech of the chairman that referred to what the central bank then intended.

B **Correct.** This clearly and correctly reports the chairman's past speech about what the central bank intended at that time.

C The antecedent of the relative pronoun *which* is unclear: is it *the economy*, *an optimistic picture of the economy*, or *the*

chairman … the economy? The sequence *suggests that to investors* is unnecessarily awkward and implausibly puts *to investors* within the scope of the reported speech, i.e., within the *that*-clause.

D The placement of the adverbial phrase *in the near future* incorrectly removes it outside the scope of the reported speech, and leaves it unclear what verb or adjective it is meant to modify.

E Indirect speech is normally best expressed in a *that*-clause; the attempt to express it by the prepositional phrase *of interest rates not being lowered …* is unnecessarily awkward.

The correct answer is B.

SC03014

763. As with ants, the elaborate social structure of termites includes a few individuals reproducing and the rest serve the colony by tending juveniles, gathering food, building the nest, or battling intruders.

(A) As with ants, the elaborate social structure of termites includes a few individuals reproducing

(B) As do ants, termites have an elaborate social structure, which includes a few individuals to reproduce

(C) Just as with ants, termite social structure is elaborate, including a few individuals for reproducing

(D) Like ants, termites have an elaborate social structure in which a few individuals reproduce

(E) Like that of ants, the termite social structure is elaborate, including a few individuals that reproduce

Grammatical Construction; Parallelism

The sentence describes the organization of reproduction and labor among termites. As written, the sentence seems, illogically, to compare a social structure with ants, not with another social structure. Overall, the sentence structure is unnecessarily awkward.

A The phrases *a few individuals reproducing* and *the rest serve …* are nonparallel, contrary to what would be expected given the coordinating conjunction *and*.

B The *and* seems as if it should coordinate two parallel elements in a complex relative clause; yet *a few individuals reproducing* is not parallel with *the rest serve … intruders*.

C This illogically compares a social structure with ants. The structure *including … and …* raises an expectation that there would be a phrase following *and* that would be parallel with the phrase *a few individuals for reproducing*. However, *the rest serve … intruders* is not parallel. The participle *including* is often used to introduce instances of a class; its use here is confusing since a social structure is not a class that has termites as its members.

D **Correct.** The sentence concisely notes that termites resemble ants in having an elaborate social structure. The complex relative clause *in which … and …* has two coordinated elements correctly parallel in structure: *a few individuals reproduce* and *the rest serve … intruders*.

E The phrase *that of ants* is not parallel with *the termite social structure*; also, the forward reference of *that* is unnecessarily awkward and impairs readability. As already noted, the use of the participle *including* is confusing. The conjunction *and* indicates coordination of two parallel elements, but *a few individuals that reproduce* cannot be correctly coordinated with anything that follows it.

The correct answer is D.

SC02078

764. While Noble Sissle may be best known for his collaboration with Eubie Blake, as both a vaudeville performer and as a lyricist for songs and Broadway musicals, also enjoying an independent career as a singer with such groups as Hahn's Jubilee Singers.

(A) and as a lyricist for songs and Broadway musicals, also enjoying

(B) and writing lyrics for songs and Broadway musicals, also enjoying

(C) and a lyricist for songs and Broadway musicals, he also enjoyed

(D) as well as writing lyrics for songs and Broadway musicals, he also enjoyed

(E) as well as a lyricist for songs and Broadway musicals, he had also enjoyed

Grammatical Construction; Idiom; Parallelism

As worded, this sentence opens with a dependent clause (a clause that cannot stand on its own), which requires a main clause (also known as an independent clause) to complete the sentence; however, there is no main clause. Also, given the placement of *as* before *both*, the *as* before *a lyricist* is incorrect. It would be acceptable to write *as both a vaudeville performer and a lyricist* or to write *both as a vaudeville performer and as a lyricist*; it is not acceptable to mix the two forms, as is done here.

A The dependent clause, *While . . . Broadway musicals*, is followed by a participial phrase rather than a main clause and is therefore ungrammatical. Furthermore, the word *as* before *a lyricist* violates the parallel structure required by the phrase *both . . . and*.

B The construction *as both a performer and writing lyrics* is incorrect. Also, like (A), this version of the sentence does not supply a main clause.

C **Correct.** Unlike (A) and (B), this version has a main clause. Also, unlike the other version, it correctly uses the *both x and y* form.

D Although this version does supply the main clause anticipated by *While . . .*, its use *as both a vaudeville performer as well as writing lyrics* is incorrect.

E This version's use of *both x as well as y* instead of *both x and y* is incorrect. It also introduces an inexplicable past perfect verb, *had . . . enjoyed*, in the main clause.

The correct answer is C.

SC03881

765. Air traffic routes over the North Pole are currently used by only two or three planes a day, but it was found by a joint Canadian–Russian study to be both feasible as well as desirable if those routes are opened to thousands more commercial planes a year.

(A) Air traffic routes over the North Pole are currently used by only two or three planes a day, but it was found by a joint Canadian–Russian study to be both feasible as well as desirable if those routes are opened to thousands more commercial planes a year.

(B) Currently used by only two or three planes a day, a joint Canadian–Russian study has found that if air traffic routes over the North Pole are opened to thousands more commercial planes a year, it would be both feasible and desirable.

(C) A joint Canadian–Russian study, finding it to be both feasible as well as desirable to open air traffic routes over the North Pole, which are currently used by only two or three planes a day, to thousands more commercial planes a year.

(D) Although air traffic routes over the North Pole are currently used by only two or three planes a day, a joint Canadian–Russian study has found that opening those routes to thousands more commercial planes a year is both feasible and desirable.

(E) With air traffic routes over the North Pole currently used by only two or three planes a day, opening those routes to thousands more commercial planes a year has been found by a joint Canadian—Russian study as both feasible and desirable.

Rhetorical Construction; Verb Form; Logical Predication

The point of the sentence is to share the results of a study about air routes over the North Pole, but the wording is confusing and verbose. The passive construction *it was found by a joint Canadian–Russian study to be* could be expressed more directly and clearly in active voice: *a joint Canadian–Russian study has found.*

A The passive construction *it was found by a joint Canadian–Russian study to be*, especially followed by the conditional *if*, is wordy, awkward, and unclear.

B *Used by only two or three planes* illogically modifies *a joint Canadian–Russian study*; the pronoun *it* has no clear antecedent.

C The subject *A joint Canadian–Russian study* has no verb; *to thousands more commercial planes* is located too far away from *to open*, which it is intended to modify.

D **Correct.** The sentence uses correctly placed modifiers and the active voice to explain clearly what a *joint Canadian–Russian study has found*.

E The passive construction *opening those routes . . . has been found by a joint Canadian–Russian study as both* is wordy and unidiomatic.

The correct answer is D.

SC01680

766. From an experiment using special extrasensory perception cards, each bearing one of a set of symbols, parapsychologist Joseph Banks Rhine claimed statistical proof for subjects who could use thought transference to identify a card in the dealer's hand.

(A) for subjects who could use thought transference to identify a card in the dealer's hand

(B) for a card in the dealer's hand to be identified by subjects with thought transference

(C) of subjects able to identify with thought transference a card in the dealer's hand

(D) that subjects could identify a card in the dealer's hand by using thought transference

(E) that subjects are capable to use thought transference for identifying a card in the dealer's hand

Idiom; Rhetorical Construction

This sentence is meant to indicate that Joseph Banks Rhine claimed that a certain experiment statistically proved that subjects could identify what symbol was on a card in a dealer's hand by using thought transference. The present version of the sentence does not convey the intended meaning well, however. What should follow *proof* is a statement of the assertion that Rhine claims the experiment has statistically proved, linked to the word *proof* by the word *that*. Instead *proof* is followed by a prepositional phrase *for subjects who. . . .*

A This version of the sentence inappropriately attempts to describe the claim by using a prepositional phrase, *for subjects who. . . .*

B Like (A), this version of the sentence inappropriately attempts to describe the claim by using a prepositional phrase, *for a card in. . . .*

C Like (A) and (B), this version of the sentence inappropriately attempts to describe the claim by using a prepositional phrase. While *proof* might reasonably be followed by *of*, the phrase that follows the preposition is ungrammatical, requiring a participle to modify *subjects*, such as *being able to. . . .*

D Correct. This version correctly uses the idiom *proof that* followed by an assertion.

E While this version of the sentence correctly follows *proof* with *that* followed by an assertion, it fails to use the appropriate idiom with *capable*; instead of *capable to use*, it should have *capable of using*.

The correct answer is D.

SC02272

767. A long-term study of some 1,000 physicians indicates that the more coffee these doctors drank, the more they had a likelihood of coronary disease.

(A) more they had a likelihood of coronary disease

(B) more was their likelihood of having coronary disease

(C) more they would have a likelihood to have coronary disease

(D) greater was their likelihood of having coronary disease

(E) greater was coronary disease likely

Idiom; Rhetorical Construction

This sentence describes the results of a study in which researchers found a correlation between the amounts of coffee that people drank and their likelihood of coronary disease. It most eloquently expresses this correlation as a comparison of parallel forms, using the idiom *the + comparative adjective phrase . . . the + comparative adjective phrase*. The two adjective phrases should have the same grammatical form.

A This version obscures the intended correlation between *coffee* and *likelihood*. The phrase *the more they had a likelihood* somewhat illogically indicates that the research subjects had likelihood to a greater degree rather than that their likelihood was greater.

B Although the adverb *more* is used to indicate a greater degree or extent in phrases such as *more likely*, the adjective *more* normally indicates greater quantity. Thus, the use of *more* as an adjective modifying

their likelihood is nonstandard. Differences in a particular type of likelihood are normally thought of as matters of degree, not of quantity. *Greater* is the preferred adjective for indicating such differences.

C The conditional verb phrase *would have a likelihood to have* is redundant, wordy, and not comparable to the simple past tense *drank*.

D **Correct.** This version uses proper wording and is clear and concise.

E This completion of the comparison is not idiomatic; moreover, it is ungrammatical, attempting to use an adjective *greater* to describe an adverb, *likely*.

The correct answer is D.

SC02096

768. Hurricanes at first begin traveling from east to west, because that direction is the way the prevailing winds in the tropics blow, but they then veer off toward higher latitudes, in many cases changing direction toward the east before dissipating over the colder, more northerly waters or over land.

(A) Hurricanes at first begin traveling from east to west, because that direction is the way the prevailing winds in the tropics blow, but

(B) At first, hurricanes travel from east to west, because that is the direction of the prevailing winds in the tropics, but

(C) While hurricanes travel from east to west at first, the direction of the prevailing winds blowing in the tropics, and

(D) Because hurricanes at first travel from east to west, since it is the direction of the prevailing winds in the tropics,

(E) Hurricanes, beginning by traveling from east to west, because this is the direction of the prevailing winds in the tropics,

Rhetorical Construction; Grammatical Construction

Hurricanes at first begin traveling is redundant. The sentence could start with *At first, hurricanes travel* or with *Hurricanes begin traveling*; there is no need to have both *at first* and *begin*. A concise version of the sentence would also avoid *that direction is the way the prevailing winds in the tropics blow*. The meaning of *way* here is already conveyed by *direction*.

A *At first* and *begin* are redundant. Also, *that direction is the way the prevailing winds blow* is unnecessarily wordy.

B **Correct.** This version of the sentence is grammatically correct and lacks redundancy.

C This sentence begins with a dependent clause (that is, a clause that cannot stand on its own), anticipating a main clause (also known as an independent clause) to complete the sentence; a main clause does follow, but it is connected to the initial dependent clause by the coordinating conjunction *and*, which would be appropriate here only if the initial clause was of the same grammatical type (that is, was also a main clause).

D The causal conjunction *Because* suggests that the direction in which hurricanes initially travel causes them later to veer off to the north, but this make little logical sense.

E This sentence opens with a main subject, *Hurricanes*, but this subject has no verb. The sentence's main verb, *veer*, has as a subject *they*.

The correct answer is B.

SC03083

769. Travelers from Earth to Mars would have to endure low levels of gravity for long periods of time, avoiding large doses of radiation, plus contending with the chemically reactive Martian soil, and perhaps even ward off contamination by Martian life-forms.

(A) Mars would have to endure low levels of gravity for long periods of time, avoiding large doses of radiation, plus contending

(B) Mars would have to endure low levels of gravity for long periods of time, avoid large doses of radiation, contend

(C) Mars, having to endure low levels of gravity for long periods of time, would also have to avoid large doses of radiation, plus contending

(D) Mars, having to endure low levels of gravity for long periods of time, avoid large doses of radiation, plus contend

(E) Mars, who would have to endure low levels of gravity for long periods of time, avoid large doses of radiation, contend with

Grammatical Construction; Parallelism

The sentence lists a series of things that travelers from Earth to Mars would have to do in order to successfully handle challenging conditions. Listing elements in a series requires parallelism in wording for each element, together with the use of a conjunction immediately preceding the final element.

A The parallelism requirement is not fulfilled; for example, *endure … time* is not parallel with *avoiding … radiation* or *contending … soil*. The word *plus* is not a coordinating conjunction and its inclusion impairs the structure of the series.

B **Correct.** The parallelism requirement is fulfilled, with the following elements: *endure …, avoid …, contend …, and perhaps even ward off.*

C The parallelism requirement is not fulfilled; for example, *would have to avoid* is not parallel with *contending*. The word *plus* is not a coordinating conjunction.

D This is not a valid sentence since it lacks an independent clause.

E This is not a valid sentence since it lacks an independent clause.

The correct answer is B.

SC01739

770. Unlike the virginal, whose single set of strings runs parallel to the front edge of the instrument, the harpsichord's several sets of strings are placed at right angles to its front edge.

(A) whose single set of strings runs parallel to the front edge of the instrument, the harpsichord's several sets of strings are

(B) with a single set of strings running parallel to the front edge of the instrument, the several sets of strings of the harpsichord are

(C) which has a single set of strings that runs parallel to the front edge of the instrument, in the case of the harpsichord, several sets of strings are

(D) which has a single set of strings that run parallel to the front edge of the instrument, the harpsichord has several sets of strings

(E) in which a single set of strings run parallel to the front edge of the instrument, the harpsichord's several sets of strings are

Parallelism; Agreement

The point of the sentence is to contrast two instruments, but the sentence has been written to contrast the *virginal* with the *sets of strings* on the harpsichord. The proper contrast is between the *virginal* and the *harpsichord*.

A The *virginal* is illogically contrasted with the *sets of strings* on the harpsichord. Note the possessive form *harpsichord's* in contrast to virginal.

B The *virginal* is illogically contrasted with the *sets of strings* on the harpsichord.

C *In the case of the harpsichord* is not parallel to the *virginal*.

D **Correct.** The contrast is properly drawn between *the virginal* and *the harpsichord*.

E The *virginal* is illogically contrasted with the *sets of strings* on the harpsichord; the verb *run* does not agree with the singular subject *set*.

The correct answer is D.

SC02000

771. Although Alice Walker published a number of essays, poetry collections, and stories during the 1970s, her third novel, *The Color Purple*, which was published in 1982, brought her the widest acclaim in that it won both the National Book Award as well as the Pulitzer Prize.

(A) which was published in 1982, brought her the widest acclaim in that it won both the National Book Award as well as the Pulitzer Prize

(B) published in 1982, bringing her the widest acclaim by winning both the National Book Award and the Pulitzer Prize

(C) published in 1982, brought her the widest acclaim, winning both the National Book Award and the Pulitzer Prize

(D) was published in 1982 and which, winning both the National Book Award and the Pulitzer Prize, brought her the widest acclaim

(E) was published in 1982, winning both the National Book Award as well as the Pulitzer Prize, and bringing her the widest acclaim

Idiom; Grammatical Construction

This sentence claims that the 1982 novel *The Color Purple* brought Alice Walker more acclaim than her many publications in the 1970s.

A The construction *both the American Book Award as well as the Pulitzer Prize* is unidiomatic; the correct idiomatic form is *both x and y*.

B Because this sentence uses only participial phrases in the clause following the initial, dependent clause, the sentence lacks a main verb and is therefore ungrammatical.

C **Correct.** This version correctly uses the form *both x and y* and is grammatically correct.

D The use of *which* is inappropriate here; although it would still be rhetorically inferior to the correct answer (C), this version would be acceptable if the word *which* were deleted.

E Like (A), this version of the sentence uses the unidiomatic form *both x as well as y*.

The correct answer is C.

SC01436

772. Heating oil and natural gas futures rose sharply yesterday, as long-term forecasts for much colder temperatures in key heating regions raised fears of insufficient supplies capable of meeting the demand this winter.

(A) of insufficient supplies capable of meeting
(B) of supplies that would be insufficient for meeting
(C) of insufficient supplies that are unable to meet
(D) that there would be supplies insufficient for meeting
(E) that supplies would be insufficient to meet

Rhetorical Construction; Verb Form

The wording of the underlined portion of this sentence is incoherent because it suggests that supplies that are "insufficient" are "capable of meeting the demand." The phrase *fears of insufficient supplies* is awkward and unclear: it suggests that the object of the fears already exists, i.e., that supplies are already insufficient. How can the intended meaning—regarding a fear that something might occur—be best expressed in the context of the sentence as a whole?

A This produces an incoherent sentence that forces us to guess at what might have been intended.

B This is wordy and unnecessarily awkward. The phrase *insufficient to meet* would be more idiomatic than *insufficient for meeting*.

C The present tense *are* fails to express the future-oriented nature of the fears: that future supplies might turn out to be insufficient relative to demand.

D The awkward expression here is misleading. What the fears were about was not that there would be supplies but that the supplies would be insufficient.

E **Correct.** What was feared was the following: future supplies will be insufficient to meet the demand. Because we are told that the fears were raised in the past, the futurity of the feared occurrence must be expressed by *would be* (rather than by *will be*) in the context of the *that*-clause, which clearly conveys what was feared (the object of the "fears").

The correct answer is E.

SC00970

773. Because it regarded the environmentalists as members of an out-of-state organization, the city council voted that they are denied permission for participating in the parade.

(A) that they are denied permission for participating
(B) that they be denied permission for participating
(C) denying them permission for participation
(D) the denial of permission that they participate
(E) to deny them permission to participate

Verb Form; Logical Predication

The sentence describes a vote that has been taken by a city council and suggests an explanation as to why the city council voted the particular way it did. The underlined portion, together with the three words that follow it, serves to describe the particular way the council voted and begins immediately after the verb *voted*. The word *that* at the beginning of the underlined portion introduces a subordinate clause that introduces the particular way the city council voted.

A When we vote for something, what we vote for is something that perhaps should happen, rather than a fact or a description of an actual state of affairs. The statement *they are denied permission* would, if used properly, simply describe an actual state of affairs. It is therefore something that would not be voted for. The wording of the sentence thus needs

to be changed, so that what is described as being voted for is not described as if it were an existing state of affairs. Furthermore, as discussed in connection with option B, the use of "for participating" may also be incorrect.

B The use of "for participating" in this option may be incorrect. The noun *permission* as used in this statement describes an official act of allowing someone or something *to* do something. In this statement, it would be better if *permission* were followed by an infinitive form of a verb (beginning with the word "to"). For example, *permission to participate* would be correct.

C In addition to the flaw described in connection with option B, this option has a flaw associated with the use of the word *denying*. Between *voted* and whatever form of the verb "deny" we may choose, we need a term, such as an infinitive (e.g., *to*) or a preposition (e.g., *for* or *on*) to introduce the statement describing the vote. In this way, *to deny*, *for denying*, and *on denying* could be correct. This option lacks such an introducing term.

D One flaw in this option is somewhat like the flaw in option C. For option D, the option is a noun phrase, which, when preceded by the verb "voted," needs a preposition such as *for* or *on* to precede it. For example, *voted **for** the denial of permission* might be correct. The use of *that they participate* is also incorrect. This flaw could be fixed if, as discussed in connection with option B, we used *to participate* instead.

E **Correct.** This option has none of the flaws discussed in connection with options A through D.

The correct answer is E.

SC07348

774. In 1913, the largely self-taught Indian mathematician Srinivasa Ramanujan mailed 120 of his theorems to three different British mathematicians; only one, G. H. Hardy, recognized the brilliance of these theorems, but thanks to Hardy's recognition, Ramanujan was eventually elected to the Royal Society of London.

(A) only one, G. H. Hardy, recognized the brilliance of these theorems, but

(B) they were brilliant, G. H. Hardy alone recognized, but

(C) these theorems were brilliant, but only one, G. H. Hardy recognized;

(D) but, only one, G. H. Hardy, recognizing their brilliance,

(E) only one G. H. Hardy recognized, but these theorems were brilliant

Logical Predication; Grammatical Construction

The point of the sentence is that only one of the British mathematicians with whom Srinivasa Ramanujan initially shared his theorems recognized their brilliance, but that recognition was sufficient to earn Ramanujan acclaim. The sentence has been correctly constructed, with the phrase *only one* referring clearly to *British mathematicians* and the noun *theorems* repeated to avoid confusion.

A **Correct.** The phrase *only one* refers clearly to *British mathematicians*, and the noun *theorems* is repeated to avoid confusion.

B *They* is intended to refer to *theorems* but instead refers to *mathematicians*, causing confusion.

C Structured in this way, the sentence does not make sense. *Only one* is intended to refer to *G. H. Hardy* but instead seems to refer to *theorems*, causing confusion. If *only one* is taken to refer to *G. H. Hardy*, the absence of a comma after the name and the absence of an object for *recognized* make the sentence ungrammatical.

D The sentence is ungrammatical because *G. H. Hardy* serves as the subject of a clause but is not paired with a verb.

E *Only one G. H. Hardy recognized* incorrectly implies (in an awkwardly inverted wording structure) that Hardy recognized only one theorem; *these theorems were brilliant thanks to Hardy's recognition* illogically suggests that Hardy's recognition is what made the theorems brilliant.

The correct answer is A.

SC05201

775. Cost cutting and restructuring has allowed the manufacturing company to lower its projected losses for the second quarter, and they are forecasting a profit before the end of the year.

(A) has allowed the manufacturing company to lower its projected losses for the second quarter, and they are forecasting

(B) has allowed for the manufacturing company to lower its projected losses in the second quarter and to forecast

(C) have allowed that the manufacturing company can lower the projected losses for the second quarter, and to forecast

(D) have allowed the manufacturing company to lower its projected second-quarter losses and to forecast

(E) have allowed for the manufacturing company to lower the projected losses in the second quarter, as well as forecasting

Agreement; Idiom; Verb Form

The point of the sentence is to explain the two main effects of the changes made by the company. However, the singular verb *has allowed* does not agree with the compound subject *cost cutting and restructuring*, which are far more plausibly understood as two actions rather than as two facets of a single action. In principle, *the manufacturing company* could be construed as plural (referring collectively to the decision makers and spokespeople who are projecting losses and forecasting a profit), but the plural pronoun *they* does not agree with the earlier *its*, which treats the antecedent as singular.

A The singular verb *has allowed* does not agree with the compound subject *cost cutting and restructuring*; the plural pronoun *they* does not agree with the intended singular antecedent *company*.

B The singular verb *has allowed* does not agree with the compound subject *cost cutting and restructuring*; *allowed for* is not the correct idiom.

C *Allowed that* is not the correct idiom; *can lower* and *to forecast* are not grammatically parallel.

D **Correct.** The sentence uses the correct subject–verb combination *cost cutting and restructuring have allowed*; the two occurrences of the pronoun *its* agree with each other in treating their antecedent *company* as singular; and the two effects *to lower* and *to forecast* are parallel and idiomatic.

E *Allowed for* is not the correct idiom; *to lower* and *as well as forecasting* are not parallel.

The correct answer is D.

SC13010

776. The Life and Casualty Company hopes that by increasing its environmental fund reserves to $1.2 billion, that it has set aside enough to pay for environmental claims and no longer has to use its profits and capital to pay those claims bit by bit, year by year.

(A) that it has set aside enough to pay for environmental claims and no longer has

(B) enough has been set aside with which environmental claims can be paid and it will have no longer

(C) it has set aside enough for payment of environmental claims and thus no longer having

(D) enough has been set aside to pay for environmental claims, thus no longer having

(E) it has set aside enough to pay for environmental claims and will no longer have

Grammatical Construction; Logical Predication

All predicates need a proper logical subject. Here, the relevant predicates are the verbs *increase*, *set aside*, and *have*. With *it* as the subject for *set aside*—referring back to the Life and Casualty Company—all three verbs should have this as their understood subject. With a different subject for *set aside*, at least one of the other verbs lacks a proper logical subject. Also, this sentence uses the word *that* after *hope* to start the subordinate clause, but then incorrectly repeats the *that* after the initial adverbial phrase (*by increasing . . . billion*). Only the first *that* is grammatically correct.

A The additional *that* makes the sentence ungrammatical. Also, because in this context the hope is forward-looking (*bit by bit, year by year*), it would be preferable to use the

future tense, *will no longer have to*, instead of the present *no longer has to*.

B With *enough* as the subject of *set aside*, the next subject (*it*) is naturally interpreted as *enough*, but this is not a logical choice for the subject of *use*.

C The phrase *no longer having* is ungrammatical when connected to the rest of the sentence by *and*, which should connect two regular clauses; *no longer having . . .* is a mere phrase, not a clause, and *no longer has* would be correct.

D For *no longer having*, illogically, the implied subject is *enough*; the implied subject, instead, should be the company referred to at the beginning of the sentence.

E **Correct.** There is only one *that*, and *will no longer have to use* has its proper logical subject (*it*) from the clause preceding it.

The correct answer is E.

SC03079

777. Like ancient Egyptian architectural materials that were recycled in the construction of ancient Greek Alexandria, so ancient Greek materials from the construction of that city were reused in subsequent centuries by Roman, Muslim, and modern builders.

(A) Like ancient Egyptian architectural materials that were recycled in the construction of

(B) Like recycling ancient Egyptian architectural materials to construct

(C) Just as ancient Egyptian architectural materials were recycled in the construction of

(D) Just as they recycled ancient Egyptian architectural materials in constructing

(E) Just like ancient Egyptian architectural materials that were recycled in constructing

Diction; Parallelism

When two situations are asserted to be similar, the proper way to express this is with the paired expressions *just as . . . so . . .*, not *like . . . so*. Moreover, the two compared situations should be expressed as clauses, not as noun phrases. Thus the clause *ancient Egyptian architectural materials were recycled . . .* is correct, as opposed to a noun phrase like *ancient Egyptian architectural materials that were recycled . . .*

A *Just as* and a following clause with a passive verb are preferred, but instead this option has *like* and a following noun phrase (*ancient Egyptian materials . . .*). It appears, somewhat implausibly, to say that the ancient Greek materials were similar to the earlier ancient Egyptian ones in that both were used by Roman, Muslim, and modern builders.

B *Just as* and a following clause with a passive verb are preferred, but instead this option has *like* and a following noun phrase (*recycling ancient Egyptian materials . . .*). It appears illogically to say that the action of recycling was similar to the ancient Greek materials in that both were reused in subsequent centuries.

C **Correct.** The expressions *just as* and *so* are paired to link the two clauses in parallel, and both clauses use the passive construction.

D *Just as* is used to connect two clauses, which is good, but the first clause employs the active construction rather than the preferred passive, so there is a failure of parallelism. Also, it is unclear what *they* refers to. The sentence appears to say illogically that some unidentified group's action of recycling was similar to the ancient Greek materials' being reused.

E *Just as* introducing a clause with a passive verb is preferable, but this sentence uses *like* and a following noun phrase (*ancient Egyptian materials . . .*). It appears, somewhat implausibly, to say that the ancient Greek materials were similar to the earlier ancient Egyptian ones in that both were used by Roman, Muslim, and modern builders.

The correct answer is C.

SC09877

778. Especially in the early years, new entrepreneurs may need to find resourceful ways, like renting temporary office space or using answering services, that make their company seem large and more firmly established than they may actually be.

(A) that make their company seem large

(B) to make their companies seem larger

(C) thus making their companies seem larger

(D) so that the companies seem larger

(E) of making their company seem large

Grammatical Construction; Diction

The clause beginning with *that* suggests that a company can be made to seem better than it actually is. The comparison signaled by *than* appears to be intended to apply to both the size of the company and the degree to which the company is firmly established. In that case, it is a mistake to use *large* instead of *larger*. If, on the other hand, *large* is not intended to be part of the comparison, it would be better to clarify this by separating the two topics in a construction such as *make their company seem large and also make it seem more firmly established*. . . . The phrase *resourceful ways* suggests purpose, so *ways* should connect with *to* or *of,* rather than a *that* clause to capture the intended meaning.

A *Large* is the incorrect form to express comparison; it should be *larger*; the *that* clause does not adequately capture the idea of purpose implicit in *ways*. The singular *company* does not agree with the plural pronoun *they*. Thus, the sentence either commits an agreement mistake or illogically says that entrepreneurs need to find ways to make themselves seem large and more firmly established.

B **Correct.** *Larger* is the correct form to express the comparative meaning, and *to* correctly follows *way*. *Companies* agrees with the plural *they*.

C The phrase beginning *thus making* does not capture the idea of purpose implicit in *ways*.

D Clauses beginning *so that* can express purpose, but do not fit with *ways* in the manner required here: *to* or *of* is needed after *ways*.

E *Large* is the incorrect form to express comparison; it should be *larger*. The singular *company* does not agree with the plural pronoun *they*. Thus, the sentence either commits an agreement mistake or illogically says that entrepreneurs need to find ways to make themselves seem large and more firmly established.

The correct answer is B.

SC01975

779. Unlike the nests of leaf cutters and most other ants, situated underground or in pieces of wood, raider ants make a portable nest by entwining their long legs to form "curtains" of ants that hang from logs or boulders, providing protection for the queen and the colony larvae and pupae.

(A) the nests of leaf cutters and most other ants,

(B) the nests of leaf cutters and most other ants, which are

(C) leaf cutters and most other ants, whose nests are

(D) leaf cutters and most other ants in having nests

(E) those of leaf cutters and most other ants with nests

Logical Predication

As worded, this sentence draws a contrast between raider ants and the nests of leaf cutters and most other ants. The appropriate contrast would be with leaf cutters and most other ants themselves, not their nests.

A As indicated above, the appropriate contrast is between raider ants and other kinds of ants (namely leaf cutters and most ants). As worded, this version of the sentence says something obviously true: of course the nests of leaf cutters and most other ants do not make portable nests.

B Like (A), this sentence compares nests with raider ants. Also, the referent of the relative pronoun *which* is ambiguous, possibly modifying *ants*, and possibly modifying *nests*.

C **Correct.** This version correctly draws the contrast between raider ants and other kinds of ants. Furthermore, unlike in (B) and (D), it is clear here that *situated underground or in pieces of wood* applies to the nests of leaf cutters and most other ants.

D This sentence correctly compares leaf cutters and other ants with raider ants, but the prepositional phrase *in having nests* suggests that it is raider ants, not leaf cutters and most other ants, that have nests situated underground or in pieces of wood; however, the rest of the sentence indicates that in fact raider ants' nests are not situated in such locations.

E The referent of *those* is unclear; presumably it refers to *nests*, but grammatically it has no clear antecedent. If it is taken to refer to nests, *those* creates an illogical comparison with *raider ants*.

The correct answer is C.

SC04452

780. Turtles, like other reptiles, can endure long fasts, in their ability to survive on weekly or even monthly feedings; however, when food is readily available, they may eat frequently and grow very fat.

(A) fasts, in their ability to survive
(B) fasts, having their ability to survive
(C) fasts, due to having the ability of surviving
(D) fasts because they are able to survive
(E) fasts because of having the ability of surviving

Idiom; Diction

To express why turtles can endure long fasts—their ability to survive on only occasional feedings—it is clearer and more idiomatic to use *because* than to use *in* or *having*. Also, the noun *ability* here requires *to* introducing a noun phrase denoting the nature of the ability.

A *In* does not express the causal relationship clearly, whereas *because* does.

B *Having* does not express the causal relationship clearly.

C *Ability of* is incorrect; *ability* must be followed by *to* in order to express the intended meaning. *Due to having the ability* is awkward, nonstandard, and unnecessarily wordy.

D **Correct.** This option uses *because* to express the causal relation and uses *to* after *ability*.

E *Ability of* is incorrect; *ability* must be followed by *to* in order to express the intended meaning. *Because of having the ability* is awkward, nonstandard, and unnecessarily wordy.

The correct answer is D.

SC02025

781. Thai village crafts, as with other cultures, have developed through the principle that form follows function and incorporate readily available materials fashioned using traditional skills.

(A) as with
(B) as did those of
(C) as they have in
(D) like in
(E) like those of

Logical Predication; Diction; Verb Form

The phrase *as with other cultures* is initially confusing given that no culture has been specifically mentioned; Thai village culture is indirectly referenced by the mention of *Thai village crafts*, so perhaps that is what is meant. But then, looking at the phrase in context, it becomes clear that the sentence is intended to indicate that the *crafts* of other cultures are similar in certain ways to Thai village crafts. Thus, the sentence should say *those of other cultures*. Furthermore, the use here of *as with* is questionable. To do the job it is supposed to do here (to indicate that the crafts of Thai villages are like the crafts of other cultures in a particular way), *as with* should be at the beginning of the sentence: *As with the crafts of other cultures, Thai village crafts have developed. . . .* Alternatively, *like* could be used here instead of *as with*.

A The appropriate comparison is between Thai village crafts and those (i.e., crafts) of other cultures, not the other cultures themselves. Additionally, *like* would be more appropriate here than *as with*.

B The verb form here is incorrect. [*D*]*id* is not parallel to *have* later in the sentence. The phrase *as have those of other cultures* would be parallel, but it is in the wrong position. To be correct, it would need to occur after the main verb is introduced: *Thai village crafts have developed, as have those of other cultures, . . .*

C The use of the pronoun *they* is inaccurate; the reader is likely to take its antecedent to be *Thai village crafts*, not *crafts*. Furthermore, even if the pronoun here were not problematic, if the construction *as they have in other cultures* is used, it should occur after the main verb (*have developed*) is introduced.

D The comparative term *like* compares two nouns or noun phrases, but in this version of the sentence, *like* compares a noun (*crafts*) with a prepositional phrase (*in other cultures*).

E **Correct.** [*T*]*hose of other cultures* clearly refers to the crafts of other cultures; *like* is appropriate for making a comparison between two sorts of things (*crafts*).

The correct answer is E.

SC01554

782. To estimate the expansion rate of the universe is a notoriously difficult problem because there is a lack of a single yardstick that all distances can be measured by.

(A) To estimate the expansion rate of the universe is a notoriously difficult problem because there is a lack of a single yardstick that all distances can be measured by.

(B) Estimating the expansion rate of the universe is a notoriously difficult problem because there is no single yardstick by which all distances can be measured.

(C) Because there is a lack of a single yardstick to measure all distances by, estimating the expansion rate of the universe is a notoriously difficult problem.

(D) A notoriously difficult problem is to estimate the expansion rate of the universe because a single yardstick is lacking by which all distances can be measured.

(E) It is a notoriously difficult problem to estimate the expansion rate of the universe because by no single yardstick can all distances be measured.

Rhetorical Construction; Logical Predication

The sentence seeks to explain the difficulty of estimating the expansion rate of the universe and uses a *because*-clause to present the explanation. Issues in the given sentence include the following: is the infinitive verb form *to estimate* best here? And is there a more straightforward and more readable way to express the explanation?

A The wording with the infinitive verb form *to estimate* is less than ideal here (as opposed to *how to estimate*, for example). The phrase *there is a lack of a single yardstick* is wordy. The placement of the preposition *by* so far from the relative pronoun it governs (*that*) is unnecessarily awkward.

B **Correct.** Use of the verbal noun *estimating* is acceptable here. The phrase *there is no single yardstick* is much more direct and readable than *there is a lack of a single yardstick*. The preposition *by* is adjacent to *which*, the relative pronoun that it governs.

C The phrase *there is a lack of a single yardstick* is wordy. The placement of the preposition *by* at the end of the phrase *a single yardstick to measure all distances by* is unnecessarily awkward, in that it separates *by* from the noun that it is meant to govern.

D Compared with the given sentence, this sentence involves a reordering of the ideas and a shifting of emphases in a way that is confusing. For example, is this sentence to be understood as citing one instance of "a notoriously difficult problem"? This was not the purpose of the given sentence. In addition, the phrase *to estimate* is less clear than would be *how to estimate*. Finally, the wide separation of the *because*-clause from the reference to difficulty produces a sentence that is unnecessarily awkward, if not incoherent (for example, structurally it seems to make the adverbial *because*-clause modify the verb *estimate*). Contrast this with the given sentence, where the *because*-clause is placed adjacent to the phrase *difficult problem*.

E The phrase *to estimate* is less clear than would be *how to estimate*. The *because*-clause, which is meant to explain why estimating the expansion rate of the universe is difficult, is too widely separated from the reference to difficulty. In the *because*-clause, the inversion of the normal subject-verb order is unnecessarily awkward.

The correct answer is B.

SC01059

783. The Commerce Department reported that the nation's economy grew at a brisk annual pace of 3.7 percent in the second quarter, but that while businesses were expanding their production, unsold goods piled up on store shelves as consumer spending is slowed sharply.

(A) unsold goods piled up on store shelves as consumer spending is slowed sharply

(B) unsold goods were piling up on store shelves as consumer spending slowed sharply

(C) unsold goods had piled up on store shelves with a sharp slowing of consumer spending

(D) consumer spending was slowing sharply, with the piling up of unsold goods on store shelves

(E) consumer spending has slowed sharply, with unsold goods piling up on store shelves

Verb Form; Rhetorical Construction

The sentence summarizes a government report about four business and economic processes

occurring over a single quarter: economic growth, increasing production, unsold goods accumulating in retail stores, and a sharp slowing in consumer spending. A problem in the verb *is slowed* is use of the passive form, which in this context is awkward and unidiomatic. It is also present tense, whereas *piled up* is simple-past tense—a breach of proper tense sequence.

A This fails because of the inappropriate and in context unidiomatic use of the passive voice. Also, *piled up* does not clearly indicate a process.

B **Correct.** The verb *were piling up* correctly indicates a process as opposed to a single event; with the *as*-clause, the verb *slowed* indicates a process simultaneous with another process (and, implicitly, contributing to it).

C The verb *had piled up* suggests an event that occurred before businesses were expanding their production, even though the *while*-clause indicates that the piling-up occurred simultaneously with that expansion.

D The import of the *with*-phrase is insufficiently clear. It could be read as indicating that the piling-up was also slowing. But this reading fails to capture the idea of a causal relationship implicitly conveyed in the given sentence.

E The verb *has slowed* suggests a process that occurred in the recent past and impinges on the present (not necessarily in "the second quarter"). The verb tense does not match the verb tense *were expanding* in the *while*-clause, and does not convey simultaneity with the expansion referred to.

The correct answer is B.

SC01470

784. Thomas Mann's novel Doctor Faustus offers an examination not only of how difficult it is to reconcile reason, will, and passion together in any art form, but also a skillfully navigated exploration of the major concerns of modernism.

(A) an examination not only of how difficult it is to reconcile reason, will, and passion together in any art form, but

(B) an examination not only about the difficulty of reconciling reason, will, and passion in any art form, and

(C) not only an examination of how difficult it is to reconcile reason, will, and passion in any art form, and

(D) not only an examination about the difficulty with reconciling reason, will, and passion together in any art form, but

(E) not only an examination of the difficulty of reconciling reason, will, and passion in any art form, but

Grammatical Construction; Idiom

The sentence, in its most correct form, would use the structure *not only … but also …* to coordinate parallel references to an "examination" and to an "exploration." However, the given sentence errs in placing the phrase *not only* after the first of the items meant to be coordinated. This impairs the required parallelism and the grammatical structure of the sentence as a whole—as if the "examination" referred to was not only an examination of the difficulty of a certain reconciliation but was also an examination of a skillfully navigated exploration. This does not seem to be the intended meaning, and if it were, the latter *of*, not included, would be required.

A In addition to the structural problem already noted, the word *together* is superfluous because its meaning is already included in *reconcile*.

B The word *examination* should be followed in this context by the preposition *of* rather than by *about*. The coordinate conjunction *and* is unidiomatic, given the earlier occurrence of *not only*.

C The coordinate conjunction *and* is unidiomatic in this context, given the earlier occurrence of *not only*.

D The prepositions *about* and *with* are unidiomatic here (as opposed to *of* in both cases). As noted earlier, *together* is superfluous with *reconcile*.

E **Correct.** The coordination of the parallel reference to an examination and an exploration is successfully executed here using the structure *not only … but also*.

The correct answer is E.

SC00981

785. According to a recent study, retirees in the United States are four times more likely to give regular financial aid to their children as to receive it from them.

(A) retirees in the United States are four times more likely to give regular financial aid to their children as

(B) retirees in the United States are four times as likely to give regular financial aid to their children as it is for them

(C) retirees in the United States are four times more likely to give regular financial aid to their children than

(D) it is four times more likely for retirees in the United States to give regular financial aid to their children than they are

(E) it is four times as likely that retirees in the United States will give their children regular financial aid as they are

Diction; Parallelism

The sentence notes a difference, for retirees in the United States, between the likelihood that they will give regular financial aid to their children and the likelihood that they will receive regular financial aid from their children. The elements of the comparison need to be expressed in parallel and in a proper construction.

A This sentence improperly implements the construction *four times more likely to X than to Y*, with *X* corresponding to *give regular financial aid to their children* and *Y* corresponding to *receive it from them*. Instead of the word *than* that would be used in this construction, the sentence improperly uses *as*.

B This sentence, like sentence A, improperly uses *as*. It also lacks parallelism, because *to give regular financial aid to their children* is not parallel to *it is for them to receive it from them*.

C **Correct.** This sentence resolves both of the issues discussed in connection with sentences A and B. In addition to properly using *than* in the construction *four times more likely to X than to Y*, the sentence properly lists in parallel the two elements being compared—*to give regular financial aid to their children* and *to receive it from them.*

D This sentence, in addition to being somewhat more wordy than necessary, lacks parallelism. The phrase *to give regular financial aid to their children* is not parallel to *they are to receive it from them*. The words *they are* in the second phrase are superfluous and make the sentence more difficult to read than necessary, and can simply be removed.

E This sentence is hard to parse and lacks parallelism. It is difficult to see what two phrases represent the elements to be compared and thus what needs to be parallel with what. This makes the sentence difficult to read.

The correct answer is C.

SC04093

786. Discussion of greenhouse effects have usually had as a focus the possibility of Earth growing warmer and to what extent it might, but climatologists have indicated all along that precipitation, storminess, and temperature extremes are likely to have the greatest impact on people.

(A) Discussion of greenhouse effects have usually had as a focus the possibility of Earth growing warmer and to what extent it might,

(B) Discussion of greenhouse effects has usually had as its focus whether Earth would get warmer and what the extent would be,

(C) Discussion of greenhouse effects has usually focused on whether Earth would grow warmer and to what extent,

(D) The discussion of greenhouse effects have usually focused on the possibility of Earth getting warmer and to what extent it might,

(E) The discussion of greenhouse effects has usually focused on whether Earth would grow warmer and the extent that is,

Agreement; Parallelism

The sentence contrasts climatologists' views concerning greenhouse effects with other views that emphasize global warming. The main subject of the sentence is *discussion . . .*, which is singular, so the main verb should be singular. The two things that are said to be the focus of discussion should be in parallel form.

A The plural verb *have . . . had* does not agree with the singular subject *discussion*. The phrases *the possibility . . . warmer* and *to what . . . might* are not parallel.

B The verb form *has had as its focus* is unnecessarily wordy; the noun clauses are parallel in form, but it is not clear what *the extent* refers to.

C **Correct.** This has correct subject-verb agreement, eliminates the wordiness of the original sentence, and the phrases *whether . . . warmer* and *to what extent* are parallel.

D The singular subject *discussion* does not agree with the plural verb *have focused*. *The possibility of . . .* is not parallel with *to what extent. . . .*

E The two phrases following *on* are not in parallel form. What *that* refers to in *the extent that is* is unclear.

The correct answer is C.

SC02102

787. In the seventh century B.C., the Roman alphabet was adapted from the Etruscan alphabet, which in turn had been adapted in the previous century from a western Greek alphabet, which itself had been adapted earlier in the same century from the Phoenician alphabet.

(A) which itself had been adapted earlier
(B) adapting itself earlier
(C) itself being adapted earlier
(D) having been earlier adapted itself
(E) earlier itself having been adapted

Rhetorical Construction; Verb Form; Logical Predication

This sentence describes a string of adaptations of the alphabet, tracing back from the seventh century BC through two points in the eighth century BC. Because the latest of the three adaptations is temporally located in past tense, earlier adaptations should be located in the past perfect tense.

A **Correct.** This sentence is properly constructed and uses the appropriate verb forms for the relationships among the events that it describes.

B It is unclear what the participial phrase *adapting itself earlier . . .* refers to. The present participle could be used for an event that was simultaneous with, or part of, the event mentioned before the underlined portion. However, it is inappropriate for describing an event that took place even earlier than the seventh century BC, which has already been designated in the sentence as past tense. The reflexive form *adapting itself* is nonsensical in this sentence.

C The present tense of the reflexive participial phrase is inappropriate for describing an event prior to the seventh century BC, given that the seventh century BC has already been designated in the sentence as past tense.

D Without commas around *itself*, the pronoun appears to be reflexive. The combination of passive and reflexive then makes no sense. If *itself* is intended simply for emphasis, rather than as a reflexive pronoun, it would be preferable, in this context, to set it off with commas. But if it were intended in that way, it would seem to refer to the Roman alphabet, and the claim made in the sentence would be confusing and nearly nonsensical. This modifier is confusingly placed before the designation of time (*in the same century*) and source (*from the Phoenician alphabet*).

E The adverb *earlier* is misplaced before the pronoun *itself*; it should be immediately before the phrase *in the same century*.

The correct answer is A.

SC09185

788. The foundation works to strengthen local and regional agricultural markets and cooperating with governments, improving access for farmers for productive resources such as land and credit.

(A) cooperating with governments, improving access for farmers for
(B) cooperates with governments to improve access for farmers to
(C) cooperate with governments for improvements of access for farmers to
(D) cooperate with governments and improve accessibility for farmers for their
(E) in cooperation with governments to improve access for farmers for

Parallelism; Rhetorical Construction

As written, this sentence does not clearly indicate whether *and* is intended to conjoin two things that the foundation does (working

to strengthen markets and cooperating with governments) or two things that the foundation works to accomplish (strengthening markets and cooperating with governments). The latter is less plausible because of the redundancy of *works to cooperate*. In the former, the proper verb form, parallel with the present-tense *works*, would be *cooperates*. In the latter, the proper verb form, parallel with the infinitive *to strengthen*, would be *to cooperate* or simply *cooperate*. Only one of the answer choices resolves the uncertainty of meaning in a coherent and well-formed way.

A *Cooperating* is incorrect, since it is not in the same form as either *works* or *to strengthen*.

B **Correct.** This version correctly represents the foundation's two actions by putting the verbs *works* and *cooperates* in parallel form. *Cooperates . . . to improve* is the most concise phrasing to express the purpose of improving access.

C *Cooperate . . . for improvements of access for farmers* is awkwardly phrased and unnecessarily wordy.

D *Cooperate . . . and improve accessibility for farmers* is awkwardly phrased and unnecessarily wordy.

E *In cooperation* destroys the parallelism required by *works to*: there should be a verb following *works to*, not this prepositional phrase.

The correct answer is B.

SC07338

789. A professor at the university has taken a sabbatical to research on James Baldwin's books that Baldwin wrote in France while he was living there.

(A) on James Baldwin's books that Baldwin wrote in France while he was living there

(B) about the books James Baldwin wrote in France

(C) into James Baldwin's books written while in France

(D) on the books of James Baldwin, written while he lived in France

(E) the books James Baldwin wrote while he lived in France

Diction; Rhetorical Construction

The phrasing of this sentence is wordy and redundant: *books that Baldwin wrote in France while he was living there* could more concisely be expressed with *books James Baldwin wrote while he lived in France*. The verb *research* requires a direct object, not a preposition followed by its object.

A *On* incorrectly follows *to research*, and *books that Baldwin wrote in France while he was living there* includes redundant information.

B *About* incorrectly follows *to research*.

C *Into* incorrectly follows *to research*. Given this sentence structure, *while in France* seems to say, illogically, that the books were written while they were in France.

D *On* incorrectly follows *to research*; also, there is no need to make *written while he lived in France* into an independent phrase instead of a relative clause.

E **Correct.** *Research* takes a direct object, which describes the books directly without redundancy.

The correct answer is E.

SC12710.01

790. When working with overseas clients, an understanding of cultural norms is at least as important as grasping the pivotal business issues for the global manager.

(A) When working with overseas clients, an understanding of cultural norms is at least as important as grasping the pivotal business issues for the global manager.

(B) When they work with overseas clients, understanding cultural norms is at least of equivalent importance to grasping the pivotal business issues for the global manager.

(C) For global managers working with overseas clients, understanding cultural norms is at least as important as grasping the pivotal business issues.

(D) For global managers working with overseas clients, an understanding of cultural norms is at least as important to them as grasping the pivotal business issues.

(E) Global managers working with overseas clients find an understanding of cultural norms to be equally important to grasping the pivotal business issues.

Idiom; Rhetorical Construction; Logical Predication

The sentence compares the relative importance of two kinds of understanding that are important for global managers working with overseas clients: understanding of cultural norms and grasping the pivotal business issues. The sentence and its variants seem intended to assert that the first is at least as important as the second. The idiomatic usage *as important as* is the most effective way to make the comparison, but some of the variants do not make it in this way. In the given sentence, the initial phrase *when … clients,* by virtue of its position, should modify the main subject of the sentence, *an understanding of cultural norms*, but that reading is untenable and results in a logical-predication error. The adverbial modifier *for the global manager* is not well placed to make clear that it modifies the adjective *important.*

A This version fails for the reasons already explained: misleading placement of the initial phrase, and misleading placement of an adverbial modifier.

B The pronoun *they* should refer forward to a plural noun or pronoun but does not do so here. To make a comparison, the awkward phrase *of equivalent importance to* is used instead of the more idiomatic *as important as*. The modifying phrase *for the global manager* fails to show clearly what it is intended to modify.

C **Correct.** The initial adverbial phrase *for global … clients* signals clearly that it modifies the adjective *important.* The comparison is made clearly and idiomatically.

D The phrase *to them* is redundant with *for global managers*. The phrase *an understanding of cultural norms* is not parallel with the verbal-noun construction *grasping the pivotal business issues.*

E The wording used to express the comparison is awkward and unidiomatic. The phrase *an understanding of cultural norms* is not parallel with the verbal-noun construction *grasping the pivotal business issues.* Also, preferable to *equally important to* would be *as important as.*

The correct answer is C.

SC87460.01

791. Often major economic shifts are so gradual as to be indistinguishable at first from ordinary fluctuations in the financial markets.

(A) so gradual as to be indistinguishable
(B) so gradual they can be indistinguishable
(C) so gradual that they are unable to be distinguished
(D) gradual enough not to be distinguishable
(E) gradual enough so that one cannot distinguish them

Idiom; Rhetorical Construction

The idiom *so … as to …* is correctly used as a predicate of the subject in the given sentence. None of the variants offered uses the idiom correctly, and some of them have rhetorical issues such as redundancy or awkwardness.

A **Correct.** The underlined portion is an example of correct use of the idiom mentioned above. The sentence contains no other errors.

B Based on the given sentence, which is correct, the word *can* is redundant here, given the ending *-able* of *indistinguishable*. The intended sense could be conveyed by *so gradual that they are indistinguishable*—even though this would not be a use of the idiom mentioned above.

C This contains awkward verbiage in the phrase *are unable to*. The intended sense would be better conveyed by *cannot*—even though this would not be a use of the idiom mentioned above.

D This is unnecessarily awkward, and the use of *enough* often carries the nuance that the sufficiency is of something desirable—which seems not to be so in this context. The idiomatic use above would be better.

E This is wordy and unnecessarily awkward. As explained, the use of *enough* is inappropriate in the context, and use of the idiom explained above would be much better.

The correct answer is A.

SC01506

792. Researchers now regard interferon as not a single substance, but it is rather a biological family of complex molecules that play an important, though not entirely defined, role in the immune system.

(A) as not a single substance, but it is rather a biological family of complex molecules that play

(B) as not a single substance but as a biological family of complex molecules playing

(C) not as a single substance but as a biological family of complex molecules that play

(D) not to be a single substance but rather a biological family of complex molecules playing

(E) not as a single substance but instead as being a biological family of complex molecules that play

Parallelism; Rhetorical Construction

This sentence draws a contrast between how interferon is and is not regarded by researchers. However, the two parts of the contrast are not expressed in parallel form since the first is a prepositional phrase (*as not a single substance*), and the second is a clause (*it is rather a biological family*). Furthermore, the wording *regard interferon as not* is awkward and confusing. For clarity and proper parallelism, the contrast should be constructed using the expression *not as X but as Y,* where *X* and *Y* are both noun phrases.

A The contrast is not expressed using parallel grammatical structure, and *regard interferon as not* is awkward and confusing.

B The wording *regard interferon as not* is awkward and confusing and violates proper parallelism.

C **Correct.** The contrast is expressed using the parallel structure *not as a single substance but as a biological family.*

D The main defect here is that *regard interferon not to be a single substance* is unidiomatic; *regard . . . as . . .* is the correct form; and completing the parallelism correctly would require the repetition of *as*, in the phrase *but rather as . . .*

E The contrast is not expressed using parallel grammatical structure since *a single substance* is a noun phrase, while *being a biological family* is a participial phrase; omitting the unnecessary words *being* and *instead* would improve the sentence.

The correct answer is C.

SC01018

793. The remarkable similarity of Thule artifacts throughout a vast region can, in part, be explained as a very rapid movement of people from one end of North America to the other.

(A) The remarkable similarity of Thule artifacts throughout a vast region can, in part, be explained as

(B) Thule artifacts being remarkably similar throughout a vast region, one explanation is

(C) That Thule artifacts are remarkably similar throughout a vast region is, in part, explainable as

(D) One explanation for the remarkable similarity of Thule artifacts throughout a vast region is that there was

(E) Throughout a vast region Thule artifacts are remarkably similar, with one explanation for this being

Logical Predication; Grammatical Construction; Rhetorical Construction

The intended meaning of the sentence is that the rapid movement of people across North America is one explanation of the *similarity of Thule artifacts throughout a vast region*. As worded, however, the sentence is illogical: The sentence indicates that the similarity in artifacts was a rapid movement of people, which makes no sense. Instead of equating similarity with movement, the sentence needs to identify this movement of people as a cause of similarity among artifacts.

A As worded, this version of the sentence makes the illogical statement that the similarity among artifacts is explainable *as a very rapid movement*. It should specify that the similarity of artifacts may be a consequence of the rapid population movement.

B This version of the sentence is syntactically awkward, and leaves unclear what the main subject, *one explanation*, is supposed to be an explanation of.

C Like (A), this version of the sentence equates the similarity of artifacts with the movement of people, when a causal connection is what is intended.

D **Correct.** This version adequately expresses the intended causal connection.

E This version is awkward, introducing the causal connection with the unnecessarily wordy and indirect string of prepositional phrases, *with one explanation for this. . . .*

The correct answer is D.

SC12841.01

794. Regulators are likely to end what are, in effect, long-standing exemptions permitting pilots of small turboprop aircraft at small carriers to fly as much as 20 percent more hours per month than pilots at larger airlines fly, with the consequence that some carriers could be forced to hire additional pilots.

(A) as much as 20 percent more hours per month than pilots at larger airlines fly, with the consequence that

(B) as many as 20 percent more hours per month as pilots at larger airlines, and

(C) more hours per month, as much as 20 percent, than pilots at larger airlines; consequently

(D) as much as 20 percent more hours per month as larger airlines' pilots, so

(E) as many as 20 percent more hours per month than pilots at larger airlines do, and consequently

Grammatical Construction; Diction

The sentence is meant to convey that an exemption to maximum flying-time regulations for pilots at smaller airlines may soon be ended and that this will entail that such airlines will have to hire more pilots. The most significant error in the given sentence is in the final clause, which seems to indicate that pilots' flying as many as 20 percent more hours per month could result in carriers having to hire additional pilots. This "consequence" is wrongly assigned to the extra flying time rather than to the (probable) ending of the exemption—a logical predication error. A second significant error, a diction error, in some of the variants is the use of *as* in a context where *than* is required to express a comparison. A usage that is preferable to *as much as*, given that the noun it modifies is plural, is *as many as*.

A This version fails because of the errors identified above.

B The comparison of flying times here is erroneously expressed by the third occurrence of *as* where *than* is required. The verb *do* should be inserted immediately following *airlines* to complete the clause. Also, the idea of consequence present in the given sentence is not conveyed by using *and* without some such word as *consequently*.

C Inserting the percentage as a parenthesis fails to indicate clearly that what is intended is 20 percent more hours than the flying time of pilots at larger airlines.

D The comparison of flying times here is erroneously expressed by the third occurrence of *as*, where *than* is required. The verb *do* should be inserted immediately following *airlines* to complete the clause.

E **Correct.** None of the errors identified in the given sentence is present here. The consequence referred to is correctly assigned to the possible ending of the exemption. The comparison between the maximum flying times for the two classes of pilots is correctly expressed using *than*.

The correct answer is E.

SC24751.01

795. Self-compassion is made up of mindfulness, the ability to manage thoughts and emotions without being carried away or repressing them, common humanity, or empathy with the suffering of others, and self-kindness, a recognition of your own suffering and a commitment to solving the problem.

(A) away or repressing them, common humanity, or empathy with the suffering of others,

(B) away, or repression of them, and common humanity, or empathy with the suffering of others,

(C) away, or repressing them, common humanity, empathy with the suffering of others;

(D) away or repressing them; common humanity, an empathy with the suffering of others;

(E) away or repress them; common humanity, to empathize with the suffering of others

Parallelism; Grammatical Construction

This sentence seems meant to present a list of three elements that make up self-compassion: mindfulness, common humanity, and self-kindness. However, the sentence is not well formed, especially with respect to punctuation. Also, the use of the conjunction *or* is haphazard and its function unclear. The description of each

of the three elements is complex, comprising a noun that names the element, followed by a noun phrase that gives a definition of that noun. For clarity, the sentence should be structured in a way that highlights the parallelism among the three elements. Because of the complexity and length of the description of each element, the sentence would be made clearest by separating the descriptions of the elements with semicolons.

A The second occurrence of *or* could function to introduce a definition of a term but its use here is confusing and nonparallel with its first occurrence. The lack of appropriate punctuation creates a reading difficulty.

B The first occurrence of *or* is meant to coordinate two items, but the naming of the items impairs the formal parallelism that should be present; *being carried away*, a verbal noun, is nonparallel with *repression*, which is a noun but not a verbal noun. As indicated above, the function of the second occurrence of *or* is not clear: for example, does it introduce a definition of *common humanity*? If so, the description of the second element in the series is nonparallel with the descriptions of the other two elements.

C The effect of the final semicolon here is to coalesce, in a very confusing way, the descriptions of the first two elements; to avoid this, a semicolon should also immediately precede *common humanity*.

D **Correct.** This version produces a sentence in which each of the descriptions of the three elements of self-compassion is set off with a semicolon and clearly distinguished from the others in a way that makes salient the parallelism among the three descriptions and facilitates the reader in understanding the sentence.

E The punctuation here is confusing: the first semicolon is not matched by a semicolon immediately after *others*. The verb *repress* is nonparallel with the verbal noun *being carried away*.

The correct answer is D.

SC83751.01

796. According to the laws of this nation, individuals are minors until they reach the age of eighteen, although this is less in some countries and more in others.

(A) although this is less in some countries and more in others

(B) but this age is lower in some countries; higher in others

(C) although in some countries, it is lower and in others it is higher

(D) although it is less than that in some countries and more than that in others

(E) but the relevant age is lower in some countries and higher in others

Logical Predication; Diction

What the pronoun *this* refers to in the underlined clause is unclear. Could it be the age of majority? No, because this is not mentioned in the preceding context. Could it be *the age of eighteen*? No, because it makes no sense to say the age of eighteen is *less in some countries* (this would be a logical predication error). If *lower* were substituted for *less,* but no other change was made, the sentence would not be any better—even if, in general, the adjective *lower* is a more appropriate modifier with *age* than is *less.*

A As explained, this version fails because of a logical predication error and a diction error.

B This version also contains a logical predication error. The semicolon, rather than a comma or a coordinating conjunction *and,* is inappropriate: it turns *higher in others* into a mere sentence fragment.

C The context fails to provide an antecedent that makes sense for the pronoun *it*; if *the age of eighteen* were the antecedent, there would be a logical predication error. The comma after *countries* is unnecessary and confusing.

D Again, as explained, the reference of the pronoun *it* is unclear. The predicates *less than that* and *more than that* create a logical predication error if they are predicates of *the age of eighteen*.

E **Correct.** The phrase *the relevant age* clearly refers to the age at which minors reach the age of majority. The sentence indicates that in some countries that age is lower than eighteen and in some others higher.

The correct answer is E.

SC32261.01

797. Rather than ignore a company that seems about to fail, investment analysts should recognize that its reorganization and recent uptick in revenue, combined with its dynamic new leadership, indicate that the firm's prospects must be taken seriously.

(A) Rather than ignore a company that seems about to fail,

(B) Rather than ignoring a company that is about to seemingly fail,

(C) Instead of a company that is seemingly about to fail being ignored,

(D) Instead of ignore a company that seems about to fail,

(E) In place of ignoring a company's imminent failure seemingly about to occur,

Diction; Verb Form; Parallelism

The underlined phrase raises two main issues: Is *rather than* the appropriate way of introducing the modifying underlined phrase? Is the verb form *ignore* correct? The phrases *instead of* and *in place of* both function as prepositions and must therefore be followed, even if not immediately, by a word or phrase that functions as a noun or pronoun (this could include verbal nouns, ending in *-ing*). The phrase *rather than* indicates a comparison or contrast. (However, *rather than* can function as a preposition in some contexts.)

A **Correct.** *Rather than* does not function as a preposition here. Its function is to coordinate two verbs, in parallel form, that indicate actions compared in the sentence (some have called *rather than* in this function a "quasi-conjunction").

B The phrase *rather than ignoring* is correct and accepted in some usages, where *rather than* functions prepositionally, as here. But B is incorrect because the phrase *about to seemingly fail* does not coherently capture the intended idea. To see this, notice that the idea to be conveyed is that actual failure seems about to occur, not that the appearance of failure is about to occur.

C The passive verb form is quite unnecessary and produces an unnecessarily awkward phrase that is also incorrect in another way: the complex noun phrase *instead of … being ignored* is mistakenly placed in parallel with *investment analysts*.

D *Instead of* normally functions as a preposition and can govern only a word or phrase that functions as a noun or pronoun, not a finite verb form (a verb form that is neither a verbal noun nor an infinitive) such as *ignore*.

E *In place of* is a preposition that can do the same work as *instead of* in some contexts but is somewhat awkward here. In the noun phrase *a company's imminent failure seemingly about to occur*, the adjectival phrase *seemingly about to occur* is redundant with the adjective *imminent*.

The correct answer is A.

SC01490

798. Between 14,000 and 8,000 B.C. the ice cap that covered northern Asia, Europe, and America began to melt, uncovering vast new areas that were to be occupied by migrating peoples moving northward.

(A) began to melt, uncovering vast new areas that were to be occupied

(B) began melting, to uncover vast new areas to be occupied

(C) began, by melting, to uncover vast new areas for occupation

(D) began, after melting, uncovering vast new areas which are to be occupied

(E) would begin to uncover, through melting, vast new areas for occupation

Verb Form; Logical Predication

The sentence explains what happened when an ice cap *began to melt*. The participial phrase *uncovering vast new areas* succinctly describes the immediate effects of the melting. The verb form *were to be occupied* is used to indicate that occupation would take place at a time in the future from the time of the melting.

A **Correct.** The sentence succinctly expresses immediate and future effects of the melting of an ice cap.

B The infinitive *to uncover* incorrectly implies that the ice cap melted for the purpose of uncovering new areas.

C Since *melting* is what caused new areas to be uncovered, that word should be part of the main verb, not placed in the nonrestrictive prepositional phrase *by melting*.

D It does not make sense to say that the ice cap *began . . . uncovering* new areas *after* it had melted—since the ice cap no longer existed in the areas where it had melted.

E Since *melting* is what caused new areas to be uncovered, that word should be part of the main verb, not placed in the nonrestrictive prepositional phrase *through melting*.

The correct answer is A.

SC01472

799. Bengal-born writer, philosopher, and educator Rabindranath Tagore had the greatest admiration for Mohandas K. Gandhi the person and also as a politician, but Tagore had been skeptical of Gandhi's form of nationalism and his conservative opinions about India's cultural traditions.

(A) for Mohandas K. Gandhi the person and also as a politician, but Tagore had been

(B) for Mohandas K. Gandhi as a person and as a politician, but Tagore was also

(C) for Mohandas K. Gandhi not only as a person and as a politician, but Tagore was also

(D) of Mohandas K. Gandhi as a person and as also a politician, but Tagore was

(E) of Mohandas K. Gandhi not only as a person and as a politician, but Tagore had also been

Rhetorical Construction; Parallelism

This sentence describes the writer and philosopher Tagore's two types of feelings for Gandhi. The underlined part of the sentence has to express correctly the time line of these two feelings (they happened simultaneously). The underlined part also has to express the correct relationship between the complements of admiration and skepticism.

A To maintain parallelism, it is important for two conjoined phrases to be of the same grammatical type. Thus, it is appropriate to conjoin *Gandhi the person and the politician,* or *Gandhi as a person and as a politician,* but it is nonstandard in English to mix and match. In addition, the use of the past perfect tense *had been* places the skepticism earlier on the time line than the admiration, which is misleading.

B **Correct.** This version correctly conjoins two parallel phrases, *Gandhi as a person and as a politician*, and, in using two simple past tenses to introduce the two emotions, marks them as holding at the same time.

C The phrase *not only X but also Y* matches the meaning of this sentence: Tagore had not only admiration but also skepticism. However *not only* has to precede *admiration* for this rhetorical construction to be parallel.

D The noun *admiration* as it is positioned in this sentence should take the preposition *for*, not *of*, since it refers to a person. The adverb *also* is redundant because it expresses the same meaning as the conjunction *and*.

E As in (D), the noun *admiration* should take the preposition *for*. As in (C), the rhetorical structure of *not only X but also Y* is violated. Finally, the use of the past perfect tense *had been* is misleading with respect to the time line.

The correct answer is B.

SC04704

800. Traffic safety officials predict that drivers will be equally likely to exceed the proposed speed limit as the current one.

(A) equally likely to exceed the proposed speed limit as

(B) equally likely to exceed the proposed speed limit as they are

(C) equally likely that they will exceed the proposed speed limit as.

(D) as likely that they will exceed the proposed speed limit as

(E) as likely to exceed the proposed speed limit as they are

Idiom; Parallelism

This sentence reports on a prediction that compares the likelihood of drivers exceeding a proposed new speed limit with the likelihood of drivers exceeding the current speed limit. The idiom *as x as y*, rather than the incorrect form *equally . . . as*, should be used to express the comparison.

A *Equally likely . . . as* is not an idiomatic form of comparison.

B This also offers a nonidiomatic form of comparison.

C The comparison is expressed nonidiomatically. Also, *the drivers will be equally likely* should be followed by *to exceed* rather than by *that they will exceed*. The resulting sentence is wordy and structurally flawed.

D The resulting sentence is wordy and structurally flawed. The idiomatic phrase *as x as y* is somewhat in use, but *as likely that they* is awkward, and the comparison is unclear and not parallel.

E **Correct.** The idiomatic phrase *as x as y* is properly used, and the comparison is clear and parallel.

The correct answer is E.

SC04562

801. Written early in the French Revolution, Mary Wollstonecraft's *A Vindication of the Rights of Man* (1790) and *A Vindication of the Rights of Woman* (1792) attributed Europe's social and political ills to be the result of the dominance of aristocratic values and patriarchal hereditary privilege.

(A) Mary Wollstonecraft's *A Vindication of the Rights of Man* (1790) and *A Vindication of the Rights of Woman* (1792) attributed Europe's social and political ills to be the result of

(B) Mary Wollstonecraft's *A Vindication of the Rights of Man* (1790) and *A Vindication of the Rights of Woman* (1792) attributed Europe's social and political ills to result from

(C) Mary Wollstonecraft's *A Vindication of the Rights of Man* (1790) and *A Vindication of the Rights of Woman* (1792) attributed Europe's social and political ills to

(D) in *A Vindication of the Rights of Man* (1790) and *A Vindication of the Rights of Woman* (1792), Mary Wollstonecraft attributed Europe's social and political ills to have been the result of

(E) Mary Wollstonecraft, in *A Vindication of the Rights of Man* (1790) and *A Vindication of the Rights of Woman* (1792), attributed Europe's social and political ills to

Logical Predication; Idiom

The phrase at the beginning needs a subject for *written*; most logically here it would be the books mentioned written by Mary Wollstonecraft; any other main-clause subject is therefore incorrect. The verb *attribute* idiomatically requires the preposition *to* followed by a noun phrase, not the infinitive marker *to* followed by a verb.

A The main subject is correctly predicated of *written*, but *attribute* is incorrectly followed by the infinitive *to* plus a verb (*be*).

B The main subject is correctly predicated of *written*, but *attribute* is incorrectly followed by the infinitive *to* plus a verb (*result*).

C **Correct.** The main subject is correctly predicated of *written*, and *attribute* is correctly followed by the preposition *to*.

D The subject of the main clause is *Mary Wollstonecraft*, and so this phrase is illogically forced to be taken as the subject of *written*. Also, *attribute* is incorrectly followed by *to* plus a verb (*have been*).

E The subject of the main clause is *Mary Wollstonecraft*, and so this phrase is illogically forced to be taken as the subject of *written*.

The correct answer is C.

SC01498

802. Using study groups managed by the principal popular organizations and political parties, the Swedish public was informed by the government about energy and nuclear power.

(A) the Swedish public was informed by the government about energy and nuclear power

(B) the government informed the Swedish public about energy and nuclear power

(C) energy and nuclear power information was given to the Swedish public by the government

(D) information about energy and nuclear power was given to the Swedish public by the government

(E) the public of Sweden was given energy and nuclear power information by the government

Logical Predication; Rhetorical Construction

This sentence tries to describe a situation in which the government used study groups to inform the Swedish public. Therefore, it is incorrect to use *the Swedish public* as the subject of *inform* in this sentence, because doing so in this case illogically makes *the Swedish public* the subject of *using* as well. Additionally, *inform* is a more concise and direct way to express the idea in *give information*.

A Using *the Swedish public* as the subject of the main clause incorrectly makes it the subject of *using* as well.

B **Correct.** Using *the government* as the main subject correctly allows it to count as the subject of using; inform is a concise phrasing for the main action of the sentence.

C Energy and nuclear power information does not work as the subject of the main clause, since this also, illogically, makes it the subject of *using*. Also, this phrase delays the reader's understanding of the important noun *information* (a clearer phrasing is *information about energy and nuclear power*) and employs *give information* rather than the more concise *inform*.

D *Energy and nuclear power information* does not work as the main clause subject, since this also, illogically, makes it the subject of *using*. In addition, this version awkwardly uses *give information to* instead of the more concise *inform*.

E *The public of Sweden* is awkward compared to *the Swedish public*, and in any case is illogically taken as the subject of using; *given . . . information* could be phrased more concisely with *inform*.

The correct answer is B.

SC07446

803. The use of the bar code, or Universal Product Code, which was created in part to enable supermarkets to process customers at a faster rate, has expanded beyond supermarkets to other retail outlets and <u>have become readily accepted despite some initial opposition when it was first introduced in 1974</u>.

(A) have become readily accepted despite some initial opposition when it was first introduced in 1974

(B) has become readily accepted despite some initial opposition when they were first introduced in 1974

(C) have become readily accepted despite some initial opposition when first introduced in 1974

(D) has become readily accepted despite some initial opposition when the bar code was first introduced in 1974

(E) bar codes have become readily accepted despite some initial opposition when it was first introduced in 1974

Agreement; Rhetorical Construction

The subject of this sentence is *the use of the bar code*, the main noun of which is the singular *use*; thus, the corresponding main verb should be in the singular form *has*, not the plural *have*. The actual subject for this verb is merely understood, but when it is present, any pronoun that refers back to it must agree with it in number.

A The verb form *have* does not agree with the sentence's subject. The referent of *it* is potentially unclear.

B *Has* is correct; however, the rest of its clause is badly worded, because its subject *they* does not clearly refer back to the singular *Universal Product Code* (or *bar code*); a better choice is *it*.

C The plural *have* does not agree with the singular subject *use*.

D **Correct.** The verb is in the correct form *has*, and using *bar code* as the last clause's subject avoids an agreement problem.

E Restating the subject as the plural *bar codes* allows the following verb to be *have*, but it is then incorrect to use *it* later in the sentence, since *it* does not agree in number with *bar codes*.

The correct answer is D.

SC01595

804. Normally a bone becomes fossilized through the action of groundwater, which permeates the bone, washes away its organic components, and replaces them with minerals.

(A) which permeates the bone, washes away its organic components, and replaces them

(B) which permeates the bone, washes away its organic components, and those are replaced

(C) which permeates the bone, washing away its organic components, to be replaced

(D) permeating the bone, washing away its organic components, to be replaced

(E) permeating the bone, washing away its organic components and replacing them

Logical Predication; Grammatical Construction

The sentence explains the process by which groundwater produces fossilization of bones. The grammatically correct sentence describes a series of three stages in the process.

A **Correct.** Three parallel verbal phrases—*permeates …*, *washes …*, *and replaces …*—are correctly coordinated within a relative clause that has *which* as its subject referring to *groundwater*.

B The third component of the series, *and those are replaced,* is nonparallel, and therefore incorrect. This renders the sentence ungrammatical.

C This lacks the appropriate parallelism; based on structure, the phrase *to be replaced …* should modify *which*, a relative pronoun referring to *groundwater*. But this would not express the thought intended in the given sentence, which indicates that organic components are replaced.

D The participles *permeating* and *washing away* should, based on structure, have the subject of the sentence, *a bone,* as their implicit subject. But this produces nonsense. It is unclear what the phrase *to be replaced* modifies: based on the intended meaning, it should be *its organic components*, but the structure does not indicate this, given that the subject of the sentence is *a bone*.

E The three participles *permeating*, *washing away*, and *replacing* have the subject of the sentence (*a bone*) as their implicit subject. This produces nonsense. Also, any three-element series must have a comma immediately following each of its first two elements.

The correct answer is A.

SC04416

805. The Organization of Petroleum Exporting Countries (OPEC) had long been expected to announce a reduction in output to bolster sagging oil prices, but officials of the organization just recently announced that the group will pare daily production by 1.5 million barrels by the beginning of next year, but only if non-OPEC nations, including Norway, Mexico, and Russia, were to trim output by a total of 500,000 barrels a day.

(A) year, but only if non-OPEC nations, including Norway, Mexico, and Russia, were to trim output

(B) year, but only if the output of non-OPEC nations, which includes Norway, Mexico, and Russia, is trimmed

(C) year only if the output of non-OPEC nations, including Norway, Mexico, and Russia, would be trimmed

(D) year only if non-OPEC nations, which includes Norway, Mexico, and Russia, were trimming output

(E) year only if non-OPEC nations, including Norway, Mexico, and Russia, trim output

Rhetorical Construction; Logical Predication

The underlined part of this sentence deals with the conditions under which OPEC members will lower their own oil production by 1.5 million barrels by the beginning of next year. The important thing to notice here is the following logical relation: *X will do something only if Y does something else*.

A This version has redundant words, *were to* in front of *trim*, that do not add anything more in meaning. Furthermore, *were to trim* is not the proper verb form to accompany *will pare*. The addition of *but* before *only* is also redundant.

B This version uses the passive construction in the conditional clause *only if the output … is trimmed.* This use of the passive voice makes this sentence vague; it is now unclear who needs to trim the output of non-OPEC nations. Finally, the addition of *but* before *only* is redundant.

C As in (B), this version also introduces vagueness by using the passive construction. In addition, *would* in front of the passive verb *be trimmed* is redundant.

D This version uses an active verb, but in the past progressive form, *were trimming*. The progressive tense denotes actions in progress, so its use is not normally warranted in conditional sentences such as this one.

E **Correct.** This version uses the correct and most concise conditional structure, without redundancies.

The correct answer is E.

SC01507

806. Over the past ten years cultivated sunflowers have become a major commercial crop, second only to soybeans as a source of vegetable oil.

(A) second only to soybeans as a source of vegetable oil

(B) second in importance to soybeans only as a source of vegetable oil

(C) being second in importance only to soybeans as a source of vegetable oil

(D) which, as a source of vegetable oil, is only second to soybeans

(E) as a source of vegetable oil only second to soybeans

Rhetorical Construction; Idiom

The sentence makes the point that cultivated sunflowers are the second largest source of vegetable oil, soybeans alone being larger. Where *only* is placed in the sentence greatly affects the sense.

A **Correct.** The placement of *only* allows the sentence to correctly express the thought that cultivated sunflowers rank second as a source of vegetable oil, with soybeans alone ranking first.

B The placement of *only* creates an ambiguity: does it modify *soybeans* or the phrase *as a source of vegetable oil?* In the latter case, the sense would be that being a source of vegetable oil is the only respect in which soybeans are more important than sunflower seeds. However, this does not seem to be the intended sense of the given sentence. The phrase *in importance* is unnecessary and would make the sentence wordy.

C The word *being* and the phrase *in importance* are unnecessary and make the sentence wordy.

D The phrase *only second to soybeans* appears to minimize the importance, initially suggested, of sunflowers' being second to soybeans as a source of vegetable oil.

E The word *only* is misplaced, given the intended sense, and it is unclear whether it modifies the phrase *as a source of vegetable oil,* or the phrase *second to soybeans.* In either case it fails to capture the sense of the given sentence.

The correct answer is A.

SC00985

807. Not trusting themselves to choose wisely among the wide array of investment opportunities on the market, stockbrokers are helping many people who turn to them to buy stocks that could be easily bought directly.

(A) stockbrokers are helping many people who turn to them to buy stocks that could be easily

(B) stockbrokers are helping many people who are turning to them for help in buying stocks that they could easily have

(C) many people are turning to stockbrokers for help from them to buy stocks that could be easily

(D) many people are turning to stockbrokers for help to buy stocks that easily could have been

(E) many people are turning to stockbrokers for help in buying stocks that could easily be

Logical Predication; Grammatical Construction; Verb Form

This sentence is intended to be about people who, because they do not trust themselves to make wise investment decisions, turn to stockbrokers for advice. As the sentence is worded, however, it is stockbrokers who do not trust themselves to choose wisely. The sentence is made even more incomprehensible by the peculiar placement of the adverbs in the phrase, *could be easily bought directly*.

A This version of the sentence incorrectly identifies the subject described by the opening modifier as *stockbrokers*; the adverb *easily* is misplaced in the phrase *could be easily bought*.

B As in (A), the opening clause illogically modifies *stockbrokers* rather than *many people*. The tense of the verb phrase *could easily have bought* does not match the tense of *are helping* earlier in the main clause.

C Although the opening modifier is correctly attached to *people* rather than *stockbrokers*, the sentence is unnecessarily wordy (*for help from them*).

D *To buy* is not idiomatic in this context—*in buying* would be correct—and the tense of the verb *could have been* does not match the tense of the verb earlier in the clause; the point is not that people are turning to stockbrokers for help in buying stocks that at some earlier time could have been bought directly, but rather that the stocks could be bought by the people directly at the very time they are seeking help from the stockbrokers.

E **Correct.** The opening clause correctly modifies *many people*, and the adverb is correctly placed.

The correct answer is E.

SC01007

808. In the 1940s popular magazines in the United States began to report on the private lives of persons from the entertainment industry, <u>in despite of the fact that they previously had featured individuals</u> in business and politics.

(A) in despite of the fact that they previously had featured individuals

(B) in spite of the fact previously that these publications featured articles on those

(C) whereas previously there were those individuals featured in articles

(D) whereas previously those individuals they featured were

(E) whereas previously these publications had featured articles on individuals

Idiom; Parallelism; Logical Predication

The sentence compares the reporting by popular magazines in the 1940s to the reporting by these magazines before the 1940s. Whereas previously the publications featured articles on people in business and politics, in the 1940s the magazines began to report on the private lives of persons in the entertainment industry. The two elements being compared should be described clearly and in a parallel fashion.

A This sentence appears to misuse the *in spite of* idiom by using *despite* instead of *spite*. The use of *despite* is incorrect. Furthermore, although we can discern what the pronoun *they* is meant to refer to, the sentence would be easier to read if *these publications* were used in place of *they*.

B The word *previously*, which is misplaced in this sentence, should be between *publications* and *featured*, and perhaps preceded with *had*. The wording of the relevant portion of the sentence would thus be *fact that these publications had previously featured*. Furthermore, although we can discern what (or who) *those in business and politics* is meant to refer to, more specific wording would have made this phrase in the sentence easier to read. For example, we could substitute *individuals* for *those*.

C In this sentence, the phrase, *there were those individuals featured in articles in business and politics* is an assertion that individuals thus featured existed. Although we can guess that the writer would have meant to indicate that it was the magazines that were doing the featuring, the sentence fails to make this point clear. The sentence thus lacks clarity.

D This sentence may present an improvement over sentences A, B, and C. However, the sentence would be more readable if the phrase *those individuals they featured* was made parallel with the corresponding portion of the other element of the comparison. For example, *they featured those individuals* would be parallel with *popular magazines ... began to report on the private lives of persons ...* It would also help if *they* were replaced with a more specific term such as *the magazines*.

E **Correct.** This sentence is clear and relatively easy to read.

The correct answer is E.

SC04770

809. In the early part of the twentieth century, many vacationers found that driving automobiles and sleeping in tents allowed them to enjoy nature close at hand and tour at their own pace, with none of the restrictions of passenger trains and railroad timetables or with the formalities, expenses, and impersonality of hotels.

(A) with none of the restrictions of passenger trains and railroad timetables or with the

(B) with none of the restrictions of passenger trains, railroad timetables, nor

(C) without the restrictions of passenger trains and railroad timetables nor

(D) without the restrictions of passenger trains and railroad timetables or with the

(E) without the restrictions of passenger trains and railroad timetables or the

Rhetorical Construction; Diction

The sentence lays out some advantages that car travel and tent camping were perceived to offer over rail travel. The sentence attempts to describe these advantages in terms of the absence of any of a series of annoyances accompanying rail travel. But the sentence fails because of the mismatch between *with none of* . . . and *or with*. . . . One way to successfully convey the intended meaning is to use the preposition *without* governing all the items in the series, expressed as nouns or noun phrases.

A By using *none of* . . . to introduce the first drawback of rail travel, and *or* to introduce the rest of them, this sentence suggests that the presence of drawbacks on the final list is an alternative to the absence of *restrictions*.

B *With none* . . . *nor* . . . is nonidiomatic (as opposed to *neither* . . . *nor* . . .).

C The structure *without* . . . *nor* . . . in the way used here is nonidiomatic. The negative *without* governs the whole list of drawbacks at the end of the sentence.

D The coupling of *without* and *or with* is confusing, suggesting, as in (A), that the drawbacks on the final list are an alternative to the absence of *restrictions*.

E **Correct.** The sentence is unambiguous and constructed in a way that *without* clearly distributes over all the items in the series.

The correct answer is E.

SC04760

810. Over the next few years, increasing demands on the Chattahoochee River, which flows into the Apalachicola River, could alter the saline content of Apalachicola Bay, which would rob the oysters there of their flavor, and to make them decrease in size, less distinctive, and less in demand.

(A) which would rob the oysters there of their flavor, and to make them decrease in size,

(B) and it would rob the oysters there of their flavor, make them smaller,

(C) and rob the oysters there of their flavor, making them decrease in size,

(D) robbing the oysters there of their flavor and making them smaller,

(E) robbing the oysters there of their flavor, and making them decrease in size,

Category

The sentence claims that demands for river water may change the saline content of the bay, possibly altering the flavor and size of oysters there and diminishing the oysters' marketability. The sentence is not parallel. It should read *which would rob the oysters . . . and make them decrease* to be parallel and grammatical. The series of three phrases after *make them* that describes what will happen to the oysters also needs to be parallel.

A The referent of the relative pronoun, *which*, is ambiguous; the two effects of altered saline content are not expressed in parallel form, with a relative clause expressing the first effect, and an infinitive phrase expressing the second.

B The referent of the pronoun *it* is ambiguous. Also, the effects of the bay's altered saline content are not expressed in parallel form—the first being an independent clause and the second a verb phrase.

C The comma before the conjunction *and* signals that an independent clause will follow *and*, but a verb phrase follows instead. The series of phrases following *making them* lacks appropriate parallelism.

D **Correct.** The potential effects on the oysters are expressed by two parallel participial phrases, the second of which lists three adjectives correctly in a series.

E The series of phrases following *making them* lacks appropriate parallelism.

The correct answer is D.

SC01469

811. Elizabeth Barber, the author of both *Prehistoric Textiles*, a comprehensive work on cloth in the early cultures of the Mediterranean, and also of *Women's Work*, a more general account of early cloth manufacture, is an expert authority on textiles in ancient societies.

(A) also of *Women's Work*, a more general account of early cloth manufacture, is an expert authority on

(B) also *Women's Work*, a more general account of cloth manufacture, is an expert authority about

(C) of *Women's Work*, a more general account about early cloth manufacture, is an authority on

(D) of *Women's Work*, a more general account about early cloth manufacture, is an expert authority about

(E) *Women's Work*, a more general account of early cloth manufacture, is an authority on

Rhetorical Construction; Idiom; Parallelism

Using a lot of parenthetical elements, this sentence communicates the main idea that Elizabeth Barber is an authority on textiles in ancient societies. It is the main rhetorical goal of the sentence to position the parenthetical elements so that they do not obscure the main idea. The parenthetical descriptions need to be streamlined enough to be informative, but not too long. In addition, several versions repeat *of* before the title *Women's Work* and doing so makes the sentence unparallel; the first *of* comes before *both* and so should distribute over both clauses.

A The use of *also of* before *Women's Work* is redundant and unparallel. It is sufficient to connect the two book titles like this: *both X and Y*. The meanings of the two nouns *expert* and *authority* largely overlap, so there is no need to modify one with the other.

B The use of *also* before *Women's Work* is redundant. It is sufficient to connect the two book titles like this: *both X and Y*. The meanings of the two nouns *expert* and *authority* largely overlap, so there is no need to modify one with the other. Finally, the noun *authority* takes the preposition *on*, not *about*.

C As in (A), repeating the preposition *of* before *Women's Work* makes the sentence unparallel. The noun *account* takes the preposition *of*, not *about*.

D As in (A) and (C), repeating the preposition *of* before *Women's Work* makes the sentence unparallel. The noun *account* takes the preposition *of*, not *about*. It is redundant to modify *authority* with *expert* because they express the same idea. Finally, the noun *authority* takes the preposition *on*, not *about*.

E Correct. This version is parallel, uses the most concise structure of the parenthetical descriptions, eschews the redundant modification of *authority*, and employs the correct prepositions.

The correct answer is E.

SC00994

812. Digging in sediments in northern China, evidence has been gathered by scientists suggesting that complex life-forms emerged much earlier than they had previously thought.

(A) evidence has been gathered by scientists suggesting that complex life-forms emerged much earlier than they had

(B) evidence gathered by scientists suggests a much earlier emergence of complex life-forms than had been

(C) scientists have gathered evidence suggesting that complex life-forms emerged much earlier than

(D) scientists have gathered evidence that suggests a much earlier emergence of complex life-forms than that which was

(E) scientists have gathered evidence which suggests a much earlier emergence of complex life-forms than that

Logical Predication; Modification

In principle, the relationship described in the first part of the underlined portion could be expressed with *scientists* as the subject (*scientists gathered evidence*) or with *evidence* as the subject (*evidence was gathered by scientists*). The latter construction could be effective in some contexts, but here its relationship to the rest of the sentence appears to commit the writer to the claim that the evidence was digging in China.

A This version has a dangling participle, *digging. … Digging in sediments in northern China* must modify *scientists*, not *evidence*. The passive structure of the main clause also creates an inadvisable distance between the words *evidence* and *suggesting*. Furthermore, the dependent clause starting with *suggesting* may be construed with either the evidence or the scientists, which makes this version unnecessarily ambiguous.

B This version has a dangling participle, *digging. … Digging in sediments in northern China* must modify *scientists*, not *evidence*.

C **Correct.** Choosing *scientists* as the subject of *gathered*, this version corrects the dangling participle. It also uses a parallel active form of the verb *emerge*, and does not use redundant material.

D In this context it would be preferable to use a verb (*emerged*). The phrasing used here (*suggests a much earlier emergence of*) sounds more stilted and is less clear and direct. In addition, inserting *that which* before *previously thought* is not only redundant but incorrect English.

E The problems described in (D) above are also in evidence here.

The correct answer is C.

SC01521

813. Employing many different techniques throughout his career, Michelangelo produced a great variety of art works, including paintings, for example, in the Sistine Chapel, to sculpture, for example, the statue of David.

(A) including paintings, for example, in the Sistine Chapel, to sculpture, for example,

(B) including paintings, for example, in the Sistine Chapel, to sculpture, like

(C) including paintings, such as those in the Sistine Chapel, and sculpture, as

(D) ranging from paintings, such as those in the Sistine Chapel, to sculpture, such as

(E) ranging from paintings, such as in the Sistine Chapel, and sculpture, such as

Parallelism; Rhetorical Construction

This sentence names painting and sculpture as two of the many kinds of art created by Michelangelo and provides examples of his work in those two art forms. Although the two sets of examples are expressed in parallel form, the position of the phrase *for example* that introduces them creates a choppy and awkward sentence since it must be surrounded by commas. A more concise way to construct parallel sets of examples is to express each using a phrase introduced by *such as*.

A The sentence is choppy and awkward due to the twofold use of the phrase *for example*, which must be surrounded by commas. The preposition *to*, in context, suggests a range, but it would then be needed to be preceded by *from*.

B The examples of art are not in parallel form since the first is introduced by *for example* followed by the prepositional phrase *in the Sistine Chapel,* and the second is introduced by the prepositional phrase *like. . .* The preposition *to* is unidiomatic and awkwardly used here.

C The examples of art are not in parallel form since the first is introduced by *such as,* and the second is introduced by *as.*

D **Correct.** The examples of art are in parallel form, each introduced with the words *such as.*

E Although the examples of art are both introduced by *such as*, the form is not parallel since the first is a prepositional phrase (*in the Sistine Chapel*) and the second is a noun phrase (*the statue of David*).

The correct answer is D.

SC04422

814. According to a recent study of consumer spending on prescription medications, increases in the sales of the 50 drugs that were advertised most heavily accounts for almost half of the $20.8 billion increase in drug spending last year, the remainder of which came from sales of the 9,850 prescription medicines that companies did not advertise or advertised very little.

(A) heavily accounts for almost half of the $20.8 billion increase in drug spending last year, the remainder of which came

(B) heavily were what accounted for almost half of the $20.8 billion increase in drug spending last year; the remainder of the increase coming

(C) heavily accounted for almost half of the $20.8 billion increase in drug spending last year, the remainder of the increase coming

(D) heavily, accounting for almost half of the $20.8 billion increase in drug spending last year, while the remainder of the increase came

(E) heavily, which accounted for almost half of the $20.8 billion increase in drug spending last year, with the remainder of it coming

Grammatical Construction; Verb Form

The sentence indicates that according to research, increases in sales of the relatively small number of the most heavily advertised drugs accounted for nearly half of last year's total increase in drug spending. The sentence is flawed because of subject-verb disagreement, and an ambiguity in the referent of *which*.

A The singular verb form *accounts* fails to agree in number with the plural subject *increases*. What the relative pronoun *which* refers to is unclear; to make clear sense, it should refer to *the . . . increase*.

B The phrase *were what accounted* is unnecessarily wordy; the semicolon before *the remainder* signals that a complete clause will follow, but what follows is not a complete clause.

C **Correct.** The sentence is clear and grammatically correct. The subject and verb agree.

D In the resulting sentence, no main verb follows the main subject *increases*.

E The resulting sentence lacks a main verb for the main subject *increases*.

The correct answer is C.

SC00971

815. Technically, "quicksand" is the term for sand that is so saturated with water as to acquire a liquid's character.

(A) that is so saturated with water as to acquire a liquid's character

(B) that is so saturated with water that it acquires the character of a liquid

(C) that is saturated with water enough to acquire liquid characteristics

(D) saturated enough with water so as to acquire the character of a liquid

(E) saturated with water so much as to acquire a liquid character

Rhetorical Construction; Logical Predication

The statement provides a definition of the term *quicksand* as sand that has been saturated with water to a certain degree. Many of the flaws in the incorrect options have to do with how this degree of saturation is described.

A The matter of degree in this option is introduced with the word *so*, which is used to indicate that the relevant degree of saturation will be specified with a clause that states a condition—a statement that includes both a subject and a verb—that implies a certain degree of saturation. Lacking a subject, this sentence fails to state a clear condition.

B **Correct.** In this option, the clause introduced with *that* contains a proper statement—with both a subject and verb—which implies a degree of saturation with water. This option thus has none of the flaws discussed in connection with option A.

C In this option, we might immediately note that the word (adjective) *enough*, which qualifies the word *water* is misplaced. In English (with, as almost always, exceptions), qualifiers of nouns are generally placed before the noun. In this case, it should be *enough water*.

D The words *so as* make this option a poor choice. In the case of option D, if we cut out "so as" and write, *"quicksand" is the term for sand saturated enough to acquire the character of a liquid*, then our statement would be much improved. However, as it stands, option D is at best awkward.

E We might immediately note that this option is awkward—*so much* qualifies *saturated*, yet it is placed after the word *water*, well after *saturated*. This makes the statement unnecessarily difficult to read. A modification of this part of the sentence so as to read *saturated so much with water* would be an improvement. Furthermore, as discussed in connection with options A and B, option E would be better if *as to acquire a liquid character* were replaced with *that it acquires a liquid character* (or, as in B, *that it acquires the character of a liquid*).

The correct answer is B.

SC07232

816. At the end of 2001, motion picture industry representatives said that there were about a million copies of Hollywood movies available online and expected piracy to increase with high-speed Internet connections that become more widely available.

(A) online and expected piracy to increase with high-speed Internet connections that become more widely available

(B) online and expect the increase of piracy with the wider availability of high-speed Internet connections

(C) online, and they expect more piracy to increase with the wider availability of high-speed Internet connections

(D) online, and that they expected the increase of piracy as high-speed Internet connections would become more widely available

(E) online, and that they expected piracy to increase as high-speed Internet connections became more widely available

Rhetorical Construction; Grammatical Construction

Every clause needs a subject, either an overt subject or an understood subject (whose interpretation can come from a coordinated clause or some other nearby clause). In this sentence, the clause containing *expected* lacks a clear subject. The intended subject is *motion picture industry representatives*, but to clearly indicate that, the subject should either be repeated or be replaced with the pronoun *they*. Furthermore, *piracy to increase with high-speed Internet connections that become more widely available* is awkward, and it fails to clearly communicate the idea that piracy will increase as a result of high-speed Internet connections becoming available.

A The second clause is awkward and unclear; there is no clear subject for *expected*.

B There is no clear subject for *expect*.

C It is redundant to use both *more* and *increase*.

D This wording makes the meaning very unclear. *They expected the increase in piracy* appears to refer to a particular (past) increase, but this does not clearly make sense with the ensuing use of the conditional verb form *would become*, which is inappropriate here.

E **Correct.** In this version the verb *expect* has an overt subject, and the following phrasing clearly indicates that the expected increase in piracy is the result of high-speed Internet connections becoming more widely available.

The correct answer is E.

SC14066

817. Making things even more difficult has been general market inactivity lately, if not paralysis, which has provided little in the way of pricing guidance.

(A) has been general market inactivity lately, if not paralysis, which has provided

(B) there is general market inactivity, if not paralysis, lately it has provided

(C) general market inactivity, if not paralysis, has lately provided

(D) lately, general market inactivity, if not paralysis, has provided

(E) is that lately general market inactivity, if not paralysis, which provides

Grammatical Construction; Rhetorical Construction

This sentence uses a special inverted structure, putting the predicate (*Making things even more difficult*) before the verb (*has been*) and the subject. In this construction, the subject (*general market inactivity*) can be directly compared with *paralysis*. Such contrasts are best made using phrases that are adjacent, not separated by other material (here, the adverb *lately*). If a more normal clause structure is used, *making things even more difficult* becomes a modifier, not the main predicate, so it should be clearly set off from the rest of the clause with a comma.

A This inverted structure makes *general market activity* the subject of *Making things even more difficult*. This would be legitimate by itself, but it requires *general market inactivity* to be next to both *if not paralysis* (for contrast) and *which* (marking a relative clause modifying *inactivity*). It cannot be next to both of these simultaneously.

B This is a run-on sentence, with two independent clauses (*Making things even more difficult there is general market inactivity, if not paralysis, and lately it has*

provided little in the way of pricing guidance) conjoined merely by a comma, rather than by a coordinating conjunction, such as and. Also, the initial topic phrase (*Making things even more difficult*) is awkward without a following comma.

C The initial topic phrase (*Making things even more difficult*) should be followed by a comma.

D **Correct.** The topic phrase (*Making things even more difficult*) is properly separated from the subject by a comma, and *inactivity* and *if not paralysis* are adjacent for the clearest connection between them.

E This is a sentence fragment.

The correct answer is D.

SC01946

818. Ryūnosuke Akutagawa's knowledge of the literatures of Europe, China, and that of Japan were instrumental in his development as a writer, informing his literary style as much as the content of his fiction.

(A) that of Japan were instrumental in his development as a writer, informing his literary style as much as

(B) that of Japan was instrumental in his development as a writer, and it informed both his literary style as well as

(C) Japan was instrumental in his development as a writer, informing both his literary style and

(D) Japan was instrumental in his development as a writer, as it informed his literary style as much as

(E) Japan were instrumental in his development as a writer, informing both his literary style in addition to

Logical Predication; Agreement

When a verb follows a complex noun phrase made up of several parts, it agrees with the first noun in the phrase. In this case, *knowledge of the literatures of Europe, China, and Japan* is a singular noun and the correct verb form is *was*, not *were*. The various parts of an enumeration have to be alike: *the literatures of Europe, China, and Japan.* The logical relationship between the predicates is important.

A This version of the sentence violates the correct subject-verb agreement, and the correct structure of enumeration is disrupted by the addition of *that of* in front of *Japan*.

B The correct structure of enumeration is disrupted by the addition of *that of* in front of *Japan*. *Both … as well as …* is incorrect usage.

C **Correct.** The structure of the enumeration (*Europe, China, and Japan*) as well as the conjunction structure (*both X and Y*) are correct. The logical relationships among the parts of the sentence are clearly expressed.

D This phrasing makes it unclear what the writer is claiming. It appears to indicate that the effect of Akutagawa's knowledge on his development as a writer was due to the fact that both of the aspects of his writing were influenced to the same extent. However, it is implausible to suppose that this is what the writer intends. Furthermore, the comparison is ambiguous: did his knowledge inform his style as much as it informed the content, or did it inform his style as much as the content informed his style?

E The subject-verb agreement in this version is incorrect. *Both X in addition to Y* is incorrect usage.

The correct answer is C.

SC24321.01

819. Many stock traders in the United States have set out to become global investors, convinced that limiting their investments to the U.S. stock market, even though it is certainly home to the stocks of some of the world's great corporations, restricted their gains.

(A) even though it is certainly

(B) which, while it is certainly

(C) despite that that market is certainly

(D) which, though certainly

(E) although, certainly as

Grammatical Construction; Diction

This sentence contains no errors. A major error in three of the variants of the underlined portion is to create a mere sentence fragment through failure to complete, with a verb, the noun clause that would normally be introduced by the phrase *convinced that*.

A **Correct.** The phrase *convinced that* introduces a noun clause: *limiting their investments to the U.S. stock market restricted*

their gains. The clause introduced by *even though* is a parenthesis inserted in the noun clause.

B This creates a sentence fragment by leaving the noun clause introduced by *convinced that* with no verb to complete it. The relative pronoun *which* introduces a relative clause; this clause takes *restricted* as its verb and *the U.S. stock market* as the antecedent of *which*.

C There is a diction error here. The phrase *despite that* is not a subordinating conjunction; the word *despite* is normally used as a preposition. A preposition must be followed by a noun, noun phrase, or pronoun that it governs (as in "despite that fact, …) but is not so followed in this case. The conjunction *although* would better serve the function intended for *despite that*.

D This creates a sentence fragment by leaving the noun clause introduced by *convinced that* without a verb to complete it.

E This creates a sentence fragment and deprives the verb *restricted* of a subject. The word *although* is a subordinating conjunction used only to introduce a subordinate clause, which is required to have its own verb. But these requirements are not fulfilled here, so we have a diction error.

The correct answer is A.

SC01973

820. According to scientists who monitored its path, an expanding cloud of energized particles ejected from the Sun recently triggered a large storm in the magnetic field that surrounds Earth, which brightened the Northern Lights and also possibly knocking out a communications satellite.

(A) an expanding cloud of energized particles ejected from the Sun recently triggered a large storm in the magnetic field that surrounds Earth, which brightened the Northern Lights and also possibly knocking

(B) an expanding cloud of energized particles ejected from the Sun was what recently triggered a large storm in the magnetic field that surrounds Earth, and it brightened the Northern Lights and also possibly knocked

(C) an expanding cloud of energized particles ejected from the Sun recently triggered a large storm in the magnetic field that surrounds Earth, brightening the Northern Lights and possibly knocking

(D) a large storm in the magnetic field that surrounds Earth, recently triggered by an expanding cloud of energized particles, brightened the Northern Lights and it possibly knocked

(E) a large storm in the magnetic field surrounding Earth was recently triggered by an expanding cloud of energized particles, brightening the Northern Lights and it possibly knocked

Logical Predication; Rhetorical Construction; Verb Form

The timing and logical relationships among the events described in this sentence are of utmost importance. The scientists monitored a cloud ejected from the Sun. The cloud triggered a large storm, whose consequences were the brightening of the Northern Lights and the possible knocking out of a satellite. The latter two events are in a conjunction, so they should be represented by similar verb forms.

A In this context, the shift in verb form from *which brightened* to *and also possibly knocking* is ungrammatical. The two verbs should be in the same verb form for parallel construction.

B *X was what triggered Y* is wordy and awkward, and its meaning is unclear in this context. Given the most plausible intended meaning of the sentence, the two conjunctions *and … and …* in the last clause are redundant. The comma after *Earth* turns the final part of the sentence into an independent clause, and it is unclear whether this is part of what the scientists claimed or a separate claim made by the writer.

C **Correct.** The conjoined elements are of parallel forms, and the logical relations between the events are clear and concisely communicated.

D The wording in this answer choice makes the intended meaning unclear. The information that the cloud particles were ejected from the Sun is lost. The sentence is ungrammatical; the second conjoined main verb, *knocked*, needs no pronoun subject *it* because its subject is *a large storm*.

E The wording in this answer choice makes the intended meaning unclear. The information that the cloud particles were ejected from the Sun is lost. The two conjoined verbs are of different form; the second conjoined verb includes an unnecessary pronoun subject.

The correct answer is C.

SC01033

821. Because many of Australia's marsupials, such as the koala, are cute and cuddly, as well as being biologically different than North American marsupials, they have attracted a lot of attention after their discovery in the 1700s.

(A) being biologically different than North American marsupials, they have attracted a lot of attention after

(B) being biologically different from North American marsupials, they attracted a lot of attention since

(C) biologically different than North American marsupials, they attracted a lot of attention since

(D) biologically different than North American marsupials, they have attracted a lot of attention after

(E) biologically different from North American marsupials, they have attracted a lot of attention since

Verb Form; Parallelism

In seeking to explain why Australian marsupials have attracted much attention in North America, the sentence ascribes two attributes to them: they differ biologically from North American marsupials and seem friendly and appealing. The structure *are … as well as …* is used to coordinate the description of the two properties—but incorrectly, because the insertion of *being* impairs the required parallelism: *are cute and cuddly* is not parallel to *[are] being biologically different*. Also, there is a lack of fit between the verb form *have attracted* and the preposition *after*.

A The phrase *cute and cuddly* is adjectival, as is *biologically different …;* adding the word *being* is not useful and impairs parallelism. The verb form *have attracted* suggests a process continuing from some point in the past, but the word *after* is most naturally read as indicating the time of a single event relative to an earlier point in time.

B The word *being* is superfluous here. The word *since* indicates continuation over a past period, whereas the verb *attracted* indicates a single event occurring within a period.

C The word *being* is superfluous here and impairs parallelism. The verb *attracted*, indicating a single event, does not match the use of the word *since*, which indicates a continuing duration relative to the time of an earlier event.

D The verb *have attracted*, indicating continuation, does not match the use of the word *after*, which is appropriate in order to give the time of a single event relative to an earlier point in time.

E **Correct.** The superfluous word *being* is omitted, preserving the parallelism between the two adjectival phrases in the description of the attribute following *as well as*. The preposition *since* is the appropriate usage with the verb form *have attracted*.

The correct answer is E.

SC02448

822. Having been named for a mythological nymph who cared for the infant Jupiter, the asteroid named Ida, in the middle of the belt of asteroids that orbit the Sun between Mars and Jupiter, was discovered in 1884.

(A) Having been named for a mythological nymph who cared for the infant Jupiter, the asteroid named Ida, in the middle of the belt of asteroids that orbit the Sun between Mars and Jupiter, was discovered in 1884.

(B) Discovered in 1884, the asteroid Ida, named for a mythological nymph who cared for the infant Jupiter, is in the middle of the belt of asteroids that orbit the Sun between Mars and Jupiter.

(C) In the middle of the belt of asteroids that orbit the Sun between Mars and Jupiter, the asteroid Ida, discovered in 1884 and named for a mythological nymph who cared for the infant Jupiter.

(D) The asteroid Ida, named for a mythological nymph who cared for the infant Jupiter and discovered in 1884, is in the middle of the belt of asteroids to orbit the Sun between Mars and Jupiter.

(E) Ida, an asteroid discovered in 1884 and which was named for a mythological nymph who cared for the infant Jupiter, is in the middle of the belt of asteroids to orbit the Sun between Mars and Jupiter

Rhetorical Construction; Logical Predication; Grammatical Construction

This sentence describes a discovery that occurred in 1884 and provides some additional information about the object that was discovered. The most effectively worded answer choice opens with a past-participial phrase (*discovered . . .*) describing the subject of the sentence, *the asteroid Ida*. Ida's discovery is logically prior to its naming, described in a second past, following the subject (*named . . .*). The sentence is then completed with a present tense linking verb *is* + prepositional phrase to explain Ida's location.

A Opening with a past perfect passive verb, *Having been named,* this version of the sentence illogically suggests that being named for a mythological nymph preceded the discovery of Ida.

B **Correct.** This version is clear, logically coherent, and grammatically correct.

C This version of the sentence is ungrammatical; it has no main verb for the subject *the asteroid Ida*.

D The sequence of events is obscured by the placement of *named* before *discovered* in the compound participial phrases. The infinitive form *to orbit* is ungrammatical in place of the relative clause.

E This sentence awkwardly attempts to use a compound conjunction *and* to join the past participial phrase *discovered in 1884* with the relative clause *which was named. . . .* The infinitive form *to orbit* is ungrammatical in place of the relative clause.

The correct answer is B.

SC20121.01

823. Custodian fees and expenses, as described in the statement of operations, include interest expense incurred by the fund on any cash overdrafts of its custodian account during the period.

(A) include interest expense incurred by the fund on any cash overdrafts of its custodian account during the period

(B) are to include interest expenses on any cash overdrafts of its custodian account the fund incurred during the period

(C) includes interest expense the fund incurred during the period on any cash overdrafts of its custodian account

(D) may include interest expense during the period that the fund was to incur on any cash overdrafts of its custodian account

(E) including interest expense on any cash overdrafts of its custodian account incurred by the fund during the period

Logical Predication; Agreement; Grammatical Construction; Verb Form

The given sentence is correct. The subject of the main verb is plural; the word *custodian* functions as an adjective modifying *fees and expenses.* The complex adjectival phrase *incurred … period* (which includes embedded adverbial modifiers such as *by the fund*) modifies the noun phrase *interest expense.* The adverbial phrase *during the period* modifies the verb *incurred*. Errors occurring in the other versions include misplaced modifiers, errors in subject-verb agreement, and a grammatical construction error.

A **Correct.** This has none of the errors listed above. The use of the singular *expense,* an abstract noun with no plural, is legitimate—as is also the use of the plural concrete noun *expenses* (a "count noun") elsewhere in the sentence.

B The phrase *are to include* can convey either a future sense or an imperative sense, but nothing in the given sentence indicates that either of these senses is appropriate. The relative clause [*that*] *the fund incurred …* is misleadingly attached to *account* rather than to *expenses*—a logical predication error.

C The verb *includes* is singular but its subject is plural.

D The introduction of *may* and *was to* do not improve on the given sentence and introduce superfluous words. The force of *was to* is unclear. The relative clause *that … incur* is misleadingly attached to *period* rather than to *expense*.

E This version is no longer a sentence—as opposed to an extended noun phrase—because the present participle *including* has replaced the finite verb *include*. The adjectival modifier *incurred by … period* is misleadingly attached to *account* rather than *expense*.

The correct answer is A.

SC36241.01

824. Although some had accused Smith, the firm's network manager, of negligence when the crucial data went missing, the CEO defused a situation that was quite tense with her public statement that the debacle was not Smith's fault.

(A) a situation that was quite tense with her public statement that the debacle was not Smith's fault

(B) a situation that was quite tense, by publicly stating that the debacle was not Smith's fault

(C) a situation, which was quite tense, by stating publicly that Smith was not responsible for the debacle

(D) a quite tense situation with a public statement about the debacle not being Smith's fault

(E) a quite tense situation by publicly stating the debacle not to have been Smith's fault

Logical Predication; Rhetorical Construction

The sentence is awkwardly and ambiguously worded. The phrase *with her public statement that the debacle was not Smith's fault* could be read as modifying *tense* or as expressing the means by which the CEO defused the situation, which is surely what is intended.

A The sentence is flawed for the reasons discussed above.

B **Correct.** This clearly conveys the intended meaning that the CEO defused the situation *by publicly stating that the debacle was not Smith's fault*.

C By setting *which was quite tense* apart with commas, the tenseness of the situation appears to be inessential, but surely the fact that the situation was quite tense is an important part of the intended meaning. Thus, this version of the sentence fails rhetorically.

D *With a public statement about the debacle not being Smith's fault* could be taken to be modifying *situation* or to be indicating the means by which the CEO defused the situation. Therefore, this version is ambiguous.

E *By publicly stating the debacle not to have been Smith's fault* is awkward and lacks rhetorical force.

The correct answer is B.

SC01077

825. Many utilities obtain most of their electric power from large coal and nuclear operations at costs that are sometimes two to three times higher as that of power from smaller, more efficient plants that can both make use of waste heat and take advantage of the current abundance of natural gas.

(A) two to three times higher as that of power from smaller, more efficient plants that can both

(B) higher by two to three times as that from smaller, more efficient plants that both can

(C) two to three times higher than those for power from smaller, more efficient plants that can both

(D) between two to three times higher as those for power from smaller, more efficient plants that both can

(E) between two to three times higher than from smaller, more efficient plants that they can both

Grammatical Construction; Diction

The sentence compares utilities' high costs of power obtained from large producers with the costs of power obtained from smaller, more economic producers. The comparative form *higher* must be followed by the preposition *than*, not by *as*. The sentence uses the plural *costs*; therefore, the singular pronoun *that* in the phrase *as that of power from …* incorrectly refers to a plural antecedent *costs*. An issue that arises in some of the five choices concerns the placing of *both* in a *both … and …* construction that is meant to indicate parallelism between the clauses *that make use of …* and *[that] take advantage of ….*

A As indicated, the use of *as* with *higher* in the comparison between costs is incorrect. Use of the singular pronoun *that* to refer to the plural *costs* is incorrect.

B The phrase *higher by two to three times* is unclear, and the use of *as* is unidiomatic here. Also, *higher as* is incorrect.

C **Correct.** The comparative *higher* is correctly followed by *than*. The plural pronoun *those* is correctly used to refer back to *costs*. The placement of *both* indicates correctly the parallel clauses.

D The phrase *higher as* is unidiomatic. The placement of *both* is ambiguous: either suggesting that the number of "more efficient plants" is just two, or that the verb *can* is not to be read as going along with *take* (this reading would create a grammatical-construction flaw, and render *take advantage … gas* into a sentence fragment).

E This omits a pronoun that would refer back to costs and so fails to capture the comparison intended in the given sentence. It compares the costs of power from large plants with power from smaller plants, i.e., it nonsensically compares costs with power.

The correct answer is C.

SC01523

826. When viewed from the window of a speeding train, the speed with which nearby objects move seems faster than that of more distant objects.

(A) the speed with which nearby objects move seems faster than that of

(B) the speed that nearby objects move seems faster than for

(C) the speed of nearby objects seems faster than

(D) nearby objects' speeds seem to be faster than those of

(E) nearby objects seem to move at a faster speed than do

Logical Predication; Parallelism

The intended meaning of the sentence is easily discerned: objects viewed from a speeding train seem to move faster than more distant objects. However, the sentence is defective in structure. One problem is that the participle *viewed* seems to apply to the subject of the main clause, the noun phrase *the speed with which nearby objects move*. Since this produces nonsense, the sentence needs to be reshaped. Comparing the speed of nearby objects with the speed of more distant objects would ideally be done with parallelism in phrasing, but that is lacking in the given sentence.

A The subject of the main clause should be *nearby objects* and not *the speed with which nearby objects move*, given the participle in the *when*-clause.

B The phrase *the speed … move* is erroneously made the subject of the main clause, but the phrase contains an additional problem: structurally it makes the relative pronoun *that* the object of the verb *move*.

C The phrase *the speed … objects* is erroneously made the subject of the main clause.

D The phrase *nearby objects' speeds* is erroneously made the subject of the main clause.

E **Correct.** The phrase *nearby objects* is correctly made the subject of the verb *seem*, and this fits with the participle in the *when*-clause. Additionally, there is a strict parallelism between *nearby objects* and *more distant objects*, which are being compared with respect to their apparent speed.

The correct answer is E.

SC41451.01

827. Ramón pointed out that food high in whole-grain fiber creates the energy we need to fight illnesses—as do vegetables and lean proteins.

(A) fiber creates the energy we need to fight illnesses—as do vegetables and lean proteins

(B) fiber in addition to vegetables and lean proteins, create the energy we need to fight illnesses

(C) fiber creates the energy we need to fight illnesses, along with vegetables and lean proteins

(D) fiber, vegetables, and lean proteins creates the energy we need to fight illnesses

(E) fiber, as vegetables and lean proteins, create the energy we need to fight illnesses

Logical Predication; Grammatical Construction; Agreement

The sentence is clear and correctly constructed. Its variants go wrong in three different ways. One error is to make the verb number plural where the subject of the verb is singular. Another error consists of the misapplication of a predicate. In the given sentence, the predicate *creates the energy we need to fight illnesses* is correctly applied, and the verb is singular because the subject of the

verb is given by the noun phrase *food high in whole grain fiber.* A third error concerns the use of *as*. In the given sentence, it functions correctly as a conjunction introducing a clause that compares foods high in whole-grain fiber with vegetables and lean proteins.

A **Correct.** As explained above, this avoids errors that appear in the variant versions of the sentence.

B This fails in two ways. First, the comma immediately following *proteins* in effect creates two sentence fragments which do not comprise a sentence and neither of which can stand on its own as an independent clause. This is a grammatical construction error. Even if the comma were removed, a plural verb is paired with the singular subject designated by *food high in whole-grain fiber.* The phrase *in addition to … proteins* is an adjectival modifier of the subject and does not generate a plural subject.

C The main error here arises from the placement of the final phrase *along with … proteins.* Inserting it instead immediately after *fiber* would make the meaning clearer for the reader. It would then be an adjectival modifier of the noun phrase *food high in whole-grain fiber.* But as it stands, it can be read as an adverbial modifier, though it is unclear which verb it would modify.

D It would make sense to describe a meal plan as rich in vegetables. But vegetables are not parallel to fiber as components of a food, and this indicates that the series *fiber, vegetables, and lean proteins* has logical predication and parallelism issues.

E The verb *create* is incorrect in being plural, given that its subject *food high in whole-grain fiber* is singular. The role of *as* here is ambiguous: is it meant to function as a preposition—which must govern a noun, noun phrase, or pronoun—or as a conjunction that would introduce a subordinate clause? In the given sentence, it functions, correctly, as a conjunction. Here, though, it is unclear, and looks more like a preposition, since the phrase *as vegetables and lean proteins* contains no verb. However, if taken as a propositional phrase, the phrase could imply that vegetables and lean proteins are high in whole-grain fiber (obviously false). This would be a logical predication error.

The correct answer is A.

SC01487

828. The English physician Edward Jenner found that if experimental subjects were deliberately infected with cowpox, which caused only a mild illness, they are immune from smallpox.

(A) which caused only a mild illness, they are immune from

(B) causing only a mild illness, they become immune from

(C) which causes only a mild illness, they are immune to

(D) causing only a mild illness, they became immune from

(E) which caused only a mild illness, they would become immune to

Verb Form

This sentence describes the result of infecting volunteers with cowpox. A conditional verb form is used to describe the cowpox infection: *if experimental subjects were deliberately infected.* The sentence then incorrectly uses simple present tense for the effects of that infection: *they are immune.* However, since the effects are dependent on an action that may or may not occur, the correct way to express those effects is by using another conditional verb form: *they would become immune.*

A The effects of a conditional situation are incorrectly expressed using the simple present tense verb *are.*

B The participle *causing* suggests that infecting the subjects with cowpox caused a mild illness only in some of the cases—but this does not seem to be the intended meaning. The effects of a conditional situation are incorrectly expressed using the simple present tense verb *become.* The preposition *from* is incorrect with *immune*; it should be *to.*

C The effects of a conditional situation are incorrectly expressed using the simple present tense verb *are.*

D See above the comment on *causing* in (B). The effects of a conditional situation are incorrectly expressed using the simple past tense verb *became*. The preposition with *immune* should be *to*.

E **Correct.** The effects of a conditional situation are correctly expressed using the conditional verb *would become*. The preposition *to* (rather than *from*) is correct with *immune*.

The correct answer is E.

SC00989

829. The final decades of the twentieth century not only saw an explosion of the literary production among women, but there was also an intense interest in the lives and works of women writers.

(A) not only saw an explosion of the literary production among women, but there was also

(B) not only saw an explosion of literary production in women, but there was also

(C) saw not only an explosion of literary production among women, but also

(D) saw not only an explosion of the literary production by women, but it also saw

(E) saw not only an explosion of literary production by women, but also saw

Parallelism; Diction

The sentence, about twentieth century literary production by women and the interest in women writers, contains a common type of construction that requires parallelism.

A The predicate of this sentence begins with what would be the first part of the construction *not only saw ... but also saw*. In this construction, *not also saw* would be parallel with *but also saw*, thus allowing for a statement that is easy for a human to process. However, instead of *but also saw*, the sentence uses *but there was also*. The sentence thus lacks parallelism and is unnecessarily difficult to read.

B This sentence has the same flaw as does sentence A with respect to *but there was also*. Furthermore, the use of *in* in *production in women* is incorrect and should be replaced with *among*.

C **Correct.** This sentence correctly uses, after the main verb *saw*, the construction *not only ... but also*. It also uses *among* as suggested for sentence B.

D The portion of this sentence that follows the main verb *saw* starts with what would be the construction *not only ... but also*. However, instead of *but also,* the sentence uses *but it also saw*. This is incorrect on various grounds. First, the portion is in the predicate and it is clear what the subject is. The pronoun *it*, which refers to the subject, is thus unnecessary. Second, because it fails to correctly follow the construction *not only ... but also*, the sentence lacks parallelism.

E The main flaw in this sentence is the inclusion of *saw* after *also*. This use of *saw* is redundant and lacks parallelism.

The correct answer is C.

SC01070

830. Covering 71 percent of Earth's surface, the oceans play an essential role in maintaining the conditions for human existence on land, moderating temperature by the absorption of heat and carbon dioxide, and giving pure water back to the atmosphere through evaporation.

(A) Covering 71 percent of Earth's surface, the oceans play an essential role in maintaining the conditions for human existence on land, moderating

(B) Covering 71 percent of Earth's surface and playing an essential role in maintaining the conditions for human existence on land, the oceans moderate

(C) The oceans cover 71 percent of Earth's surface and play an essential role in maintaining conditions for human existence on land, and by moderating

(D) The oceans cover 71 percent of Earth's surface, play an essential role in maintaining the conditions for human existence on land, and moderate

(E) The oceans cover 71 percent of Earth's surface, playing an essential role in maintaining the conditions for human existence on land, and they moderate

Parallelism; Rhetorical Construction; Grammatical Construction

This sentence about the essential role oceans play in maintaining conditions for human existence on

land begins with a participial phrase describing the vastness of the oceans, followed by the main clause (*oceans play an essential role . . .*). The object, *role*, is modified by a prepositional phrase that indicates what kind of role the oceans play (it plays a role *in maintaining the conditions for human existence on land*). This statement about the ocean's role in maintaining terrestrial conditions is elucidated by two parallel participial phrases that describe the oceans, explaining how they maintain conditions essential for human existence on land (*moderating . . . and giving . . .*).

A **Correct.** This version of the sentence effectively conveys the means by which the ocean plays an essential role in maintaining the conditions for human existence on land, using parallel verb forms.

B This version of the sentence is ungrammatical; *and giving . . .* suggests that this is part of a series of participial phrases, but it is not.

C The conjunction followed by a prepositional phrase *and by moderating . . .* anticipates a new subject—an agent that does something by moderating—but this subject never appears.

D This version of the sentence is structured as a series of verbs—*cover, play*, and *moderate*—all describing things the oceans do; the final participial phrase *giving . . . water . . .* violates the parallel structure set up in the sentence.

E This version of the sentence correctly makes *playing an essential role . . .* a function of the oceans' coverage of Earth's surface, but the introduction of a new main verb *moderate* fails to indicate that what follows (moderating temperature and returning pure water) identifies the role oceans play in maintaining conditions for human existence on land. Furthermore, the participial phrase *and giving pure water . . .* violates the parallel structure set up by the series of main verbs that appear earlier in this version of the sentence.

The correct answer is A.

SC11850.01

831. Although the rise in the Producer Price Index was greater than expected, most analysts agreed that the index was unlikely to continue going up and that inflation remained essentially under control.

(A) that the index was unlikely to continue going up and that inflation remained

(B) that it was unlikely for the index continuing to go up and for inflation to remain

(C) that the index was unlikely to continue to go up, with inflation to remain

(D) on the unlikelihood that the index would continue going up and that inflation remained

(E) on the unlikelihood that the index would continue to go up and for inflation to remain

Rhetorical Construction; Verb Form

The given sentence is a better version than any of its variants. The analysts agreed on two points, each expressed in a noun clause, with each clause introduced by *that*. The first point of agreement is on a prediction, the second on a determination of fact. Each of these noun clauses is an object of the verb *agreed*. There is a rhetorically valuable parallelism between the two clauses, a parallelism not preserved, however, in three of the four variants. Note also that when a past-tense verb takes a *that*-clause as its object, the tense of that clause should be past (e.g., *was, remained*).

A **Correct.** As noted above, this preserves an important parallelism and correctly uses a past-tense verb in each of the noun clauses.

B This variant loses the rhetorically valuable parallelism noted above. It substitutes another, badly functioning, parallelism between two phrases each introduced by *for*. The verb forms in the phrases *for the index continuing* and *for inflation to remain* are not parallel, and both constructions are awkward and nonidiomatic.

C Although *continue to go* is not in itself wrong, avoiding the repetition of *to* by using the equally correct *continue going* would be rhetorically better. The phrase *with inflation to remain* conveys no clear information and leaves us guessing: for example, is it meant to indicate in context that it was agreed that inflation's remaining under control would impede the continuation of the increase in the index? If this is the intended meaning—not a meaning conveyed in the best version of the sentence above—it would be better expressed by, e.g., the clause *if inflation remained …*, plus dropping the comma immediately preceding it.

D This is awkward and contains avoidable verbiage. Compare *agreed on the unlikelihood that the index would* with *agreed that the index was unlikely to*. The second is more direct and shorter. The parallelism between two *that*-clauses here is introduced, not by *agreed* but by *unlikelihood*. The sentence formed in this way indicates (contrary to the given sentence above, which is error-free) that it was agreed that inflation was unlikely to remain under control.

E There is an undesirable lack of parallelism between *unlikelihood that* and [*unlikelihood*] *for*. The first is idiomatic and the second not so. Moreover, the sentence formed in this way indicates—contrary to the given sentence above, which is error-free—that it was agreed that inflation was unlikely to remain under control.

The correct answer is A.

SC17041.01

832. Severely hindered by problems with local suppliers, the fact that the AQ division also had a new management team to adapt to was not seen by the board of directors as a legitimate excuse for such low productivity.

(A) Severely hindered by problems with local suppliers, the fact that the AQ division also had a new management team to adapt to

(B) Though severely hindered by local supply problems, the fact that the AQ division also had a new management team to which to adapt

(C) Severely hindered by problems with local suppliers, the AQ division also had to adapt to a new management team, but this

(D) Severely hindered by local supply problems, that the AQ division also had to adapt to a new management team

(E) Though severely hindered by problems with local suppliers, the AQ division's also having a new management team to which it had to adapt

Logical Predication; Rhetorical Construction

The adjectival phrase *severely … suppliers* should, because of its position, modify the subject of the main clause, the noun phrase *the fact … to*. On this interpretation, the sentence lacks a coherent interpretation and has a logical predication error. The noun phrase that was meant to be modified is probably *the AQ division*. A second flaw concerns the phrase *had a new management team to adapt to*, which is unnecessarily awkward, especially with *to adapt to*.

A As explained above, this sentence fails because of two flaws.

B A logical predication flaw similar to the one noted above is present in this variant. The relative clause *to which to adapt* is unnecessarily awkward.

C **Correct.** This makes clear that the adjectival phrase *severely … suppliers* modifies the noun phrase *the AQ division*. This version is a rhetorical improvement on the given sentence in that unnecessary verbiage such as *the fact that* is dropped and the terminal preposition *to* is eliminated.

D This has a logical predication problem like that noted in the given sentence: the initial adjectival phrase, rather than modifying *the AQ division*, appears to modify a noun clause *that … team* but this would yield an incoherent interpretation of the sentence.

E This also has a logical predication flaw; because of its position, the phrase *though severely … suppliers* seems to modify a complex noun phrase, i.e., the phrase *the AQ division's also having a new management team to which it had to adapt*.

The correct answer is C.

SC01037

833. The Eastern State Penitentiary was established in 1822 by reformers advocating that prisoners be held in solitary confinement and hard labor so as to reform them.

(A) advocating that prisoners be held in solitary confinement and hard labor so as to reform them

(B) who were advocating prisoners to be held in solitary confinement and hard labor for their reform

(C) advocating solitary confinement and hard labor as the means to reform prisoners

(D) who advocated solitary confinement and hard labor for the means of prisoner reform

(E) advocating as the means for prisoner reform solitary confinement and hard labor

Idiom; Rhetorical Construction

The sentence describes an effect—reform of prisoners—that those who founded a prison in 1822 hoped would result from two types of punishment they advocated. The phrase *held in solitary confinement and hard labor* is problematic because *held in hard labor* is nonidiomatic. The adverbial phrase *so as to reform them* is wordy; it is also grammatically problematic because the subject of the passive-voice verb is *prisoners,* whereas the implicit subject of the verb *to reform* is presumably the punishments or the prison staff.

A This is wordy, unidiomatic, and grammatically flawed, as explained.

B An alternative wording *that prisoners be held* … would be much clearer and less awkward; the phrase *advocating prisoners* … makes it misleadingly appear that *prisoners* is the object of *advocating.* As indicated, the phrase *held in solitary confinement and hard labor* is unidiomatic.

C **Correct.** The wording here conveys the intended meaning correctly and idiomatically, as well as with clarity and brevity. It indicates that reform of prisoners is the hoped-for result of the advocated punishments.

D The phrase *for the means of prisoner reform* is wordy and unidiomatic and conveys no clear meaning. For example, is it intended to suggest that prisoner reform is a means to something else? Probably not. Is it intended to suggest that the two punishment types are means to reform? If so, then *as* would work much better than *for.*

E The insertion of *as the means for prisoner reform* placed before (rather than after) *confinement and hard labor*—the object of the verb *advocating*—renders the resulting sentence unnecessarily awkward.

The correct answer is C.

SC03288

834. Some anthropologists believe that the genetic homogeneity evident in the world's people is the result of a "population bottleneck"—at some time in the past our ancestors suffered an event, greatly reducing their numbers and thus our genetic variation.

(A) at some time in the past our ancestors suffered an event, greatly reducing their numbers

(B) that at some time in the past our ancestors suffered an event that greatly reduced their numbers

(C) that some time in the past our ancestors suffered an event so that their numbers were greatly reduced,

(D) some time in the past our ancestors suffered an event from which their numbers were greatly reduced

(E) some time in the past, that our ancestors suffered an event so as to reduce their numbers greatly,

Grammatical Construction; Parallelism

The underlined part of this sentence is an explanatory rewording of the clause that follows *believe*. *Scientists believe that X*—[in other words,] *that Y*. In this construction, X and Y are parallel clauses.

A The omission of *that* after the dash makes the function of the final clause unclear. The structure makes that clause appear to be an awkward and rhetorically puzzling separate assertion that the writer has appended to the prior claim about what the anthropologists believe. The agent or cause of *reducing* is unclear.

B **Correct.** Repetition of *that* effectively signals the paraphrasing of the belief.

C The preposition *at* before *some time* is missing; without *at* the adverb *sometime* would be needed instead of this two-word noun phrase. The modifier of *event* is expressed with a wordy passive construction, which destroys the parallelism between it and what follows.

D Repetition of *that* signals the paraphrasing of the belief and is therefore needed. The preposition *at* before *some time* is missing. The modifier of *event* is expressed with a wordy passive construction, which destroys the parallelism between it and what follows.

E *That* is repeated in the paraphrase, but in the wrong place. A possible, and absurd, reading of this version is that our ancestors suffered an event in order to willfully reduce their own numbers and thus our genetic variation.

The correct answer is B.

SC01493

835. Through experimenting designed to provide information that will ultimately prove useful in the treatment of hereditary diseases, mice have received bone marrow transplants that give them a new gene.

(A) Through experimenting designed to provide information that will ultimately prove

(B) Through experiments designed to provide information ultimately proving

(C) In experimentation designed to provide information that ultimately proves

(D) In experimenting designed to provide information ultimately proving

(E) In experiments designed to provide information that will ultimately prove

Rhetorical Construction; Diction

The sentence reports that mice received a new gene by means of a bone marrow transplant, in the context of experiments aimed at improving treatment of hereditary disease. Issues arise concerning use of the preposition *through*, use of the verb form *experimenting*, and use of certain forms of the verb *prove*. The hoped-for result is more clearly expressed by the future tense *will … prove* than by other forms of the verb.

A The verb form *experimenting* is inappropriate here because it seems to have *mice* as its implicit subject, which would be nonsensical, presuming scientists ran the experiment. The preposition *through* awkwardly signals that the experiments were the means by which—rather than the context in which—the bone marrow transplants were administered.

B The use of *through* is awkward for the reason already indicated. Compared with *will … prove,* the present participle *proving* less clearly signals the prospective nature of the experimenters' goal.

C The word *experimentation*, because it can simply mean "trying out new things or ideas," is unnecessarily imprecise compared with *experiments*. The present tense *prove* does not clearly signal the prospective nature of the experimenters' goal.

D The use of the verbal noun *experimenting* is less idiomatic than *experiments*. Compared with *will … prove,* the present participle *proving* less clearly signals the prospective nature of the experimenters' goal.

E **Correct.** The use of the preposition *in*, the word *experiments*, and the future *will … prove* create a sentence that avoids some of the potential problems identified.

The correct answer is E.

SC48420.01

836. Linking arrangements among secondary schools and the workplace never evolved in the United States as they have in most other developed countries.

(A) among secondary schools and the workplace never evolved in the United States as they have

(B) in the United States among secondary schools and the workplace never evolved as they did

(C) between secondary schools and the workplace never evolved in the United States as

(D) in the United States between secondary schools and the workplace never evolved as they have

(E) between secondary schools and the workplace never evolved in the United States as they did

Diction; Verb Form

The sentence presents a contrast between the United States and other countries with respect to the relationship (or lack thereof) between school and workplace. The sentence has two flaws. The first flaw is the use of *among*, which should be used to indicate only a relationship of more than two entities. Here, the use of *among* suggests a relationship among secondary schools. But the intended relationship is between two entities: secondary schools on the one hand and the workplace on the other. The preposition *between* is a better usage. The second flaw relates to the

use of *have*. It would be appropriate as a proxy for a preceding occurrence of the past-perfect verb *have evolved,* rather than the simple-past verb from, *evolved*, used in the first part of the sentence. The simple-past verb form *did* is a better proxy for *evolved.*

A The sentence is flawed in the ways explained.

B The default reading of the phrase *in the United States* would treat it as a modifier of *arrangements,* but this reading is nonsensical in the context of the sentence as a whole; it makes no sense to say that linking arrangements in the United States have evolved in other countries. The parallelism that would help to highlight the intended comparison is lost. Also, the preposition *among* is not correct, for the reason explained above.

C This can convey what is likely an unintended meaning: that the linking arrangements never evolved in the United States and never evolved in most other developed countries.

D The default reading of the phrase *in the United States* would treat it as a modifier of *arrangements,* but this reading is nonsensical in the context of the sentence as a whole; it makes no sense to say that linking arrangements in the United States have evolved in other countries. The phrase would be better treated as an adverbial modifier of the verb *evolved*. The parallelism that would help to highlight the comparison is lost.

E **Correct.** None of the flaws identified above, nor any other flaw, is present here.

The correct answer is E.

SC01603

837. The United Parcel Service plans to convert its more than 2,000 gasoline-powered trucks in the Los Angeles area to run on cleaner-burning natural gas.

(A) to convert its more than 2,000 gasoline-powered trucks in the Los Angeles area to

(B) to convert its more than 2,000 trucks in the Los Angeles area that are powered by gasoline to

(C) on converting its more than 2,000 gasoline-powered trucks in the Los Angeles area that will

(D) for its more than 2,000 gasoline-powered trucks in the Los Angeles area to convert to

(E) that its more than 2,000 trucks in the Los Angeles area that are powered by gasoline will convert to

Verb Form; Logical Predication

The sentence reports a company's plan to convert certain of its trucks to run on natural gas. Issues to note include: what construction should follow the verb *plan* and how the class of trucks that are to be converted is described.

A **Correct.** The planned action is described by the infinitive form *to convert*. Of the company's trucks, those in question are specified by the adjective *gasoline-powered* and by the adjectival phrase *in the Los Angeles area*. The goal of the conversion is given by the infinitive verbal phrase *to run … gas*.

B The introduction of the relative clause *that are powered by gasoline* is unnecessarily awkward, especially because the relative pronoun *that* is not adjacent to its antecedent *trucks*.

C The construction *plans on converting …* is not a standard form, even if sometimes used informally. The future tense in the relative clause *that will run …* does not clearly specify that the trucks' running on natural gas is the goal of the planned conversion.

D This fails to capture the thought in the given sentence, which indicates that the company plans to convert the trucks, rather than (as here) the trucks converting. In this version, *to convert* is being used intransitively (without an object), with its implicit subject being the noun phrase *its more than … area,* which refers to the trucks.

E This refers to a plan that the trucks will convert (where *convert* is used intransitively), rather than to a plan to convert the trucks. This intransitive use makes no sense in the context. The introduction of the relative clause *that are powered by gasoline* is unnecessarily awkward.

The correct answer is A.

SC02443

838. Foraging at all times of the day and night, but interspersing their feeding with periods of rest that last between one and eight hours, a sperm whale could eat so much as a ton of squid a day.

(A) between one and eight hours, a sperm whale could eat so

(B) between one and eight hours, sperm whales can eat as

(C) between one to eight hours, sperm whales could eat as

(D) from one to eight hours, sperm whales could eat so

(E) from one to eight hours, a sperm whale can eat so

Agreement; Diction

Although this sentence, as presented, uses the conditional or past verb form *could*, it is more plausibly intended to make a general statement about the actual behavior of a species, a statement that holds in the present day. For that purpose, the present indicative *can* is preferable. *So much as* is not the correct wording to express the upper level of a variable amount; *as much as* should be used instead. Also, although the singular *a sperm whale* can be used to refer to sperm whales generally, the plural *their* needs to refer to the plural *sperm whales*.

A This sentence incorrectly uses *so*. Also, the plural *their* does not agree with the singular *sperm whale*.

B **Correct.** Both *can* and *as* are used; also, *sperm whales* agrees with the plural *their*.

C *To* is the wrong word to use with *between*. The proper construction would be *between . . . and* or *from . . . to*.

D This sentence incorrectly uses *so*.

E *So* is not the correct form; also the use of the singular *a sperm whale* does not agree with the plural *their*.

The correct answer is B.

SC14796

839. In some types of pine tree, a thick layer of needles protects the buds from which new growth proceeds; consequently they are able to withstand forest fires relatively well.

(A) a thick layer of needles protects the buds from which new growth proceeds; consequently they are able to withstand forest fires relatively well

(B) a thick needle layer protects buds from where new growth proceeds, so that they can withstand forest fires relatively well

(C) a thick layer of needles protect the buds from which new growth proceeds; thus, they are able to withstand relatively well any forest fires

(D) since the buds from which new growth proceeds are protected by a thick needle layer, consequently they can therefore withstand forest fires relatively well

(E) because the buds where new growth happens are protected by a thick layer of needles, they are able to withstand forest fires relatively easily as a result

Grammatical Construction; Rhetorical Construction

This sentence is fine as written. It uses the correct *from which* to introduce the relative clause modifying *buds* and avoids redundant expressions of causation, such as *consequently . . . therefore,* or *because . . . as a result*.

A **Correct.** The relative clause starting with *from which* is in the correct form, and the causality is expressed efficiently and clearly with one word, *consequently*.

B In this context, *needle layer* is less precise than the more standard *layer of needles*, which makes it clear that the layer is composed of needles rather than being, for example, a layer of a needle. *From where* is not the correct form, because it is redundant in using two words that express the idea of location (*from* and *where*) instead of one.

C The short direct object *any forest fires* is separated from its verb *withstand* by an adverb phrase; this word order is awkward, and is acceptable only with very long direct objects and in some cases where there is no other reasonable way to eliminate ambiguity.

D This version is unnecessarily redundant in expressing causation, using all of *since*, *consequently*, and *therefore*. As in answer choice B, *layer of needles* would be more precise than *needle layer*.

E This version is unnecessarily redundant in expressing causation, using both *because* and *as a result*.

The correct answer is A.

SC08577

840. The tourism commission has conducted surveys of hotels in the most popular resorts, with the ultimate goal of reducing the guests who end up expressing overall dissatisfaction with the service in the hotels.

(A) with the ultimate goal of reducing the guests who end up expressing overall dissatisfaction with the service in the hotels

(B) with the goal to ultimately reduce the number of guests who end up expressing overall dissatisfaction with the hotels' service

(C) ultimately with the goal to reduce expressions of overall dissatisfaction by the guests with the hotel service

(D) in an ultimate attempt to reduce the number of guests that ends up expressing overall dissatisfaction with the hotels' service

(E) with the ultimate goal of reducing the number of guests who express overall dissatisfaction with the hotels' service

Verb Form; Rhetorical Construction

This sentence seems to be saying something absurd: that the goal is to reduce the guests themselves, instead of to reduce the **number** of guests or the expressions of dissatisfaction. It is also awkward in introducing the superfluous *end up*; but at least, if it does so, the correct form to agree with the subject *guests* is *end up*, not *ends up*, which is used in answer choice D. In general, direct modifiers (such as *with the (hotel) service*) should not be separated from the word they modify (such as *dissatisfaction*) if possible.

A *Reducing the guests* is clearly not the intent of the sentence; it should be phrased as reducing the number of guests or the expressions of dissatisfaction.

B *With the goal to ultimately reduce* is awkward and unidiomatic.

C *With the hotel service* should be placed next to *dissatisfaction*; also, *ultimately with the goal* is awkward, better phrased as *with the ultimate goal*.

D The relative clause *that ends up . . .* modifies the plural *guests* (not, in this context, *number*), so the correct verb form is *end up*.

E **Correct.** The *with* phrase is concise, and it is the number of guests, not the guests themselves, that is to be reduced. *With the hotel's service* is adjacent to *dissatisfaction*. Also, in the relative clause starting with *who*, the implicit subject of *express* is *guests*, so this verb correctly agrees with its subject.

The correct answer is E.

SC01607

841. A new study suggests that the conversational pace of everyday life may be so brisk it hampers the ability of some children for distinguishing discrete sounds and words and, the result is, to make sense of speech.

(A) it hampers the ability of some children for distinguishing discrete sounds and words and, the result is, to make

(B) that it hampers the ability of some children to distinguish discrete sounds and words and, as a result, to make

(C) that it hampers the ability of some children to distinguish discrete sounds and words and, the result of this, they are unable to make

(D) that it hampers the ability of some children to distinguish discrete sounds and words, and results in not making

(E) as to hamper the ability of some children for distinguishing discrete sounds and words, resulting in being unable to make

Rhetorical Construction; Parallelism; Diction

The sentence describes a hypothesized causal series: The fast conversational pace impairs children's ability to distinguish individual sounds and words, and this, in turn, impairs their ability to make sense of speech. These two consequences, both impaired abilities, are most clearly and efficiently expressed in parallel infinitive phrases (*to distinguish* and *to make*). The explanatory phrase *as a result* before the second infinitive clarifies the sequence. The term *ability* should be followed by the preposition *to*, not *for*.

A *For* is the wrong preposition to follow *ability*; the phrase *and, the result is*, introduces a new clause which indicates that children's inability to distinguish sounds enables them to make sense of speech.

B **Correct.** The two abilities hampered by the fast pace of conversation are described with the parallel infinitive phrases *to distinguish* and *to make*.

C *The result of this* is a new subject that grammatically requires a new verb; the phrase is wordy and unclear.

D This version of the sentence nonsensically suggests that the pace of speech results in not making sense of speech, removing the children from the picture as the ones who are affected.

E The phrase is awkward, wordy, and unclear; *for* is the incorrect preposition to follow ability.

The correct answer is B.

SC07035

842. The nineteenth-century chemist Humphry Davy presented the results of his early experiments in his "Essay on Heat and Light," a critique of all chemistry since Robert Boyle as well as a vision of a new chemistry that Davy hoped to found.

(A) a critique of all chemistry since Robert Boyle as well as a vision of a

(B) a critique of all chemistry following Robert Boyle and also his envisioning of a

(C) a critique of all chemistry after Robert Boyle and envisioning as well

(D) critiquing all chemistry from Robert Boyle forward and also a vision of

(E) critiquing all the chemistry done since Robert Boyle as well as his own envisioning of

Parallelism; Rhetorical Construction

The main objective of the sentence is to describe "Essay on Heat and Light" as Davy's presentation of his own experiments and to further explain that the essay served as both a critique of previous chemistry and a vision of a new kind of chemistry. The clearest, most effective form for providing this explanation of the essay's function is to make *critique* and *vision* both appositives of "Essay on Heat and Light," and to present them in a parallel structure.

A **Correct.** The phrases describing the essay's function are presented in parallel form.

B *Critique* and *his envisioning* are not parallel; the phrase *and also his envisioning* is unnecessarily wordy; it is also unclear to whom *his* refers.

C The two descriptors are not parallel.

D The two descriptors are not parallel.

E The meaning is confused in the assertion that Davy critiqued his own vision of chemistry.

The correct answer is A.

SC02280

843. To attract the most talented workers, some companies are offering a wider range of benefits, letting employees pick those most important to them.

(A) benefits, letting employees pick those most important to them

(B) benefits, letting employees pick the most important of them to themselves

(C) benefits and letting employees pick the most important to themselves

(D) benefits and let employees pick the most important to them

(E) benefits and let employees pick those that are most important to themselves

Diction; Parallelism; Verb Form

The sentence describes the benefit options offered by some companies, which allow employees to *pick those most important to them*. *Letting* maintains the progressive sense of *are offering; those* refers clearly and concisely to *benefits*; and *them* is the correct pronoun to serve as the object of the preposition *to*.

A **Correct.** The sentence clearly and concisely explains benefit options that allow employees to *pick those most important to them*.

B *The most important of them to themselves* is wordy, and the function of *themselves* is unclear. Normally, *themselves* would be either reflexive or emphatic, but in this case it cannot reasonably be taken in either of those ways. This nonstandard use of the pronoun makes it unclear whether *to themselves* is supposed to modify *pick* or *most important of them*.

C The pronoun *themselves* is used incorrectly, and its intended function is unclear. Normally, *themselves* would be either reflexive or emphatic, but in this case it cannot reasonably be taken in either of those ways. This nonstandard use of the pronoun makes it unclear whether *to themselves* is supposed to modify *pick* or *most important of them*.

D The present tense verb *let* incorrectly shifts tense from the present progressive *are offering*.

E The present tense verb *let* incorrectly shifts tense from the present progressive *are offering*; the function of *themselves* is unclear. Normally, *themselves* would be either reflexive or emphatic, but in this case it cannot reasonably be taken in either of those ways. This nonstandard use of the pronoun makes it unclear whether *to themselves* is supposed to modify *pick* or *most important of them*.

The correct answer is A.

SC01583

844. Many of the earliest known images of Hindu deities in India date from the time of the Kushan Empire, fashioned either from the spotted sandstone of Mathura or Gandharan grey schist.

(A) Empire, fashioned either from the spotted sandstone of Mathura or

(B) Empire, fashioned from either the spotted sandstone of Mathura or from

(C) Empire, either fashioned from the spotted sandstone of Mathura or

(D) Empire and either fashioned from the spotted sandstone of Mathura or from

(E) Empire and were fashioned either from the spotted sandstone of Mathura or from

Logical Predication; Parallelism

The sentence makes two claims about the earliest known images of Hindu deities in India: They date from the Kushan Empire, and they are made from sandstone or schist. The clearest, most effective way to incorporate these two claims into a single sentence is to provide two parallel predicates for the single subject, *the earliest known images of Hindu deities in India*. The two options of media, presented as either/or choices, must also be given in parallel structure: *either from … or from …* or *from either … or. …*

A Placement of the modifier *fashioned …* suggests that the *Empire* (the closest noun), not the images of the deities, was fashioned out of these materials; to parallel *either from*, the preposition *from* should also follow *or*.

B Parallelism requires that *either* precede the first appearance of *from* or that the second appearance of *from* be eliminated.

C As in (A) and (B), the placement of the modifier after *Empire* is misleading; parallelism requires that the phrase *fashioned from*, or another comparable verb and preposition, follow *or*.

D Parallelism requires that a verb follow *or*, since a verb follows *either*.

E Correct. Two verbs, *date* and *were fashioned*, introduce parallel predicates for the subject, *earliest known images*; the choices of media are correctly presented with the structure *either from … or from*.

The correct answer is E.

SC01051

845. Tides typically range from three to six feet, but while some places show no tides at all, some others, such as the Bay of Fundy, have tides of at least thirty feet and more.

(A) some others, such as the Bay of Fundy, have tides of at least thirty feet and more

(B) the others, such as the Bay of Fundy, that have tides of more than thirty feet

(C) others, such as the Bay of Fundy, have tides of more than thirty feet

(D) those at the Bay of Fundy, which has tides of more than thirty feet

(E) the ones at the Bay of Fundy have tides of at least thirty feet and more

Idiom; Grammatical Construction

This sentence defines typical tides and then draws a contrast between locations with tides lower than that norm and locations with tides higher than the norm. The proper idiom for drawing this contrast is *some places* and *others*—not *some places* and *some others* as written. The height of tides in places such as the Bay of Fundy is expressed in a confusing manner since *at least thirty feet* sets a lower limit on the height. This wording is pointlessly redundant with the phrase *and more*, which follows it. *At least* would normally be used to indicate that the writer does not know, or prefers not to say, whether the tides are sometimes higher. *And more* rhetorically conflicts with this by signaling a definite commitment

to the claim that they are (at least sometimes) higher. A charitable reading suggests that *tides of more than thirty feet* is the intended meaning.

A The sentence contains repetitive and redundant wording—*some places* and *some others*, and *at least thirty feet and more*.

B The final clause is incomplete because *that* introduces a subordinate clause, leaving the subject *others* with no main verb.

C **Correct.** A contrast is drawn between places with low tides and places with high tides using the expression *some places* and *others*, and the height of the high tides is expressed clearly and without redundancy.

D The pronoun *those*, which refers to *places*, does not make sense along with *at the Bay of Fundy*, which names a single place; the final clause is incomplete because *which* introduces a subordinate clause, leaving the subject *those* with no verb.

E The word *ones*, which refers to *places*, does not make sense along with *at the Bay of Fundy*, which names a single place; *at least thirty feet and more* is redundant and confusing.

The correct answer is C.

SC01028

846. A leading figure in the Scottish Enlightenment, Adam Smith's two major books are to democratic capitalism what Marx's *Das Kapital* is to socialism.

(A) Adam Smith's two major books are to democratic capitalism what

(B) Adam Smith's two major books are to democratic capitalism like

(C) Adam Smith's two major books are to democratic capitalism just as

(D) Adam Smith wrote two major books that are to democratic capitalism similar to

(E) Adam Smith wrote two major books that are to democratic capitalism what

Idiom; Logical Predication

A leading figure in the Scottish Enlightenment describes Adam Smith, not his two books, so the name of Adam Smith must immediately follow the opening phrase. The comparison between Smith's books and Marx's book is expressed as a ratio, so the correct idiomatic expression is *x is to y what a is to b*.

A The opening phrase is a dangling modifier because it describes Smith, not his books.

B The opening phrase is a dangling modifier; *like* is an incorrect word for making the comparison.

C The opening phrase is a dangling modifier; *just as* is an incorrect term for the comparison.

D *Similar to* is an incorrect conclusion to the comparison introduced by *are to*.

E **Correct.** The opening phrase is followed by the subject that it modifies, Adam Smith, and the comparison of the two men's work is presented idiomatically.

The correct answer is E.

SC04331

847. Researchers studying the brain scans of volunteers who pondered ethical dilemmas have found that the basis for making tough moral judgments is emotion, not logic or analytical reasoning.

(A) the brain scans of volunteers who pondered ethical dilemmas have found that the basis for making tough moral judgments is

(B) the brain scans of volunteers who pondered ethical dilemmas and found the basis to make tough moral decisions to be

(C) the brain scans of volunteers pondering ethical dilemmas and found that the basis for making tough moral decisions is

(D) volunteers' brain scans while pondering ethical dilemmas have found the basis to make tough moral judgments to be

(E) volunteers' brain scans while they pondered ethical dilemmas have found that the basis for making tough moral judgments is

Logical Predication; Grammatical Construction

The sentence reports that researchers got volunteers to ponder ethical dilemmas and make moral judgments. Brain scans revealed that the volunteers' judgments were based on emotion rather than logical analysis. The main clause of this sentence is *Researchers . . . have found that . . .;* embedded within this sentence, the present participial phrase *studying . . .* describes the researchers, the relative clause *who pondered . . .* describes the volunteers, and the object of the main verb appears as a noun clause *that the basis . . . is. . . .*

A **Correct.** The sentence is coherent and grammatically correct.

B The use of the conjunction *and* immediately before *found* indicates that the past tense verbs *pondered* and *found* both have *volunteers* as subject, but this changes the original sentence, making it a long noun phrase rather than a complete sentence.

C The conjunction *and* leaves the verb *found* without a subject, and this changes the original sentence into a sequence of incoherently connected phrases rather than a complete sentence.

D The phrase *the basis to make* is unidiomatic, a sufficient reason for rejecting this option. The placement of the modifier *while pondering* appears in a form parallel to *studying* and means that the researchers, not the volunteers, were pondering ethical dilemmas. This does not make the sentence incoherent, but creates a sentence that fails to capture the meaning clearly intended in the original sentence.

E Because the word *volunteers'* is a possessive form, and functions adjectivally as a modifier of *brain scans*, *they* must refer back to *researchers* rather than to *volunteers'*. This is not incorrect in itself, but, as with (D), the resulting sentence fails to capture the intended meaning of the original sentence.

The correct answer is A.

SC02060

848. Rivaling the pyramids of Egypt or even the ancient cities of the Maya as an achievement, the army of terra-cotta warriors created to protect Qin Shi Huang, China's first emperor, in his afterlife is more than 2,000 years old and took 700,000 artisans more than 36 years to complete.

(A) the army of terra-cotta warriors created to protect Qin Shi Huang, China's first emperor, in his afterlife is more than 2,000 years old and took 700,000 artisans more than 36 years to complete

(B) Qin Shi Huang, China's first emperor, was protected in his afterlife by an army of terra-cotta warriors that was created more than 2,000 years ago by 700,000 artisans who took more than 36 years to complete it

(C) it took 700,000 artisans more than 36 years to create an army of terra-cotta warriors more than 2,000 years ago that would protect Qin Shi Huang, China's first emperor, in his afterlife

(D) more than 2,000 years ago, 700,000 artisans worked more than 36 years to create an army of terra-cotta warriors to protect Qin Shi Huang, China's first emperor, in his afterlife

(E) more than 36 years were needed to complete the army of terra-cotta warriors that 700,000 artisans created 2,000 years ago to protect Qin Shi Huang, China's first emperor, in his afterlife

Logical Predication; Rhetorical Construction

The opening modifier, *Rivaling the pyramids …* describes *the army of terra-cotta warriors*, which must immediately follow the modifier. The placement of the predicates that follow is important; they must clarify two things about the army of terra-cotta warriors: how old it is and how long it took to complete. The clearest and most effective way to express these two assertions is as parallel verb phrases, *is more than 2,000 years old* and *took … more than 36 years to complete*.

A **Correct.** The opening phrase correctly modifies the subject, *the army of terra-cotta warriors*; the placement of modifiers and predicates in the main clause makes the meaning of the sentence clear.

B Opening phrase is a dangling modifier because it does not describe the subject *Qin Shi Huang*; in addition, the sentence is awkward and unclear.

C Opening phrase is a dangling modifier because it does not describe the subject *it*; the sequence of information presented is confusing and unclear.

D Opening phrase is a dangling modifier because it does not describe the subject *700,000 artisans*.

E Opening phrase is a dangling modifier because it does not describe the subject *more than 36 years*.

The correct answer is A.

SC03675

849. In California, a lack of genetic variation in the Argentine ant has allowed the species to spread widely; due to their being so genetically similar to one another, the ants consider all their fellows to be a close relative and thus do not engage in the kind of fierce intercolony struggles that limits the spread of this species in its native Argentina.

(A) due to their being so genetically similar to one another, the ants consider all their fellows to be a close relative and thus do not engage in the kind of fierce intercolony struggles that limits

(B) due to its being so genetically similar, the ant considers all its fellows to be a close relative and thus does not engage in the kind of fierce intercolony struggles that limit

(C) because it is so genetically similar, the ant considers all its fellows to be close relatives and thus does not engage in the kind of fierce intercolony struggles that limits

(D) because they are so genetically similar to one another, the ants consider all their fellows to be close relatives and thus do not engage in the kind of fierce intercolony struggles that limit

(E) because of being so genetically similar to one another, the ants consider all their fellows to be a close relative and thus do not engage in the kind of fierce intercolony struggles that limits

Diction; Agreement

Words that express comparisons, such as *similar*, require either a plural object, with an optional expression of the entities being compared, or a singular object, in which case this explicit comparison is required. Thus *its being so genetically similar*, without this explicit comparison, is incorrect. Also, the two sides of the construction *consider . . . to be* must agree in number (*fellows . . . close relatives*, not *fellows . . . a close relative*).

A *Consider all their fellows to be a close relative* shows incorrect agreement, with plural *fellows* and singular *a close relative*.

B *Its being so genetically similar* is incorrect because there is no explicit statement of what the ant is similar to; also, the plural *fellows* and *singular a close relative* do not agree.

C *It is so genetically similar* is incorrect because there is no explicit statement of what the ant is similar to.

D **Correct.** The clause with *similar* uses the plural *they* and an explicit *to one another*, and agreement is respected between *ants* and *fellows*.

E The plural *fellows* and singular *a close relative* do not agree.

The correct answer is D.

SC07758

850. Next month, state wildlife officials are scheduled to take over the job of increasing the wolf population in the federally designated recovery area, the number of which will however ultimately be dictated by the number of prey in the area.

(A) area, the number of which will however

(B) area; the size of the population, however, will

(C) area, however the number of wolves will

(D) area; the number of which will, however,

(E) area, when the size of the population will, however,

Grammatical Construction; Diction

The point of the sentence is that the ultimate size of the wolf population will be determined according to the number of prey in the area. However, the phrase *the number of which* has no referent since it cannot logically refer to the noncount noun *population* or to the singular *wolf*, which is used adjectivally here to modify *population.* The idea can be expressed clearly by making *the size of the population* the subject of a new independent clause: *the size of the population* will *be dictated by the number of prey.*

A *The number of which* cannot logically refer to the noncount noun *population* or to the singular *wolf*, which is used adjectivally here to modify *population.*

B **Correct.** The idea is expressed clearly with an independent clause: *the size of the population* will *be dictated by the number of prey.*

C *However* is intended to serve as a conjunctive adverb between the two independent clauses, but the punctuation of the sentence creates confusion by suggesting that *however* is modifying *are scheduled.* A semicolon after *area* and a comma after *however* would make the intended function of *however* clear.

D *The number of which* cannot logically refer to the noncount noun *population*; the semicolon creates confusion since it is not followed by an independent clause.

E *When* illogically suggests that the size of the population will be determined at the moment wildlife officials take over the task. This conflicts with the ensuing claim that the determination will *ultimately* depend on a long-term condition (*the number of prey in the area*).

The correct answer is B.

SC02710

851. About 5 million acres in the United States have been invaded by leafy spurge, a herbaceous plant from Eurasia with milky sap that gives mouth sores to cattle, displacing grasses and other cattle food and rendering rangeland worthless.

(A) States have been invaded by leafy spurge, a herbaceous plant from Eurasia with milky sap that gives mouth sores to cattle, displacing grasses and other cattle food and rendering

(B) States have been invaded by leafy spurge, *a herbaceous plant from Eurasia*, with milky sap, that gives mouth sores to cattle and displaces grasses and other cattle food, rendering

(C) States have been invaded by leafy spurge, a herbaceous plant from Eurasia having milky sap that gives mouth sores to cattle and displacing grasses and other cattle food, rendering

(D) States, having been invaded by leafy spurge, a herbaceous plant from Eurasia with milky sap that gives mouth sores to cattle, displaces grasses and other cattle food, and renders

(E) States, having been invaded by leafy spurge, a herbaceous plant from Eurasia that has milky sap giving mouth sores to cattle and displacing grasses and other cattle food, rendering

Logical Predication; Grammatical Construction

The sentence explains that leafy spurge causes mouth sores in cattle and also displaces other plants eaten by cattle. However, the structure of the sentence seems, illogically, to indicate that *displacing grasses* modifies either the immediately preceding phrase (*that gives mouth sores to cattle*) or the main subject of the sentence (*about 5 million acres in the United States*). A clearer way to express the effects of the leafy spurge invasion is with a compound predicate in the subordinate clause: *that gives mouth sores . . . and displaces grasses.*

A Displacing grasses appears illogically to modify either about 5 million acres in the United States or that gives mouth sores to cattle.

B **Correct.** The effects of the leafy spurge invasion are expressed clearly with a compound predicate in the subordinate clause: that gives mouth sores . . . and displaces grasses. The parenthetical commas around with milky sap make it clear that the entire phrase that gives . . . and displaces . . . rendering . . . is intended to modify a herbaceous plant from Eurasia. Although the sap may well be the means by which the plant gives mouth sores to cattle, the sentence can be well formed and meaningful without making a definite commitment to whether that is the case.

C *Having* and *displacing* should not be expressed in parallel form since the first is a permanent characteristic of leafy spurge and the second refers to an effect of the plant's invasion.

D The subject of the sentence, *5 million acres* is not clearly paired with a verb. The structure of the sentence suggests that *5 million acres* may be the intended subject of both *displaces* and *renders* but it is illogical to say that 5 million acres displaces grasses and renders rangeland worthless.

E The subject of the sentence, *5 million acres* is not clearly paired with a verb. The structure of the sentence suggests that *5 million acres* may be the intended subject of both *displaces* and *renders* but it is illogical to say that 5 million acres displaces grasses and renders rangeland worthless.

The correct answer is B.

SC01445

852. While it costs about the same to run nuclear plants as other types of power plants, it is the fixed costs that stem from building nuclear plants that makes it more expensive for them to generate electricity.

(A) While it costs about the same to run nuclear plants as other types of power plants, it is the fixed costs that stem from building nuclear plants that makes it more expensive for them to generate electricity.

(B) While the cost of running nuclear plants is about the same as for other types of power plants, the fixed costs that stem from building nuclear plants make the electricity they generate more expensive.

(C) Even though it costs about the same to run nuclear plants as for other types of power plants, it is the fixed costs that stem from building nuclear plants that makes the electricity they generate more expensive.

(D) It costs about the same to run nuclear plants as for other types of power plants, whereas the electricity they generate is more expensive, stemming from the fixed costs of building nuclear plants.

(E) The cost of running nuclear plants is about the same as other types of power plants, but the electricity they generate is made more expensive because of the fixed costs stemming from building nuclear plants.

Agreement; Logical Predication

The emphatic construction *it is X that does Y* (as in the phrase *it is Jane who knows the answer*) should be used only when there is a compelling reason to emphasize the doer of the action. In this sentence, the emphatic construction is used without good reason.

A This sentence uses the emphatic structure *it is … that* without justification. The singular verb *makes* violates the agreement within the structure. The verb *makes* should agree with the notional subject (*the fixed costs*), not with the pronoun *it*.

B **Correct.** This answer choice clearly and succinctly compares the two types of costs.

C In addition to using the more cumbersome emphatic structure, this version violates the agreement within the structure. The verb should agree with the notional subject (*the fixed costs*), not with the pronoun *it*.

D The preposition *for* is redundant in comparing the two objects of *run*. Since it is not clear what *stemming* … refers to, this is a dangling modifier.

E The passive construction *electricity … is made more expensive because of …* is wordy and cumbersome. The preposition *for* is necessary in the comparison of the costs.

The correct answer is B.

SC03207

853. The 32 species that make up the dolphin family are closely related to whales and in fact include the animal known as the killer whale, which can grow to be 30 feet long and is famous for its aggressive hunting pods.

(A) include the animal known as the killer whale, which can grow to be 30 feet long and is

(B) include the animal known as the killer whale, growing as big as 30 feet long and

(C) include the animal known as the killer whale, growing up to 30 feet long and being

(D) includes the animal known as the killer whale, which can grow as big as 30 feet long and is

(E) includes the animal known as the killer whale, which can grow to be 30 feet long and it is

Rhetorical Construction; Agreement

The subject of the sentence is *the 32 species that make up the dolphin family*, and the sentence makes two claims about them: They are closely related, and they include the killer whale. The relative pronoun *which* restates the object of the second verb, reintroducing *the animal known as the killer whale* as the subject of a relative clause followed by two parallel verbs: *can grow* and *is famous.*

A **Correct.** In this concise sentence, verbs agree in number with their subjects and the relative pronoun *which* indicates clearly that *the animal known as the killer whale* is the subject of the verbs in the dependent clause.

B Changing the verb to the participial *growing* introduces ambiguity, because it could refer back to the subject of the sentence (*32 species*).

C The participial *growing* might refer to *the 32 species*; the introduction of *being* is unnecessarily wordy and adds nothing in terms of meaning.

D *as big as* is an idiomatically incorrect expression of the comparison; the plural verb form *include* is needed to match the plural subject *the 32 species*.

E *It* simply restates the subject of the previous phrase, introducing more words but no additional meaning; the singular verb form *includes* should be the plural form *include*.

The correct answer is A.

SC06611

854. The first trenches that were cut into a 500-acre site at Tell Hamoukar, Syria, have yielded strong evidence for centrally administered complex societies in northern regions of the Middle East that were arising simultaneously with but independently of the more celebrated city-states of southern Mesopotamia, in what is now southern Iraq.

(A) that were cut into a 500-acre site at Tell Hamoukar, Syria, have yielded strong evidence for centrally administered complex societies in northern regions of the Middle East that were arising simultaneously with but

(B) that were cut into a 500-acre site at Tell Hamoukar, Syria, yields strong evidence that centrally administered complex societies in northern regions of the Middle East were arising simultaneously with but also

(C) having been cut into a 500-acre site at Tell Hamoukar, Syria, have yielded strong evidence that centrally administered complex societies in northern regions of the Middle East were arising simultaneously but

(D) cut into a 500-acre site at Tell Hamoukar, Syria, yields strong evidence of centrally administered complex societies in northern regions of the Middle East arising simultaneously but also

(E) cut into a 500-acre site at Tell Hamoukar, Syria, have yielded strong evidence that centrally administered complex societies in northern regions of the Middle East arose simultaneously with but

Rhetorical Construction; Agreement; Grammatical Construction

This sentence, explaining interconnections among a number of events, needs to be streamlined as much as possible in order to become understandable. To this end, unnecessary words and structures should be eliminated. Prominent among these are the relative clauses beginning with *that*. Additionally, the subject of this sentence is the plural *trenches*, which requires a plural verb.

A *That were cut* … and *that were arising* … are unnecessarily wordy and create an unnecessarily complicated and confusing sentence structure.

B In addition to the unnecessarily wordy relative clauses, the singular verb *yields* does not agree with the plural subject *trenches*.

C *Having been cut* … is unnecessarily wordy; *arising simultaneously* must be followed by the preposition *with* in order to make sense.

D The singular verb *yields* does not agree with the plural subject *trenches*; *also* adds no meaning to the sentence.

E **Correct.** Unnecessary clauses and phrases are avoided, and the subject and verb of the main clause agree in number.

The correct answer is E.

SC02317

855. Companies are relying more and more on networked computers for such critical tasks as inventory management, electronic funds transfer, and electronic data interchange, in which standard business transactions are handled via computer rather than on paper.

(A) in which standard business transactions are handled via computer rather than on paper

(B) where computers handle standard business transactions rather than on paper

(C) in which computers handle standard business transactions instead of on paper

(D) where standard business transactions are handled, not with paper, but instead via computer

(E) in which standard business transactions are being handled via computer, in place of on paper

Idiom; Logical Predication; Rhetorical Construction

The concluding comparison in this sentence uses the idiom *rather than*, which requires parallel structures. In this sentence the prepositional phrase *via computer* parallels *on paper*. Substituting *where* for *in which* creates a nonstandard idiom.

A **Correct.** This sentence uses standard idiomatic constructions and avoids the problems that are found in the other versions.

B *Where* is a nonstandard way to refer to a noun that does not name a location. If electronic data interchange were a location, this version would entail the odd claim that *on paper* is an alternative location at which computers would be expected to process information.

C The comparison of the clause *computers handle . . .* with the prepositional phrase *on paper* illogically treats a location (*on paper*) as an alternative to an activity (*computers handle*).

D As in (B), *where* is a nonstandard idiom. The commas around *not with paper* appear to make this phrase parenthetical; thus, it is somewhat unclear what *instead via computer* is contrasted with.

E The pile of prepositions in the phrase *in place of on paper* is unnecessarily confusing and wordy.

The correct answer is A.

SC07231

856. Combining enormous physical strength with higher intelligence, the Neanderthals appear as equipped for facing any obstacle the environment could put in their path, but their relatively sudden disappearance during the Paleolithic era indicates that an inability to adapt to some environmental change led to their extinction.

(A) appear as equipped for facing any obstacle the environment could put in their path,

(B) appear to have been equipped to face any obstacle the environment could put in their path,

(C) appear as equipped to face any obstacle the environment could put in their paths,

(D) appeared as equipped to face any obstacle the environment could put in their paths,

(E) appeared to have been equipped for facing any obstacle the environment could put in their path,

Verb Form; Diction

Because Neanderthals "disappeared," the verb describing their apparent abilities cannot be present tense, so *as equipped* must be changed to *to have been equipped*. The expression *equipped to face* is clearer and more direct than *equipped for facing*.

A *As equipped* indicates that Neanderthals still appear this way; *equipped* should be followed by an infinitive form instead of a prepositional phrase.

B **Correct.** The verb tense clearly indicates that the current evidence is about Neanderthals in the past.

C *As equipped* does not indicate that Neanderthals appeared this way in the past; while individual Neanderthals may well have followed different paths, this sentence is about the single evolutionary path taken by Neanderthals as a species.

D Present-tense *appear* is needed to parallel present-tense *indicates* and to reinforce that this is current evidence about Neanderthals in the past; as in (C), *paths* should be singular.

E *For facing* is an incorrect substitution of a prepositional phrase for an infinitive.

The correct answer is B.

SC02135

857. To map Earth's interior, geologists use a network of seismometers to chart seismic waves that originate in the earth's crust and ricochet around its interior, most rapidly traveling through cold, dense regions and slower through hotter rocks.

(A) interior, most rapidly traveling through cold, dense regions and slower

(B) interior, which travel most rapidly through cold, dense regions, and more slowly

(C) interior, traveling most rapidly through cold, dense regions and more slowly

(D) interior and most rapidly travel through cold, dense regions, and slower

(E) interior and that travel most rapidly through cold, dense regions and slower

Grammatical Construction; Parallelism

This sentence explains in detail an activity of geologists (using seismometers to chart waves), focusing primarily on the object, seismic waves. A description of these waves is developed in a relative clause (*that originate . . . hotter rocks*) that contains a compound verb phrase (*originate . . . ricochet . . .*). The action, *ricochet*, is further described in a participial phrase in which *traveling . . .* is then further described in a comparison of travel speeds in cold and hot regions of Earth's crust.

A The two expressions of comparison should be parallel. Because *most rapidly* is placed

before the verb, it appears to modify the entire ensuing phrase, including *slower*. This and the contrast between the forms of *rapidly* and *slower* make the comparisons nonparallel. Some usage advisers consider *slower* to be only an adjective. Although *slower* is sometimes used as an adverb, that usage would be more appropriate with the parallel *faster*. The stark contrast between this typically adjectival form and the clearly adverbial *ly* form is somewhat jarring.

B The referent of the relative pronoun *which* is unclear.

C **Correct.** The modifiers are parallel and correctly positioned in relation to the verb.

D This version of the sentence offers *travel* as a compound verb parallel with *originate* and *ricochet* rather than as a description of how the waves ricochet. It has the same problems with parallelism as (A).

E Adding a relative clause *and that . . .* makes this sentence wordy and awkward.

The correct answer is C.

SC02470

858. Prices at the producer level are only 1.3 percent higher now than a year ago and are going down, even though floods in the Midwest and drought in the South are hurting crops and therefore raised corn and soybean prices.

(A) than a year ago and are going down, even though floods in the Midwest and drought in the South are hurting crops and therefore raised

(B) than those of a year ago and are going down, even though floods in the Midwest and drought in the South are hurting crops and therefore raising

(C) than a year ago and are going down, despite floods in the Midwest and drought in the South, and are hurting crops and therefore raising

(D) as those of a year ago and are going down, even though floods in the Midwest and drought in the South hurt crops and therefore raise

(E) as they were a year ago and are going down, despite floods in the Midwest and drought in the South, and are hurting crops and therefore raising

Logical Predication; Verb Form

The sentence as written makes an illogical comparison between *prices at the producer level* and a time period (*a year ago*); surely the intended comparison is between such prices now and those of a year ago. The clause at the end of the sentence states that flooding and a drought *are hurting* crops, and as a result of this, they have *raised* prices of certain crops. *Are hurting* is in the present progressive tense, indicating an ongoing process; *raised* is in the simple past tense, indicating a completed action. It would be more appropriate to use the present progressive tense here as well, *[are] raising*.

A The first part of this version of the sentence illogically compares prices to a time; the second part of the sentence indicates that a completed action (*raised . . . prices*) results from an ongoing present condition (*floods . . . and drought . . . are hurting crops*).

B **Correct.** This version of the sentence makes an appropriate comparison (between prices now and those of a year ago), and uses tenses in an appropriate way.

C Like (A), this version of the sentence illogically compares prices to time past. Furthermore, in this version, *Prices* is the subject not only for the verb *are* but also for the verbs *are hurting* and *[are] raising*, which makes no sense.

D The comparative adjective *higher* requires the comparative term *than* instead of *as*; the tenses of the verbs in the latter half of the sentence, *hurt* (simple past) and *raise* (simple present), do not work together logically.

E Like (D), this version inappropriately uses *as* instead of *than* with *higher*. Furthermore, like (C), in this version [*p*]*rices* is the subject not only for the verb *are* but also for the verbs *are hurting* and *[are] raising*.

The correct answer is B.

SC07117

859. Fossils of the arm of a sloth found in Puerto Rico in 1991, and dated at 34 million years old, made it the earliest known mammal of the Greater Antilles Islands.

(A) sloth found in Puerto Rico in 1991, and dated at 34 million years old, made it the earliest known mammal of

(B) sloth, that they found in Puerto Rico in 1991, has been dated at 34 million years old, thus making it the earliest mammal known on

(C) sloth that was found in Puerto Rico in 1991, was dated at 34 million years old, making this the earliest known mammal of

(D) sloth, found in Puerto Rico in 1991, have been dated at 34 million years old, making the sloth the earliest known mammal on

(E) sloth which, found in Puerto Rico in 1991, was dated at 34 million years old, made the sloth the earliest known mammal of

Agreement; Logical Predication

The subject of the sentence is the plural *fossils*, not *sloth*, and therefore requires a plural verb. *It* therefore does not have a singular antecedent. To clarify the identification of the oldest known mammal, the noun *the sloth* must be explicitly identified.

A Because *sloth* is the object of a preposition and not the subject of the sentence, there is no reasonable antecedent for the pronoun *it*; in this construction, the subject of *made* is *fossils*, but it makes no sense to say that the *fossils* made it the earliest known mammal.

B The introduction of the mysterious *they,* a pronoun without a reference, adds confusion to this sentence; the singular verb does not agree with the plural subject.

C The relative clause *that was* … is wordy and awkward; the singular verb does not agree with the plural subject.

D **Correct.** The plural verb agrees with its plural subject, and *the sloth* is explicitly identified as *the earliest known mammal.*

E The singular verb does not agree with the plural subject.

The correct answer is D.

SC01550

860. Recently physicians have determined that stomach ulcers are <u>not caused by stress, alcohol, or rich foods, but</u> a bacterium that dwells in the mucous lining of the stomach.

(A) not caused by stress, alcohol, or rich foods, but

(B) not caused by stress, alcohol, or rich foods, but are by

(C) caused not by stress, alcohol, or rich foods, but by

(D) caused not by stress, alcohol, and rich foods, but

(E) caused not by stress, alcohol, and rich foods, but are by

Parallelism; Diction

The formula used in this sentence *not this but that* requires parallel elements following *not* and *but.* This means that *not by stress, alcohol, or rich foods* must be balanced by *but by a bacterium.* … There is no need to repeat the verb *are caused*, or even the auxiliary verb *are*, because the verb precedes the *not by … but by …* formula. The substitution of the conjunction *and* for the conjunction *or* changes the meaning of the sentence: *Stress, alcohol and rich foods* identifies the combination of these three factors as a suggested cause of stomach ulcers, whereas *stress, alcohol, or rich foods* offers three individual possibilities. There is no way to tell which one of these is the intended meaning of the sentence.

A To preserve parallelism, *but* should be followed by *by*.

B There is no reason to repeat the auxiliary verb *are*.

C **Correct.** This sentence correctly uses the *not by … but by …* formula.

D To preserve parallelism, *but* should be followed by *by*.

E To preserve parallelism, *but* should be followed by *by*.

The correct answer is C.

SC05848

861. <u>The eyes of the elephant seal adapt to darkness more quickly than any other animal yet tested, thus allowing it</u> to hunt efficiently under the gloomy conditions at its feeding depth of between 300 and 700 meters.

(A) The eyes of the elephant seal adapt to darkness more quickly than any other animal yet tested, thus allowing it

(B) The eyes of the elephant seal adapt to darkness more quickly than does any other animal yet tested, allowing them

(C) The eyes of the elephant seal adapt to darkness more quickly than do those of any other animal yet tested, allowing it

(D) Because they adapt to darkness more quickly than any other animal yet tested, the eyes of the elephant seal allow it

(E) Because the eyes of the elephant seal adapt to darkness more quickly than do those of any other animal yet tested, it allows them

Logical Predication; Agreement

Logically, the eyes of the elephant seal should be contrasted with the eyes of other animals, not with the animals themselves. The sentence must make this comparison directly and precisely, with each subject interpretable as the subject of *adapt*. Given the correct subject (*those of any other animal yet tested*), which is plural, any reference to it must also be plural.

A *Any other animal yet tested* is incorrectly set up as the subject of *adapt*.

B *Any other animal yet tested* is incorrectly set up as the subject of *adapt*. The plural pronoun *them* seems to refer to eyes. Although there is a sense in which eyes can hunt, it is more reasonable to suppose that, in this context, the writer's intention is to mention how the eyes' quick adaptation allows the seal to hunt efficiently.

C **Correct.** The subject of the comparative phrase is correctly *those of any other animal yet tested*, the plural verb *do* correctly agrees with this subject (*those*), and the singular pronoun *it* correctly agrees with its antecedent (*elephant seal*).

D *Any other animal yet tested* is incorrectly set up as the subject of *adapt*.

E The subject is correct, but in the following clause *it* has no clear referent.

The correct answer is C.

SC01068

862. A mutual fund having billions of dollars in assets will typically invest that money in hundreds of companies, rarely holding more than one percent of the shares of any particular corporation.

(A) companies, rarely holding more than one percent

(B) companies, and it is rare to hold at least one percent or more

(C) companies and rarely do they hold more than one percent

(D) companies, so that they rarely hold more than one percent

(E) companies; rarely do they hold one percent or more

Agreement; Logical Predication

The participial phrase starting with *rarely holding* is predicated of the main subject *a mutual fund*. It elaborates on the effect of the main clause verb: since a mutual fund invests in hundreds of companies, it rarely holds more than one percent in any particular corporation.

A **Correct.** The participle *holding* in the embedded clause correctly refers to *a mutual fund*. It also correctly expresses the cause-and-effect relationship between investing in many companies and holding little in each company.

B The antecedent of *it is rare to hold* is not clear. The use of *it is rare* instead of *rarely* could be misleading.

C The use of *and* between the clauses makes them both main clauses. Thus, the cause-and-effect relationship between investing and holding is lost. The referent of *they* is unclear. It makes no sense to suppose that it refers to the hundreds of companies. Since it presumably refers to *a mutual fund*, it should be singular.

D The pronoun *they* refers to *a mutual fund* and thus should be singular.

E The pronoun *they* refers to *a mutual fund* and thus should be singular.

The correct answer is A.

SC08083

863. Positing an enormous volcanic explosion at the end of the Permian period would explain the presence of a buried crater, account for the presence of the element iridium (originating deep within the earth), and the presence of quartz having been shattered by high-impact shock waves.

(A) account for the presence of the element iridium (originating deep within the earth), and the presence of quartz having been

(B) of the element iridium (originating deep within the earth), and of quartz

(C) the element iridium (originating deep within the earth), and explain the presence of quartz having been

(D) the presence of the element iridium (originating deep within the earth), and explain the presence of quartz

(E) explain the element iridium (originating deep within the earth), and the presence of quartz

Parallelism; Rhetorical Construction

The sentence indicates that a volcanic explosion would explain the presence of three features, but those features are not expressed using parallel grammatical structures. The first two items in the list are verb phrases that involve needless repetition—*explain the presence of* and *account for the presence of*—while the third is an awkwardly worded noun phrase—*the presence of quartz having been shattered*. The three features can be identified more concisely with a list of prepositional phrases following *explain the presence*: *of a buried crater*, *of the element iridium,* and *of quartz*.

A The three features are not listed in parallel form; the sentence is wordy and awkward.

B **Correct.** The three features are identified with parallel prepositional phrases.

C The three features are not listed in parallel form since the first and third are verb phrases, while the second is a noun phrase; the wording is awkward and needlessly repetitive.

D The three features are not listed in parallel form since the first and third are verb phrases, while the second is a noun phrase; the wording is needlessly repetitive.

E The three features are not listed in parallel form since the first and second are verb phrases, while the third is a noun phrase; the sentence illogically states that an explosion would *explain the element iridium*, rather than explain the *presence* of the element.

The correct answer is B.

SC01561

864. The 19-year-old pianist and composer performed his most recent work all over Europe, Asia, and North America last year, winning prestigious awards in both London as well as Tokyo for his achievement at so young an age, and he is hoping to continue composing now that he has returned to Chicago.

(A) winning prestigious awards in both London as well as Tokyo for his achievement at so young an age, and he is hoping

(B) winning prestigious awards both in London and Tokyo for his achievement at such a young age, and hoping

(C) having won prestigious awards both in London and Tokyo for his achievement at so young an age, hoping

(D) winning prestigious awards in both London and Tokyo for his achievement at such a young age, and he hopes

(E) having won prestigious awards both in London as well as Tokyo for his achievement at so young an age, and he hopes

Idiom; Grammatical Construction

This sentence is about the past accomplishments and the future ambitions of a musician who recently won awards on a world tour. In some of the versions of the sentence, the phrase *as well as* is redundant with the word *both* before *London* and *Tokyo*. Idiomatically, the simple conjunction *and* completes the phrase beginning with *both*.

A The phrase *as well as* between *London* and *Tokyo* is not idiomatic (the idiomatic formula is *both X and Y*). The present progressive verb *is hoping* is unnecessarily wordy.

B Because *hoping* is parallel with *winning*, it suggests that the *hoping* and *winning* are contemporaneous, whereas in fact the musician won his awards last year but is now, in the present, upon his return, hoping to continue composing.

C The present-perfect participial phrase *having won* suggests that his winning took place before his performance tour. Furthermore, the use of *hoping* in this version of the sentence suggests that hoping is something the pianist did while on his performance tour *last year*, but the final phrase, *now that he has returned to Chicago*, indicates this is not so.

D **Correct.** This version of the sentence uses the correct idiomatic formula (*both X and Y*).

E The participial phrase *having won* . . . inaccurately states that the musician won his awards prior to his performance tour. Furthermore, *both in London as well as Tokyo* is unidiomatic, as indicated in the discussion of (A) above, and unparallel (*in* should either precede *both*, or else *in* should be added before *Tokyo*).

The correct answer is D.

SC01474

865. Starfish, with anywhere from five to eight arms, have a strong regenerative ability, and if one arm is lost it quickly replaces it, sometimes by the animal overcompensating and growing an extra one or two.

(A) one arm is lost it quickly replaces it, sometimes by the animal overcompensating and

(B) one arm is lost it is quickly replaced, with the animal sometimes overcompensating and

(C) they lose one arm they quickly replace it, sometimes by the animal overcompensating,

(D) they lose one arm they are quickly replaced, with the animal sometimes overcompensating,

(E) they lose one arm it is quickly replaced, sometimes with the animal overcompensating,

Agreement; Idiom

In a conditional sentence *if X, (then) Y*, rhetorical flow is enhanced by the two clauses sharing the same structure. If one clause is passive, the other should be passive; if one clause is active, the other should be active, too.

A The conditional clause has a passive verb, while the result clause has an active verb. The pronoun *it* should be plural since it refers to *starfish*. We know that *starfish* is plural in this sentence because it agrees with *have* in the main clause.

B **Correct.** The conditional structure is clear and correct.

C This answer choice allows the unintended reading that the animal replaces the missing arm by overcompensating. The logical connection between *overcompensating* and *growing* is unclear.

D The conditional clause has an active verb, while the result clause has a passive verb. The second *they* should refer to *arm*, so the agreement is not correct. The logical connection between *overcompensating* and *growing* is unclear.

E The conditional clause has an active verb, while the result clause has a passive verb. The logical connection between *overcompensating* and *growing* is unclear.

The correct answer is B.

SC04249

866. In 2000, a mere two dozen products accounted for half the increase in spending on prescription drugs, a phenomenon that is explained not just because of more expensive drugs but by the fact that doctors are writing many more prescriptions for higher-cost drugs.

(A) a phenomenon that is explained not just because of more expensive drugs but by the fact that doctors are writing

(B) a phenomenon that is explained not just by the fact that drugs are becoming more expensive but also by the fact that doctors are writing

(C) a phenomenon occurring not just because of drugs that are becoming more expensive but because of doctors having also written

(D) which occurred not just because drugs are becoming more expensive but doctors are also writing

(E) which occurred not just because of more expensive drugs but because doctors have also written

Rhetorical Construction; Idiom

This sentence explains that a few high-cost products account for increased spending for two reasons—rising drug prices and more prescriptions for high-priced drugs. To present these two causes, the sentence employs a formula that requires parallel elements: *not just because of x, but because of y*, with *x* and *y* assuming the same grammatical form. One way to create this parallelism is to phrase both contributing causes as noun clauses beginning with *the fact that*. To streamline the sentence, unnecessary words and redundancies should be eliminated. One such redundancy is the repetition of meaning in *explained* and *because of*.

A It is redundant and confusing to say that the phenomenon in question is *explained* … *because of*; the sentence structure is not parallel.

B **Correct.** This sentence correctly uses parallel structure.

C The phrasing *drugs that are becoming* and *doctors having also written* are awkward and confusing; the placement of *also* is incorrect.

D The structure of this sentence is not parallel.

E The placement of *also* is incorrect; the structure of the sentence is not parallel.

The correct answer is B.

SC05393

867. Similar to other early Mississippi Delta blues singers, the music of Robert Johnson arose from an oral tradition beginning with a mixture of chants, fiddle tunes, and religious music and only gradually evolved into the blues.

(A) Similar to other early Mississippi Delta blues singers, the music of Robert Johnson arose from an oral tradition beginning with

(B) Similar to that of other early Mississippi Delta blues singers, Robert Johnson made music that arose from an oral tradition that began with

(C) As with other early Mississippi Delta blues singers, Robert Johnson made music that arose from an oral tradition beginning as

(D) Like other early Mississippi Delta blues singers, Robert Johnson's music arose from an oral tradition beginning with

(E) Like the music of other early Mississippi Delta blues singers, the music of Robert Johnson arose from an oral tradition that began as

Logical Predication; Verb Form

The sentence aims to compare the music of early Mississippi Delta Blues singers with the music of Robert Johnson. But what it does is illogically compare singers themselves with the music of Johnson. The second half of the sentence describes two stages of the oral tradition from which blues developed.

A *Similar to* is a wordy and imprecise form of comparison here. The second half of the sentence attempts to describe the stages of the oral tradition, but in a nonparallel form, presenting the first stage as a participial phrase and the second as a verb phrase.

B *Similar to* is wordy and imprecise. The pronoun *that* lacks a grammatical referent.

C The comparative phrase *as with* is an inappropriate form for comparing nouns and noun phrases. The second half of the sentence violates parallelism, attempting to express the first stage of the oral tradition as a present-participle phrase and the second as a past-tense verb phrase.

D This makes a sentence that illogically compares *singers* with *music*. It violates parallelism by coupling a participial phrase *beginning with* . . . with a verb phrase *evolved into*. . . .

E **Correct.** The resulting sentence compares like with like. It uses a relative clause to describe the oral tradition from which blues developed, indicating the two stages of development with two verbs in parallel.

The correct answer is E.

SC03805

868. Thelonious Monk, who was a jazz pianist and composer, produced a body of work both rooted in the stride-piano tradition of Willie (The Lion) Smith and Duke Ellington, yet in many ways he stood apart from the mainstream jazz repertory.

(A) Thelonious Monk, who was a jazz pianist and composer, produced a body of work both rooted

(B) Thelonious Monk, the jazz pianist and composer, produced a body of work that was rooted both

(C) Jazz pianist and composer Thelonious Monk, who produced a body of work rooted

(D) Jazz pianist and composer Thelonious Monk produced a body of work that was rooted

(E) Jazz pianist and composer Thelonious Monk produced a body of work rooted both

Grammatical Construction; Rhetorical Construction

The subject of the sentence is *Thelonious Monk*, and the sentence tells about two things that he did: *produced* and *stood apart*. The work he produced was rooted in the mainstream (*stride piano*) jazz tradition, yet at the same time, he deviated from this tradition. The use of a relative clause (*who was a jazz pianist* …) or an appositive (*the jazz pianist* …) introduces unnecessary wordiness and grammatical complexity. Since only one point is being made about Monk's body of work, the appearance of the word *both* in the clause presenting the claim about Monk's work is deceptive as well as grammatically incorrect.

A The relative clause introduces wordiness and confusion.

B The appositive introduces wordiness and unnecessary grammatical complexity.

C The sentence is a fragment because the main subject, *Thelonious Monk*, has no verb.

D **Correct.** The sentence concisely identifies Thelonious Monk and expresses the single point about his work without unnecessary or misleading words.

E The appearance of *both* is misleading, since only one point is being made about where Monk's musical roots are located.

The correct answer is D.

SC06898

869. Nobody knows exactly how many languages there are in the world, partly because of the difficulty of distinguishing between a language and the sublanguages or dialects within it, but those who have tried to count typically have found about five thousand.

(A) and the sublanguages or dialects within it, but those who have tried to count typically have found

(B) and the sublanguages or dialects within them, with those who have tried counting typically finding

(C) and the sublanguages or dialects within it, but those who have tried counting it typically find

(D) or the sublanguages or dialects within them, but those who tried to count them typically found

(E) or the sublanguages or dialects within them, with those who have tried to count typically finding

Agreement; Idiom

This sentence first introduces a condition that makes it difficult to count languages and then, with the conjunction *but*, introduces the topic of those who defy these difficulties and try to count the world's languages anyway. Connecting these two parts of the sentence with *but* indicates that the second clause of the sentence is counter to expectation. The challenges of the task are explained using the example of a single language and its many sublanguages or dialects. When this example is referred to with a pronoun, the pronoun should be singular; when the languages being counted are referred to with a pronoun, this pronoun must be plural.

A **Correct.** The pronoun *it* agrees in number to its singular antecedent, and *but* indicates that the idea expressed in the final clause defies expectations.

B The plural pronoun *them* incorrectly refers to the singular antecedent *language*; connecting the two clauses with the preposition *with* loses the sense that counting languages despite the difficulties defies expectations.

C The second appearance of *it*, referring to world languages, is incorrect because it does not agree in number with *languages*.

D The conjunction *or* is incorrect—the idiomatic expression is *distinguishing between x and y*; the plural pronoun *them* does not agree with the singular antecedent *language*.

E The plural pronoun *them* incorrectly refers to the singular antecedent, *language; with* is an imprecise connector for the two clauses, losing the *counter-to-expectation* relationship between them.

The correct answer is A.

SC08719

870. Although a number of excellent studies narrate the development of domestic technology and its impact on housewifery, these works do not discuss the contributions of the women employed by manufacturers and utility companies as product demonstrators and publicists, who initially promoted new and unfamiliar technology to female consumers.

(A) by manufacturers and utility companies as product demonstrators and publicists,

(B) to be product demonstrators and publicists by manufacturers and utility companies,

(C) to demonstrate and publicize their products by manufacturers and utility companies

(D) by manufacturers and utility companies to be demonstrators and publicists of their products

(E) by manufacturers and utility companies to demonstrate and publicize their products

Logical Predication; Rhetorical Construction

The point of the sentence is that studies do not include the contributions of women who promoted new domestic technology. The sentence indicates clearly that the women were *employed by manufacturers and utility companies*, worked as *product demonstrators and publicists*, and promoted new technology *to female consumers.*

A **Correct.** The sentence clearly describes the women's employment and contributions.

B This sentence structure appears to make *who initially promoted* refer to *manufacturers and utility companies* rather than to *the women.* This conflicts with the use of the word *who*, which would normally be expected to refer to persons rather than to abstract entities such as companies.

C *Their* refers to *the women,* incorrectly suggesting that the *products* belong to them. This sentence structure appears to make *who initially promoted* refer to *manufacturers and utility companies* rather than to *the women.* This conflicts with the word *who*, which would normally be expected to refer to persons rather than to abstract entities such as companies.

D *Who initially promoted* follows, and appears to refer to, *products*, which cannot logically be the referent.

E *Who initially promoted* follows, and appears to refer to, *products*, which cannot logically be the referent.

The correct answer is A.

SC01577

871. The absence from business and financial records of the nineteenth century of statistics about women leave us with no record of the jobs that were performed by women and how they survived economically.

(A) from business and financial records of the nineteenth century of statistics about women leave us with no record of the jobs that were performed by women and

(B) from business and financial records of statistics about women from the nineteenth century leave us with no record of what jobs women performed or

(C) of statistics for women from business and financial records in the nineteenth century leaves us with no record of either the jobs that women were performing and of

(D) of statistics on women from business and financial records in the nineteenth century leave us with no record of the jobs that women performed or of

(E) of statistics about women from business and financial records of the nineteenth century leaves us with no record of either what jobs women performed or

Rhetorical Construction; Agreement

This sentence is phrased awkwardly in two ways. The first relates to *absence of statistics*: it is best to place a noun modifier right next to the noun that it modifies, with no intervening material. Second, *jobs that were performed by women* is more complicated than necessary—*jobs women performed* is better, for example. Also, the singular noun *absence* requires the correct agreeing verb form *leaves*.

A *Absence* and *of statistics* are widely separated, and *leave* does not properly agree with its subject, *absence.*

B *Absence* and *of statistics* are widely separated, and *leave* does not properly agree with its subject, *absence.*

C *Jobs that women were performing* is unnecessarily long and complex. The *either* construction should be completed with *or*, not *and*.

D *Leave* does not properly agree with its subject, *absence.*

E **Correct.** *Leaves* agrees with *absence.* The phrase *of statistics* is next to the noun it modifies (*absence*), and *jobs women performed* is a nicely simple phrasing.

The correct answer is E.

SC02138

872. Heating-oil prices are expected to be higher this year than last because refiners are paying about $5 a barrel more for crude oil than they were last year.

(A) Heating-oil prices are expected to be higher this year than last because refiners are paying about $5 a barrel more for crude oil than they were

(B) Heating-oil prices are expected to rise higher this year over last because refiners pay about $5 a barrel for crude oil more than they did

(C) Expectations are for heating-oil prices to be higher this year than last year's because refiners are paying about $5 a barrel for crude oil more than they did

(D) It is the expectation that heating-oil prices will be higher for this year over last because refiners are paying about $5 a barrel more for crude oil now than what they were

(E) It is expected that heating-oil prices will rise higher this year than last year's because refiners pay about $5 a barrel for crude oil more than they did

Rhetorical Construction; Idiom

The sentence connects a comparison between this year's and last year's heating-oil prices with a comparison between this year's and last year's crude-oil prices. The most efficient, parallel expression of those comparisons is to use two comparative expressions, *higher than* and *more than.*

A **Correct.** This sentence expresses the comparison in succinct, parallel phrases.

B The comparative form, *higher*, anticipates the comparative term *than*, not *over*; in the second clause, the comparative terms *more than* should immediately follow *$5 a barrel*.

C *Expectations are for* … is an unnecessarily wordy and indirect expression; the possessive *year's* is not parallel with the adverbial phrase *this year*.

D *It is the expectation that* … is wordy and awkward; *for* and *what* are unnecessary.

E *It is expected that* … is wordy and awkward; the possessive *last year's* does not parallel the adverbial phrase *this year*.

The correct answer is A.

SC01443

873. Even though Clovis points, spear points with longitudinal grooves chipped onto their faces, have been found all over North America, they are named for the New Mexico site where they were first discovered in 1932.

(A) Even though Clovis points, spear points with longitudinal grooves chipped onto their faces, have been found all over North America, they are named for the New Mexico site where they were first discovered in 1932.

(B) Although named for the New Mexico site where first discovered in 1932, Clovis points are spear points of longitudinal grooves chipped onto their faces and have been found all over North America.

(C) Named for the New Mexico site where they have been first discovered in 1932, Clovis points, spear points of longitudinal grooves chipped onto the faces, have been found all over North America.

(D) Spear points with longitudinal grooves that are chipped onto the faces, Clovis points, even though named for the New Mexico site where first discovered in 1932, but were found all over North America.

(E) While Clovis points are spear points whose faces have longitudinal grooves chipped into them, they have been found all over North America, and named for the New Mexico site where they have been first discovered in 1932.

Verb Form; Rhetorical Construction; Logical Predication

Even though, *although*, and *while* introduce clauses that appear to be logically incompatible but in fact are not. In this sentence, the apparent incompatibility that must be clearly expressed is that although the spear points are named for a particular place in New Mexico, they are in fact found throughout North America. Because their discovery took place in 1932 and is not ongoing, the correct verb tense is simple past, not present perfect.

A **Correct.** The *even though* clause expresses clearly that the seeming incompatibility is between where the spear points have been found (*all over North America*) and the naming of the spear points for a single site in New Mexico.

B The sentence structure indicates that the expected incompatibility is between the geographically based name of the points and their physical properties, which makes no sense; *where discovered* is missing a subject—the correct form is *where they were first discovered*.

C *Have been first discovered* is the wrong tense, since the discovery is a discrete event completed in the past.

D The sequence of information in this sentence is confusing; *even though* and *but* both introduce information that is contrary to expectation, so to use them both to describe a single apparent contradiction is redundant and nonsensical.

E *While* introduces a description of Clovis points and suggests that this appears incompatible with their appearance all over North America, which makes no sense; *have been first discovered* is the wrong tense.

The correct answer is A.

SC04408

874. Heavy commitment by an executive to a course of action, especially if it has worked well in the past, makes it likely to miss signs of incipient trouble or misinterpret them when they do appear.

(A) Heavy commitment by an executive to a course of action, especially if it has worked well in the past, makes it likely to miss signs of incipient trouble or misinterpret them when they do appear.

(B) An executive who is heavily committed to a course of action, especially one that worked well in the past, makes missing signs of incipient trouble or misinterpreting ones likely when they do appear.

(C) An executive who is heavily committed to a course of action is likely to miss or misinterpret signs of incipient trouble when they do appear, especially if it has worked well in the past.

(D) Executives' being heavily committed to a course of action, especially if it has worked well in the past, makes them likely to miss signs of incipient trouble or misinterpreting them when they do appear.

(E) Being heavily committed to a course of action, especially one that has worked well in the past, is likely to make an executive miss signs of incipient trouble or misinterpret them when they do appear.

Rhetorical Construction; Logical Predication

This sentence explains that an executive who is blindly committed to a proven course of action is likely to overlook or misinterpret indicators that the plan may no longer be working. The sentence needs to make clear *who* may misinterpret these indicators.

A The passive construction causes the sentence to be wordy and confusing; the reference for *it* is ambiguous, leaving the reader with questions about who or what is likely to miss these signs.

B The sentence structure indicates that the *executive*, not his or her strategy, causes signs to be overlooked; the modifier *when they do appear* is misplaced.

C The reference for the pronoun *it* is unclear because many nouns have intervened between the appearance of the logical referent (*course of action*) and *it*.

D *Misinterpreting* should be an infinitive verb form to parallel *miss*; the phrasing throughout the sentence is wordy and awkward.

E **Correct.** The grammatical structure of this sentence and the appropriate placement of modifiers expresses the meaning clearly and concisely.

The correct answer is E.

SC06740

875. According to recent studies comparing the nutritional value of meat from wild animals and meat from domesticated animals, wild animals have less total fat than do livestock fed on grain and more of a kind of fat they think is good for cardiac health.

(A) wild animals have less total fat than do livestock fed on grain and more of a kind of fat they think is

(B) wild animals have less total fat than livestock fed on grain and more of a kind of fat thought to be

(C) wild animals have less total fat than that of livestock fed on grain and have more fat of a kind thought to be

(D) total fat of wild animals is less than livestock fed on grain and they have more fat of a kind thought to be

(E) total fat is less in wild animals than that of livestock fed on grain and more of their fat is of a kind they think is

Logical Predication; Rhetorical Construction

The sentence reports research findings on the comparison between the fat content of wild animals and that of domestic livestock. The most significant error in the sentence is in the phrase *they think*: the pronoun *they* either lacks a referent or is meant to refer back to *wild animals*, which would be nonsensical.

A The pronoun *they* fails to refer correctly.

B **Correct.** The phrase *thought to be* eliminates the most significant error in the original sentence. Note that while the phrase *less total fat than livestock* differs from the phrase *less total fat than do livestock* in the original, either would be correct here.

C The resulting sentence is unnecessarily wordy and confusing. The pronoun *that* is not only superfluous, but it fails to refer back to anything.

D The resulting sentence makes a nonsensical comparison between *total fat* and *livestock*.

E The resulting sentence is wordy and confusing. It lacks the required parallelism *in wild animals . . . in livestock*. The referent of the possessive pronoun *their* is ambiguous, as is the referent of the pronoun *they*.

The correct answer is B.

SC03292

876. Yellow jackets number among the 900 or so species of the world's social wasps, wasps living in a highly cooperative and organized society where they consist almost entirely of females—the queen and her sterile female workers.

(A) wasps living in a highly cooperative and organized society where they consist almost entirely of

(B) wasps that live in a highly cooperative and organized society consisting almost entirely of

(C) which means they live in a highly cooperative and organized society, almost all

(D) which means that their society is highly cooperative, organized, and it is almost entirely

(E) living in a society that is highly cooperative, organized, and it consists of almost all

Idiom; Logical Predication; Rhetorical Construction

This sentence identifies yellow jackets as one of 900 types of social wasps and provides an explanation of the term *social wasps*. In this explanation, the society or population—not the individual wasps themselves—consists almost entirely of females. The three descriptors of social wasps (*cooperative*, *organized*, and *consisting almost entirely of females*) are most effectively expressed in parallel structures.

A *They*, referring to wasps, is an incorrect subject for *consist*.

B **Correct.** The three descriptors of the wasp society are in parallel form, and *consisting* properly modifies *society*.

C The sentence structure makes it unclear what *almost all females* describes.

D *And it is* … violates the parallelism of the three descriptors of social wasps.

E *And it consists* … violates the parallelism of the three descriptors.

The correct answer is B.

SC02539

877. Before 1988, insurance companies in California were free to charge whatever rates the market would bear, needing no approval from regulators before raising rates.

(A) needing no approval from regulators before raising

(B) and it needed no approval by regulators before raising

(C) and needing no approval from regulators before they raised

(D) with approval not needed by regulators before they raised

(E) with no approval needed from regulators before the raising of

Logical Predication; Rhetorical Construction

The sentence explains that, prior to 1988, insurance companies in California could raise rates without regulators' approval. This idea is expressed concisely using a participial phrase and two prepositional phrases: *needing no approval from regulators before raising rates*. Unlike some of the answer choices that contain errors involving antecedents, this construction uses no pronouns and contains no such errors.

A **Correct.** The combination of a participial phrase and two prepositional phrases expresses the idea clearly with no errors involving pronouns or antecedents.

B The singular pronoun *it* has no clear antecedent. If *it* is taken to refer to the market (the only grammatically plausible antecedent), the sentence is illogical. *Whatever rates the market would bear* clearly indicates that *market* is being used in the sense of an abstract set of forces affecting prices. To say that the market, in that sense, raised taxes and that it needed no approval to do so is nonsensical.

C The construction *were … and needing* is ungrammatical. The pronoun *they* is intended to refer to *companies* but could also seem, illogically, to refer to *regulators*.

D *By regulators* illogically indicates that regulators are the ones who did not need approval; the pronoun *they* is intended to refer to *companies* but could also seem, illogically, to refer to *regulators*.

E *Before the raising of* is wordy and awkward. Both that phrase and *with no approval needed* are strangely uninformative and rhetorically ineffective in that they appear to pointedly avoid telling who did not need the approval or who might have raised the rates.

The correct answer is A.

SC01022

878. Marconi's conception of the radio was as a substitute for the telephone, a tool for private conversation; instead, it is precisely the opposite, a tool for communicating with a large, public audience.

(A) Marconi's conception of the radio was as a substitute for the telephone, a tool for private conversation; instead, it is

(B) Marconi conceived of the radio as a substitute for the telephone, a tool for private conversation, but which is

(C) Marconi conceived of the radio as a tool for private conversation that could substitute for the telephone; instead, it has become

(D) Marconi conceived of the radio to be a tool for private conversation, a substitute for the telephone, which has become

(E) Marconi conceived of the radio to be a substitute for the telephone, a tool for private conversation, other than what it is,

Rhetorical Construction; Logical Predication

The main point of this sentence is to explain that while Marconi felt the radio would substitute for the phone as an instrument of private communication, in fact it has become an instrument of mass communication. It is less wordy to use *Marconi* as the subject of the active verb *conceived* than to use the subject *conception* with the static verb *was*. The pronoun *it* positioned as the subject of the final verb *has become* refers back to *radio*. Versions of the sentence that use the relative pronoun *which* indicate that the telephone has become a mass medium.

A The nominalized subject, *conception*, leads to a wordy and awkward sentence.

B The reference for the relative pronoun *which* is ambiguous; the sentence as a whole is awkward.

C **Correct.** An active verb makes the first clause more concise; *it* in the second clause clearly refers to *the radio*.

D *Conceived of* … should be followed by *as* rather than *to be*.

E *Conceived of* … should be followed by *as* rather than *to be*; *other than what it is* is awkward, wordy, and redundant, overlapping the meaning of *precisely the opposite* … .

The correct answer is C.

SC02611

879. Because there are provisions of the new maritime code that provide that even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas, they have already stimulated international disputes over uninhabited islands.

(A) Because there are provisions of the new maritime code that provide that even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas, they have already stimulated

(B) Because the new maritime code provides that even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas, it has already stimulated

(C) Even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas under provisions of the new maritime code, already stimulating

(D) Because even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas under provisions of the new maritime code, this has already stimulated

(E) Because even tiny islets can be the basis for claims to the fisheries and oil fields of large sea areas under provisions of the new maritime code, which is already stimulating

Logical Predication; Grammatical Construction

In this sentence, the *there are* … *that* … construction contributes nothing more than unnecessary words. The sentence needs to make clear whether *provisions* or *code* is the subject of the main verb *stimulated*.

A The *there are* … *that* … construction is unnecessarily wordy; in the predicate nominative instead of the subject position, *provisions* is not an obvious referent for the pronoun *they*.

B **Correct.** In this sentence, *the new maritime code* is clearly the antecedent of *it* in the main clause and thus the subject of *has already stimulated*.

C *Under provisions of the new maritime code* is a misplaced modifier, seeming to describe *sea areas*; the sentence does not make clear what is *stimulating* … *disputes*.

D The referent of *this* is unclear.

E The sentence is a fragment, opening with a dependent clause (*Because … code*) and concluding with a relative clause, but lacking a main, independent clause.

The correct answer is B.

SC02576

880. Unlike the automobile company, whose research was based on crashes involving sport utility vehicles, the research conducted by the insurance company took into account such factors as a driver's age, sex, and previous driving record.

(A) company, whose research was based on
(B) company, which researched
(C) company, in its research of
(D) company's research, having been based on
(E) company's research on

Logical Predication; Rhetorical Construction

The point of the sentence is to contrast the research conducted by the automobile company and that conducted by the insurance company, but the sentence has been written in a way that contrasts *the automobile company* with *research*. The correct contrast is between *automobile company's research* and *research conducted by the insurance company*.

A *Automobile company* is incorrectly contrasted with *research*.

B *Automobile company* is incorrectly contrasted with *research*.

C *Automobile company* is incorrectly contrasted with *research*.

D *Having been based on* is wordy. This construction makes it unclear whether *having been based on crashes involving sport utility vehicles* is intended to modify *the automobile company's research* or *the research conducted by the insurance company*. The sentence structure slightly favors the latter interpretation, but it is somewhat implausible to suppose that this is the intended meaning.

E **Correct.** The sentence concisely contrasts the *automobile company's research* and *research conducted by the insurance company*.

The correct answer is E.

SC12131

881. Gusty westerly winds will continue to usher in a seasonably cool air mass into the region, as a broad area of high pressure will build and bring fair and dry weather for several days.

(A) to usher in a seasonably cool air mass into the region, as a broad area of high pressure will build and
(B) ushering in a seasonably cool air mass into the region and a broad area of high pressure will build that
(C) to usher in a seasonably cool air mass to the region, a broad area of high pressure building, and
(D) ushering a seasonably cool air mass in the region, with a broad area of high pressure building and
(E) to usher a seasonably cool air mass into the region while a broad area of high pressure builds, which will

Verb Form; Grammatical Construction; Diction

The sentence offers a prediction that two concurrent weather events will bring a certain type of weather, but its use of the phrase *as . . . will build* causes confusion. The wording makes the sequence of events and the causal relationships among them unclear. Future tense is used to indicate that winds *will continue*. The relation of *as* to the rest of the sentence makes it unclear whether *as* is intended as a logical indicator (similar to *because*) or as a temporal indicator (equivalent to *while*). If *as* is intended in the former way, it would be preferable to resolve the ambiguity by using a word or phrase such as *because* or *given that*. If it is intended in the latter way, a present tense verb would be needed following *as* or *while* to show that the second event is concurrent with, or part of, the future situation: *while high pressure builds*. In addition, *usher in . . . into* is redundant and unidiomatic. A clear, concise way to express this idea is *will continue to usher a seasonably cool air mass into the region while a broad area of high pressure builds*.

A *Usher in … into* is redundant and unidiomatic. *As … will build* causes confusion.

B The absence of a comma after *region* makes this ungrammatical. *Ushering in . . . into* is redundant; *will build* is the wrong verb tense; the plural verb *bring* does not agree with *area*, the singular antecedent of *that*.

C The grammatical function of *a broad area of high pressure building* is unclear.

D *Ushering … in the region* is incorrect since *into* is needed to indicate movement from outside in; the subject of the verb *bring* is unclear.

E **Correct.** The idea is expressed with clear, correct combinations of verbs and subjects.

The correct answer is E.

SC02008

882. With the patience of its customers and with its network strained to the breaking point, the on-line service company announced a series of new initiatives trying to relieve the congestion that has led to at least four class-action lawsuits and thousands of complaints from frustrated customers.

(A) the patience of its customers and with its network strained to the breaking point, the on-line service company announced a series of new initiatives trying to relieve

(B) the patience of its customers and its network strained to the breaking point, the on-line service company announced a series of new initiatives that try to relieve

(C) its network and the patience of its customers strained to the breaking point, the on-line service company announced a series of new initiatives to try to relieve

(D) its network and with the patience of its customers strained to the breaking point, the on-line service company announced a series of initiatives to try relieving

(E) its network and its customers' patience strained to the breaking point, the on-line service company announced a series of new initiatives to try relieving

Logical Predication; Rhetorical Construction

The sentence explains the online service provider's efforts to relieve congestion, but it has been written with confusing ambiguities. Because *the patience of its customers* is in a separate prepositional phrase from *its network*, it is not clear whether both or only the latter is *strained to the breaking point*. The phrase *trying to relieve* is probably meant to explain the purpose of the initiatives, but does not do so unambiguously (for example, *trying* could modify either *the company* or *initiatives*, and it is not clear which is intended). An unambiguous wording of the sentence would clarify that both *the patience of its customers* and *its network* are *strained to the breaking point* and that the purpose of the initiatives is *to try to relieve* the congestion.

A *The patience of its customers* is not clearly linked to *strained to the breaking point*; *trying to relieve* is an ambiguous and unidiomatic way of expressing the purpose of the initiatives.

B *That try to relieve* fails to express the purpose of the initiatives in a rhetorically acceptable way; moreover the present tense *try* is illogical here. The phrase *the patience of its customers and its network* is rhetorically flawed in that its structure makes it seem to be attributing *patience* to the *network*.

C **Correct.** The sentence indicates clearly that both *the patience of its customers* and *its network* are *strained to the breaking point* and that the company introduced initiatives aimed at relieving the congestion.

D *Its network* is not clearly linked to *strained to the breaking point*; with *to try*, the infinitive form *to relieve* is more rhetorically appropriate here than the verbal noun form *relieving*, in order to indicate the goal of the intervention.

E With *to try*, the infinitive form *to relieve* is more rhetorically appropriate here than the verbal noun form *relieving*, in order to indicate the goal of the intervention.

The correct answer is C.

SC02094

883. November is traditionally the strongest month for sales of light trucks, but sales this past November, even when compared with sales in previous Novembers, accounted for a remarkably large share of total vehicle sales.

(A) but sales this past November, even when compared with sales in previous Novembers,

(B) but even when it is compared with previous Novembers, this past November's sales

(C) but even when they are compared with previous Novembers, sales of light trucks this past November

(D) so that compared with previous Novembers, sales of light trucks this past November

(E) so that this past November's sales, even compared with previous Novembers' sales,

Logical Predication; Agreement

This sentence identifies November as traditionally being the month with the strongest sales of light trucks, and then goes on to indicate that even when compared to previous Novembers, this past November's sales accounted for a notably large portion of overall sales. It makes sense to make a comparison between sales in one November with sales in other Novembers. It does not make sense to compare sales to months, as in (C) and (D).

A **Correct.** This version makes the correct comparison between sales in one particular November and sales in previous Novembers.

B The antecedent of the word *it* is unclear. The sentence begins with the word *November*, which is used to refer not to a specific November, but to the month generally. If the antecedent of *it* is taken to be *November*, then the sentence compares November, taken generally, to previous Novembers. But previous to what? Since taking *November* to be the antecedent renders the sentence nonsensical, we may be inclined to look for the antecedent elsewhere; the only other possible candidate, however, is *this past November's sales*, which is ruled out because *it* is singular and *sales* is plural.

C The antecedent of the pronoun *they* is *sales*, making the comparison between *they* and *previous Novembers* illogical.

D The sentence illogically compares sales of light trucks with previous Novembers. The conjunction *so that* nonsensically introduces a causal relationship between November's typically strong sales and the aforementioned comparison.

E Like (D), this sentence introduces a nonsensical causal relationship, in this case between the fact that November typically has the strongest sales and the fact that this past November's sales accounted for a remarkably large share of total vehicle sales.

The correct answer is A.

SC05760

884. Most of the country's biggest daily newspapers had lower circulation in the six months from October 1995 through March 1996 than a similar period a year earlier.

(A) a similar period

(B) a similar period's

(C) in a similar period

(D) that in a similar period

(E) that of a similar period

Logical Predication; Parallelism

The sentence compares newspaper circulation during two separate periods, but the comparison is not parallel because it has been drawn using a prepositional phrase, *in the six months*, and a noun phrase, *a similar period.* Both phrases compared by *than* should be prepositional phrases: *lower in the six months . . . than in a similar period.*

A *In the six months* and *a similar period* are not grammatically parallel. The sentence appears illogically to compare a period of time with an amount of circulation.

B *In the six months* and *a similar period's* are not grammatically parallel.

C **Correct.** *In the six months* and *in a similar period* are both prepositional phrases, making the comparison clear and properly idiomatic.

D *In the six months* and *that in a similar period* are not grammatically parallel; it is unclear what the antecedent of *that* is supposed to be.

E *In the six months* and *that of a similar period* are not grammatically parallel; it is unclear what the antecedent of *that* is supposed to be.

The correct answer is C.

SC01714

885. Mauritius was a British colony for almost 200 years, excepting for the domains of administration and teaching, the English language was never really spoken on the island.

(A) excepting for

(B) except in

(C) but except in

(D) but excepting for

(E) with the exception of

Idiom; Grammatical Construction

This two-clause sentence describes an apparent incompatibility: as a British colony, Mauritius might be expected to be English-speaking, but in fact it was not. To describe this apparent contradiction and to avoid a comma splice, the clauses should be joined by the conjunction *but*. *Domains* describes places *in* which English is spoken; *for* is the incorrect preposition. *Excepting* is not idiomatic English in this case.

A The lack of a conjunction causes a comma splice; *excepting for* is non-idiomatic.

B The lack of a conjunction causes a comma splice.

C **Correct.** The two independent clauses are separated by *but*, and *except in* is an appropriate idiom.

D *Excepting for* is non-idiomatic.

E The lack of a conjunction causes a comma splice.

The correct answer is C.

SC04853

886. Although appearing less appetizing than most of their round and red supermarket cousins, heirloom tomatoes, grown from seeds saved during the previous year—they are often green and striped, or have plenty of bumps and bruises—heirlooms are more flavorful and thus in increasing demand.

(A) Although appearing less appetizing than most of their round and red supermarket cousins, heirloom tomatoes, grown from seeds saved during the previous year

(B) Although heirloom tomatoes, grown from seeds saved during the previous year, appear less appetizing than most of their round and red supermarket cousins

(C) Although they appear less appetizing than most of their round and red supermarket cousins, heirloom tomatoes, grown from seeds saved during the previous year

(D) Grown from seeds saved during the previous year, heirloom tomatoes appear less appetizing than most of their round and red supermarket cousins

(E) Heirloom tomatoes, grown from seeds saved during the previous year, although they appear less appetizing than most of their round and red supermarket cousins

Rhetorical Construction; Grammatical Construction

The intended meaning could be communicated more effectively by mentioning heirloom tomatoes as early as possible in the sentence, so that we know that the writer is comparing heirloom tomatoes with supermarket tomatoes. The placement of *heirloom tomatoes* and *heirlooms* makes the sentence ungrammatical.

A This is ungrammatical. If *heirloom tomatoes* is the subject of *are more flavorful* … then *heirlooms* has no predicate and is nonsensically superfluous. If *heirlooms* is the subject, *heirloom tomatoes* has no predicate.

B **Correct.** The noun *heirloom tomatoes* is mentioned early in the sentence, followed by a parenthetical definition, and is the subject of the verb *appear*, and *heirlooms* is the subject of *are*.

C The noun *heirloom tomatoes* appears too late in the sentence. Parsing is made harder by introducing the pronoun *they* and revealing its antecedent later in the sentence. The sentence is also ungrammatical. If *heirloom tomatoes* is the subject of *are more flavorful* … then *heirlooms* has no predicate and is nonsensically superfluous. If *heirlooms* is the subject, *heirloom tomatoes* has no predicate.

D Beginning the sentence with the explanatory clause *grown from seeds* … gives it too much importance. It could be construed as the reason why heirloom tomatoes appear less appetizing, which is contrary to the truth. The sentence is also ungrammatical.

E Rhetorical structure requires that *although* appear in the beginning of the clause to which it pertains. Placing it later necessitates the pronoun *they* with antecedent *heirloom tomatoes*, which is redundant. The sentence is also ungrammatical.

The correct answer is B.

SC01987

887. The World Wildlife Fund has declared that global warming, a phenomenon most scientists agree to be caused by human beings in burning fossil fuels, will create havoc among migratory birds by altering the environment in ways harmful to their habitats.

(A) a phenomenon most scientists agree to be caused by human beings in burning fossil fuels,

(B) a phenomenon most scientists agree that is caused by fossil fuels burned by human beings,

(C) a phenomenon that most scientists agree is caused by human beings' burning of fossil fuels,

(D) which most scientists agree on as a phenomenon caused by human beings who burn fossil fuels,

(E) which most scientists agree to be a phenomenon caused by fossil fuels burned by human beings,

Logical Predication; Rhetorical Construction

The underlined portion of the sentence is an appositive defining *global warming* as a phenomenon caused by the burning of fossil fuels by humans. Because this appositive intervenes between the subject (*global warming*) and verb (*will create*) of a clause, it should be expressed as clearly and economically as possible so as not to confuse the meaning of the sentence as a whole.

A *To be caused* and *in burning* are wordy, awkward, and indirect.

B *That is* should immediately follow *phenomenon*, not *agree*.

C **Correct.** The phrase *human beings' burning* is more economical than constructions with prepositional phrases or relative clauses.

D The phrasing is wordy and indirect.

E The phrasing is wordy and the meaning is imprecise; it is not fossil fuels that cause global warming—it is the burning of fossil fuels by humans.

The correct answer is C.

SC02216

888. The largest of all the planets, <u>not only is Jupiter three times so massive as Saturn, the next larger</u> planet, but also possesses four of the largest satellites, or moons, in our solar system.

(A) not only is Jupiter three times so massive as Saturn, the next larger

(B) not only is Jupiter three times as massive as Saturn, the next largest

(C) Jupiter, not only three times as massive as Saturn, the next largest

(D) Jupiter not only is three times as massive as Saturn, the next largest

(E) Jupiter is not only three times so massive as Saturn, the next larger

Diction; Idiom

This sentence begins with a phrase, [*t*]*he largest . . .*, describing the main subject *Jupiter*. The remainder of the sentence describes Jupiter's size and possession of moons, using the idiom *not only x but y* to introduce parallel adjective phrases.

A In this version of the sentence, *so massive as Saturn* violates the parallelism established by the idiom *as* + *adjective* + *as* + *noun*. For the sake of clarity, the noun described by the opening adjectival phrase should immediately follow that phrase. The phrase *next larger* is unidiomatic and unclear. The superlative (*largest*) is appropriate in this consideration of all the planets.

B As in (A), *Jupiter* should immediately follow the opening phrase.

C This version of the sentence violates the parallelism of the idiom *not only x but y*, following the first half of the template with an adjective phrase and the second half with a verb phrase.

D **Correct.** The placement of the subject in relation to the opening modifier, the properly constructed phrasing, and the proper use of comparison words make the meaning of the sentence clear.

E The phrase *so massive as* violates the idiom *as x as y*. Consideration of Jupiter's size among all the planets, including Saturn, requires the superlative form, *largest*.

The correct answer is D.

SC01587

889. While many of the dinosaur fossils found recently in northeast China seem to provide evidence of the kinship between dinosaurs and birds, the wealth of enigmatic fossils <u>seem more likely at this stage that they will inflame debates over the origin of birds rather than</u> settle them.

(A) seem more likely at this stage that they will inflame debates over the origin of birds rather than

(B) seem more likely that it will inflame debates over the origin of birds at this stage than

(C) seems more likely to inflame debates on the origin of birds at this stage rather than

(D) seems more likely at this stage to inflame debates over the origin of birds than to

(E) seems more likely that it will inflame debates on the origin of birds at this stage than to

Agreement; Parallelism

This sentence states that whereas many dinosaur fossils from China suggest that there is a kinship between dinosaurs and birds, the *wealth* of fossils are more ambiguous about what they suggest about the ancestry of birds. The word *wealth* is a mass noun followed by a prepositional phrase; because *wealth* follows the article *the*, the emphasis is on it rather than on the noun in the prepositional phrase, *fossils*. The singular *wealth* requires a singular main verb (*seems*). The comparative expression *more likely . . .* must be followed by an infinitive verb (*to inflame*) so it will be parallel to the verb with which it is compared (*to settle*).

A The singular subject *wealth* does not agree with the plural verb *seem*; both items being compared should be in parallel form (*inflame* and *settle*); the relative clause *that they will inflame* violates the parallelism.

B Again, the relative clause violates the desired parallelism; the singular subject, *wealth*, requires a singular verb, *seems*.

C The subject and the verb agree with one another, but the placement of the modifier *at this stage* makes the modifier appear to describe *origin of the birds* rather than the verb *seems*.

D **Correct.** The verb *seems* agrees in number with the noun *wealth*; the infinitive *to inflame* is parallel with the verb to which it is compared, *to settle*.

E The clause *wealth . . . seems more likely that it will inflame* is not idiomatic, and *that it will inflame* is not parallel with the infinitive verb *to settle*.

The correct answer is D.

SC01622

890. Found only in the Western Hemisphere and surviving through extremes of climate, hummingbirds' range extends from Alaska to Tierra del Fuego, from sea-level rain forests to the edges of Andean snowfields and ice fields at altitudes of 15,000 feet.

(A) Found only in the Western Hemisphere and surviving through extremes of climate, hummingbirds' range extends

(B) Found only in the Western Hemisphere, hummingbirds survive through extremes of climate, their range extending

(C) Hummingbirds, found only in the Western Hemisphere and surviving through extremes of climate, with their range extending

(D) Hummingbirds, found only in the Western Hemisphere and surviving through extremes of climate, their range extends

(E) Hummingbirds are found only in the Western Hemisphere, survive through extremes of climate, and their range extends

Logical Predication; Grammatical Construction

This sentence makes three points about hummingbirds: they live in the Western Hemisphere, they survive extreme climates, and their range is wide and varied. *Hummingbirds*, not *hummingbirds' range*, should be the subject of the sentence.

A The opening modifier, *found . . . and surviving . . .* should modify *hummingbirds*, not, as it does, *hummingbirds' range*.

B **Correct.** *Hummingbirds* is the subject of the sentence, and the use of the absolute phrase *their range extending* appropriately connects the final clause to the rest of the sentence.

C This version of the sentence has no main verb for the subject *Hummingbirds* and as a result is ungrammatical.

D Like (C), this version of the sentence has no main verb for the subject *Hummingbirds*.

E This version of the sentence begins with the subject *Hummingbirds* attached to a pair of verb phrases (*are found . . .* and *survive . . .*) followed by the conjunction *and*, which suggests that what follows should also be a verb phrase; instead, a new subject

is introduced, *their range*. Replacing the comma before *survive* with *and* would render the sentence acceptable.

The correct answer is B.

SC01761

891. She was less successful after she had emigrated to New York compared to her native Germany, photographer Lotte Jacobi nevertheless earned a small group of discerning admirers, and her photographs were eventually exhibited in prestigious galleries across the United States.

(A) She was less successful after she had emigrated to New York compared to

(B) Being less successful after she had emigrated to New York as compared to

(C) Less successful after she emigrated to New York than she had been in

(D) Although she was less successful after emigrating to New York when compared to

(E) She had been less successful after emigrating to New York than in

Idiom; Grammatical Construction; Logical Predication

This sentence compares the success Jacobi experienced after moving to New York to the success she had previously experienced in Germany. The phrase *less successful* anticipates the conclusion of the comparison with the phrase *than*. … The main subject of the sentence is *photographer Lotte Jacobi*, and the main verb is *earned*. The opening clause *She was less successful* … therefore creates a comma splice if the comma is not followed by a conjunction. The most efficient way to incorporate the information about Jacobi's comparative successes in Germany and in New York is to turn this clause into an adjectival phrase describing Jacobi.

A *Less successful* … anticipates *than* rather than *compared to* …; a comma is insufficient to join two independent clauses into a single sentence.

B *As compared to* is an incorrect way to complete the comparison introduced by *less*; *Being* … is unnecessarily wordy and awkward.

C **Correct.** The idiomatic construction *less successful* … *than* is incorporated into an introductory adjectival phrase modifying *Lotte Jacobi*.

D *When compared to* is an incorrect phrase to complete the comparison introduced by *less*.

E A comma is insufficient to join two independent clauses into a single sentence; past-perfect tense is misleading, since it refers to Jacobi's experience in New York, which in fact followed her experience in Germany.

The correct answer is C.

SC02259

892. Scientists have recently found evidence that black holes—regions of space in which matter is so concentrated and the pull of gravity so powerful that nothing, not even light, can emerge from them—probably exist at the core of nearly all galaxies and the mass of each black hole is proportional to its host galaxy.

(A) exist at the core of nearly all galaxies and the mass of each black hole is proportional to

(B) exist at the core of nearly all galaxies and that the mass of each black hole is proportional to that of

(C) exist at the core of nearly all galaxies, and that the mass of each black hole is proportional to

(D) exists at the core of nearly all galaxies, and that the mass of each black hole is proportional to that of

(E) exists at the core of nearly all galaxies and the mass of each black hole is proportional to that of

Logical Predication; Agreement

This sentence focuses attention on two hypotheses about black holes—one about their location and the other about their mass. These hypotheses appear as parallel relative clauses *that black holes . . . exist at . . .* and *that the mass . . . is proportional*. The subject of the first relative clause (*black holes*) is plural, so the clause must be completed with the plural form of *exist*.

A This version of the sentence does not provide the relative pronoun *that* to provide parallel structure for presenting the two things scientific evidence reveals about black holes. This leaves it somewhat unclear whether the final clause is intended to convey part of what the scientists discovered or to express a claim that the writer is making independently of the scientists' discovery. The sentence illogically compares *mass* to *galaxy*.

B **Correct.** The structure of the sentence makes the meaning clear, and the plural verb form agrees with the plural subject.

C The comma appears to signal that the final part of the sentence is intended as an independent clause expressing a separate claim rather than describing part of the scientists' discovery. But if it were intended in that way, it should be set off as a separate sentence, not conjoined with the preceding clause. Like (A), this version makes an illogical comparison between *mass* and *galaxy*.

D The singular verb *exists* does not agree with the plural subject *black holes*. As in (C), the comma is inappropriate because it does not introduce a new independent clause.

E The singular verb *exists* does not agree with the plural subject *black holes*. Like (A), this version lacks the relative pronoun *that*, which would clarify the relationship between the two clauses.

The correct answer is B.

SC02346

893. The use of lie detectors is based on the assumption that lying produces emotional reactions in an individual that, in turn, create unconscious physiological responses.

(A) that, in turn, create unconscious physiological responses

(B) that creates unconscious physiological responses in turn

(C) creating, in turn, unconscious physiological responses

(D) to create, in turn, physiological responses that are unconscious

(E) who creates unconscious physiological responses in turn

Agreement; Rhetorical Construction; Logical Predication

This sentence describes a cause-and-effect sequence; in the underlined portion of the sentence, the relative pronoun *that* refers to the plural noun *reactions*. The verb in the relative clause must therefore be a plural verb. The causal sequence is most clearly expressed by a relative clause that turns the object *emotional reactions* (from the clause *lying causes emotional reactions in an individual*) into the subject (*that*) of a new clause (*that in turn create unconscious physiological responses*). *In turn* is best placed before the verb of the second relative clause, *create*, to clarify that a chain of events is being described.

A **Correct.** This construction clearly indicates the causal sequence.

B The singular verb *creates* does not agree with the subject referenced by the relative pronoun *that* (*reactions*).

C This construction is less successful at clarifying the chain of events because *creating* seems to refer back to *lying*; if used as a participial, *creating* would have to be preceded by a comma.

D This construction does not make clear the causal chain of events, because it is unclear which noun *to create* should attach to; the infinitive construction implies intent, which does not really make sense.

E Because *reactions* is not a person, *who* is the wrong relative pronoun to use.

The correct answer is A.

SC04213

894. Australian embryologists have found evidence that suggests that the elephant is descended from an aquatic animal, and its trunk originally evolving as a kind of snorkel.

(A) that suggests that the elephant is descended from an aquatic animal, and its trunk originally evolving

(B) that has suggested the elephant descended from an aquatic animal, its trunk originally evolving

(C) suggesting that the elephant had descended from an aquatic animal with its trunk originally evolved

(D) to suggest that the elephant had descended from an aquatic animal and its trunk originally evolved

(E) to suggest that the elephant is descended from an aquatic animal and that its trunk originally evolved

Parallelism; Verb Form

The clearest, most economical way of expressing the two things suggested by Australian embryologists' evidence is to format them as relative clauses serving as parallel direct objects of the verb *suggest*. It is awkward and confusing to string together relative clauses: *evidence that suggests that the elephant.* … A clearer way of making this connection is to turn the verb *suggests* into a participle modifying *evidence*. The word *descended* is a predicate adjective following the present-tense verb *is* and describing the present-day elephant. The verb *evolved* should be past tense because it describes how the trunk of the elephant *originally* evolved, not how it is evolving today.

A The string of relative phrases is awkward and confusing; the phrase following the conjunction *and* is not parallel with the relative clause *that the elephant is descended.* …

B The evidence *still* suggests these things about the evolution of the elephant and its trunk, so the present-perfect verb tense is inaccurate.

C *Had descended* is the wrong verb tense; *with* cannot be followed by an independent clause.

D *Had descended* is the wrong tense; the phrase following the conjunction *and* does not parallel the relative clause that precedes the conjunction.

E **Correct.** The two dependent clauses beginning with *that* are in parallel form and contain verbs in the correct tenses.

The correct answer is E.

SC01957

895. Most efforts to combat such mosquito-borne diseases <u>like malaria and dengue have focused either on the vaccination of humans or on exterminating</u> mosquitoes with pesticides.

(A) like malaria and dengue have focused either on the vaccination of humans or on exterminating

(B) like malaria and dengue have focused either on vaccinating of humans or on the extermination of

(C) as malaria and dengue have focused on either vaccinating humans or on exterminating

(D) as malaria and dengue have focused on either vaccinating of humans or on extermination of

(E) as malaria and dengue have focused on either vaccinating humans or exterminating

Diction; Parallelism

The phrase *such … diseases like malaria and dengue* is not a correct way in English to indicate that the two diseases mentioned are examples of a larger category; the correct expression is *such … as.* …

A This use of *such … like …* is incorrect English; the correct expression is *such … as.…* It is better to keep the preposition *on* close to the verb it goes with, *focus*, so as not to repeat it.

B The correct expression is *such … as.…* It is better to keep the preposition *on* close to the verb it goes with, *focus*, so as not to repeat it. This use of the gerund *vaccinating* (followed by *of*) would normally be preceded by *the*, but this would make the phrase awkward. It would be preferable to use *vaccination*, which is parallel to *extermination*.

C This answer choice incorrectly repeats the preposition *on* before *exterminating*.

D This answer choice incorrectly repeats the preposition *on* before *extermination*. This use of the gerund *vaccinating* (followed by *of*) would normally be preceded by *the*, but this would make the phrase awkward. It would be preferable to use *vaccination*, which is parallel to *extermination*.

E **Correct.** This version uses *either … or …* correctly and appropriately uses the parallel forms *vaccinating* and *exterminating*.

The correct answer is E.

SC02344

896. Among the Tsonga, a Bantu-speaking group of tribes in southeastern Africa, dance teams represent their own chief at <u>the court of each other, providing entertainment in return for</u> food, drink, and lodging.

(A) the court of each other, providing entertainment in return for

(B) the court of another and provide entertainment in return for

(C) the court of the other, so as to provide entertainment as a return on

(D) each other's court, entertainment being provided in return for

(E) another's court and provide entertainment as a return on

Diction; Idiom

The point of the sentence is that dancers representing one chief perform at the court of another chief *in return for* gifts. *The court of each other* is unidiomatic and unclear. It could be intended to indicate, somewhat implausibly, that each team has a court that the other teams visit, but *represent their own chief* strongly suggests that the court referred to is the court of another chief. The correct pronoun to refer to a different chief is *another*.

A *The court of each other* is unidiomatic and unclear. *Each other* seems to refer, somewhat illogically, to the dancers.

B **Correct.** The sentence clearly explains the idea, using the correct pronoun *another* and the correct idiom *in return for*.

C This could be confusing in that *the other* indicates that there is only one other chief, whereas *group of tribes* suggests that there may be a number of chiefs. *As a return on* is the incorrect idiom; *a return on* normally refers to a gain from an investment, not a direct exchange of one good for another.

D *Each other's court* somewhat illogically indicates that the dancers each have a court. *Entertainment being provided in return for* is awkward and indirect.

E *As a return on* is the incorrect idiom; *a return on* normally refers to a gain from an investment, not a direct exchange of one good for another.

The correct answer is B.

SC06633

897. Almost like clones in their similarity to one another, the cheetah species' homogeneity makes them especially vulnerable to disease.

(A) the cheetah species' homogeneity makes them especially vulnerable to disease

(B) the cheetah species is especially vulnerable to disease because of its homogeneity

(C) the homogeneity of the cheetah species makes it especially vulnerable to disease

(D) homogeneity makes members of the cheetah species especially vulnerable to disease

(E) members of the cheetah species are especially vulnerable to disease because of their homogeneity

Agreement; Logical Predication

Genetic homogeneity is presented as a cause of cheetahs' vulnerability to disease. The opening adjectival phrase refers to the fact that individual cheetahs are almost like clones of one another because of how genetically similar they are. This adjectival phrase should be followed by what it describes, individual cheetahs. But the structure of the sentence makes it seem that this adjectival phrase is meant—illogically—to describe *the cheetah species' homogeneity*. The sentence structure also fails to make clear that the intended reference is to just one (the only) cheetah species.

A The sentence nonsensically presents the opening phrase as describing *homogeneity*.

B The resulting sentence opens with a reference to a plurality of individuals (*to one another*), but confusingly identifies this with a single (collective) entity, a species.

C The resulting sentence nonsensically presents the opening phrase as describing *homogeneity*.

D The resulting sentence nonsensically presents the opening phrase as describing *homogeneity*.

E **Correct.** The sentence is clear and the opening phrase correctly modifies *members of the cheetah species*.

The correct answer is E.

SC04330

898. As sources of electrical power, windmills now account for only about 2,500 megawatts nationwide, but production is almost expected to double by the end of the year, which would provide enough electricity for 1.3 million households.

(A) almost expected to double by the end of the year, which would provide

(B) almost expected that it will double by the end of the year, thus providing

(C) expected that it will almost double by the end of the year to provide

(D) expected almost to double by the end of the year and thus to provide

(E) expected almost to double by the end of the year, which would thus be providing

Rhetorical Construction; Idiom

The intended meaning of the sentence seems to be that the electricity production of windmills is expected to approximately double by year's end. But instead of saying *almost double*, we have *almost expected*, which is an unclear idea. Also unclear is what the relative pronoun *which* refers to.

A The placement of *almost* makes it nonsensically modify *is expected*. What the relative pronoun *which* refers to is ambiguous: for example, does it refer to the expectation, the possible doubling, or the year?

B The resulting sentence misplaces the adverb *almost*.

C The phrase *production is expected that it will . . .* makes no sense—as opposed to, for example, *it is expected that production will. . . .*

D **Correct.** This sentence clearly conveys the expectations of production: *almost to double* and *thus to provide*. There is no ambiguity as to what will be providing *enough electricity*.

E The referent of the relative pronoun *which* is ambiguous, and the conditional verb form *would thus be providing* is unnecessarily wordy.

The correct answer is D.

SC03154

899. While most of the earliest known ball courts in Mesoamerica date to 900–400 B.C., waterlogged latex balls found at El Manati and representations of ballplayers painted on ceramics found at San Lorenzo attest to the fact that the Mesoamerican ballgame was well established by the mid-thirteenth century B.C.

(A) waterlogged latex balls found at El Manati and representations of ballplayers painted on ceramics found at San Lorenzo attest

(B) waterlogged latex balls found at El Manati and the painting of representations of ballplayers on ceramics found at San Lorenzo attests

(C) waterlogged latex balls found at El Manati and ceramics painted with representations of ballplayers found at San Lorenzo attests

(D) the finding of waterlogged latex balls at El Manati and the painting of representations of ballplayers on ceramics found at San Lorenzo attests

(E) the finding of waterlogged latex balls at El Manati and of representations of ballplayers painted on ceramics at San Lorenzo attest

Logical Predication; Agreement

The sentence points out two pieces of evidence that prove the early existence of ballgames in Mesoamerica: *waterlogged latex balls* and *representations of ballplayers*. The two noun phrases together serve as subjects for the verb *attest*, creating a sentence that logically and correctly expresses its main idea.

A **Correct.** *Waterlogged latex balls* and *representations of ballplayers* together serve as subjects for the verb *attest*.

B *Painting* could refer to something that has been painted, but on that interpretation the sentence does not make sense, because the painting is itself the representation and a single painting would not plausibly be on multiple ceramics. Alternatively, it could refer to an ongoing act of painting, which could not plausibly constitute the kind of evidence referred to. The singular verb *attests* does not agree with the compound subject *balls* and *painting*.

C The singular verb *attests* does not agree with the compound subject *balls* and *ceramics*.

D *Balls*, not *finding*, should be the subject of the verb since the balls are the evidence. *Painting* could refer to something that has been painted, but on that interpretation the sentence does not make sense, because the painting is itself the representation and a single painting would not plausibly be on multiple ceramics. Alternatively, it could refer to an ongoing act of painting, which could not plausibly constitute the kind of evidence referred to. The singular verb *attests* does not agree with the compound subject *finding* and *painting*.

E *Balls* and *representations* should be the subject of the verb *attest* since they are the evidence—not *finding*; the plural verb *attest* does not agree with the singular subject *finding*.

The correct answer is A.

SC04899

900. As criminal activity on the Internet becomes more and more sophisticated, not only are thieves able to divert cash from company bank accounts, they can also pilfer valuable information such as business development strategies, new product specifications, and contract bidding plans, and sell the data to competitors.

(A) they can also pilfer valuable information such as business development strategies, new product specifications, and contract bidding plans, and sell

(B) they can also pilfer valuable information that includes business development strategies, new product specifications, and contract bidding plans, and selling

(C) also pilfering valuable information including business development strategies, new product specifications, and contract bidding plans, selling

(D) but also pilfer valuable information such as business development strategies, new product specifications, and contract bidding plans to sell

(E) but also pilfering valuable information such as business development strategies, new product specifications, and contract bidding plans and selling

Grammatical Construction; Verb Form

The two clauses in this *not only* . . . construction normally require subjects, which this sentence has. The second clause (beginning with *they can*) further divides into two clauses about pilfering and selling; here, the two verbs must have the same form, since each one is the main verb of its clause.

A **Correct.** *They* supplies the needed subject, and *pilfer* and *sell* are both in the bare verb form.

B *Selling* is the wrong form for the main verb of a finite clause; it should be *sell*.

C There is no subject for the *pilfer* clause, and *pilfering* would be the wrong form even if a subject were added.

D There is no subject for the *pilfer* clause.

E There is no subject for the *pilfer* clause, and both *selling* and *pilfering* have the wrong verb for the main verb of a finite clause; they should be *sell* and *pilfer*, respectively.

The correct answer is A.

SC05785

901. Last week local shrimpers held a news conference to take some credit for the resurgence of the rare Kemp's ridley turtle, saying that their compliance with laws requiring that turtle-excluder devices be on shrimp nets protect adult sea turtles.

(A) requiring that turtle-excluder devices be on shrimp nets protect

(B) requiring turtle-excluder devices on shrimp nets is protecting

(C) that require turtle-excluder devices on shrimp nets protect

(D) to require turtle-excluder devices on shrimp nets are protecting

(E) to require turtle-excluder devices on shrimp nets is protecting

Rhetorical Construction; Agreement

The subject of the clause introduced by *saying that* is the singular noun *compliance*. This subject requires the singular form of the verb *protect*. The clearest, most economical way to describe the laws in question is to follow the word *laws* with a present participle *requiring*. To use an infinitive, *to require*, seems to indicate that requiring these devices is the objective of the laws, when in fact the objective is to protect the sea turtles.

A The plural verb *protect* does not agree with the singular subject *compliance*.

B **Correct.** The singular verb *is protecting* agrees with the singular subject *compliance*, and the participial phrase beginning with *requiring* concisely and accurately describes the laws.

C The relative clause *that require* introduces unnecessary wordiness; the plural verb *protect* does not agree with the singular subject *compliance*.

D *To require* obscures the purpose of the laws; the plural verb phrase *are protecting* does not agree with the singular subject *compliance*.

E *To require* obscures the purpose of the laws.

The correct answer is B.

SC03752

902. A ruined structure found at Aqaba, Jordan, was probably a church, as indicated in its eastward orientation and by its overall plan, as well as artifacts, such as glass oil-lamp fragments, found at the site.

(A) A ruined structure found at Aqaba, Jordan, was probably a church, as indicated in its eastward orientation and by its overall plan, as well as

(B) A ruined structure found at Aqaba, Jordan, once probably being a church, was indicated by its eastward orientation, overall plan, and

(C) Indicating that a ruined structure found at Aqaba, Jordan, was probably a church were its eastward orientation and overall plan, but also the

(D) A ruined structure found at Aqaba, Jordan, was probably a church, as indicates its eastward orientation and overall plan, as well as the

(E) That a ruined structure found at Aqaba, Jordan, was probably a church is indicated by its eastward orientation and overall plan, as well as by the

Logical Predication; Parallelism

This sentence explains why a currently ruined structure probably used to be a church. In the best-worded answer choice, the abstract subject (the probability that a certain hypothesis is true) is explained abstractly in a relative clause (*That a ruined structure was probably . . .*) followed by a passive verb (*is indicated*), followed by the prepositional phrase (*by . . .*), which is completed by a parallel listing of forms of evidence, all presented as noun phrases in the expression, (*by*) (*its*) A + B, as well as (*by*) C.

A This version makes the relationship between *as well as . . .* and the rest of the sentence unclear. The most plausible hypothesis is that the artifacts are another of the types of evidence, parallel with the structure's orientation and its plan. The sentence violates the parallelism required in the list by failing to supply the preposition in the final item following *as well as*.

B The subject of this version of the sentence, *structure*, is completed by the verb *was indicated*, creating the illogical assertion that the structure itself, rather than its probable identity, was indicated by its orientation, plan, and attendant artifacts.

C Opening the sentence with the predicate adjective *indicating* leads to a confusing and awkward withholding of the subjects *orientation . . . plan . . . artifacts*.

D The only plausible subject for the singular verb *indicates* is the plural *orientation . . . plan, as well as the artifacts*. Very little about this sentence makes sense.

E **Correct.** The relationships among the parts of the sentence are clear and logical.

The correct answer is E.

SC04343

903. In the major cities of industrialized countries at the end of the nineteenth century, important public places such as theaters, restaurants, shops, and banks had installed electric lighting, but electricity was in less than 1 percent of homes, where lighting was still provided mainly by candles or gas.

(A) electricity was in less than 1 percent of homes, where lighting was still

(B) electricity was in less than 1 percent of homes and lighting still

(C) there had been less than 1 percent of homes with electricity, where lighting was still being

(D) there was less than 1 percent of homes that had electricity, having lighting that was still

(E) less than 1 percent of homes had electricity, where lighting had still been

Rhetorical Construction; Verb Form

In this type of usage, a participle such as *provided* normally must be preceded by some form of the verb *be*. The best choice for this is the past tense *was*, since the main part of the clause describes the situation in the past tense (*electricity was . . .*). To link the ideas of lighting and electricity in homes, *where* is the most efficient and direct expression, superior to alternatives such as *and* or *having*.

A **Correct.** The participle is preceded by the appropriate form *was*, and the clauses are linked efficiently by *where*.

B There is no form of *be* in the second clause, and *and* does not clearly indicate the connection between the two clauses.

C *Had been* and *was being* represent inappropriate tenses, and the *there had been* construction is longer than necessary.

D Both *having lighting* and the *there was* construction are longer and more complicated than necessary. This sentence structure makes *there*, instead of *homes*, the subject of *having*.

E *Had been* is not the appropriate tense for this situation.

The correct answer is A.

SC02965

904. By 1999, astronomers had discovered 17 nearby stars that are orbited by planets about the size of Jupiter.

(A) had discovered 17 nearby stars that are orbited by planets

(B) had discovered 17 nearby stars with planets orbiting them that were

(C) had discovered that there were 17 nearby stars that were orbited by planets

(D) have discovered 17 nearby stars with planets orbiting them that are

(E) have discovered that 17 nearby stars are orbited by planets

Verb Form; Rhetorical Construction

Opening with a past date (*1999*) describing the end point of a period of discovery, this sentence calls for a past perfect main verb to follow the subject *astronomers*. In order to economize on words and maximize clarity, the object of the main clause, *stars*, is modified by a passive relative clause *that are orbited by planets* followed by the adjective phrase *about the size of Jupiter*. This structure avoids an awkward and confusing string of relative clauses and prepositional phrases.

A **Correct.** This version is clear and uses the correct verb form *had discovered*.

B The use of a prepositional phrase *with planets* necessitates the introduction of a relative clause *that were . . .*, in which the referent of the relative pronoun *that* is somewhat uncertain (stars? or planets?). The past tense verb *were* suggests, improbably, that the size of the planets may have changed significantly since 1999.

C The string of relative clauses is awkward and wordy.

D If the sentence was written after 1999, the present perfect tense is illogical, because 1999 is in the past. If it was written in 1999, this way of referring to the then-present time is odd and misleading. The prepositional phrase is wordy and indirect.

E As in (D), the present perfect tense is illogical.

The correct answer is A.

SC01647

905. Although she was considered among her contemporaries to be the better poet than her husband, later Elizabeth Barrett Browning was overshadowed by his success.

(A) Although she was considered among her contemporaries to be the better poet than her husband, later Elizabeth Barrett Browning was overshadowed by his success.

(B) Although Elizabeth Barrett Browning was considered among her contemporaries as a better poet than her husband, she was later overshadowed by his success.

(C) Later overshadowed by the success of her husband, Elizabeth Barrett Browning's poetry had been considered among her contemporaries to be better than that of her husband.

(D) Although Elizabeth Barrett Browning's success was later overshadowed by that of her husband, among her contemporaries she was considered the better poet.

(E) Elizabeth Barrett Browning's poetry was considered among her contemporaries as better than her husband, but her success was later overshadowed by his.

Idiom; Verb Form; Logical Predication

The sentence misuses the locution *the better poet*. It is acceptable to say *a better poet than* but not *the better poet than*. If you have already mentioned two poets *X* and *Y*, and you want to say that *X* is better than *Y*, you can either say *X is a better poet than Y*, or simply, *X is the better poet*.

A This version of the sentence misuses the idiom *the better poet*, most likely confusing it with the idiom *a better poet than*.

B [W]*as considered among her contemporaries as* is awkward and unnecessarily creates a potential misreading (she was considered to be among her contemporaries).

C The subject here is *Elizabeth Barrett Browning's poetry*, not *Elizabeth Barrett Browning*, so the antecedent of *her* in *her husband* could comically be taken to be *Elizabeth Barrett Browning's poetry*. Furthermore, the tense of *had been considered* pairs oddly with *Later overshadowed*. Each seems to be in reaction to some particular time *T*—later than *T* and earlier than *T*, but when *T* was or its significance is never indicated.

D **Correct.** This version avoids the problems of the other versions.

E This sentence comically compares Elizabeth Barrett Browning's poetry to her husband.

The correct answer is D.

SC01618

906. In no other historical sighting did Halley's Comet cause such a worldwide sensation as did its return in 1910–1911.

(A) did its return in 1910–1911
(B) had its 1910–1911 return
(C) in its return of 1910–1911
(D) its return of 1910–1911 did
(E) its return in 1910–1911

Parallelism; Verb Form; Logical Predication

The single subject of this sentence is *Halley's Comet*, and its single verb phrase is *did cause*. The comparison presented by the sentence is between adverbial phrases describing times when the comet was seen. Grammatically, the items being compared are parallel prepositional phrases beginning with the preposition *in: in no other sighting* and *in its return in 1910–1911*. This is the clearest, most economical way of presenting the information. The options that introduce a second verb (*did* or *had*) violate the parallelism and introduce a comparison between the comet itself (subject of the verb *did cause*) and the comet's return (subject of the verb *did* or *had*).

A This sentence implies a comparison between the comet and its return.

B This sentence implies a comparison between the comet and its return; *had* is the wrong auxiliary verb form because it must be followed by *caused* instead of *cause*.

C **Correct.** The parallel prepositional phrases in this sentence correctly compare times when the comet was sighted.

D This sentence implies a comparison between the comet and its return.

E This sentence violates parallelism, implying a comparison between a prepositional phrase and a noun phrase.

The correct answer is C.

SC04836

907. Rock samples taken from the remains of an asteroid about twice the size of the 6-mile-wide asteroid that eradicated the dinosaurs has been dated to be 3.47 billion years old and thus is evidence of the earliest known asteroid impact on Earth.

(A) has been dated to be 3.47 billion years old and thus is
(B) has been dated at 3.47 billion years old and thus
(C) have been dated to be 3.47 billion years old and thus are
(D) have been dated as being 3.47 billion years old and thus
(E) have been dated at 3.47 billion years old and thus are

Agreement; Idiom

The plural subject of this sentence, *Rock samples*, requires plural verb phrases—*have been dated* and *are* rather than *has been dated* and *is*. The idiomatic way of expressing estimation of age is with the phrase *dated at*.

A The subject and verbs do not agree; *dated to be* … is not idiomatic.

B The subject and verb do not agree; the conjunction *and thus* should be followed by a verb.

C *Dated to be* is not idiomatic.

D *As being* is not idiomatic; the conjunction *and thus* should be followed by a verb.

E **Correct.** The plural verbs match the plural subject, and the wording of the sentence is idiomatic.

The correct answer is E.

To register for the GMAT exam go to www.mba.com

10.0 Integrated Reasoning

Please visit gmat.wiley.com and use the unique access code found on the inside front cover of this book to access Integrated Reasoning questions and answer explanations.

10.0 Integrated Reasoning

This chapter contains an overview of integrated reasoning question types, explains what they measure, and offers some tips and strategies for answering them. Because of the way integrated reasoning questions are presented on a computer screen, this book does ***not*** contain any integrated reasoning practice questions. **For Integrated Reasoning practice questions, you can go to gmat.wiley.com and log into your account using the access code located on the inside front cover of this book.**

Overview of the Integrated Reasoning Section:

The Integrated Reasoning section of the GMAT™ exam measures your ability to understand and evaluate multiple sources and types of information—numeric, graphic, and verbal—as they relate to one another.

In this section, you will:

- Use quantitative and verbal reasoning skills to solve complex problems,
- Solve multiple problems in relation to one another, and
- Provide answers in different response formats, rather than only traditional multiple choice.

The Integrated Reasoning section consists of 12 questions to be completed over 30 minutes. Four types of questions are used throughout the section, and some require multiple responses. The questions involve both quantitative and verbal reasoning, either separately or in combination. Questions with a **quantitative component** require a basic knowledge of arithmetic, elementary algebra, and commonly known concepts of geometry and statistics. Questions with a **verbal component** require the ability to understand written material and to reason and evaluate arguments.

Special Features:

- The Integrated Reasoning section is unique from the Quantitative Reasoning and Verbal Reasoning sections of the GMAT™ exam in that it is not computer-adaptive. This means that your performance on earlier questions does not determine the selection of later questions.
- Unlike the other sections of the GMAT™ exam, integrated reasoning questions may have multiple questions on a single screen. For these questions, you can change answers while on the current screen before clicking "Next" to advance to the next question. However, once you move to a new screen, you cannot return to the previous screen.
- The Integrated Reasoning section may contain quantitative elements but is not a test of quantitative skills. An online calculator with basic functions will be available for this section only, whereas it is not available for the Quantitative Reasoning section.

10.1 What Is Measured

The Integrated Reasoning section of the GMAT™ exam measures how well you integrate data to solve complex problems. Specifically, the Integrated Reasoning section tests you in the following skill categories:

Skill Category	Details	Examples
Apply	Ability to understand principles, rules, or other concepts and apply them to a new context or predict consequences that would follow if new information were incorporated	• Decide whether new examples would comply with or violate established rules • Determine how a trend would be affected by new scenarios • Use established principles to draw conclusions about new data
Evaluate	Ability to make judgments about the quality of information	• Decide whether a claim made in one source is supported or weakened by information provided in another source • Determine whether information provided is sufficient to justify a course of action • Judge the strength of evidence in support of an argument or plan • Identify errors or gaps in the information provided
Infer	Ability to draw conclusions based on information or ideas that are not explicitly stated in the materials provided, but can be derived from them	• Calculate the probability of an outcome based on given data • Indicate whether statements follow logically from the information provided • Determine the meaning of a term within a given context • Identify the rate of change in data gathered over time
Recognize	Ability to identify information that is directly presented in the materials provided, including specific facts, details, or relationships between pieces of information	• Identify areas of agreement and disagreement between sources of information • Determine the strength of correlation between two variables • Indicate rank within a table within a combination of categories (e.g., which product maximizes revenue and minimizes costs) • Identify facts provided as evidence in an argument
Strategize	Ability to work toward a goal within the context of particular needs or constraints	• Choose a plan of action that minimizes risks and maximizes value • Identify trade-offs required to reach a goal • Specify the mathematical formula that will yield a desired result • Determine which means of completing a task are consistent within given constraints

10.2 Question Types and Test-Taking Strategies

There are four types of questions in the Integrated Reasoning section:

Multi-Source Reasoning	Table Analysis	Graphics Interpretation	Two-Part Analysis

Multi-Source Reasoning

What will be displayed:

- Two or three sources of information presented on multiple tabs on the left side of your screen
- A question prompt with answer choices on the right side of your screen
- Multiple tabs for you to click on to view information and determine what is needed to answer the question. At least one tab will contain a written passage (e.g., an email or report)
- Other sources may be tables, graphs, diagrams, or other visual information

Example of information sources presented on multiple tabs:

Techniques | Artifacts | Budget

For outside laboratory tests, the museum's first-year budget for the Kaxna collection allows unlimited IRMS testing, and a total of $7,000—equal to the cost of 4 TL tests plus 15 radiocarbon tests, or the cost of 40 ICP-MS tests—for all other tests. For each technique applied by an outside lab, the museum is charged a fixed price per artifact.

The response type:

- For some questions, you will receive a traditional multiple-choice question with five answer choices
- For some questions, you will receive a set of three conditional statements for you to indicate true/false or yes/no
  - Select one answer choice PER ROW (i.e., conditional statement)
  - All three conditional statements must be answered correctly to receive credit for the question

Example of a conditional statement question:

For each of the following artifacts in the museum's Kaxna collection, select *Yes* if, based on the museum's assumptions, a range of dates for the object's creation can be obtained using one of the techniques in the manner described. Otherwise, select *No*.

	Yes	No
Bronze statue of a deer	○	○
Fired-clay pot	○	○
Wooden statue of a warrior	○	○

Strategies for Answering Multi-Source Reasoning Questions

- **Do not expect to be completely familiar with the material presented in multi-source reasoning sets.**

  All the information you will need to answer the questions correctly will be provided. Even so, you may find some graphs, charts, tables, or verbal passages easier to understand than others; all the material is designed to be challenging.

- **Analyze each source of information carefully, as the questions require detailed understanding of the information presented.**

  Text passages often build ideas sequentially, so note as you read how each statement adds to the main idea of the passage as a whole. Some of the passages used with multi-source reasoning questions will be entirely descriptive; others may contain strong opinions.

  The graphic elements in the multi-source reasoning questions come in various forms, such as tables, graphs, diagrams, or charts. Briefly familiarize yourself with the information presented. If scales are provided, note the marked values and labels. Also note the major graphical elements of the information presented.

- **Read the questions carefully, making sure you understand what is being asked.**

  Some questions may require you to recognize discrepancies among different sources of information or to draw inferences using information from different sources. Other questions may require you to determine which one of the information sources is relevant.

  You can refer back to any of the information at any time while you are answering the multi-source reasoning questions by clicking on the tabs in the graphics.

- **Select the answer choices that have the most support based on the information provided.**

  If you happen to be familiar with the subject matter, do not let this knowledge influence your answer. Consider only the information provided in the question when selecting an answer.

Table Analysis

What will be displayed:

- A data table similar to a spreadsheet, which you will be able to sort by each data column

Example of data table with sorting drop-down menu:

The table displays data on *Brazilian agricultural* products in 2009.

Sort By: Production, world share (%) ▼

Commodity	Production, world share (%)	Production, world rank	Exports, world share (%)	Exports, world rank
Pork	4	4	12	4
Cotton	5	5	10	4
Corn	8	4	10	2
Chickens	15	3	38	1
Beef	16	2	22	1
Sugar	21	1	44	1
Soybeans	27	2	40	2
Coffee	40	1	32	1
Orange juice	56	1	82	1

The response type:

- A set of three conditional statements for you to indicate true/false or yes/no
  - Select one answer choice PER ROW (i.e., conditional statement)
  - All three conditional statements must be answered correctly to receive credit for the question

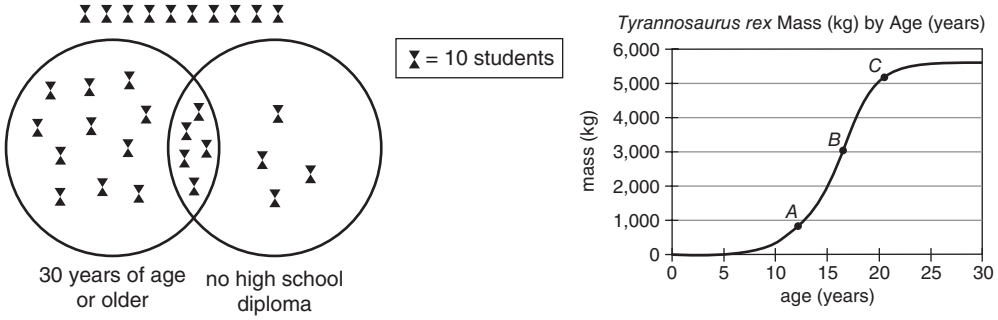
Example of a conditional statement question:

For each of the following statements, select *Yes* if the statement can be shown to be true based on the information in the table. Otherwise select *No*.

Yes	No	
○	○	No individual country produces more than one-fourth of the world's sugar.
○	○	If Brazil produces less than 20% of the world's supply of any commodity listed in the table, Brazil is not the world's top exporter of that commodity.
○	○	Of the commodities in th table for which Brazil ranks first in world exports, Brazil produces more than 20% of the world's supply.

Strategies for Answering Table Analysis Questions

- **Examine the table and accompanying text to determine the type of information provided.**
  Orienting yourself to the data at the start will make it easier to locate the information you need.
- **Read the question carefully.**
  The question will contain the condition that each phrase, statement, numerical value, or algebraic expression does or does not meet. If you clearly understand the condition (e.g., "*is consistent with the information provided*" or "*can be inferred from the information provided*"), you will find it easier to understand what choice you need to make. Some questions involve quantitative skills, but others involve subsets, conditions, or consistency of data, which are not necessarily mathematical.
- **Read each phrase, statement, numerical value, or algebraic expression carefully to determine the data analysis required.**
  Often, the phrase, statement, numerical value, or algebraic expression indicates a relationship that you can clarify by sorting the table by one or more of its columns. Understanding how the data is organized and sorted can help you work more efficiently.
- **Judge each phrase, statement, numerical value, or algebraic expression carefully based on the condition specified.**
  For each, the two answer choices (such as *yes* or *no*, *true* or *false*, *consistent* or *inconsistent*) are mutually exclusive and only one answer selection for each phrase, statement, numerical value, or algebraic expression is correct. Focus your attention on whether the given condition has been met.



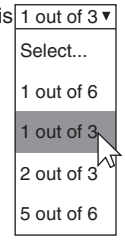
Graphics Interpretation

What will be displayed:

- A graph, diagram, or other visual representation
  - Graphics may include (but are not limited to) bar graphs, line graphs, scatterplots, bubble charts, pie charts, flow charts, or organizational charts

- One or more statements with blank/missing information

Example of graphics:



Example of statement with blank/missing information and drop-down menus:

Use the drop-down menus to complete each statement according to the information presented in the diagram.

If one student is selected at random from the 300 surveyed, the chance that the student will be under 30 or a high school graduate or both is Select... ▼

If one student is selected at random from the 300 surveyed, the chance that the student will be both under 30 and high school graduate is 1 out of 3 ▼

The response type:

- Drop-down menus containing a word, number, or phrase
  - If there is more than one blank, all drop-down menus must be answered correctly in order to receive credit for the question
- Interpret the graphic and complete each statement with the most accurate word, number, or phrase from an embedded drop-down menu

Strategies for Answering Graphics Interpretation Questions

- **Make sure you understand what the problem is asking you to do.**

  Graphics interpretation problems involve interpreting and integrating data, discerning relationships, and making inferences from a set of data. You may have to do some quantitative analysis, such as calculating change in a given value over time or comparing different rates of growth.

- **Read the graphic carefully.**

  Familiarize yourself with the information presented in the graphic. If there are scales on the axes, make note of the marked values. If there are labels, be sure to note any discrepancy between the units in the graph and the units discussed in the text.

- **Read any accompanying text carefully.**

  If there is accompanying text, it may clarify the meaning of the graphic. The text might also present information that is not contained in the graphic but is necessary to answer the question.

- **Read all the choices in the drop-down menu.**

  By checking the menu options, you may find additional information about the task involved.

- **Choose the option that best completes the statement.**

  More than one option in the drop-down menu may seem plausible; choose the one that makes the statement most accurate or logical. If the drop-down menu is preceded by a phrase, such as *nearest to* or *closest to*, choose the option that is closest to your calculated answer. You might find it helpful to read the statement again with your answer choice in place.

Two-Part Analysis

Two-part analysis questions, which measure your ability to solve complex problems, cover a wide range of content and could be quantitative, verbal, or some combination of both. The versatility of the format lends itself to a wide range of content and skills measured, including the ability to evaluate trade-offs, solve simultaneous equations, and discern relationships between two entities.

What is displayed:

- A brief written scenario or problem
- A table with two related choices relevant to the information provided
  - The two related choices are represented by the first two columns
  - Your answer options are listed in the third column of the table

Example of a written scenario:

A literature department at a small university in an English-speaking country is organizing a two-day festival in which it will highlight the works of ten writers who have been the subjects of recent scholarly work by the faculty. Five writers will be featured each day. To reflect the department's strengths, the majority of writers scheduled for one of the days will be writers whose primary writing language is not English. On the other day of the festival, at least four of the writers will be women. Neither day should have more than two writers from the same country. Departmental members have already agreed on a schedule for eight of the writers. That schedule showing names, along with each writer's primary writing language and country of origin, is shown.

• Day 1:	• Day 2:
Achebe (male, English, Nigeria)	Rowling (female, English, UK)
Weil (female, French, France)	Austen (female, English, UK)
Gavalda (female, French, France)	Ocantos (male, Spanish, Argentina)
Barrett Browning (female, English, UK)	Lu Xun (male, Chinese, China)

Example of a response based on passage information:

Select a writer who could be added to the schedule for either day. Then select a writer who could be added to the schedule for neither day. Make only two selections, one in each column.

Either day	Neither day	Writer
○	○	LeGuin (female, English, USA)
○	○	Longfellow (make, English, USA)
○	○	Murasaki (female, Japanese, Japan)
○	○	Colette (female, French, France)
○	○	Vargas Llosa (male, Spanish, Peru)
○	○	Zola (male, French, France)

The response type:

- Select one response PER COLUMN (not per row)
  - A single correct answer must be selected for each column to receive credit for the question
  - The same answer choice can be selected for both response columns (i.e., the two answer choices are not mutually exclusive)

Strategies for Answering Two-Part Analysis Questions

- **Read the information carefully.**

  All the material presented is designed to be challenging. If you happen to be familiar with the subject matter, do not let this knowledge influence your choice. Answer the question only on the basis of what is given.

- **Determine exactly what the question is asking.**

  Do not assume that the headings in the two response columns are complete descriptions of the tasks to be performed. Pay close attention to how the question describes the tasks. Often the headings in the two response columns are shorthand references to the tasks.

- **Remember that you are only supposed to make two choices.**

  Select one answer in each of the first two columns of the response table. You do not need to make a choice for each *row* of the table. The third column contains possible answers to the two questions.

- **Review all available answers before making a final choice.**

  Do not assume you have chosen the best answers in the two columns without reading all the options.

- **Determine whether tasks are dependent or independent.**

  Some two-part analysis questions pose two tasks that can be carried out individually. Others pose one task with two dependent parts, each of which you must carry out correctly to create a single correct response. With dependent questions, you cannot answer the question logically without making both choices. Be sure to examine your answers in relation to one another.

- **Keep in mind that the same answer choice might be the correct response for both columns.**

  If the tasks associated with the two response columns are *not* mutually exclusive, it is possible that one answer option satisfies the conditions of both response columns.

Additional Tips for the Integrated Reasoning Section

Examine and analyze all given data

- Do not expect to be completely familiar with all the material presented. You may find some graphs, charts, tables, or verbal passages to be easier to understand than others. All the material is designed to be challenging, but if you have familiarity with the subject matter, do not let this knowledge influence your answer choices. Answer all questions based on the information that is provided.
- For graphs and charts, make sure you take note of the scales on the axes and read all accompanying text carefully, as it may help clarify the meaning of the graphic or provide additional valuable information.

Read each question carefully

- Make sure you are clear about exactly what the question is asking. Fully read each question problem, including the accompanying text, which usually comes before the answer tables.

Scan the answer choices

- It may be helpful to scan the answer choices prior to doing any work; sometimes the answer choices will give you additional information about the task involved.

Manage your time wisely

- You have 30 minutes to complete 12 questions in the Integrated Reasoning section, which is 2½ minutes per question.
- Remember that many questions have a considerable amount of information to comprehend and consist of multiple parts.

Additional Integrated Reasoning Samples

For additional sample questions in each question format, visit mba.com:

Additional Integrated Reasoning Practice

Use your unique access code found in the inside front cover of this book to access 74 Integrated Reasoning practice questions with answer explanations at gmat.wiley.com. Additional Integrated Reasoning practice questions are available for purchase on mba.com.

10.3 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

11.0 Analytical Writing Assessment

11.0 Analytical Writing Assessment

The Analytical Writing Assessment (AWA) consists of one 30-minute writing task called the Analysis of an Argument. In this section, you must read a brief argument, analyze the reasoning behind it, and then write a critique of the argument. You are not asked to state your opinion but rather to analyze the one given. For example, you may, consider what questionable assumptions underlie the author's thinking, what alternative explanations or counterexamples might weaken the conclusion, or what sort of evidence could help strengthen or refute the argument.

For this task, you will use the computer keyboard to type your response. You will be able to use typical word-processing functions—that is, you can cut, copy, paste, undo, and redo. These functions can be accessed either by using the keyboard or by using the mouse to click on icons on the screen. You will be able to take notes when planning your response.

It is important that you plan carefully before you begin writing. Read the specific analytical writing task several times to make sure you understand exactly what is expected. Think about how you might present your analysis. You may want to sketch an outline to help you plan and organize. Keep in mind the 30-minute time limit as you plan your response—keep your analysis brief enough to allow for plenty of time to write a first draft, read it over carefully, and make any necessary corrections or revisions before you run out of time. As you write, try to keep your language clear, your sentences concise, and the flow of your ideas logical. State your premise clearly at the beginning, and make sure you present a strong conclusion at the end.

11.1 What Is Measured

The Analytical Writing Assessment is designed as a direct measure of your ability to think critically and communicate your ideas. More specifically, the Analysis of an Argument task tests your ability to formulate an appropriate and constructive critique of a prescribed conclusion based upon a specific line of thinking.

The argument that you will analyze may concern a topic of general interest, possibly related to business, or to a variety of other subjects. It is important to note, however, that no Analysis of an Argument question presupposes any specific knowledge of business or other specific content areas. Only your capacity to write analytically is assessed.

Professional essay raters, including college and university faculty members from various subject-matter areas, including but not limited to management education, will evaluate your essay. For information on how readers are qualified, visit mba.com. Readers are trained to be sensitive and fair in evaluating the responses of nonnative speakers of English. A computer scoring program will also evaluate your essays. Your responses will be scored on the basis of:

- the overall quality of your ideas
- your ability to organize, develop, and express those ideas
- how well you provide relevant supporting reasons and examples
- your ability to control the elements of standard written English

11.2 Test-Taking Strategies

1. **Read the question carefully.**
   Make sure you have taken all parts of a question into account before you begin to respond to it.

2. **Do not start to write immediately.**
   Take a few minutes to think about the question and plan a response before you begin writing. You may find it helpful to write a brief outline or jot down some ideas on the erasable notepad provided. Take care to organize your ideas and develop them fully, but leave time to reread your response and make any revisions that you think would improve it.

3. **Focus on the task of analyzing and critiquing a line of thinking or reasoning.**
   Get used to asking yourself questions such as the following: *What questionable assumptions might underlie the thinking? What alternative explanations might be given? What counterexamples might be raised? What additional evidence might prove useful in fully and fairly evaluating the reasoning?*

4. **Develop fully any examples you use.**
   Do not simply list your examples—explain how they illustrate your point.

5. **Discuss alternative explanations or counterexamples.**
   These techniques allow you to introduce illustrations and examples drawn from your observations, experiences, and reading.

6. **Make sure your response reads like a narrative.**
   Your response should not read like an outline. It should use full sentences, a coherent organizational scheme, logical transitions between points, and appropriately introduced and developed examples.

11.3 The Directions

These are the directions that you will see for the Analysis of an Argument essay. If you read them carefully and understand them clearly before going to sit for the test, you will not need to spend too much time reviewing them when you take the GMAT™ exam. They read as follows:

ANALYSIS OF AN ARGUMENT

In this section, you will be asked to write a critique of the argument presented. *You are* not *asked to present your own views on the subject*.

Writing Your Response: Take a few minutes to evaluate the argument and plan a response before you begin writing. Be sure to leave enough time to reread your response and make any revisions that you think are necessary.

Evaluation of Your Response: Scores will reflect how well you:

- organize, develop, and express your ideas about the argument presented
- provide relevant supporting reasons and examples
- control the elements of standard written English

11.4 GMAT™ Scoring Guide: Analysis of an Argument

6 Outstanding

A 6 paper presents a cogent, well-articulated critique of the argument and demonstrates mastery of the elements of effective writing.

A typical paper in this category exhibits the following characteristics:

- clearly identifies important features of the argument and analyzes them insightfully
- develops ideas cogently, organizes them logically, and connects them with clear transitions
- effectively supports the main points of the critique
- demonstrates control of language, including diction and syntactic variety
- demonstrates facility with the conventions of standard written English but may have minor flaws

5 Strong

A 5 paper presents a well-developed critique of the argument and demonstrates good control of the elements of effective writing.

A typical paper in this category exhibits the following characteristics:

- clearly identifies important features of the argument and analyzes them in a generally thoughtful way
- develops ideas clearly, organizes them logically, and connects them with appropriate transitions
- sensibly supports the main points of the critique
- demonstrates control of language, including diction and syntactic variety
- demonstrates facility with the conventions of standard written English but may have occasional flaws

4 Adequate

A 4 paper presents a competent critique of the argument and demonstrates adequate control of the elements of writing.

A typical paper in this category exhibits the following characteristics:

- identifies and analyzes important features of the argument
- develops and organizes ideas satisfactorily but may not connect them with transitions
- supports the main points of the critique
- demonstrates sufficient control of language to convey ideas with reasonable clarity
- generally follows the conventions of standard written English but may have some flaws

3 Limited

A 3 paper demonstrates some competence in analytical writing skills and in its control of the elements of writing but is plainly flawed.

A typical paper in this category exhibits one or more of the following characteristics:

- does not identify or analyze most of the important features of the argument, although some analysis of the argument is present
- mainly analyzes tangential or irrelevant matters, or reasons poorly
- is limited in the logical development and organization of ideas
- offers support of little relevance and value for points of the critique
- does not convey meaning clearly
- contains occasional major errors or frequent minor errors in grammar, usage, and mechanics

2 Seriously Flawed

A 2 paper demonstrates serious weaknesses in analytical writing skills.

A typical paper in this category exhibits one or more of the following characteristics:

- does not present a critique based on logical analysis, but may instead present the writer's own views on the subject
- does not develop ideas, or is disorganized and illogical
- provides little, if any, relevant or reasonable support
- has serious and frequent problems in the use of language and in sentence structure
- contains numerous errors in grammar, usage, and mechanics that interfere with meaning

1 Fundamentally Deficient

A 1 paper demonstrates fundamental deficiencies in analytical writing skills.

A typical paper in this category exhibits more than one of the following characteristics:

- provides little evidence of the ability to understand and analyze the argument
- provides little evidence of the ability to develop an organized response
- has severe and persistent errors in language and sentence structure
- contains a pervasive pattern of errors in grammar, usage, and mechanics that results in incoherence

0 No Score

A paper in this category is off topic, not written in English, is merely attempting to copy the topic, or consists only of keystroke characters.

NR Blank

11.5 Sample: Analysis of an Argument

Read the statement and the instructions that follow it, and then make any notes that will help you plan your response.

The following appeared as part of an article in a daily newspaper:

"The computerized on-board warning system that will be installed in commercial airliners will virtually solve the problem of midair plane collisions. One plane's warning system can receive signals from another's transponder—a radio set that signals a plane's course—in order to determine the likelihood of a collision and recommend evasive action."

Discuss how well reasoned you find this argument. In your discussion, be sure to analyze the line of reasoning and the use of evidence in the argument. For example, you may need to consider what questionable assumptions underlie the thinking and what alternative explanations or counterexamples might weaken the conclusion. You can also discuss what sort of evidence would strengthen or refute the argument, what changes in the argument would make it more logically sound, and what, if anything, would help you better evaluate its conclusion.

Sample Paper 6

The argument that this warning system will virtually solve the problem of midair plane collisions omits some important concerns that must be addressed to substantiate the argument. The statement that follows the description of what this warning system will do simply describes the system and how it operates. This alone does not constitute a logical argument in favor of the warning system, and it certainly does not provide support or proof of the main argument.

Most conspicuously, the argument does not address the cause of the problem of midair plane collisions, the use of the system by pilots and flight specialists, or who is involved in the midair plane collisions. First, the argument assumes that the cause of the problem is that the planes' courses, the likelihood of collisions, and actions to avoid collisions are unknown or inaccurate. In a weak attempt to support its claim, the argument describes a system that makes all of these things accurately known. But if the cause of the problem of midair plane collisions is that pilots are not paying attention to their computer systems or flight operations, the warning system will not solve the collision problem. Second, the argument never addresses the interface between individuals and the system and how this will affect the warning system's objective of obliterating the problem of collisions. If the pilot or flight specialist does not conform to what the warning system suggests, midair collisions will not be avoided. Finally, if planes other than commercial airliners are involved in the collisions, the problem of these collisions cannot be solved by a warning system that will not be installed on non-commercial airliners. The argument also does not address what would happen in the event that the warning system collapses, fails, or does not work properly.

Because the argument leaves out several key issues, it is not sound or persuasive. If it included the items discussed above instead of solely explaining what the system supposedly does, the argument would have been more thorough and convincing.

Explanation of Score 6

This response is, as the scoring guide requires of a 6, "cogent"and "well articulated": all the points made not only bear directly on the argument to be analyzed, but also contribute to a single, integrated development of the writer's critique. The writer begins by making the controlling point that a mere description of the warning system's mode of operation cannot serve as a true argument proving the system's effectiveness, since the description overlooks several major considerations. The writer then identifies these considerations—what causes midair collisions, how pilots will actually use the commercial airline warning system, what kinds of airplanes are typically involved in midair collisions—and, citing appropriate counterexamples (e.g., what if pilots do not pay attention to their instruments?), explains fully how each oversight undermines the conclusion that the warning system will virtually eliminate midair plane collisions.

Throughout, the writer complements the logically organized development of this critique with good, clear prose that demonstrates the ability not only to control language and vary sentence structure but also to express ideas forcibly (e.g., "the argument never addresses the interface between individuals and the system"). Of course, as in any response written under time constraints, occasional minor flaws can be found. For example, "the argument assumes that the cause of the problem is that the planes' courses, the likelihood of collisions, and actions to avoid collisions are unknown or inaccurate" is wordy and imprecise: how can a course, a likelihood, or actions be inaccurate? But flaws such as these, minor and infrequent, do not interfere with the overall clarity and forcefulness of this outstanding response.

Sample Paper 4

The argument is not logically convincing. It does not state whether all planes can receive signals from each other. It does not state whether planes constantly receive signals. If they only receive signals once every certain time interval, collisions will not definitely be prevented. Further if they receive a signal right before they are about to crash, they cannot avoid each other.

The main flaw in the argument is that it assumes that the two planes, upon receiving each other's signals, will know which evasive action to take. For example, the two planes could be going towards each other and then receive the signals. If one turns at an angle to the left and the other turns at an angle to the right, the two planes will still crash. Even if they receive an updated signal, they will not have time to avoid each other.

The following argument would be more sound and persuasive. The new warning system will solve the problem of midair plane collisions. Each plane will receive constant, continual signals from each other. If the two planes are headed in a direction where they will crash, the system will coordinate the signals, and tell one plane to go one way, and the other plane to go another way. The new system will ensure that the two planes will turn in different directions so they don't crash by trying to prevent the original crash. In addition, the two planes will be able to see themselves and the other on a computer screen, to aid in the evasive action.

Explanation of Score 4

This response competently cites a number of deficiencies in the argument presented: the information given about the nature of the signals sent and received and the evasive action recommended does not warrant the conclusion that the onboard warning system "will virtually solve the problem of midair plane collisions." However, in discussing these insufficiencies in the argument, the response reveals an unevenness in the quality of its reasoning. For example, while it is perfectly legitimate to point out that the argument assumes too much and says too little about the evasive action that will be recommended by the warning system, it is farfetched to suggest that the system might be so poorly designed as to route two approaching airplanes to the same spot. Likewise, while it is fair to question the effectiveness of a warning signal about which the argument says so little, it is not reasonable to assume that the system would be designed to space signals so far apart that they would prove useless. Rather than invent implausibly bad versions of the warning system to prove that it might be ineffective, a stronger response would analyze unexplored possibilities inherent in the information that is given—for example, the possibility that pilots might not be able to respond quickly and effectively to the radio signals the argument says they will receive when the new system is installed. The "more sound and persuasive argument" in the last paragraph, while an improvement on the original, continues to overlook this possibility and also assumes that other types of aircraft without transponders will pose no problems.

The organization of ideas, while generally sound, is sometimes weakened by needless repetition of the same points, as in sentences 4 and 5 of the last paragraph. The writing contains minor instances of awkwardness (e.g., "Each plane will receive constant, continual signals from each other" in paragraph 3), but is free of flaws that make understanding difficult. However, though the writing is generally clean and clear, the syntax does not show much variety. A few sentences begin with "if" clauses, but almost all the rest, even those that begin with a transitional phrase such as "for example" or "in addition," conform to a "subject, verb, complement" pattern. The first paragraph, in which the second and third sentences begin the same way ("It does not state"), is particularly repetitious.

Sample Paper 2

This argument has no information about air collisions. I think most cases happen in new airports because the air traffic I heavy. In this case sound airport control could solve the problem.

I think this argument is logically reasonable. Its assumption is that plane collisions are caused by planes that don't know each others positions. So pilots can do nothing, if they know each others position through the system it will solve the problem.

If it can provide evidence the problem is lack of knowledge of each others positions, it will be more sound and persuasive.

More information about air collisions is helpful, (the reason for air collisions).

Explanation of Score 2

This response is seriously flawed in several ways. First of all, it has very little substance. The writer appears to make only one point—that while it seems reasonable to assume that midair collisions would be less likely if pilots were sure of each other's positions, readers cannot adequately judge this assumption without more information about where, why, and how such collisions occur. This point, furthermore, is neither explained by a single reason beyond what is given in the topic nor supported by a single example. Legitimate though it is, it cannot, alone and undeveloped, serve as an adequate response to the argument.

Aside from being undeveloped, the response is confusing. At the outset, it seems to be critical of the argument. The writer begins by pointing to the inadequacy of the information given; then speculates, without evidence, that "most cases happen in new airports"; and then suggests that the problem should be addressed by improving "airport control," not (it is implied) by installing onboard warning systems. After criticizing the argument in the first paragraph, the writer confusingly seems to endorse it in the second. Then, in the remainder of the response, the writer returns to a critical stance.

The general lack of coherence is reflected in the serious and frequent writing problems that make meaning hard to determine—for example, the elliptical and ungrammatical "So pilots can do nothing, if they know each others position through the system it will solve the problem" (paragraph 2) or "If it can provide evidence the problem is lack of knowledge of each others positions, it will be more sound and persuasive" (paragraph 3). The prose suffers from a variety of basic errors in grammar, usage, and mechanics.

11.6 Analysis of an Argument Sample Topics

The following appeared as part of an annual report sent to stockholders by Olympic Foods, a processor of frozen foods:

"Over time, the costs of processing go down because as organizations learn how to do things better, they become more efficient. In color film processing, for example, the cost of a 3-by-5-inch print fell from 50 cents for five-day service in 1970 to 20 cents for one-day service in 1984. The same principle applies to the processing of food. And since Olympic Foods will soon celebrate its 25th birthday, we can expect that our long experience will enable us to minimize costs and thus maximize profits."

Discuss how well reasoned you find this argument. In your discussion be sure to analyze the line of reasoning and the use of evidence in the argument. For example, you may need to consider what questionable assumptions underlie the thinking and what alternative explanations or counterexamples might weaken the conclusion. You can also discuss what sort of evidence would strengthen or refute the argument, what changes in the argument would make it more logically sound, and what, if anything, would help you better evaluate its conclusion.

The following appeared in a memorandum from the business department of the Apogee Company:

"When the Apogee Company had all its operations in one location, it was more profitable than it is today. Therefore, the Apogee Company should close down its field offices and conduct all its operations from a single location. Such centralization would improve profitability by cutting costs and helping the company maintain better supervision of all employees."

Discuss how well reasoned … etc.

The following appeared in a memorandum issued by a large city's council on the arts:

"In a recent citywide poll, 15 percent more residents said that they watch television programs about the visual arts than was the case in a poll conducted five years ago. During these past five years, the number of people visiting our city's art museums has increased by a similar percentage. Since the corporate funding that supports public television, where most of the visual arts programs appear, is now being threatened with severe cuts, we can expect that attendance at our city's art museums will also start to decrease. Thus some of the city's funds for supporting the arts should be reallocated to public television."

Discuss how well reasoned … etc.

The following appeared in a report presented for discussion at a meeting of the directors of a company that manufactures parts for heavy machinery:

"The falling revenues that the company is experiencing coincide with delays in manufacturing. These delays, in turn, are due in large part to poor planning in purchasing metals. Consider further that the manager of the department that handles purchasing of raw materials has an excellent background in general business, psychology, and sociology, but knows little about the properties of metals. The company should, therefore, move the purchasing manager to the sales department and bring in a scientist from the research division to be manager of the purchasing department."

Discuss how well reasoned … etc.

The following appeared in an announcement issued by the publisher of *The Mercury*, a weekly newspaper:

"Since a competing lower-priced newspaper, *The Bugle*, was started five years ago, *The Mercury*'s circulation has declined by 10,000 readers. The best way to get more people to read *The Mercury* is to reduce its price below that of *The Bugle*, at least until circulation increases to former levels. The increased circulation of *The Mercury* will attract more businesses to buy advertising space in the paper."

Discuss how well reasoned … etc.

The following appeared as part of an article in a magazine devoted to regional life:

"Corporations should look to the city of Helios when seeking new business opportunities or a new location. Even in the recent recession, Helios's unemployment rate was lower than the regional average. It is the industrial center of the region, and historically it has provided more than its share of the region's manufacturing jobs. In addition, Helios is attempting to expand its economic base by attracting companies that focus on research and development of innovative technologies."

Discuss how well reasoned … etc.

The following appeared in the health section of a magazine on trends and lifestyles:

"People who use the artificial sweetener aspartame are better off consuming sugar, since aspartame can actually contribute to weight gain rather than weight loss. For example, high levels of aspartame have been shown to trigger a craving for food by depleting the brain of a chemical that registers satiety, or the sense of being full. Furthermore, studies suggest that sugars, if consumed after at least 45 minutes of continuous exercise, actually enhance the body's ability to burn fat. Consequently, those who drink aspartame-sweetened juices after exercise will also lose this calorie-burning benefit. Thus it appears that people consuming aspartame rather than sugar are unlikely to achieve their dietary goals."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a corporate newsletter:

"The common notion that workers are generally apathetic about management issues is false, or at least outdated: a recently published survey indicates that 79 percent of the nearly 1,200 workers who responded to survey questionnaires expressed a high level of interest in the topics of corporate restructuring and redesign of benefits programs."

Discuss how well reasoned … etc.

The following appeared in the opinion column of a financial magazine:

"On average, middle-aged consumers devote 39 percent of their retail expenditure to department store products and services, while for younger consumers the average is only 25 percent. Since the number of middle-aged people will increase dramatically within the next decade, department stores can expect retail sales to increase significantly during that period. Furthermore, to take advantage of the trend, these stores should begin to replace some of those products intended to attract the younger consumer with products intended to attract the middle-aged consumer."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"This past winter, 200 students from Waymarsh State College traveled to the state capitol building to protest against proposed cuts in funding for various state college programs. The other 12,000 Waymarsh students evidently weren't so concerned about their education: they either stayed on campus or left for winter break. Since the group who did not protest is far more numerous, it is more representative of the state's college students than are the protesters. Therefore the state legislature need not heed the appeals of the protesting students."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"In the first four years that Montoya has served as mayor of the city of San Perdito, the population has decreased and the unemployment rate has increased. Two businesses have closed for each new business that has opened. Under Varro, who served as mayor for four years before Montoya, the unemployment rate decreased and the population increased. Clearly, the residents of San Perdito would be best served if they voted Montoya out of office and reelected Varro."

Discuss how well reasoned … etc.

The following appeared as part of a promotional campaign to sell advertising space in the *Daily Gazette* to grocery stores in the Marston area:

"Advertising the reduced price of selected grocery items in the *Daily Gazette* will help you increase your sales. Consider the results of a study conducted last month. Thirty sale items from a store in downtown Marston were advertised in *The Gazette* for four days. Each time one or more of the 30 items was purchased, clerks asked whether the shopper had read the ad. Two-thirds of the 200 shoppers asked answered in the affirmative. Furthermore, more than half the customers who answered in the affirmative spent over $100 at the store."

Discuss how well reasoned … etc.

The following appeared as part of a campaign to sell advertising time on a local radio station to local businesses:

"The Cumquat Café began advertising on our local radio station this year and was delighted to see its business increase by 10 percent over last year's totals. Their success shows you how you can use radio advertising to make your business more profitable."

Discuss how well reasoned … etc.

The following appeared as part of a newspaper editorial:

"Two years ago Nova High School began to use interactive computer instruction in three academic subjects. The school dropout rate declined immediately, and last year's graduates have reported some impressive achievements in college. In future budgets the school board should use a greater portion of the available funds to buy more computers, and all schools in the district should adopt interactive computer instruction throughout the curriculum."

Discuss how well reasoned … etc.

The following appeared as a part of an advertisement for Adams, who is seeking re-election as governor:

"Re-elect Adams, and you will be voting for proven leadership in improving the state's economy. Over the past year alone, 70 percent of the state's workers have had increases in their wages, 5,000 new jobs have been created, and six corporations have located their headquarters here. Most of the respondents in a recent poll said they believed that the economy is likely to continue to improve if Adams is re-elected. Adams's opponent, Zebulon, would lead our state in the wrong direction, because Zebulon disagrees with many of Adams's economic policies."

Discuss how well reasoned … etc.

The following appeared as part of an article in the education section of a Waymarsh city newspaper:

"Throughout the last two decades, those who earned graduate degrees found it very difficult to get jobs teaching their academic specialties at the college level. Those with graduate degrees from Waymarsh University had an especially hard time finding such jobs. But better times are coming in the next decade for all academic job seekers, including those from Waymarsh. Demographic trends indicate that an increasing number of people will be reaching college age over the next 10 years; consequently, we can expect that the job market will improve dramatically for people seeking college-level teaching positions in their fields."

Discuss how well reasoned … etc.

The following appeared in an article in a consumer-products magazine:

"Two of today's best-selling brands of full-strength prescription medication for the relief of excess stomach acid, Acid-Ease and Pepticaid, are now available in milder nonprescription forms. Doctors have written 76 million more prescriptions for full-strength Acid-Ease than for full-strength Pepticaid. So people who need an effective but milder nonprescription medication for the relief of excess stomach acid should choose Acid-Ease."

Discuss how well reasoned … etc.

The following is an excerpt from a memo written by the head of a governmental department:

"Neither stronger ethics regulations nor stronger enforcement mechanisms are necessary to ensure ethical behavior by companies doing business with this department. We already have a code of ethics that companies doing business with this department are urged to abide by, and virtually all of these companies have agreed to follow it. We also know that the code is relevant to the current business environment because it was approved within the last year, and in direct response to specific violations committed by companies with which we were then working—not in abstract anticipation of potential violations, as so many such codes are."

Discuss how well reasoned … etc.

The following appeared as part of an article in the travel section of a newspaper:

"Over the past decade, the restaurant industry in the country of Spiessa has experienced unprecedented growth. This surge can be expected to continue in the coming years, fueled by recent social changes: personal incomes are rising, more leisure time is available, single-person households are more common, and people have a greater interest in gourmet food, as evidenced by a proliferation of publications on the subject."

Discuss how well reasoned … etc.

The following appeared in an article in a health and fitness magazine:

"Laboratory studies show that Saluda Natural Spring Water contains several of the minerals necessary for good health and that it is completely free of bacteria. Residents of Saluda, the small town where the water is bottled, are hospitalized less frequently than the national average. Even though Saluda Natural Spring Water may seem expensive, drinking it instead of tap water is a wise investment in good health."

Discuss how well reasoned … etc.

The following appeared as part of an editorial in an industry newsletter:

"While trucking companies that deliver goods pay only a portion of highway maintenance costs and no property tax on the highways they use, railways spend billions per year maintaining and upgrading their facilities. The government should lower the railroad companies' property taxes, since sending goods by rail is clearly a more appropriate mode of ground transportation than highway shipping. For one thing, trains consume only a third of the fuel a truck would use to carry the same load, making them a more cost-effective and environmentally sound mode of transport. Furthermore, since rail lines already exist, increases in rail traffic would not require building new lines at the expense of taxpaying citizens."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a newspaper:

"As public concern over drug abuse has increased, authorities have become more vigilant in their efforts to prevent illegal drugs from entering the country. Many drug traffickers have consequently switched from marijuana, which is bulky, or heroin, which has a market too small to justify the risk of severe punishment, to cocaine. Thus enforcement efforts have ironically resulted in an observed increase in the illegal use of cocaine."

Discuss how well reasoned … etc.

The following appeared in a speech delivered by a member of the city council:

"Twenty years ago, only half of the students who graduated from Einstein High School went on to attend a college or university. Today, two-thirds of the students who graduate from Einstein do so. Clearly, Einstein has improved its educational effectiveness over the past two decades. This improvement has occurred despite the fact that the school's funding, when adjusted for inflation, is about the same as it was 20 years ago. Therefore, we do not need to make any substantial increase in the school's funding at this time."

Discuss how well reasoned … etc.

The following appeared in a memo from the customer service division to the manager of Mammon Savings and Loan:

"We believe that improved customer service is the best way for us to differentiate ourselves from competitors and attract new customers. We can offer our customers better service by reducing waiting time in teller lines from an average of six minutes to an average of three. By opening for business at 8:30 instead of 9:00, and by remaining open for an additional hour beyond our current closing time, we will be better able to accommodate the busy schedules of our customers. These changes will enhance our bank's image as the most customer-friendly bank in town and give us the edge over our competition."

Discuss how well reasoned … etc.

The following appeared as part of an article in a magazine on lifestyles:

"Two years ago, City L was listed fourteenth in an annual survey that ranks cities according to the quality of life that can be enjoyed by those living in them. This information will enable people who are moving to the state in which City L is located to confidently identify one place, at least, where schools are good, housing is affordable, people are friendly, the environment is safe, and the arts flourish."

Discuss how well reasoned … etc.

The following appeared in a memorandum from a member of a financial management and consulting firm:

"We have learned from an employee of Windfall, Ltd., that its accounting department, by checking about 10 percent of the last month's purchasing invoices for errors and inconsistencies, saved the company some $10,000 in overpayments. In order to help our clients increase their net gains, we should advise each of them to institute a policy of checking all purchasing invoices for errors. Such a recommendation could also help us get the Windfall account by demonstrating to Windfall the rigorousness of our methods."

Discuss how well reasoned … etc.

The following appeared in a newspaper editorial:

"As violence in movies increases, so do crime rates in our cities. To combat this problem we must establish a board to censor certain movies, or we must limit admission to persons over 21 years of age. Apparently our legislators are not concerned about this issue since a bill calling for such actions recently failed to receive a majority vote."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"Commuter use of the new subway train is exceeding the transit company's projections. However, commuter use of the shuttle buses that transport people to the subway stations is below the projected volume. If the transit company expects commuters to ride the shuttle buses to the subway rather than drive there, it must either reduce the shuttle bus fares or increase the price of parking at the subway stations."

Discuss how well reasoned … etc.

The following was excerpted from the speech of a spokesperson for Synthetic Farm Products, Inc.:

"Many farmers who invested in the equipment needed to make the switch from synthetic to organic fertilizers and pesticides feel that it would be too expensive to resume synthetic farming at this point. But studies of farmers who switched to organic farming last year indicate that their current crop yields are lower. Hence their purchase of organic farming equipment, a relatively minor investment compared to the losses that would result from continued lower crop yields, cannot justify persisting on an unwise course. And the choice to farm organically is financially unwise, given that it was motivated by environmental rather than economic concerns."

Discuss how well reasoned … etc.

The following appeared in a newspaper story giving advice about investments:

"As overall life expectancy continues to rise, the population of our country is growing increasingly older. For example, more than 20 percent of the residents of one of our more populated regions are now at least 65 years old, and occupancy rates at resort hotels in that region declined significantly during the past six months. Because of these two related trends, a prudent investor would be well advised to sell interest in hotels and invest in hospitals and nursing homes instead."

Discuss how well reasoned … etc.

The following appeared as part of the business plan of an investment and financial consulting firm:

"Studies suggest that an average coffee drinker's consumption of coffee increases with age, from age 10 through age 60. Even after age 60, coffee consumption remains high. The average cola drinker's consumption of cola, however, declines with increasing age. Both of these trends have remained stable for the past 40 years. Given that the number of older adults will significantly increase as the population ages over the next 20 years, it follows that the demand for coffee will increase and the demand for cola will decrease during this period. We should, therefore, consider transferring our investments from Cola Loca to Early Bird Coffee."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a West Cambria newspaper:

"A recent review of the West Cambria volunteer ambulance service revealed a longer average response time to accidents than was reported by a commercial ambulance squad located in East Cambria. In order to provide better patient care for accident victims and to raise revenue for our town by collecting service fees for ambulance use, we should disband our volunteer service and hire a commercial ambulance service."

Discuss how well reasoned … etc.

The following is part of a business plan being discussed at a board meeting of the Perks Company:

"It is no longer cost-effective for the Perks Company to continue offering its employees a generous package of benefits and incentives year after year. In periods when national unemployment rates are low, Perks may need to offer such a package in order to attract and keep good employees, but since national unemployment rates are now high, Perks does not need to offer the same benefits and incentives. The money thus saved could be better used to replace the existing plant machinery with more technologically sophisticated equipment, or even to build an additional plant."

Discuss how well reasoned … etc.

The following appeared as part of a plan proposed by an executive of the Easy Credit Company to the president:

"The Easy Credit Company would gain an advantage over competing credit card services if we were to donate a portion of the proceeds from the use of our cards to a well-known environmental organization in exchange for the use of its symbol or logo on our card. Since a recent poll shows that a large percentage of the public is concerned about environmental issues, this policy would attract new customers, increase use among existing customers, and enable us to charge interest rates that are higher than the lowest ones available."

Discuss how well reasoned … etc.

The following appeared as part of a recommendation from the financial planning office to the administration of Fern Valley University:

"In the past few years, Fern Valley University has suffered from a decline in both enrollments and admissions applications. The reason can be discovered from our students, who most often cite poor teaching and inadequate library resources as their chief sources of dissatisfaction with Fern Valley. Therefore, in order to increase the number of students attending our university, and hence to regain our position as the most prestigious university in the greater Fern Valley metropolitan area, it is necessary to initiate a fund-raising campaign among the alumni that will enable us to expand the range of subjects we teach and to increase the size of our library facilities."

Discuss how well reasoned … etc.

The following appeared in an article in a college departmental newsletter:

"Professor Taylor of Jones University is promoting a model of foreign language instruction in which students receive 10 weeks of intensive training, then go abroad to live with families for 10 weeks. The superiority of the model, Professor Taylor contends, is proved by the results of a study in which foreign language tests given to students at 25 other colleges show that first-year foreign language students at Jones speak more fluently after only 10 to 20 weeks in the program than do 9 out of 10 foreign language majors elsewhere at the time of their graduation."

Discuss how well reasoned … etc.

The following appeared as part of an article in the business section of a local newspaper:

"Motorcycle X has been manufactured in the United States for more than 70 years. Although one foreign company has copied the motorcycle and is selling it for less, the company has failed to attract motorcycle X customers—some say because its product lacks the exceptionally loud noise made by motorcycle X. But there must be some other explanation. After all, foreign cars tend to be quieter than similar American-made cars, but they sell at least as well. Also, television advertisements for motorcycle X highlight its durability and sleek lines, not its noisiness, and the ads typically have voice-overs or rock music rather than engine-roar on the sound track."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a campus newspaper:

"Because occupancy rates for campus housing fell during the last academic year, so did housing revenues. To solve the problem, campus housing officials should reduce the number of available housing units, thereby increasing the occupancy rates. Also, to keep students from choosing to live off-campus, housing officials should lower the rents, thereby increasing demand."

Discuss how well reasoned … etc.

The following appeared in an Avia Airlines departmental memorandum:

"On average, 9 out of every 1,000 passengers who traveled on Avia Airlines last year filed a complaint about our baggage-handling procedures. This means that although some 1 percent of our passengers were unhappy with those procedures, the overwhelming majority were quite satisfied with them; thus it would appear that a review of the procedures is not important to our goal of maintaining or increasing the number of Avia's passengers."

Discuss how well reasoned … etc.

The following appeared as part of an article in a weekly newsmagazine:

"The country of Sacchar can best solve its current trade deficit problem by lowering the price of sugar, its primary export. Such an action would make Sacchar better able to compete for markets with other sugar-exporting countries. The sale of Sacchar's sugar abroad would increase, and this increase would substantially reduce Sacchar's trade deficit."

Discuss how well reasoned … etc.

The following appeared as part of an article in a trade publication:

"Stronger laws are needed to protect new kinds of home-security systems from being copied and sold by imitators. With such protection, manufacturers will naturally invest in the development of new home-security products and production technologies. Without stronger laws, therefore, manufacturers will cut back on investment. From this will follow a corresponding decline not only in product quality and marketability, but also in production efficiency, and thus ultimately a loss of manufacturing jobs in the industry."

Discuss how well reasoned … etc.

The following appeared in the opinion section of a national newsmagazine:

"To reverse the deterioration of the postal service, the government should raise the price of postage stamps. This solution will no doubt prove effective, since the price increase will generate larger revenues and will also reduce the volume of mail, thereby eliminating the strain on the existing system and contributing to improved morale."

Discuss how well reasoned … etc.

The following appeared in an article in the health section of a newspaper:

"There is a common misconception that university hospitals are better than community or private hospitals. This notion is unfounded, however: the university hospitals in our region employ 15 percent fewer doctors, have a 20 percent lower success rate in treating patients, make far less overall profit, and pay their medical staff considerably less than do private hospitals. Furthermore, many doctors at university hospitals typically divide their time among teaching, conducting research, and treating patients. From this it seems clear that the quality of care at university hospitals is lower than that at other kinds of hospitals."

Discuss how well reasoned … etc.

The following is part of a business plan created by the management of the Megamart grocery store:

"Our total sales have increased this year by 20 percent since we added a pharmacy section to our grocery store. Clearly, the customer's main concern is the convenience afforded by one-stop shopping. The surest way to increase our profits over the next couple of years, therefore, is to add a clothing department along with an automotive supplies and repair shop. We should also plan to continue adding new departments and services, such as a restaurant and a garden shop, in subsequent years. Being the only store in the area that offers such a range of services will give us a competitive advantage over other local stores."

Discuss how well reasoned … etc.

The following appeared as part of a column in a popular entertainment magazine:

"The producers of the forthcoming movie *3003* will be most likely to maximize their profits if they are willing to pay Robin Good several million dollars to star in it—even though that amount is far more than any other person involved with the movie will make. After all, Robin has in the past been paid a similar amount to work in several films that were very financially successful."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the directors of a security and safety consulting service:

"Our research indicates that over the past six years no incidents of employee theft have been reported within ten of the companies that have been our clients. In analyzing the security practices of these ten companies, we have further learned that each of them requires its employees to wear photo identification badges while at work. In the future, therefore, we should recommend the use of such identification badges to all of our clients."

Discuss how well reasoned … etc.

The following appeared as part of an article in the business section of a local newspaper:

"The owners of the Cumquat Cafe evidently made a good business decision in moving to a new location, as can be seen from the fact that the Cafe will soon celebrate its second anniversary there. Moreover, it appears that businesses are not likely to succeed at the old location: since the Cafe's move, three different businesses—a tanning salon, an antique emporium, and a pet-grooming shop—have occupied its former spot."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"The profitability of Croesus Company, recently restored to private ownership, is a clear indication that businesses fare better under private ownership than under public ownership."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"If the paper from every morning edition of the nation's largest newspaper were collected and rendered into paper pulp that the newspaper could reuse, about 5 million trees would be saved each year. This kind of recycling is unnecessary, however, since the newspaper maintains its own forests to ensure an uninterrupted supply of paper."

Discuss how well reasoned … etc.

The following appeared as part of a business plan recommended by the new manager of a musical rock group called Zapped:

"To succeed financially, Zapped needs greater name recognition. It should therefore diversify its commercial enterprises. The rock group Zonked plays the same type of music that Zapped plays, but it is much better known than Zapped because, in addition to its concert tours and four albums, Zonked has a series of posters, a line of clothing and accessories, and a contract with a major advertising agency to endorse a number of different products."

Discuss how well reasoned … etc.

The following appeared in a magazine article on trends and lifestyles:

"In general, people are not as concerned as they were a decade ago about regulating their intake of red meat and fatty cheeses. Walk into the Heart's Delight, a store that started selling organic fruits and vegetables and whole-grain flours in the 1960s, and you will also find a wide selection of cheeses made with high butterfat content. Next door, the owners of the Good Earth Cafe, an old vegetarian restaurant, are still making a modest living, but the owners of the new House of Beef across the street are millionaires."

Discuss how well reasoned … etc.

The following editorial appeared in the Elm City paper:

"The construction last year of a shopping mall in downtown Oak City was a mistake. Since the mall has opened, a number of local businesses have closed, and the downtown area suffers from an acute parking shortage, and arrests for crime and vagrancy have increased in the nearby Oak City Park. Elm City should pay attention to the example of the Oak City mall and deny the application to build a shopping mall in Elm City."

Discuss how well reasoned … etc.

The following appeared as part of an editorial in a weekly newsmagazine:

"Historically, most of this country's engineers have come from our universities; recently, however, our university-age population has begun to shrink, and decreasing enrollments in our high schools clearly show that this drop in numbers will continue throughout the remainder of the decade. Consequently, our nation will soon be facing a shortage of trained engineers. If we are to remain economically competitive in the world marketplace, then we must increase funding for education—and quickly."

Discuss how well reasoned … etc.

The following appeared in an Excelsior Company memorandum:

"The Excelsior Company plans to introduce its own brand of coffee. Since coffee is an expensive food item, and since there are already many established brands of coffee, the best way to gain customers for the Excelsior brand is to do what Superior, the leading coffee company, did when it introduced the newest brand in its line of coffees: conduct a temporary sales promotion that offers free samples, price reductions, and discount coupons for the new brand."

Discuss how well reasoned … etc.

The following appeared as part of an article in a health club trade publication:

"After experiencing a decline in usage by its members, Healthy Heart fitness center built an indoor pool. Since usage did not increase significantly, it appears that health club managers should adopt another approach—lowering membership fees rather than installing expensive new features."

Discuss how well reasoned … etc.

The following appeared as part of an article in a popular arts-and-leisure magazine:

"The safety codes governing the construction of public buildings are becoming far too strict. The surest way for architects and builders to prove that they have met the minimum requirements established by these codes is to construct buildings by using the same materials and methods that are currently allowed. But doing so means that there will be very little significant technological innovation within the industry, and hence little evolution of architectural styles and design—merely because of the strictness of these safety codes."

Discuss how well reasoned … etc.

The following is from a campaign by Big Boards Inc. to convince companies in River City that their sales will increase if they use Big Boards billboards for advertising their locally manufactured products:

"The potential of Big Boards to increase sales of your products can be seen from an experiment we conducted last year. We increased public awareness of the name of the current national women's marathon champion by publishing her picture and her name on billboards in River City for a period of three months. Before this time, although the champion had just won her title and was receiving extensive national publicity, only 5 percent of 15,000 randomly surveyed residents of River City could correctly name the champion when shown her picture; after the three-month advertising experiment, 35 percent of respondents from a second survey could supply her name."

Discuss how well reasoned … etc.

The following appeared as part of an article on government funding of environmental regulatory agencies:

"When scientists finally learn how to create large amounts of copper from other chemical elements, the regulation of copper mining will become unnecessary. For one thing, since the amount of potentially available copper will no longer be limited by the quantity of actual copper deposits, the problem of over-mining will quickly be eliminated altogether. For another, manufacturers will not need to use synthetic copper substitutes, the production of which creates pollutants. Thus, since two problems will be settled—over-mining and pollution—it makes good sense to reduce funding for mining regulation and either save the money or reallocate it where it is needed more."

Discuss how well reasoned … etc.

The following appeared as part of an article in a popular science magazine:

"Scientists must typically work 60 to 80 hours a week if they hope to further their careers; consequently, good and affordable all-day child care must be made available to both male and female scientists if they are to advance in their fields. Moreover, requirements for career advancement must be made more flexible so that preschool-age children can spend a significant portion of each day with a parent."

Discuss how well reasoned … etc.

The following appeared as part of a recommendation by one of the directors of the Beta Company:

"The Alpha Company has just reduced its workforce by laying off 15 percent of its employees in all divisions and at all levels, and it is encouraging early retirement for other employees. As you know, the Beta Company manufactures some products similar to Alpha's, but our profits have fallen over the last few years. To improve Beta's competitive position, we should try to hire a significant number of Alpha's former workers, since these experienced workers can provide valuable information about Alpha's successful methods, will require little training, and will be particularly motivated to compete against Alpha."

Discuss how well reasoned … etc.

The following appeared in the letters-to-the-editor section of a local newspaper:

"*Muscle Monthly*, a fitness magazine that regularly features pictures of bodybuilders using state-of-the-art exercise machines, frequently sells out, according to the owner of Skyview Newsstand. To help maximize fitness levels in our town's residents, we should, therefore, equip our new community fitness center with such machines."

Discuss how well reasoned … etc.

The following appeared as part of an article in the business section of a local newspaper:

"The Cumquat Cafe made a mistake in moving to a new location. After one year at the new spot, it is doing about the same volume of business as before, but the owners of the RoboWrench plumbing supply wholesale outlet that took over its old location are apparently doing better: RoboWrench is planning to open a store in a neighboring city."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the director of human resources to the executive officers of Company X:

"Last year, we surveyed our employees on improvements needed at Company X by having them rank, in order of importance, the issues presented in a list of possible improvements. Improved communications between employees and management was consistently ranked as the issue of highest importance by the employees who responded to the survey. As you know, we have since instituted regular communications sessions conducted by high-level management, which the employees can attend on a voluntary basis. Therefore, it is likely that most employees at Company X now feel that the improvement most needed at the company has been made."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the vice president of Road Food, an international chain of fast-food restaurants:

"This past year, we spent almost as much on advertising as did our main competitor, Street Eats, which has fewer restaurants than we do. Although it appeared at first that our advertising agency had created a campaign along the lines we suggested, in fact our total profits were lower than those of Street Eats. In order to motivate our advertising agency to perform better, we should start basing the amount that we pay it on how much total profit we make each year."

Discuss how well reasoned … etc.

The following appeared in the promotional literature for Cerberus dog food:

"Obesity is a great problem among pet dogs, just as it is among their human owners. Obesity in humans is typically caused by consuming more calories than the body needs. For humans, a proper diet for losing weight is a reduced-calorie diet that is high in fiber and carbohydrates but low in fat. Therefore, the best way for dog owners to help their dogs lose weight in a healthy way is to restrict the dog's diet to Cerberus reduced-calorie dog food, which is high in fiber and carbohydrates but low in fat."

Discuss how well reasoned … etc.

The following appeared in an article in a travel magazine:

"After the airline industry began requiring airlines to report their on-time rates, Speedee Airlines achieved the number one on-time rate, with more than 89 percent of its flights arriving on time each month. And now Speedee is offering more flights to more destinations than ever before. Clearly, Speedee is the best choice for today's business traveler."

Discuss how well reasoned … etc.

The following appeared in a memorandum to the planning department of an investment firm:

"Costs have begun dropping for several types of equipment currently used to convert solar energy into electricity. Moreover, some exciting new technologies for converting solar energy are now being researched and developed. Hence we can expect that solar energy will soon become more cost efficient and attractive than coal or oil as a source of electrical power. We should, therefore, encourage investment in Solario, a new manufacturer of solar-powered products. After all, Solario's chief executive was once on the financial planning team for Ready-to-Ware, a software engineering firm that has shown remarkable growth since its recent incorporation."

Discuss how well reasoned … etc.

The following appeared in a memorandum from a company's marketing department:

"Since our company started manufacturing and marketing a deluxe air filter six months ago, sales of our economy filter—and company profits—have decreased significantly. The deluxe air filter sells for 50 percent more than the economy filter, but the economy filter lasts for only one month while the deluxe filter can be used for two months before it must be replaced. To increase repeat sales of our economy filter and maximize profits, we should discontinue the deluxe air filter and concentrate all our advertising efforts on the economy filter."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the president of a company that makes shampoo:

"A widely publicized study claims that HR2, a chemical compound in our shampoo, can contribute to hair loss after prolonged use. This study, however, involved only 500 subjects. Furthermore, we have received no complaints from our customers during the past year, and some of our competitors actually use more HR2 per bottle of shampoo than we do. Therefore, we do not need to consider replacing the HR2 in our shampoo with a more expensive alternative."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"The tragic crash of a medical helicopter last week points out a situation that needs to be addressed. The medical-helicopter industry supposedly has more stringent guidelines for training pilots and maintaining equipment than do most other airline industries, but these guidelines do not appear to be working: statistics reveal that the rate of medical-helicopter accidents is much higher than the rate of accidents for nonmedical helicopters or commercial airliners."

Discuss how well reasoned … etc.

The following appeared as part of a recommendation from the business manager of a department store:

"Local clothing stores reported that their profits decreased, on average, for the three-month period between August 1 and October 31. Stores that sell products for the home reported that, on average, their profits increased during this same period. Clearly, consumers are choosing to buy products for their homes instead of clothing. To take advantage of this trend, we should reduce the size of our clothing departments and enlarge our home furnishings and household products departments."

Discuss how well reasoned … etc.

The following appeared in a letter to the editor of a regional newspaper:

"In response to petitions from the many farmers and rural landowners throughout our region, the legislature has spent valuable time and effort enacting severe laws to deter motorists from picking fruit off the trees, trampling through the fields, and stealing samples of foliage. But how can our local lawmakers occupy themselves with such petty vandalism when crime and violence plague the nation's cities? The fate of apples and leaves is simply too trivial to merit their attention."

Discuss how well reasoned … etc.

The following appeared as part of an editorial in a campus newspaper:

"With an increasing demand for highly skilled workers, this nation will soon face a serious labor shortage. New positions in technical and professional occupations are increasing rapidly, while at the same time the total labor force is growing slowly. Moreover, the government is proposing to cut funds for aid to education in the near future."

Discuss how well reasoned … etc.

The following appeared as part of a memorandum from a government agency:

"Given the limited funding available for the building and repair of roads and bridges, the government should not spend any money this year on fixing the bridge that crosses the Styx River. This bridge is located near a city with a weakening economy, so it is not as important as other bridges; moreover, the city population is small and thus unlikely to contribute a significant enough tax revenue to justify the effort of fixing the bridge."

Discuss how well reasoned … etc.

The following appeared as part of an article in an entertainment magazine:

"A series of books based on the characters from a popular movie are consistently best sellers in local bookstores. Seeking to capitalize on the books' success, Vista Studios is planning to produce a movie sequel based on the books. Due to the success of the books and the original movie, the sequel will undoubtedly be profitable."

Discuss how well reasoned … etc.

The following appeared in a letter to the editor of a popular science and technology magazine:

"It is a popular myth that consumers are really benefiting from advances in agricultural technology. Granted, consumers are, on the average, spending a decreasing proportion of their income on food. But consider that the demand for food does not rise in proportion with real income. As real income rises, therefore, consumers can be expected to spend a decreasing proportion of their income on food. Yet agricultural technology is credited with having made our lives better."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"This city should be able to improve existing services and provide new ones without periodically raising the taxes of the residents. Instead, the city should require that the costs of services be paid for by developers who seek approval for their large new building projects. After all, these projects can be highly profitable to the developers, but they can also raise a city's expenses and increase the demand for its services."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local newspaper:

"In order to avoid the serious health threats associated with many landfills, our municipality should build a plant for burning trash. An incinerator could offer economic as well as ecological advantages over the typical old-fashioned type of landfill: incinerators can be adapted to generate moderate amounts of electricity, and ash residue from some types of trash can be used to condition garden soil."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a monthly business newsmagazine:

"Most companies would agree that as the risk of physical injury occurring on the job increases, the wages paid to employees should also increase. Hence it makes financial sense for employers to make the workplace safer: they could thus reduce their payroll expenses and save money."

Discuss how well reasoned … etc.

The following appeared as part of a company memorandum:

"Adopting an official code of ethics regarding business practices may in the long run do our company more harm than good in the public eye. When one of our competitors received unfavorable publicity for violating its own code of ethics, it got more attention from the media than it would have if it had had no such code. Rather than adopt an official code of ethics, therefore, we should instead conduct a publicity campaign that stresses the importance of protecting the environment and assisting charitable organizations."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a daily newspaper:

"Although forecasts of presidential elections based on opinion polls measure current voter preference, many voters keep changing their minds about whom they prefer until the last few days before the balloting. Some do not even make a final decision until they enter the voting booth. Forecasts based on opinion polls are therefore little better at predicting election outcomes than a random guess would be."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a newspaper in the country of West Cambria:

"The practice of officially changing speed limits on the highways—whether by increasing or decreasing them—is a dangerous one. Consider what happened over the past decade whenever neighboring East Cambria changed its speed limits: an average of 3 percent more automobile accidents occurred during the week following the change than had occurred during the week preceding it—even when the speed limit was lowered. This statistic shows that the change in speed limit adversely affected the alertness of drivers."

Discuss how well reasoned … etc.

The following appeared as part of a memorandum from the vice president of Nostrum, a large pharmaceutical corporation:

"The proposal to increase the health and retirement benefits that our employees receive should not be implemented at this time. An increase in these benefits is not only financially unjustified, since our last year's profits were lower than those of the preceding year, but also unnecessary, since our chief competitor, Panacea, offers its employees lower health and retirement benefits than we currently offer. We can assume that our employees are reasonably satisfied with the health and retirement benefits that they now have since a recent survey indicated that two-thirds of the respondents viewed them favorably."

Discuss how well reasoned … etc.

The following appeared as part of an article on trends in television:

"A recent study of viewers' attitudes toward prime-time television programs shows that many of the programs that were judged by their viewers to be of high quality appeared on (noncommercial) television networks, and that, on commercial television, the most popular shows are typically sponsored by the bestselling products. Thus, it follows that businesses who use commercial television to promote their products will achieve the greatest advertising success by sponsoring only highly rated programs—and, ideally, programs resembling the highly rated noncommercial programs on public channels as much as possible."

Discuss how well reasoned … etc.

The following appeared as part of an article in the business section of a daily newspaper:

"Company A has a large share of the international market in video-game hardware and software. Company B, the pioneer in these products, was once a $12 billion-a-year giant but collapsed when children became bored with its line of products. Thus Company A can also be expected to fail, especially given the fact that its games are now in so many American homes that the demand for them is nearly exhausted."

Discuss how well reasoned … etc.

The following appeared as part of an article in a photography magazine:

"When choosing whether to work in color or in black-and-white, the photographer who wishes to be successful should keep in mind that because color photographs are more true to life, magazines use more color photographs than black-and-white ones, and many newspapers are also starting to use color photographs. The realism of color also accounts for the fact that most portrait studios use more color film than black-and-white film. Furthermore, there are more types of color film than black-and-white film available today. Clearly, photographers who work in color have an advantage over those who work in black-and-white."

Discuss how well reasoned … etc.

The following appeared as part of a letter to the editor of a local newspaper:

"It makes no sense that in most places 15-year-olds are not eligible for their driver's license while people who are far older can retain all of their driving privileges by simply renewing their license. If older drivers can get these renewals, often without having to pass another driving test, then 15-year-olds should be eligible to get a license. Fifteen-year-olds typically have much better eyesight, especially at night; much better hand-eye coordination; and much quicker reflexes. They are also less likely to feel confused by unexpected developments or disoriented in unfamiliar surroundings, and they recover from injuries more quickly."

Discuss how well reasoned … etc.

The following appeared in an ad for a book titled *How to Write a Screenplay for a Movie*:

"Writers who want to succeed should try to write film screenplays rather than books, since the average film tends to make greater profits than does even a best-selling book. It is true that some books are also made into films. However, our nation's film producers are more likely to produce movies based on original screenplays than to produce films based on books, because in recent years the films that have sold the most tickets have usually been based on original screenplays."

Discuss how well reasoned … etc.

The following appeared as part of an article in a daily newspaper:

"The computerized onboard warning system that will be installed in commercial airliners will virtually solve the problem of midair plane collisions. One plane's warning system can receive signals from another's transponder—a radio set that signals a plane's course—in order to determine the likelihood of a collision and recommend evasive action."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the ElectroWares company's marketing department:

"Since our company started manufacturing and marketing a deluxe light bulb six months ago, sales of our economy light bulb—and company profits—have decreased significantly. Although the deluxe light bulb sells for 50 percent more than the economy bulb, it lasts twice as long. Therefore, to increase repeat sales and maximize profits, we should discontinue the deluxe light bulb."

Discuss how well reasoned … etc.

The following is taken from an editorial in a local newspaper:

"Over the past decade, the price per pound of citrus fruit has increased substantially. Eleven years ago, Megamart charged 15 cents a pound for lemons, but today it commonly charges over a dollar a pound. In only one of these last 11 years was the weather unfavorable for growing citrus crops. Evidently, then, citrus growers have been responsible for the excessive increase in the price of citrus fruit, and strict pricing regulations are needed to prevent them from continuing to inflate prices."

Discuss how well reasoned … etc.

The following appeared as part of an article in a local newspaper:

"Over the past three years the tartfish industry has changed markedly: fishing technology has improved significantly, and the demand for tartfish has grown in both domestic and foreign markets. As this trend continues, the tartfish industry on Shrimp Island can expect to experience the same overfishing problems that are already occurring with mainland fishing industries: without restrictions on fishing, fishers see no reason to limit their individual catches. As the catches get bigger, the tartfish population will be dangerously depleted while the surplus of tartfish will devalue the catch for fishers. Government regulation is the only answer: tartfish-fishing should be allowed only during the three-month summer season, when tartfish reproduce and thus are most numerous, rather than throughout the year."

Discuss how well reasoned … etc.

The following appeared in a proposal from the development office at Platonic University:

"Because Platonic University has had difficulty in meeting its expenses over the past three years, we need to find new ways to increase revenues. We should consider following the example of Greene University, which recently renamed itself after a donor who gave it $100 million. If Platonic University were to advertise to its alumni and other wealthy people that it will rename either individual buildings or the entire university itself after the donors who give the most money, the amount of donations would undoubtedly increase."

Discuss how well reasoned … etc.

The following appeared as part of an article in the business section of a local newspaper:

"Hippocrene Plumbing Supply recently opened a wholesale outlet in the location once occupied by the Cumquat Café. Hippocrene has apparently been quite successful there because it is planning to open a large outlet in a nearby city. But the Cumquat Café, one year after moving to its new location, has seen its volume of business drop somewhat from the previous year's. Clearly, the former site was the better business location, and the Cumquat Café has made a mistake in moving to its new address."

Discuss how well reasoned … etc.

The following appeared in the editorial section of a local paper:

"Applications for advertising spots on KMTV, our local cable television channel, decreased last year. Meanwhile a neighboring town's local channel, KOOP, changed its focus to farming issues and reported an increase in advertising applications for the year. To increase applications for its advertisement spots, KMTV should focus its programming on farming issues as well."

Discuss how well reasoned … etc.

The following appeared as part of an article in a computer magazine:

"A year ago Apex Manufacturing bought its managers computers for their homes and paid for telephone connections so that they could access Apex computers and data files from home after normal business hours. Since last year, productivity at Apex has increased by 15 percent. Other companies can learn from the success at Apex: given home computers and access to company resources, employees will work additional hours at home and thereby increase company profits."

Discuss how well reasoned … etc.

The following was excerpted from an article in a farming trade publication:

"Farmers who switched from synthetic to organic farming last year have seen their crop yields decline. Many of these farmers feel that it would be too expensive to resume synthetic farming at this point, given the money that they invested in organic farming supplies and equipment. But their investments will be relatively minor compared to the losses from continued lower crop yields. Organic farmers should switch to synthetic farming rather than persist in an unwise course. And the choice to farm organically is financially unwise, given that it was motivated by environmental rather than economic concerns."

Discuss how well reasoned … etc.

The following appeared in a letter to prospective students from the admissions office at Plateau College:

"Every person who earned an advanced degree in science or engineering from Olympus University last year received numerous offers of excellent jobs. Typically, many graduates of Plateau College have gone on to pursue advanced degrees at Olympus. Therefore, enrolling as an undergraduate at Plateau College is a wise choice for students who wish to ensure success in their careers."

Discuss how well reasoned … etc.

The following appeared in a memorandum sent by a vice-president of the Nadir Company to the company's human resources department:

"Nadir does not need to adopt the costly 'family-friendly' programs that have been proposed, such as part-time work, work at home, and jobsharing. When these programs were made available at the Summit Company, the leader in its industry, only a small percentage of employees participated in them. Rather than adversely affecting our profitability by offering these programs, we should concentrate on offering extensive training that will enable employees to increase their productivity."

Discuss how well reasoned … etc.

The following appeared as part of an article in a trade magazine for breweries:

"Magic Hat Brewery recently released the results of a survey of visitors to its tasting room last year. Magic Hat reports that the majority of visitors asked to taste its low-calorie beers. To boost sales, other small breweries should brew low-calorie beers as well."

Discuss how well reasoned … etc.

The following appeared in an editorial from a newspaper serving the town of Saluda:

"The Saluda Consolidated High School offers more than 200 different courses from which its students can choose. A much smaller private school down the street offers a basic curriculum of only 80 different courses, but it consistently sends a higher proportion of its graduating seniors on to college than Consolidated does. By eliminating at least half of the courses offered there and focusing on a basic curriculum, we could improve student performance at Consolidated and also save many tax dollars."

Discuss how well reasoned … etc.

The following appeared as part of an article in the book section of a newspaper:

"Currently more and more books are becoming available in electronic form—either free-of-charge on the Internet or for a very low price-per-book on compact disc. Thus literary classics are likely to be read more widely than ever before. People who couldn't have purchased these works at bookstore prices will now be able to read them for little or no money; similarly, people who find it inconvenient to visit libraries and wait for books to be returned by other patrons will now have access to whatever classic they choose from their home or work computers. This increase in access to literary classics will radically affect the public taste in reading, creating a far more sophisticated and learned reading audience than has ever existed before."

Discuss how well reasoned … etc.

The following appeared as an editorial in a magazine concerned with educational issues:

"In our country, the real earnings of men who have only a high-school degree have decreased significantly over the past 15 years, but those of male college graduates have remained about the same. Therefore, the key to improving the earnings of the next generation of workers is to send all students to college. Our country's most important educational goal, then, should be to establish enough colleges and universities to accommodate all high school graduates."

Discuss how well reasoned … etc.

The following appeared as part of a business plan created by the management of the Take Heart Fitness Center:

"After opening the new swimming pool early last summer, Take Heart saw a 12 percent increase in the use of the center by its members. Therefore, in order to increase membership in Take Heart, we should continue to add new recreational facilities in subsequent years: for example, a multipurpose game room, a tennis court, and a miniature golf course. Being the only center in the area offering this range of activities would give us a competitive advantage in the health and recreation market."

Discuss how well reasoned … etc.

The following appeared in a letter from a staff member in the office of admissions at Argent University:

"The most recent nationwide surveys show that undergraduates choose their major field primarily based on their perception of job prospects in that field. At our university, economics is now the most popular major, so students must perceive this field as having the best job prospects. Therefore, we can increase our enrollment if we focus our advertising and recruiting on publicizing the accomplishments of our best-known economics professors and the success of our economics graduates in finding employment."

Discuss how well reasoned … etc.

The following appeared as part of a memorandum from the loan department of the Frostbite National Bank:

"We should not approve the business loan application of the local group that wants to open a franchise outlet for the Kool Kone chain of ice cream parlors. Frostbite is known for its cold winters, and cold weather can mean slow ice cream sales. For example, even though Frostbite is a town of 10,000 people, it has only one ice cream spot—the Frigid Cow. Despite the lack of competition, the Frigid Cow's net revenues fell by 10 percent last winter."

Discuss how well reasoned … etc.

The following appeared as part of a letter to the editor of a local newspaper:

"Bayview High School is considering whether to require all of its students to wear uniforms while at school. Students attending Acorn Valley Academy, a private school in town, earn higher grades on average and are more likely to go on to college. Moreover, Acorn Valley reports few instances of tardiness, absenteeism, or discipline problems. Since Acorn Valley requires its students to wear uniforms, Bayview High School would do well to follow suit and require its students to wear uniforms as well."

Discuss how well reasoned … etc.

The following appeared in a memo to the Saluda town council from the town's business manager:

"Research indicates that those who exercise regularly are hospitalized less than half as often as those who don't exercise. By providing a well-equipped gym for Saluda's municipal employees, we should be able to reduce the cost of our group health insurance coverage by approximately 50 percent and thereby achieve a balanced town budget."

Discuss how well reasoned … etc.

The following appeared in a memorandum written by the assistant manager of a store that sells gourmet food items from various countries:

"A local wine store made an interesting discovery last month: it sold more French than Italian wine on days when it played recordings of French accordion music, but it sold more Italian than French wine on days when Italian songs were played. Therefore, I recommend that we put food specialties from one particular country on sale for a week at a time and play only music from that country while the sale is going on. By this means we will increase our profits in the same way that the wine store did, and we will be able to predict more precisely what items we should stock at any given time."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the director of research and development at Ready-to-Ware, a software engineering firm:

"The package of benefits and incentives that Ready-to-Ware offers to professional staff is too costly. Our quarterly profits have declined since the package was introduced two years ago, at the time of our incorporation. Moreover, the package had little positive effect, as we have had only marginal success in recruiting and training high-quality professional staff. To become more profitable again, Ready-to-Ware should, therefore, offer the reduced benefits package that was in place two years ago and use the savings to fund our current research and development initiatives."

Discuss how well reasoned … etc.

The following appeared as a memorandum from the vice-president of the Dolci candy company:

"Given the success of our premium and most expensive line of chocolate candies in a recent taste test and the consequent increase in sales, we should shift our business focus to producing additional lines of premium candy rather than our lower-priced, ordinary candies. When the current economic boom ends and consumers can no longer buy major luxury items, such as cars, they will still want to indulge in small luxuries, such as expensive candies."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the business office of the Lovin' Cupful, a national restaurant chain:

"The Lovin' Cupful franchises in our northeast region have begun serving customers Almost, a brand new powdered instant tea, in place of brewed tea. Waiters report that only about 2 percent of the customers have complained, and that customers who want refills typically ask for 'more tea.' It appears, then, that 98 percent of the customers are perfectly happy with the switch, or else they cannot tell powdered instant from brewed tea. Therefore, in order to take advantage of the lower price per pound of Almost, all of our restaurants should begin substituting it for brewed tea."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the director of marketing for a pharmaceutical company:

"According to a survey of 5,000 urban residents, the prevalence of stress headaches increases with educational level, so that stress headaches occur most often among people with graduate-school degrees. It is well established that, nationally, higher educational levels usually correspond with higher levels of income. Therefore, in marketing our new pain remedy, Omnilixir, we should send free samples primarily to graduate students and to people with graduate degrees, and we should concentrate on advertising in professional journals rather than in general interest magazines."

Discuss how well reasoned … etc.

The following appeared as part of an editorial in the Waymarsh city newspaper:

"Last year the parents of first graders in our school district expressed satisfaction with the reading skills their children developed but complained strongly about their children's math skills. To remedy this serious problem and improve our district's elementary education, everyone in the teacher-training program at Waymarsh University should be required to take more courses in mathematics."

Discuss how well reasoned … etc.

The following appeared in a letter to the editor of a River City newspaper:

"The Clio Development Group should not be permitted to build a multilevel parking garage on Dock Street since most of the buildings on the block would have to be demolished. Because these buildings were erected decades ago, they have historic significance and must therefore be preserved as economic assets in the effort to revitalize a restored riverfront area. Recall how Lakesburg has benefited from business increases in its historic downtown center. Moreover, there is plenty of vacant land for a parking lot elsewhere in River City."

Discuss how well reasoned … etc.

The following appeared in a corporate planning memorandum for a company that develops amusement parks:

"Because travel from our country to foreign countries has increased dramatically in recent years, our next project should be a 'World Tour' theme park with replicas of famous foreign buildings, rides that have international themes, and refreshment stands serving only foods from the country represented by the nearest ride. The best location would be near our capital city, which has large percentages of international residents and of children under the age of 16. Given the advantages of this site and the growing interest in foreign countries, the 'World Tour' theme park should be as successful as our space-travel theme park, where attendance has increased tenfold over the past decade."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the publisher to the staff of *The Clarion*, a large metropolitan newspaper:

"During the recent campaign for mayor, a clear majority of city readers who responded to our survey indicated a desire for more news about city government. To increase circulation, and thus our profits, we should therefore consistently devote a greater proportion of space in all editions of *The Clarion* to coverage of local news."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the assistant manager of Pageturner Books:

"Over the past two years, Pageturner's profits have decreased by 5 percent, even though we have added a popular café as well as a music section selling CDs and tapes. At the same time, we have experienced an increase in the theft of merchandise. We should therefore follow the example of Thoreau Books, which increased its profits after putting copies of its most frequently stolen books on a high shelf behind the payment counter. By doing likewise with copies of the titles that our staff reported stolen last year, we too can increase profitability."

Discuss how well reasoned … etc.

The following appeared in a letter to the editor of a River City newspaper:

"The Clio Development Group's plan for a multilevel parking garage on Dock Street should be approved in order to strengthen the economy of the surrounding area. Although most of the buildings on the block would have to be demolished, they are among the oldest in the city and thus of little current economic value. Those who oppose the project should realize that historic preservation cannot be the only consideration: even Athens or Jerusalem will knock down old buildings to put up new ones that improve the local economy."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the owner of Carlo's Clothing to the staff:

"Since Disc Depot, the music store on the next block, began a new radio advertising campaign last year, its business has grown dramatically, as evidenced by the large increase in foot traffic into the store. While the Disc Depot's owners have apparently become wealthy enough to retire, profits at Carlo's Clothing have remained stagnant for the past three years. In order to boost our sales and profits, we should therefore switch from newspaper advertising to frequent radio advertisements like those for Disc Depot."

Discuss how well reasoned … etc.

The following appeared as part of the business plan of the Capital Idea investment firm:

"Across town in the Park Hill district, the Thespian Theater, Pizzazz Pizza, and the Niblick Golf Club have all had business increases over the past two years. Capital Idea should therefore invest in the Roxy Playhouse, the Slice-o'-Pizza, and the Divot Golf Club, three new businesses in the Irongate district. As a condition, we should require them to participate in a special program: Any customer who patronizes two of the businesses will receive a substantial discount at the third. By motivating customers to patronize all three, we will thus contribute to the profitability of each and maximize our return."

Discuss how well reasoned … etc.

The following appeared as part of an article in a newsletter for farmers:

"Users of Solacium, a medicinal herb now grown mainly in Asia, report that it relieves tension and promotes deep sleep. A recent study indicates that a large number of college students who took pills containing one of the ingredients in Solacium suffered less anxiety. To satisfy the anticipated demands for this very promising therapeutic herb and to reap the financial benefits, farmers in this country should begin growing it."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the president of Aurora, a company that sells organic milk (milk produced without the use of chemical additives):

"Sales of organic food products in this country have tripled over the past five years. If Aurora is to profit from this continuing trend, we must diversify and start selling products such as organic orange juice and organic eggs in addition to our regular product line. With the recent increase of articles in health magazines questioning the safety of milk and other food products, customers are even more likely to buy our line of organic products. And to help ensure our successful expansion, we should hire the founder of a chain of health-food stores to serve as our vice president of marketing."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the human resources department of Diversified Manufacturing:

"Managers at our central office report that their employees tend to be most productive in the days immediately preceding a vacation. To help counteract our declining market share, we could increase the productivity of our professional staff members, who currently receive four weeks paid vacation a year, by limiting them to a maximum of one week's continuous vacation time. They will thus take more vacation breaks during a year and give us more days of maximum productivity."

Discuss how well reasoned … etc.

The following appeared in a memorandum from a regional supervisor of post office operations:

"During a two-week study of postal operations, the Presto City post office handled about twice as many items as the Lento City post office, even though the cities are about the same size. Moreover, customer satisfaction appears to be higher in Presto City, since the study found fewer complaints regarding the Presto City post office. Therefore, the postmasters at these two offices should exchange assignments: the Presto City postmaster will solve the problems of inefficiency and customer dissatisfaction at the Lento City office while the Lento City postmaster learns firsthand the superior methods of Presto City."

Discuss how well reasoned … etc.

The following appeared in a memorandum written by the managing director of the Exeunt Theater Company:

"Now that we have moved to a larger theater, we can expect to increase our revenues from ticket sales. To further increase profits, we should start producing the plays that have been most successful when they were performed in our nation's largest cities. In addition, we should hire the Adlib Theater Company's director of fund-raising, since corporate contributions to Adlib have increased significantly over the three years that she has worked for Adlib."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the human resources department of HomeStyle, a house remodeling business:

"This year, despite HomeStyle's move to new office space, we have seen a decline in both company morale and productivity, and a corresponding increase in administrative costs. To rectify these problems, we should begin using a newly developed software package for performance appraisal and feedback. Managers will save time by simply choosing comments from a preexisting list; then the software will automatically generate feedback for the employee. The human resources department at CounterBalance, the manufacturer of the countertops we install, reports satisfaction with the package."

Discuss how well reasoned … etc.

The following appeared as part of an article in a weekly newsmagazine:

"The country of Oleum can best solve the problem of its balance-of-trade deficit by further increasing the tax on its major import, crude oil. After Oleum increased the tax on imported crude oil four months ago, consumption of gasoline declined by 20 percent. Therefore, by imposing a second and significantly higher tax increase next year, Oleum will dramatically decrease its balance-of-trade deficit."

Discuss how well reasoned … etc.

The following appeared as part of a business plan by the Capital Idea investment firm:

"In recent years the worldwide demand for fish has grown, and improvements in fishing technology have made larger catches, and thus increased supply, possible: for example, last year's tuna catch was 9 percent greater than the previous year's. To capitalize on these trends, we should therefore invest in the new tartfish processing plant on Tartfish Island, where increasing revenues from tourism indicate a strong local economy."

Discuss how well reasoned … etc.

The following appeared in a speech by a stockholder of Consolidated Industries at the company's annual stockholders' meeting:

"In the computer hardware division last year, profits fell significantly below projections, the product line decreased from 20 to only 5 items, and expenditures for employee benefits increased by 15 percent. Nevertheless, Consolidated's board of directors has approved an annual salary of more than $1 million for our company's chief executive officer. The present board members should be replaced because they are unconcerned about the increasing costs of employee benefits and salaries, in spite of the company's problems generating income."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the business planning department of Avia Airlines:

"Of all the cities in their region, Beaumont and Fletcher are showing the fastest growth in the number of new businesses. Therefore, Avia should establish a commuter route between them as a means of countering recent losses on its main passenger routes. And to make the commuter route more profitable from the outset, Avia should offer a 1/3 discount on tickets purchased within two days of the flight. Unlike tickets bought earlier, discount tickets will be nonrefundable, and so gain from their sale will be greater."

Discuss how well reasoned … etc.

The following appeared in a memorandum from the vice president of Gigantis, a development company that builds and leases retail store facilities:

"Nationwide over the past five years, sales have increased significantly at outlet stores that deal exclusively in reduced-price merchandise. Therefore, we should publicize the new mall that we are building at Pleasantville as a central location for outlet shopping and rent store space only to outlet companies. By taking advantage of the success of outlet stores, this plan should help ensure full occupancy of the mall and enable us to recover quickly the costs of building the mall."

Discuss how well reasoned … etc.

The following appeared in a memorandum written by the chair of the music department to the president of Omega University:

"Mental health experts have observed that symptoms of mental illness are less pronounced in many patients after group music-therapy sessions, and job openings in the music-therapy field have increased during the past year. Consequently, graduates from our degree program for music therapists should have no trouble finding good positions. To help improve the financial status of Omega University, we should therefore expand our music-therapy degree program by increasing its enrollment targets."

Discuss how well reasoned … etc.

The following appeared in a memorandum to the work-group supervisors of the GBS Company:

"The CoffeeCart beverage and food service located in the lobby of our main office building is not earning enough in sales to cover its costs, and so the cart may discontinue operating at GBS. Given the low staff morale, as evidenced by the increase in the number of employees leaving the company, the loss of this service could present a problem, especially since the staff morale questionnaire showed widespread dissatisfaction with the snack machines. Therefore, supervisors should remind the employees in their group to patronize the cart—after all, it was leased for their convenience so that they would not have to walk over to the cafeteria on breaks."

Discuss how well reasoned … etc.

The following appeared as part of an article in a trade magazine:

"During a recent trial period in which government inspections at selected meat-processing plants were more frequent, the amount of bacteria in samples of processed chicken decreased by 50 percent on average from the previous year's level. If the government were to institute more frequent inspections, the incidence of stomach and intestinal infections throughout the country could thus be cut in half. In the meantime, consumers of Excel Meats should be safe from infection because Excel's main processing plant has shown more improvement in eliminating bacterial contamination than any other plant cited in the government report."

Discuss how well reasoned … etc.

12.0 Official Guide Question Index

12.0 Official Guide Question Index

The Official Guide Question index is organized by difficulty level, GMAT section, and then by math or verbal concept. All numbers below are associated with the problem numbers in the guide and not the page numbers.

There are different ways to classify and categorize each of the different types of problems. Below are the GMAC classification and categorization of the practice problems in this section of the guide.

Difficulty: Easy

Critical Reasoning:

Argument Construction: 612, 613, 616, 617, 620, 621, 622, 626, 627, 631, 633, 635, 636, 637, 640, 643, 644, 645, 648, 649, 651, 654, 657

Argument Evaluation: 610, 614, 618, 619, 624, 628, 630, 632, 639, 642, 653, 655

Evaluation of a Plan: 611, 615, 623, 625, 629, 634, 638, 641, 646, 647, 650, 652, 656, 658

Data Sufficiency: Algebra

Applied problems: 251, 276, 287

Equations: 257, 262

Exponents: 252, 259

Exponents and radicals: 302

Inequalities: 256, 278, 281

Measurement conversion: 309

Operations with radicals: 286

Probability: 277

Ratios: 297

Sets: 258, 283

Simplifying algebraic equations: 296, 305

Simultaneous equations: 232, 233, 236, 248, 254, 255, 294, 295, 303

Statistics: 304

Data Sufficiency: Arithmetic

Applied problems: 231, 244, 249, 264, 280

Difficulty: Medium

Critical Reasoning:

Argument Construction: 659, 660, 662, 663, 664, 665, 666, 667, 669, 671, 675, 676, 679, 680, 681, 686, 689, 690, 693, 694, 699, 700, 701, 703, 704, 705, 706, 709

Argument Evaluation: 661, 668, 672, 673, 677, 678, 684, 685, 687, 695, 698, 702, 707, 708, 710

Evaluation of a Plan: 670, 674, 682, 683, 688, 691, 692, 696, 697

Data Sufficiency: Algebra

Inequalities: 362

Applied problems: 366, 381

Applied problems; Percents: 378

Applied problems; Proportions: 336

Exponents: 316

First-degree equations: 346, 363, 373

Functions: 353

Inequalities: 320, 367

Properties of numbers: 347

Ratios: 323

Ratios; Simultaneous equations: 319

Series and sequences: 326

Sets: 361

Simplifying algebraic expressions: 337, 359

Simultaneous equations: 313, 314, 315, 327, 349

Data Sufficiency: Arithmetic

Applied problems: 340, 342, 354, 356, 383

Applied problems; Percents: 368, 379

Arithmetic operations: 311

Computation with integers: 365, 380

Exponents: 348

Inequalities: 375

Number line: 386

Operations with integers: 370

Operations with integers; Order: 350

Percents: 344

Probability: 355
Properties of integers: 310, 318, 241, 385
Properties of numbers: 343, 351, 352, 364, 372, 374
Series and sequences: 312
Statistics: 338, 339, 377, 382, 384
Statistics; Simplifying algebraic expressions: 357

Data Sufficiency: Geometry

Angles: 360
Applied problems; Circles: 345
Circles: 321
Circles; Area: 322
Polygons: 369
Quadrilaterals: 324, 335
Quadrilaterals; Area: 317
Quadrilaterals; Perimeter: 331
Rectangles; Perimeter: 358
Surface area: 376
Triangles: 328, 330
Triangles; Area: 325, 329, 332
Triangles; Area; Pythagorean theorem: 334
Volume: 333
Volume; Surface area: 371

Problem Solving: Algebra

Applied problems: 110, 118, 130, 131, 133
Functions: 129
Inequalities: 122
Percents: 105, 135
Percents; First-degree equations: 112
Ratio and proportion: 102
Second-degree equations: 104, 116, 128
Sets: 123
Simplifying algebraic expressions; Operations on rational numbers: 115
Simultaneous equations; Inequalities: 138

Problem Solving: Arithmetic

Absolute value; Number line: 121
Estimation: 132
Operations on integers: 120
Operations on radical expressions: 117
Operations with decimals; Place value: 139
Operations with integers: 101, 111, 137
Percents: 113, 125, 126
Percents; Ratio and proportion: 114
Properties of numbers: 103, 127
Remainders: 108
Sets: 124
Statistics: 107, 134, 136

Problem Solving: Geometry

Area: 109
Circles; Triangles: 106
Circles; Rectangles: 96
Quadrilaterals; Area: 100
Quadrilaterals; Pythagorean theorem: 97
Rectangles: 98
Triangles; Area: 99
Volume: 119

Reading Comprehension:

Application: 517, 522, 531, 540, 545
Evaluation: 504, 505, 507, 511, 513, 523, 530, 535, 541, 542, 548
Inference: 503, 506, 509, 510, 512, 516, 518, 519, 528, 529, 534, 538, 544, 546
Main idea: 508, 525, 532, 533, 543, 549
Supporting idea: 502, 526, 527, 536, 537, 547
Supporting ideas: 514, 515, 520, 521, 524, 539

Sentence Correction:

Agreement; Diction: 838
Agreement; Rhetorical construction: 803
Category: 810
Diction; Verb form: 836

Diction; Verb form; Parallelism: 797
Grammatical construction; Diction: 794, 819, 825
Grammatical construction; Parallelism: 834
Grammatical construction; Rhetorical construction: 817, 839
Grammatical construction; Verb form: 814
Idiom; Parallelism: 800
Idiom; Parallelism; Logical predication: 808
Idiom; Rhetorical construction: 833
Logical predication; Agreement: 818
Logical predication; Agreement; Grammatical construction; Verb form: 823
Logical predication; Diction: 796
Logical predication; Grammatical construction: 804
Logical predication; Grammatical construction; Agreement: 827
Logical predication; Grammatical construction; Rhetorical construction: 793
Logical predication; Grammatical construction; Verb form: 807
Logical predication; Idiom: 801
Logical predication; Modification: 812
Logical Predication; Parallelism: 826
Logical predication; Rhetorical construction: 802, 824, 832
Logical predication; Rhetorical construction; Verb form: 820
Parallelism, Diction: 829
Parallelism; Grammatical construction: 795
Parallelism; Rhetorical construction: 792, 813
Parallelism; Rhetorical construction; Grammatical construction: 830
Rhetorical construction; Diction: 809, 835
Rhetorical construction; Grammatical construction: 816
Rhetorical construction; Idiom: 806
Rhetorical construction; Idiom; Parallelism: 811
Rhetorical construction; Logical predication: 805, 815
Rhetorical construction; Logical predication; Grammatical construction: 822
Rhetorical construction; Parallelism: 799
Rhetorical construction; Verb form: 831
Verb form: 828
Verb form; Logical predication: 798, 837

Verb form; Parallelism: 821

Verb form; Rhetorical construction: 840

Difficulty: Hard

Critical Reasoning:

Argument Construction: 712, 714, 717, 719, 721, 725, 728, 731, 732, 736, 741, 742, 744, 746, 748, 752, 753, 756

Argument Evaluation: 713, 715, 716, 718, 720, 722, 723, 724, 726, 727, 729, 730, 733, 735, 738, 739, 740, 743, 745, 749, 750, 754, 755, 757, 758

Evaluation of a Plan: 711, 734, 737, 747, 751

Data Sufficiency: Algebra

Absolute value: 447

Applied problems: 394, 395, 407, 449

Computation with integers: 415

Coordinate geometry: 403, 439

Exponents: 406

Functions: 420

Inequalities: 417, 429, 432, 457

Order: 391, 400

Properties of numbers: 426

Rate problems: 397

Ratios: 411

Second-degree equations: 422

Simplifying algebraic expressions: 460

Simultaneous equations: 401, 408

Data Sufficiency: Arithmetic

Applied problems: 392, 416, 430, 453

Applied problems; Estimating: 436

Computation with integers: 393

Elementary combinations: 387

Operations on rational numbers: 443

Operations with radicals: 398

Percents: 388, 396

Place value: 405, 444

Properties of integers: 412, 421
Properties of numbers: 390, 410, 413, 419, 428, 433, 446, 451, 455, 459
Proportions: 458
Ratio and proportion: 424
Rounding; Estimating: 389
Sets: 418, 445
Statistics: 404, 414, 431, 434, 437. 441, 448, 450, 452

Data Sufficiency: Geometry

Angles: 456
Area: 454
Circles: 425, 435
Coordinate geometry: 438
Cylinders; Volume: 399
Polygons: 423
Rectangular solids and cylinder: 427
Simple coordinate geometry: 218
Triangles: 442
Triangles; Area: 402, 409
Triangles; Perimeter: 440

Problem Solving: Algebra

Algebra equations: 180
Applied numbers: 190
Applied problems: 160, 167, 179, 184, 190, 191, 199, 219, 220, 227
Applied problems; Simultaneous equations: 186
Coordinate geometry: 183
Inequalities: 185, 193, 228
Percents: 207
Second-degree equations: 168, 188, 202, 222, 226
Second-degree equations; Simultaneous equations: 155
Sequences: 206
Simplifying algebraic expressions: 198, 212
Simultaneous equations: 149, 216
Simultaneous equations; Inequalities: 157

Statistics: 171, 211

Statistics; Applied problems; Simultaneous equations: 217

Systems of equations: 150

Problem Solving: Arithmetic

Applied problems: 143, 152, 208

Elementary combinations: 140, 148,182, 201, 214

Estimation: 192

Interpretation of graphs and tables; Statistics: 164

Negative exponents: 209, 230

Operations on rational numbers: 161, 163, 187, 197, 203, 215, 223, 225

Operations with integers: 173

Percents: 153, 169, 172, 210

Probability: 142, 162, 170, 221

Profit and loss: 196

Properties of numbers: 141, 154, 175, 176, 178, 181, 189, 195, 200, 213

Properties of numbers; Decimals: 147

Property of numbers: 165

Rate: 205

Sets: 229

Simplifying expressions; Computation with integers: 204

Statistics: 144, 151, 158, 166

Algebra Statistics; Applied problems: 194

Problem Solving: Geometry

Area: 146

Circles: 177

Perimeter: 156

Polygons: 224

Quadrilaterals; Triangles: 174

Triangles: 145

Arithmetic Volume; Ratio and proportion: 159

Reading Comprehension:

Application: 573, 577, 586, 604

Evaluation: 551, 557, 559, 562, 568, 574, 575, 578, 581, 589, 596, 601, 606, 607

Inference: 554, 555, 556, 560, 561, 564, 566, 567, 571, 572, 579, 582, 585, 587, 590, 591, 592, 593, 594, 599, 600, 602, 603, 608, 609

Main idea: 550, 558, 563, 565, 570, 583

Supporting idea: 595, 597, 598

Supporting ideas: 552, 553, 569, 576, 580, 584, 588, 605

Sentence Correction:

Agreement; Idiom: 865, 869, 907

Agreement; Logical predication: 852, 859, 862, 897

Agreement; Parallelism: 889

Agreement; Rhetorical construction; Logical predication: 893

Diction; Agreement: 849

Diction; Idiom: 888, 896

Diction; Parallelism: 895

Diction; Parallelism; Verb form: 843

Grammatical construction; Diction: 850

Grammatical construction; Parallelism: 857

Grammatical construction; Rhetorical construction: 868

Grammatical construction; Verb form: 900

Idiom; Grammatical construction: 845, 864, 885

Idiom; Grammatical construction; Logical predication: 891

Idiom; Logical predication: 846

Idiom; Logical predication; Rhetorical construction: 855, 876

Idiom; Verb form; Logical predication: 905

Logical predication; Agreement: 861, 883, 892, 899

Logical predication; Grammatical construction: 847, 851, 879, 890

Logical predication; Parallelism: 844, 884, 902

Logical predication; Rhetorical construction: 848, 870, 875, 877, 880, 882, 887

Logical predication; Verb form: 858, 867

Parallelism; Diction: 860

Parallelism; Rhetorical construction: 842, 863

Parallelism; Verb form: 894

Parallelism; Verb form; Logical predication: 906

Rhetorical construction; Agreement: 853, 871, 901

Rhetorical construction; Agreement; Grammatical construction: 854

Rhetorical construction; Grammatical construction: 886

Rhetorical construction; Idiom: 866, 872, 898

Rhetorical construction; Logical predication: 874, 878

Rhetorical construction; Parallelism; Diction: 841

Rhetorical construction; Verb form: 903

Verb form; Diction: 856

Verb form; Grammatical construction; Diction: 881

Verb form; Rhetorical construction: 904

Verb form; Rhetorical construction; Logical predication: 873

13.0 GMAT Official Guide Online Index

GMAT Official Guide Online Index

ARE YOU USING BOTH THE BOOK AND THE ONLINE QUESTION BANK TO STUDY? If so, use the following index to locate a question from the online question bank in the book.

To locate a question from the online question bank in the book – Every question in the online question bank has a unique ID, called the Practice Question Identifier or PQID, which appears below the question number. Look up the PQID in the table to find its problem number and page number in the book.

Graduate Management Admission Council™

Caution!

The penalties for cheating on the GMAT™ Exam are severe.

The following is considered cheating:

- Hiring someone to take the test
- Taking the test for someone else
- Memorizing test questions
- Sharing answers with others

The penalties for cheating are:

- Cancellation of your scores
- Ban on future testing
- School notification
- Possible legal prosecution

Has someone been trying to get you to cheat?

File a report via email: **pvtestsecurity@pearson.com**

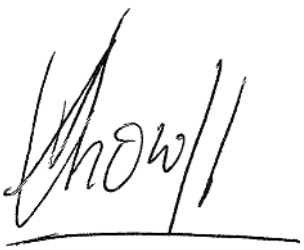
Dear GMAT Test-Taker,

Thank you for your interest in graduate management education. Today more than 7,000 graduate programs around the world use the GMAT™ exam to establish their MBA, business master's, and other graduate-level management degree programs as hallmarks of excellence. Nine of out 10 new MBA enrollments globally are made using a GMAT score.*

By using the *GMAT™ Official Guide* to prepare for the GMAT exam, you're taking a very important step toward achieving your goals and pursuing admission to the MBA or business master's program that is the best fit for you.



This book, *GMAT™ Official Guide Quantitative Review 2020*, is designed to help you prepare for and build confidence to do your best on the GMAT exam. It's the only guide that features real questions from past exams published by the Graduate Management Admission Council (GMAC), the makers of the GMAT™ exam.

For more than 60 years, the GMAT exam has helped candidates like you demonstrate their command of the skills needed for success in the classroom and showcase to schools their commitment to pursuing a graduate business degree. Schools use and trust the GMAT exam as part of their admissions process because it's a proven predictor of classroom success and your ability to excel in your chosen program.

The mission of GMAC is to ensure no talent goes undiscovered. We are driven to continue improving the GMAT exam as well as helping you find and connect with the best-fit schools and programs for you. I applaud your commitment to educational success. This guide and the other GMAT™ Official Prep products available at mba.com will give you the confidence to achieve your personal best on the GMAT exam and launch or reinvigorate a rewarding career.

I wish you the best success on all your future educational and professional endeavors.

Sincerely,

Sangeet Chowfla
President & CEO of the Graduate Management Admission Council

**Refers to the FT-100 Global MBA Programs, 2017*

GMAT™ Official Guide Quantitative Review 2020

1.0 What Is the GMAT™ Exam?

1.0 What Is the GMAT™ Exam?

The Graduate Management Admission Test™ (GMAT™) exam is a standardized exam used in admissions decisions by more than 7,000 graduate management programs worldwide, at approximately 2,300 graduate business schools worldwide. It helps you gauge, and demonstrate to schools, your academic potential for success in graduate-level management studies.

The four-part exam measures your Analytical Writing, Integrated Reasoning, Verbal Reasoning, and Quantitative Reasoning skills—higher-order reasoning skills that management faculty, admissions professionals, and employers worldwide have identified as important for incoming students to have. "Higher-order" reasoning skills involve complex judgments, and include critical thinking, analysis, and problem solving. Unlike undergraduate grades and curricula, which vary in their meaning across regions and institutions, your GMAT scores provide a standardized, statistically valid and reliable measure of how you are likely to perform academically in the core curriculum of a graduate management program. The GMAT exam's validity, fairness, and value in admissions have been well-established through numerous academic studies.

The GMAT exam is delivered entirely in English and solely on a computer. It is not a test of business knowledge, subject-matter mastery, English vocabulary, or advanced computational skills. The GMAT exam also does not measure other factors related to success in graduate management study, such as job experience, leadership ability, motivation, and interpersonal skills. Your GMAT score is intended to be used as one admissions criterion among other, more subjective, criteria, such as admissions essays and interviews.

1.1 Why Take the GMAT™ Exam?

Launched in 1954 by a group of nine business schools to provide a uniform measure of the academic skills needed to succeed in their programs, the GMAT exam is now used by more than 7,000 graduate management programs at approximately 2,300 institutions worldwide.

Taking the GMAT exam helps you stand out in the admissions process and demonstrate your readiness and commitment to pursuing graduate management education. Schools use GMAT scores to help them select the most qualified applicants—because they know that candidates who take the GMAT exam are serious about earning a graduate business degree, and it's a proven predictor of a student's ability to succeed in his or her chosen program. When you consider which programs to apply to, you can look at a school's use of the GMAT exam as one indicator of quality. Schools that use the GMAT exam typically list score ranges or average scores in their class profiles, so you may also find these profiles helpful in gauging the academic competitiveness of a program you are considering and how well your performance on the exam compares with that of the students enrolled in the program.

Myth -vs- FACT

M – If I don't achieve a high score on the GMAT, I won't get into my top choice schools.

F – There are great schools available for candidates at any GMAT score range.

Fewer than 50 of the more than 250,000 people taking the GMAT exam each year get a perfect score of 800; and many more get into top business school programs around the world each year. Admissions Officers use GMAT scores as one component in their admissions decisions, in conjunction with undergraduate records, application essays, interviews, letters of recommendation, and other information when deciding whom to accept into their programs. Visit School Finder on mba.com to learn about schools that are the best fit for you.

No matter how you perform on the GMAT exam, you should contact the schools that interest you to learn more and to ask how they use GMAT scores and other criteria (such as your undergraduate

grades, essays, and letters of recommendation) in their admissions processes. School admissions offices, web sites, and materials published by schools are the key sources of information when you are doing research about where you might want to go to business school.

For more information on the GMAT exam, test preparation materials, registration, how to use and send your GMAT scores to schools, and applying to business school, please visit mba.com.

1.2 GMAT™ Exam Format

The GMAT exam consists of four separately timed sections (see the table on the next page). The Analytical Writing Assessment (AWA) section consists of one essay. The Integrated Reasoning section consists of graphical and data analysis questions in multiple response formats. The Quantitative and Verbal Reasoning sections consist of multiple-choice questions.

The Quantitative and Verbal Reasoning sections of the GMAT exam are computer adaptive, which means that the test draws from a large bank of questions to tailor itself to your ability level, and you won't get many questions that are too hard or too easy for you. The first question will be of medium difficulty. As you answer each question, the computer scores your answer and uses it—as well as your responses to all preceding questions—to select the next question.

Computer-adaptive tests become more difficult the more questions you answer correctly, but if you get a question that seems easier than the last one, it does not necessarily mean you answered the last question incorrectly. The test has to cover a range of content, both in the type of question asked and the subject matter presented.

Myth-vs- FACT

M – Getting an easier question means I answered the last one wrong.

F – You should not become distracted by the difficulty level of a question.

Many different factors contribute to the difficulty of a question, so don't worry when taking the test or waste valuable time trying to determine the difficulty of the question you are answering.

To ensure that everyone receives the same content, the test selects a specific number of questions of each type. The test may call for your next problem to be a relatively hard data sufficiency question involving arithmetic operations. But, if there are no more relatively difficult data sufficiency questions involving arithmetic, you might be given an easier question.

Because the computer uses your answers to select your next questions, you may not skip questions or go back and change your answer to a previous question. If you don't know the answer to a question, try to eliminate as many choices as possible, then select the answer you think is best.

Though the individual questions are different, the mix of question types is the same for every GMAT exam. Your score is determined by the difficulty and statistical characteristics of the questions you answer as well as the number of questions you answer correctly. By adapting to each test-taker, the GMAT exam is able to accurately and efficiently gauge skill levels over a full range of abilities, from very high to very low.

The test includes the types of questions found in this book and online at gmat.wiley.com, but the format and presentation of the questions are different on the computer. When you take the test:

- Only one question or question prompt at a time is presented on the computer screen.
- The answer choices for the multiple-choice questions will be preceded by radio buttons, rather than by letters.

- Different question types appear in random order in the multiple-choice and Integrated Reasoning sections.
- You must select your answer using the computer.
- You must choose an answer and confirm your choice before moving on to the next question.
- You may not go back to previous screens to change answers to previous questions.

Format of the GMAT™ Exam

	Questions	Timing
Analytical Writing Assessment	1	30 min.
Integrated Reasoning Multi-Source Reasoning Table Analysis Graphics Interpretation Two-Part Analysis	12	30 min.
Quantitative Reasoning Problem Solving Data Sufficiency	31	62 min.
Verbal Reasoning Reading Comprehension Critical Reasoning Sentence Correction	36	65 min.
	Total Time:	187 min.

Immediately prior to starting your exam, you will have the flexibility to select the order for the section of the GMAT exam from three options.

Order #1	Order #2	Order #3
Analytical Writing Assessment	Verbal Reasoning	Quantitative Reasoning
Integrated Reasoning		
Optional 8-minute break		
Quantitative Reasoning	Quantitative Reasoning	Verbal Reasoning
Optional 8-minute break		
Verbal Reasoning	Integrated Reasoning	Integrated Reasoning
	Analytical Writing Assessment	Analytical Writing Assessment

The section order selection will take place at the test center on exam date, immediately prior to the start of the GMAT exam.

1.3 What Is the Content of the Exam Like?

The GMAT exam measures higher-order analytical skills encompassing several types of reasoning. The Analytical Writing Assessment asks you to analyze the reasoning behind an argument and respond in writing; the Integrated Reasoning section asks you to interpret and synthesize information from multiple sources and in different formats to make reasoned conclusions; the Quantitative Reasoning section asks you to reason quantitatively using basic arithmetic, algebra, and geometry; and the Verbal Reasoning section asks you to read and comprehend written material and to reason and evaluate arguments.

Test questions may address a variety of subjects, but all of the information you need to answer the questions will be included on the exam, with no outside knowledge of the subject matter necessary. The GMAT exam is not a test of business knowledge, English vocabulary, or advanced computational skills. You will need to read and write in English and have basic math and English skills to perform well on the test, but its difficulty comes from analytical and critical thinking abilities.

The questions in this book are organized by question type and from easiest to most difficult, but keep in mind that when you take the test, you may see different types of questions in any order within each section.

1.4 Analytical Writing Assessment

The Analytical Writing Assessment (AWA) consists of one 30-minute writing task: Analysis of an Argument. The AWA measures your ability to think critically, communicate your ideas, and formulate an appropriate and constructive critique. You will type your essay on a computer keyboard.

1.5 Integrated Reasoning Section

The Integrated Reasoning section highlights the relevant skills that business managers in today's data-driven world need in order to analyze sophisticated streams of data and solve complex problems. It measures your ability to understand and evaluate multiple sources and types of information—graphic, numeric, and verbal—as they relate to one another. This section will require you to use both quantitative and verbal reasoning to solve complex problems and solve multiple problems in relation to one another.

Four types of questions are used in the Integrated Reasoning section:

- Multi-Source Reasoning
- Table Analysis
- Graphics Interpretation
- Two-Part Analysis

Integrated Reasoning questions may require quantitative or verbal reasoning skills, or a combination of both. You will have to interpret graphics and sort tables to extract meaning from data, but advanced statistical knowledge and spreadsheet manipulation skills are not necessary. You will have access to an on-screen calculator with basic functions for the Integrated Reasoning section, but note that the calculator is *not* available on the Quantitative Reasoning section.

1.6 Quantitative Reasoning Section

The GMAT Quantitative Reasoning section measures your ability to reason quantitatively, solve quantitative problems, and interpret graphic data.

Two types of multiple-choice questions are used in the Quantitative Reasoning section:

- Problem Solving
- Data Sufficiency

Both are intermingled throughout the Quantitative Reasoning section, and require basic knowledge of arithmetic, elementary algebra, and commonly known concepts of geometry.

To review the basic mathematical concepts that you will need to answer Quantitative Reasoning questions, see the math review in chapter 4. For test-taking tips specific to the question types in the Quantitative Reasoning section, practice questions, and answer explanations, see chapters 4 and 5.

1.7 Verbal Reasoning Section

The GMAT Verbal Reasoning section measures your ability to read and comprehend written material and to reason and evaluate arguments. The Verbal Reasoning section includes reading sections from several different content areas. Although you may be generally familiar with some of the material, neither the reading passages nor the questions assume detailed knowledge of the topics discussed.

Three types of multiple-choice questions are intermingled throughout the Verbal Reasoning section:

- Reading Comprehension
- Critical Reasoning
- Sentence Correction

All three require basic knowledge of the English language, but the Verbal Reasoning section is not a test of advanced vocabulary.

For test-taking tips specific to each question type in the Verbal Reasoning section, practice questions, and answer explanations, see *GMAT™ Official Guide 2020* or *GMAT™ Official Guide Verbal Review 2020*; both are available for purchase at mba.com.

1.8 What Are the Test Centers Like?

The GMAT exam is administered under standardized conditions at over 700 test centers worldwide. Each test center has a proctored testing room with individual computer workstations that allow you to sit for the exam under quiet conditions and with some privacy. You will be able to take two optional 8-minute breaks during the course of the exam. You may not take notes or scratch paper with you into the testing room, but an erasable notepad and marker will be provided for you to use during the test. For more information about exam day visit mba.com.

1.9 How Are Scores Calculated?

Verbal Reasoning and Quantitative Reasoning sections are scored on a scale of 6 to 51, in one-point increments. The Total GMAT score ranges from 200 to 800 and is based on your performance in these two sections. Your score is determined by:

- The number of questions you answer
- The number of questions you answer correctly or incorrectly
- The level of difficulty and other statistical characteristics of each question

Your Verbal, Quantitative, and Total GMAT scores are determined by an algorithm that takes into account the difficulty of the questions that were presented to you and how you answered them. When you answer the easier questions correctly, you get a chance to answer harder questions, making it possible to earn a higher score. After you have completed all the questions on the test, or when your time is expired, the computer will calculate your scores.

You will receive three scores: Total Score (which is based on your Quantitative Reasoning and Verbal Reasoning scores), Integrated Reasoning Score, and Analytical Writing Assessment Score. The following table summarizes the different types of scores, the scales, and the increments.

Type of Score	Scale	Increments
Total (based on Quantitative Reasoning and Verbal Reasoning)	200–800	10
Quantitative Reasoning	6–51	1
Verbal Reasoning	6–51	1
Integrated Reasoning	1–8	1
Analytical Writing Assessment	0–6	.5

The schools that you have designated to receive your scores may receive a copy of your Analytical Writing Assessment essay with your score report. Your own copy of your score report will not include your actual essay.

Your GMAT score includes a percentile ranking that compares your skill level with other test-takers from the past three years. The percentile rank of your score shows the percentage of tests taken with scores lower than your score. Every July, percentile ranking tables are updated. Visit mba.com to view the most recent percentile rankings tables.

2.0 How to Prepare

2.0 How to Prepare

2.1 How Should I Prepare to Take the Test?

The GMAT exam is designed specifically to measure reasoning skills needed for management education, and the test contains several question formats unique to the GMAT exam. At a minimum, you should be familiar with the test format and the question formats before you sit for the test. Because the GMAT exam is a timed exam, you should practice answering test questions, not only to better understand the question formats and the skills they require, but also to help you learn to pace yourself so you can finish each section when you sit for the exam.

Because the exam measures reasoning rather than subject-matter knowledge, you most likely will not find it helpful to memorize facts. You do not need to study advanced mathematical concepts, but you should be sure your grasp of basic arithmetic, algebra, and geometry is sound enough that you can use these skills in quantitative problem solving. Likewise, you do not need to study advanced vocabulary words, but you should have a firm understanding of basic English vocabulary and grammar for reading, writing, and reasoning.

Myth -vs- FACT

M – You need very advanced math skills to get a high GMAT score.

F – The GMAT measures your reasoning and critical thinking abilities, rather than your advanced math skills.

The GMAT exam only requires basic quantitative skills. You should review the math skills (algebra, geometry, basic arithmetic) presented in this guide and the *GMAT™ Official Guide 2020*. The difficulty of GMAT Quantitative questions stems from the logic and analysis used to solve the problems and not the underlying math skills.

This book and other study materials released by the Graduate Management Admission Council (GMAC) are the ONLY source of questions that have been retired from the GMAT exam. All questions that appear or have appeared on the GMAT exam are copyrighted and owned by GMAC, which does not license them to be reprinted elsewhere. Accessing live Integrated Reasoning, Quantitative, or Verbal test questions in advance or sharing test content during or after you take the test is a serious violation, which could cause your scores to be canceled and schools to be notified. In cases of a serious violation, you may be banned from future testing and other legal remedies may be pursued.

2.2 Using GMAT Official Prep Products

Because the GMAT exam is administered on a computer, we encourage you to practice the questions in the *GMAT™ Official Guide Quantitative Review* online at gmat.wiley.com. All of the questions in this book are available there, and you'll be able to create practice sets and track progress more easily.

In addition to the *GMAT™ Official Guide Quantitative Review*, we recommend using some or all of our six GMAT Official Practice Exams in your preparation. Because the GMAT exam is computer adaptive, meaning that it adjusts to your ability as you answer questions on the exam, the best simulation of the GMAT exam experience is through GMAT Official Practice Exams. Like the real thing, the Official Practice Exams adjust to your ability and use the same scoring algorithm as the actual GMAT exam.

To maximize your studying efforts, we recommend starting by learning about the GMAT exam and the question types in the *GMAT™ Official Guide* and in the GMAT™ Official Starter Kit. Then, take GMAT Official Practice Exam 1 to familiarize yourself with the exam and to get a baseline score. Don't worry about your score on the first practice exam! The goal is to become familiar with the exam and set a baseline for measuring your progress. Following that, go to gmat.wiley.com and practice the questions in the *Official Guide*, focusing on areas that require your attention. As you continue to practice, take additional Official Practice Exams to gauge your progress. Before your real GMAT exam, take a final Official Practice Exam to see where you are and do a "dry run" of the true experience.

Remember: the first two GMAT Official Practice Exams are part of the free GMAT™ Official Starter Kit + Practice Exams 1 and 2, which also include 90 free practice questions, available to everyone with an mba.com account.

2.3 Where Can I Get Additional Practice?

If you would like additional practice, *GMAT™ Official Guide 2020* and *GMAT™ Official Guide Verbal Review 2020* offer additional questions that are not published in this guide. You can also find more Quantitative, Verbal, and Integrated Reasoning practice questions, full-length, computer-adaptive practice exams, Analytical Writing Assessment practice prompts, and other helpful study materials at mba.com.

2.4 General Test-Taking Suggestions

Specific test-taking strategies for individual question types are presented later in this book. The following are general suggestions to help you perform your best on the test.

1. **Use your time wisely.**
   Although the GMAT exam stresses accuracy more than speed, it is important to use your time wisely. On average, you will have about 1¾ minutes for each Verbal question, about 2 minutes for each Quantitative question, and about 2½ minutes for each Integrated Reasoning question, some of which have multiple questions. Once you start the test, an onscreen clock will show the time you have left. You can hide this display if you want, but it is a good idea to check the clock periodically to monitor your progress. The clock will automatically alert you when 5 minutes remain for the section you are working on.

2. **Determine your preferred section order before the actual exam.**
   The GMAT exam allows you to select the order in which to take the sections. Use the GMAT Official Practice Exams as an opportunity to practice and determine your preferred order. Remember: there is no "right" order in which to take the exam; you can practice each order and see which one works best for you.

3. **Answer practice questions ahead of time.**
   After you become generally familiar with all question types, use the practice questions in this book and online at gmat.wiley.com to prepare for the actual test (note that Integrated Reasoning questions are only available online). It may be useful to time yourself as you answer the practice questions to get an idea of how long you will have for each question when you sit for the actual test, as well as to determine whether you are answering quickly enough to finish the test in the allotted time.

4. **Read all test directions carefully.**
The directions explain exactly what is required to answer each question type. If you read hastily, you may miss important instructions and impact your ability to answer correctly. To review directions during the test, click on the Help icon. But be aware that the time you spend reviewing directions will count against your time allotment for that section of the test.

5. **Read each question carefully and thoroughly.**
Before you answer a question, determine exactly what is being asked and then select the best choice. Never skim a question or the possible answers; skimming may cause you to miss important information or nuances.

6. **Do not spend too much time on any one question.**
If you do not know the correct answer, or if the question is too time consuming, try to eliminate choices you know are wrong, select the best of the remaining answer choices, and move on to the next question.

   Not completing sections and randomly guessing answers to questions at the end of each test section can significantly lower your score. As long as you have worked on each section, you will receive a score even if you do not finish one or more sections in the allotted time. You will not earn points for questions you never get to see.

7. **Confirm your answers ONLY when you are ready to move on.**
On the Quantitative Reasoning and Verbal Reasoning sections, once you have selected your answer to a multiple-choice question, you will be asked to confirm it. Once you confirm your response, you cannot go back and change it. You may not skip questions. In the Integrated Reasoning section, there may be several questions based on information provided in the same question prompt. When there is more than one response on a single screen, you can change your response to any of the questions on the screen before moving on to the next screen. However, you may not navigate back to a previous screen to change any responses.

8. **Plan your essay answer before you begin to write.**
The best way to approach the Analysis of an Argument section is to read the directions carefully, take a few minutes to think about the question, and plan a response before you begin writing. Take time to organize your ideas and develop them fully, but leave time to reread your response and make any revisions that you think would improve it.

Myth -vs- FACT

M – It is more important to respond correctly to the test questions than it is to finish the test.

F – There is a significant penalty for not completing the GMAT exam.

Pacing is important. If you are stumped by a question, give it your best guess and move on. If you guess incorrectly, the computer program will likely give you an easier question, which you are likely to answer correctly, and the computer will rapidly return to giving you questions matched to your ability. If you don't finish the test, your score will be reduced. Failing to answer five verbal questions, for example, could reduce your score from the 91st percentile to the 77th percentile.

Myth -vs- FACT

M – The first 10 questions are critical and you should invest the most time on those.

F – All questions count.

The computer-adaptive testing algorithm uses each answered question to obtain an *initial* estimate. However, as you continue to answer questions, the algorithm self-corrects by computing an updated estimate on the basis of all the questions you have answered, and then administers questions that are closely matched to this new estimate of your ability. Your final score is based on all your responses and considers the difficulty of all the questions you answered. Taking additional time on the first 10 questions will not game the system and can hurt your ability to finish the test.

3.0 Math Review

3.0 Math Review

To answer Quantitative Reasoning questions on the GMAT exam, you will need to be familiar with basic mathematical concepts and formulas. This chapter contains a list of the basic mathematical concepts, terms, and formulas that may appear or can be useful for answering Quantitative Reasoning questions on the GMAT exam. This chapter offers only a high-level overview, so if you find unfamiliar terms or concepts, you should consult other resources for a more detailed discussion and explanation.

Keep in mind that this knowledge of basic math, while necessary, is seldom sufficient in answering GMAT questions. Unlike traditional math problems that you may have encountered in school, GMAT Quantitative Reasoning questions require you to *apply* your knowledge of math. For example, rather than asking you to demonstrate your knowledge of prime factorization by listing the prime factors of a number, a GMAT question may require you to apply your knowledge of prime factorization and properties of exponents to simplify an algebraic expression with a radical.

To prepare for the GMAT Quantitative Reasoning section, we recommend starting with a review of the basic mathematical concepts and formulas to ensure that you have the foundational knowledge necessary for solving the questions, before moving on to practicing the application of this knowledge on real GMAT questions from past exams.

Section 3.1, "Arithmetic," includes the following topics:

1. Properties of Integers
2. Fractions
3. Decimals
4. Real Numbers
5. Ratio and Proportion
6. Percents
7. Powers and Roots of Numbers
8. Descriptive Statistics
9. Sets
10. Counting Methods
11. Discrete Probability

Section 3.2, "Algebra," does not extend beyond what is usually covered in a first-year high school algebra course. The topics included are as follows:

1. Simplifying Algebraic Expressions
2. Equations
3. Solving Linear Equations with One Unknown
4. Solving Two Linear Equations with Two Unknowns
5. Solving Equations by Factoring
6. Solving Quadratic Equations
7. Exponents
8. Inequalities
9. Absolute Value
10. Functions

Section 3.3, "Geometry," is limited primarily to measurement and intuitive geometry or spatial visualization. Extensive knowledge of theorems and the ability to construct proofs, skills that are usually developed in a formal geometry course, are not tested. The topics included in this section are the following:

1. Lines
2. Intersecting Lines and Angles
3. Perpendicular Lines
4. Parallel Lines
5. Polygons (Convex)
6. Triangles
7. Quadrilaterals
8. Circles
9. Rectangular Solids and Cylinders
10. Coordinate Geometry

Section 3.4, "Word Problems," presents examples of and solutions to the following types of word problems:

1. Rate Problems
2. Work Problems
3. Mixture Problems
4. Interest Problems
5. Discount
6. Profit
7. Sets
8. Geometry Problems
9. Measurement Problems
10. Data Interpretation

3.1 Arithmetic

1. Properties of Integers

An *integer* is any number in the set $\{\ldots -3, -2, -1, 0, 1, 2, 3, \ldots\}$. If x and y are integers and $x \neq 0$, then x is a *divisor* (*factor*) of y provided that $y = xn$ for some integer n. In this case, y is also said to be *divisible* by x or to be a *multiple* of x. For example, 7 is a divisor or factor of 28 since $28 = (7)(4)$, but 8 is not a divisor of 28 since there is no integer n such that $28 = 8n$.

If x and y are positive integers, there exist unique integers q and r, called the *quotient* and *remainder,* respectively, such that $y = xq + r$ and $0 \leq r < x$. For example, when 28 is divided by 8, the quotient is 3 and the remainder is 4 since $28 = (8)(3) + 4$. Note that y is divisible by x if and only if the remainder r is 0; for example, 32 has a remainder of 0 when divided by 8 because 32 is divisible by 8. Also, note that when a smaller integer is divided by a larger integer, the quotient is 0 and the remainder is the smaller integer. For example, 5 divided by 7 has the quotient 0 and the remainder 5 since $5 = (7)(0) + 5$.

Any integer that is divisible by 2 is an *even integer*; the set of even integers is $\{\ldots -4, -2, 0, 2, 4, 6, 8, \ldots\}$. Integers that are not divisible by 2 are *odd integers*; $\{\ldots -3, -1, 1, 3, 5, \ldots\}$ is the set of odd integers.

If at least one factor of a product of integers is even, then the product is even; otherwise the product is odd. If two integers are both even or both odd, then their sum and their difference are even. Otherwise, their sum and their difference are odd.

A *prime* number is a positive integer that has exactly two different positive divisors, 1 and itself. For example, 2, 3, 5, 7, 11, and 13 are prime numbers, but 15 is not, since 15 has four different positive divisors, 1, 3, 5, and 15. The number 1 is not a prime number since it has only one positive divisor. Every integer greater than 1 either is prime or can be uniquely expressed as a product of prime factors. For example, $14 = (2)(7)$, $81 = (3)(3)(3)(3)$, and $484 = (2)(2)(11)(11)$.

The numbers $-2, -1, 0, 1, 2, 3, 4, 5$ are *consecutive integers.* Consecutive integers can be represented by $n, n + 1, n + 2, n + 3, \ldots$, where n is an integer. The numbers 0, 2, 4, 6, 8 are *consecutive even integers,* and 1, 3, 5, 7, 9 are *consecutive odd integers.* Consecutive even integers can be represented by $2n, 2n + 2, 2n + 4, \ldots$, and consecutive odd integers can be represented by $2n + 1, 2n + 3, 2n + 5, \ldots$, where n is an integer.

Properties of the integer 1. If n is any number, then $1 \cdot n = n$, and for any number $n \neq 0$, $n \cdot \frac{1}{n} = 1$.

The number 1 can be expressed in many ways; for example, $\frac{n}{n} = 1$ for any number $n \neq 0$.

Multiplying or dividing an expression by 1, in any form, does not change the value of that expression.

Properties of the integer 0. The integer 0 is neither positive nor negative. If n is any number, then $n + 0 = n$ and $n \cdot 0 = 0$. Division by 0 is not defined.

2. Fractions

In a fraction $\frac{n}{d}$, n is the *numerator* and d is the *denominator*. The denominator of a fraction can never be 0, because division by 0 is not defined.

Two fractions are said to be *equivalent* if they represent the same number. For example, $\frac{8}{36}$ and $\frac{14}{63}$ are equivalent since they both represent the number $\frac{2}{9}$. In each case, the fraction is reduced to lowest terms by dividing both numerator and denominator by their *greatest common divisor* (gcd). The gcd of 8 and 36 is 4 and the gcd of 14 and 63 is 7.

Addition and subtraction of fractions.

Two fractions with the same denominator can be added or subtracted by performing the required operation with the numerators, leaving the denominators the same. For example, $\frac{3}{5}+\frac{4}{5}=\frac{3+4}{5}=\frac{7}{5}$ and $\frac{5}{7}-\frac{2}{7}=\frac{5-2}{7}=\frac{3}{7}$. If two fractions do not have the same denominator, express them as equivalent fractions with the same denominator. For example, to add $\frac{3}{5}$ and $\frac{4}{7}$, multiply the numerator and denominator of the first fraction by 7 and the numerator and denominator of the second fraction by 5, obtaining $\frac{21}{35}$ and $\frac{20}{35}$, respectively; $\frac{21}{35}+\frac{20}{35}=\frac{41}{35}$.

For the new denominator, choosing the *least common multiple* (lcm) of the denominators usually lessens the work. For $\frac{2}{3}+\frac{1}{6}$, the lcm of 3 and 6 is 6 (not $3\times 6=18$), so $\frac{2}{3}+\frac{1}{6}=\frac{2}{3}\times\frac{2}{2}+\frac{1}{6}=\frac{4}{6}+\frac{1}{6}=\frac{5}{6}$.

Multiplication and division of fractions.

To multiply two fractions, simply multiply the two numerators and multiply the two denominators.

For example, $\frac{2}{3}\times\frac{4}{7}=\frac{2\times 4}{3\times 7}=\frac{8}{21}$.

To divide by a fraction, invert the divisor (that is, find its *reciprocal*) and multiply. For example, $\frac{2}{3}\div\frac{4}{7}=\frac{2}{3}\times\frac{7}{4}=\frac{14}{12}=\frac{7}{6}$.

In the problem above, the reciprocal of $\frac{4}{7}$ is $\frac{7}{4}$. In general, the reciprocal of a fraction $\frac{n}{d}$ is $\frac{d}{n}$, where n and d are not zero.

Mixed numbers.

A number that consists of a whole number and a fraction, for example, $7\frac{2}{3}$, is a mixed number: $7\frac{2}{3}$ means $7+\frac{2}{3}$.

To change a mixed number into a fraction, multiply the whole number by the denominator of the fraction and add this number to the numerator of the fraction; then put the result over the denominator of the fraction. For example, $7\frac{2}{3}=\frac{(3\times 7)+2}{3}=\frac{23}{3}$.

3. Decimals

In the decimal system, the position of the period or *decimal point* determines the place value of the digits. For example, the digits in the number 7,654.321 have the following place values:

Thousands		Hundreds	Tens	Ones or units		Tenths	Hundredths	Thousandths
7	,	6	5	4	.	3	2	1

Some examples of decimals follow.

$$0.321 = \frac{3}{10} + \frac{2}{100} + \frac{1}{1,000} = \frac{321}{1,000}$$

$$0.0321 = \frac{0}{10} + \frac{3}{100} + \frac{2}{1,000} + \frac{1}{10,000} = \frac{321}{10,000}$$

$$1.56 = 1 + \frac{5}{10} + \frac{6}{100} = \frac{156}{100}$$

Sometimes decimals are expressed as the product of a number with only one digit to the left of the decimal point and a power of 10. This is called *scientific notation.* For example, 231 can be written as 2.31×10^2 and 0.0231 can be written as 2.31×10^{-2}. When a number is expressed in scientific notation, the exponent of the 10 indicates the number of places that the decimal point is to be moved in the number that is to be multiplied by a power of 10 in order to obtain the product. The decimal point is moved to the right if the exponent is positive and to the left if the exponent is negative. For example, 2.013×10^4 is equal to 20,130 and 1.91×10^{-4} is equal to 0.000191.

Addition and subtraction of decimals.

To add or subtract two decimals, the decimal points of both numbers should be lined up. If one of the numbers has fewer digits to the right of the decimal point than the other, zeros may be inserted to the right of the last digit. For example, to add 17.6512 and 653.27, set up the numbers in a column and add:

$$\begin{array}{r} 17.6512 \\ +\,653.2700 \\ \hline 670.9212 \end{array}$$

Likewise for 653.27 minus 17.6512:

$$\begin{array}{r} 653.2700 \\ -17.6512 \\ \hline 635.6188 \end{array}$$

Multiplication of decimals.

To multiply decimals, multiply the numbers as if they were whole numbers and then insert the decimal point in the product so that the number of digits to the right of the decimal point is equal to the sum of the numbers of digits to the right of the decimal points in the numbers being multiplied. For example:

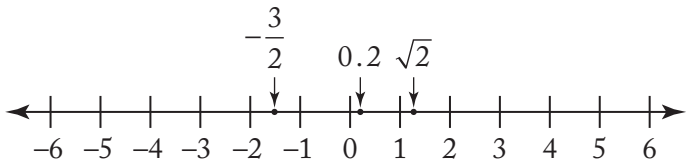
$$\begin{array}{rl} 2.09 & (2 \text{ digits to the right}) \\ \times 1.3 & (1 \text{ digit to the right}) \\ \hline 627 & \\ \\ 2090 & \\ \hline 2.717 & (2+1=3 \text{ digits to the right}) \end{array}$$

Division of decimals.

To divide a number (the dividend) by a decimal (the divisor), move the decimal point of the divisor to the right until the divisor is a whole number. Then move the decimal point of the dividend the same number of places to the right, and divide as you would by a whole number. The decimal point in the quotient will be directly above the decimal point in the new dividend. For example, to divide 698.12 by 12.4:

$$12.4\overline{)698.12}$$

will be replaced by:



$$124\overline{)6981.2}$$

and the division would proceed as follows:

$$\begin{array}{r} 56.3 \\ 124\overline{)6981.2} \\ \underline{620} \\ 781 \\ \underline{744} \\ 372 \\ \underline{372} \\ 0 \end{array}$$

4. Real Numbers

All *real* numbers correspond to points on the number line and all points on the number line correspond to real numbers. All real numbers except zero are either positive or negative.

On a number line, numbers corresponding to points to the left of zero are negative and numbers corresponding to points to the right of zero are positive. For any two numbers on the number line, the number to the left is less than the number to the right; for example, $-4 < -3 < -\frac{3}{2} < -1$, and $1 < \sqrt{2} < 2$.

To say that the number n is between 1 and 4 on the number line means that $n > 1$ and $n < 4$, that is, $1 < n < 4$. If n is "between 1 and 4, inclusive," then $1 \le n \le 4$.

The distance between a number and zero on the number line is called the *absolute value* of the number. Thus 3 and –3 have the same absolute value, 3, since they are both three units from zero. The absolute value of 3 is denoted $|3|$. Examples of absolute values of numbers are

$$|-5| = |5| = 5, \left|-\frac{7}{2}\right| = \frac{7}{2}, \text{ and } |0| = 0.$$

Note that the absolute value of any nonzero number is positive.

Here are some properties of real numbers that are used frequently. If x, y, and z are real numbers, then

(1) $x + y = y + x$ and $xy = yx$.
For example, $8 + 3 = 3 + 8 = 11$, and $(17)(5) = (5)(17) = 85$.

(2) $(x + y) + z = x + (y + z)$ and $(xy)z = x(yz)$.
For example, $(7 + 5) + 2 = 7 + (5 + 2) = 7 + (7) = 14$, and $\left(5\sqrt{3}\right)\left(\sqrt{3}\right) = (5)\left(\sqrt{3}\sqrt{3}\right) = (5)(3) = 15$.

(3) $xy + xz = x(y + z)$.
For example, $718(36) + 718(64) = 718(36 + 64) = 718(100) = 71{,}800$.

(4) If x and y are both positive, then $x + y$ and xy are positive.

(5) If x and y are both negative, then $x + y$ is negative and xy is positive.

(6) If x is positive and y is negative, then xy is negative.

(7) If $xy = 0$, then $x = 0$ or $y = 0$. For example, $3y = 0$ implies $y = 0$.

(8) $|x + y| \le |x| + |y|$. For example, if $x = 10$ and $y = 2$, then $|x + y| = |12| = 12 = |x| + |y|$; and if $x = 10$ and $y = -2$, then $|x + y| = |8| = 8 < 12 = |x| + |y|$.

5. Ratio and Proportion

The *ratio* of the number a to the number b ($b \neq 0$) is $\frac{a}{b}$.

A ratio may be expressed or represented in several ways. For example, the ratio of 2 to 3 can be written as 2 to 3, 2:3, or $\frac{2}{3}$. The order of the terms of a ratio is important. For example, the ratio of the number of months with exactly 30 days to the number with exactly 31 days is $\frac{4}{7}$, not $\frac{7}{4}$.

A *proportion* is a statement that two ratios are equal; for example, $\frac{2}{3} = \frac{8}{12}$ is a proportion. One way to solve a proportion involving an unknown is to cross multiply, obtaining a new equality. For example, to solve for n in the proportion $\frac{2}{3} = \frac{n}{12}$, cross multiply, obtaining $24 = 3n$; then divide both sides by 3, to get $n = 8$.

6. Percents

Percent means *per hundred* or *number out of 100.* A percent can be represented as a fraction with a denominator of 100, or as a decimal. For example:

$$37\% = \frac{37}{100} = 0.37.$$

To find a certain percent of a number, multiply the number by the percent expressed as a decimal or fraction. For example:

$$20\% \text{ of } 90 = 0.2 \times 90 = 18$$

or

$$20\% \text{ of } 90 = \frac{20}{100} \times 90 = \frac{1}{5} \times 90 = 18.$$

Percents greater than 100%.

Percents greater than 100% are represented by numbers greater than 1. For example:

$$300\% = \frac{300}{100} = 3$$

$$250\% \text{ of } 80 = 2.5 \times 80 = 200.$$

Percents less than 1%.

The percent 0.5% means $\frac{1}{2}$ of 1 percent. For example, 0.5% of 12 is equal to $0.005 \times 12 = 0.06$.

Percent change.

Often a problem will ask for the percent increase or decrease from one quantity to another quantity. For example, "If the price of an item increases from \$24 to \$30, what is the percent increase in price?" To find the percent increase, first find the amount of the increase; then divide this increase by the original amount, and express this quotient as a percent. In the example above, the percent increase would be found in the following way: the amount of the increase is $(30 - 24) = 6$. Therefore, the percent increase is $\frac{6}{24} = 0.25 = 25\%$.

Likewise, to find the percent decrease (for example, the price of an item is reduced from \$30 to \$24), first find the amount of the decrease; then divide this decrease by the original amount, and express this quotient as a percent. In the example above, the amount of decrease is $(30 - 24) = 6$.

Therefore, the percent decrease is $\frac{6}{30} = 0.20 = 20\%$.

Note that the percent increase from 24 to 30 is not the same as the percent decrease from 30 to 24.

In the following example, the increase is greater than 100 percent: If the cost of a certain house in 1983 was 300 percent of its cost in 1970, by what percent did the cost increase?

If n is the cost in 1970, then the percent increase is equal to $\frac{3n-n}{n}=\frac{2n}{n}=2$, or 200%.

7. Powers and Roots of Numbers

When a number k is to be used n times as a factor in a product, it can be expressed as k^n, which means the nth power of k. For example, $2^2=2\times2=4$ and $2^3=2\times2\times2=8$ are powers of 2.

Squaring a number that is greater than 1, or raising it to a higher power, results in a larger number; squaring a number between 0 and 1 results in a smaller number. For example:

$$\begin{array}{cc} 3^2=9 & (9>3) \\ \left(\frac{1}{3}\right)^2=\frac{1}{9} & \left(\frac{1}{9}<\frac{1}{3}\right) \\ (0.1)^2=0.01 & (0.01<0.1) \end{array}$$

A *square root* of a number n is a number that, when squared, is equal to n. The square root of a negative number is not a real number. Every positive number n has two square roots, one positive and the other negative, but $\sqrt{n}$ denotes the positive number whose square is n. For example, $\sqrt{9}$ denotes 3. The two square roots of 9 are $\sqrt{9}=3$ and $-\sqrt{9}=-3$.

Every real number r has exactly one real *cube root,* which is the number s such that $s^3=r$. The real cube root of r is denoted by $\sqrt[3]{r}$. Since $2^3=8$, $\sqrt[3]{8}=2$. Similarly, $\sqrt[3]{-8}=-2$, because $(-2)^3=-8$.

8. Descriptive Statistics

A list of numbers, or numerical data, can be described by various statistical measures. One of the most common of these measures is the *average,* or *(arithmetic) mean,* which locates a type of "center" for the data. The average of n numbers is defined as the sum of the n numbers divided by n. For example, the average of 6, 4, 7, 10, and 4 is $\frac{6+4+7+10+4}{5}=\frac{31}{5}=6.2$.

The *median* is another type of center for a list of numbers. To calculate the median of n numbers, first order the numbers from least to greatest; if n is odd, the median is defined as the middle number, whereas if n is even, the median is defined as the average of the two middle numbers. In the example above, the numbers, in order, are 4, 4, 6, 7, 10, and the median is 6, the middle number.

For the numbers 4, 6, 6, 8, 9, 12, the median is $\frac{6+8}{2}=7$. Note that the mean of these numbers is 7.5.

The median of a set of data can be less than, equal to, or greater than the mean. Note that for a large set of data (for example, the salaries of 800 company employees), it is often true that about half of the data is less than the median and about half of the data is greater than the median; but this is not always the case, as the following data show.

3, 5, 7, 7, 7, 7, 7, 7, 8, 9, 9, 9, 9, 10, 10

Here the median is 7, but only $\frac{2}{15}$ of the data is less than the median.

The *mode* of a list of numbers is the number that occurs most frequently in the list. For example, the mode of 1, 3, 6, 4, 3, 5 is 3. A list of numbers may have more than one mode. For example, the list 1, 2, 3, 3, 3, 5, 7, 10, 10, 10, 20 has two modes, 3 and 10.

The degree to which numerical data are spread out or dispersed can be measured in many ways. The simplest measure of dispersion is the *range,* which is defined as the greatest value in the numerical data minus the least value. For example, the range of 11, 10, 5, 13, 21 is 21 – 5 = 16. Note how the range depends on only two values in the data.

One of the most common measures of dispersion is the *standard deviation.* Generally speaking, the more the data are spread away from the mean, the greater the standard deviation. The standard deviation of n numbers can be calculated as follows: (1) find the arithmetic mean, (2) find the differences between the mean and each of the n numbers, (3) square each of the differences, (4) find the average of the squared differences, and (5) take the nonnegative square root of this average. Shown below is this calculation for the data 0, 7, 8, 10, 10, which have arithmetic mean 7.

x	$x - 7$	$(x - 7)^2$
0	–7	49
7	0	0
8	1	1
10	3	9
10	3	9
	Total	68

Standard deviation $\sqrt{\frac{68}{5}} \approx 3.7$

Notice that the standard deviation depends on every data value, although it depends most on values that are farthest from the mean. This is why a distribution with data grouped closely around the mean will have a smaller standard deviation than will data spread far from the mean. To illustrate this, compare the data 6, 6, 6.5, 7.5, 9, which also have mean 7. Note that the numbers in the second set of data seem to be grouped more closely around the mean of 7 than the numbers in the first set. This is reflected in the standard deviation, which is less for the second set (approximately 1.1) than for the first set (approximately 3.7).

There are many ways to display numerical data that show how the data are distributed. One simple way is with a *frequency distribution,* which is useful for data that have values occurring with varying frequencies. For example, the 20 numbers

–4	0	0	–3	–2	–1	–1	0	–1	–4
–1	–5	0	–2	0	–5	–2	0	0	–1

are displayed on the next page in a frequency distribution by listing each different value x and the frequency f with which x occurs.

Data Value x	Frequency f
–5	2
–4	2
–3	1
–2	3
–1	5
0	7
Total	20

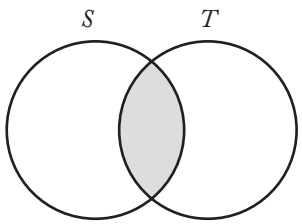
From the frequency distribution, one can readily compute descriptive statistics:

$$\text{Mean:} = \frac{(-5)(2)+(-4)(2)+(-3)(1)+(-2)(3)+(-1)(5)+(0)(7)}{20} = -1.6$$

Median: –1 (the average of the 10th and 11th numbers)

Mode: 0 (the number that occurs most frequently)

Range: 0 – (–5) = 5



$$\text{Standard deviation: } \sqrt{\frac{(-5+1.6)^2(2)+(-4+1.6)^2(2)+\ldots+(0+1.6)^2(7)}{20}} \approx 1.7$$

9. Sets

In mathematics a *set* is a collection of numbers or other objects. The objects are called the *elements* of the set. If S is a set having a finite number of elements, then the number of elements is denoted by $|S|$. Such a set is often defined by listing its elements; for example, $S = \{-5, 0, 1\}$ is a set with $|S| = 3$.
The order in which the elements are listed in a set does not matter; thus $\{-5, 0, 1\} = \{0, 1, -5\}$.
If all the elements of a set S are also elements of a set T, then S is a *subset* of T; for example, $S = \{-5, 0, 1\}$ is a subset of $T = \{-5, 0, 1, 4, 10\}$.

For any two sets A and B, the *union* of A and B is the set of all elements that are in A *or* in B *or* in both. The *intersection* of A and B is the set of all elements that are both in A *and* in B. The union is denoted by $A \cup B$ and the intersection is denoted by $A \cap B$. As an example, if $A = \{3, 4\}$ and $B = \{4, 5, 6\}$, then $A \cup B = \{3, 4, 5, 6\}$ and $A \cap B = \{4\}$. Two sets that have no elements in common are said to be *disjoint* or *mutually exclusive*.

The relationship between sets is often illustrated with a *Venn diagram* in which sets are represented by regions in a plane. For two sets S and T that are not disjoint and neither is a subset of the other, the intersection $S \cap T$ is represented by the shaded region of the diagram below.

This diagram illustrates a fact about any two finite sets S and T: the number of elements in their union equals the sum of their individual numbers of elements minus the number of elements in their intersection (because the latter are counted twice in the sum); more concisely,

$$|S \cup T| = |S| + |T| - |S \cap T|.$$

This counting method is called the general addition rule for two sets. As a special case, if S and T are disjoint, then

$$|S \cup T| = |S| + |T|$$

since $|S \cap T| = 0$.

10. Counting Methods

There are some useful methods for counting objects and sets of objects without actually listing the elements to be counted. The following principle of multiplication is fundamental to these methods.

If an object is to be chosen from a set of m objects and a second object is to be chosen from a different set of n objects, then there are mn ways of choosing both objects simultaneously.

As an example, suppose the objects are items on a menu. If a meal consists of one entree and one dessert and there are 5 entrees and 3 desserts on the menu, then there are $5 \times 3 = 15$ different meals that can be ordered from the menu. As another example, each time a coin is flipped, there are two possible outcomes, heads and tails. If an experiment consists of 8 consecutive coin flips, then the experiment has 2^8 possible outcomes, where each of these outcomes is a list of heads and tails in some order.

A symbol that is often used with the multiplication principle is the *factorial*. If n is an integer greater than 1, then n factorial, denoted by the symbol $n!$, is defined as the product of all the integers from 1 to n. Therefore,

$$2! = (1)(2) = 2,$$
$$3! = (1)(2)(3) = 6,$$
$$4! = (1)(2)(3)(4) = 24, \text{ etc.}$$

Also, by definition, $0! = 1! = 1$.

The factorial is useful for counting the number of ways that a set of objects can be ordered. If a set of n objects is to be ordered from 1st to nth, then there are n choices for the 1st object, $n - 1$ choices for the 2nd object, $n - 2$ choices for the 3rd object, and so on, until there is only 1 choice for the nth object.

Thus, by the multiplication principle, the number of ways of ordering the n objects is

$n(n-1)(n-2)\cdots(3)(2)(1) = n!$.

For example, the number of ways of ordering the letters A, B, and C is 3!, or 6:

ABC, ACB, BAC, BCA, CAB, and CBA.

These orderings are called the *permutations* of the letters A, B, and C.

A permutation can be thought of as a selection process in which objects are selected one by one in a certain order. If the order of selection is not relevant and only k objects are to be selected from a larger set of n objects, a different counting method is employed.

Specifically, consider a set of n objects from which a complete selection of k objects is to be made without regard to order, where $0 \le k \le n$. Then the number of possible complete selections of k objects is called the number of *combinations* of n objects taken k at a time and is denoted by $\binom{n}{k}$.

The value of $\binom{n}{k}$ is given by $\binom{n}{k} = \frac{n!}{k!(n-k)!}$.

Note that $\binom{n}{k}$ is the number of k-element subsets of a set with n elements. For example, if S = {A, B, C, D, E}, then the number of 2-element subsets of S, or the number of combinations of 5 letters taken 2 at a time, is $\binom{5}{2} = \frac{5!}{2!3!} = \frac{120}{(2)(6)} = 10$.

The subsets are {A, B}, {A, C}, {A, D}, {A, E}, {B, C}, {B, D}, {B, E}, {C, D}, {C, E}, and {D, E}. Note that $\binom{5}{2} = 10 = \binom{5}{3}$ because every 2-element subset chosen from a set of 5 elements corresponds to a unique 3-element subset consisting of the elements *not* chosen.

In general, $\binom{n}{k} = \binom{n}{n-k}$.

11. Discrete Probability

Many of the ideas discussed in the preceding three topics are important to the study of discrete probability. Discrete probability is concerned with *experiments* that have a finite number of *outcomes*. Given such an experiment, an *event* is a particular set of outcomes. For example, rolling a number cube with faces numbered 1 to 6 (similar to a 6-sided die) is an experiment with 6 possible outcomes: 1, 2, 3, 4, 5, or 6. One event in this experiment is that the outcome is 4, denoted {4}; another event is that the outcome is an odd number: {1, 3, 5}.

The probability that an event E occurs, denoted by $P(E)$, is a number between 0 and 1, inclusive. If E has no outcomes, then E is *impossible* and $P(E) = 0$; if E is the set of all possible outcomes of the experiment, then E is *certain* to occur and $P(E) = 1$. Otherwise, E is possible but uncertain, and $0 < P(E) < 1$. If F is a subset of E, then $P(F) \le P(E)$. In the example above, if the probability of each of the 6 outcomes is the same, then the probability of each outcome is $\frac{1}{6}$, and the outcomes are said to be

equally likely. For experiments in which all the individual outcomes are equally likely, the probability of an event E is

$$P(E) = \frac{\text{The number of outcomes in } E}{\text{The total number of possible outcomes}}.$$

In the example, the probability that the outcome is an odd number is

$$P(\{1,3,5\}) = \frac{|\{1,3,5\}|}{6} = \frac{3}{6} = \frac{1}{2}.$$

Given an experiment with events E and F, the following events are defined:
"not E" is the set of outcomes that are not outcomes in E;
"E or F" is the set of outcomes in E or F or both, that is, $E \cup F$;
"E and F" is the set of outcomes in both E and F, that is, $E \cap F$.

The probability that E does not occur is $P(\text{not } E) = 1 - P(E)$. The probability that "$E$ or F" occurs is $P(E \text{ or } F) = P(E) + P(F) - P(E \text{ and } F)$, using the general addition rule at the end of section 4.1.9 ("Sets"). For the number cube, if E is the event that the outcome is an odd number, {1, 3, 5}, and F is the event that the outcome is a prime number, {2, 3, 5}, then $P(E \text{ and } F) = P(\{3,5\}) = \frac{2}{6} = \frac{1}{3}$ and so $P(E \text{ or } F) = P(E) + P(F) - P(E \text{ and } F) = \frac{3}{6} + \frac{3}{6} - \frac{2}{6} = \frac{4}{6} = \frac{2}{3}$.
Note that the event *"E or F"* is $E \cup F = \{1, 2, 3, 5\}$, and hence $P(E \text{ or } F) = \frac{|\{1,2,3,5\}|}{6} = \frac{4}{6} = \frac{2}{3}$.

If the event *"E and F"* is impossible (that is, $E \cap F$ has no outcomes), then E and F are said to be *mutually exclusive* events, and $P(E \text{ and } F) = 0$. Then the general addition rule is reduced to $P(E \text{ or } F) = P(E) + P(F)$.

This is the special addition rule for the probability of two mutually exclusive events.

Two events A and B are said to be *independent* if the occurrence of either event does not alter the probability that the other event occurs. For one roll of the number cube, let $A = \{2, 4, 6\}$ and let $B = \{5, 6\}$. Then the probability that A occurs is $P(A) = \frac{|A|}{6} = \frac{3}{6} = \frac{1}{2}$, while, *presuming B occurs,* the probability that A occurs is

$$\frac{|A \cap B|}{|B|} = \frac{|\{6\}|}{|\{5,6\}|} = \frac{1}{2}.$$

Similarly, the probability that B occurs is $P(B) = \frac{|B|}{6} = \frac{2}{6} = \frac{1}{3}$, while, *presuming A occurs,* the probability that B occurs is

$$\frac{|B \cap A|}{|A|} = \frac{|\{6\}|}{|\{2,4,6\}|} = \frac{1}{3}.$$

Thus, the occurrence of either event does not affect the probability that the other event occurs. Therefore, A and B are independent.

The following multiplication rule holds for any independent events E and F: $P(E \text{ and } F) = P(E)P(F)$.

For the independent events A and B above, $P(A \text{ and } B) = P(A)P(B) = \left(\frac{1}{2}\right)\left(\frac{1}{3}\right) = \left(\frac{1}{6}\right)$.

Note that the event "A and B" is $A \cap B = \{6\}$, and hence $P(A \text{ and } B) = P(\{6\}) = \frac{1}{6}$. It follows from the general addition rule and the multiplication rule above that if E and F are independent, then

$$P(E \text{ or } F) = P(E) + P(F) - P(E)P(F).$$

For a final example of some of these rules, consider an experiment with events A, B, and C for which $P(A) = 0.23$, $P(B) = 0.40$, and $P(C) = 0.85$. Also, suppose that events A and B are mutually exclusive and events B and C are independent. Then

$$\begin{aligned} P(A \text{ or } B) &= P(A) + P(B) \text{ (since } A \text{ or } B \text{ are mutually exclusive)} \\ &= 0.23 + 0.40 \\ &= 0.63 \\ P(B \text{ or } C) &= P(B) + P(C) - P(B)P(C) \text{ (by independence)} \\ &= 0.40 + 0.85 - (0.40)(0.85) \\ &= 0.91 \end{aligned}$$

Note that $P(A \text{ or } C)$ and $P(A \text{ and } C)$ cannot be determined using the information given. But it can be determined that A and C are *not* mutually exclusive since $P(A) + P(C) = 1.08$, which is greater than 1, and therefore cannot equal $P(A \text{ or } C)$; from this it follows that $P(A \text{ and } C) \geq 0.08$. One can also deduce that $P(A \text{ and } C) \leq P(A) = 0.23$, since $A \cap C$ is a subset of A, and that $P(A \text{ or } C) \geq P(C) = 0.85$ since C is a subset of $A \cup C$. Thus, one can conclude that $0.85 \leq P(A \text{ or } C) \leq 1$ and $0.08 \leq P(A \text{ and } C) \leq 0.23$.

3.2 Algebra

Algebra is based on the operations of arithmetic and on the concept of an *unknown quantity,* or *variable.* Letters such as x or n are used to represent unknown quantities. For example, suppose Pam has 5 more pencils than Fred. If F represents the number of pencils that Fred has, then the number of pencils that Pam has is $F + 5$. As another example, if Jim's present salary S is increased by 7%, then his new salary is $1.07S$. A combination of letters and arithmetic operations, such as $F + 5, \frac{3x^2}{2x - 5}$, and $19x^2 - 6x + 3$, is called an *algebraic expression.*

The expression $19x^2 - 6x + 3$ consists of the *terms* $19x^2$, $-6x$, and 3, where 19 is the *coefficient* of x^2, -6 is the coefficient of x^1, and 3 is a *constant term* (or coefficient of $x^0 = 1$). Such an expression is called a *second degree* (or *quadratic*) *polynomial in x* since the highest power of x is 2. The expression $F + 5$ is a *first degree* (or *linear*) *polynomial in F* since the highest power of F is 1. The expression $\frac{3x^2}{2x - 5}$ is not a polynomial because it is not a sum of terms that are each powers of x multiplied by coefficients.

1. Simplifying Algebraic Expressions

Often when working with algebraic expressions, it is necessary to simplify them by factoring or combining *like* terms. For example, the expression $6x + 5x$ is equivalent to $(6 + 5)x$, or $11x$. In the expression $9x - 3y$, 3 is a factor common to both terms: $9x - 3y = 3(3x - y)$. In the expression $5x^2 + 6y$, there are no like terms and no common factors.

If there are common factors in the numerator and denominator of an expression, they can be divided out, provided that they are not equal to zero.

For example, if $x \neq 3$, then $\frac{x-3}{x-3}$ is equal to 1; therefore,

$$\begin{aligned}\frac{3xy-9y}{x-3} &= \frac{3y(x-3)}{x-3}\\ &= (3y)(1)\\ &= 3y\end{aligned}$$

To multiply two algebraic expressions, each term of one expression is multiplied by each term of the other expression. For example:

$$\begin{aligned}(3x-4)(9y+x) &= 3x(9y+x)-4(9y+x)\\ &= (3x)(9y)+(3x)(x)+(-4)(9y)+(-4)(x)\\ &= 27xy+3x^2-36y-4x\end{aligned}$$

An algebraic expression can be evaluated by substituting values of the unknowns in the expression. For example, if $x = 3$ and $y = -2$, then $3xy - x^2 + y$ can be evaluated as

$$3(3)(-2)-(3)^2+(-2) = -18-9-2 = -29$$

2. Equations

A major focus of algebra is to solve equations involving algebraic expressions. Some examples of such equations are

$5x - 2 = 9 - x$ (a linear equation with one unknown)

$3x + 1 = y - 2$ (a linear equation with two unknowns)

$5x^2 + 3x - 2 = 7x$ (a quadratic equation with one unknown)

$\frac{x(x-3)(x^2+5)}{x-4} = 0$ (an equation that is factored on one side with 0 on the other)

The *solutions* of an equation with one or more unknowns are those values that make the equation true, or "satisfy the equation," when they are substituted for the unknowns of the equation. An equation may have no solution or one or more solutions. If two or more equations are to be solved together, the solutions must satisfy all the equations simultaneously.

Two equations having the same solution(s) are *equivalent equations.* For example, the equations

$$2 + x = 3$$
$$4 + 2x = 6$$

each have the unique solution $x = 1$. Note that the second equation is the first equation multiplied by 2. Similarly, the equations

$$3x - y = 6$$
$$6x - 2y = 12$$

have the same solutions, although in this case each equation has infinitely many solutions. If any value is assigned to x, then $3x - 6$ is a corresponding value for y that will satisfy both equations; for example, $x = 2$ and $y = 0$ is a solution to both equations, as is $x = 5$ and $y = 9$.

3. Solving Linear Equations with One Unknown

To solve a linear equation with one unknown (that is, to find the value of the unknown that satisfies the equation), the unknown should be isolated on one side of the equation. This can be done by performing the same mathematical operations on both sides of the equation. Remember that if the same number is added to or subtracted from both sides of the equation, this does not change the equality; likewise, multiplying or dividing both sides by the same nonzero number does not change the equality. For example, to solve the equation $\frac{5x-6}{3} = 4$ for x, the variable x can be isolated using the following steps:

$$5x - 6 = 12 \quad \text{(multiplying by 3)}$$
$$5x = 18 \quad \text{(adding 6)}$$
$$x = \frac{18}{5} \quad \text{(dividing by 5)}$$

The solution, $\frac{18}{5}$, can be checked by substituting it for x in the original equation to determine whether it satisfies that equation:

$$\frac{5\left(\frac{18}{5}\right)-6}{3} = \frac{18-6}{3} = \frac{12}{3} = 4$$

Therefore, $x = \frac{18}{5}$ is the solution.

4. Solving Two Linear Equations with Two Unknowns

For two linear equations with two unknowns, if the equations are equivalent, then there are infinitely many solutions to the equations, as illustrated at the end of section 4.2.2 ("Equations"). If the equations are not equivalent, then they have either one unique solution or no solution. The latter case is illustrated by the two equations:

$$3x + 4y = 17$$
$$6x + 8y = 35$$

Note that $3x + 4y = 17$ implies $6x + 8y = 34$, which contradicts the second equation. Thus, no values of x and y can simultaneously satisfy both equations.

There are several methods of solving two linear equations with two unknowns. With any method, if a contradiction is reached, then the equations have no solution; if a trivial equation such as $0 = 0$ is reached, then the equations are equivalent and have infinitely many solutions. Otherwise, a unique solution can be found.

One way to solve for the two unknowns is to express one of the unknowns in terms of the other using one of the equations, and then substitute the expression into the remaining equation to obtain an equation with one unknown. This equation can be solved and the value of the unknown substituted into either of the original equations to find the value of the other unknown. For example, the following two equations can be solved for x and y.

$$\begin{aligned} (1) \quad & 3x + 2y = 11 \\ (2) \quad & x - y = 2 \end{aligned}$$

In equation (2), $x = 2 + y$. Substitute $2 + y$ in equation (1) for x:

$$\begin{aligned} 3(2 + y) + 2y &= 11 \\ 6 + 3y + 2y &= 11 \\ 6 + 5y &= 11 \\ 5y &= 5 \\ y &= 1 \end{aligned}$$

If $y = 1$, then $x - 1 = 2$ and $x = 2 + 1 = 3$.

There is another way to solve for x and y by eliminating one of the unknowns. This can be done by making the coefficients of one of the unknowns the same (disregarding the sign) in both equations and either adding the equations or subtracting one equation from the other. For example, to solve the equations

$$\begin{aligned} (1) \quad & 6x + 5y = 29 \\ (2) \quad & 4x - 3y = -6 \end{aligned}$$

by this method, multiply equation (1) by 3 and equation (2) by 5 to get

$$\begin{aligned} 18x + 15y &= 87 \\ 20x - 15y &= -30 \end{aligned}$$

Adding the two equations eliminates y, yielding $38x = 57$, or $x = \frac{3}{2}$. Finally, substituting $\frac{3}{2}$ for x in one of the equations gives $y = 4$. These answers can be checked by substituting both values into both of the original equations.

5. Solving Equations by Factoring

Some equations can be solved by factoring. To do this, first add or subtract expressions to bring all the expressions to one side of the equation, with 0 on the other side. Then try to factor the nonzero side into a product of expressions. If this is possible, then using property (7) in section 4.1.4 ("Real Numbers") each of the factors can be set equal to 0, yielding several simpler equations that possibly can be solved. The solutions of the simpler equations will be solutions of the factored equation. As an example, consider the equation $x^3 - 2x^2 + x = -5(x-1)^2$:

$$\begin{aligned} x^3 - 2x^2 + x + 5(x-1)^2 &= 0 \\ x(x^2 - 2x + 1) + 5(x-1)^2 &= 0 \\ x(x-1)^2 + 5(x-1)^2 &= 0 \\ (x+5)(x-1)^2 &= 0 \\ x + 5 = 0 \text{ or } (x-1)^2 &= 0 \\ x = -5 \text{ or } x &= 1. \end{aligned}$$

For another example, consider $\dfrac{x(x-3)(x^2+5)}{x-4} = 0$. A fraction equals 0 if and only if its numerator equals 0. Thus, $x(x-3)(x^2+5) = 0$:

$$\begin{aligned} x = 0 \text{ or } x - 3 = 0 \text{ or } x^2 + 5 &= 0 \\ x = 0 \text{ or } x = 3 \text{ or } x^2 + 5 &= 0. \end{aligned}$$

But $x^2 + 5 = 0$ has no real solution because $x^2 + 5 > 0$ for every real number. Thus, the solutions are 0 and 3.

The solutions of an equation are also called the *roots* of the equation. These roots can be checked by substituting them into the original equation to determine whether they satisfy the equation.

6. Solving Quadratic Equations

The standard form for a *quadratic equation* is

$$ax^2 + bx + c = 0,$$

where a, b, and c are real numbers and $a \neq 0$; for example:

$$\begin{aligned} x^2 + 6x + 5 &= 0 \\ 3x^2 - 2x &= 0, \text{ and} \\ x^2 + 4 &= 0 \end{aligned}$$

Some quadratic equations can easily be solved by factoring. For example:

(1)
$$\begin{aligned} x^2 + 6x + 5 &= 0 \\ (x+5)(x+1) &= 0 \\ x + 5 = 0 \text{ or } x + 1 &= 0 \\ x = -5 \text{ or } x &= -1 \end{aligned}$$

(2)
$$3x^2 - 3 = 8x$$
$$3x^2 - 8x - 3 = 0$$
$$(3x+1)(x-3) = 0$$
$$3x+1 = 0 \text{ or } x-3 = 0$$
$$x = -\frac{1}{3} \text{ or } x = 3$$

A quadratic equation has at most two real roots and may have just one or even no real root. For example, the equation $x^2 - 6x + 9 = 0$ can be expressed as $(x-3)^2 = 0$, or $(x-3)(x-3) = 0$; thus the only root is 3. The equation $x^2 + 4 = 0$ has no real root; since the square of any real number is greater than or equal to zero, $x^2 + 4$ must be greater than zero.

An expression of the form $a^2 - b^2$ can be factored as $(a-b)(a+b)$.

For example, the quadratic equation $9x^2 - 25 = 0$ can be solved as follows.

$$(3x-5)(3x+5) = 0$$
$$3x-5 = 0 \text{ or } 3x+5 = 0$$
$$x = \frac{5}{3} \text{ or } x = -\frac{5}{3}$$

If a quadratic expression is not easily factored, then its roots can always be found using the *quadratic formula:* If $ax^2 + bx + c = 0$ $(a \neq 0)$, then the roots are

$$x = \frac{-b+\sqrt{b^2-4ac}}{2a} \text{ and } x = \frac{-b-\sqrt{b^2-4ac}}{2a}$$

These are two distinct real numbers unless $b^2 - 4ac \leq 0$. If $b^2 - 4ac = 0$, then these two expressions for x are equal to $-\frac{b}{2a}$, and the equation has only one root. If $b^2 - 4ac < 0$, then $\sqrt{b^2-4ac}$ is not a real number and the equation has no real roots.

7. Exponents

A positive integer exponent of a number or a variable indicates a product, and the positive integer is the number of times that the number or variable is a factor in the product. For example, x^5 means $(x)(x)(x)(x)(x)$; that is, x is a factor in the product 5 times.

Some rules about exponents follow.

Let x and y be any positive numbers, and let r and s be any positive integers.

(1) $(x^r)(x^s) = x^{(r+s)}$; for example, $(2^2)(2^3) = 2^{(2+3)} = 2^5 = 32$.

(2) $\frac{x^r}{x^s} = x^{(r-s)}$; for example, $\frac{4^5}{4^2} = 4^{5-2} = 4^3 = 64$.

(3) $(x^r)(y^r) = (xy)^r$; for example, $(3^3)(4^3) = 12^3 = 1{,}728$.

(4) $\left(\frac{x}{y}\right)^r = \frac{x^r}{y^r}$; for example, $\left(\frac{2}{3}\right)^3 = \frac{2^3}{3^3} = \frac{8}{27}$.

(5) $(x^r)^s = x^{rs} = (x^s)^r$; for example, $(x^3)^4 = x^{12} = (x^4)^3$.

(6) $x^{-r} = \frac{1}{x^r}$; for example, $3^{-2} = \frac{1}{3^2} = \frac{1}{9}$.

(7) $x^0 = 1$; for example, $6^0 = 1$.

(8) $x^{\frac{r}{s}} = \left(x^{\frac{1}{s}}\right)^r = \left(x^r\right)^{\frac{1}{s}} = \sqrt[s]{x^r}$; for example, $8^{\frac{2}{3}} = \left(8^{\frac{1}{3}}\right)^2 = \left(8^2\right)^{\frac{1}{3}} = \sqrt[3]{8^2} = \sqrt[3]{64} = 4$ and $9^{\frac{1}{2}} = \sqrt{9} = 3$.

It can be shown that rules 1 – 6 also apply when r and s are not integers and are not positive, that is, when r and s are any real numbers.

8. Inequalities

An *inequality* is a statement that uses one of the following symbols:

≠ not equal to

> greater than

≥ greater than or equal to

< less than

≤ less than or equal to

Some examples of inequalities are $5x - 3 < 9$, $6x \geq y$, and $\frac{1}{2} < \frac{3}{4}$. Solving a linear inequality with one unknown is similar to solving an equation; the unknown is isolated on one side of the inequality. As in solving an equation, the same number can be added to or subtracted from both sides of the inequality, or both sides of an inequality can be multiplied or divided by a positive number without changing the truth of the inequality. However, multiplying or dividing an inequality by a negative number reverses the order of the inequality. For example, $6 > 2$, but $(-1)(6) < (-1)(2)$.

To solve the inequality $3x - 2 > 5$ for x, isolate x by using the following steps:

$$\begin{aligned} 3x - 2 &> 5 \\ 3x &> 7 \quad \text{(adding 2 to both sides)} \\ x &> \frac{7}{3} \quad \text{(dividing both sides by 3)} \end{aligned}$$

To solve the inequality $\frac{5x-1}{-2} < 3$ for x, isolate x by using the following steps:

$$\begin{aligned} &\frac{5x-1}{-2} < 3 \\ &5x - 1 > -6 \quad \text{(multiplying both sides by } -2\text{)} \\ &5x > -5 \quad \text{(adding 1 to both sides)} \\ &x > -1 \quad \text{(dividing both sides by 5)} \end{aligned}$$

9. Absolute Value

The absolute value of x, denoted $|x|$, is defined to be x if $x \geq 0$ and $-x$ if $x < 0$. Note that $\sqrt{x^2}$ denotes the nonnegative square root of x^2, and so $\sqrt{x^2} = |x|$.

10. Functions

An algebraic expression in one variable can be used to define a *function* of that variable. A function is denoted by a letter such as f or g along with the variable in the expression. For example, the expression $x^3 - 5x^2 + 2$ defines a function f that can be denoted by

$$f(x) = x^3 - 5x^2 + 2.$$

The expression $\frac{2z+7}{\sqrt{z+1}}$ defines a function g that can be denoted by

$$g(z) = \frac{2z+7}{\sqrt{z+1}}.$$

The symbols "$f(x)$" or "$g(z)$" do not represent products; each is merely the symbol for an expression, and is read "f of x" or "g of z."

Function notation provides a short way of writing the result of substituting a value for a variable. If $x = 1$ is substituted in the first expression, the result can be written $f(1) = -2$, and $f(1)$ is called the "value of f at $x = 1$." Similarly, if $z = 0$ is substituted in the second expression, then the value of g at $z = 0$ is $g(0) = 7$.

Once a function $f(x)$ is defined, it is useful to think of the variable x as an input and $f(x)$ as the corresponding output. In any function there can be no more than one output for any given input. However, more than one input can give the same output; for example, if $h(x) = |x + 3|$, then $h(-4) = 1 = h(-2)$.

The set of all allowable inputs for a function is called the *domain* of the function. For f and g defined above, the domain of f is the set of all real numbers and the domain of g is the set of all numbers greater than -1. The domain of any function can be arbitrarily specified, as in the function defined by "$h(x) = 9x - 5$ for $0 \leq x \leq 10$." Without such a restriction, the domain is assumed to be all values of x that result in a real number when substituted into the function.

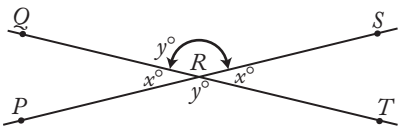
The domain of a function can consist of only the positive integers and possibly 0. For example, $a(n) = n^2 + \frac{n}{5}$ for $n = 0, 1, 2, 3, \ldots$.

Such a function is called a *sequence* and $a(n)$ is denoted by a_n. The value of the sequence a_n at $n = 3$ is $a_3 = 3^2 + \frac{3}{5} = 9.60$. As another example, consider the sequence defined by $b_n = (-1)^n (n!)$ for $n = 1, 2, 3, \ldots$. A sequence like this is often indicated by listing its values in the order $b_1, b_2, b_3, \ldots, b_n, \ldots$ as follows:

$-1, 2, -6, \ldots, (-1)^n(n!), \ldots,$ and $(-1)^n(n!)$ is called the nth term of the sequence.

3.3 Geometry

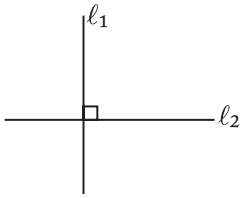
1. Lines



In geometry, the word "line" refers to a straight line that extends without end in both directions.

The line above can be referred to as line PQ or line ℓ. The part of the line from P to Q is called a *line segment*. P and Q are the *endpoints* of the segment. The notation $\overline{PQ}$ is used to denote line segment PQ and PQ is used to denote the length of the segment.

2. Intersecting Lines and Angles

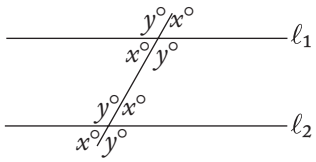


If two lines intersect, the opposite angles are called *vertical angles* and have the same measure. In the figure

$\angle PRQ$ and $\angle SRT$ are vertical angles and $\angle QRS$ and $\angle PRT$ are vertical angles. Also, $x + y = 180°$ since PRS is a straight line.

3. Perpendicular Lines

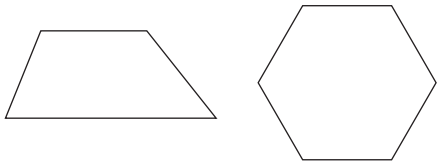
An angle that has a measure of 90° is a *right angle.* If two lines intersect at right angles, the lines are *perpendicular.* For example:



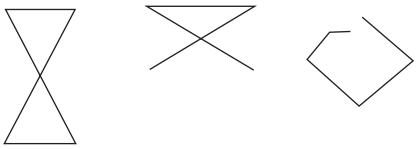
ℓ_1 and ℓ_2 above are perpendicular, denoted by $\ell_1 \perp \ell_2$. A right angle symbol in an angle of intersection indicates that the lines are perpendicular.

4. Parallel Lines

If two lines that are in the same plane do not intersect, the two lines are *parallel.* In the figure



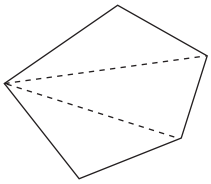
lines ℓ_1 and ℓ_2 are parallel, denoted by $\ell_1 \parallel \ell_2$. If two parallel lines are intersected by a third line, as shown below, then the angle measures are related as indicated, where $x + y = 180°$.



5. Polygons (Convex)

A *polygon* is a closed plane figure formed by three or more line segments, called the *sides* of the polygon. Each side intersects exactly two other sides at their endpoints. The points of intersection of the sides are *vertices*. The term "polygon" will be used to mean a convex polygon, that is, a polygon in which each interior angle has a measure of less than 180°.

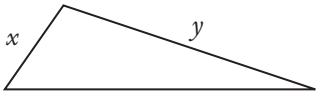
The following figures are polygons:



The following figures are not polygons:

A polygon with three sides is a *triangle*; with four sides, a *quadrilateral*; with five sides, a *pentagon*; and with six sides, a *hexagon*.

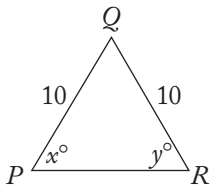
The sum of the interior angle measures of a triangle is 180°. In general, the sum of the interior angle measures of a polygon with n sides is equal to $(n - 2)180°$. For example, this sum for a pentagon is $(5 - 2)180° = (3)180° = 540°$.



Note that a pentagon can be partitioned into three triangles and therefore the sum of the angle measures can be found by adding the sum of the angle measures of three triangles.

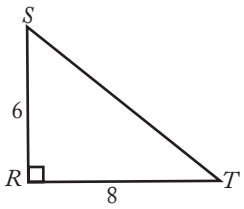
The *perimeter* of a polygon is the sum of the lengths of its sides.

The commonly used phrase "area of a triangle" (or any other plane figure) is used to mean the area of the region enclosed by that figure.

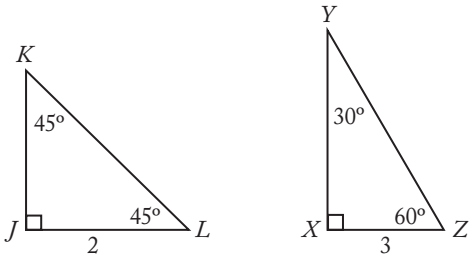


6. Triangles

There are several special types of triangles with important properties. But one property that all triangles share is that the sum of the lengths of any two of the sides is greater than the length of the third side, as illustrated below.



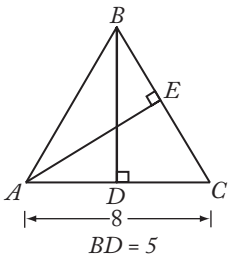
$x + y > z$, $x + z > y$, and $y + z > x$



An *equilateral* triangle has all sides of equal length. All angles of an equilateral triangle have equal measure. An *isosceles* triangle has at least two sides of the same length. If two sides of a triangle have the same length, then the two angles opposite those sides have the same measure. Conversely, if two angles of a triangle have the same measure, then the sides opposite those angles have the same length. In isosceles triangle PQR below, $x = y$ since $PQ = QR$.

A triangle that has a right angle is a *right* triangle. In a right triangle, the side opposite the right angle is the *hypotenuse,* and the other two sides are the *legs.* An important theorem concerning right triangles is the *Pythagorean theorem,* which states: In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs.

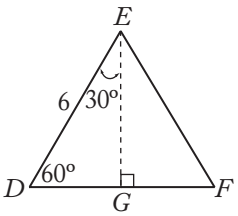
In the figure above, ΔRST is a right triangle, so $(RS)^2 + (RT)^2 = (ST)^2$. Here, $RS = 6$ and $RT = 8$, so $ST = 10$, since $6^2 + 8^2 = 36 + 64 = 100 = (ST)^2$ and $ST = \sqrt{100}$. Any triangle in which the lengths of the sides are in the ratio 3:4:5 is a right triangle. In general, if a, b, and c are the lengths of the sides of a triangle and $a^2 + b^2 = c^2$, then the triangle is a right triangle.



In 45°– 45°– 90° triangles, the lengths of the sides are in the ratio $1:1:\sqrt{2}$. For example, in ΔJKL, if $JL = 2$, then $JK = 2$ and $KL = 2\sqrt{2}$. In 30°– 60°– 90° triangles, the lengths of the sides are in the ratio $1:\sqrt{3}:2$. For example, in ΔXYZ, if $XZ = 3$, then $XY = 3\sqrt{3}$ and $YZ = 6$.

The *altitude* of a triangle is the segment drawn from a vertex perpendicular to the side opposite that vertex. Relative to that vertex and altitude, the opposite side is called the *base*.

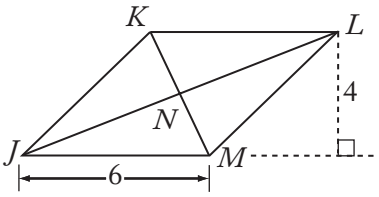
The area of a triangle is equal to:



$$\frac{(\text{the length of the altitude}) \times (\text{the length of the base})}{2}$$

In ΔABC, $\overline{BD}$ is the altitude to base $\overline{AC}$ and $\overline{AE}$ is the altitude to base $\overline{BC}$. The area of ΔABC is equal to

$$\frac{BD \times AC}{2} = \frac{5 \times 8}{2} = 20.$$



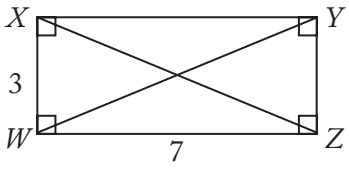
The area is also equal to $\frac{AE \times BC}{2}$. If ΔABC above is isosceles and $AB = BC$, then altitude $\overline{BD}$ bisects the base; that is, $AD = DC = 4$. Similarly, any altitude of an equilateral triangle bisects the side to which it is drawn.

In equilateral triangle DEF, if $DE = 6$, then $DG = 3$ and $EG = 3\sqrt{3}$. The area of ΔDEF is equal to $\frac{3\sqrt{3} \times 6}{2} = 9\sqrt{3}$.

7. Quadrilaterals

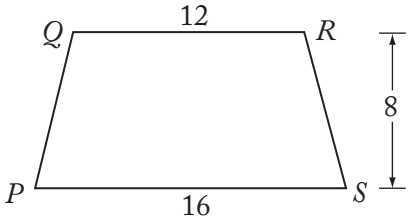
A polygon with four sides is a *quadrilateral.* A quadrilateral in which both pairs of opposite sides are parallel is a *parallelogram*. The opposite sides of a parallelogram also have equal length.

In parallelogram *JKLM*, $\overline{JK} \parallel \overline{LM}$ and $JK = LM; \overline{KL} \parallel \overline{JM}$ and $KL = JM$.



The diagonals of a parallelogram bisect each other (that is, $KN = NM$ and $JN = NL$).

The area of a parallelogram is equal to



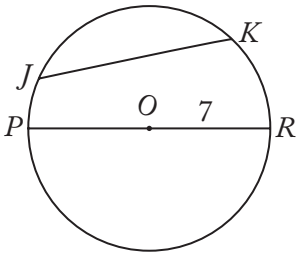
(the length of the altitude) × (the length of the base).

The area of *JKLM* is equal to $4 \times 6 = 24$.

A parallelogram with right angles is a *rectangle,* and a rectangle with all sides of equal length is a *square.*

The perimeter of *WXYZ* = 2(3) + 2(7) = 20 and the area of *WXYZ* is equal to $3 \times 7 = 21$. The diagonals of a rectangle are equal; therefore $WY = XZ = \sqrt{9+49} = \sqrt{58}$.

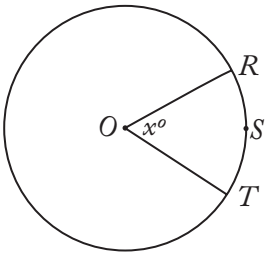
A quadrilateral with two sides that are parallel, as shown above, is a *trapezoid.* The area of trapezoid *PQRS* may be calculated as follows:



$$\frac{1}{2}(\text{the sum of the lengths of the bases})(\text{the height}) = \frac{1}{2}(QR + PS)(8) = \frac{1}{2}(28 \times 8) = 112.$$

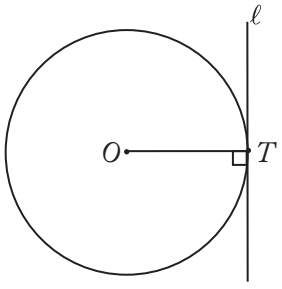
8. Circles

A *circle* is a set of points in a plane that are all located the same distance from a fixed point (the *center* of the circle).



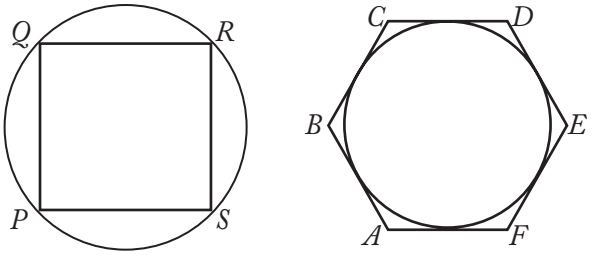
A *chord* of a circle is a line segment that has its endpoints on the circle. A chord that passes through the center of the circle is a *diameter* of the circle. A *radius* of a circle is a segment from the center of the circle to a point on the circle. The words "diameter" and "radius" are also used to refer to the lengths of these segments.

The *circumference* of a circle is the distance around the circle. If r is the radius of the circle, then the circumference is equal to $2\pi r$, where π is approximately $\frac{22}{7}$ or 3.14. The *area* of a circle of radius r is equal to πr^2.



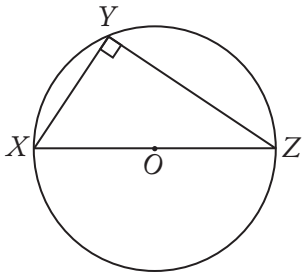
In the circle above, O is the center of the circle and $\overline{JK}$ and $\overline{PR}$ are chords. $\overline{PR}$ is a diameter and $\overline{OR}$ is a radius. If $OR = 7$, then the circumference of the circle is $2\pi(7) = 14\pi$ and the area of the circle is $\pi(7)^2 = 49\pi$.

The number of degrees of arc in a circle (or the number of degrees in a complete revolution) is 360.



In the circle with center O above, the length of arc RST is $\frac{x}{360}$ of the circumference of the circle; for example, if $x = 60$, then arc RST has length $\frac{1}{6}$ of the circumference of the circle.

A line that has exactly one point in common with a circle is said to be *tangent* to the circle, and that common point is called the *point of tangency*. A radius or diameter with an endpoint at the point of tangency is perpendicular to the tangent line, and, conversely, a line that is perpendicular to a radius or diameter at one of its endpoints is tangent to the circle at that endpoint.



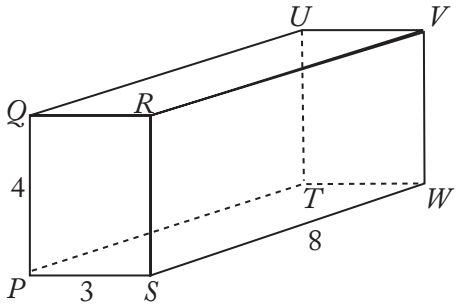
The line ℓ above is tangent to the circle and radius $\overline{OT}$ is perpendicular to ℓ.

If each vertex of a polygon lies on a circle, then the polygon is *inscribed* in the circle and the circle is *circumscribed* about the polygon. If each side of a polygon is tangent to a circle, then the polygon is *circumscribed* about the circle and the circle is *inscribed* in the polygon.

In the figure above, quadrilateral *PQRS* is inscribed in a circle and hexagon *ABCDEF* is circumscribed about a circle.

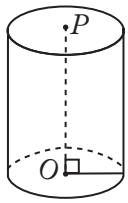
If a triangle is inscribed in a circle so that one of its sides is a diameter of the circle, then the triangle is a right triangle.

In the circle above, $\overline{XZ}$ is a diameter and the measure of $\angle XYZ$ is 90°.



9. Rectangular Solids and Cylinders

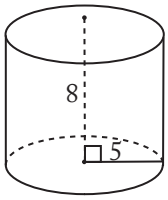
A *rectangular solid* is a three-dimensional figure formed by 6 rectangular surfaces, as shown below. Each rectangular surface is a *face*. Each solid or dotted line segment is an *edge,* and each point at which the edges meet is a *vertex.* A rectangular solid has 6 faces, 12 edges, and 8 vertices. Opposite faces are parallel rectangles that have the same dimensions. A rectangular solid in which all edges are of equal length is a *cube.*



The *surface area* of a rectangular solid is equal to the sum of the areas of all the faces. The *volume* is equal to

(length) × (width) × (height);

in other words, (area of base) × (height).

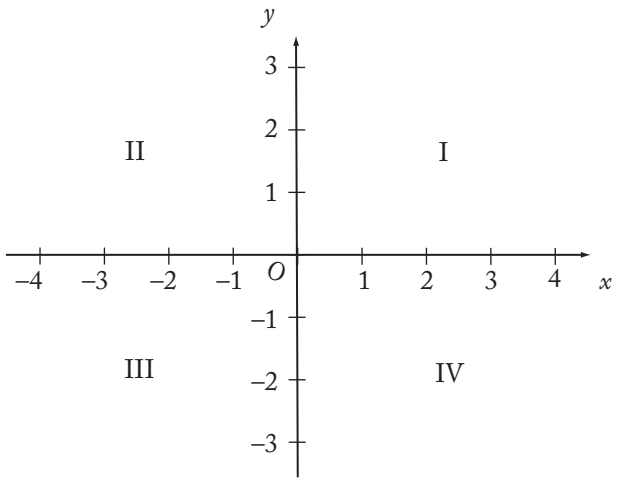


In the rectangular solid above, the dimensions are 3, 4, and 8. The surface area is equal to $2(3 \times 4) + 2(3 \times 8) + 2(4 \times 8) = 136$. The volume is equal to $3 \times 4 \times 8 = 96$.

The figure above is a right circular *cylinder*. The two bases are circles of the same size with centers O and P, respectively, and altitude (height) $\overline{OP}$ is perpendicular to the bases. The surface area of a right circular cylinder with a base of radius r and height h is equal to $2(\pi r^2) + 2\pi rh$ (the sum of the areas of the two bases plus the area of the curved surface).

The volume of a cylinder is equal to $\pi r^2 h$, that is,

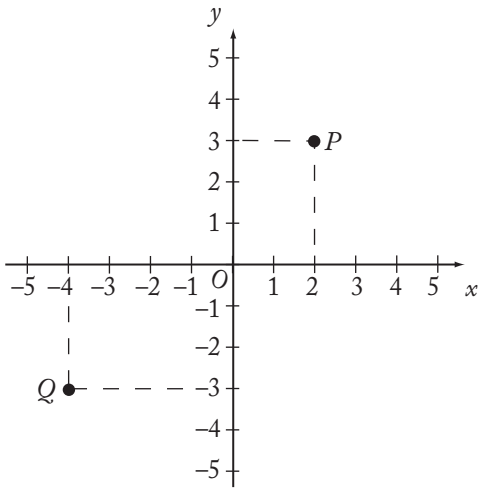
(area of base) × (height).



In the cylinder above, the surface area is equal to

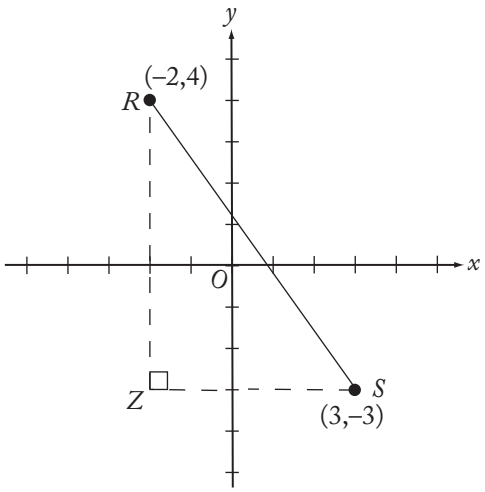
$$2(25\pi) + 2\pi(5)(8) = 130\pi,$$

and the volume is equal to



$$25\pi(8) = 200\pi.$$

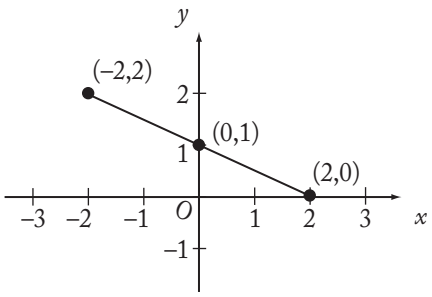
10. Coordinate Geometry



The figure above shows the (rectangular) *coordinate plane*. The horizontal line is called the *x-axis* and the perpendicular vertical line is called the *y-axis*. The point at which these two axes intersect, designated O, is called the *origin*. The axes divide the plane into four quadrants, I, II, III, and IV, as shown.

Each point in the plane has an *x-coordinate* and a *y-coordinate*. A point is identified by an ordered pair (x,y) of numbers in which the x-coordinate is the first number and the y-coordinate is the second number.

In the graph above, the (x,y) coordinates of point P are (2,3) since P is 2 units to the right of the y-axis (that is, $x = 2$) and 3 units above the x-axis (that is, $y = 3$). Similarly, the (x,y) coordinates of point Q are (–4,–3). The origin O has coordinates (0,0).



One way to find the distance between two points in the coordinate plane is to use the Pythagorean theorem.

To find the distance between points R and S using the Pythagorean theorem, draw the triangle as shown. Note that Z has (x,y) coordinates (–2,–3), $RZ = 7$, and $ZS = 5$. Therefore, the distance between R and S is equal to

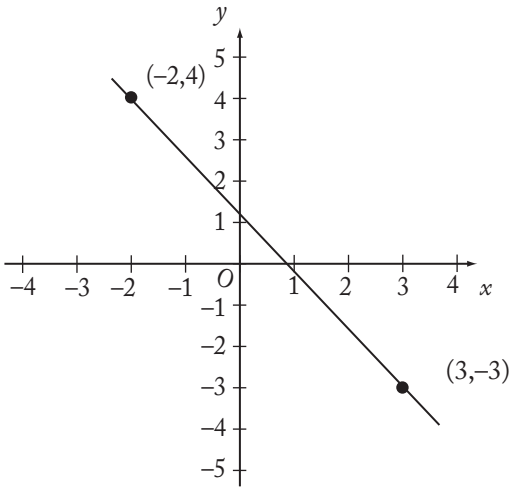
$$\sqrt{7^2 + 5^2} = \sqrt{74}.$$

For a line in the coordinate plane, the coordinates of each point on the line satisfy a linear equation of the form $y = mx + b$ (or the form $x = a$ if the line is vertical). For example, each point on the line on the next page satisfies the equation $y = -\frac{1}{2}x + 1$. One can verify this for the points (–2,2), (2,0), and (0,1) by substituting the respective coordinates for x and y in the equation.

In the equation $y = mx + b$ of a line, the coefficient m is the *slope* of the line and the constant term b is the *y-intercept* of the line. For any two points on the line, the slope is defined to be the ratio of the difference in the y-coordinates to the difference in the x-coordinates. Using $(-2, 2)$ and $(2, 0)$ above, the slope is

$$\frac{\text{The difference in the } y\text{-coordinates}}{\text{The difference in the } x\text{-coordinates}} = \frac{0-2}{2-(-2)} = \frac{-2}{4} = -\frac{1}{2}.$$

The y-intercept is the y-coordinate of the point at which the line intersects the y-axis. For the line above, the y-intercept is 1, and this is the resulting value of y when x is set equal to 0 in the equation $y = -\frac{1}{2}x + 1$. The *x-intercept* is the x-coordinate of the point at which the line intersects the x-axis. The x-intercept can be found by setting $y = 0$ and solving for x. For the line $y = -\frac{1}{2}x + 1$, this gives



$$-\frac{1}{2}x + 1 = 0$$

$$-\frac{1}{2}x = -1$$

$$x = 2.$$

Thus, the x-intercept is 2.

Given any two points (x_1,y_1) and (x_2,y_2) with $x_1 \neq x_2$, the equation of the line passing through these points can be found by applying the definition of slope. Since the slope is $m = \frac{y_2 - y_1}{x_2 - x_1}$, then using a point known to be on the line, say (x_1,y_1), any point (x,y) on the line must satisfy $\frac{y - y_1}{x - x_1} = m$, or $y - y_1 = m(x - x_1)$. (Using (x_2,y_2) as the known point would yield an equivalent equation.) For example, consider the points $(-2,4)$ and $(3,-3)$ on the line below.

The slope of this line is $\frac{-3-4}{3-(-2)}=\frac{-7}{5}$, so an equation of this line can be found using the point (3,–3) as follows:

$$y-(-3)=-\frac{7}{5}(x-3)$$
$$y+3=-\frac{7}{5}x+\frac{21}{5}$$
$$y=-\frac{7}{5}x+\frac{6}{5}$$

The y-intercept is $\frac{6}{5}$. The *x-intercept* can be found as follows:

$$0=-\frac{7}{5}x+\frac{6}{5}$$
$$\frac{7}{5}x=\frac{6}{5}$$
$$x=\frac{6}{7}$$

Both of these intercepts can be seen on the graph.

If the slope of a line is negative, the line slants downward from left to right; if the slope is positive, the line slants upward. If the slope is 0, the line is horizontal; the equation of such a line is of the form $y = b$ since $m = 0$. For a vertical line, slope is not defined, and the equation is of the form $x = a$, where a is the x-intercept.

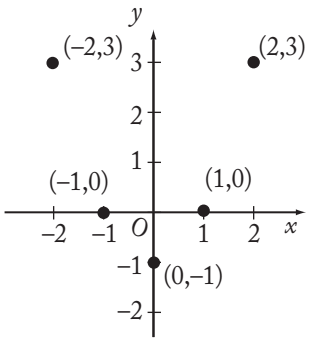
There is a connection between graphs of lines in the coordinate plane and solutions of two linear equations with two unknowns. If two linear equations with unknowns x and y have a unique solution, then the graphs of the equations are two lines that intersect in one point, which is the solution. If the equations are equivalent, then they represent the same line with infinitely many points or solutions. If the equations have no solution, then they represent parallel lines, which do not intersect.

There is also a connection between functions (see section 3.2.10) and the coordinate plane. If a function is graphed in the coordinate plane, the function can be understood in different and useful ways. Consider the function defined by

$$f(x) = -\frac{7}{5}x + \frac{6}{5}.$$

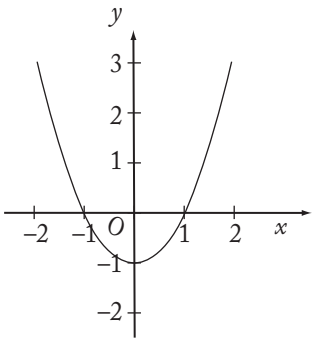
If the value of the function, $f(x)$, is equated with the variable y, then the graph of the function in the xy-coordinate plane is simply the graph of the equation

$$y = -\frac{7}{5}x + \frac{6}{5}$$



shown above. Similarly, any function $f(x)$ can be graphed by equating y with the value of the function:

$$y = f(x).$$



So for any x in the domain of the function f, the point with coordinates $(x, f(x))$ is on the graph of f, and the graph consists entirely of these points.

As another example, consider a quadratic polynomial function defined by $f(x) = x^2 - 1$. One can plot several points $(x, f(x))$ on the graph to understand the connection between a function and its graph:

x	$f(x)$
–2	3
–1	0
0	–1
1	0
2	3

If all the points were graphed for $-2 \le x \le 2$, then the graph would appear as follows.

The graph of a quadratic function is called a *parabola* and always has the shape of the curve above, although it may be upside down or have a greater or lesser width. Note that the roots of the equation $f(x) = x^2 - 1 = 0$ are $x = 1$ and $x = -1$; these coincide with the x-intercepts since x-intercepts are found by setting $y = 0$ and solving for x. Also, the y-intercept is $f(0) = -1$ because this is the value of y corresponding to $x = 0$. For any function f, the x-intercepts are the solutions of the equation $f(x) = 0$ and the y-intercept is the value $f(0)$.

3.4 Word Problems

Many of the principles discussed in this chapter are used to solve word problems. The following discussion of word problems illustrates some of the techniques and concepts used in solving such problems.

1. Rate Problems

The distance that an object travels is equal to the product of the average speed at which it travels and the amount of time it takes to travel that distance, that is,

$$\text{Rate} \times \text{Time} = \text{Distance}.$$

Example 1: If a car travels at an average speed of 70 kilometers per hour for 4 hours, how many kilometers does it travel?

Solution: Since rate × time = distance, simply multiply 70 km/hour × 4 hours. Thus, the car travels 280 kilometers in 4 hours.

To determine the average rate at which an object travels, divide the total distance traveled by the total amount of traveling time.

Example 2: On a 400-mile trip, Car X traveled half the distance at 40 miles per hour (mph) and the other half at 50 mph. What was the average speed of Car X ?

Solution: First it is necessary to determine the amount of traveling time. During the first 200 miles, the car traveled at 40 mph; therefore, it took $\frac{200}{40} = 5$ hours to travel the first 200 miles.

During the second 200 miles, the car traveled at 50 mph; therefore, it took $\frac{200}{50} = 4$ hours to travel the second 200 miles. Thus, the average speed of Car X was $\frac{400}{9} = 44\frac{4}{9}$ mph. Note that the average speed is *not* $\frac{40+50}{2} = 45$.

Some rate problems can be solved by using ratios.

Example 3: If 5 shirts cost \$44, then, at this rate, what is the cost of 8 shirts?

Solution: If c is the cost of the 8 shirts, then $\frac{5}{44} = \frac{8}{c}$. Cross multiplication results in the equation

$$5c = 8 \times 44 = 352$$

$$c = \frac{352}{5} = 70.40$$

The 8 shirts cost \$70.40.

2. Work Problems

In a work problem, the rates at which certain persons or machines work alone are usually given, and it is necessary to compute the rate at which they work together (or vice versa).

The basic formula for solving work problems is $\frac{1}{r} + \frac{1}{s} = \frac{1}{h}$, where r and s are, for example, the number of hours it takes Rae and Sam, respectively, to complete a job when working alone, and h is the number of hours it takes Rae and Sam to do the job when working together. The reasoning is that in 1 hour Rae does $\frac{1}{r}$ of the job, Sam does $\frac{1}{s}$ of the job, and Rae and Sam together do $\frac{1}{h}$ of the job.

Example 1: If Machine X can produce 1,000 bolts in 4 hours and Machine Y can produce 1,000 bolts in 5 hours, in how many hours can Machines X and Y, working together at these constant rates, produce 1,000 bolts?

Solution:

$$\frac{1}{4} + \frac{1}{5} = \frac{1}{h}$$

$$\frac{5}{20} + \frac{4}{20} = \frac{1}{h}$$

$$\frac{9}{20} = \frac{1}{h}$$

$$9h = 20$$

$$h = \frac{20}{9} = 2\frac{2}{9}$$

Working together, Machines X and Y can produce 1,000 bolts in $2\frac{2}{9}$ hours.

Example 2: If Art and Rita can do a job in 4 hours when working together at their respective constant rates and Art can do the job alone in 6 hours, in how many hours can Rita do the job alone?

Solution:

$$\frac{1}{6}+\frac{1}{R}=\frac{1}{4}$$
$$\frac{R+6}{6R}=\frac{1}{4}$$
$$4R+24=6R$$
$$24=2R$$
$$12=R$$

Working alone, Rita can do the job in 12 hours.

3. Mixture Problems

In mixture problems, substances with different characteristics are combined, and it is necessary to determine the characteristics of the resulting mixture.

Example 1: If 6 pounds of nuts that cost \$1.20 per pound are mixed with 2 pounds of nuts that cost \$1.60 per pound, what is the cost per pound of the mixture?

Solution: The total cost of the 8 pounds of nuts is

$$6(\$1.20)+2(\$1.60)=\$10.40.$$

The cost per pound is $\frac{\$10.40}{8}=\$1.30.$

Example 2: How many liters of a solution that is 15 percent salt must be added to 5 liters of a solution that is 8 percent salt so that the resulting solution is 10 percent salt?

Solution: Let n represent the number of liters of the 15% solution. The amount of salt in the 15% solution $[0.15n]$ plus the amount of salt in the 8% solution $[(0.08)(5)]$ must be equal to the amount of salt in the 10% mixture $[0.10(n+5)]$. Therefore,

$$0.15n+0.08(5)=0.10(n+5)$$
$$15n+40=10n+50$$
$$5n=10$$
$$n=2 \text{ liters}$$

Two liters of the 15% salt solution must be added to the 8% solution to obtain the 10% solution.

4. Interest Problems

Interest can be computed in two basic ways. With simple annual interest, the interest is computed on the principal only and is equal to (principal) × (interest rate) × (time). If interest is compounded, then interest is computed on the principal as well as on any interest already earned.

Example 1: If $8,000 is invested at 6 percent simple annual interest, how much interest is earned after 3 months?

Solution: Since the annual interest rate is 6%, the interest for 1 year is

$$(0.06)(\$8,000) = \$480.$$

The interest earned in 3 months is $\frac{3}{12}(\$480) = \$120.$

Example 2: If $10,000 is invested at 10 percent annual interest, compounded semiannually, what is the balance after 1 year?

Solution: The balance after the first 6 months would be

$$10,000 + (10,000)(0.05) = \$10,500.$$

The balance after one year would be $10,500 + (10,500)(0.05) = \$11,025.$

Note that the interest rate for each 6-month period is 5%, which is half of the 10% annual rate. The balance after one year can also be expressed as

$$10,000\left(1 + \frac{0.10}{2}\right)^2 \text{ dollars.}$$

5. Discount

If a price is discounted by n percent, then the price becomes $(100 - n)$ percent of the original price.

Example 1: A certain customer paid $24 for a dress. If that price represented a 25 percent discount on the original price of the dress, what was the original price of the dress?

Solution: If p is the original price of the dress, then $0.75p$ is the discounted price and $0.75p = \$24$, or $p = \$32$. The original price of the dress was $32.

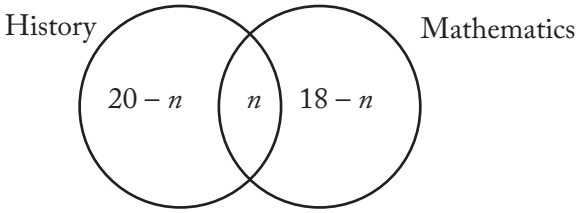
Example 2: The price of an item is discounted by 20 percent and then this reduced price is discounted by an additional 30 percent. These two discounts are equal to an overall discount of what percent?

Solution: If p is the original price of the item, then $0.8p$ is the price after the first discount. The price after the second discount is $(0.7)(0.8)\ p = 0.56p$. This represents an overall discount of 44 percent (100% – 56%).

6. Profit

Gross profit is equal to revenues minus expenses, or selling price minus cost.

Example: A certain appliance costs a merchant $30. At what price should the merchant sell the appliance in order to make a gross profit of 50 percent of the cost of the appliance?



Solution: If s is the selling price of the appliance, then $s - 30 = (0.5)(30)$, or $s = \$45$. The merchant should sell the appliance for $45.

7. Sets

If S is the set of numbers 1, 2, 3, and 4, you can write $S = \{1, 2, 3, 4\}$. Sets can also be represented by Venn diagrams. That is, the relationship among the members of sets can be represented by circles.

Example 1: Each of 25 people is enrolled in history, mathematics, or both. If 20 are enrolled in history and 18 are enrolled in mathematics, how many are enrolled in both history and mathematics?

Solution: The 25 people can be divided into three sets: those who study history only, those who study mathematics only, and those who study history and mathematics. Thus a Venn diagram may be drawn as follows, where n is the number of people enrolled in both courses, $20 - n$ is the number enrolled in history only, and $18 - n$ is the number enrolled in mathematics only.

Since there is a total of 25 people, $(20 - n) + n + (18 - n) = 25$, or $n = 13$. Thirteen people are enrolled in both history and mathematics. Note that $20 + 18 - 13 = 25$, which is the general addition rule for two sets (see section 4.1.9).

Example 2: In a certain production lot, 40 percent of the toys are red and the remaining toys are green. Half of the toys are small and half are large. If 10 percent of the toys are red and small, and 40 toys are green and large, how many of the toys are red and large?

Solution: For this kind of problem, it is helpful to organize the information in a table:

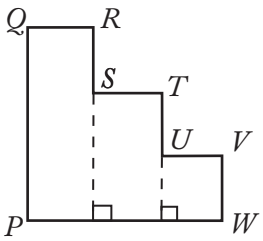
	Red	Green	Total
Small	10%		50%
Large			50%
Total	40%	60%	100%

The numbers in the table are the percentages given. The following percentages can be computed on the basis of what is given:

	Red	Green	Total
Small	10%	40%	50%
Large	30%	20%	50%
Total	40%	60%	100%

Since 20% of the number of toys (n) are green and large, $0.20n = 40$ (40 toys are green and large), or $n = 200$. Therefore, 30% of the 200 toys, or $(0.3)(200) = 60$, are red and large.

8. Geometry Problems



The following is an example of a word problem involving geometry.

Example:

The figure above shows an aerial view of a piece of land. If all angles shown are right angles, what is the perimeter of the piece of land?

Solution: For reference, label the figure as

If all the angles are right angles, then $QR + ST + UV = PW$, and $RS + TU + VW = PQ$. Hence, the perimeter of the land is $2PW + 2PQ = 2 \times 200 + 2 \times 200 = 800$ meters.

9. Measurement Problems

Some questions on the GMAT involve metric units of measure, whereas others involve English units of measure. However, except for units of time, if a question requires conversion from one unit of measure to another, the relationship between those units will be given.

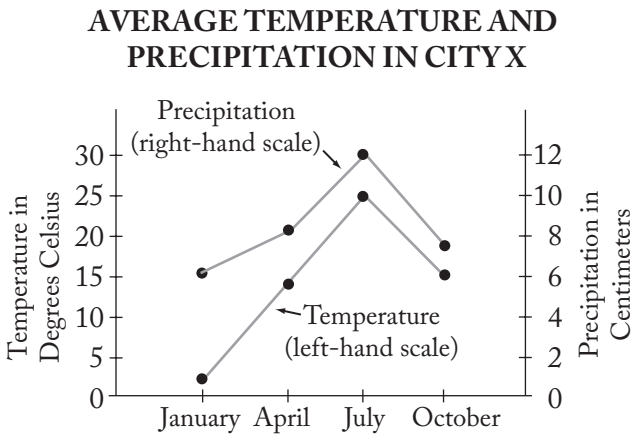
Example: A train travels at a constant rate of 25 meters per second. How many kilometers does it travel in 5 minutes? (1 kilometer = 1,000 meters)

Solution: In 1 minute the train travels (25)(60) = 1,500 meters, so in 5 minutes it travels 7,500 meters. Since 1 kilometer = 1,000 meters, it follows that 7,500 meters equals $\frac{7,500}{1,000}$, or 7.5 kilometers.

10. Data Interpretation

Occasionally a question or set of questions will be based on data provided in a table or graph. Some examples of tables and graphs are given below.

Example 1:



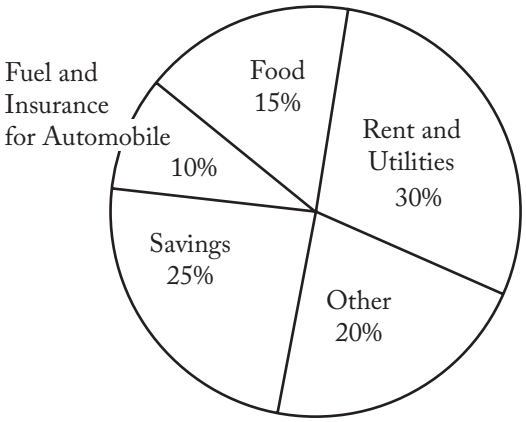
Population by Age Group
(in thousands)

Age	Population
17 years and under	63,376
18–44 years	86,738
45–64 years	43,845
65 years and over	24,054

How many people are 44 years old or younger?

Solution: The figures in the table are given in thousands. The answer in thousands can be obtained by adding 63,376 thousand and 86,738 thousand. The result is 150,114 thousand, which is 150,114,000.

Example 2:



What are the average temperature and precipitation in City X during April?

Solution: Note that the scale on the left applies to the temperature line graph and the one on the right applies to the precipitation line graph. According to the graph, during April the average temperature is approximately 14° Celsius and the average precipitation is approximately 8 centimeters.

Example 3:

DISTRIBUTION OF AL'S WEEKLY NET SALARY

Al's weekly net salary is $350. To how many of the categories listed was at least $80 of Al's weekly net salary allocated?

Solution: In the circle graph, the relative sizes of the sectors are proportional to their corresponding values and the sum of the percents given is 100%. Note that $\frac{80}{350}$ is approximately 23%, so at least $80 was allocated to each of 2 categories—Rent and Utilities, and Savings—since their allocations are each greater than 23%.

4.0 Problem Solving

4.0 Problem Solving

The Quantitative Reasoning section of the GMAT™ exam uses problem solving and data sufficiency questions to gauge your skill level. This chapter focuses on problem solving questions. Remember that Quantitative questions require knowledge of the following:

- Arithmetic
- Elementary algebra
- Commonly known concepts of geometry.

Problem solving questions are designed to test your basic mathematical skills and understanding of elementary mathematical concepts, as well as your ability to reason quantitatively, solve Quantitative problems, and interpret graphic data. The mathematics knowledge required to answer the questions is no more advanced than what is generally taught in secondary school (or high school) mathematics classes.

In these questions, you are asked to solve each problem and select the best of the five answer choices given. Begin by reading the question thoroughly to determine exactly what information is given and to make sure you understand what is being asked. Scan the answer choices to understand your options. If the problem seems simple, take a few moments to see whether you can determine the answer. Then, check your answer against the choices provided.

If you do not see your answer among the choices, or if the problem is complicated, take a closer look at the answer choices and think again about what the problem is asking. See whether you can eliminate some of the answer choices and narrow down your options. If you are still unable to narrow the answer down to a single choice, reread the question. Keep in mind that the answer will be based solely on the information provided in the question—don't allow your own experience and assumptions to interfere with your ability to find the correct answer to the question.

If you find yourself stuck on a question or unable to select the single correct answer, keep in mind that you have about 2 minutes to answer each Quantitative question. You may run out of time if you take too long to answer any one question; you may simply need to pick the answer that seems to make the most sense. Although guessing is generally not the best way to achieve a high GMAT score, making an educated guess is a good strategy for answering questions you are unsure of. Even if your answer to a particular question is incorrect, your answers to other questions will allow the test to accurately gauge your ability level.

The following pages include test-taking strategies, directions that will apply to questions of this type, sample questions, an answer key, and explanations for all the problems. These explanations present problem solving strategies that could be helpful in answering the questions.

4.1 Test-Taking Strategies

1. **Pace yourself.**

   Consult the on-screen timer periodically. Work as carefully as possible, but do not spend valuable time checking answers or pondering problems that you find difficult.

2. **Use the erasable notepad provided.**

   Working a problem out may help you avoid errors in solving the problem. If diagrams or figures are not presented, it may help to draw your own.

3. **Read each question carefully to determine what is being asked.**

   For word problems, take one step at a time, reading each sentence carefully and translating the information into equations or other useful mathematical representations.

4. **Scan the answer choices before attempting to answer a question.**

   Scanning the answers can prevent you from putting answers in a form that is not given (e.g., finding the answer in decimal form, such as 0.25, when the choices are given in fractional form, such as $\frac{1}{4}$). Also, if the question requires approximations, a shortcut could serve well (e.g., you may be able to approximate 48 percent of a number by using half).

5. **Don't waste time trying to solve a problem that is too difficult for you.**

   Make your best guess and then move on to the next question.

4.2 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

To register for the GMAT exam go to www.mba.com

4.3 Sample Questions

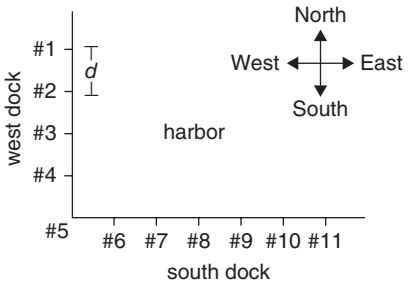
Solve the problem and indicate the best of the answer choices given.
Numbers: All numbers used are real numbers.
Figures: A figure accompanying a problem solving question is intended to provide information useful in solving the problem. Figures are drawn as accurately as possible. Exceptions will be clearly noted. Lines shown as straight are straight, and lines that appear jagged are also straight. The positions of points, angles, regions, etc., exist in the order shown, and angle measures are greater than zero. All figures lie in a plane unless otherwise indicated.

*PS03439

1. Working at a constant rate, a copy machine makes 20 copies of a one-page document per minute. If the machine works at this constant rate, how many hours does it take to make 4,800 copies of a one-page document?

(A) 4
(B) 5
(C) 6
(D) 7
(E) 8

PS11042



2. If $x + y = 2$ and $x^2 + y^2 = 2$, what is the value of xy ?

(A) –2
(B) –1
(C) 0
(D) 1
(E) 2

PS02978

3. The sum S of the first n consecutive positive even integers is given by $S = n(n + 1)$. For what value of n is this sum equal to 110 ?

(A) 10
(B) 11
(C) 12
(D) 13
(E) 14

PS08375

4. A certain harbor has docking stations along its west and south docks, as shown in the figure; any two adjacent docking stations are separated by a uniform distance d. A certain boat left the west dock from docking station #2 and moved in a straight line diagonally until it reached the south dock. If the boat was at one time directly east of docking station #4 and directly north of docking station #7, at which docking station on the south dock did the boat arrive?

(A) #7
(B) #8
(C) #9
(D) #10
(E) #11

PS03887

5. $6(87.30 + 0.65) – 5(87.30) =$

(A) 3.90
(B) 39.00
(C) 90.90
(D) 91.20
(E) 91.85

*These numbers correlate with the online test bank question number. See the GMAT Quantitative Review Online Index in the back of this book.

PS13800

6. Points A, B, C, and D, in that order, lie on a line. If $AB = 3$ cm, $AC = 4$ cm, and $BD = 6$ cm, what is CD, in centimeters?

(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

PS05292

7. What is the value of $x^2yz - xyz^2$, if $x = -2$, $y = 1$, and $z = 3$?

(A) 20
(B) 24
(C) 30
(D) 32
(E) 48

PS11468

8. A souvenir vendor purchased 1,000 shirts for a special event at a price of $5 each. The vendor sold 600 of the shirts on the day of the event for $12 each and 300 of the shirts in the week following the event for $4 each. The vendor was unable to sell the remaining shirts. What was the vendor's gross profit on the sale of these shirts?

(A) $1,000
(B) $2,200
(C) $2,700
(D) $3,000
(E) $3,400

PS06937

9. If $x > y$ and $y > z$, which of the following represents the greatest number?

(A) $x - z$
(B) $x - y$
(C) $y - x$
(D) $z - y$
(E) $z - x$

PS12926

10. To order certain plants from a catalog, it costs $3.00 per plant, plus a 5 percent sales tax, plus $6.95 for shipping and handling regardless of the number of plants ordered. If Company C ordered these plants from the catalog at the total cost of $69.95, how many plants did Company C order?

(A) 22
(B) 21
(C) 20
(D) 19
(E) 18

PS00812

11. A rug manufacturer produces rugs at a cost of $75 per rug. What is the manufacturer's gross profit from the sale of 150 rugs if $\frac{2}{3}$ of the rugs are sold for $150 per rug and the rest are sold for $200 per rug?

(A) $10,350
(B) $11,250
(C) $13,750
(D) $16,250
(E) $17,800

PS07793

12. The value of Maureen's investment portfolio has decreased by 5.8 percent since her initial investment in the portfolio. If her initial investment was $16,800, what is the current value of the portfolio?

(A) $7,056.00
(B) $14,280.00
(C) $15,825.60
(D) $16,702.56
(E) $17,774.40

PS03036

13. Company C produces toy trucks at a cost of $5.00 each for the first 100 trucks and $3.50 for each additional truck. If 500 toy trucks were produced by Company C and sold for $10.00 each, what was Company C's gross profit?

(A) $2,250
(B) $2,500
(C) $3,100
(D) $3,250
(E) $3,500

Division	Profit or Loss (in millions of dollars)				
	1991	1992	1993	1994	1995
A	1.1	(3.4)	1.9	2.0	0.6
B	(2.3)	5.5	(4.5)	3.9	(2.9)
C	10.0	(6.6)	5.3	1.1	(3.0)

PS02019

14. The annual profit or loss for the three divisions of Company T for the years 1991 through 1995 are summarized in the table shown, where losses are enclosed in parentheses. For which division and which three consecutive years shown was the division's profit or loss for the three-year period closest to $0 ?

(A) Division *A* for 1991–1993
(B) Division *A* for 1992–1994
(C) Division *B* for 1991–1993
(D) Division *B* for 1993–1995
(E) Division *C* for 1992–1994

PS13583

15. Of the following, which is least?

(A) $\frac{0.03}{0.00071}$
(B) $\frac{0.03}{0.0071}$
(C) $\frac{0.03}{0.071}$
(D) $\frac{0.03}{0.71}$
(E) $\frac{0.03}{7.1}$

PS08011

16. If the average (arithmetic mean) of 5 numbers j, $j + 5$, $2j - 1$, $4j - 2$, and $5j - 1$ is 8, what is the value of j ?

(A) $\frac{1}{3}$
(B) $\frac{7}{13}$
(C) 1
(D) 3
(E) 8

PS14037

17. Guadalupe owns 2 rectangular tracts of land. One is 300 m by 500 m and the other is 250 m by 630 m. The combined area of these 2 tracts is how many square meters?

(A) 3,360
(B) 307,500
(C) 621,500
(D) 704,000
(E) 2,816,000

PS03918

18. There are five sales agents in a certain real estate office. One month Andy sold twice as many properties as Ellen, Bob sold 3 more than Ellen, Cary sold twice as many as Bob, and Dora sold as many as Bob and Ellen together. Who sold the most properties that month?

(A) Andy
(B) Bob
(C) Cary
(D) Dora
(E) Ellen

PS10862

19. In a field day at a school, each child who competed in n events and scored a total of p points was given an overall score of $\frac{p}{n} + n$. Andrew competed in 1 event and scored 9 points. Jason competed in 3 events and scored 5, 6, and 7 points, respectively. What was the ratio of Andrew's overall score to Jason's overall score?

(A) $\frac{10}{23}$
(B) $\frac{7}{10}$
(C) $\frac{4}{5}$
(D) $\frac{10}{9}$
(E) $\frac{12}{7}$

PS06719

20. A certain work plan for September requires that a work team, working every day, produce an average of 200 items per day. For the first half of the month, the team produced an average of 150 items per day. How many items per day must the team average during the second half of the month if it is to attain the average daily production rate required by the work plan?

(A) 225
(B) 250
(C) 275
(D) 300
(E) 350

PS01949

21. A company sells radios for $15.00 each. It costs the company $14.00 per radio to produce 1,000 radios and $13.50 per radio to produce 2,000 radios. How much greater will the company's gross profit be from the production and sale of 2,000 radios than from the production and sale of 1,000 radios?

(A) $500
(B) $1,000
(C) $1,500
(D) $2,000
(E) $2,500

PS06555

22. Which of the following represent positive numbers?

I. $-3-(-5)$
II. $(-3)(-5)$
III. $-5-(-3)$

(A) I only
(B) II only
(C) III only
(D) I and II
(E) II and III

PS09983

23. Point X lies on side BC of rectangle $ABCD$, which has length 12 and width 8. What is the area of triangular region AXD?

(A) 96
(B) 48
(C) 32
(D) 24
(E) 20

PS07659

24. A grocer has 400 pounds of coffee in stock, 20 percent of which is decaffeinated. If the grocer buys another 100 pounds of coffee of which 60 percent is decaffeinated, what percent, by weight, of the grocer's stock of coffee is decaffeinated?

(A) 28%
(B) 30%
(C) 32%
(D) 34%
(E) 40%

PS05129

25. The toll T, in dollars, for a truck using a certain bridge is given by the formula $T = 1.50 + 0.50(x - 2)$, where x is the number of axles on the truck. What is the toll for an 18-wheel truck that has 2 wheels on its front axle and 4 wheels on each of its other axles?

(A) $2.50
(B) $3.00
(C) $3.50
(D) $4.00
(E) $5.00

PS13917

26. For what value of x between -4 and 4, inclusive, is the value of $x^2 - 10x + 16$ the greatest?

(A) -4
(B) -2
(C) 0
(D) 2
(E) 4

PS15994

27. If $x = -\frac{5}{8}$ and $y = -\frac{1}{2}$, what is the value of the expression $-2x - y^2$?

(A) $-\frac{3}{2}$
(B) -1
(C) 1
(D) $\frac{3}{2}$
(E) $\frac{7}{4}$

PS13686

28. If $x - y = R$ and $xy = S$, then $(x - 2)(y + 2) =$

(A) $R + S - 4$
(B) $R + 2S - 4$
(C) $2R - S - 4$
(D) $2R + S - 4$
(E) $2R + S$

PS01466

29. For positive integers a and b, the remainder when a is divided by b is equal to the remainder when b is divided by a. Which of the following could be a value of ab ?

I. 24
II. 30
III. 36

(A) II only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III

PS01867

30. List S consists of the positive integers that are multiples of 9 and are less than 100. What is the median of the integers in S ?

(A) 36
(B) 45
(C) 49
(D) 54
(E) 63

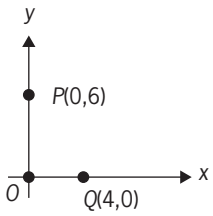
PS07380

31. A rope 20.6 meters long is cut into two pieces. If the length of one piece of rope is 2.8 meters shorter than the length of the other, what is the length, in meters, of the longer piece of rope?

(A) 7.5
(B) 8.9
(C) 9.9
(D) 10.3
(E) 11.7

PS01120

32. If x and y are integers and $x - y$ is odd, which of the following must be true?



I. xy is even.
II. $x^2 + y^2$ is odd.
III. $(x + y)^2$ is even.

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

PS00335

33. On Monday, the opening price of a certain stock was \$100 per share and its closing price was \$110 per share. On Tuesday the closing price of the stock was 10 percent less than its closing price on Monday, and on Wednesday the closing price of the stock was 4 percent greater than its closing price on Tuesday. What was the approximate percent change in the price of the stock from its opening price on Monday to its closing price on Wednesday?

(A) A decrease of 6%
(B) A decrease of 4%
(C) A decrease of 1%
(D) An increase of 3%
(E) An increase of 4%

PS05109

34. In the rectangular coordinate system shown above, points O, P, and Q represent the sites of three proposed housing developments. If a fire station can be built at any point in the coordinate system, at which point would it be equidistant from all three developments?

(A) (3,1)
(B) (1,3)
(C) (3,2)
(D) (2,2)
(E) (2,3)

PS05008

35. What is the perimeter, in meters, of a rectangular garden 6 meters wide that has the same area as a rectangular playground 16 meters long and 12 meters wide?

(A) 48
(B) 56
(C) 60
(D) 76
(E) 192

PS00918

36. $1 - 0.000001 =$

(A) $(1.01)(0.99)$
(B) $(1.11)(0.99)$
(C) $(1.001)(0.999)$
(D) $(1.111)(0.999)$
(E) $(1.0101)(0.0909)$

PS04362

37. $|-4|(|-20|-|5|) =$

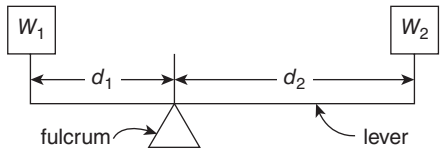
(A) -100
(B) -60
(C) 60
(D) 75
(E) 100

PS12934

38. Of the total amount that Jill spent on a shopping trip, excluding taxes, she spent 50 percent on clothing, 20 percent on food, and 30 percent on other items. If Jill paid a 4 percent tax on the clothing, no tax on the food, and an 8 percent tax on all other items, then the total tax that she paid was what percent of the total amount that she spent, excluding taxes?

(A) 2.8%
(B) 3.6%
(C) 4.4%
(D) 5.2%
(E) 6.0%

PS15469



39. How many integers x satisfy both $2 < x \leq 4$ and $0 \leq x \leq 3$?

(A) 5
(B) 4
(C) 3
(D) 2
(E) 1

PS09322

40. At the opening of a trading day at a certain stock exchange, the price per share of stock K was \$8. If the price per share of stock K was \$9 at the closing of the day, what was the percent increase in the price per share of stock K for that day?

(A) 1.4%
(B) 5.9%
(C) 11.1%
(D) 12.5%
(E) 23.6%

PS14237

41. As shown in the diagram above, a lever resting on a fulcrum has weights of w_1 pounds and w_2 pounds, located d_1 feet and d_2 feet from the fulcrum. The lever is balanced and $w_1 d_1 = w_2 d_2$. Suppose w_1 is 50 pounds and w_2 is 30 pounds. If d_1 is 4 feet less than d_2, what is d_2, in feet?

(A) 1.5
(B) 2.5
(C) 6
(D) 10
(E) 20

PS01650

42. If r and s are positive integers such that $(2^r)(4^s) = 16$, then $2r + s =$

(A) 2
(B) 3
(C) 4
(D) 5
(E) 6

PS06726

43. Three people each contributed x dollars toward the purchase of a car. They then bought the car for y dollars, an amount less than the total number of dollars contributed. If the excess amount is to be refunded to the three people in equal amounts, each person should receive a refund of how many dollars?

(A) $\frac{3x - y}{3}$

(B) $\frac{x - y}{3}$

(C) $\frac{x - 3y}{3}$

(D) $\frac{y - 3x}{3}$

(E) $3(x - y)$

PS07080

44. Last week Jack worked 70 hours and earned $1,260. If he earned his regular hourly wage for the first 40 hours worked, $1\frac{1}{2}$ times his regular hourly wage for the next 20 hours worked, and 2 times his regular hourly wage for the remaining 10 hours worked, what was his regular hourly wage?

(A) $7.00

(B) $14.00

(C) $18.00

(D) $22.00

(E) $31.50

PS13426

45. If a and b are positive integers and $(2^a)^b = 2^3$, what is the value of $2^a\,2^b$?

(A) 6

(B) 8

(C) 16

(D) 32

(E) 64

PS01099

46. Five machines at a certain factory operate at the same constant rate. If four of these machines, operating simultaneously, take 30 hours to fill a certain production order, how many fewer hours does it take all five machines, operating simultaneously, to fill the same production order?

(A) 3

(B) 5

(C) 6

(D) 16

(E) 24

PS01443

47. A certain toll station on a highway has 7 tollbooths, and each tollbooth collects $0.75 from each vehicle that passes it. From 6 o'clock yesterday morning to 12 o'clock midnight, vehicles passed each of the tollbooths at the average rate of 4 vehicles per minute. Approximately how much money did the toll station collect during that time period?

(A) $1,500

(B) $3,000

(C) $11,500

(D) $23,000

(E) $30,000

PS13829

48. How many integers between 1 and 16, inclusive, have exactly 3 different positive integer factors? (Note: 6 is NOT such an integer because 6 has 4 different positive integer factors: 1, 2, 3, and 6.)

(A) 1

(B) 2

(C) 3

(D) 4

(E) 6

PS14063

49. Stephanie has $2\frac{1}{4}$ cups of milk on hand and makes 2 batches of cookies, using $\frac{2}{3}$ cup of milk for each batch of cookies. Which of the following describes the amount of milk remaining after she makes the cookies?

(A) Less than $\frac{1}{2}$ cup

(B) Between $\frac{1}{2}$ cup and $\frac{3}{4}$ cup

(C) Between $\frac{3}{4}$ cup and 1 cup

(D) Between 1 cup and $1\frac{1}{2}$ cups

(E) More than $1\frac{1}{2}$ cups

PS01656

50. The expression $n!$ is defined as the product of the integers from 1 through n. If p is the product of the integers from 100 through 299 and q is the product of the integers from 200 through 299, which of the following is equal to $\frac{p}{q}$?

(A) $99!$

(B) $199!$

(C) $\frac{199!}{99!}$

(D) $\frac{299!}{99!}$

(E) $\frac{299!}{199!}$

PS15753

51. A school club plans to package and sell dried fruit to raise money. The club purchased 12 containers of dried fruit, each containing $16\frac{3}{4}$ pounds. What is the maximum number of individual bags of dried fruit, each containing $\frac{1}{4}$ pounds, that can be sold from the dried fruit the club purchased?

(A) 50

(B) 64

(C) 67

(D) 768

(E) 804

Height	Price
Less than 5 ft	$14.95
5 ft to 6 ft	$17.95
Over 6 ft	$21.95

PS02498

52. A nursery sells fruit trees priced as shown in the chart above. In its inventory 54 trees are less than 5 feet in height. If the expected revenue from the sale of its entire stock is estimated at $2,450, approximately how much of this will come from the sale of trees that are at least 5 feet tall?

(A) $1,730

(B) $1,640

(C) $1,410

(D) $1,080

(E) $810

PS04971

53. A certain bridge is 4,024 feet long. Approximately how many minutes does it take to cross this bridge at a constant speed of 20 miles per hour? (1 mile = 5,280 feet)

(A) 1

(B) 2

(C) 4

(D) 6

(E) 7

PS12657

54. The annual interest rate earned by an investment increased by 10 percent from last year to this year. If the annual interest rate earned by the investment this year was 11 percent, what was the annual interest rate last year?

(A) 1%

(B) 1.1%

(C) 9.1%

(D) 10%

(E) 10.8%

PS07394

55. A total of 5 liters of gasoline is to be poured into two empty containers with capacities of 2 liters and 6 liters, respectively, such that both containers will be filled to the same percent of their respective capacities. What amount of gasoline, in liters, must be poured into the 6-liter container?

(A) $4\frac{1}{2}$

(B) 4

(C) $3\frac{3}{4}$

(D) 3

(E) $1\frac{1}{4}$

PS13882

56. What is the larger of the 2 solutions of the equation $x^2 - 4x = 96$?

(A) 8

(B) 12

(C) 16

(D) 32

(E) 100

PS10921

57. $\frac{(39{,}897)(0.0096)}{198.76}$ is approximately

(A) 0.02

(B) 0.2

(C) 2

(D) 20

(E) 200

PS13205

58. If a square region has area n, what is the length of the diagonal of the square in terms of n ?

(A) $\sqrt{2n}$

(B) $\sqrt{n}$

(C) $2\sqrt{n}$

(D) $2n$

(E) $2n^2$

PS00817

59. The "prime sum" of an integer n greater than 1 is the sum of all the prime factors of n, including repetitions. For example, the prime sum of 12 is 7, since $12 = 2 \times 2 \times 3$ and $2 + 2 + 3 = 7$. For which of the following integers is the prime sum greater than 35 ?

(A) 440

(B) 512

(C) 620

(D) 700

(E) 750

PS02256

60. Each machine at a toy factory assembles a certain kind of toy at a constant rate of one toy every 3 minutes. If 40 percent of the machines at the factory are to be replaced by new machines that assemble this kind of toy at a constant rate of one toy every 2 minutes, what will be the percent increase in the number of toys assembled in one hour by all the machines at the factory, working at their constant rates?

(A) 20%

(B) 25%

(C) 30%

(D) 40%

(E) 50%

PS10339

61. When a subscription to a new magazine was purchased for m months, the publisher offered a discount of 75 percent off the regular monthly price of the magazine. If the total value of the discount was equivalent to buying the magazine at its regular monthly price for 27 months, what was the value of m ?

(A) 18

(B) 24

(C) 30

(D) 36

(E) 48

PS10422

62. At a garage sale, all of the prices of the items sold were different. If the price of a radio sold at the garage sale was both the 15th highest price and the 20th lowest price among the prices of the items sold, how many items were sold at the garage sale?

(A) 33
(B) 34
(C) 35
(D) 36
(E) 37

PS11738

63. Half of a large pizza is cut into 4 equal-sized pieces, and the other half is cut into 6 equal-sized pieces. If a person were to eat 1 of the larger pieces and 2 of the smaller pieces, what fraction of the pizza would remain uneaten?

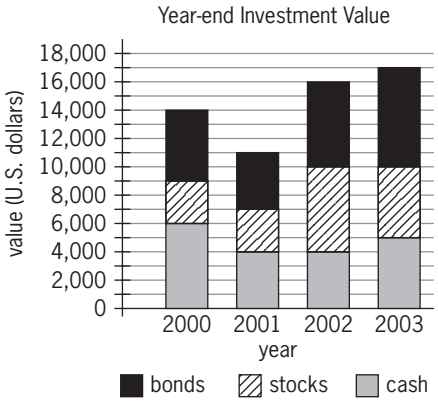
(A) $\frac{5}{12}$
(B) $\frac{13}{24}$
(C) $\frac{7}{12}$
(D) $\frac{2}{3}$
(E) $\frac{17}{24}$

PS14293

64. If $a = 1 + \frac{1}{4} + \frac{1}{16} + \frac{1}{64}$ and $b = 1 + \frac{1}{4}a$, then what is the value of $a - b$?

(A) $-\frac{85}{256}$
(B) $-\frac{1}{256}$
(C) $-\frac{1}{4}$
(D) $\frac{125}{256}$
(E) $\frac{169}{256}$

PS10174



65. In a certain learning experiment, each participant had three trials and was assigned, for each trial, a score of either –2, –1, 0, 1, or 2. The participant's final score consisted of the sum of the first trial score, 2 times the second trial score, and 3 times the third trial score. If Anne received scores of 1 and –1 for her first two trials, not necessarily in that order, which of the following could NOT be her final score?

(A) –4
(B) –2
(C) 1
(D) 5
(E) 6

PS00111

66. For all positive integers m and v, the expression $m \Theta v$ represents the remainder when m is divided by v. What is the value of $((98 \Theta 33) \Theta 17) - (98 \Theta (33 \Theta 17))$?

(A) –10
(B) –2
(C) 8
(D) 13
(E) 17

PS13841

67. The chart above shows year-end values for Darnella's investments. For just the stocks, what was the increase in value from year-end 2000 to year-end 2003?

(A) $1,000
(B) $2,000
(C) $3,000
(D) $4,000
(E) $5,000

PS05775

68. If the sum of the reciprocals of two consecutive odd integers is $\frac{12}{35}$, then the greater of the two integers is

(A) 3
(B) 5
(C) 7
(D) 9
(E) 11

PS05916

69. What is the sum of the odd integers from 35 to 85, inclusive?

(A) 1,560
(B) 1,500
(C) 1,240
(D) 1,120
(E) 1,100

PS00777

70. In a certain sequence, each term after the first term is one-half the previous term. If the tenth term of the sequence is between 0.0001 and 0.001, then the twelfth term of the sequence is between

(A) 0.0025 and 0.025
(B) 0.00025 and 0.0025
(C) 0.000025 and 0.00025
(D) 0.0000025 and 0.000025
(E) 0.00000025 and 0.0000025

PS04765

71. A certain drive-in movie theater has a total of 17 rows of parking spaces. There are 20 parking spaces in the first row and 21 parking spaces in the second row. In each subsequent row there are 2 more parking spaces than in the previous row. What is the total number of parking spaces in the movie theater?

(A) 412
(B) 544
(C) 596
(D) 632
(E) 692

PS10810

72. Ada and Paul received their scores on three tests. On the first test, Ada's score was 10 points higher than Paul's score. On the second test, Ada's score was 4 points higher than Paul's score. If Paul's average (arithmetic mean) score on the three tests was 3 points higher than Ada's average score on the three tests, then Paul's score on the third test was how many points higher than Ada's score?

(A) 9
(B) 14
(C) 17
(D) 23
(E) 25

PS06180

73. The price of a certain stock increased by 0.25 of 1 percent on a certain day. By what fraction did the price of the stock increase that day?

(A) $\frac{1}{2,500}$
(B) $\frac{1}{400}$
(C) $\frac{1}{40}$
(D) $\frac{1}{25}$
(E) $\frac{1}{4}$

PS03831

74. For each trip, a taxicab company charges $4.25 for the first mile and $2.65 for each additional mile or fraction thereof. If the total charge for a certain trip was $62.55, how many miles at most was the trip?

(A) 21
(B) 22
(C) 23
(D) 24
(E) 25

PS12857

75. When 24 is divided by the positive integer n, the remainder is 4. Which of the following statements about n must be true?

I. n is even.

II. n is a multiple of 5.

III. n is a factor of 20.

(A) III only
(B) I and II only
(C) I and III only
(D) II and III only
(E) I, II, and III

PS12759

76. What is the thousandths digit in the decimal equivalent of $\frac{53}{5{,}000}$?

(A) 0
(B) 1
(C) 3
(D) 5
(E) 6

PS67502.01

77. If $\frac{1}{2}$ the result obtained when 2 is subtracted from $5x$ is equal to the sum of 10 and $3x$, what is the value of x ?

(A) –22
(B) –4
(C) 4
(D) 18
(E) 22

PS48502.01

78. In a rectangular coordinate system, straight line k passes through points (0, 0) and (3, 2). Which of the following are coordinates of a point on k ?

(A) (9, 4)
(B) (4, 9)
(C) (–4, 6)
(D) (–6, –9)
(E) (–6, –4)

PS87502.01

79. If Car A took n hours to travel 2 miles and Car B took m hours to travel 3 miles, which of the following expresses the time it would take Car C, traveling at the average (arithmetic mean) of those rates, to travel 5 miles?

(A) $\frac{10nm}{3n+2m}$
(B) $\frac{3n+2m}{10(n+m)}$
(C) $\frac{2n+3m}{5nm}$
(D) $\frac{10(n+m)}{2n+3m}$
(E) $\frac{5(n+m)}{2n+3m}$

PS78502.01

80. If x, y, and k are positive and x is less than y, then $\frac{x+k}{y+k}$ is

(A) 1
(B) greater than $\frac{x}{y}$
(C) equal to $\frac{x}{y}$
(D) less than $\frac{x}{y}$
(E) less than $\frac{x}{y}$ or greater than $\frac{x}{y}$, depending on the value of k

PS09502.01

81. Consider the following set of inequalities: $p > q$, $s > r$, $q > t$, $s > p$, and $r > q$. Between which two quantities is no relationship established?

(A) p and r
(B) s and t
(C) s and q
(D) p and t
(E) r and t

PS68502.01

82. Carl averaged $2m$ miles per hour on a trip that took him h hours. If Ruth made the same trip in $\frac{2}{3}h$ hours, what was her average speed in miles per hour?

(A) $\frac{1}{3}mh$

(B) $\frac{2}{3}mh$

(C) m

(D) $\frac{3}{2}m$

(E) $3m$

PS29502.01

83. Of three persons, two take relish, two take pepper, and two take salt. The one who takes no salt takes no pepper, and the one who takes no pepper takes no relish. Which of the following statements must be true?

I. The person who takes no salt also takes no relish.

II. Any of the three persons who takes pepper also takes relish and salt.

III. The person who takes no relish is not one of those who takes salt.

(A) I only

(B) II only

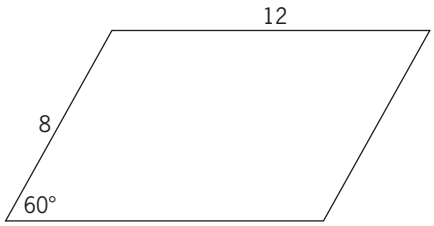
(C) III only

(D) I and II only

(E) I, II, and III

PS88502.01

84. If a rectangle of area 24 can be partitioned into exactly 3 nonoverlapping squares of equal area, what is the length of the longest side of the rectangle?



(A) $2\sqrt{2}$

(B) 6

(C) 8

(D) $6\sqrt{2}$

(E) $12\sqrt{2}$

PS50602.01

85. In the figure above, the area of the parallelogram is

(A) 40

(B) $24\sqrt{3}$

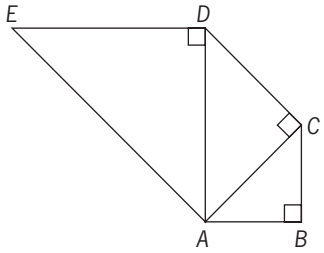
(C) 72

(D) $48\sqrt{3}$

(E) 96

PS91602.01

86. If the smaller of 2 consecutive odd integers is a multiple of 5, which of the following could NOT be the sum of these 2 integers?



(A) –8

(B) 12

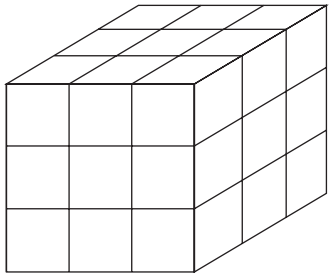
(C) 22

(D) 52

(E) 252

PS73602.01

87. In the figure above, if triangles ABC, ACD, and ADE are isosceles right triangles and the area of ΔABC is 6, then the area of ΔADE is



(A) 18

(B) 24

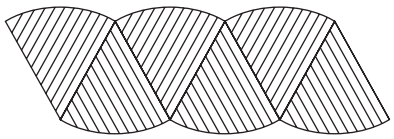
(C) 36

(D) $12\sqrt{2}$

(E) $24\sqrt{2}$

PS93602.01

88. Each of 27 white 1-centimeter cubes will have exactly one face painted red. If these 27 cubes are joined together to form one large cube, as shown above, what is the greatest possible fraction of the surface area that could be red?



(A) $\frac{11}{27}$

(B) $\frac{13}{27}$

(C) $\frac{1}{2}$

(D) $\frac{5}{9}$

(E) $\frac{19}{27}$

PS44602.01

89. The figure above is constructed by separating a circular region into 6 equal parts and rearranging the parts as shown. If the diameter of the circle is d, what is the perimeter of the figure above?

(A) πd

(B) $2\pi d$

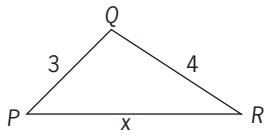
(C) $\pi d + 2$

(D) $\pi d + d$

(E) $2\pi d + d$

PS54602.01

90. On a scale drawing of a triangular piece of land, the sides of the triangle have lengths 5, 12, and 13 centimeters. If 1 centimeter on the drawing represents 3 meters, what is the area, in square meters, of the piece of land?



(A) 90

(B) 180

(C) 240

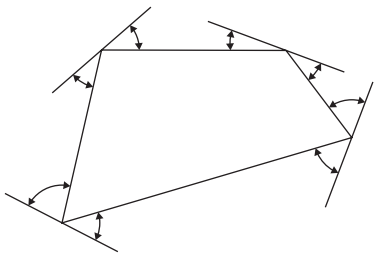
(D) 270

(E) 540

Note: Figure not drawn to scale.

PS05602.01

91. Which of the following gives all possible values of x in the figure above?



(A) $1 < x < 4$

(B) $1 < x < 7$

(C) $3 < x < 5$

(D) $4 < x < 7$

(E) $5 < x < 12$

PS15602.01

92. In the figure above, lines are drawn at the vertices of the quadrilateral as shown. What is the sum of the degree measures of the marked angles?

(A) 450

(B) 360

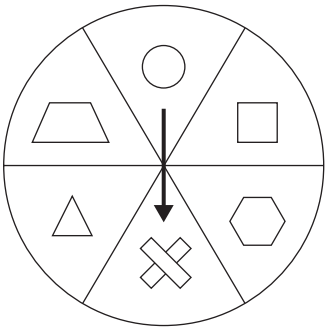
(C) 270

(D) 240

(E) 180

PS25602.01

93. The dimensions of a ream of paper are $8\frac{1}{2}$ inches by 11 inches by $2\frac{1}{2}$ inches. The inside dimensions of a carton that will hold exactly 12 reams of paper could be



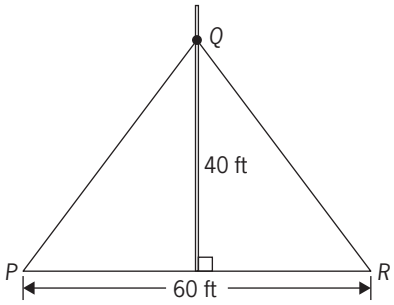
(A) $8\frac{1}{2}$ in by 11 in by 12 in
(B) 17 in by 11 in by 15 in
(C) 17 in by 22 in by 3 in
(D) 51 in by 66 in by 15 in
(E) 102 in by 132 in by 30 in

PS35602.01

94. In the racetrack shown above, regions I and III are semicircular with radius r. If region II is rectangular and its length is twice its width, what is the perimeter of the track in terms of r?

(A) $2r(\pi + 2)$
(B) $2r(\pi + 4)$
(C) $2r(\pi + 8)$
(D) $4r(\pi + 2)$
(E) $4r(\pi + 4)$

PS85602.01

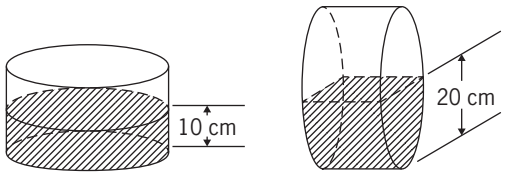


95. The figure above, which is divided into 6 sectors of equal area, contains an arrow representing a spinner. If the spinner is rotated 3,840 degrees in a clockwise direction from the position shown, which of the following indicates the sector to which the arrow on the spinner will point?

(A) 
(B) 
(C) 
(D) 
(E) 

PS95602.01

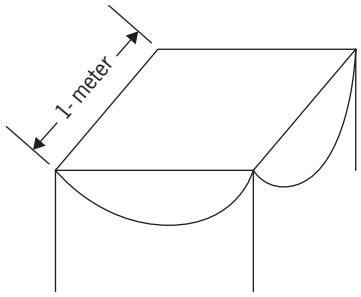
96. When a rectangular vat that is 3 feet deep is filled to $\frac{2}{3}$ of its capacity, it contains 60 gallons of water. If $7\frac{1}{2}$ gallons of water occupies 1 cubic foot of space, what is the area, in square feet, of the base of the vat?



(A) 4
(B) 8
(C) 12
(D) 150
(E) 225

PS06602.01

97. The figure above represents an antenna tower with two guy wires that extend from point Q, 40 feet above the ground, to points P and R as shown. If the two wires have equal length, approximately what is the total length, in feet, of the two wires?



(A) 60
(B) 80
(C) 100
(D) 120
(E) 180

PS16602.01

98. The figures above show a sealed container that is a right circular cylinder filled with liquid to $\frac{1}{2}$ its capacity. If the container is placed on its base, the depth of the liquid in the container is 10 centimeters and if the container is placed on its side, the depth of the liquid is 20 centimeters. How many cubic centimeters of liquid are in the container?

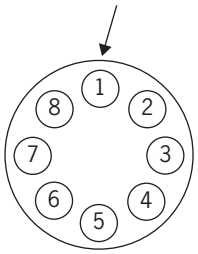
(A) $4{,}000\pi$
(B) $2{,}000\pi$
(C) $1{,}000\pi$
(D) 400π
(E) 200π

PS26602.01

99. The figure above shows a drop-leaf table. With all four leaves down the tabletop is a square, and with all four leaves up the tabletop is a circle. What is the radius, in meters, of the tabletop when all four leaves are up?

(A) $\frac{1}{2}$
(B) $\frac{\sqrt{2}}{2}$
(C) 1
(D) $\sqrt{2}$
(E) 2

PS36602.01



100. If the diameter of a circular skating rink is 60 meters, the area of the rink is approximately how many square meters?

(A) 90
(B) 180
(C) 900
(D) 2,800
(E) 10,800

PS46602.01

101. What is the greatest number of blocks 8 centimeters by 6 centimeters by 9 centimeters that will fit into a storage space that is 60 centimeters by 72 centimeters by 96 centimeters?

(A) 60
(B) 840
(C) 896
(D) 960
(E) 1,080

PS56602.01

102. Eight light bulbs numbered 1 through 8 are arranged in a circle as shown above. The bulbs are wired so that every third bulb, counting in a clockwise direction, flashes until all bulbs have flashed once. If the bulb numbered 1 flashes first, which numbered bulb will flash last?

(A) 2
(B) 3
(C) 4
(D) 6
(E) 7

PS00986

103. The average (arithmetic mean) of the positive integers x, y, and z is 3. If $x < y < z$, what is the greatest possible value of z?

(A) 5
(B) 6
(C) 7
(D) 8
(E) 9

PS14087

104. The product of 3,305 and the 1-digit integer x is a 5-digit integer. The units (ones) digit of the product is 5 and the hundreds digit is y. If A is the set of all possible values of x and B is the set of all possible values of y, then which of the following gives the members of A and B?

	A	B
(A)	{1, 3, 5, 7, 9}	{0, 1, 2, 3, 4, 5, 6, 7, 8, 9}
(B)	{1, 3, 5, 7, 9}	{1, 3, 5, 7, 9}
(C)	{3, 5, 7, 9}	{1, 5, 7, 9}
(D)	{5, 7, 9}	{1, 5, 7}
(E)	{5, 7, 9}	{1, 5, 9}

PS07001

105. If x and y are integers such that $2 < x \leq 8$ and $2 < y \leq 9$, what is the maximum value of $\frac{1}{x} - \frac{x}{y}$?

(A) $-3\frac{1}{8}$
(B) 0
(C) $\frac{1}{4}$
(D) $\frac{5}{18}$
(E) 2

PS01875

106. Items that are purchased together at a certain discount store are priced at \$3 for the first item purchased and \$1 for each additional item purchased. What is the maximum number of items that could be purchased together for a total price that is less than \$30?

(A) 25
(B) 26
(C) 27
(D) 28
(E) 29

PS00774

107. What is the least integer z for which $(0.000125)(0.0025)(0.00000125) \times 10^z$ is an integer?

(A) 18
(B) 10
(C) 0
(D) –10
(E) –18

PS08407

108. The average (arithmetic mean) length per film for a group of 21 films is t minutes. If a film that runs for 66 minutes is removed from the group and replaced by one that runs for 52 minutes, what is the average length per film, in minutes, for the new group of films, in terms of t?

(A) $t + \frac{2}{3}$
(B) $t - \frac{2}{3}$
(C) $21t + 14$
(D) $t + \frac{3}{2}$
(E) $t - \frac{3}{2}$

PS08051

109. An open box in the shape of a cube measuring 50 centimeters on each side is constructed from plywood. If the plywood weighs 1.5 grams per square centimeter, which of the following is closest to the total weight, in kilograms, of the plywood used for the box? (1 kilogram = 1,000 grams)

(A) 2
(B) 4
(C) 8
(D) 13
(E) 19

PS03614

110. A garden center sells a certain grass seed in 5-pound bags at $13.85 per bag, 10-pound bags at $20.43 per bag, and 25-pound bags at $32.25 per bag. If a customer is to buy at least 65 pounds of the grass seed, but no more than 80 pounds, what is the least possible cost of the grass seed that the customer will buy?

(A) $94.03
(B) $96.75
(C) $98.78
(D) $102.07
(E) $105.36

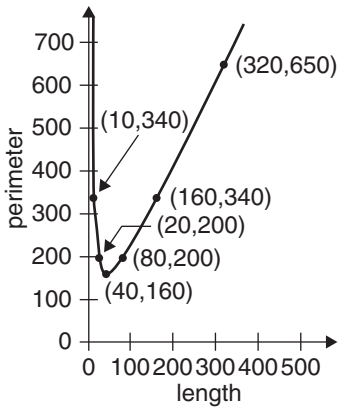
PS12785

111. If $x = -|w|$, which of the following must be true?

(A) $x = -w$
(B) $x = w$
(C) $x^2 = w$
(D) $x^2 = w^2$
(E) $x^3 = w^3$

PS04160

112. A certain financial institution reported that its assets totaled $2,377,366.30 on a certain day. Of this amount, $31,724.54 was held in cash. Approximately what percent of the reported assets was held in cash on that day?



(A) 0.00013%
(B) 0.0013%
(C) 0.013%
(D) 0.13%
(E) 1.3%

$$\begin{array}{r} AB \\ +\ BA \\ \hline AAC \end{array}$$

PS09820

113. In the correctly worked addition problem shown, where the sum of the two-digit positive integers AB and BA is the three-digit integer AAC, and A, B, and C are different digits, what is the units digit of the integer AAC?

(A) 9
(B) 6
(C) 3
(D) 2
(E) 0

PS14060

114. Planning is in progress for a fenced, rectangular playground with an area of 1,600 square meters. The graph above shows the perimeter, in meters, as a function of the length of the playground. The length of the playground should be how many meters to minimize the perimeter and, therefore, the amount of fencing needed to enclose the playground?

(A) 10
(B) 40
(C) 60
(D) 160
(E) 340

$$3r \le 4s + 5$$
$$|s| \le 5$$

PS06913

115. Given the inequalities above, which of the following CANNOT be the value of r?

(A) –20
(B) –5
(C) 0
(D) 5
(E) 20

PS11647

116. If m is an even integer, v is an odd integer, and $m > v > 0$, which of the following represents the number of even integers less than m and greater than v?

(A) $\frac{m-v}{2} - 1$
(B) $\frac{m-v-1}{2}$
(C) $\frac{m-v}{2}$
(D) $m - v - 1$
(E) $m - v$

PS02378

117. A positive integer is divisible by 9 if and only if the sum of its digits is divisible by 9. If n is a positive integer, for which of the following values of k is $25 \times 10^n + k \times 10^{2n}$ divisible by 9?

(A) 9
(B) 16
(C) 23
(D) 35
(E) 47

PS17806

118. The perimeter of rectangle A is 200 meters. The length of rectangle B is 10 meters less than the length of rectangle A and the width of rectangle B is 10 meters more than the width of rectangle A. If rectangle B is a square, what is the width, in meters, of rectangle A?

(A) 10
(B) 20
(C) 40
(D) 50
(E) 60

PS08598

119. On the number line, the shaded interval is the graph of which of the following inequalities?

(A) $|x| \le 4$
(B) $|x| \le 8$
(C) $|x - 2| \le 4$
(D) $|x - 2| \le 6$
(E) $|x + 2| \le 6$

PS12450

120. Last year members of a certain professional organization for teachers consisted of teachers from 49 different school districts, with an average (arithmetic mean) of 9.8 schools per district. Last year the average number of teachers at these schools who were members of the organization was 22. Which of the following is closest to the total number of members of the organization last year?

(A) 10^7
(B) 10^6
(C) 10^5
(D) 10^4
(E) 10^3

PS09294

121. Of all the students in a certain dormitory, $\frac{1}{2}$ are first-year students and the rest are second-year students. If $\frac{4}{5}$ of the first-year students have not declared a major and if the fraction of second-year students who have declared a major is 3 times the fraction of first-year students who have declared a major, what fraction of all the students in the dormitory are second-year students who have not declared a major?

(A) $\frac{1}{15}$
(B) $\frac{1}{5}$
(C) $\frac{4}{15}$
(D) $\frac{1}{3}$
(E) $\frac{2}{5}$

PS09050

122. If the average (arithmetic mean) of x, y, and z is $7x$ and $x \neq 0$, what is the ratio of x to the sum of y and z?

(A) 1:21
(B) 1:20
(C) 1:6
(D) 6:1
(E) 20:1

PS05413

123. Jonah drove the first half of a 100-mile trip in x hours and the second half in y hours. Which of the following is equal to Jonah's average speed, in miles per hour, for the entire trip?

(A) $\frac{50}{x+y}$
(B) $\frac{100}{x+y}$
(C) $\frac{25}{x}+\frac{25}{y}$
(D) $\frac{50}{x}+\frac{50}{y}$
(E) $\frac{100}{x}+\frac{100}{y}$

PS11454

124. In the xy-plane, the points (c,d), $(c,-d)$, and $(-c,-d)$ are three vertices of a certain square. If $c < 0$ and $d > 0$, which of the following points is in the same quadrant as the fourth vertex of the square?

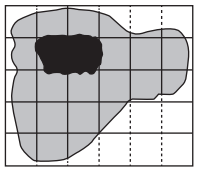
(A) (–5,–3)
(B) (–5,3)
(C) (5,–3)
(D) (3,–5)
(E) (3,5)

PS05470

125. If the amount of federal estate tax due on an estate valued at \$1.35 million is \$437,000 plus 43 percent of the value of the estate in excess of \$1.25 million, then the federal tax due is approximately what percent of the value of the estate?

A. 30%
B. 35%
C. 40%
D. 45%
E. 50%

PS05924



126. If $\frac{3}{10^4} = x\%$, then $x =$

(A) 0.3
(B) 0.03
(C) 0.003
(D) 0.0003
(E) 0.00003

PS01285

127. What is the remainder when 3^{24} is divided by 5?

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

PS11692

128. In the figure shown, a square grid is superimposed on the map of a park, represented by the shaded region, in the middle of which is a pond, represented by the black region. If the area of the pond is 5,000 square yards, which of the following is closest to the area of the park, in square yards, including the area of the pond?

(A) 30,000
(B) 45,000
(C) 60,000
(D) 75,000
(E) 90,000

PS03623

129. If the volume of a ball is 32,490 cubic millimeters, what is the volume of the ball in cubic centimeters? (1 millimeter = 0.1 centimeter)

(A) 0.3249
(B) 3.249
(C) 32.49
(D) 324.9
(E) 3,249

PS07058

130. David used part of $100,000 to purchase a house. Of the remaining portion, he invested $\frac{1}{3}$ of it at 4 percent simple annual interest and $\frac{2}{3}$ of it at 6 percent simple annual interest. If after a year the income from the two investments totaled $320, what was the purchase price of the house?

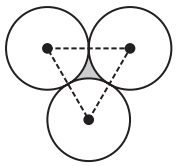
(A) $96,000
(B) $94,000
(C) $88,000
(D) $75,000
(E) $40,000

PS09439

131. A certain manufacturer sells its product to stores in 113 different regions worldwide, with an average (arithmetic mean) of 181 stores per region. If last year these stores sold an average of 51,752 units of the manufacturer's product per store, which of the following is closest to the total number of units of the manufacturer's product sold worldwide last year?

(A) 10^6
(B) 10^7
(C) 10^8
(D) 10^9
(E) 10^{10}

PS17708



132. Andrew started saving at the beginning of the year and had saved $240 by the end of the year. He continued to save and by the end of 2 years had saved a total of $540. Which of the following is closest to the percent increase in the amount Andrew saved during the second year compared to the amount he saved during the first year?

(A) 11%
(B) 25%
(C) 44%
(D) 56%
(E) 125%

PS19062

133. Two numbers differ by 2 and sum to S. Which of the following is the greater of the numbers in terms of S?

(A) $\frac{S}{2} - 1$
(B) $\frac{S}{2}$
(C) $\frac{S}{2} + \frac{1}{2}$
(D) $\frac{S}{2} + 1$
(E) $\frac{S}{2} + 2$

PS00904

134. The figure shown above consists of three identical circles that are tangent to each other. If the area of the shaded region is $64\sqrt{3} - 32\pi$, what is the radius of each circle?

(A) 4
(B) 8
(C) 16
(D) 24
(E) 32

PS02053

135. In a numerical table with 10 rows and 10 columns, each entry is either a 9 or a 10. If the number of 9s in the nth row is $n - 1$ for each n from 1 to 10, what is the average (arithmetic mean) of all the numbers in the table?

(A) 9.45
(B) 9.50
(C) 9.55
(D) 9.65
(E) 9.70

PS08485

136. A positive integer n is a perfect number provided that the sum of all the positive factors of n, including 1 and n, is equal to $2n$. What is the sum of the reciprocals of all the positive factors of the perfect number 28 ?

(A) $\frac{1}{4}$

(B) $\frac{56}{27}$

(C) 2

(D) 3

(E) 4

PS11430

137. The infinite sequence $a_1, a_2, \ldots, a_n, \ldots$ is such that $a_1 = 2$, $a_2 = -3$, $a_3 = 5$, $a_4 = -1$, and $a_n = a_{n-4}$ for $n > 4$. What is the sum of the first 97 terms of the sequence?

(A) 72

(B) 74

(C) 75

(D) 78

(E) 80

PS09901

138. The sequence $a_1, a_2, \ldots a_n, \ldots$ is such that $a_n = 2a_{n-1} - x$ for all positive integers $n \geq 2$ and for a certain number x. If $a_5 = 99$ and $a_3 = 27$, what is the value of x ?

(A) 3

(B) 9

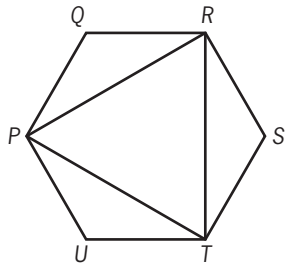
(C) 18

(D) 36

(E) 45

PS03779

139. A window is in the shape of a regular hexagon with each side of length 80 centimeters. If a diagonal through the center of the hexagon is w centimeters long, then $w =$



(A) 80

(B) 120

(C) 150

(D) 160

(E) 240

PS03695

140. In the figure shown, $PQRSTU$ is a regular polygon with sides of length x. What is the perimeter of triangle PRT in terms of x ?

(A) $\frac{x\sqrt{3}}{2}$

(B) $x\sqrt{3}$

(C) $\frac{3x\sqrt{3}}{2}$

(D) $3x\sqrt{3}$

(E) $4x\sqrt{3}$

PS11755

141. In a certain medical survey, 45 percent of the people surveyed had the type A antigen in their blood and 3 percent had both the type A antigen and the type B antigen. Which of the following is closest to the percent of those with the type A antigen who also had the type B antigen?

(A) 1.35%

(B) 6.67%

(C) 13.50%

(D) 15.00%

(E) 42.00%

PS05146

142. On a certain transatlantic crossing, 20 percent of a ship's passengers held round-trip tickets and also took their cars aboard the ship. If 60 percent of the passengers with round-trip tickets did not take their cars aboard the ship, what percent of the ship's passengers held round-trip tickets?

(A) $33\frac{1}{3}\%$

(B) 40%

(C) 50%

(D) 60%

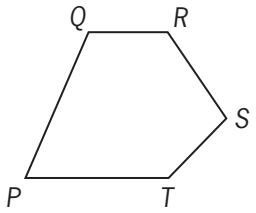
(E) $66\frac{2}{3}\%$

PS03696

143. If x and k are integers and $(12^x)(4^{2x+1}) = (2^k)(3^2)$, what is the value of k?

(A) 5
(B) 7
(C) 10
(D) 12
(E) 14

PS11024



144. If S is the sum of the reciprocals of the 10 consecutive integers from 21 to 30, then S is between which of the following two fractions?

(A) $\frac{1}{3}$ and $\frac{1}{2}$
(B) $\frac{1}{4}$ and $\frac{1}{3}$
(C) $\frac{1}{5}$ and $\frac{1}{4}$
(D) $\frac{1}{6}$ and $\frac{1}{5}$
(E) $\frac{1}{7}$ and $\frac{1}{6}$

PS08729

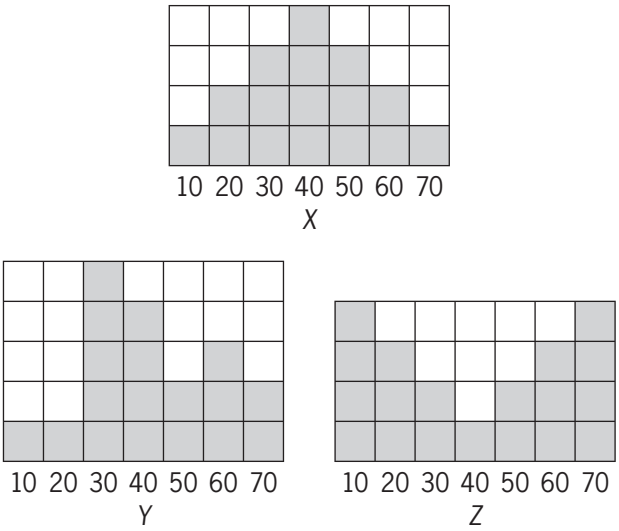
145. For every even positive integer m, $f(m)$ represents the product of all even integers from 2 to m, inclusive. For example, $f(12) = 2 \times 4 \times 6 \times 8 \times 10 \times 12$. What is the greatest prime factor of $f(24)$?

(A) 23
(B) 19
(C) 17
(D) 13
(E) 11

Note: Not drawn to scale.

PS08572

146. In pentagon $PQRST$, $PQ = 3$, $QR = 2$, $RS = 4$, and $ST = 5$. Which of the lengths 5, 10, and 15 could be the value of PT?

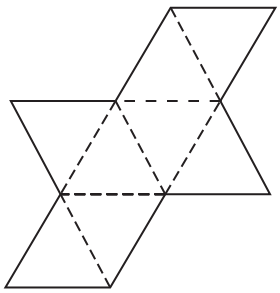


(A) 5 only
(B) 15 only
(C) 5 and 10 only
(D) 10 and 15 only
(E) 5, 10, and 15

3, k, 2, 8, m, 3

PS07771

147. The arithmetic mean of the list of numbers above is 4. If k and m are integers and $k \neq m$, what is the median of the list?



(A) 2
(B) 2.5
(C) 3
(D) 3.5
(E) 4

PS04987

148. If the variables, *X*, *Y*, and *Z* take on only the values 10, 20, 30, 40, 50, 60, or 70 with frequencies indicated by the shaded regions above, for which of the frequency distributions is the mean equal to the median?

(A) *X* only
(B) *Y* only
(C) *Z* only
(D) *X* and *Y*
(E) *X* and *Z*

PS15538

149. When the figure above is cut along the solid lines, folded along the dashed lines, and taped along the solid lines, the result is a model of a geometric solid. This geometric solid consists of 2 pyramids, each with a square base that they share. What is the sum of the number of edges and the number of faces of this geometric solid?

(A) 10
(B) 18
(C) 20
(D) 24
(E) 25

$$2x + y = 12$$
$$|y| \leq 12$$

PS03356

150. For how many ordered pairs (x,y) that are solutions of the system above are x and y both integers?

(A) 7
(B) 10
(C) 12
(D) 13
(E) 14

PS08859

151. The points *R*, *T*, and *U* lie on a circle that has radius 4. If the length of arc *RTU* is $\frac{4\pi}{3}$, what is the length of line segment *RU*?

(A) $\frac{4}{3}$
(B) $\frac{8}{3}$
(C) 3
(D) 4
(E) 6

PS02955

152. A certain university will select 1 of 7 candidates eligible to fill a position in the mathematics department and 2 of 10 candidates eligible to fill 2 identical positions in the computer science department. If none of the candidates is eligible for a position in both departments, how many different sets of 3 candidates are there to fill the 3 positions?

(A) 42
(B) 70
(C) 140
(D) 165
(E) 315

PS06189

153. A survey of employers found that during 1993 employment costs rose 3.5 percent, where employment costs consist of salary costs and fringe-benefit costs. If salary costs rose 3 percent and fringe-benefit costs rose 5.5 percent during 1993, then fringe-benefit costs represented what percent of employment costs at the beginning of 1993?

(A) 16.5%
(B) 20%
(C) 35%
(D) 55%
(E) 65%

PS02528

154. The subsets of the set {*w*, *x*, *y*} are {*w*}, {*x*}, {*y*}, {*w*, *x*}, {*w*, *y*}, {*x*, *y*}, {*w*, *x*, *y*}, and { } (the empty subset). How many subsets of the set {*w*, *x*, *y*, *z*} contain *w*?

(A) Four
(B) Five
(C) Seven
(D) Eight
(E) Sixteen

PS10309

155. There are 5 cars to be displayed in 5 parking spaces, with all the cars facing the same direction. Of the 5 cars, 3 are red, 1 is blue, and 1 is yellow. If the cars are identical except for color, how many different display arrangements of the 5 cars are possible?

(A) 20
(B) 25
(C) 40
(D) 60
(E) 125

PS17461

156. The number $\sqrt{63-36\sqrt{3}}$ can be expressed as $x+y\sqrt{3}$ for some integers x and y. What is the value of xy?

(A) –18
(B) –6
(C) 6
(D) 18
(E) 27

PS01334

157. There are 10 books on a shelf, of which 4 are paperbacks and 6 are hardbacks. How many possible selections of 5 books from the shelf contain at least one paperback and at least one hardback?

(A) 75
(B) 120
(C) 210
(D) 246
(E) 252

PS03774

158. If x is to be chosen at random from the set {1, 2, 3, 4} and y is to be chosen at random from the set {5, 6, 7}, what is the probability that xy will be even?

(A) $\frac{1}{6}$
(B) $\frac{1}{3}$
(C) $\frac{1}{2}$
(D) $\frac{2}{3}$
(E) $\frac{5}{6}$

PS04254

159. The function f is defined for each positive three-digit integer n by $f(n) = 2^x 3^y 5^z$, where x, y, and z are the hundreds, tens, and units digits of n, respectively. If m and v are three-digit positive integers such that $f(m) = 9f(v)$, then $m - v =$

(A) 8
(B) 9
(C) 18
(C) 20
(E) 80

PS06312

160. If $10^{50} - 74$ is written as an integer in base 10 notation, what is the sum of the digits in that integer?

(A) 424
(B) 433
(C) 440
(D) 449
(E) 467

PS09056

161. A certain company that sells only cars and trucks reported that revenues from car sales in 1997 were down 11 percent from 1996 and revenues from truck sales in 1997 were up 7 percent from 1996. If total revenues from car sales and truck sales in 1997 were up 1 percent from 1996, what is the ratio of revenue from car sales in 1996 to revenue from truck sales in 1996?

(A) 1:2
(B) 4:5
(C) 1:1
(D) 3:2
(E) 5:3

PS14267

162. Becky rented a power tool from a rental shop. The rent for the tool was $12 for the first hour and $3 for each additional hour. If Becky paid a total of $27, excluding sales tax, to rent the tool, for how many hours did she rent it?

(A) 5
(B) 6
(C) 9
(D) 10
(E) 12

PS06959

163. If $4 < \frac{7 - x}{3}$, which of the following must be true?

I. $5 < x$
II. $|x + 3| > 2$
III. $-(x + 5)$ is positive.

(A) II only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III

PS08654

164. A certain right triangle has sides of length x, y, and z, where $x < y < z$. If the area of this triangular region is 1, which of the following indicates all of the possible values of y?

(A) $y > \sqrt{2}$
(B) $\frac{\sqrt{3}}{2} < y < \sqrt{2}$
(C) $\frac{\sqrt{2}}{3} < y < \frac{\sqrt{3}}{2}$
(D) $\frac{\sqrt{3}}{4} < y < \frac{\sqrt{2}}{3}$
(E) $y < \frac{\sqrt{3}}{4}$

PS14397

165. On a certain day, a bakery produced a batch of rolls at a total production cost of $300. On that day, $\frac{4}{5}$ of the rolls in the batch were sold, each at a price that was 50 percent greater than the average (arithmetic mean) production cost per roll. The remaining rolls in the batch were sold the next day, each at a price that was 20 percent less than the price of the day before. What was the bakery's profit on this batch of rolls?

(A) $150
(B) $144
(C) $132
(D) $108
(E) $90

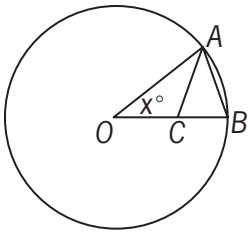
PS05972

166. A set of numbers has the property that for any number t in the set, $t + 2$ is in the set. If -1 is in the set, which of the following must also be in the set?

I. -3
II. 1
III. 5

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III

PS04780



167. A couple decides to have 4 children. If they succeed in having 4 children and each child is equally likely to be a boy or a girl, what is the probability that they will have exactly 2 girls and 2 boys?

(A) $\frac{3}{8}$
(B) $\frac{1}{4}$
(C) $\frac{3}{16}$
(D) $\frac{1}{8}$
(E) $\frac{1}{16}$

PS01564

168. The closing price of Stock X changed on each trading day last month. The percent change in the closing price of Stock X from the first trading day last month to each of the other trading days last month was less than 50 percent. If the closing price on the second trading day last month was $10.00, which of the following CANNOT be the closing price on the last trading day last month?

(A) $3.00
(B) $9.00
(C) $19.00
(D) $24.00
(E) $29.00

PS02389

169. In the figure above, point O is the center of the circle and $OC = AC = AB$. What is the value of x ?

(A) 40
(B) 36
(C) 34
(D) 32
(E) 30

PS16967

170. An airline passenger is planning a trip that involves three connecting flights that leave from Airports A, B, and C, respectively. The first flight leaves Airport A every hour, beginning at 8:00 a.m., and arrives at Airport B $2\frac{1}{2}$ hours later. The second flight leaves Airport B every 20 minutes, beginning at 8:00 a.m., and arrives at Airport C $1\frac{1}{6}$ hours later. The third flight leaves Airport C every hour, beginning at 8:45 a.m. What is the least total amount of time the passenger must spend between flights if all flights keep to their schedules?

(A) 25 min
(B) 1 hr 5 min
(C) 1 hr 15 min
(D) 2 hr 20 min
(E) 3 hr 40 min

PS07426

171. If n is a positive integer and n^2 is divisible by 72, then the largest positive integer that must divide n is

(A) 6
(B) 12
(C) 24
(D) 36
(E) 48

PS16977

172. A certain grocery purchased x pounds of produce for p dollars per pound. If y pounds of the produce had to be discarded due to spoilage and the grocery sold the rest for s dollars per pound, which of the following represents the gross profit on the sale of the produce?

(A) $(x - y)s - xp$
(B) $(x - y)p - ys$
(C) $(s - p)y - xp$
(D) $xp - ys$
(E) $(x - y)(s - p)$

PS16990

173. If x, y, and z are positive integers such that x is a factor of y, and x is a multiple of z, which of the following is NOT necessarily an integer?

(A) $\frac{x+z}{z}$
(B) $\frac{y+z}{x}$
(C) $\frac{x+y}{z}$
(D) $\frac{xy}{z}$
(E) $\frac{yz}{x}$

PS08416

174. Running at their respective constant rates, Machine X takes 2 days longer to produce w widgets than Machine Y. At these rates, if the two machines together produce $\frac{5}{4}w$ widgets in 3 days, how many days would it take Machine X alone to produce $2w$ widgets?

(A) 4
(B) 6
(C) 8
(D) 10
(E) 12

PS07117

175. A square wooden plaque has a square brass inlay in the center, leaving a wooden strip of uniform width around the brass square. If the ratio of the brass area to the wooden area is 25 to 39, which of the following could be the width, in inches, of the wooden strip?

I. 1
II. 3
III. 4

(A) I only
(B) II only
(C) I and II only
(D) I and III only
(E) I, II, and III

PS16963

176. $\dfrac{2\frac{3}{5}-1\frac{2}{3}}{\frac{2}{3}-\frac{3}{5}}=$

(A) 16
(B) 14
(C) 3
(D) 1
(E) –1

4.4 Answer Key

4.5 Answer Explanations

The following discussion is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to problem solving questions. The particular questions in this chapter are generally representative of the kinds of problem solving questions you will encounter on the GMAT. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

*PS03439

1. Working at a constant rate, a copy machine makes 20 copies of a one-page document per minute. If the machine works at this constant rate, how many hours does it take to make 4,800 copies of a one-page document?

(A) 4
(B) 5
(C) 6
(D) 7
(E) 8

Arithmetic Rate

The copy machine produces 20 copies of the one-page document each minute. Because there are 60 minutes in an hour, the constant rate of 20 copies per minute is equal to $60 \times 20 = 1{,}200$ copies per hour. With the machine working at this rate, the amount of time that it takes to produce 4,800 copies of the document is

$$\frac{4800 \ copies}{1200 \ \frac{copies}{hour}} = 4 \text{ hours.}$$

The correct answer is A.

PS11042

2. If $x + y = 2$ and $x^2 + y^2 = 2$, what is the value of xy?

(A) –2
(B) –1
(C) 0
(D) 1
(E) 2

Algebra Second-degree equations

$x + y = 2$	given
$y = 2 - x$	subtract x from both sides
$x^2 + (2 - x)^2 = 2$	substitute $y = 2 - x$ into $x^2 + y^2 = 2$
$2x^2 - 4x + 4 = 2$	expand and combine like terms
$2x^2 - 4x + 2 = 0$	subtract 2 from both sides
$x^2 - 2x + 1 = 0$	divide both sides by 2
$(x - 1)(x - 1) = 0$	factor
$x = 1$	set each factor equal to 0
$y = 1$	use $x = 1$ and $y = 2 - x$
$xy = 1$	multiply 1 and 1

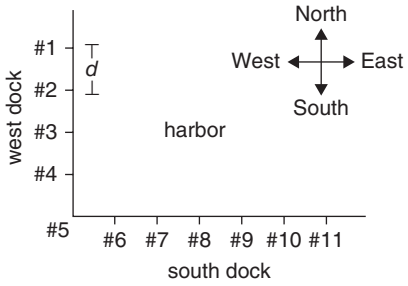
Alternatively, the value of xy can be found by first squaring both sides of the equation $x + y = 2$.

$x + y = 2$	given
$(x + y)^2 = 4$	square both sides
$x^2 + 2xy + y^2 = 4$	expand and combine like terms
$2 + 2xy = 4$	replace $x^2 + y^2$ with 2
$2xy = 2$	subtract 2 from both sides
$xy = 1$	divide both sides by 2

The correct answer is D.

PS02978

3. The sum S of the first n consecutive positive even integers is given by $S = n(n + 1)$. For what value of n is this sum equal to 110?



(A) 10
(B) 11
(C) 12
(D) 13
(E) 14

*These numbers correlate with the online test bank question number. See the GMAT Quantitative Review Online Index in the back of this book.

Algebra Factoring

Given that the sum of the first n even numbers is $n(n + 1)$, the sum is equal to 110 when $110 = n(n + 1)$. To find the value of n in this case, we need to find the two consecutive integers whose product is 110. These integers are 10 and 11; $10 \times 11 = 110$. The smaller of these numbers is n.

The correct answer is A.

PS08375

4. A certain harbor has docking stations along its west and south docks, as shown in the figure; any two adjacent docking stations are separated by a uniform distance d. A certain boat left the west dock from docking station #2 and moved in a straight line diagonally until it reached the south dock. If the boat was at one time directly east of docking station #4 and directly north of docking station #7, at which docking station on the south dock did the boat arrive?

(A) #7
(B) #8
(C) #9
(D) #10
(E) #11

Geometry Coordinate geometry

The boat traveled in a straight line from docking station #2 on the west dock to one of the docking stations on the south dock, passing through a single point that is both due east of docking station #4 and due north of docking station #7. Call this point P. Having traveled to P, the boat was both $2d$ south of its starting point and $2d$ east of its starting point. Therefore, traveling in a straight line, the boat traveled one unit south for every one unit traveled east. And because at point P the boat was a distance d north of the south dock, the boat must have reached the south dock at a point which is a distance of d east of docking station #7 (which is due south of point P). This point is the position of docking station #8. The boat therefore arrived at docking station #8.

The correct answer is B.

PS03887

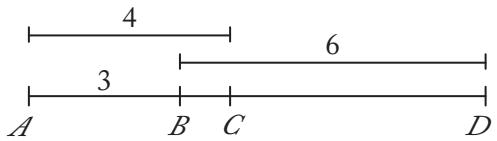
5. $6(87.30 + 0.65) - 5(87.30) =$

(A) 3.90
(B) 39.00
(C) 90.90
(D) 91.20
(E) 91.85

Arithmetic Factors, multiples, and divisibility

This question is most efficiently answered by distributing the 6 over 87.30 and 0.65, and then combining the terms that contain a factor of 87.30, as follows:

$6(87.30 + 0.65) - 5(87.30) = 6\ (87.30) + 6\ (0.65) - 5\ (87.30) = (6 - 5)\ 87.30 + 6(0.65) = 87.30 + 3.90 = 91.20$



The correct answer is D.

PS13800

6. Points A, B, C, and D, in that order, lie on a line. If $AB = 3$ cm, $AC = 4$ cm, and $BD = 6$ cm, what is CD, in centimeters?

(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

Geometry Lines and segments

The figure shows points A, B, C, and D as well as the given measurements. Since $AC = AB + BC$, it follows that $4 = 3 + BC$, and so $BC = 1$. Then, since $BD = BC + CD$, it follows that $6 = 1 + CD$, and so $CD = 5$.

Alternately, $AD = AB + BD = 3 + 6 = 9$. Also, $AD = AC + CD$, so $9 = 4 + CD$ and $CD = 5$.

The correct answer is E.

PS05292

7. What is the value of $x^2yz - xyz^2$, if $x = -2$, $y = 1$, and $z = 3$?

(A) 20
(B) 24
(C) 30
(D) 32
(E) 48

Algebra Operations on integers

Given that $x = -2$, $y = 1$, and $z = 3$, it follows by substitution that

$$\begin{aligned} x^2yz - xyz^2 &= (-2)^2(1)(3) - (-2)(1)(3^2) \\ &= (4)(1)(3) - (-2)(1)(9) \\ &= 12 - (-18) \\ &= 12 + 18 \\ &= 30 \end{aligned}$$

The correct answer is C.

PS11468

8. A souvenir vendor purchased 1,000 shirts for a special event at a price of $5 each. The vendor sold 600 of the shirts on the day of the event for $12 each and 300 of the shirts in the week following the event for $4 each. The vendor was unable to sell the remaining shirts. What was the vendor's gross profit on the sale of these shirts?

(A) $1,000
(B) $2,200
(C) $2,700
(D) $3,000
(E) $3,400

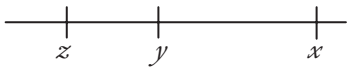
Arithmetic Applied problems

The vendor's gross profit on the sale of the shirts is equal to the total revenue from the shirts that were sold minus the total cost for all of the shirts. The total cost for all of the shirts is equal to the number of shirts the vendor purchased multiplied by the price paid by the vendor for each shirt: $1{,}000 \times \$5 = \$5{,}000$. The total revenue from the shirts that were sold is equal to the total revenue from the 600 shirts sold for $12 each plus the total revenue from the 300 shirts that were sold for $4 each: $600 \times \$12 + 300 \times \$4 = \$7{,}200 + \$1{,}200 = \$8{,}400$. The gross profit is therefore $\$8{,}400 - \$5{,}000 = \$3{,}400$.

The correct answer is E.

PS06937

9. If $x > y$ and $y > z$, which of the following represents the greatest number?



(A) $x - z$
(B) $x - y$
(C) $y - x$
(D) $z - y$
(E) $z - x$

Algebra Inequalities

From $x > y$ and $y > z$, it follows that $x > z$. These inequalities imply the following about the differences that are given in the answer choices:

Answer choice	Difference	Algebraic sign	Reason
(A)	$x - z$	positive	$x > z$ implies $x - z > 0$
(B)	$x - y$	positive	$x > y$ implies $x - y > 0$
(C)	$y - x$	negative	$x - y > 0$ implies $y - x < 0$
(D)	$z - y$	negative	$y > z$ implies $0 > z - y$
(E)	$z - x$	negative	$x - z > 0$ implies $z - x < 0$

Since the expressions in A and B represent positive numbers and the expressions in C, D, and E represent negative numbers, the latter can be eliminated because every negative number is less than every positive number. To determine which of $x - z$ and $x - y$ is greater, consider the placement of points with coordinates x, y, and z on the number line.

The distance between x and z (that is, $x - z$) is the sum of the distance between x and y (that is, $x - y$) and the distance between y and z (that is, $y - z$).

Therefore, $(x - z) > (x - y)$, which means that $x - z$ represents the greater of the numbers represented by $(x - z)$ and $(x - y)$. Thus, $x - z$ represents the greatest of the numbers represented by the answer choices.

Alternatively,

$y > z$	given
$-y < -z$	multiply both sides by -1
$x - y < x - z$	add x to both sides

Thus, $x - z$ represents the greater of the numbers represented by $(x - z)$ and $(x - y)$. Therefore, $x - z$ represents the greatest of the numbers represented by the answer choices.

The correct answer is A.

PS12926

10. To order certain plants from a catalog, it costs $3.00 per plant, plus a 5 percent sales tax, plus $6.95 for shipping and handling regardless of the number of plants ordered. If Company C ordered these plants from the catalog at the total cost of $69.95, how many plants did Company C order?

(A) 22
(B) 21
(C) 20
(D) 19
(E) 18

Algebra First-degree equations

Letting x represent the number of plants Company C bought from the catalog, then, in dollars, $3.00x$ is the cost of the plants, $(0.05)(3.00x)$ is the sales tax, and 6.95 is the shipping and handling fee. It follows that

$3.00x + (0.05)(3.00x) + 6.95 = 69.95$	plants + tax + shipping = total
$(3.00x)(1.05) + 6.95 = 69.95$	add like terms
$(3.00x)(1.05) = 63.00$	subtract 6.95 from both sides
$x = 20$	divide both sides by (3.00)(1.05)

Therefore, Company C bought 20 plants from the catalog.

The correct answer is C.

PS00812

11. A rug manufacturer produces rugs at a cost of $75 per rug. What is the manufacturer's gross profit from the sale of 150 rugs if $\frac{2}{3}$ of the rugs are sold for $150 per rug and the rest are sold for $200 per rug?

(A) $10,350
(B) $11,250
(C) $13,750
(D) $16,250
(E) $17,800

Arithmetic Applied problems; Proportions

The gross profit from the sale of 150 rugs is equal to the revenue from the sale of the rugs minus the cost of producing them. For $\frac{2}{3}$ of the 150 rugs—100 of them—the gross profit per rug is $150 – $75 = $75. For the remaining 50 rugs, the gross profit per rug is $200 – $75 = $125. The gross profit from the sale of the 150 rugs is therefore $100 \times \$75 + 50 \times \$125 = \$13{,}750$.

The correct answer is C.

PS07793

12. The value of Maureen's investment portfolio has decreased by 5.8 percent since her initial investment in the portfolio. If her initial investment was $16,800, what is the current value of the portfolio?

(A) $7,056.00
(B) $14,280.00
(C) $15,825.60
(D) $16,702.56
(E) $17,774.40

Arithmetic Percents

Maureen's initial investment was $16,800, and it has decreased by 5.8%. Its current value is therefore (100% – 5.8%) = 94.2% of $16,800, which is equal to $0.942 \times \$16{,}800$. To make the multiplication simpler, this can be expressed as $\$(942 \times 16.8)$. Thus multiplying, we obtain the result of $15,825.60.

The correct answer is C.

PS03036

13. Company C produces toy trucks at a cost of $5.00 each for the first 100 trucks and $3.50 for each additional truck. If 500 toy trucks were produced by Company C and sold for $10.00 each, what was Company C's gross profit?

(A) $2,250
(B) $2,500
(C) $3,100
(D) $3,250
(E) $3,500

Arithmetic Applied problems

The company's gross profit on the 500 toy trucks is the company's revenue from selling the trucks minus the company's cost of producing the trucks. The revenue is (500)($10.00) = $5,000. The cost for the first 100 trucks is (100)($5.00) = $500, and the cost for the other 400 trucks is (400)($3.50) = $1,400 for a total cost of $500 + $1,400 = $1,900. Thus, the company's gross profit is $5,000 – $1,900 = $3,100.

The correct answer is C.

Division	Profit or Loss (in millions of dollars)				
	1991	1992	1993	1994	1995
A	1.1	(3.4)	1.9	2.0	0.6
B	(2.3)	5.5	(4.5)	3.9	(2.9)
C	10.0	(6.6)	5.3	1.1	(3.0)

PS02019

14. The annual profit or loss for the three divisions of Company T for the years 1991 through 1995 are summarized in the table shown, where losses are enclosed in parentheses. For which division and which three consecutive years shown was the division's profit or loss for the three-year period closest to $0 ?

(A) Division *A* for 1991–1993
(B) Division *A* for 1992–1994
(C) Division *B* for 1991–1993
(D) Division *B* for 1993–1995
(E) Division *C* for 1992–1994

Arithmetic Applied problems

For completeness, the table shows all 9 of the profit or loss amounts, in millions of dollars, for each of the 3 divisions and the 3 three-year periods.

	1991–1993	1992–1994	1993–1995
A	–0.4	0.5	4.5
B	–1.3	4.9	–3.5
C	8.7	**–0.2**	3.4

The correct answer is E.

PS13583

15. Of the following, which is least?

(A) $\frac{0.03}{0.00071}$
(B) $\frac{0.03}{0.0071}$
(C) $\frac{0.03}{0.071}$
(D) $\frac{0.03}{0.71}$
(E) $\frac{0.03}{7.1}$

Arithmetic Operations on rational numbers

Since the numerator of all of the fractions in the answer choices is 0.03, the least of the fractions will be the fraction with the greatest denominator. The greatest denominator is 7.1, and so the least of the fractions is $\frac{0.03}{7.1}$.

The correct answer is E.

PS08011

16. If the average (arithmetic mean) of 5 numbers j, $j + 5$, $2j - 1$, $4j - 2$, and $5j - 1$ is 8, what is the value of j ?

(A) $\frac{1}{3}$
(B) $\frac{7}{13}$
(C) 1
(D) 3
(E) 8

Algebra First-degree equations

$$\frac{j+(j+5)+(2j-1)+(4j-2)+(5j-1)}{5} = 8 \quad \text{given}$$

$$j+(j+5)+(2j-1)+(4j-2)+(5j-1) = 40 \quad \text{multiply both sides by 5}$$

$$13j+1 = 40 \quad \text{combine like terms}$$

$$13j = 39 \quad \text{subtract 1 from both sides}$$

$$j = 3 \quad \text{divide both sides by 13}$$

The correct answer is D.

PS14037

17. Guadalupe owns 2 rectangular tracts of land. One is 300 m by 500 m and the other is 250 m by 630 m. The combined area of these 2 tracts is how many square meters?

(A) 3,360
(B) 307,500
(C) 621,500
(D) 704,000
(E) 2,816,000

Geometry Area

The area of a rectangle can be found by multiplying the length and width of the rectangle. Therefore, the combined area, in square meters, of the 2 rectangular tracts of land is (300)(500) + (250)(630) = 150,000 + 157,500 = 307,500.

The correct answer is B.

PS03918

18. There are five sales agents in a certain real estate office. One month Andy sold twice as many properties as Ellen, Bob sold 3 more than Ellen, Cary sold twice as many as Bob, and Dora sold as many as Bob and Ellen together. Who sold the most properties that month?

(A) Andy
(B) Bob
(C) Cary
(D) Dora
(E) Ellen

Algebra Order

Let x represent the number of properties that Ellen sold, where $x \geq 0$. Then, since Andy sold twice as many properties as Ellen, $2x$ represents the number of properties that Andy sold. Bob sold 3 more properties than Ellen, so $(x + 3)$ represents the number of properties that Bob sold. Cary sold twice as many properties as Bob, so $2(x + 3) = (2x + 6)$ represents the number of properties that Cary sold. Finally, Dora sold as many properties as Bob and Ellen combined, so $[(x + 3) + x] = (2x + 3)$ represents the number of properties that Dora sold. The following table summarizes these results.

Agent	Properties sold
Andy	$2x$
Bob	$x + 3$
Cary	$2x + 6$
Dora	$2x + 3$
Ellen	x

Since $x \geq 0$, clearly $2x + 6$ exceeds x, $x + 3$, $2x$, and $2x + 3$. Therefore, Cary sold the most properties.

The correct answer is C.

PS10862

19. In a field day at a school, each child who competed in n events and scored a total of p points was given an overall score of $\frac{p}{n} + n$. Andrew competed in 1 event and scored 9 points. Jason competed in 3 events and scored 5, 6, and 7 points, respectively. What was the ratio of Andrew's overall score to Jason's overall score?

(A) $\frac{10}{23}$
(B) $\frac{7}{10}$
(C) $\frac{4}{5}$
(D) $\frac{10}{9}$
(E) $\frac{12}{7}$

Algebra Applied problems; Substitution

Andrew participated in 1 event and scored 9 points, so his overall score was $\frac{9}{1} + 1 = 10$. Jason participated in 3 events and scored $5 + 6 + 7 = 18$ points, so his overall score was $\frac{18}{3} + 3 = 9$. The ratio of Andrew's overall score to Jason's overall score was $\frac{10}{9}$.

The correct answer is D.

PS06719

20. A certain work plan for September requires that a work team, working every day, produce an average of 200 items per day. For the first half of the month, the team produced an average of 150 items per day. How many items per day must the team average during the second half of the month if it is to attain the average daily production rate required by the work plan?

(A) 225
(B) 250
(C) 275
(D) 300
(E) 350

Arithmetic Rate problem

The work plan requires that the team produce an average of 200 items per day in September. Because the team has only produced an average of 150 items per day in the first half of September, it has a shortfall of $200 - 150 = 50$ items per day for the first half of the month. The team must make up for this shortfall in the second half of the month, which has an equal number of days as the first half of the month. The team must therefore produce in the second half of the month an average amount per day that is 50 items greater than the required average of 200 items per day for the entire month. This amount for the second half of September is 250 items per day.

The correct answer is B.

PS01949

21. A company sells radios for $15.00 each. It costs the company $14.00 per radio to produce 1,000 radios and $13.50 per radio to produce 2,000 radios. How much greater will the company's gross profit be from the production and sale of 2,000 radios than from the production and sale of 1,000 radios?

(A) $500
(B) $1,000
(C) $1,500
(D) $2,000
(E) $2,500

Arithmetic Applied problems

If the company produces and sells 1,000 radios, its gross profit from the sale of these radios is equal to the total revenue from the sale of these radios minus the total cost. The total cost is equal to the number of radios produced multiplied by the production cost per radio: $1{,}000 \times \$15.00$. The total revenue is equal to the number of radios sold multiplied by the selling price: $1{,}000 \times \$14.00$. The gross profit in this case is therefore $1{,}000 \times \$15.00 - 1{,}000 \times \$14.00 = 1{,}000 \times (\$15.00 - \$14.00) = 1{,}000\ (\$1.00) = \$1{,}000$. If 2,000 radios are produced and sold, the total cost is equal to $2{,}000 \times \$13.50$ and the total revenue is equal to $2{,}000 \times \$15.00$. The gross profit in this case is therefore $2{,}000 \times \$15.00 - 2{,}000 \times \$13.50 = 2{,}000 \times (\$15.00 - \$13.50) = 2{,}000 \times (\$1.50) = \$3{,}000$. This profit of $3,000 is $2,000 greater than the gross profit of $1,000 from producing and selling 1,000 radios.

The correct answer is D.

PS06555

22. Which of the following represent positive numbers?

I. $-3 - (-5)$
II. $(-3)(-5)$
III. $-5 - (-3)$

(A) I only
(B) II only
(C) III only
(D) I and II
(E) II and III

Arithmetic Operations on integers

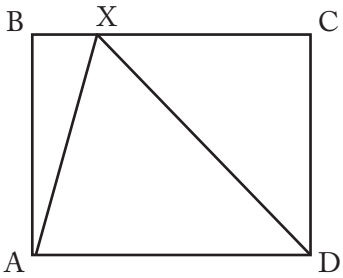
Find the value of each expression to determine if it is positive.

I. $-3-(-5)=-3+5=2$, which is positive.

II. $(-3)(-5)=15$, which is positive.

III. $-5-(-3)=-5+3=-2$, which is not positive.

The correct answer is D.



PS09983

23. Point X lies on side BC of rectangle $ABCD$, which has length 12 and width 8. What is the area of triangular region AXD?

(A) 96
(B) 48
(C) 32
(D) 24
(E) 20

Geometry Area

Note that, in rectangle $ABCD$, the sides BC and AD do not share an endpoint and must therefore be on opposite sides of the rectangle. We thus see that the point X, which is both on triangle AXD and on side BC of the rectangle, lies on the side of the rectangle that is opposite the side AD of the rectangle. AD is also a side of the triangle. So if the rectangle is drawn with AD horizontal and on the bottom (see the diagram, which is not drawn to scale), the vertical height of the triangle from the base AD is equal to the length of the sides on the rectangle that are adjacent to AD. Given the formula for the area of a triangle, $\frac{1}{2}\times\text{base}\times\text{height}$, the area of the triangle AXD is thus $\frac{1}{2}\times AD\times AB$ (or equivalently $\frac{1}{2}\times AD\times CD$).

Now, AD may be either a length or a width of the rectangle—equal to 12 or equal to 8. If AD is equal to 12, then AB is a width and is equal to 8; the area of the triangle is thus $\frac{1}{2}\times 12\times 8$. If AD is instead equal to 8, then AB is equal to 12, and the formula for the area of the triangle results in the expression $\frac{1}{2}\times 8\times 12$. In both cases, the area of the triangle is equal to 48.

The correct answer is B.

PS07659

24. A grocer has 400 pounds of coffee in stock, 20 percent of which is decaffeinated. If the grocer buys another 100 pounds of coffee of which 60 percent is decaffeinated, what percent, by weight, of the grocer's stock of coffee is decaffeinated?

(A) 28%
(B) 30%
(C) 32%
(D) 34%
(E) 40%

Arithmetic Percents

The grocer has 400 pounds of coffee in stock, of which $(400)(20\%)=80$ pounds is decaffeinated coffee. Therefore, if the grocer buys 100 pounds of coffee, of which $(100)(60\%)=60$ pounds is decaffeinated coffee, then the percent of the grocer's stock of coffee that is decaffeinated would be $\frac{80+60}{400+100}=\frac{140}{500}=\frac{28}{100}=28\%$.

The correct answer is A.

PS05129

25. The toll T, in dollars, for a truck using a certain bridge is given by the formula $T=1.50+0.50(x-2)$, where x is the number of axles on the truck. What is the toll for an 18-wheel truck that has 2 wheels on its front axle and 4 wheels on each of its other axles?

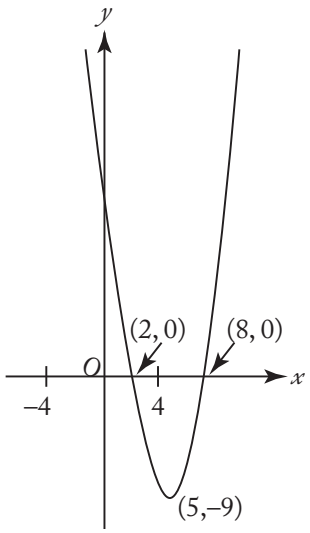
(A) \$2.50
(B) \$3.00
(C) \$3.50
(D) \$4.00
(E) \$5.00

Algebra Operations on rational numbers

The 18-wheel truck has 2 wheels on its front axle and 4 wheels on each of its other axles, and so if A represents the number of axles on the truck in addition to the front axle, then $2 + 4A = 18$, from which it follows that $4A = 16$ and $A = 4$. Therefore, the total number of axles on the truck is $1 + A = 1 + 4 = 5$. Then, using $T = 1.50 + 0.50(x - 2)$, where x is the number of axles on the truck and $x = 5$, it follows that $T = 1.50 + 0.50(5 - 2) = 1.50 + 1.50 = 3.00$. Therefore, the toll for the truck is \$3.00.

The correct answer is B.

PS13917



26. For what value of x between –4 and 4, inclusive, is the value of $x^2 - 10x + 16$ the greatest?

(A) –4
(B) –2
(C) 0
(D) 2
(E) 4

Algebra Second-degree equations

Given the expression $x^2 - 10x + 16$, a table of values can be created for the corresponding function $f(x) = x^2 - 10x + 16$ and the graph in the standard (x,y) coordinate plane can be sketched by plotting selected points:

x	$f(x)$
–4	72
–3	55
–2	40
–1	27
0	16
1	7
2	0
3	–5
4	–8
5	–9
6	–8
7	–5
8	0
9	7

It is clear from both the table of values and the sketch of the graph that as the value of x increases from –4 to 4, the values of $x^2 - 10x + 16$ decrease. Therefore, the value of $x^2 - 10x + 16$ is greatest when $x = -4$.

Alternatively, the given expression, $x^2 - 10x + 16$, has the form $ax^2 + bx + c$, where $a = 1$, $b = -10$, and $c = 16$. The graph in the standard (x,y) coordinate plane of the corresponding function $f(x) = ax^2 + bx + c$ is a parabola with vertex at $x = -\frac{b}{2a}$, and so the vertex of the graph of $f(x) = x^2 - 10x + 16$ is at

$$x = -\left(\frac{-10}{2(1)}\right) = 5.$$

Because $a = 1$ and 1 is positive, this parabola opens upward and values of $x^2 - 10x + 16$ decrease as x increases from –4 to 4. Therefore, the greatest value of $x^2 - 10x + 16$ for all values of x between –4 and 4, inclusive, is at $x = -4$.

The correct answer is A.

PS15994

27. If $x = -\frac{5}{8}$ and $y = -\frac{1}{2}$, what is the value of the expression $-2x - y^2$?

(A) $-\frac{3}{2}$
(B) –1
(C) 1
(D) $\frac{3}{2}$
(E) $\frac{7}{4}$

Algebra Fractions

If $x = -\frac{5}{8}$ and $y = -\frac{1}{2}$, then

$-2x - y^2 = -2\left(-\frac{5}{8}\right) - \left(-\frac{1}{2}\right)^2 = \frac{5}{4} - \frac{1}{4} = \frac{4}{4} = 1.$

The correct answer is C.

PS13686

28. If $x - y = R$ and $xy = S$, then $(x - 2)(y + 2) =$

(A) $R + S - 4$
(B) $R + 2S - 4$
(C) $2R - S - 4$
(D) $2R + S - 4$
(E) $2R + S$

Algebra Simplifying algebraic expressions; Substitution

$$\begin{aligned}(x-2)(y+2) &= xy + 2x - 2y - 4 && \text{multiply binomials}\\ &= xy + 2(x-y) - 4 && \text{distributive principle}\\ &= S + 2R - 4 && \text{substitution}\\ &= 2R + S - 4 && \text{commutative principle}\end{aligned}$$

The correct answer is D.

PS01466

29. For positive integers a and b, the remainder when a is divided by b is equal to the remainder when b is divided by a. Which of the following could be a value of ab ?

I. 24
II. 30
III. 36

(A) II only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III

Arithmetic Properties of integers

We are given that the remainder when a is divided by b is equal to the remainder when b is divided by a, and asked about possible values of ab. We thus need to find what our given condition implies about a and b.

We consider two cases: $a = b$ and $a \neq b$.

If $a = b$, then our given condition is trivially satisfied: the remainder when a is divided by a is equal to the remainder when a is divided by b. The condition thus allows that a be equal to b.

Now consider the case of $a \neq b$. Either a < b or $b < a$. Supposing that $a < b$, the remainder when a is divided by b is simply a. (For example, if 7 is divided by 10, then the remainder is 7.) However, according to our given condition, this remainder, a, is also the remainder when b is divided by a, which is impossible. If b is divided by a, then the remainder must be less than a. (For example, for any number that is divided by 10, the remainder cannot be 10 or greater.) Similar reasoning applies if we suppose that $b < a$. This is also impossible.

We thus see that a must be equal to b, and consider the statements I, II, and III.

I. Factored in terms of prime numbers, $24 = 3 \times 2 \times 2 \times 2$. Because "3" occurs only once in the factorization, we see that there is no integer a such that $a \times a = 24$. Based on the reasoning above, we see that 24 cannot be a value of ab.

II. Factored in terms of prime numbers, $30 = 5 \times 3 \times 2$. Because there is no integer a such that $a \times a = 30$, we see that 30 cannot be a value of ab.

III. Because $36 = 6 \times 6$, we see that 36 is a possible value of ab (with $a = b$).

The correct answer is B.

PS01867

30. List S consists of the positive integers that are multiples of 9 and are less than 100. What is the median of the integers in S ?

(A) 36
(B) 45
(C) 49
(D) 54
(E) 63

Arithmetic Series and sequences

In the set of positive integers less than 100, the greatest multiple of 9 is 99 (9×11) and the least multiple of 9 is 9 (9×1). The sequence of positive multiples of 9 that are less than 100 is therefore

the sequence of numbers $9 \times k$, where k ranges from 1 through 11. The median of the numbers k from 1 through 11 is 6. Therefore the median of the numbers $9 \times k$, where k ranges from 1 through 11, is $9 \times 6 = 54$.

The correct answer is D.

PS07380

31. A rope 20.6 meters long is cut into two pieces. If the length of one piece of rope is 2.8 meters shorter than the length of the other, what is the length, in meters, of the longer piece of rope?

(A) 7.5
(B) 8.9
(C) 9.9
(D) 10.3
(E) 11.7

Algebra First-degree equations

If x represents the length of the longer piece of rope, then $x - 2.8$ represents the length of the shorter piece, where both lengths are in meters. The total length of the two pieces of rope is 20.6 meters so,

$$\begin{aligned} x + (x - 2.8) &= 20.6 && \text{given} \\ 2x - 2.8 &= 20.6 && \text{add like terms} \\ 2x &= 23.4 && \text{add 2.8 to both sides} \\ x &= 11.7 && \text{divide both sides by 2} \end{aligned}$$

Thus, the length of the longer piece of rope is 11.7 meters.

The correct answer is E.

PS01120

32. If x and y are integers and $x - y$ is odd, which of the following must be true?

I. xy is even.
II. $x^2 + y^2$ is odd.
III. $(x + y)^2$ is even.

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

Arithmetic Properties of numbers

We are given that x and y are integers and that $x - y$ is odd, and then asked, for various operations on x and y, whether the results of the operations are odd or even. It is therefore useful to determine, given that $x - y$ is odd, whether x and y are odd or even. If both x and y are even—that is, divisible by 2—then $x - y = 2m - 2n = 2(m - n)$ for integers m and n. We thus see if both x and y are even then $x - y$ cannot be odd. And because $x - y$ *is* odd, we see that x and y cannot both be even. Similarly, if both x and y are odd, then, for integers j and k, $x = 2j + 1$ and $y = 2k + 1$. Therefore, $x - y = (2j + 1) - (2k + 1)$. The ones cancel, and we are left with $x - y = 2j - 2k = 2(j - k)$. Because $2(j - k)$ would be even, x and y cannot both be odd if $x - y$ is odd. It follows from all of this that one of x or y must be even and the other odd.

Now consider the statements I through III.

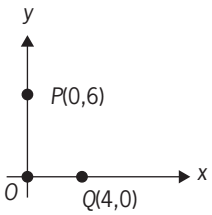
I. If one of x or y is even, then one of x or y is divisible by 2. It follows that xy is divisible by 2 and that xy is even.

II. Given that a number x or y is odd—not divisible by 2—we know that its product with itself is not divisible by 2 and is therefore odd. On the other hand, given that a number x or y is even, we know that its product with itself *is* divisible by 2 and is therefore even. The sum $x^2 + y^2$ is therefore the sum of an even number and an odd number. In such a case, the sum can be written as $(2m) + (2n + 1) = 2(m + n) + 1$, with m and n integers. It follows that $x^2 + y^2$ is not divisible by 2 and is therefore odd.

III. We know that one of x or y is even and the other is odd. We can therefore see from the discussion of statement II that $x + y$ is odd, and then also see, from the discussion of statement II, that the product of $x + y$ with itself, $(x + y)^2$, is odd.

The correct answer is D.

PS00335



33. On Monday, the opening price of a certain stock was $100 per share and its closing price was $110 per share. On Tuesday the closing price of the stock was 10 percent less than its closing price on Monday, and on Wednesday the closing price of the stock was 4 percent greater than its closing price on Tuesday. What was the approximate percent change in the price of the stock from its opening price on Monday to its closing price on Wednesday?

(A) A decrease of 6%
(B) A decrease of 4%
(C) A decrease of 1%
(D) An increase of 3%
(E) An increase of 4%

Arithmetic Percents

The closing share price on Tuesday was 10% less than the closing price on Monday, $110. 10% of $110 is equal to $0.1 \times \$110 = \$11$, so the closing price on Tuesday was $\$110 - \$11 = \$99$. The closing price on Wednesday was 4% greater than this: $\$99 + (0.04 \times \$99) = \$99 + \$3.96 = \$102.96$. This value, $102.96, is 2.96% greater than $100, the opening price on Monday. The percentage change from the opening share price on Monday is therefore an increase of approximately 3%, which is the closest of the available answers to an increase of 2.96%.

The correct answer is D.

PS05109

34. In the rectangular coordinate system shown above, points *O*, *P*, and *Q* represent the sites of three proposed housing developments. If a fire station can be built at any point in the coordinate system, at which point would it be equidistant from all three developments?

(A) (3,1)
(B) (1,3)
(C) (3,2)
(D) (2,2)
(E) (2,3)

Geometry Coordinate geometry

Any point equidistant from the points (0,0) and (4,0) must lie on the perpendicular bisector of the segment with endpoints (0,0) and (4,0), which is the line with equation $x = 2$. Any point equidistant from the points (0,0) and (0,6) must lie on the perpendicular bisector of the segment with endpoints (0,0) and (0,6), which is the line with equation $y = 3$. Therefore, the point that is equidistant from (0,0), (4,0), and (0,6) must lie on both of the lines $x = 2$ and $y = 3$, which is the point (2,3).

Alternatively, let (x,y) be the point equidistant from (0,0), (4,0), and (0,6). Since the distance between (x,y) and (0,0) is equal to the distance between (x,y) and (4,0), it follows from the distance formula that $\sqrt{x^2 + y^2} = \sqrt{(x-4)^2 + y^2}$. Squaring both sides gives $x^2 + y^2 = (x-4)^2 + y^2$. Subtracting y^2 from both sides of the last equation and then expanding the right side gives $x^2 = x^2 - 8x + 16$, or $0 = -8x + 16$, or $x = 2$. Also, since the distance between (x,y) and (0,0) is equal to the distance between (x,y) and (0,6), it follows from the distance formula that $\sqrt{x^2 + y^2} = \sqrt{x^2 + (y-6)^2}$.

Squaring both sides of the last equation gives $x^2 + y^2 = x^2 + (y-6)^2$. Subtracting x^2 from both sides and then expanding the right side gives $y^2 = y^2 - 12y + 36$, or $0 = -12y + 36$, or $y = 3$.

The correct answer is E.

PS05008

35. What is the perimeter, in meters, of a rectangular garden 6 meters wide that has the same area as a rectangular playground 16 meters long and 12 meters wide?

(A) 48
(B) 56
(C) 60
(D) 76
(E) 192

Geometry Perimeter and area

Let L represent the length, in meters, of the rectangular garden. It is given that the width of the garden is 6 meters and the area of the garden is the same as the area of a rectangular playground that is 16 meters long and 12 meters wide. It follows that $6L = (16)(12)$, and so $L = 32$. The perimeter of the garden is, then, $2(32 + 6) = 2(38) = 76$ meters.

The correct answer is D.

PS00918

36. $1 - 0.000001 =$

(A) $(1.01)(0.99)$
(B) $(1.11)(0.99)$
(C) $(1.001)(0.999)$
(D) $(1.111)(0.999)$
(E) $(1.0101)(0.0909)$

Arithmetic Place value

The task in this question is to find among the available answers the expression that is equal to $1 - 0.000001 = 0.999999$. In the case of option C, the first of the two factors, (1.001), is equal to $1 + 0.001$. One may therefore observe that $(1.001)(0.999) = (1 + 0.001)(0.999) = 0.999 + 0.000999 = 0.999999$. Option C is therefore a correct answer.

For option A, $(1.01)(0.99) = (1 + 0.01)(0.99) = 0.9999$. This option is therefore incorrect. For option B, $(1.11)(0.99) = (1 + 0.1 + 0.01)(0.99) = 0.99 + 0.099 + 0.0099 = 1.0989$. This option is therefore incorrect. For option D, $(1.111)(0.999) = 0.999 + 0.0999 + 0.00999 + 0.000999 = 1.109889$. This option is therefore incorrect. For option E, $(1.0101)(0.909) = 0.909 + 0.00909 + 0.0000909 = 0.9181809$. This option is therefore incorrect.

The correct answer is C.

PS04362

37. $|-4|(|-20|-|5|) =$

(A) -100
(B) -60
(C) 60
(D) 75
(E) 100

Arithmetic Absolute value

$|-4|(|-20|-|5|) = 4(20 - 5) = 4 \times 15 = 60$

The correct answer is C.

PS12934

38. Of the total amount that Jill spent on a shopping trip, excluding taxes, she spent 50 percent on clothing, 20 percent on food, and 30 percent on other items. If Jill paid a 4 percent tax on the clothing, no tax on the food, and an 8 percent tax on all other items, then the total tax that she paid was what percent of the total amount that she spent, excluding taxes?

(A) 2.8%
(B) 3.6%
(C) 4.4%
(D) 5.2%
(E) 6.0%

Arithmetic Applied problems

Let T represent the total amount Jill spent, excluding taxes. Jill paid a 4% tax on the clothing she bought, which accounted for 50% of the total amount she spent, and so the tax she paid on the clothing was $(0.04)(0.5T)$. Jill paid an 8% tax on the other items she bought, which accounted for 30% of the total amount she spent, and so the tax she paid on the other items was $(0.08)(0.3T)$. Therefore, the total amount of tax Jill paid was $(0.04)(0.5T) + (0.08)(0.3T) = 0.02T + 0.024T = 0.044T$. The tax as a percent of the total amount Jill spent, excluding taxes, was $\left(\frac{0.044T}{T} \times 100\right)\% = 4.4\%$.

The correct answer is C.

PS15469

39. How many integers x satisfy both $2 < x \leq 4$ and $0 \leq x \leq 3$?

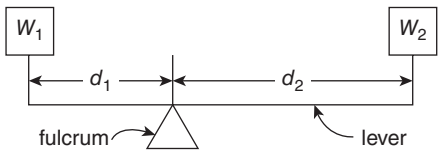
(A) 5
(B) 4
(C) 3
(D) 2
(E) 1

Arithmetic Inequalities

The integers that satisfy $2 < x \leq 4$ are 3 and 4. The integers that satisfy $0 \leq x \leq 3$ are 0, 1, 2, and 3. The only integer that satisfies both $2 < x \leq 4$ and $0 \leq x \leq 3$ is 3, and so there is only one integer that satisfies both $2 < x \leq 4$ and $0 \leq x \leq 3$.

The correct answer is E.

PS09322



40. At the opening of a trading day at a certain stock exchange, the price per share of stock K was \$8. If the price per share of stock K was \$9 at the closing of the day, what was the percent increase in the price per share of stock K for that day?

(A) 1.4%
(B) 5.9%
(C) 11.1%
(D) 12.5%
(E) 23.6%

Arithmetic Percents

An increase from \$8 to \$9 represents an increase of $\left(\frac{9-8}{8} \times 100\right)\% = \frac{100}{8}\% = 12.5\%$.

The correct answer is D.

PS14237

41. As shown in the diagram above, a lever resting on a fulcrum has weights of w_1 pounds and w_2 pounds, located d_1 feet and d_2 feet from the fulcrum. The lever is balanced and $w_1d_1 = w_2d_2$. Suppose w_1 is 50 pounds and w_2 is 30 pounds. If d_1 is 4 feet less than d_2, what is d_2, in feet?

(A) 1.5
(B) 2.5
(C) 6
(D) 10
(E) 20

Algebra First-degree equations; Substitution

Given $w_1d_1 = w_2d_2$, $w_1 = 50$, $w_2 = 30$, and $d_1 = d_2 - 4$, it follows that $50(d_2 - 4) = 30d_2$, and so

$50(d_2 - 4) = 30d_2$ given
$50d_2 - 200 = 30d_2$ distributive principle
$20d_2 = 200$ add $200 - 30d_2$ to both sides
$d_2 = 10$ divide both sides by 20

The correct answer is D.

PS01650

42. If r and s are positive integers such that $(2^r)(4^s) = 16$, then $2r + s =$

(A) 2
(B) 3
(C) 4
(D) 5
(E) 6

Algebra Exponents

Using the rules of exponents,

$(2^r)(4^s) = 16$ given
$(2^r)(2^{2s}) = 2^4$ $4^s = (2^2)^s = 2^{2s}$, $16 = 2^4$
$2^{r+2s} = 2^4$ addition property of exponents

Thus, $r + 2s = 4$. However, the problem asks for the value of $2r + s$. Since r and s are positive integers, $s < 2$; otherwise, r would not be positive. Therefore, $s = 1$, and it follows that $r + (2)(1) = 4$, or $r = 2$. The value of $2r + s$ is $(2)(2) + 1 = 5$.

Alternatively, since $(2^r)(4^s) = 16$ and both r and s are positive, it follows that $s < 2$; otherwise, $4^s \geq 16$ and r would not be positive. Therefore, $s = 1$ and $(2^r)(4) = 16$. It follows that $2^r = 4$ and $r = 2$. The value of $2r + s$ is $(2)(2) + 1 = 5$.

The correct answer is D.

PS06726

43. Three people each contributed x dollars toward the purchase of a car. They then bought the car for y dollars, an amount less than the total number of dollars contributed. If the excess amount is to be refunded to the three people in equal amounts, each person should receive a refund of how many dollars?

(A) $\frac{3x-y}{3}$

(B) $\frac{x-y}{3}$

(C) $\frac{x-3y}{3}$

(D) $\frac{y-3x}{3}$

(E) $3(x-y)$

Algebra Applied problems

The total to be refunded is equal to the total contributed minus the amount paid, or $3x-y$. If $3x-y$ is divided into three equal amounts, then each amount will be $\frac{3x-y}{3}$.

The correct answer is A.

PS07080

44. Last week Jack worked 70 hours and earned $1,260. If he earned his regular hourly wage for the first 40 hours worked, $1\frac{1}{2}$ times his regular hourly wage for the next 20 hours worked, and 2 times his regular hourly wage for the remaining 10 hours worked, what was his regular hourly wage?

(A) $7.00

(B) $14.00

(C) $18.00

(D) $22.00

(E) $31.50

Algebra First-degree equations

If w represents Jack's regular hourly wage, then Jack's earnings for the week can be represented by the sum of the following amounts, in dollars: $40w$ (his earnings for the first 40 hours he worked), $(20)(1.5w)$ (his earnings for the next 20 hours he worked), and $(10)(2w)$ (his earnings for the last 10 hours he worked). Therefore,

$40w + (20)(1.5w) + (10)(2w) = 1{,}260$ given

$90w = 1{,}260$ add like terms

$w = 14$ divide both sides by 90

Jack's regular hourly wage was $14.00.

The correct answer is B.

PS13426

45. If a and b are positive integers and $(2^a)^b = 2^3$, what is the value of $2^a\,2^b$?

(A) 6

(B) 8

(C) 16

(D) 32

(E) 64

Algebra Exponents

It is given that $(2^a)^b = 2^3$, or $2^{ab} = 2^3$. Therefore, $ab = 3$. Since a and b are positive integers, it follows that either $a = 1$ and $b = 3$, or $a = 3$ and $b = 1$. In either case $a + b = 4$, and so $2^a 2^b = 2^{a+b} = 2^4 = 16$.

The correct answer is C.

PS01099

46. Five machines at a certain factory operate at the same constant rate. If four of these machines, operating simultaneously, take 30 hours to fill a certain production order, how many fewer hours does it take all five machines, operating simultaneously, to fill the same production order?

(A) 3

(B) 5

(C) 6

(D) 16

(E) 24

Arithmetic Applied problems

If 4 machines, working simultaneously, each work for 30 hours to fill a production order, it takes (4)(30) machine hours to fill the order.
If 5 machines are working simultaneously, it will take $\frac{(4)(30)}{5} = 24$ hours. Thus, 5 machines

working simultaneously will take 30 – 24 = 6 fewer hours to fill the production order than 4 machines working simultaneously.

The correct answer is C.

PS01443

47. A certain toll station on a highway has 7 tollbooths, and each tollbooth collects $0.75 from each vehicle that passes it. From 6 o'clock yesterday morning to 12 o'clock midnight, vehicles passed each of the tollbooths at the average rate of 4 vehicles per minute. Approximately how much money did the toll station collect during that time period?

(A) $1,500
(B) $3,000
(C) $11,500
(D) $23,000
(E) $30,000

Arithmetic Rate problem

On average, 4 vehicles pass each tollbooth every minute. There are 7 tollbooths at the station, and each passing vehicle pays $0.75. Therefore, the average rate, per minute, at which money is collected by the toll station is $\$ (7 \times 4 \times 0.75) = \$ (7 \times 4 \times \frac{3}{4}) = \$ (7 \times 3) = \$21$. From 6 a.m. through midnight there are 18 hours. And because 18 hours is equal to 18×60 minutes, from 6 a.m. through midnight there are 1,080 minutes. The total amount of money collected by the toll station during this period is therefore $1{,}080 \times \$21 = \$22{,}680$, which is approximately $23,000.

The correct answer is D.

PS13829

48. How many integers between 1 and 16, inclusive, have exactly 3 different positive integer factors?

(Note: 6 is NOT such an integer because 6 has 4 different positive integer factors: 1, 2, 3, and 6.)

(A) 1
(B) 2
(C) 3
(D) 4
(E) 6

Arithmetic Properties of numbers

Using the process of elimination to eliminate integers that do NOT have exactly 3 different positive integer factors, the integer 1 can be eliminated since 1 has only 1 positive integer factor, namely 1 itself. Because each prime number has exactly 2 positive factors, each prime number between 1 and 16, inclusive, (namely, 2, 3, 5, 7, 11, and 13) can be eliminated. The integer 6 can also be eliminated since it was used as an example of an integer with exactly 4 positive integer factors. Check the positive integer factors of each of the remaining integers.

Integer	Positive integer factors	Number of factors
4	1, 2, 4	3
8	1, 2, 4, 8	4
9	1, 3, 9	3
10	1, 2, 5, 10	4
12	1, 2, 3, 4, 6, 12	6
14	1, 2, 7, 14	4
15	1, 3, 5, 15	4
16	1, 2, 4, 8, 16	5

Just the integers 4 and 9 have exactly 3 positive integer factors.

Alternatively, if the integer n, where $n > 1$, has exactly 3 positive integer factors, which include 1 and n, then n has exactly one other positive integer factor, say p. Since any factor of p would also be a factor of n, then p is prime, and so p is the only prime factor of n. It follows that $n = p^k$ for some integer $k > 1$. But if $k \geq 3$, then p^2 is a factor of n in addition to 1, p, and n, which contradicts the fact that n has exactly 3 positive integer factors. Therefore, $k = 2$ and $n = p^2$, which means that n is the square of a prime number. Of the integers between 1 and 16, inclusive, only 4 and 9 are the squares of prime numbers.

The correct answer is B.

PS14063

49. Stephanie has $2\frac{1}{4}$ cups of milk on hand and makes 2 batches of cookies, using $\frac{2}{3}$ cup of milk for each batch of cookies. Which of the following describes the amount of milk remaining after she makes the cookies?

(A) Less than $\frac{1}{2}$ cup

(B) Between $\frac{1}{2}$ cup and $\frac{3}{4}$ cup

(C) Between $\frac{3}{4}$ cup and 1 cup

(D) Between 1 cup and $1\frac{1}{2}$ cups

(E) More than $1\frac{1}{2}$ cups

Arithmetic Applied problems

In cups, the amount of milk remaining is $2\frac{1}{4}-2\left(\frac{2}{3}\right)=\frac{9}{4}-\frac{4}{3}=\frac{27-16}{12}=\frac{11}{12}$, which is greater than $\frac{3}{4}=\frac{9}{12}$ and less than 1.

The correct answer is C.

PS01656

50. The expression $n!$ is defined as the product of the integers from 1 through n. If p is the product of the integers from 100 through 299 and q is the product of the integers from 200 through 299, which of the following is equal to $\frac{p}{q}$?

(A) 99!

(B) 199!

(C) $\frac{199!}{99!}$

(D) $\frac{299!}{99!}$

(E) $\frac{299!}{199!}$

Arithmetic Series and sequences

The number p is equal to $100\times101\times102\times\ldots\times299$ and the number q is equal to $200\times201\times202\times\ldots\times299$. The number $\frac{p}{q}$ is thus equal to $\frac{100\times101\times102\times\ldots\times299}{200\times201\times202\times\ldots\times299}=$

$\frac{100\times101\times102\times\ldots\times199\times200\times201\times202\times\ldots\times299}{200\times201\times202\times\ldots\times299}$.

Canceling $200\times201\times202\times\ldots\times299$ from the numerator and the denominator, we see that $\frac{p}{q}=100\times101\times102\times\ldots\times199$. Note that the multiplication in this expression for $\frac{p}{q}$ begins with 100 (the smallest of the numbers being multiplied), whereas the multiplication in $n!=1\times2\times3\times\ldots\times n$ begins with 1. Starting with 199! as our numerator, we thus need to find a denominator that will cancel the undesired elements of the multiplication (in 199!). This number is $1\times2\times3\times\ldots\times99=99!$

That is, $\frac{p}{q}=100\times101\times102\times\ldots\times199=$

$\frac{1\times2\times3\times\ldots\times99\times100\times101\times102\times\ldots\times199}{1\times2\times3\times\ldots\times99}=\frac{199!}{99!}$.

The correct answer is C.

PS15753

51. A school club plans to package and sell dried fruit to raise money. The club purchased 12 containers of dried fruit, each containing $16\frac{3}{4}$ pounds. What is the maximum number of individual bags of dried fruit, each containing $\frac{1}{4}$ pounds, that can be sold from the dried fruit the club purchased?

(A) 50

(B) 64

(C) 67

(D) 768

(E) 804

Arithmetic Applied problems; Operations with fractions

The 12 containers, each containing $16\frac{3}{4}$ pounds of dried fruit, contain a total of $(12)\left(16\frac{3}{4}\right)=(12)\left(\frac{67}{4}\right)=(3)(67)=201$ pounds of dried fruit, which will make $\frac{201}{\frac{1}{4}}=(201)(4)=804$ individual bags that can be sold.

The correct answer is E.

Height	Price
Less than 5 ft	$14.95
5 ft to 6 ft	$17.95
Over 6 ft	$21.95

PS02498

52. A nursery sells fruit trees priced as shown in the chart above. In its inventory 54 trees are less than 5 feet in height. If the expected revenue from the sale of its entire stock is estimated at $2,450, approximately how much of this will come from the sale of trees that are at least 5 feet tall?

(A) $1,730
(B) $1,640
(C) $1,410
(D) $1,080
(E) $810

Arithmetic Applied problems

If the nursery sells its entire stock of trees, it will sell the 54 trees that are less than 5 feet in height at the price per tree of $14.95 shown in the chart. The expected revenue from the sale of the trees that are less than 5 feet tall is therefore $54 \times \$14.95 = \$807.30$. The revenue from the sale of the trees that are at least 5 feet tall is thus equal to the total revenue from the sale of the entire stock of trees minus $807.30. The revenue from the sale of the entire stock of trees is estimated at $2,450. Based on this estimate, the revenue from the sale of the trees that are at least 5 feet tall will be $\$2,450 - \$807.30 = \$1,642.70$, which is approximately $1,640.

The correct answer is B.

PS04971

53. A certain bridge is 4,024 feet long. Approximately how many minutes does it take to cross this bridge at a constant speed of 20 miles per hour? (1 mile = 5,280 feet)

(A) 1
(B) 2
(C) 4
(D) 6
(E) 7

Arithmetic Applied problems

First, convert 4,024 feet to miles since the speed is given in miles per hour:

$$4{,}024 \text{ ft} \times \frac{1 \text{ mi}}{5{,}280 \text{ ft}} = \frac{4{,}024}{5{,}280} \text{ mi.}$$

Now, divide by 20 mph: $\frac{4{,}024}{5{,}280} \text{ mi} \div \frac{20 \text{ mi}}{1 \text{ hr}}$

$$= \frac{4{,}024 \text{ mi}}{5{,}280} \times \frac{1 \text{ hr}}{20 \text{ mi}} = \frac{4{,}024 \text{ hr}}{(5{,}280)(20)}.$$

Last, convert $\frac{4{,}024 \text{ hr}}{(5{,}280)(20)}$ to minutes:

$$\frac{4{,}024 \text{ hr}}{(5{,}280)(20)} \times \frac{60 \text{ min}}{1 \text{ hr}} = \frac{(4{,}024)(60) \text{ min}}{(5{,}280)(20)} \approx$$

$\frac{4{,}000}{5{,}000} \times \frac{60}{20}$ min. Then, $\frac{4{,}000}{5{,}000} \times \frac{60}{20}$ min =

$= 0.8 \times 3 \text{ min} \approx 2 \text{ min}$. Thus, at a constant speed of 20 miles per hour, it takes approximately 2 minutes to cross the bridge.

The correct answer is B.

PS12657

54. The annual interest rate earned by an investment increased by 10 percent from last year to this year. If the annual interest rate earned by the investment this year was 11 percent, what was the annual interest rate last year?

(A) 1%
(B) 1.1%
(C) 9.1%
(D) 10%
(E) 10.8%

Arithmetic Percents

If L is the annual interest rate last year, then the annual interest rate this year is 10% greater than L, or $1.1L$. It is given that $1.1L = 11\%$. Therefore, $L = \frac{11\%}{1.1} = 10\%$. (Note that if the given information had been that the investment increased by *10 percentage points*, then the equation would have been $L + 10\% = 11\%$.)

The correct answer is D.

PS07394

55. A total of 5 liters of gasoline is to be poured into two empty containers with capacities of 2 liters and 6 liters, respectively, such that both containers will be filled to the same percent of their respective capacities. What amount of gasoline, in liters, must be poured into the 6-liter container?

(A) $4\frac{1}{2}$

(B) 4

(C) $3\frac{3}{4}$

(D) 3

(E) $1\frac{1}{4}$

Algebra Ratio and proportion

If x represents the amount, in liters, of gasoline poured into the 6-liter container, then $5 - x$ represents the amount, in liters, of gasoline poured into the 2-liter container. After the gasoline is poured into the containers, the 6-liter container will be filled to $\left(\frac{x}{6} \times 100\right)\%$ of its capacity and the 2-liter container will be filled to $\left(\frac{5-x}{2} \times 100\right)\%$ of its capacity. Because these two percents are equal,

$\frac{x}{6} = \frac{5-x}{2}$	given
$2x = 6(5-x)$	multiply both sides by 12
$2x = 30 - 6x$	use distributive property
$8x = 30$	add $6x$ to both sides
$x = 3\frac{3}{4}$	divide both sides by 8

Therefore, $3\frac{3}{4}$ liters of gasoline must be poured into the 6-liter container.

The correct answer is C.

PS13882

56. What is the larger of the 2 solutions of the equation $x^2 - 4x = 96$?

(A) 8

(B) 12

(C) 16

(D) 32

(E) 100

Algebra Second-degree equations

It is given that $x^2 - 4x = 96$, or $x^2 - 4x - 96 = 0$, or $(x - 12)(x + 8) = 0$. Therefore, $x = 12$ or $x = -8$, and the larger of these two numbers is 12.

Alternatively, from $x^2 - 4x = 96$ it follows that $x(x - 4) = 96$. By inspection, the left side is either the product of 12 and 8, where the value of x is 12, or the product of -8 and -12, where the value of x is -8, and the larger of these two values of x is 12.

The correct answer is B.

PS10921

57. $\frac{(39{,}897)(0.0096)}{198.76}$ is approximately

(A) 0.02

(B) 0.2

(C) 2

(D) 20

(E) 200

Arithmetic Estimation

$$\frac{(39{,}897)(0.0096)}{198.76} \approx \frac{(40{,}000)(0.01)}{200} = (200)(0.01) = 2$$

The correct answer is C.

PS13205

58. If a square region has area n, what is the length of the diagonal of the square in terms of n ?

(A) $\sqrt{2n}$

(B) $\sqrt{n}$

(C) $2\sqrt{n}$

(D) $2n$

(E) $2n^2$

Geometry Area; Pythagorean theorem

If s represents the side length of the square, then $n = s^2$. By the Pythagorean theorem, the length of the diagonal of the square is $\sqrt{s^2 + s^2} = \sqrt{n + n} = \sqrt{2n}$.

The correct answer is A.

PS00817

59. The "prime sum" of an integer n greater than 1 is the sum of all the prime factors of n, including repetitions. For example, the prime sum of 12 is 7, since $12 = 2 \times 2 \times 3$ and $2 + 2 + 3 = 7$. For which of the following integers is the prime sum greater than 35 ?

(A) 440
(B) 512
(C) 620
(D) 700
(E) 750

Arithmetic Properties of numbers

A Since $440 = 2 \times 2 \times 2 \times 5 \times 11$, the prime sum of 440 is $2 + 2 + 2 + 5 + 11 = 22$, which is not greater than 35.

B Since $512 = 2^9$, the prime sum of 512 is $9(2) = 18$, which is not greater than 35.

C Since $620 = 2 \times 2 \times 5 \times 31$, the prime sum of 620 is $2 + 2 + 5 + 31 = 40$, which is greater than 35.

Because there can be only one correct answer, D and E need not be checked. However, for completeness,

D Since $700 = 2 \times 2 \times 5 \times 5 \times 7$, the prime sum of 700 is $2 + 2 + 5 + 5 + 7 = 21$, which is not greater than 35.

E Since $750 = 2 \times 3 \times 5 \times 5 \times 5$, the prime sum of 750 is $2 + 3 + 5 + 5 + 5 = 20$, which is not greater than 35.

The correct answer is C.

PS02256

60. Each machine at a toy factory assembles a certain kind of toy at a constant rate of one toy every 3 minutes. If 40 percent of the machines at the factory are to be replaced by new machines that assemble this kind of toy at a constant rate of one toy every 2 minutes, what will be the percent increase in the number of toys assembled in one hour by all the machines at the factory, working at their constant rates?

(A) 20%
(B) 25%
(C) 30%
(D) 40%
(E) 50%

Arithmetic Applied problems; Percents

Let n be the total number of machines working. Currently, it takes each machine 3 minutes to assemble 1 toy, so each machine assembles 20 toys in 1 hour and the total number of toys assembled in 1 hour by all the current machines is $20n$. It takes each new machine 2 minutes to assemble 1 toy, so each new machine assembles 30 toys in 1 hour. If 60% of the machines assemble 20 toys each hour and 40% assemble 30 toys each hour, then the total number of toys produced by the machines each hour is $(0.60n)(20) + (0.40n)(30) = 24n$. The percent increase in hourly production is $\frac{24n - 20n}{20n} = \frac{1}{5}$ or 20%.

The correct answer is A.

PS10339

61. When a subscription to a new magazine was purchased for m months, the publisher offered a discount of 75 percent off the regular monthly price of the magazine. If the total value of the discount was equivalent to buying the magazine at its regular monthly price for 27 months, what was the value of m ?

(A) 18
(B) 24
(C) 30
(D) 36
(E) 48

Algebra Percents

Let P represent the regular monthly price of the magazine. The discounted monthly price is then $0.75P$. Paying this price for m months is equivalent to paying the regular price for 27 months. Therefore, $0.75mP = 27P$, and so $0.75m = 27$. It follows that $m = \frac{27}{0.75} = 36$.

The correct answer is D.

PS10422

62. At a garage sale, all of the prices of the items sold were different. If the price of a radio sold at the garage sale was both the 15th highest price and the 20th lowest price among the prices of the items sold, how many items were sold at the garage sale?

(A) 33
(B) 34
(C) 35
(D) 36
(E) 37

Arithmetic Operations with integers

If the price of the radio was the 15th highest price, there were 14 items that sold for prices higher than the price of the radio. If the price of the radio was the 20th lowest price, there were 19 items that sold for prices lower than the price of the radio. Therefore, the total number of items sold is $14 + 1 + 19 = 34$.

The correct answer is B.

PS11738

63. Half of a large pizza is cut into 4 equal-sized pieces, and the other half is cut into 6 equal-sized pieces. If a person were to eat 1 of the larger pieces and 2 of the smaller pieces, what fraction of the pizza would remain uneaten?

(A) $\frac{5}{12}$
(B) $\frac{13}{24}$
(C) $\frac{7}{12}$
(D) $\frac{2}{3}$
(E) $\frac{17}{24}$

Arithmetic Operations with fractions

Each of the 4 equal-sized pieces represents $\frac{1}{8}$ of the whole pizza since each slice is $\frac{1}{4}$ of $\frac{1}{2}$ of the pizza. Each of the 6 equal-sized pieces represents $\frac{1}{12}$ of the whole pizza since each slice is $\frac{1}{6}$ of $\frac{1}{2}$ of the pizza. The fraction of the pizza remaining after a person eats one of the larger pieces and 2 of the smaller pieces is $1 - \left[\frac{1}{8} + 2\left(\frac{1}{12}\right)\right] = 1 - \left(\frac{1}{8} + \frac{1}{6}\right) = 1 - \frac{6+8}{48} = 1 - \frac{7}{24} = \frac{17}{24}$.

The correct answer is E.

PS14293

64. If $a = 1 + \frac{1}{4} + \frac{1}{16} + \frac{1}{64}$ and $b = 1 + \frac{1}{4}a$, then what is the value of $a - b$?

(A) $-\frac{85}{256}$
(B) $-\frac{1}{256}$
(C) $-\frac{1}{4}$
(D) $\frac{125}{256}$
(E) $\frac{169}{256}$

Arithmetic Operations with fractions

Given that $a = 1 + \frac{1}{4} + \frac{1}{16} + \frac{1}{64}$, it follows that $\frac{1}{4}a = \frac{1}{4} + \frac{1}{16} + \frac{1}{64} + \frac{1}{256}$ and so $b = 1 + \frac{1}{4} + \frac{1}{16} + \frac{1}{64} + \frac{1}{256}$. Then $a - b = \left(1 + \frac{1}{4} + \frac{1}{16} + \frac{1}{64}\right) - \left(1 + \frac{1}{4} + \frac{1}{16} + \frac{1}{64} + \frac{1}{256}\right) = -\frac{1}{256}$.

The correct answer is B.

PS10174

65. In a certain learning experiment, each participant had three trials and was assigned, for each trial, a score of either –2, –1, 0, 1, or 2. The participant's final score consisted of the sum of the first trial score, 2 times the second trial score, and 3 times the third trial score. If Anne received scores of 1 and –1 for her first two trials, not necessarily in that order, which of the following could NOT be her final score?

(A) –4
(B) –2
(C) 1
(D) 5
(E) 6

Arithmetic Applied problems

If x represents Anne's score on the third trial, then Anne's final score is either $1 + 2(-1) + 3x = 3x - 1$ or $-1 + 2(1) + 3x = 3x + 1$, where x can have the value –2, –1, 0, 1, or 2. The following table shows Anne's final score for each possible value of x.

x	$3x - 1$	$3x + 1$
–2	–7	–5
–1	–4	–2
0	–1	1
1	2	4
2	5	7

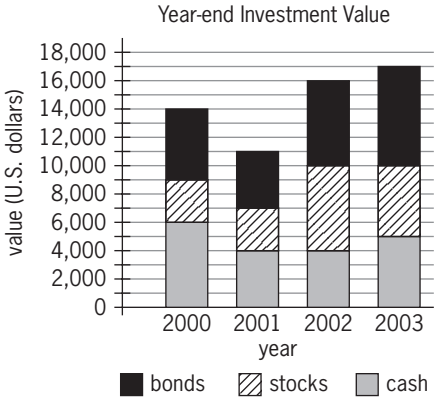
Among the answer choices, the only one not found in the table is 6.

The correct answer is E.

PS00111

66. For all positive integers m and v, the expression $m \Theta v$ represents the remainder when m is divided by v. What is the value of $((98 \Theta 33) \Theta 17) - (98 \Theta (33 \Theta 17))$?

(A) –10
(B) –2
(C) 8
(D) 13
(E) 17



Arithmetic Operations with integers

First, for $((98 \Theta 33) \Theta 17)$, determine $98 \Theta 33$, which equals 32, since 32 is the remainder when 98 is divided by 33 ($98 = 2(33) + 32$). Then, determine $32 \Theta 17$, which equals 15, since 15 is the remainder when 32 is divided by 17 ($32 = 1(17) + 15$). Thus, $((98 \Theta 33) \Theta 17) = 15$.

Next, for $(98 \Theta (33 \Theta 17))$, determine $33 \Theta 17$, which equals 16, since 16 is the remainder when 33 is divided by 17 ($33 = 1(17) + 16$). Then, determine $98 \Theta 16$, which equals 2, since 2 is the remainder when 98 is divided by 16 ($98 = 6(16) + 2$). Thus, $(98 \Theta (33 \Theta 17)) = 2$.

Finally, $((98 \Theta 33) \Theta 17 - (98 \Theta (33 \Theta 17)) = 15 - 2 = 13$.

The correct answer is D.

PS13841

67. The chart above shows year-end values for Darnella's investments. For just the stocks, what was the increase in value from year-end 2000 to year-end 2003 ?

(A) $1,000
(B) $2,000
(C) $3,000
(D) $4,000
(E) $5,000

Arithmetic Interpretation of graphs

From the graph, the year-end 2000 value for stocks is 9,000 – 6,000 = 3,000 and the year-end 2003 value for stocks is 10,000 – 5,000 = 5,000. Therefore, for just the stocks, the increase in value from year-end 2000 to year-end 2003 is 5,000 – 3,000 = 2,000.

The correct answer is B.

PS05775

68. If the sum of the reciprocals of two consecutive odd integers is $\frac{12}{35}$, then the greater of the two integers is

(A) 3
(B) 5
(C) 7
(D) 9
(E) 11

Arithmetic Operations with fractions

The sum of the reciprocals of 2 integers, a and b, is $\frac{1}{a}+\frac{1}{b}=\frac{a+b}{ab}$. Therefore, since $\frac{12}{35}$ is the sum of the reciprocals of 2 consecutive odd integers, the integers must be such that their sum is a multiple of 12 and their product is the same multiple of 35 so that the fraction reduces to $\frac{12}{35}$. Considering the simplest case where $a+b=12$ and $ab=35$, it is easy to see that the integers are 5 and 7 since 5 and 7 are the only factors of 35 that are consecutive odd integers. The larger of these is 7.

Algebraically, if a is the greater of the two integers, then $b=a-2$ and

$$\frac{a+(a-2)}{a(a-2)}=\frac{12}{35}$$

$$\frac{2a-2}{a(a-2)}=\frac{12}{35}$$

$$35(2a-2)=12a(a-2)$$
$$70a-70=12a^2-24a$$
$$0=12a^2-94a+70$$
$$0=2(6a-5)(a-7)$$

Thus, $6a-5=0$, so $a=\frac{5}{6}$, or $a-7=0$, so $a=7$. Since a must be an integer, it follows that $a=7$.

The correct answer is C.

PS05916

69. What is the sum of the odd integers from 35 to 85, inclusive?

(A) 1,560
(B) 1,500
(C) 1,240
(D) 1,120
(E) 1,100

Arithmetic Operations on integers

The odd integers from 35 through 85 form an arithmetic sequence with first term 35 and each subsequent term 2 more than the preceding term. Thus the sum 35 + 37 + 39 + … + 85 can be found as follows:

1st term	35	=	35		
2nd term	37	=	35	+	1(2)
3rd term	39	=	35	+	2(2)
4th term	41	=	35	+	3(2)
…	…	…	…	…	…
26th term	85	=	35	+	25(2)

$$\text{Sum} = 35(26) + (1+2+3+\ldots+25)(2)$$
$$= 35(26) + \frac{(25)(26)}{2}(2) \quad \text{See note below}$$
$$= 910 + 650$$
$$= 1{,}560$$

Note that if $s=1+2+3+\ldots+25$, then $2s=(1+2+3+\ldots+25)+(25+24+23+\ldots+1)$, and so $2s=(1+25)+(2+24)+(3+23)+\ldots+(25+1)=(25)(26)$. Therefore, $s=\frac{(25)(26)}{2}$.

Alternatively, to determine the number of odd integers from 35 to 85, inclusive, consider that 3 of them (35, 37, and 39) have tens digit 3. Half of the integers with tens digit 4 are odd, so 5 of the odd integers between 35 and 85, inclusive, have tens digit 4. Similarly, 5 of the odd integers between 35 and 85, inclusive, have tens digit 5; 5 have tens digit 6; and 5 have tens digit 7. Finally, 3 have tens digit 8 (81, 83, and 85), and so the number of odd integers between 35 and 85, inclusive, is 3 + 5 + 5 + 5 + 5 + 3 = 26. Now, let $S=35+37+39+\ldots+85$. Then, $S=85+83+81+\ldots+35$, and it follows that $2S=(35+85)+(37+83)+(39+81)+\ldots+(85+35)=(120)(26)$. Thus, $S=35+37+39+\ldots+85=\frac{(120)(26)}{2}=1{,}560$.

The correct answer is A.

PS00777

70. In a certain sequence, each term after the first term is one-half the previous term. If the tenth term of the sequence is between 0.0001 and 0.001, then the twelfth term of the sequence is between

(A) 0.0025 and 0.025
(B) 0.00025 and 0.0025
(C) 0.000025 and 0.00025
(D) 0.0000025 and 0.000025
(E) 0.00000025 and 0.0000025

Arithmetic Sequences

Let a_n represent the nth term of the sequence. It is given that each term after the first term is $\frac{1}{2}$ the previous term and that $0.0001 < a_{10} < 0.001$.

Then for a_{11}, $\frac{0.0001}{2} < a_{11} < \frac{0.001}{2}$, or $0.00005 < a_{11} < 0.0005$. For a_{12}, $\frac{0.00005}{2} < a_{12} < \frac{0.0005}{2}$, or $0.000025 < a_{12} < 0.00025$. Thus, the twelfth term of the sequence is between 0.000025 and 0.00025.

The correct answer is C.

PS04765

71. A certain drive-in movie theater has a total of 17 rows of parking spaces. There are 20 parking spaces in the first row and 21 parking spaces in the second row. In each subsequent row there are 2 more parking spaces than in the previous row. What is the total number of parking spaces in the movie theater?

(A) 412
(B) 544
(C) 596
(D) 632
(E) 692

Arithmetic Operations on integers

Row	Number of parking spaces
1st row	20
2nd row	21
3rd row	21 + 1(2)
4th row	21 + 2(2)
…	… … …
17th row	21 + 15(2)

Then, letting S represent the total number of parking spaces in the theater,

$$\begin{aligned} S &= 20 + (16)(21) + (1 + 2 + 3 + \ldots + 15)(2) \\ &= 20 + 336 + \frac{(15)(16)}{2}(2) \quad \text{See note below} \\ &= 356 + 240 \\ &= 596 \end{aligned}$$

Note that if $s = 1 + 2 + 3 + \ldots + 15$, then $2s = (1 + 2 + 3 + \ldots + 15) + (15 + 14 + 13 + \ldots + 1)$, and so $2s = (1 + 15) + (2 + 14) + (3 + 13) + \ldots + (15 + 1) = (15)(16)$. Therefore, $s = \frac{(15)(16)}{2}$.

The correct answer is C.

PS10810

72. Ada and Paul received their scores on three tests. On the first test, Ada's score was 10 points higher than Paul's score. On the second test, Ada's score was 4 points higher than Paul's score. If Paul's average (arithmetic mean) score on the three tests was 3 points higher than Ada's average score on the three tests, then Paul's score on the third test was how many points higher than Ada's score?

(A) 9
(B) 14
(C) 17
(D) 23
(E) 25

Algebra Statistics

Let a_1, a_2, and a_3 be Ada's scores on the first, second, and third tests, respectively, and let p_1, p_2, and p_3 be Paul's scores on the first, second, and third tests, respectively. Then, Ada's average score is $\frac{a_1+a_2+a_3}{3}$ and Paul's average score is $\frac{p_1+p_2+p_3}{3}$. But, Paul's average score is 3 points higher than Ada's average score, so $\frac{p_1+p_2+p_3}{3}=\frac{a_1+a_2+a_3}{3}+3$. Also, it is given that $a_1=p_1+10$ and $a_2=p_2+4$, so by substitution, $\frac{p_1+p_2+p_3}{3}=\frac{(p_1+10)+(p_2+4)+a_3}{3}+3$. Then, $p_1+p_2+p_3=(p_1+10)+(p_2+4)+a_3+9$ and so $p_3=a_3+23$. On the third test, Paul's score was 23 points higher than Ada's score.

The correct answer is D.

PS06180

73. The price of a certain stock increased by 0.25 of 1 percent on a certain day. By what fraction did the price of the stock increase that day?

(A) $\frac{1}{2{,}500}$

(B) $\frac{1}{400}$

(C) $\frac{1}{40}$

(D) $\frac{1}{25}$

(E) $\frac{1}{4}$

Arithmetic Percents

It is given that the price of a certain stock increased by 0.25 of 1 percent on a certain day. This is equivalent to an increase of $\frac{1}{4}$ of $\frac{1}{100}$, which is $\left(\frac{1}{4}\right)\left(\frac{1}{100}\right)$, and $\left(\frac{1}{4}\right)\left(\frac{1}{100}\right)=\frac{1}{400}$.

The correct answer is B.

PS03831

74. For each trip, a taxicab company charges \$4.25 for the first mile and \$2.65 for each additional mile or fraction thereof. If the total charge for a certain trip was \$62.55, how many miles at most was the trip?

(A) 21

(B) 22

(C) 23

(D) 24

(E) 25

Arithmetic Applied problems

Subtracting the charge for the first mile leaves a charge of \$62.55 – \$4.25 = \$58.30 for the miles after the first mile. Divide this amount by \$2.65 to find the number of miles to which \$58.30 corresponds: $\frac{58.30}{2.65}=22$ miles. Therefore, the total number of miles is at most 1 (the first mile) added to 22 (the number of miles after the first mile), which equals 23.

The correct answer is C.

PS12857

75. When 24 is divided by the positive integer n, the remainder is 4. Which of the following statements about n must be true?

I. n is even.

II. n is a multiple of 5.

III. n is a factor of 20.

(A) III only

(B) I and II only

(C) I and III only

(D) II and III only

(E) I, II, and III

Arithmetic Properties of numbers

Since the remainder is 4 when 24 is divided by the positive integer n and the remainder must be less than the divisor, it follows that $24=qn+4$ for some positive integer q and $4<n$, or $qn=20$ and $n>4$. It follows that $n=5$, or $n=10$, or $n=20$ since these are the only factors of 20 that exceed 4.

I. n is not necessarily even. For example, n could be 5.

II. n is necessarily a multiple of 5 since the value of n is either 5, 10, or 20.
III. n is a factor of 20 since $20 = qn$ for some positive integer q.

The correct answer is D.

PS12759

76. What is the thousandths digit in the decimal equivalent of $\frac{53}{5{,}000}$?

(A) 0
(B) 1
(C) 3
(D) 5
(E) 6

Arithmetic Place value

$\frac{53}{5{,}000} = \frac{106}{10{,}000} = 0.0106$ and the thousandths digit is 0.

The correct answer is A.

PS67502.01

77. If $\frac{1}{2}$ the result obtained when 2 is subtracted from 5x is equal to the sum of 10 and 3x, what is the value of x ?

(A) –22
(B) –4
(C) 4
(D) 18
(E) 22

Algebra First-degree equations

The result obtained when 2 is subtracted from $5x$ is $5x - 2$, and the sum of 10 and $3x$ is $10 + 3x$. Therefore, it is given that $\frac{1}{2}$ of $5x - 2$ is equal to $10 + 3x$, or $\frac{1}{2}(5x - 2) = 10 + 3x$.

$\frac{1}{2}(5x - 2) = 10 + 3x$ given
$5x - 2 = 20 + 6x$ multiply both sides by 2
$-22 = x$ subtract both $5x$ and 20 from both sides

The correct answer is A.

PS48502.01

78. In a rectangular coordinate system, straight line k passes through points (0, 0) and (3, 2). Which of the following are coordinates of a point on k ?

(A) (9, 4)
(B) (4, 9)
(C) (–4, 6)
(D) (–6, –9)
(E) (–6, –4)

Geometry Simple coordinate geometry

Line k has slope $m = \frac{2-0}{3-0} = \frac{2}{3}$ and y-intercept $b = 0$. Therefore, an equation of line k is $y = mx + b = \frac{2}{3}x + 0$, or $y = \frac{2}{3}x$. It follows that a point is on k if and only if $\frac{2}{3}$ times the x-coordinate of the point is equal to the y-coordinate of the point. The table below shows that, among the answer choices, only the point (–6, –4) is on k.

x-coordinate	$\frac{2}{3}$ times x-coordinate
9	6
4	$\frac{8}{3}$
–4	$-\frac{8}{3}$
–6	–4

The correct answer is E.

PS87502.01

79. If Car A took n hours to travel 2 miles and Car B took m hours to travel 3 miles, which of the following expresses the time it would take Car C, traveling at the average (arithmetic mean) of those rates, to travel 5 miles?

(A) $\frac{10nm}{3n+2m}$

(B) $\frac{3n+2m}{10(n+m)}$

(C) $\frac{2n+3m}{5nm}$

(D) $\frac{10(n+m)}{2n+3m}$

(E) $\frac{5(n+m)}{2n+3m}$

Algebra Applied problems

This is a rate problem that can be solved by several applications of the formula

$$\text{Rate} \times \text{Time} = \text{Distance}.$$

Let r_A and r_B be the rates, respectively and in miles per hour, of Car A and Car B. Then omitting units for simplicity, for Car A this formula becomes $r_A \times n = 2$, or $r_A = \frac{2}{n}$, and for Car B this formula becomes $r_B \times m = 3$, or $r_B = \frac{3}{m}$. Thus, the average of the two rates is $\frac{1}{2}(r_A + r_B) = \frac{1}{2}\left(\frac{2}{n} + \frac{3}{m}\right) = \frac{1}{2}\left(\frac{2m+3n}{mn}\right) = \frac{3n+2m}{2mn}$. Therefore, if t is the desired time, in hours, that Car C traveled, then the above formula for Car C becomes $\frac{3n+2m}{2mn} \times t = 5$, or $t = 5 \times \frac{2mn}{3n+2m} = \frac{10mn}{3n+2m}$.

The correct answer is A.

PS78502.01

80. If x, y, and k are positive and x is less than y, then $\frac{x+k}{y+k}$ is

(A) 1

(B) greater than $\frac{x}{y}$

(C) equal to $\frac{x}{y}$

(D) less than $\frac{x}{y}$

(E) less than $\frac{x}{y}$ or greater than $\frac{x}{y}$, depending on the value of k

Algebra Ratios

x	$<$	y	Given
kx	$<$	ky	Multiply by positive k
$xy + kx$	$<$	$xy + ky$	Add xy
$x(y + k)$	$<$	$y(x + k)$	Factor
x	$<$	$\frac{y(x+k)}{y+k}$	Divide by positive $y + k$
$\frac{x}{y}$	$<$	$\frac{x+k}{y+k}$	Divide by positive y

Thus, $\frac{x+k}{y+k} > \frac{x}{y}$.

The correct answer is B.

PS09502.01

81. Consider the following set of inequalities: $p > q$, $s > r$, $q > t$, $s > p$, and $r > q$. Between which two quantities is no relationship established?

(A) p and r

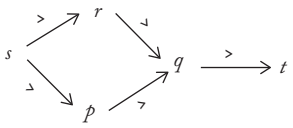
(B) s and t

(C) s and q

(D) p and t

(E) r and t

Algebra Order



Using $r > q$ and $q > t$ gives $r > t$, so a relationship is established between r and t. The correct answer is NOT E.

Using $p > q$ and $q > t$ gives $p > t$, so a relationship is established between p and t. The correct answer is NOT D.

Using $s > r$ and $r > q$ gives $s > q$, so a relationship is established between s and q. The correct answer is NOT C.

Using $s > r$, $r > q$, and $q > t$ gives $s > t$, so a relationship is established between s and t. The correct answer is NOT B.

Alternately, the diagram below shows the given relationships and does not establish a relationship between p and r.

The correct answer is A.

PS68502.01

82. Carl averaged $2m$ miles per hour on a trip that took him h hours. If Ruth made the same trip in $\frac{2}{3}h$ hours, what was her average speed in miles per hour?

(A) $\frac{1}{3}mh$

(B) $\frac{2}{3}mh$

(C) m

(D) $\frac{3}{2}m$

(E) $3m$

Algebra Applied problems

Using

$$\text{Distance} = \text{Rate} \times \text{Time},$$

the distance Carl traveled on the trip was $2mh$ miles. Using $\text{rate} = \frac{\text{distance}}{\text{time}}$, Ruth's rate was $\frac{2mh}{\frac{2}{3}h} = \frac{3}{2}(2m) = 3m$.

The correct answer is E.

PS29502.01

83. Of three persons, two take relish, two take pepper, and two take salt. The one who takes no salt takes no pepper, and the one who takes no pepper takes no relish. Which of the following statements must be true?

I. The person who takes no salt also takes no relish.

II. Any of the three persons who takes pepper also takes relish and salt.

III. The person who takes no relish is not one of those who takes salt.

(A) I only

(B) II only

(C) III only

(D) I and II only

(E) I, II, and III

Arithmetic Sets (Venn diagrams)

Although this problem can be solved by the use of a Venn diagram, it is probably simpler to use ordinary reasoning. The single person who takes no salt takes no pepper, and the single person who takes no pepper takes no relish, so exactly one person does not take any of the three. Thus, each of the other two people take all three. The table below shows these results where Person 1 does not take any of the three and Persons 2 and 3 each take all three.

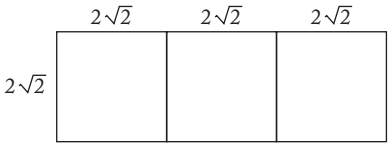
Person	Relish	Pepper	Salt
1	no	no	no
2	yes	yes	yes
3	yes	yes	yes

The only person who takes no salt is Person 1, who also takes no relish, so I must be true.

The only people who take pepper are Persons 2 and 3, and each of them also takes relish and salt, so II must be true.

The only person who takes no relish is Person 1, who is not a person who takes salt, so III must be true.

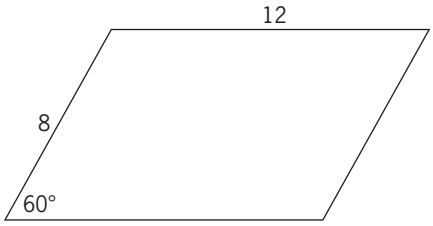
The correct answer is E.



PS88502.01

84. If a rectangle of area 24 can be partitioned into exactly 3 nonoverlapping squares of equal area, what is the length of the longest side of the rectangle?

(A) $2\sqrt{2}$
(B) 6
(C) 8
(D) $6\sqrt{2}$
(E) $12\sqrt{2}$

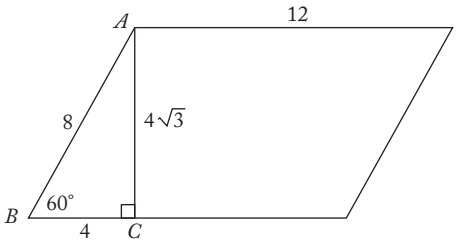


Geometry Rectangles

Because the squares all have the same area, the sides of the squares all have the same length. Let s be the common side length of the squares. Then the area of one of the squares is s^2 and the total area of the 3 nonoverlapping squares is $3s^2$. From the given information, it follows that $3s^2 = 24$, or $s^2 = 8$, or $s = \sqrt{8} = 2\sqrt{2}$. The diagram below shows how these squares must be arranged in the rectangle.

From the diagram, it follows that the length of the longest side of the rectangle is $2\sqrt{2} + 2\sqrt{2} + 2\sqrt{2} = 6\sqrt{2}$.

The correct answer is D.



PS50602.01

85. In the figure above, the area of the parallelogram is

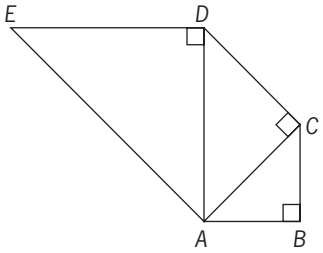
(A) 40
(B) $24\sqrt{3}$
(C) 72
(D) $48\sqrt{3}$
(E) 96

Geometry Quadrilaterals

The area of a parallelogram is the product of its base and its height. Letting the length of the horizontal sides in the given figure be the parallelogram's base, then the area of the parallelogram is the product of 12 and the value of AC in the figure below. To determine the value of AC, observe that ΔABC is a 30°-60°-90° triangle with hypotenuse of length 8. Therefore, the side opposite the 30° angle has length $BC = \frac{1}{2}(8) = 4$ and the side opposite the 60° angle has length $AC = \sqrt{3}(BC) = 4\sqrt{3}$. Hence, the area of the parallelogram is $(12)\left(4\sqrt{3}\right) = 48\sqrt{3}$.

The correct answer is D.

PS91602.01



86. If the smaller of 2 consecutive odd integers is a multiple of 5, which of the following could NOT be the sum of these 2 integers?

(A) –8
(B) 12
(C) 22
(D) 52
(E) 252

Algebra Operations with integers

Since the smaller of the 2 consecutive odd integers is a multiple of 5, let it be represented by $5n$ for some integer n. Then the other odd integer can be represented by $5n + 2$. The sum of these two integers is $10n + 2$. The sum is –8 when $n = -1$ and $5n = (5)(-1)$ is odd. The sum is 12 when $n = 1$ and $5n = (5)(1)$ is odd. The sum is 22 when $n = 2$, but $5n = (5)(2)$ is not odd. There is no need to check the D and E because it has been determined that 22 cannot be the sum of the 2 consecutive odd integers. For completeness, the sum is 52 when $n = 5$ and $5n = (5)(5)$ is odd. The sum is 252 when $n = 25$ and $5n = (5)(25)$ is odd.

The correct answer is C.

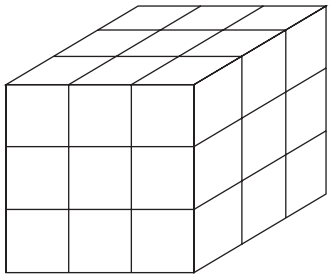
PS73602.01

87. In the figure above, if triangles *ABC*, *ACD*, and *ADE* are isosceles right triangles and the area of ΔABC is 6, then the area of ΔADE is

(A) 18

(B) 24

(C) 36



(D) $12\sqrt{2}$

(E) $24\sqrt{2}$

Geometry Triangles; Pythagorean theorem

Because ΔABC is an isosceles right triangle with legs $\overline{AB}$ and $\overline{BC}$, it follows that $AB = BC$ and the area of ΔABC is $\frac{1}{2}(AB)(BC) = \frac{1}{2}(AB)^2$. It is given that the area of ΔABC is 6, and thus $\frac{1}{2}(AB)^2 = 6$, or $(AB)^2 = 12$, or $AB = \sqrt{12}$. Applying the Pythagorean theorem to ΔABC gives $(AC)^2 = (AB)^2 + (BC)^2$, and hence $(AC)^2 = \left(\sqrt{12}\right)^2 + \left(\sqrt{12}\right)^2 = 12 + 12 = 24$, or $AC = \sqrt{24}$. Because ΔACD is an isosceles right triangle with legs $\overline{AC}$ and $\overline{CD}$, and $AC = \sqrt{24}$, it follows that $AC = CD = \sqrt{24}$. Applying the Pythagorean theorem to ΔACD gives $(AD)^2 = (AC)^2 + (CD)^2$, and hence $(AD)^2 = \left(\sqrt{24}\right)^2 + \left(\sqrt{24}\right)^2 = 24 + 24 = 48$, or $AD = \sqrt{48}$. Because ΔADE is an isosceles right triangle with legs $\overline{AD}$ and $\overline{DE}$, and $AD = \sqrt{48}$, it follows that $AD = DE = \sqrt{48}$, and hence the area of ΔADE is $\frac{1}{2}(AD)(DE) = \frac{1}{2}\left(\sqrt{48}\right)\left(\sqrt{48}\right) = \frac{1}{2}(48) = 24$.

The correct answer is B.

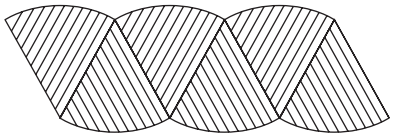
PS93602.01

88. Each of 27 white 1-centimeter cubes will have exactly one face painted red. If these 27 cubes are joined together to form one large cube, as shown above, what is the greatest possible fraction of the surface area that could be red?

(A) $\frac{11}{27}$

(B) $\frac{13}{27}$

(C) $\frac{1}{2}$



(D) $\frac{5}{9}$

(E) $\frac{19}{27}$

Geometry Rectangular solids and cylinders

All but one of the 1-centimeter cubes, namely the 1-centimeter cube in the center, has at least one face lying on the surface of the large cube. The greatest possible fraction of the surface of the large cube will be red when each of these 27 – 1 = 26 non-center 1-centimeter cubes is oriented so that its red face lies on the surface of the large cube. Since the surface of the large cube has 6 faces, each consisting of 9 faces from the 1-centimeter cubes, the surface of the large cube consists of a total of (6)(9) = 54 faces from the 1-centimeter cubes. Therefore, the greatest possible fraction of the surface area that could be red is $\frac{26}{54} = \frac{13}{27}$.

The correct answer is B.

PS44602.01

89. The figure above is constructed by separating a circular region into 6 equal parts and rearranging the parts as shown. If the diameter of the circle is d, what is the perimeter of the figure above?

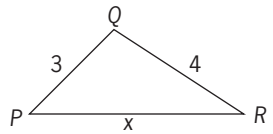
(A) πd
(B) $2\pi d$
(C) $\pi d + 2$
(D) $\pi d + d$
(E) $2\pi d + d$

Geometry Circles

The perimeter consists of 6 arcs and 2 segments. The total length of the 6 arcs is the circumference of the circle, which is πd. Each segment is a radius of the circle with length $\frac{d}{2}$. Therefore the perimeter of the figure is $\pi d + 2\left(\frac{d}{2}\right) = \pi d + d$.

The correct answer is D.

PS54602.01



90. On a scale drawing of a triangular piece of land, the sides of the triangle have lengths 5, 12, and 13 centimeters. If 1 centimeter on the drawing represents 3 meters, what is the area, in square meters, of the piece of land?

(A) 90
(B) 180
(C) 240
(D) 270
(E) 540

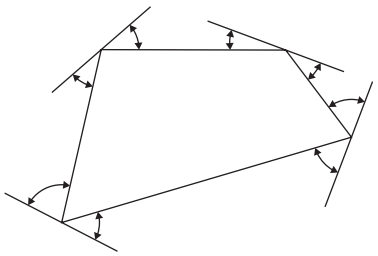
Geometry Triangles; Area; Measurement conversion

Since $5^2 + 12^2 = 13^2$, the piece of land is in the shape of a right triangle. The lengths of the legs of the piece of land, in meters, are $(3)(5) = 15$ and $(3)(12) = 36$ since 1 centimeter on the drawing represents 3 meters on the piece of land. Therefore, the area, in square meters, of the piece of land is $\frac{1}{2}(15)(36) = 270$ square meters.

The correct answer is D.

Note: Figure not drawn to scale.

PS05602.01



91. Which of the following gives all possible values of x in the figure above?

(A) $1 < x < 4$
(B) $1 < x < 7$
(C) $3 < x < 5$
(D) $4 < x < 7$
(E) $5 < x < 12$

Geometry Triangles

Because the sum of the lengths of two sides of a triangle must be greater than the length of the third side, $3 + 4 = 7 > x$ and $3 + x > 4$ or $x > 1$. Combining $7 > x$ and $x > 1$ gives $7 > x > 1$ or $1 < x < 7$.

The correct answer is B.

PS15602.01

92. In the figure above, lines are drawn at the vertices of the quadrilateral as shown. What is the sum of the degree measures of the marked angles?

(A) 450
(B) 360
(C) 270
(D) 240
(E) 180

Geometry Angles

The sum of the marked angles is the sum of 4 straight angles minus the sum of the interior angles of the quadrilateral or $(4)(180) - 360 = 360$.

The correct answer is B.

PS25602.01

93. The dimensions of a ream of paper are $8\frac{1}{2}$ inches by 11 inches by $2\frac{1}{2}$ inches. The inside dimensions of a carton that will hold exactly 12 reams of paper could be

(A) $8\frac{1}{2}$ in by 11 in by 12 in

(B) 17 in by 11 in by 15 in

(C) 17 in by 22 in by 3 in

(D) 51 in by 66 in by 15 in

(E) 102 in by 132 in by 30 in

Geometry Volume

In cubic inches, the total volume of 12 reams of paper is $12(8.5 \times 11 \times 2.5) = 2(8.5) \times 11 \times 6(2.5) = 17 \times 11 \times 15$, which is exactly the total volume represented by B.

The correct answer is B.

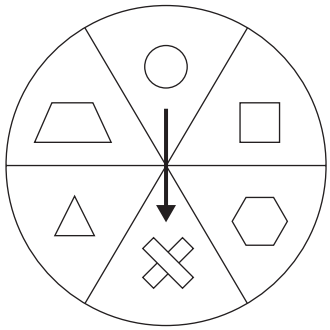
PS35602.01

94. In the racetrack shown above, regions I and III are semicircular with radius r. If region II is rectangular and its length is twice its width, what is the perimeter of the track in terms of r?

(A) $2r(\pi + 2)$

(B) $2r(\pi + 4)$

(C) $2r(\pi + 8)$



(D) $4r(\pi + 2)$

(E) $4r(\pi + 4)$

Geometry Perimeter

The figure shows that the (vertical) width of the racetrack is equal to the diameter of the semicircles, which is $2r$, and thus the (horizontal) length of the racetrack is $2(2r) = 4r$. Therefore, the perimeter of the racetrack, which consists of two semicircular arcs and two lengths of the rectangle, is $2(\pi r) + 2(4r) = 2r(\pi + 4)$.

The correct answer is B.

PS85602.01

95. The figure above, which is divided into 6 sectors of equal area, contains an arrow representing a spinner. If the spinner is rotated 3,840 degrees in a clockwise direction from the position shown, which of the following indicates the sector to which the arrow on the spinner will point?

(A) 

(B) 

(C) 

(D) 

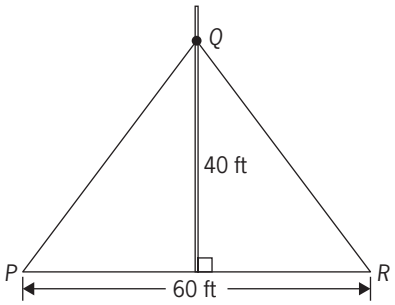
(E) 

Geometry Angle measure in degrees

The spinner rotates $\frac{3{,}840}{360} = \frac{32}{3} = 10\frac{2}{3}$ revolutions, which can also be seen by observing that 3,840 degrees – 3,600 degrees = 240 degrees = $\frac{2}{3}$ of a revolution. After making 10 revolutions, the spinner is back to the starting point and still needs to rotate $\frac{2}{3}$ of the way around the circle. Since rotating $\frac{2}{3}$ of the way around the circle is equivalent to rotating through 4 of the 6 sectors of the circle, the spinner will point to the sector with the square.

The correct answer is B.

PS95602.01



96. When a rectangular vat that is 3 feet deep is filled to $\frac{2}{3}$ of its capacity, it contains 60 gallons of water. If $7\frac{1}{2}$ gallons of water occupies 1 cubic foot of space, what is the area, in square feet, of the base of the vat?

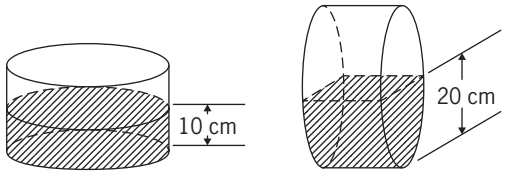
(A) 4
(B) 8
(C) 12
(D) 150
(E) 225

Geometry Rectangular solids and cylinders

When filled to $\frac{2}{3}$ capacity, the vat contains 60 gallons of water (i.e., $\frac{2}{3}$(capacity) = 60), and so when it is filled to capacity it contains $\frac{3}{2}(60) = 90$ gallons of water, which occupies $\frac{90}{7.5} = 12$ cubic feet. If A represents the area of the base of the vat, in square feet, then the volume of the vat is $3A = 12$ cubic feet, and hence $A = 4$.

The correct answer is A.

PS06602.01



97. The figure above represents an antenna tower with two guy wires that extend from point Q, 40 feet above the ground, to points P and R as shown. If the two wires have equal length, approximately what is the total length, in feet, of the two wires?

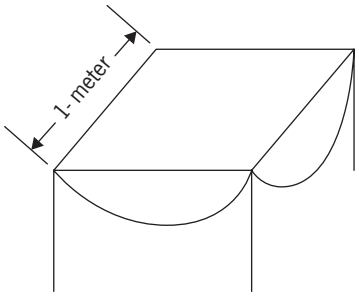
(A) 60
(B) 80
(C) 100
(D) 120
(E) 180

Geometry Triangles; Pythagorean theorem

Because $PQ = QR$, it follows that ΔPQR is isosceles and the perpendicular from Q to $\overline{PR}$ bisects $\overline{PR}$. Therefore, each of the right triangles in the figure has legs that are 30 ft and 40 ft. By the Pythagorean theorem, $PQ = \sqrt{30^2 + 40^2} = 50$ and the total length of the two guy wires is $2(50 \text{ ft}) = 100$ ft.

The correct answer is C.

PS16602.01



98. The figures above show a sealed container that is a right circular cylinder filled with liquid to $\frac{1}{2}$ its capacity. If the container is placed on its base, the depth of the liquid in the container is 10 centimeters and if the container is placed on its side, the depth of the liquid is 20 centimeters. How many cubic centimeters of liquid are in the container?

(A) $4{,}000\pi$
(B) $2{,}000\pi$
(C) $1{,}000\pi$
(D) 400π
(E) 200π

Geometry Volume

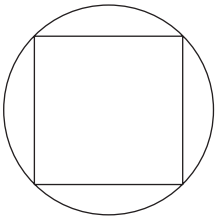
The figure on the right, which shows the cylinder filled to $\frac{1}{2}$ its capacity, indicates that the radius of the cylinder is 20 cm. The figure on the left indicates that the height of the liquid is 10 cm. Using $V = \pi r^2 h$, where r is the radius and h is the height of the liquid in the cylinder, the volume of liquid in the cylindrical container is $\pi(20)^2(10) = 4{,}000\pi$ cubic centimeters.

The correct answer is A.

PS26602.01

99. The figure above shows a drop-leaf table. With all four leaves down the tabletop is a square, and with all four leaves up the tabletop is a circle. What is the radius, in meters, of the tabletop when all four leaves are up?

(A) $\frac{1}{2}$



(B) $\frac{\sqrt{2}}{2}$

(C) 1

(D) $\sqrt{2}$

(E) 2

Geometry Triangles

The figure above shows the circular tabletop viewed from above. The diameter of the circle is the diagonal of the square, which is 1 meter on a side. By the Pythagorean theorem, the diagonal is $\sqrt{1^2+1^2} = \sqrt{2}$ meters and the radius is $\frac{\sqrt{2}}{2}$ meters.

The correct answer is B.

PS36602.01

100. If the diameter of a circular skating rink is 60 meters, the area of the rink is approximately how many square meters?

(A) 90

(B) 180

(C) 900

(D) 2,800

(E) 10,800

Geometry Circles

If the diameter of the circular skating rink is 60 meters, then the radius is 30 meters and the area is $\pi(30)^2 = 900\pi$ square meters. Assuming the value of π to be slightly greater than 3, the rink is approximately 2,800 square meters.

The correct answer is D.

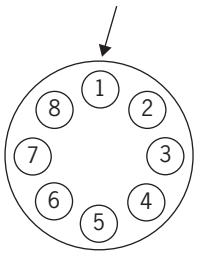
PS46602.01

101. What is the greatest number of blocks 8 centimeters by 6 centimeters by 9 centimeters that will fit into a storage space that is 60 centimeters by 72 centimeters by 96 centimeters?

(A) 60

(B) 840

(C) 896



(D) 960

(E) 1,080

Geometry Volume

The volume of the storage space is $60 \times 72 \times 96$ and each block is $6 \times 8 \times 9$, so the number of blocks that will fit is $\frac{60 \times 72 \times 96}{6 \times 8 \times 9} = \frac{60}{6} \times \frac{72}{9} \times \frac{96}{8} = 10 \times 8 \times 12 = 960.$

The correct answer is D.

PS56602.01

102. Eight light bulbs numbered 1 through 8 are arranged in a circle as shown above. The bulbs are wired so that every third bulb, counting in a clockwise direction, flashes until all bulbs have flashed once. If the bulb numbered 1 flashes first, which numbered bulb will flash last?

(A) 2

(B) 3

(C) 4

(D) 6

(E) 7

Arithmetic Properties of integers

The easiest way to do this problem might be by just counting every third bulb going clockwise around the circle starting at Bulb 1, which flashes, skipping 2 bulbs and getting to Bulb 4, which flashes, skipping 2 bulbs and getting to Bulb 7, which flashes, skipping 2 bulbs and getting to Bulb 2, which flashes, skipping 2 bulbs and getting to Bulb 5, which flashes, skipping 2 bulbs and getting to Bulb 8, which flashes, skipping 2 bulbs and getting to Bulb 3, which flashes, and finally skipping 2 bulbs and getting to Bulb 6, which flashes. Now, all 8 bulbs have flashed once and the last one to flash was Bulb 6.

The correct answer is D.

PS00986

103. The average (arithmetic mean) of the positive integers x, y, and z is 3. If $x < y < z$, what is the greatest possible value of z?

(A) 5
(B) 6
(C) 7
(D) 8
(E) 9

Algebra Inequalities

It is given that $\frac{x+y+z}{3} = 3$, or $x + y + z = 9$, or $z = 9 + (-x - y)$. It follows that the greatest possible value of z occurs when $-x - y = -(x + y)$ has the greatest possible value, which occurs when $x + y$ has the least possible value. Because x and y are different positive integers, the least possible value of $x + y$ occurs when $x = 1$ and $y = 2$. Therefore, the greatest possible value of z is $9 - 1 - 2 = 6$.

The correct answer is B.

PS14087

104. The product of 3,305 and the 1-digit integer x is a 5-digit integer. The units (ones) digit of the product is 5 and the hundreds digit is y. If A is the set of all possible values of x and B is the set of all possible values of y, then which of the following gives the members of A and B?

	A	B
(A)	{1, 3, 5, 7, 9}	{0, 1, 2, 3, 4, 5, 6, 7, 8, 9}
(B)	{1, 3, 5, 7, 9}	{1, 3, 5, 7, 9}
(C)	{3, 5, 7, 9}	{1, 5, 7, 9}
(D)	{5, 7, 9}	{1, 5, 7}
(E)	{5, 7, 9}	{1, 5, 9}

Arithmetic Properties of numbers

Since the products of 3,305 and 1, 3,305 and 2, and 3,305 and 3 are the 4-digit integers 3,305, 6,610, and 9,915, respectively, it follows that x must be among the 1-digit integers 4, 5, 6, 7, 8, and 9. Also, since the units digit of the product of 3,305 and x is 5, it follows that x cannot be 4 (product has units digit 0), 6 (product has units digit 0), or 8 (product has units digit 0). Therefore, $A = \{5, 7, 9\}$. The possibilities for y will be the hundreds digits of the products $(3{,}305)(5) = 16{,}525$, $(3{,}305)(7) = 23{,}135$, and $(3{,}305)(9) = 29{,}745$. Thus, y can be 5, 1, or 7, and so $B = \{1, 5, 7\}$.

The correct answer is D.

PS07001

105. If x and y are integers such that $2 < x \leq 8$ and $2 < y \leq 9$, what is the maximum value of $\frac{1}{x} - \frac{x}{y}$?

(A) $-3\frac{1}{8}$
(B) 0
(C) $\frac{1}{4}$
(D) $\frac{5}{18}$
(E) 2

Algebra Inequalities

Because x and y are both positive, the maximum value of $\frac{1}{x} - \frac{x}{y}$ will occur when the value of $\frac{1}{x}$ is maximum and the value of $\frac{x}{y}$ is minimum. The value of $\frac{1}{x}$ is maximum when the value of

x is minimum or when $x = 3$. The value of $\frac{x}{y}$ is minimum when the value of x is minimum (or when $x = 3$) and the value of y is maximum (or when $y = 9$). Thus, the maximum value of $\frac{1}{x} - \frac{x}{y}$ is $\frac{1}{3} - \frac{3}{9} = 0$.

The correct answer is B.

PS01875

106. Items that are purchased together at a certain discount store are priced at \$3 for the first item purchased and \$1 for each additional item purchased. What is the maximum number of items that could be purchased together for a total price that is less than \$30 ?

(A) 25
(B) 26
(C) 27
(D) 28
(E) 29

Arithmetic Applied problems

After the first item is purchased, \$29.99 – \$3.00 = \$26.99 remains to purchase the additional items. Since the price for each of the additional items is \$1.00, a maximum of 26 additional items could be purchased. Therefore, a maximum of 1 + 26 = 27 items could be purchased for less than \$30.00.

The correct answer is C.

PS00774

107. What is the least integer z for which $(0.000125)(0.0025)(0.00000125) \times 10^z$ is an integer?

(A) 18
(B) 10
(C) 0
(D) –10
(E) –18

Arithmetic Decimals

Considering each of the three decimal numbers in parentheses separately, we know that 0.000125×10^6 is the integer 125, 0.0025×10^4 is the integer 25, and 0.00000125×10^8 is the integer 125. We thus know that $(0.000125) \times 10^6 \times (0.0025) \times 10^4 \times (0.00000125) \times 10^8 = (0.000125)(0.0025)(0.00000125) \times 10^6 \times 10^4 \times 10^8 = (0.000125)(0.0025)(0.00000125) \times 10^{6+4+8} = (0.000125)(0.0025)(0.00000125) \times 10^{18}$ is the integer $125 \times 25 \times 125$. We therefore know that if $z = 18$, then $(0.000125)(0.0025)(0.00000125) \times 10^z$ is an integer.

Now, if the product $125 \times 25 \times 125$ were divisible by 10, then for at least one integer z less than 18, $(0.000125)(0.0025)(0.00000125) \times 10^z$ would be an integer. However, each of the three numbers being multiplied in the product $125 \times 25 \times 125$ is odd (not divisible by 2). We thus know that $125 \times 25 \times 125$ is not divisible by 2 and is therefore odd. Because only even numbers are divisible by 10, we know that $125 \times 25 \times 125$ is not divisible by 10. We thus know that 18 is the *least* integer z such that $(0.000125)(0.0025)(0.00000125) \times 10^z$ is an integer.

Note that it is not necessary to perform the multiplication $125 \times 25 \times 125$.

The correct answer is A.

PS08407

108. The average (arithmetic mean) length per film for a group of 21 films is t minutes. If a film that runs for 66 minutes is removed from the group and replaced by one that runs for 52 minutes, what is the average length per film, in minutes, for the new group of films, in terms of t ?

(A) $t + \frac{2}{3}$
(B) $t - \frac{2}{3}$
(C) $21t + 14$
(D) $t + \frac{3}{2}$
(E) $t - \frac{3}{2}$

Arithmetic Statistics

Let S denote the sum of the lengths, in minutes, of the 21 films in the original group. Since the average length is t minutes, it follows that $\frac{S}{21} = t$.

If a 66-minute film is replaced by a 52-minute film, then the sum of the lengths of the 21 films in the resulting group is $S - 66 + 52 = S - 14$. Therefore, the average length of the resulting 21 films is $\frac{S-14}{21} = \frac{S}{21} - \frac{14}{21} = t - \frac{2}{3}$.

The correct answer is B.

PS08051

109. An open box in the shape of a cube measuring 50 centimeters on each side is constructed from plywood. If the plywood weighs 1.5 grams per square centimeter, which of the following is closest to the total weight, in kilograms, of the plywood used for the box? (1 kilogram = 1,000 grams)

(A) 2
(B) 4
(C) 8
(D) 13
(E) 19

Geometry Surface area

The total weight of the box is the sum of the weights of the 4 lateral sides of the box and the bottom of the box. Since the sides of the box all have the same area and the same density throughout, the total weight of the box is 5 times the weight of a side of the box. In grams, the weight of a side of the box is $(A \text{ cm}^2)\left(1.5 \frac{\text{g}}{\text{cm}^2}\right)$, where A is the area of a side of the box in square centimeters. Since $A = (50 \text{ cm})(50 \text{ cm}) = 2{,}500 \text{ cm}^2$, the weight of a side of the box is $(2{,}500)(1.5) = 3{,}750$ grams $= 3.75$ kilograms. Therefore, the total weight of the box is $5(3.75) = 18.75$ kilograms.

The correct answer is E.

PS03614

110. A garden center sells a certain grass seed in 5-pound bags at $13.85 per bag, 10-pound bags at $20.43 per bag, and 25-pound bags at $32.25 per bag. If a customer is to buy at least 65 pounds of the grass seed, but no more than 80 pounds, what is the least possible cost of the grass seed that the customer will buy?

(A) $94.03
(B) $96.75
(C) $98.78
(D) $102.07
(E) $105.36

Arithmetic Applied problems

Let x represent the amount of grass seed, in pounds, the customer is to buy. It follows that $65 \le x \le 80$. Since the grass seed is available in only 5-pound, 10-pound, and 25-pound bags, then the customer must buy either 65, 70, 75, or 80 pounds of grass seed. Because the seed is more expensive per pound for smaller bags, the customer should minimize the number of the smaller bags and maximize the number of 25-pound bags to incur the least possible cost for the grass seed. The possible purchases are given in the table below.

x	Number of 25-pound bags	Number of 10-pound bags	Number of 5-pound bags	Total cost
65	2	1	1	$98.78
70	2	2	0	$105.36
75	3	0	0	$96.75
80	3	0	1	$110.60

The least possible cost is then $3($32.25) = $96.75.

The correct answer is B.

PS12785

111. If $x = -|w|$, which of the following must be true?

(A) $x = -w$
(B) $x = w$
(C) $x^2 = w$
(D) $x^2 = w^2$
(E) $x^3 = w^3$

Algebra Absolute value

Squaring both sides of $x = -|w|$ gives $x^2 = (-|w|)^2$, or $x^2 = |w|^2 = w^2$.

Alternatively, if (x, w) is equal to either of the pairs $(-1,1)$ or $(-1,-1)$, then $x = -|w|$ is true. However, each of the answer choices except $x^2 = w^2$ is false for at least one of these two pairs.

The correct answer is D.

PS04160

112. A certain financial institution reported that its assets totaled $2,377,366.30 on a certain day. Of this amount, $31,724.54 was held in cash. Approximately what percent of the reported assets was held in cash on that day?

(A) 0.00013%
(B) 0.0013%
(C) 0.013%
(D) 0.13%
(E) 1.3%

Arithmetic Percents; Estimation

The requested percent can be estimated by converting the values into scientific notation.

$$\frac{31,724.54}{2,377,366.30} \quad \text{value as fraction}$$

$$= \frac{3.172454\times10^{4}}{2.37736630\times10^{6}} \quad \text{convert to scientific notation}$$

$$= \frac{3.172454}{2.37736630}\times\frac{10^{4}}{10^{6}} \quad \text{arithmetic property of fractions}$$

$$= \frac{3.172454}{2.37736630}\times10^{-2} \quad \text{subtract exponents}$$

$$\approx \frac{3}{2}\times10^{-2} \quad \text{approximate}$$

$$= 1.5\times10^{-2} \quad \text{convert to decimal fraction}$$

$$= 0.015 \quad \text{multiply}$$

$$= 1.5\% \quad \text{convert to percent}$$

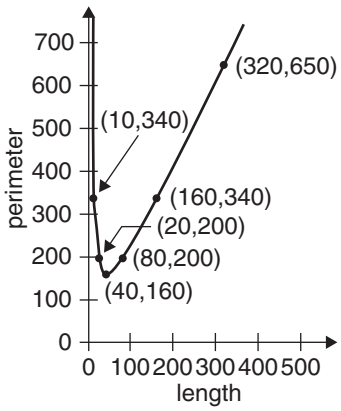
A more detailed computation would show that 1.3% is a better approximation. However, in order to select the best value from the values given as answer choices, the above computation is sufficient.

The correct answer is E.

$$\begin{array}{r} AB \\ +\ BA \\ \hline AAC \end{array}$$

PS09820

113. In the correctly worked addition problem shown, where the sum of the two-digit positive integers AB and BA is the three-digit integer AAC, and A, B, and C are different digits, what is the units digit of the integer AAC?



(A) 9
(B) 6
(C) 3
(D) 2
(E) 0

Arithmetic Place value

Determine the value of C.

It is given that $(10A + B) + (10B + A) = 100A + 10A + C$ or $11A + 11B = 110A + C$. Thus, $11B - 99A = C$, or $11(B - 9A) = C$. Therefore, C is divisible by 11, and 0 is the only digit that is divisible by 11.

The correct answer is E.

PS14060

114. Planning is in progress for a fenced, rectangular playground with an area of 1,600 square meters. The graph above shows the perimeter, in meters, as a function of the length of the playground. The length of the playground should be how many meters to minimize the perimeter and, therefore, the amount of fencing needed to enclose the playground?

(A) 10
(B) 40
(C) 60
(D) 160
(E) 340

Geometry Simple coordinate geometry

Since values of the perimeter are represented on the vertical axis, the point on the graph that corresponds to the minimum perimeter is the point on the graph that has the least y-coordinate, which is (40,160). This point corresponds to a length of 40 meters, which is what the question asked, and a perimeter of 160 meters.

The correct answer is B.

$$3r \le 4s + 5$$
$$|s| \le 5$$

PS06913

115. Given the inequalities above, which of the following CANNOT be the value of r?

(A) –20
(B) –5
(C) 0
(D) 5
(E) 20

Algebra Inequalities

Since $|s| \le 5$, it follows that $-5 \le s \le 5$. Therefore, $-20 \le 4s \le 20$, and hence $-15 \le 4s + 5 \le 25$. Since $3r \le 4s + 5$ (given) and $4s + 5 \le 25$ (end of previous sentence), it follows that $3r \le 25$. Among the answer choices, $3r \le 25$ is false only for $r = 20$.

The correct answer is E.

PS11647

116. If m is an even integer, v is an odd integer, and $m > v > 0$, which of the following represents the number of even integers less than m and greater than v?

(A) $\frac{m-v}{2} - 1$
(B) $\frac{m-v-1}{2}$
(C) $\frac{m-v}{2}$
(D) $m - v - 1$
(E) $m - v$

Arithmetic Properties of numbers

Since there is only one correct answer, one method of solving the problem is to choose values for m and v and determine which of the expressions gives the correct number for these values. For example, if $m = 6$ and $v = 1$, then there are 2 even integers less than 6 and greater than 1, namely the even integers 2 and 4. As the table below shows, $\frac{m-v-1}{2}$ is the only expression given that equals 2.

$$\frac{m-v}{2} - 1 = 1.5$$
$$\frac{m-v-1}{2} = 2$$
$$\frac{m-v}{2} = 2.5$$
$$m - v - 1 = 4$$
$$m - v = 5$$

To solve this problem it is not necessary to show that $\frac{m-v-1}{2}$ always gives the correct number of even integers. However, one way this can be done is by the following method, first shown for a specific example and then shown in general. For the specific example, suppose $v = 15$ and $m = 144$. Then a list—call it the first list—of the even integers greater than v and less than m is 16, 18, 20, …, 140, 142. Now subtract 14 (chosen so that the second list will begin with 2) from each of the integers in the first list to form a second list, which has the same number of integers as the first list: 2, 4, 6, …, 128. Finally, divide each of the integers in the second list (all of which are even) by 2 to form a third list, which also has the same number of integers as the first list: 1, 2, 3, …, 64. Since the number of integers in the third list is 64, it follows that the number of integers in the first list is 64. For the general situation, the first list is the following list of even integers: $v + 1$, $v + 3$, $v + 5$, …, $m - 4$, $m - 2$. Now subtract the even integer $v - 1$ from (i.e., add $-v + 1$ to) each of the integers in the first list to obtain the second list: 2, 4, 6, …, $m - v - 3$, $m - v - 1$. (Note, for example, that $m - 4 - (v - 1) = m - v - 3$.)

Finally, divide each of the integers (all of which are even) in the second list by 2 to obtain the third list: $1, 2, 3, \ldots, \frac{m-v-3}{2}, \frac{m-v-1}{2}$. Since the number of integers in the third list is $\frac{m-v-1}{2}$, it follows that the number of integers in the first list is $\frac{m-v-1}{2}$.

The correct answer is B.

PS02378

117. A positive integer is divisible by 9 if and only if the sum of its digits is divisible by 9. If n is a positive integer, for which of the following values of k is $25 \times 10^n + k \times 10^{2n}$ divisible by 9 ?

(A) 9
(B) 16
(C) 23
(D) 35
(E) 47

Arithmetic Properties of numbers

Since n can be any positive integer, let $n = 2$. Then $25 \times 10^n = 2{,}500$, so its digits consist of the digits 2 and 5 followed by two digits of 0. Also, $k \times 10^{2n} = k \times 10{,}000$, so its digits consist of the digits of k followed by four digits of 0. Therefore, the digits of $(25 \times 10^n) + (k \times 10^{2n})$ consist of the digits of k followed by the digits 2 and 5, followed by two digits of 0. The table below shows this for $n = 2$ and $k = 35$:

$$\begin{aligned} 25 \times 10^n &= 2{,}500 \\ 35 \times 10^{2n} &= 350{,}000 \\ (25 \times 10^n) + (35 \times 10^{2n}) &= 352{,}500 \end{aligned}$$

Thus, when $n = 2$, the sum of the digits of $(25 \times 10^n) + (k \times 10^{2n})$ will be $2 + 5 = 7$ plus the sum of the digits of k. Of the answer choices, this sum of digits is divisible by 9 only for $k = 47$, which gives $2 + 5 + 4 + 7 = 18$. It can also be verified that, for each positive integer n, the only such answer choice is $k = 47$, although this additional verification is not necessary to obtain the correct answer.

The correct answer is E.

PS17806

118. The perimeter of rectangle A is 200 meters. The length of rectangle B is 10 meters less than the length of rectangle A and the width of rectangle B is 10 meters more than the width of rectangle A. If rectangle B is a square, what is the width, in meters, of rectangle A ?

(A) 10
(B) 20
(C) 40
(D) 50
(E) 60

Geometry Rectangles; Perimeter

Let L meters and W meters be the length and width, respectively, of rectangle A. Then $(L - 10)$ meters and $(W + 10)$ meters are the length and width, respectively, of rectangle B. Since the perimeter of rectangle A is 200 meters, it follows that $2L + 2W = 200$, or $L + W = 100$. Since rectangle B is a square, it follows that $L - 10 = W + 10$, or $L - W = 20$. Adding the equations $L + W = 100$ and $L - W = 20$ gives $2L = 120$, or $L = 60$. From $L - W = 20$ and $L = 60$, it follows that $W = 40$, and so the width of rectangle A is 40 meters.

The correct answer is C.

PS08598

119. On the number line, the shaded interval is the graph of which of the following inequalities?

(A) $|x| \leq 4$
(B) $|x| \leq 8$
(C) $|x - 2| \leq 4$
(D) $|x - 2| \leq 6$
(E) $|x + 2| \leq 6$

Algebra Inequalities; Absolute value

The midpoint of the interval from −8 to 4, inclusive, is $\frac{-8+4}{2} = -2$ and the length of the interval from −8 to 4, inclusive, is $4 - (-8) = 12$, so the interval consists of all numbers within a distance of $\frac{12}{2} = 6$ from −2. Using an inequality involving absolute values, this can be described by $|x - (-2)| \leq 6$, or $|x + 2| \leq 6$.

Alternatively, the inequality $-8 \leq x \leq 4$ can be written as the conjunction $-8 \leq x$ and $x \leq 4$. Rewrite this conjunction so that the lower value, −8, and the upper value, 4, are shifted to values that have the same magnitude. This can be done by adding 2 to each side of each inequality, which gives $-6 \leq x + 2$ and $x + 2 \leq 6$. Thus, $x + 2$ lies between −6 and 6, inclusive, and it follows that $|x + 2| \leq 6$.

The correct answer is E.

PS12450

120. Last year members of a certain professional organization for teachers consisted of teachers from 49 different school districts, with an average (arithmetic mean) of 9.8 schools per district. Last year the average number of teachers at these schools who were members of the organization was 22. Which of the following is closest to the total number of members of the organization last year?

(A) 10^7
(B) 10^6
(C) 10^5
(D) 10^4
(E) 10^3

Arithmetic Statistics

There are 49 school districts and an average of 9.8 schools per district, so the number of schools is $(49)(9.8) \approx (50)(10) = 500$. There are approximately 500 schools and an average of 22 teachers at each school, so the number of teachers is approximately $(500)(22) \approx (500)(20) = 10{,}000 = 10^4$.

The correct answer is D.

PS09294

121. Of all the students in a certain dormitory, $\frac{1}{2}$ are first-year students and the rest are second-year students. If $\frac{4}{5}$ of the first-year students have not declared a major and if the fraction of second-year students who have declared a major is 3 times the fraction of first-year students who have declared a major, what fraction of all the students in the dormitory are second-year students who have not declared a major?

(A) $\frac{1}{15}$
(B) $\frac{1}{5}$
(C) $\frac{4}{15}$
(D) $\frac{1}{3}$
(E) $\frac{2}{5}$

Arithmetic Applied problems

Consider the table below in which T represents the total number of students in the dormitory. Since $\frac{1}{2}$ of the students are first-year students and the rest are second-year students, it follows that $\frac{1}{2}$ of the students are second-year students, and so the totals for the first-year and second-year columns are both $0.5T$. Since $\frac{4}{5}$ of the first-year students have not declared a major, it follows that the middle entry in the first-year column is $\frac{4}{5}(0.5T) = 0.4T$ and the first entry in the first-year column is $0.5T - 0.4T = 0.1T$. Since the fraction of second-year students who have declared a major is 3 times the fraction of first-year students who have declared a major, it follows that the first entry in the second-year column is $3(0.1T) = 0.3T$ and the second entry in the second-year column is $0.5T - 0.3T = 0.2T$. Thus, the fraction of students that are second-year students who have not declared a major is $\frac{0.2T}{T} = 0.2 = \frac{1}{5}$.

	First-year	Second-year	Total
Declared major	$0.1T$	$0.3T$	$0.4T$
Not declared major	$0.4T$	$0.2T$	$0.6T$
Total	$0.5T$	$0.5T$	T

The correct answer is B.

PS09050

122. If the average (arithmetic mean) of x, y, and z is $7x$ and $x \neq 0$, what is the ratio of x to the sum of y and z?

(A) 1:21
(B) 1:20
(C) 1:6
(D) 6:1
(E) 20:1

Algebra Ratio and proportion

Given that the average of x, y, and z is $7x$, it follows that $\frac{x+y+z}{3} = 7x$, or $x + y + z = 21x$, or $y + z = 20x$. Dividing both sides of the last equation by $20(y + z)$ gives $\frac{1}{20} = \frac{x}{y+z}$, so the ratio of x to the sum of y and z is 1:20.

The correct answer is B.

PS05413

123. Jonah drove the first half of a 100-mile trip in x hours and the second half in y hours. Which of the following is equal to Jonah's average speed, in miles per hour, for the entire trip?

(A) $\frac{50}{x+y}$
(B) $\frac{100}{x+y}$
(C) $\frac{25}{x}+\frac{25}{y}$
(D) $\frac{50}{x}+\frac{50}{y}$
(E) $\frac{100}{x}+\frac{100}{y}$

Algebra Applied problems

Using average speed $= \frac{\text{total distance}}{\text{total time}}$, it follows that Jonah's average speed for his entire 100-mile trip is $\frac{100}{x+y}$.

The correct answer is B.

PS11454

124. In the xy-plane, the points (c,d), $(c,-d)$, and $(-c,-d)$ are three vertices of a certain square. If $c < 0$ and $d > 0$, which of the following points is in the same quadrant as the fourth vertex of the square?

(A) (–5,–3)
(B) (–5,3)
(C) (5,–3)
(D) (3,–5)
(E) (3,5)

Geometry Coordinate geometry

Because the points (c,d) and $(c,-d)$ lie on the same vertical line (the line with equation $x = c$), one side of the square has length $2d$ and is vertical. Therefore, the side of the square opposite this side has length $2d$, is vertical, and contains the vertex $(-c,-d)$. From this it follows that the remaining vertex is $(-c,d)$, because $(-c,d)$ lies on the same vertical line as $(-c,-d)$ (the line with equation $x = -c$) and these two vertices are a distance $2d$ apart. Because $c < 0$ and $d > 0$, the point $(-c,d)$ has positive x-coordinate and positive y-coordinate. Thus, the point $(-c,d)$ is in Quadrant I. Of the answer choices, only (3,5) is in Quadrant I.

The correct answer is E.

PS05470

125. If the amount of federal estate tax due on an estate valued at \$1.35 million is \$437,000 plus 43 percent of the value of the estate in excess of \$1.25 million, then the federal tax due is approximately what percent of the value of the estate?

A. 30%
B. 35%
C. 40%
D. 45%
E. 50%

Arithmetic Percents; Estimation

The amount of tax divided by the value of the estate is

$$\frac{[0.437 + (0.43)(1.35 - 1.25)]\ \cancel{\text{million}}}{1.35\ \cancel{\text{million}}} \quad \text{value as fraction}$$

$$= \frac{0.437 + (0.43)(0.1)}{1.35} \quad \text{arithmetic}$$

$$= \frac{0.48}{1.35} = \frac{48}{135} \quad \text{arithmetic}$$

By long division, $\frac{48}{135}$ is approximately 35.6, so the closest answer choice is 35%.

Alternatively, $\frac{48}{135}$ can be estimated by $\frac{48}{136} = \frac{6}{17} \approx \frac{6}{18} = \frac{1}{3} \approx 33\%$, so the closest answer choice is 35%. Note that $\frac{48}{135}$ is greater than $\frac{48}{136}$, and $\frac{6}{17}$ is greater than $\frac{6}{18}$, so the correct value is greater than 33%, which rules out 30% being the closest.

The correct answer is B.

PS05924

126. If $\frac{3}{10^4} = x\%$, then $x =$

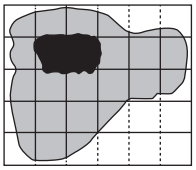
(A) 0.3
(B) 0.03
(C) 0.003
(D) 0.0003
(E) 0.00003

Arithmetic Percents

Given that $\frac{3}{10^4} = x\%$, and writing $x\%$ as $\frac{x}{100}$, it follows that $\frac{3}{10^4} = \frac{x}{100}$. Multiplying both sides by 100 gives $x = \frac{300}{10^4} = \frac{300}{10,000} = \frac{3}{100} = 0.03$.

The correct answer is B.

PS01285



127. What is the remainder when 3^{24} is divided by 5 ?

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

Arithmetic Properties of numbers

A pattern in the units digits of the numbers $3, 3^2 = 9, 3^3 = 27, 3^4 = 81, 3^5 = 243$, etc., can be found by observing that the units digit of a product of two integers is the same as the units digit of the product of the units digit of the two integers. For example, the units digit of $3^5 = 3 \times 3^4 = 3 \times 81$ is 3 since the units digit of 3×1 is 3, and the units digit of $3^6 = 3 \times 3^5 = 3 \times 243$ is 9 since the units digit of 3×3 is 9. From this it follows that the units digit of the powers of 3 follow the pattern 3, 9, 7, 1, 3, 9, 7, 1, etc., with a units digit of 1 for $3^4, 3^8, 3^{12}, \ldots, 3^{24}, \ldots$. Therefore, the units digit of 3^{24} is 1. Thus, 3^{24} is 1 more than a multiple of 10, and hence 3^{24} is 1 more than a multiple of 5, and so the remainder when 3^{24} is divided by 5 is 1.

The correct answer is B.

PS11692

128. In the figure shown, a square grid is superimposed on the map of a park, represented by the shaded region, in the middle of which is a pond, represented by the black region. If the area of the pond is 5,000 square yards, which of the following is closest to the area of the park, in square yards, including the area of the pond?

(A) 30,000
(B) 45,000
(C) 60,000
(D) 75,000
(E) 90,000

Geometry Estimation; Area

Let s be the side length, in yards, represented by each of the squares that form the square grid. By inspection, the map of the pond fills approximately 2 squares, so the area of the pond is approximately $2s^2$ yd^2. Since it is given that the area of the pond is 5,000 yd^2, it follows that $2s^2 = 5{,}000$, or $s^2 = 2{,}500$, or $s = 50$. The entire rectangular figure has a horizontal length of 6 squares, which represents 6(50 yd) = 300 yd, and a vertical length of 5 squares, which represents 5(50 yd) = 250 yd, so the area of the entire rectangular figure represents (300 yd)(250 yd) = 75,000 yd^2.

In the rectangular figure, less area is not shaded than is shaded, so to estimate the area represented by the shaded portion it will be easier to estimate the area represented by the portion that is not shaded and subtract this estimate from 75,000 yd^2, the area represented by the entire rectangular figure. By inspection, the area not shaded in the upper right corner represents approximately 2 squares, the area not shaded in the lower right corner represents approximately 6 squares, and the area not shaded on the left side represents approximately 2 squares. Thus, the area not shaded represents approximately (2 + 6 + 2) squares, or approximately 10 squares, or approximately 10(2,500 yd^2) = 25,000 yd^2. Therefore, the area of the park is approximately 75,000 yd^2 – 25,000 yd^2 = 50,000 yd^2, and of the values available, 45,000 is the closest.

The correct answer is B.

PS03623

129. If the volume of a ball is 32,490 cubic millimeters, what is the volume of the ball in cubic centimeters? (1 millimeter = 0.1 centimeter)

(A) 0.3249
(B) 3.249
(C) 32.49
(D) 324.9
(E) 3,249

Arithmetic Measurement conversion

Since 1 mm = 0.1 cm, it follows that 1 mm^3 = $(0.1)^3$ cm^3 = 0.001 cm^3. Therefore, 32,490 mm^3 = (32,490)(0.001) cm^3 = 32.49 cm^3.

The correct answer is C.

PS07058

130. David used part of $100,000 to purchase a house. Of the remaining portion, he invested $\frac{1}{3}$ of it at 4 percent simple annual interest and $\frac{2}{3}$ of it at 6 percent simple annual interest. If after a year the income from the two investments totaled $320, what was the purchase price of the house?

(A) $96,000
(B) $94,000
(C) $88,000
(D) $75,000
(E) $40,000

Algebra Applied problems; Percents

Let x be the amount, in dollars, that David used to purchase the house. Then David invested (100,000 – x) dollars, $\frac{1}{3}$ at 4% simple annual interest and $\frac{2}{3}$ at 6% simple annual interest. After one year the total interest, in dollars, on this investment was $\frac{1}{3}(100{,}000 - x)(0.04) + \frac{2}{3}(100{,}000 - x)(0.06) = 320$. Solve this equation to find the value of x.

$\frac{1}{3}(100{,}000 - x)(0.04) + \frac{2}{3}(100{,}000 - x)(0.06) = 320$ given

$(100{,}000 - x)(0.04) + 2(100{,}000 - x)(0.06) = 960$ multiply both sides by 3

$4{,}000 - 0.04x + 12{,}000 - 0.12x = 960$ distributive property

$16{,}000 - 0.16x = 960$ combine like terms

$16{,}000 - 960 = 0.16x$ add $0.16x - 960$ to both sides

$100{,}000 - 6{,}000 = x$ divide both sides by 0.16

$94{,}000 = x$

Therefore, the purchase price of the house was $94,000.

The correct answer is B.

PS09439

131. A certain manufacturer sells its product to stores in 113 different regions worldwide, with an average (arithmetic mean) of 181 stores per region. If last year these stores sold an average of 51,752 units of the manufacturer's product per store, which of the following is closest to the total number of units of the manufacturer's product sold worldwide last year?

(A) 10^6
(B) 10^7
(C) 10^8
(D) 10^9
(E) 10^{10}

Arithmetic Estimation

$$(113)(181)(51,752) \approx (100)(200)(50,000)$$
$$= 10^2 \times (2 \times 10^2) \times (5 \times 10^4)$$
$$= (2 \times 5) \times 10^{2+2+4}$$
$$= 10^1 \times 10^8 = 10^9$$

The correct answer is D.

PS17708

132. Andrew started saving at the beginning of the year and had saved $240 by the end of the year. He continued to save and by the end of 2 years had saved a total of $540. Which of the following is closest to the percent increase in the amount Andrew saved during the second year compared to the amount he saved during the first year?

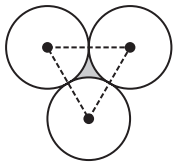
(A) 11%
(B) 25%
(C) 44%
(D) 56%
(E) 125%

Arithmetic Percents

Andrew saved $240 in the first year and $540 – $240 = $300 in the second year. The percent increase in the amount Andrew saved in the second year compared to the amount he saved in the first year is $\left(\frac{300-240}{240} \times 100\right)\% = \left(\frac{60}{240} \times 100\right)\% = \left(\frac{1}{4} \times 100\right)\% = 25\%$.

The correct answer is B.

PS19062



133. Two numbers differ by 2 and sum to S. Which of the following is the greater of the numbers in terms of S?

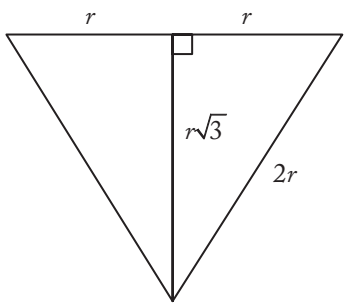
(A) $\frac{S}{2} - 1$
(B) $\frac{S}{2}$
(C) $\frac{S}{2} + \frac{1}{2}$
(D) $\frac{S}{2} + 1$
(E) $\frac{S}{2} + 2$

Algebra First-degree equations

Let x represent the greater of the two numbers that differ by 2. Then, $x - 2$ represents the lesser of the two numbers. The two numbers sum to S, so $x + (x - 2) = S$. It follows that $2x - 2 = S$, or $2x = S + 2$, or $x = \frac{S}{2} + 1$.

The correct answer is D.

PS00904



134. The figure shown above consists of three identical circles that are tangent to each other. If the area of the shaded region is $64\sqrt{3} - 32\pi$, what is the radius of each circle?

(A) 4
(B) 8
(C) 16
(D) 24
(E) 32

Geometry Circles; Triangles; Area

Let r represent the radius of each circle. Then the triangle shown dashed in the figure is equilateral with sides $2r$ units long. The interior of the triangle is comprised of the shaded region and three circular sectors. The area of the shaded region can be found as the area of the triangle minus the sum of the areas of the three sectors. Since the triangle is equilateral, its side lengths are in the proportions as shown in the diagram

below. The area of the interior of the triangle is $\frac{1}{2}(2r)\left(r\sqrt{3}\right) = r^2\sqrt{3}$.

Each of the three sectors has a central angle of 60° because the central angle is an angle of the equilateral triangle. Therefore, the area of each sector is $\frac{60}{360} = \frac{1}{6}$ of the area of the circle. The sum of the areas of the three sectors is then $3\left(\frac{1}{6}\pi r^2\right) = \frac{1}{2}\pi r^2$. Thus, the area of the shaded region is $r^2\sqrt{3} - \frac{1}{2}\pi r^2 = r^2\left(\sqrt{3} - \frac{1}{2}\pi\right)$. But, this area is given as $64\sqrt{3} - 32\pi = 64\left(\sqrt{3} - \frac{1}{2}\pi\right)$.

Thus $r^2 = 64$, and $r = 8$.

The correct answer is B.

PS02053

135. In a numerical table with 10 rows and 10 columns, each entry is either a 9 or a 10. If the number of 9s in the nth row is $n - 1$ for each n from 1 to 10, what is the average (arithmetic mean) of all the numbers in the table?

(A) 9.45
(B) 9.50
(C) 9.55
(D) 9.65
(E) 9.70

Arithmetic Operations with integers

There are (10)(10) = 100 entries in the table. In rows 1, 2, 3, …, 10, the number of 9s is 0, 1, 2, …, 9, respectively, giving a total of 0 + 1 + 2 + … + 9 = 45 entries with a 9. This leaves a total of 100 – 45 = 55 entries with a 10. Therefore, the sum of the 100 entries is 45(9) + 55(10) = 405 + 550 = 955, and the average of the 100 entries is $\frac{955}{100} = 9.55$

The correct answer is C.

PS08485

136. A positive integer n is a perfect number provided that the sum of all the positive factors of n, including 1 and n, is equal to $2n$. What is the sum of the reciprocals of all the positive factors of the perfect number 28 ?

(A) $\frac{1}{4}$
(B) $\frac{56}{27}$
(C) 2
(D) 3
(E) 4

Arithmetic Properties of numbers

The factors of 28 are 1, 2, 4, 7, 14, and 28. Therefore, the sum of the reciprocals of the factors of 28 is $\frac{1}{1} + \frac{1}{2} + \frac{1}{4} + \frac{1}{7} + \frac{1}{14} + \frac{1}{28} =$

$\frac{28}{28} + \frac{14}{28} + \frac{7}{28} + \frac{4}{28} + \frac{2}{28} + \frac{1}{28} =$

$\frac{28 + 14 + 7 + 4 + 2 + 1}{28} = \frac{56}{28} = 2.$

The correct answer is C.

PS11430

137. The infinite sequence $a_1, a_2, \ldots, a_n, \ldots$ is such that $a_1 = 2$, $a_2 = -3$, $a_3 = 5$, $a_4 = -1$, and $a_n = a_{n-4}$ for $n > 4$. What is the sum of the first 97 terms of the sequence?

(A) 72
(B) 74
(C) 75
(D) 78
(E) 80

Arithmetic Sequences and series

Because $a_n = a_{n-4}$ for $n > 4$, it follows that the terms of the sequence repeat in groups of 4 terms:

Values for n	Values for a_n
1, 2, 3, 4	2, –3, 5, –1
5, 6, 7, 8	2, –3, 5, –1
9, 10, 11, 12	2, –3, 5, –1
13, 14, 15, 16	2, –3, 5, –1

Thus, since $97 = 24(4) + 1$, the sum of the first 97 terms can be grouped into 24 groups of 4 terms each, with one remaining term, which allows the sum to be easily found:

$$(a_1 + a_2 + a_3 + a_4) + (a_5 + a_6 + a_7 + a_8) + \ldots + (a_{93} + a_{94} + a_{95} + a_{96}) + a_{97}$$

$$= (2 - 3 + 5 - 1) + (2 - 3 + 5 - 1) + \ldots + (2 - 3 + 5 - 1) + 2$$

$$= 24(2 - 3 + 5 - 1) + 2 = 24(3) + 2 = 74$$

The correct answer is B.

PS09901

138. The sequence $a_1, a_2, \ldots, a_n, \ldots$ is such that $a_n = 2a_{n-1} - x$ for all positive integers $n \geq 2$ and for a certain number x. If $a_5 = 99$ and $a_3 = 27$, what is the value of x ?

(A) 3
(B) 9
(C) 18
(D) 36
(E) 45

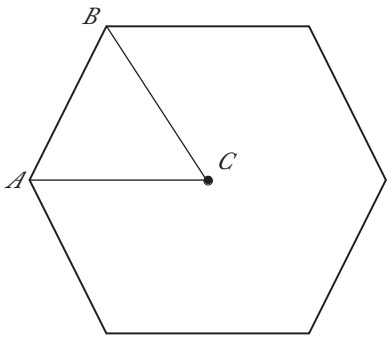
Algebra Sequences and series

An expression for a_5 that involves x can be obtained using $a_3 = 27$ and applying the equation $a_n = 2a_{n-1} - x$ twice, once for $n = 4$ and once for $n = 5$.

$a_4 = 2a_3 - x$	using $a_n = 2a_{n-1} - x$ for $n = 4$
$= 2(27) - x$	using $a_3 = 27$
$a_5 = 2a_4 - x$	using $a_n = 2a_{n-1} - x$ for $n = 5$
$= 2[2(27) - x] - x$	using $a_4 = 2(27) - x$
$= 4(27) - 3x$	combine like terms

Therefore, using $a_5 = 99$, we have

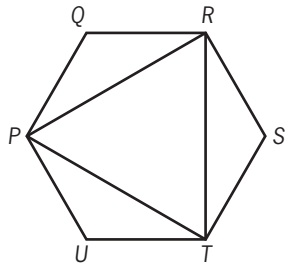
$99 = 4(27) - 3x$	given
$3x = 4(27) - 99$	adding $(3x - 99)$ to both sides
$x = 4(9) - 33$	dividing both sides by 3
$x = 3$	arithmetic



The correct answer is A.

PS03779

139. A window is in the shape of a regular hexagon with each side of length 80 centimeters. If a diagonal through the center of the hexagon is w centimeters long, then $w =$



(A) 80
(B) 120
(C) 150
(D) 160
(E) 240

Geometry Polygons

Let A and B be the endpoints of one of the sides of the hexagon and let C be the center of the hexagon. Then the degree measure of $\angle ACB$ is $\frac{360}{6} = 60$ and the sum of the degree measures of $\angle ABC$ and $\angle BAC$ is $180 - 60 = 120$. Also, since $AC = BC$, the degree measures of $\angle ABC$ and $\angle BAC$ are equal. Therefore, the degree measure of each of $\angle ABC$ and $\angle BAC$ is 60. Thus, ΔABC is an equilateral triangle with side length $AB = 80$. It follows that the length of a diagonal through the center of the hexagon is $2(AC) = 2(80) = 160$.

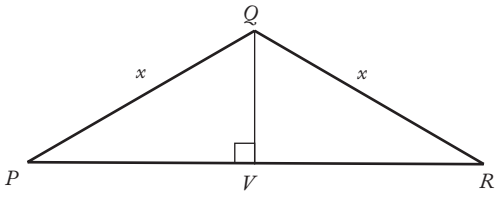
The correct answer is D.

PS03695

140. In the figure shown, *PQRSTU* is a regular polygon with sides of length *x*. What is the perimeter of triangle *PRT* in terms of *x*?

(A) $\frac{x\sqrt{3}}{2}$

(B) $x\sqrt{3}$



(C) $\frac{3x\sqrt{3}}{2}$

(D) $3x\sqrt{3}$

(E) $4x\sqrt{3}$

Geometry Polygons

Since *PQRSTU* is a regular hexagon, ΔPQR, ΔRST, and ΔTUP are the same size and shape, so $PR = RT = TP$ and the perimeter of ΔPRT is $3(PR)$. Note that in the figure above, *PQRSTU* is partitioned into four triangles. The sum of the degree measures of the interior angles of each triangle is 180°. The total of the degree measures of the interior angles of these four triangles is equal to the sum of the degree measures of the six interior angles of *PQRSTU*. Since *PQRSTU* is a regular hexagon, each of $\angle UPQ$, $\angle PQR$, $\angle QRS$, $\angle RST$, $\angle STU$, and $\angle TUP$ has the same measure, which is $\frac{(4)(180°)}{6} = 120°$.

In the figure above, ΔPQR is isosceles with $PQ = QR = x$. The measure of $\angle PQR$ is 120°, and the measure of $\angle P$ = the measure of $\angle R = \frac{180° - 120°}{2} = 30°$. $\overline{QV}$ is perpendicular to $\overline{PR}$ and $PV = VR$. Since ΔPVQ is a 30°–60°–90° triangle, its side lengths are in the ratio $1:\sqrt{3}:2$, and so $PV = \frac{x\sqrt{3}}{2}$ and $PR = x\sqrt{3}$. Therefore, the perimeter of ΔPRT is $3(x\sqrt{3}) = 3x\sqrt{3}$.

The correct answer is D.

PS11755

141. In a certain medical survey, 45 percent of the people surveyed had the type A antigen in their blood and 3 percent had both the type A antigen and the type B antigen. Which of the following is closest to the percent of those with the type A antigen who also had the type B antigen?

(A) 1.35%

(B) 6.67%

(C) 13.50%

(D) 15.00%

(E) 42.00%

Arithmetic Applied problems; Percents

Let *n* be the total number of people surveyed. Then, the proportion of the people who had type A who also had type B is $\frac{(3\%)n}{(45\%)n} = \frac{3}{45} = \frac{1}{15}$, which as a percent is approximately 6.67%. Note that by using $\frac{1}{15} = \frac{1}{3} \times \frac{1}{5}$, which equals $\frac{1}{3}$ of 20%, we can avoid dividing by a 2-digit integer.

The correct answer is B.

PS05146

142. On a certain transatlantic crossing, 20 percent of a ship's passengers held round-trip tickets and also took their cars aboard the ship. If 60 percent of the passengers with round-trip tickets did not take their cars aboard the ship, what percent of the ship's passengers held round-trip tickets?

(A) $33\frac{1}{3}\%$

(B) 40%

(C) 50%

(D) 60%

(E) $66\frac{2}{3}\%$

Arithmetic Percents

Since the number of passengers on the ship is immaterial, let the number of passengers on the ship be 100 for convenience. Let x be the number of passengers that held round-trip tickets. Then, since 20 percent of the passengers held a round-trip ticket and took their cars aboard the ship, $0.20(100) = 20$ passengers held round-trip tickets and took their cars aboard the ship. The remaining passengers with round-trip tickets did not take their cars aboard, and they represent $0.6x$ (that is, 60 percent of the passengers with round-trip tickets). Thus $0.6x + 20 = x$, from which it follows that $20 = 0.4x$, and so $x = 50$. The percent of passengers with round-trip tickets is, then,

$\frac{50}{100} = 50\%$.

The correct answer is C.

PS03696

143. If x and k are integers and $(12^x)(4^{2x+1}) = (2^k)(3^2)$, what is the value of k?

(A) 5
(B) 7
(C) 10
(D) 12
(E) 14

Arithmetic Exponents

Rewrite the expression on the left so that it is a product of powers of 2 and 3.

$$(12^x)(4^{2x+1}) = [(3\cdot 2^2)^x][(2^2)^{2x+1}]$$
$$= (3^x)[(2^2)^x][2^{2(2x+1)}]$$
$$= (3^x)(2^{2x})(2^{4x+2})$$
$$= (3^x)(2^{6x+2})$$

Then, since $(12^x)(4^{2x+1}) = (2^k)(3^2)$, it follows that $(3^x)(2^{6x+2}) = (2^k)(3^2) = (3^2)(2^k)$, so $x = 2$ and $k = 6x + 2$. Substituting 2 for x gives $k = 6(2) + 2 = 14$.

The correct answer is E.

PS11024

144. If S is the sum of the reciprocals of the 10 consecutive integers from 21 to 30, then S is between which of the following two fractions?

(A) $\frac{1}{3}$ and $\frac{1}{2}$
(B) $\frac{1}{4}$ and $\frac{1}{3}$
(C) $\frac{1}{5}$ and $\frac{1}{4}$
(D) $\frac{1}{6}$ and $\frac{1}{5}$
(E) $\frac{1}{7}$ and $\frac{1}{6}$

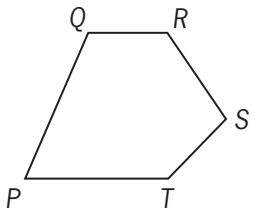
Arithmetic Estimation

The value of $\frac{1}{21} + \frac{1}{22} + \frac{1}{23} + \ldots + \frac{1}{30}$ is LESS than $\frac{1}{20} + \frac{1}{20} + \frac{1}{20} + \ldots + \frac{1}{20}$ (10 numbers added), which equals $10\left(\frac{1}{20}\right) = \frac{1}{2}$, and GREATER than $\frac{1}{30} + \frac{1}{30} + \frac{1}{30} + \ldots + \frac{1}{30}$ (10 numbers added), which equals $10\left(\frac{1}{30}\right) = \frac{1}{3}$. Therefore, the value of $\frac{1}{21} + \frac{1}{22} + \frac{1}{23} + \ldots + \frac{1}{30}$ is between $\frac{1}{3}$ and $\frac{1}{2}$.

The correct answer is A.

PS08729

145. For every even positive integer m, $f(m)$ represents the product of all even integers from 2 to m, inclusive. For example, $f(12) = 2 \times 4 \times 6 \times 8 \times 10 \times 12$. What is the greatest prime factor of $f(24)$?



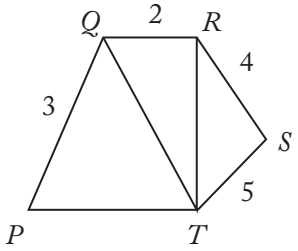
(A) 23
(B) 19
(C) 17
(D) 13
(E) 11

Arithmetic Properties of numbers

Rewriting $f(24) = 2 \times 4 \times 6 \times 8 \times 10 \times 12 \times 14 \times \ldots \times 20 \times 22 \times 24$ as $2 \times 4 \times 2(3) \times 8 \times 2(5) \times 12 \times 2(7) \times \ldots \times 20 \times 2(11) \times 24$ shows that all of the prime numbers from 2 through 11 are factors of $f(24)$. The next prime number is 13, but 13 is

not a factor of $f(24)$ because none of the even integers from 2 through 24 has 13 as a factor. Therefore, the largest prime factor of $f(24)$ is 11.

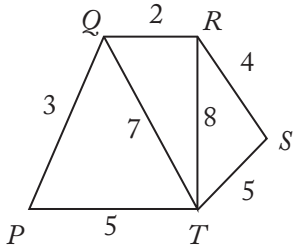
The correct answer is E.



Note: Not drawn to scale.

PS08572

146. In pentagon $PQRST$, $PQ = 3$, $QR = 2$, $RS = 4$, and $ST = 5$. Which of the lengths 5, 10, and 15 could be the value of PT?



(A) 5 only
(B) 15 only
(C) 5 and 10 only
(D) 10 and 15 only
(E) 5, 10, and 15

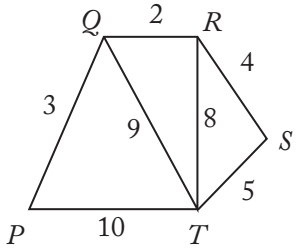
Geometry Polygons; Triangles

Note: Not drawn to scale.

In the figure above, diagonals $\overline{TQ}$ and $\overline{TR}$ have been drawn in to show ΔTRS and ΔTRQ. Because the length of any side of a triangle must be less than the sum of the lengths of the other two sides, $RT < 5 + 4 = 9$ in ΔTRS, and $QT < RT + 2$ in ΔTRQ. Since $RT < 9$, then $RT + 2 < 9 + 2 = 11$, which then implies $QT < 11$. Now, $PT < QT + 3$ in ΔTQP, and since $QT < 11$, $QT + 3 < 11 + 3 = 14$. It follows that $PT < 14$. Therefore, 15 cannot be the length of $\overline{PT}$ since $15 \not< 14$.

Note: Not drawn to scale.

To show that 5 can be the length of $\overline{PT}$, consider the figure above. For ΔTQP, the length of any side is less than the sum of the lengths of the other two sides as shown below.



$$QT = 7 < 8 = 5 + 3 = PT + PQ$$
$$PQ = 3 < 12 = 5 + 7 = PT + TQ$$
$$PT = 5 < 10 = 3 + 7 = PQ + TQ$$

For ΔRQT, the length of any side is less than the sum of the lengths of the other two sides as shown below.

$$RT = 8 < 9 = 7 + 2 = QT + QR$$
$$RQ = 2 < 15 = 7 + 8 = QT + RT$$
$$QT = 7 < 10 = 2 + 8 = QR + RT$$

For ΔRST, the length of any side is less than the sum of the lengths of the other two sides as shown below.

$$RS = 4 < 13 = 8 + 5 = TR + TS$$
$$RT = 8 < 9 = 5 + 4 = ST + SR$$
$$ST = 5 < 12 = 8 + 4 = TR + RS$$

Note: Not drawn to scale.

To show that 10 can be the length of $\overline{PT}$, consider the figure above. For ΔTQP, the length of any side is less than the sum of the lengths of the other two sides as shown below.

$$QT = 9 < 13 = 10 + 3 = PT + PQ$$
$$PQ = 3 < 19 = 10 + 9 = PT + TQ$$
$$PT = 10 < 12 = 3 + 9 = PQ + TQ$$

For ΔRQT, the length of any side is less than the sum of the lengths of the other two sides as shown below.

$$RT = 8 < 11 = 9 + 2 = QT + QR$$
$$RQ = 2 < 17 = 9 + 8 = QT + RT$$
$$QT = 9 < 10 = 2 + 8 = QT + RT$$

For ΔRST, the length of any side is less than the sum of the lengths of the other two sides as shown below.

$$RS = 4 < 13 = 8 + 5 = TR + TS$$
$$RT = 8 < 9 = 5 + 4 = ST + SR$$
$$ST = 5 < 12 = 8 + 4 = TR + RS$$

Therefore, 5 and 10 can be the length of $\overline{PT}$, and 15 cannot be the length of $\overline{PT}$.

The correct answer is C.

3, k, 2, 8, m, 3

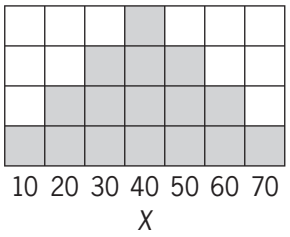
PS07771

147. The arithmetic mean of the list of numbers above is 4. If k and m are integers and $k \neq m$ what is the median of the list?

(A) 2
(B) 2.5
(C) 3
(D) 3.5
(E) 4

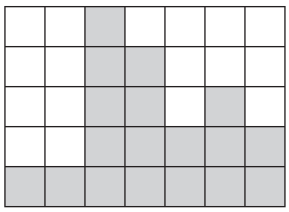
Arithmetic Statistics

Since the arithmetic mean $= \dfrac{\text{sum of values}}{\text{number of values}}$, then $\dfrac{3+k+2+8+m+3}{6} = 4$, and so $\dfrac{16+k+m}{6} = 4$, $16 + k + m = 24$, $k + m = 8$. Since $k \neq m$, then either $k < 4$ and $m > 4$ or $k > 4$ and $m < 4$. Because k and m are integers, either $k \leq 3$ and $m \geq 5$ or $k \geq 5$ and $m \leq 3$.



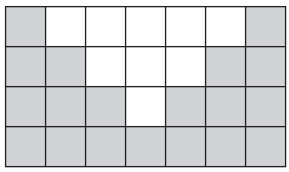
Case (i): If $k \leq 2$, then $m \geq 6$ and the six integers in ascending order are k, 2, 3, 3, m, 8 or k, 2, 3, 3, 8, m. The two middle integers are both 3 so the median is $\dfrac{3+3}{2} = 3$.

Case (ii): If $k = 3$, then $m = 5$ and the six integers in ascending order are 2, k, 3, 3, m, 8. The two middle integers are both 3 so the median is $\dfrac{3+3}{2} = 3$.



Case (iii): If $k = 5$, then $m = 3$ and the six integers in ascending order are 2, m, 3, 3, k, 8. The two middle integers are both 3 so the median is $\dfrac{3+3}{2} = 3$.

Case (iv): If $k \geq 6$, then $m \leq 2$ and the six integers in ascending order are m, 2, 3, 3, k, 8 or m, 2, 3, 3, 8, k. The two middle integers are both 3 so the median is $\dfrac{3+3}{2} = 3$.



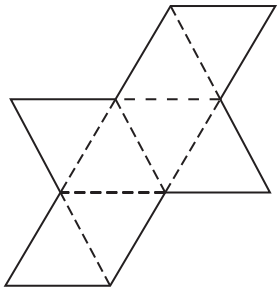
The correct answer is C.

X

Y

Z

PS04987



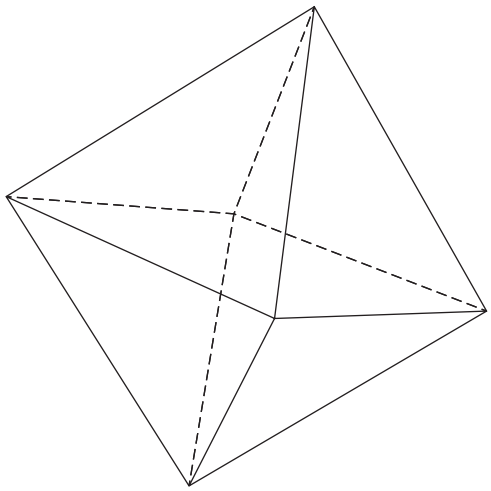
148. If the variables X, Y, and Z take on only the values 10, 20, 30, 40, 50, 60, or 70 with frequencies indicated by the shaded regions above, for which of the frequency distributions is the mean equal to the median?

(A) X only
(B) Y only
(C) Z only
(D) X and Y
(E) X and Z

Arithmetic Statistics

The frequency distributions for both X and Z are symmetric about 40, and thus both X and Z have mean = median = 40. Therefore, any answer choice that does not include both X and Z can be eliminated. This leaves only answer choice E.

The correct answer is E.



PS15538

149. When the figure above is cut along the solid lines, folded along the dashed lines, and taped along the solid lines, the result is a model of a geometric solid. This geometric solid consists of 2 pyramids, each with a square base that they share. What is the sum of the number of edges and the number of faces of this geometric solid?

(A) 10
(B) 18
(C) 20
(D) 24
(E) 25

Geometry Solids

A geometric solid consisting of 2 pyramids, each with a square base that they share, is shown in the figure above. From the figure it can be seen that the solid has 12 edges and 8 faces. Therefore, the sum of the number of edges and the number of faces of the solid is 12 + 8 = 20.

Alternatively, the solid has 7 + 5 = 12 edges because each edge in the solid is generated from either a dashed segment (there are 7 dashed segments) or from a pair of solid segments taped together (there are $\frac{10}{2} = 5$ such pairs of solid segments), and the solid has 8 faces because there are 8 small triangles in the given figure. Therefore, the sum of the number of edges and the number of faces of the solid is 12 + 8 = 20.

The correct answer is C.

$$2x + y = 12$$
$$|y| \le 12$$

PS03356

150. For how many ordered pairs (x,y) that are solutions of the system above are x and y both integers?

(A) 7
(B) 10
(C) 12
(D) 13
(E) 14

Algebra Absolute value

From $|y| \le 12$, if y must be an integer, then y must be in the set $S = \{\pm 12, \pm 11, \pm 10, \ldots, \pm 3, \pm 2, \pm 1, 0\}$.

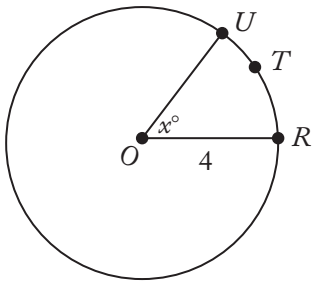
Since $2x + y = 12$, then $x = \frac{12 - y}{2}$. If x must be an integer, then $12 - y$ must be divisible by 2; that is, $12 - y$ must be even. Since 12 is even, $12 - y$ is even if and only if y is even. This eliminates all odd integers from S, leaving only the even integers $\pm 12, \pm 10, \pm 8, \pm 6, \pm 4, \pm 2$, and 0. Thus, there are 13 possible integer y-values, each with a corresponding integer x-value and, therefore, there are 13 ordered pairs (x,y), where x and y are both integers, that solve the system.

The correct answer is D.

PS08859

151. The points R, T, and U lie on a circle that has radius 4. If the length of arc RTU is $\frac{4\pi}{3}$ what is the length of line segment RU?

(A) $\frac{4}{3}$



(B) $\frac{8}{3}$

(C) 3

(D) 4

(E) 6

Geometry Circles; Triangles; Circumference

In the figure above, O is the center of the circle that contains R, T, and U and x is the degree measure of $\angle ROU$. Since the circumference of the circle is $2\pi(4) = 8\pi$ and there are 360° in the circle, the ratio of the length of arc RTU to the circumference of the circle is the same as the ratio of x to 360. Therefore, $\frac{\frac{4\pi}{3}}{8\pi} = \frac{x}{360}$. Then $x = \frac{\frac{4\pi}{3}(360)}{8\pi} = \frac{480\pi}{8\pi} = 60$. This means that ΔROU is an isosceles triangle with side lengths $OR = OU = 4$ and vertex angle measuring 60°. The base angles of ΔROU must have equal measures and the sum of their measures must be $180° - 60° = 120°$. Therefore, each base angle measures 60°, ΔROU is equilateral, and $RU = 4$.

The correct answer is D.

PS02955

152. A certain university will select 1 of 7 candidates eligible to fill a position in the mathematics department and 2 of 10 candidates eligible to fill 2 identical positions in the computer science department. If none of the candidates is eligible for a position in both departments, how many different sets of 3 candidates are there to fill the 3 positions?

(A) 42

(B) 70

(C) 140

(D) 165

(E) 315

Arithmetic Elementary combinatorics

To fill the position in the math department, 1 candidate will be selected from a group of 7 eligible candidates, and so there are 7 sets of 1 candidate each to fill the position in the math department. To fill the positions in the computer science department, any one of the 10 eligible candidates can be chosen for the first position and any of the remaining 9 eligible candidates can be chosen for the second position, making a total of $10 \times 9 = 90$ sets of 2 candidates to fill the computer science positions. But, this number includes the set in which Candidate A was chosen to fill the first position and Candidate B was chosen to fill the second position as well as the set in which Candidate B was chosen for the first position and Candidate A was chosen for the second position. These sets are not different essentially since the positions are identical and in both sets Candidates A and B are chosen to fill the 2 positions. Therefore, there are $\frac{90}{2} = 45$ sets of 2 candidates to fill the computer science positions. Then, using the multiplication principle, there are $7 \times 45 = 315$ different sets of 3 candidates to fill the 3 positions.

The correct answer is E.

PS06189

153. A survey of employers found that during 1993 employment costs rose 3.5 percent, where employment costs consist of salary costs and fringe-benefit costs. If salary costs rose 3 percent and fringe-benefit costs rose 5.5 percent during 1993, then fringe-benefit costs represented what percent of employment costs at the beginning of 1993 ?

(A) 16.5%
(B) 20%
(C) 35%
(D) 55%
(E) 65%

Algebra; Arithmetic First-degree equations; Percents

Let E represent employment costs, S represent salary costs, and F represent fringe-benefit costs. Then $E = S + F$. An increase of 3 percent in salary costs and a 5.5 percent increase in fringe-benefit costs resulted in a 3.5 percent increase in employment costs. Therefore $1.03S + 1.055F = 1.035E$. But, $E = S + F$, so $1.03S + 1.055F = 1.035(S + F) = 1.035S + 1.035F$.

Combining like terms gives $(1.055 - 1.035)F = (1.035 - 1.03)S$ or $0.02F = 0.005S$. Then, $S = \frac{0.02}{0.005}F = 4F$. Thus, since $E = S + F$, it follows that $E = 4F + F = 5F$. Then, F as a percent of E is $\frac{F}{E} = \frac{F}{5F} = \frac{1}{5} = 20\%$.

The correct answer is B.

PS02528

154. The subsets of the set {w, x, y} are {w}, {x}, {y}, {w, x}, {w, y}, {x, y}, {w, x, y}, and { } (the empty subset). How many subsets of the set {w, x, y, z} contain w ?

(A) Four
(B) Five
(C) Seven
(D) Eight
(E) Sixteen

Arithmetic Sets

As shown in the table, the subsets of $\{w, x, y, z\}$ can be organized into two columns, those subsets of $\{w, x, y, z\}$ that do not contain w (left column) and the corresponding subsets of $\{w, x, y, z\}$ that contain w (right column), and each of these collections has the same number of sets. Therefore, there are 8 subsets of $\{w, x, y, z\}$ that contain w.

subsets not containing w	subsets containing w
$\{\ \}$	$\{w\}$
$\{x\}$	$\{w, x\}$
$\{y\}$	$\{w, y\}$
$\{z\}$	$\{w, z\}$
$\{x, y\}$	$\{w, x, y\}$
$\{x, z\}$	$\{w, x, z\}$
$\{y, z\}$	$\{w, y, z\}$
$\{x, y, z\}$	$\{w, x, y, z\}$

The correct answer is D.

PS10309

155. There are 5 cars to be displayed in 5 parking spaces, with all the cars facing the same direction. Of the 5 cars, 3 are red, 1 is blue, and 1 is yellow. If the cars are identical except for color, how many different display arrangements of the 5 cars are possible?

(A) 20
(B) 25
(C) 40
(D) 60
(E) 125

Arithmetic Elementary combinatorics

There are 5 parking spaces from which 3 must be chosen to display the 3 identical red cars. Thus, there are $\binom{5}{3} = \frac{5!}{3!2!} = 10$ different arrangements of the 3 identical red cars in the parking spaces. There are 2 spaces remaining for displaying the single blue car and 1 space left for displaying the single yellow car. Therefore, there are $(10)(2)(1) = 20$ arrangements possible for displaying the 5 cars in the 5 parking spaces.

The correct answer is A.

PS17461

156. The number $\sqrt{63-36\sqrt{3}}$ can be expressed as $x+y\sqrt{3}$ for some integers x and y. What is the value of xy?

(A) –18
(B) –6
(C) 6
(D) 18
(E) 27

Algebra Operations on radical expressions

Squaring both sides of $\sqrt{63-36\sqrt{3}} = x + y\sqrt{3}$ gives $63 - 36\sqrt{3} = x^2 + 2xy\sqrt{3} + 3y^2 = (x^2 + 3y^2) + (2xy)\sqrt{3}$, which implies that $-36 = 2xy$, or $xy = -18$. Indeed, if $-36 \neq 2xy$, or equivalently, if $36 + 2xy \neq 0$, then we could write $\sqrt{3}$ as a quotient of the two integers $63 - x^2 - 3y^2$ and $36 + 2xy$, which is not possible because $\sqrt{3}$ is an irrational number. To be more explicit, $63 - 36\sqrt{3} = x^2 + 2xy\sqrt{3} + 3y^2$ implies $63 - x^2 - 3y^2 = (36 + 2xy)\sqrt{3}$, and if $36 + 2xy \neq 0$, then we could divide both sides of the equation $63 - x^2 - 3y^2 = (36 + 2xy)\sqrt{3}$ by $36 + 2xy$ to get $\frac{63 - x^2 - 3y^2}{36 + 2xy} = \sqrt{3}$.

The correct answer is A.

PS01334

157. There are 10 books on a shelf, of which 4 are paperbacks and 6 are hardbacks. How many possible selections of 5 books from the shelf contain at least one paperback and at least one hardback?

(A) 75
(B) 120
(C) 210
(D) 246
(E) 252

Arithmetic Elementary combinatorics

The number of selections of 5 books containing at least one paperback and at least one hardback is equal to $T - N$, where T is the total number of selections of 5 books and N is the number of selections that do not contain both a paperback and a hardback. The value of T is

$$\binom{10}{5} = \frac{10!}{5!(10-5)!} = \frac{(6)(7)(8)(9)(10)}{(1)(2)(3)(4)(5)}$$

$$= (7)(2)(9)(2) = 252.$$

To find the value of N, first note that no selection of 5 books can contain all paperbacks, since there are only 4 paperback books. Thus, the value of N is equal to the number of selections of 5 books that contain all hardbacks, which is equal to 6 since there are 6 ways that a single hardback can be left out when choosing the 5 hardback books. It follows that the number of selections of 5 books containing at least one paperback and at least one hardback is $T - N = 252 - 6 = 246$.

The correct answer is D.

PS03774

158. If x is to be chosen at random from the set {1, 2, 3, 4} and y is to be chosen at random from the set {5, 6, 7}, what is the probability that xy will be even?

(A) $\frac{1}{6}$
(B) $\frac{1}{3}$
(C) $\frac{1}{2}$
(D) $\frac{2}{3}$
(E) $\frac{5}{6}$

Arithmetic; Algebra Probability; Concepts of sets

By the principle of multiplication, since there are 4 elements in the first set and 3 elements in the second set, there are (4)(3) = 12 possible products of xy, where x is chosen from the first set and y is chosen from the second set. These products will be even EXCEPT when both x and y are odd. Since there are 2 odd numbers in the first set and 2 odd numbers in the second set, there are (2)(2) = 4 products of x and y that are odd. This means that the remaining $12 - 4 = 8$ products are even. Thus, the probability that xy is even is $\frac{8}{12} = \frac{2}{3}$.

The correct answer is D.

PS04254

159. The function f is defined for each positive three-digit integer n by $f(n) = 2^x 3^y 5^z$, where x, y, and z are the hundreds, tens, and units digits of n, respectively. If m and v are three-digit positive integers such that $f(m) = 9f(v)$, then $m - v =$

(A) 8
(B) 9
(C) 18
(D) 20
(E) 80

Algebra Place value

Let the hundreds, tens, and units digits of m be A, B, and C, respectively; and let the hundreds, tens, and units digits of v be a, b, and c, respectively. From $f(m) = 9f(v)$ it follows that $2^A3^B5^C = 9(2^a3^b5^c) = 3^2(2^a3^b5^c) = 2^a3^{b+2}5^c$. Therefore, $A = a$, $B = b + 2$, and $C = c$. Now calculate $m - v$.

$m - v =$	$(100A + 10B + C)$ $- (100a + 10b + c)$	place value property
$=$	$(100a + 10(b + 2) + c)$ $- (100a + 10b + c)$	obtained above
$=$	$10(b + 2) - 10b$	combine like terms
$=$	$10b + 20 - 10b$	distributive property
$=$	20	combine like terms

The correct answer is D.

PS06312

160. If $10^{50} - 74$ is written as an integer in base 10 notation, what is the sum of the digits in that integer?

(A) 424
(B) 433
(C) 440
(D) 449
(E) 467

Arithmetic Properties of numbers

$10^2 - 74$	=	$100 - 74$	=	26
$10^3 - 74$	=	$1{,}000 - 74$	=	926
$10^4 - 74$	=	$10{,}000 - 74$	=	9,926
$10^5 - 74$	=	$100{,}000 - 74$	=	99,926
$10^6 - 74$	=	$1{,}000{,}000 - 74$	=	999,926

From the table above it is clear that $10^{50} - 74$ in base 10 notation will be 48 digits of 9 followed by the digits 2 and 6. Therefore, the sum of the digits of $10^{50} - 74$ is equal to $48(9) + 2 + 6 = 440$.

The correct answer is C.

PS09056

161. A certain company that sells only cars and trucks reported that revenues from car sales in 1997 were down 11 percent from 1996 and revenues from truck sales in 1997 were up 7 percent from 1996. If total revenues from car sales and truck sales in 1997 were up 1 percent from 1996, what is the ratio of revenue from car sales in 1996 to revenue from truck sales in 1996 ?

(A) 1:2
(B) 4:5
(C) 1:1
(D) 3:2
(E) 5:3

Algebra; Arithmetic First-degree equations; Percents

Let C_{96} and C_{97} represent revenues from car sales in 1996 and 1997, respectively, and let T_{96} and T_{97} represent revenues from truck sales in 1996 and 1997, respectively. A decrease of 11 percent in revenue from car sales from 1996 to 1997 can be represented as $(1 - 0.11)C_{96} = C_{97}$, and a 7 percent increase in revenue from truck sales from 1996 to 1997 can be represented as $(1 + 0.07)T_{96} = T_{97}$. An overall increase of 1 percent in revenue from car and truck sales from 1996 to 1997 can be represented as $C_{97} + T_{97} = (1 + 0.01)(C_{96} + T_{96})$. Then, by substitution of expressions for C_{97} and T_{97} that were derived above, $(1 - 0.11)C_{96} + (1 + 0.07)T_{96} = (1 + 0.01)(C_{96} + T_{96})$ and so $0.89C_{96} + 1.07T_{96} = 1.01(C_{96} + T_{96})$ or $0.89C_{96} + 1.07T_{96} = 1.01C_{96} + 1.01T_{96}$. Then, combining like terms gives $(1.07 - 1.01)T_{96} = (1.01 - 0.89)C_{96}$ or

$0.06T_{96} = 0.12C_{96}$. Thus $\frac{C_{96}}{T_{96}} = \frac{0.06}{0.12} = \frac{1}{2}$. The ratio of revenue from car sales in 1996 to revenue from truck sales in 1996 is 1:2.

The correct answer is A.

PS14267

162. Becky rented a power tool from a rental shop. The rent for the tool was $12 for the first hour and $3 for each additional hour. If Becky paid a total of $27, excluding sales tax, to rent the tool, for how many hours did she rent it?

(A) 5
(B) 6
(C) 9
(D) 10
(E) 12

Arithmetic Applied problems

Becky paid a total of $27 to rent the power tool. She paid $12 to rent the tool for the first hour and $27 – $12 = $15 to rent the tool for the additional hours at the rate of $3 per additional hour. It follows that she rented the tool for $\frac{15}{3} = 5$ additional hours and a total of $1 + 5 = 6$ hours.

The correct answer is B.

PS06959

163. If $4 < \frac{7 - x}{3}$, which of the following must be true?

I. $5 < x$
II. $|x + 3| > 2$
III. $-(x + 5)$ is positive.

(A) II only
(B) III only
(C) I and II only
(D) II and III only
(E) I, II, and III

Algebra Inequalities

Given that $4 < \frac{7 - x}{3}$, it follows that $12 < 7 - x$. Then, $5 < -x$ or, equivalently, $x < -5$.

I. If $4 < \frac{7 - x}{3}$, then $x < -5$. If $5 < x$ were true then, by combining $5 < x$ and $x < -5$, it would follow that $5 < -5$, which cannot be true. Therefore, it is not the case that, if $4 < \frac{7 - x}{3}$, then Statement I must be true. In fact, Statement I is never true.

II. If $4 < \frac{7 - x}{3}$, then $x < -5$, and it follows that $x + 3 < -2$. Since $-2 < 0$, then $x + 3 < 0$ and $|x + 3| = -(x + 3)$. If $x + 3 < -2$, then $-(x + 3) > 2$ and by substitution, $|x + 3| > 2$. Therefore, Statement II must be true for every value of x such that $x < -5$. Therefore, Statement II must be true if $4 < \frac{7 - x}{3}$.

III. If $4 < \frac{7 - x}{3}$, then $x < -5$ and $x + 5 < 0$. But if $x + 5 < 0$, then it follows that $-(x + 5) > 0$ and so $-(x + 5)$ is positive. Therefore Statement III must be true if $4 < \frac{7 - x}{3}$.

The correct answer is D.

PS08654

164. A certain right triangle has sides of length x, y, and z, where $x < y < z$. If the area of this triangular region is 1, which of the following indicates all of the possible values of y?

(A) $y > \sqrt{2}$
(B) $\frac{\sqrt{3}}{2} < y < \sqrt{2}$
(C) $\frac{\sqrt{2}}{3} < y < \frac{\sqrt{3}}{2}$
(D) $\frac{\sqrt{3}}{4} < y < \frac{\sqrt{2}}{3}$
(E) $y < \frac{\sqrt{3}}{4}$

Geometry; Algebra Triangles; Area; Inequalities

Since x, y, and z are the side lengths of a right triangle and $x < y < z$, it follows that x and y are the lengths of the legs of the triangle and so the area of the triangle is $\frac{1}{2}xy$. But, it is given that the area is 1 and so $\frac{1}{2}xy = 1$. Then, $xy = 2$ and $y = \frac{2}{x}$. Under the assumption that x, y, and z are all positive since they are the side lengths of a triangle, $x < y$ implies $\frac{1}{x} > \frac{1}{y}$ and then $\frac{2}{x} > \frac{2}{y}$. But, $y = \frac{2}{x}$, so by substitution, $y > \frac{2}{y}$, which implies that $y^2 > 2$ since y is positive. Thus, $y > \sqrt{2}$.

Alternatively, if $x < \sqrt{2}$ and $y < \sqrt{2}$ then $xy < 2$. If $x > \sqrt{2}$ and $y > \sqrt{2}$, then $xy > 2$. But, $xy = 2$ so one of x or y must be less than $\sqrt{2}$ and the other must be greater than $\sqrt{2}$. Since $x < y$, it follows that $x < \sqrt{2} < y$ and $y > \sqrt{2}$.

The correct answer is A.

PS14397

165. On a certain day, a bakery produced a batch of rolls at a total production cost of \$300. On that day, $\frac{4}{5}$ of the rolls in the batch were sold, each at a price that was 50 percent greater than the average (arithmetic mean) production cost per roll. The remaining rolls in the batch were sold the next day, each at a price that was 20 percent less than the price of the day before. What was the bakery's profit on this batch of rolls?

(A) \$150
(B) \$144
(C) \$132
(D) \$108
(E) \$90

Arithmetic Applied problems

Let n be the number of rolls in the batch and p be the average production price, in dollars, per roll. Then the total cost of the batch is $np = 300$ dollars, and the total revenue from selling the rolls in the batch is $\left(\frac{4}{5}n\right)(1.5p) + \left(\frac{1}{5}n\right)(0.8)(1.5p) = \left(\frac{4}{5}n\right)\left(\frac{3}{2}p\right) + \left(\frac{1}{5}n\right)\left(\frac{4}{5}\right)\left(\frac{3}{2}p\right) = \left(\frac{6}{5} + \frac{6}{25}\right)np = \left(\frac{36}{25}\right)np$. Therefore, the profit from selling the rolls in the batch is $\left(\frac{36}{25}\right)np - np = \left(\frac{11}{25}\right)np = \left(\frac{11}{25}\right)(300)$ dollars = 132 dollars.

The correct answer is C.

PS05972

166. A set of numbers has the property that for any number t in the set, $t + 2$ is in the set. If -1 is in the set, which of the following must also be in the set?

I. -3
II. 1
III. 5

(A) I only
(B) II only
(C) I and II only
(D) II and III only
(E) I, II, and III

Arithmetic Properties of numbers

It is given that -1 is in the set and, if t is in the set, then $t + 2$ is in the set.

I. Since $\{-1, 1, 3, 5, 7, 9, 11, \ldots\}$ contains -1 and satisfies the property that if t is in the set, then $t + 2$ is in the set, it is not true that -3 must be in the set.

II. Since -1 is in the set, $-1 + 2 = 1$ is in the set. Therefore, it must be true that 1 is in the set.

III. Since -1 is in the set, $-1 + 2 = 1$ is in the set. Since 1 is in the set, $1 + 2 = 3$ is in the set. Since 3 is in the set, $3 + 2 = 5$ is in the set. Therefore, it must be true that 5 is in the set.

The correct answer is D.

PS04780

167. A couple decides to have 4 children. If they succeed in having 4 children and each child is equally likely to be a boy or a girl, what is the probability that they will have exactly 2 girls and 2 boys?

(A) $\frac{3}{8}$

(B) $\frac{1}{4}$

(C) $\frac{3}{16}$

(D) $\frac{1}{8}$

(E) $\frac{1}{16}$

Arithmetic Probability

Representing the birth order of the 4 children as a sequence of 4 letters, each of which is B for boy and G for girl, there are 2 possibilities (B or G) for the first letter, 2 for the second letter, 2 for the third letter, and 2 for the fourth letter, making a total of $2^4 = 16$ sequences. The table below categorizes some of these 16 sequences.

# of boys	# of girls	Sequences	# of sequences
0	4	GGGG	1
1	3	BGGG, GBGG, GGBG, GGGB	4
3	1	GBBB, BGBB, BBGB, BBBG	4
4	0	BBBB	1

The table accounts for $1 + 4 + 4 + 1 = 10$ sequences. The other 6 sequences will have 2Bs and 2Gs. Therefore the probability that the couple will have exactly 2 boys and 2 girls is $\frac{6}{16} = \frac{3}{8}$.

For the mathematically inclined, if it is assumed that a couple has a fixed number of children, that the probability of having a girl each time is p, and that the sex of each child is independent of the sex of the other children, then the number of girls, x, born to a couple with n children is a random variable having the binomial probability distribution. The probability of having exactly x girls born to a couple with n children is given by the formula $\binom{n}{x}p^x(1-p)^{n-x}$. For the problem at hand, it is given that each child is equally likely to be a boy or a girl, and so $p = \frac{1}{2}$. Thus, the probability of having exactly 2 girls born to a couple with 4 children is

$$\binom{4}{2}\left(\frac{1}{2}\right)^2\left(\frac{1}{2}\right)^2 = \frac{4!}{2!2!}\left(\frac{1}{2}\right)^2\left(\frac{1}{2}\right)^2 = (6)\left(\frac{1}{4}\right)\left(\frac{1}{4}\right) = \frac{6}{16} = \frac{3}{8}.$$

The correct answer is A.

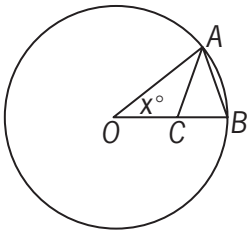
PS01564

168. The closing price of Stock X changed on each trading day last month. The percent change in the closing price of Stock X from the first trading day last month to each of the other trading days last month was less than 50 percent. If the closing price on the second trading day last month was $10.00, which of the following CANNOT be the closing price on the last trading day last month?

(A) $3.00

(B) $9.00

(C) $19.00



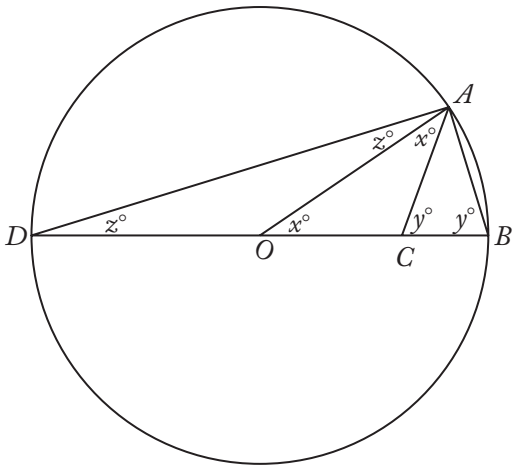
(D) $24.00

(E) $29.00

Arithmetic Applied problems; Percents

Let P be the first-day closing price, in dollars, of the stock. It is given that the second-day closing price was $(1 + n\%)P = 10$, so $P = \frac{10}{1 + n\%}$, for some value of n such that $-50 < n < 50$. Therefore, P is between $\frac{10}{1 + 0.50} \approx 6.67$ and $\frac{10}{1 - 0.50} = 20$. Hence, if Q is the closing price, in dollars, of the stock on the last day, then Q is between $(0.50)(6.67) \approx 3.34$ (50% decrease from the lowest possible first-day closing price) and $(1.50)(20) = 30$ (50% increase from the greatest possible first-day closing price). The only answer choice that gives a number of dollars not between 3.34 and 30 is the first answer choice.

The correct answer is A.



PS02389

169. In the figure above, point O is the center of the circle and $OC = AC = AB$. What is the value of x?

(A) 40
(B) 36
(C) 34
(D) 32
(E) 30

Geometry Angles

Consider the figure above, where $\overline{DB}$ is a diameter of the circle with center O and $\overline{AD}$ is a chord. Since $OC = AC$, ΔOCA is isosceles and so the base angles, $\angle AOC$ and $\angle OAC$, have the same degree measure. The measure of $\angle AOC$ is given as $x°$, so the measure of $\angle OAC$ is $x°$. Since $AC = AB$, ΔCAB is isosceles and so the base angles, $\angle ACB$ and $\angle ABC$, have the same degree measure. The measure of each is marked as $y°$. Likewise, since $\overline{OD}$ and $\overline{OA}$ are radii of the circle, $OD = OA$, and ΔDOA is isosceles with base angles, $\angle ADO$ and $\angle DAO$, each measuring $z°$. Each of the following statements is true:

(i) The measure of $\angle CAB$ is $180 - 2y$ since the sum of the measures of the angles of ΔCAB is 180.

(ii) $\angle DAB$ is a right angle (because $\overline{DB}$ is a diameter of the circle) and so $z + x + (180 - 2y) = 90$, or, equivalently, $2y - x - z = 90$.

(iii) $z + 90 + y = 180$ since the sum of the measures of the angles of right triangle ΔDAB is 180, or, equivalently, $z = 90 - y$.

(iv) $x = 2z$ because the measure of exterior angle $\angle AOC$ to ΔAOD is the sum of the measures of the two opposite interior angles, $\angle ODA$ and $\angle OAD$.

(v) $y = 2x$ because the measure of exterior angle $\angle ACB$ to ΔOCA is the sum of the measures of the two opposite interior angles, $\angle COA$ and $\angle CAO$.

Multiplying the final equation in (iii) by 2 gives $2z = 180 - 2y$. But, $x = 2z$ in (iv), so $x = 180 - 2y$. Finally, the sum of the measures of the angles of ΔCAB is 180 and so $y + y + x = 180$. Then from (v), $2x + 2x + x = 180$, $5x = 180$, and $x = 36$.

The correct answer is B.

PS16967

170. An airline passenger is planning a trip that involves three connecting flights that leave from Airports A, B, and C, respectively. The first flight leaves Airport A every hour, beginning at 8:00 a.m., and arrives at Airport B $2\frac{1}{2}$ hours later. The second flight leaves Airport B every 20 minutes, beginning at 8:00 a.m., and arrives at Airport C $1\frac{1}{6}$ hours later. The third flight leaves Airport C every hour, beginning at 8:45 a.m. What is the least total amount of time the passenger must spend between flights if all flights keep to their schedules?

(A) 25 min
(B) 1 hr 5 min
(C) 1 hr 15 min
(D) 2 hr 20 min
(E) 3 hr 40 min

Arithmetic Operations on rational numbers

Since the flight schedules at each of Airports A, B, and C are the same hour after hour, assume that the passenger leaves Airport A at 8:00 and arrives at Airport B at 10:30. Since flights from Airport B leave at 20-minute intervals beginning on the hour, the passenger must wait 10 minutes at Airport B for the flight that leaves at 10:40 and arrives at Airport C $1\frac{1}{6}$ hours or 1 hour 10 minutes later. Thus, the passenger arrives at Airport C at 11:50. Having arrived too late for the 11:45 flight from Airport C, the passenger must wait 55 minutes for the 12:45 flight. Thus, the least total amount of time the passenger must spend waiting between flights is 10 + 55 = 65 minutes, or 1 hour 5 minutes.

The correct answer is B.

PS07426

171. If n is a positive integer and n^2 is divisible by 72, then the largest positive integer that must divide n is

(A) 6
(B) 12
(C) 24
(D) 36
(E) 48

Arithmetic Properties of numbers

Since n^2 is divisible by 72, $n^2 = 72k$ for some positive integer k. Since $n^2 = 72k$, then $72k$ must be a perfect square. Since $72k = (2^3)(3^2)k$, then $k = 2m^2$ for some positive integer m in order for $72k$ to be a perfect square. Then, $n^2 = 72k = (2^3)(3^2)(2m^2) = (2^4)(3^2)m^2 = [(2^2)(3)(m)]^2$, and $n = (2^2)(3)(m)$. The positive integers that MUST divide n are 1, 2, 3, 4, 6, and 12. Therefore, the largest positive integer that must divide n is 12.

The correct answer is B.

PS16977

172. A certain grocery purchased x pounds of produce for p dollars per pound. If y pounds of the produce had to be discarded due to spoilage and the grocery sold the rest for s dollars per pound, which of the following represents the gross profit on the sale of the produce?

(A) $(x - y)s - xp$
(B) $(x - y)p - ys$
(C) $(s - p)y - xp$
(D) $xp - ys$
(E) $(x - y)(s - p)$

Algebra Simplifying algebraic expressions; Applied problems

Since the grocery bought x pounds of produce for p dollars per pound, the total cost of the produce was xp dollars. Since y pounds of the produce was discarded, the grocery sold $x - y$ pounds of produce at the price of s dollars per pound, yielding a total revenue of $(x - y)s$ dollars. Then, the grocery's gross profit on the sale of the produce is its total revenue minus its total cost or $(x - y)s - xp$ dollars.

The correct answer is A.

PS16990

173. If x, y, and z are positive integers such that x is a factor of y, and x is a multiple of z, which of the following is NOT necessarily an integer?

(A) $\frac{x+z}{z}$
(B) $\frac{y+z}{x}$
(C) $\frac{x+y}{z}$
(D) $\frac{xy}{z}$
(E) $\frac{yz}{x}$

Arithmetic Properties of numbers

Since the positive integer x is a factor of y, then $y = kx$ for some positive integer k. Since x is a multiple of the positive integer z, then $x = mz$ for some positive integer m.

Substitute these expressions for x and/or y into each answer choice to find the one expression that is NOT necessarily an integer.

A $\frac{x+z}{z} = \frac{mz+z}{z} = \frac{(m+1)z}{z} = m+1$, which MUST be an integer

B $\frac{y+z}{x} = \frac{y}{x} + \frac{z}{x} = \frac{kx}{x} + \frac{z}{mz} = k + \frac{1}{m}$, which NEED NOT be an integer

Because only one of the five expressions need not be an integer, the expressions given in C, D, and E need not be tested. However, for completeness,

C $\frac{x+y}{z} = \frac{mz+kx}{z} = \frac{mz+k(mz)}{z} = \frac{mz(1+k)}{z}$ $= m(1+k)$, which MUST be an integer

D $\frac{xy}{z} = \frac{(mz)y}{z} = my$, which MUST be an integer

E $\frac{yz}{x} = \frac{(kx)(z)}{x} = kz$, which MUST be an integer

The correct answer is B.

PS08416

174. Running at their respective constant rates, Machine X takes 2 days longer to produce w widgets than Machine Y. At these rates, if the two machines together produce $\frac{5}{4}w$ widgets in 3 days, how many days would it take Machine X alone to produce $2w$ widgets?

(A) 4
(B) 6
(C) 8
(D) 10
(E) 12

Algebra Applied problems

If x, where $x > 2$, represents the number of days Machine X takes to produce w widgets, then Machine Y takes $x - 2$ days to produce w widgets. It follows that Machines X and Y can produce $\frac{w}{x}$ and $\frac{w}{x-2}$ widgets, respectively, in 1 day and together they can produce $\frac{w}{x} + \frac{w}{x-2}$ widgets in 1 day. Since it is given that, together, they can produce $\frac{5}{4}w$ widgets in 3 days, it follows that, together, they can produce $\frac{1}{3}\left(\frac{5}{4}w\right) = \frac{5}{12}w$ widgets in 1 day. Thus,

$$\frac{w}{x} + \frac{w}{x-2} = \frac{5}{12}w$$

$$\left(\frac{1}{x} + \frac{1}{x-2}\right)w = \frac{5}{12}w$$

$$\left(\frac{1}{x} + \frac{1}{x-2}\right) = \frac{5}{12}$$

$$12x(x-2)\left(\frac{1}{x} + \frac{1}{x-2}\right) = 12x(x-2)\left(\frac{5}{12}\right)$$

$$12[(x-2)+x] = 5x(x-2)$$

$$12(2x-2) = 5x(x-2)$$

$$24x - 24 = 5x^2 - 10x$$

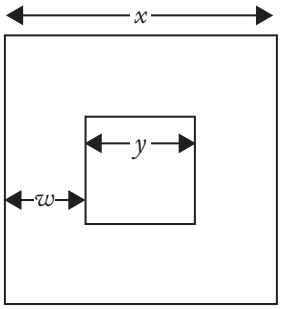
$$0 = 5x^2 - 34x + 24$$

$$0 = (5x-4)(x-6)$$

$$x = \frac{4}{5} \text{ or } 6$$

Therefore, since $x > 2$, it follows that $x = 6$. Machine X takes 6 days to produce w widgets and $2(6) = 12$ days to produce $2w$ widgets.

The correct answer is E.



PS07117

175. A square wooden plaque has a square brass inlay in the center, leaving a wooden strip of uniform width around the brass square. If the ratio of the brass area to the wooden area is 25 to 39, which of the following could be the width, in inches, of the wooden strip?

I. 1
II. 3
III. 4

(A) I only
(B) II only
(C) I and II only
(D) I and III only
(E) I, II, and III

Geometry Area

Note: Not drawn to scale.

Let x represent the side length of the entire plaque, let y represent the side length of the brass inlay, and w represent the uniform width of the wooden strip around the brass inlay, as shown in the figure above. Since the ratio of the area of the brass inlay to the area of the wooden strip is 25 to 39, the ratio of the area of the brass inlay to the area of the entire plaque is $\frac{y^2}{x^2} = \frac{25}{25+39} = \frac{25}{64}$.

Then, $\frac{y}{x} = \sqrt{\frac{25}{64}} = \frac{5}{8}$ and $y = \frac{5}{8}x$. Also, $x = y + 2w$ and $w = \frac{x-y}{2}$. Substituting $\frac{5}{8}x$ for y into this expression for w gives $w = \frac{x - \frac{5}{8}x}{2} = \frac{\frac{3}{8}x}{2} = \frac{3}{16}x$. Thus,

I. If the plaque were $\frac{16}{3}$ inches on a side, then the width of the wooden strip would be 1 inch, and so 1 inch is a possible width for the wooden strip.

II. If the plaque were 16 inches on a side, then the width of the wooden strip would be 3 inches, and so 3 inches is a possible width for the wooden strip.

III. If the plaque were $\frac{64}{3}$ inches on a side, then the width of the wooden strip would be 4 inches, and so 4 inches is a possible width for the wooden strip.

The correct answer is E.

PS16963

176. $\dfrac{2\frac{3}{5} - 1\frac{2}{3}}{\frac{2}{3} - \frac{3}{5}} =$

(A) 16
(B) 14
(C) 3
(D) 1
(E) –1

Arithmetic Operations on rational numbers

Work the problem:

$$\frac{2\frac{3}{5} - 1\frac{2}{3}}{\frac{2}{3} - \frac{3}{5}} =$$

$$\frac{\frac{13}{5} - \frac{5}{3}}{\frac{2}{3} - \frac{3}{5}} = \frac{\frac{39-25}{15}}{\frac{10-9}{15}} = \frac{\frac{14}{15}}{\frac{1}{15}} = \frac{14}{15} \times \frac{15}{1} = 14$$

The correct answer is B.

5.0 Data Sufficiency

5.0 Data Sufficiency

Data sufficiency questions appear in the Quantitative Reasoning section of the GMAT® exam. Multiple-choice data sufficiency questions are intermingled with problem solving questions throughout the section. You will have 62 minutes to complete the Quantitative Reasoning section of the GMAT exam, or about 2 minutes to answer each question. These questions require knowledge of the following topics:

- Arithmetic
- Elementary algebra
- Commonly known concepts of geometry.

Data sufficiency questions are designed to measure your ability to analyze a quantitative problem, recognize which given information is relevant, and determine at what point there is sufficient information to solve a problem. In these questions, you are to classify each problem according to the five fixed answer choices, rather than find a solution to the problem.

Each data sufficiency question consists of a question, often accompanied by some initial information, and two statements, labeled (1) and (2), which contain additional information. You must decide whether the information in each statement is sufficient to answer the question or—if neither statement provides enough information—whether the information in the two statements together is sufficient. It is also possible that the statements, in combination do not give enough information to answer the question.

Begin by reading the initial information and the question carefully. Next, consider the first statement. Does the information provided by the first statement enable you to answer the question? Go on to the second statement. Try to ignore the information given in the first statement when you consider whether the second statement provides information that, by itself, allows you to answer the question. Now you should be able to say, for each statement, whether it is sufficient to determine the answer.

Next, consider the two statements in tandem. Do they, together, enable you to answer the question?

Look again at your answer choices. Select the one that most accurately reflects whether the statements provide the information required to answer the question.

5.1 Test-Taking Strategies

1. **Do not waste valuable time solving a problem.**

   You only need to determine whether sufficient information is given to solve it.

2. **Consider each statement separately.**

   First, decide whether each statement alone gives sufficient information to solve the problem. Be sure to disregard the information given in statement (1) when you evaluate the information given in statement (2). If either, or both, of the statements give(s) sufficient information to solve the problem, select the answer corresponding to the description of which statement(s) give(s) sufficient information to solve the problem.

3. **Judge the statements in tandem if neither statement is sufficient by itself.**

   It is possible that the two statements together do not provide sufficient information. Once you decide, select the answer corresponding to the description of whether the statements together give sufficient information to solve the problem.

4. **Answer the question asked.**

   For example, if the question asks, "What is the value of y ?" for an answer statement to be sufficient, you must be able to find one and only one value for y. Being able to determine minimum or maximum values for an answer (e.g., $y = x + 2$) is not sufficient, because such answers constitute a range of values rather than the specific value of y.

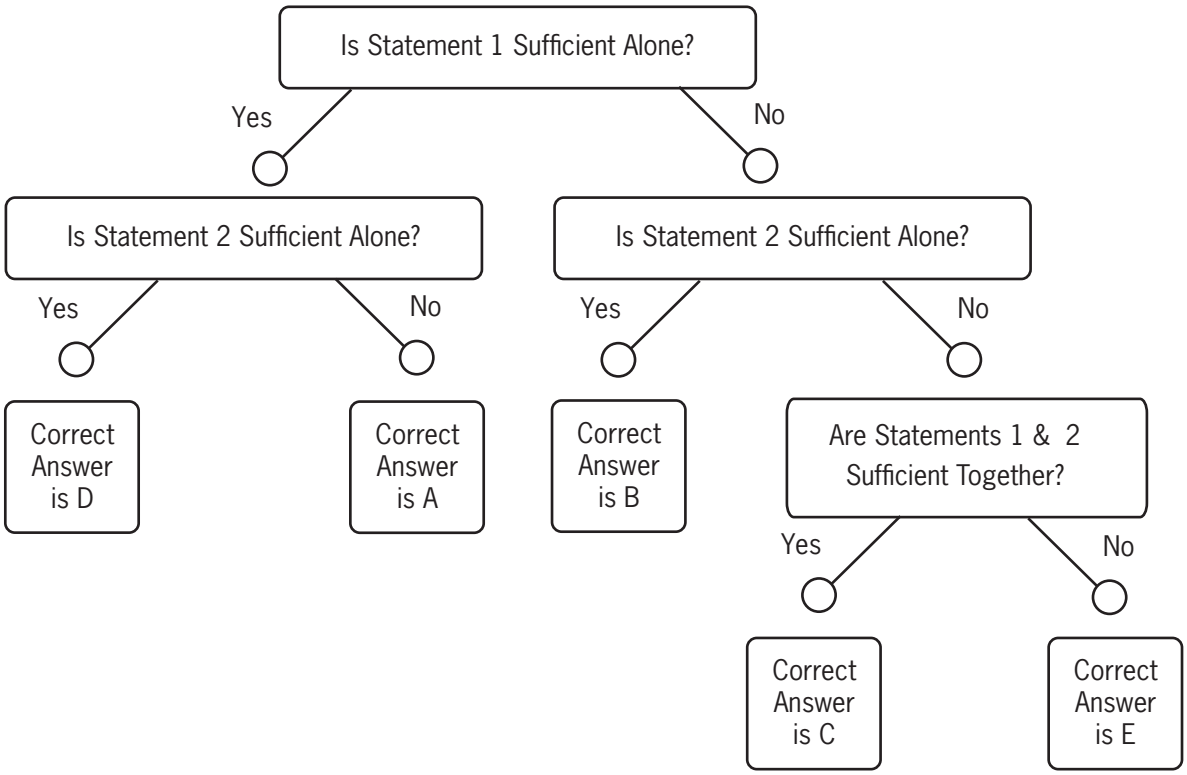
5. **Be very careful not to make unwarranted assumptions based on the images represented.**

   Figures are not necessarily drawn to scale; they are generalized figures showing little more than intersecting line segments and the relationships of points, angles, and regions. For example, if a figure described as a rectangle looks like a square, do not conclude that it is actually a square just by looking at the figure.

If statement 1 is sufficient, then the answer must be **A or D.**

If statement 2 is not sufficient, then the answer must be **A.**

If statement 2 is sufficient, then the answer must be **D.**



If statement 1 is not sufficient, then the answer must be **B, C, or E.**

If statement 2 is sufficient, then the answer must be **B.**

If statement 2 is not sufficient, then the answer must be **C or E.**

If both statements together are sufficient, then the answer must be **C.**

If both statements together are still not sufficient, then the answer must be **E.**

5.2 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

5.3 Sample Questions

Each data sufficiency problem consists of a question and two statements, labeled (1) and (2), which contain certain data. Using these data and your knowledge of mathematics and everyday facts (such as the number of days in July or the meaning of the word *counterclockwise*), decide whether the data given are sufficient for answering the question and then indicate one of the following answer choices:

A Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C BOTH statements TOGETHER are sufficient, but NEITHER statement ALONE is sufficient.
D EACH statement ALONE is sufficient.
E Statements (1) and (2) TOGETHER are not sufficient.

Note: In data sufficiency problems that ask for the value of a quantity, the data given in the statements are sufficient only when it is possible to determine exactly one numerical value for the quantity.

Example:

In ΔPQR, what is the value of x ?

(1) $PQ = PR$

(2) $y = 40$

Explanation: According to statement (1) $PQ = PR$; therefore, ΔPQR is isosceles and $y = z$. Since $x + y + z = 180$, it follows that $x + 2y = 180$. Since statement (1) does not give a value for y, you cannot answer the question using statement (1) alone. According to statement (2), $y = 40$; therefore, $x + z = 140$. Since statement (2) does not give a value for z, you cannot answer the question using statement (2) alone. Using both statements together, since $x + 2y = 180$ and the value of y is given, you can find the value of x. Therefore, BOTH statements (1) and (2) TOGETHER are sufficient to answer the questions, but NEITHER statement ALONE is sufficient.

Numbers: All numbers used are real numbers.

Figures:

- **Figures conform to the information given in the question, but will not necessarily conform to the additional information given in statements (1) and (2).**
- **Lines shown as straight are straight, and lines that appear jagged are also straight.**
- **The positions of points, angles, regions, etc., exist in the order shown, and angle measures are greater than zero.**
- **All figures lie in a plane unless otherwise indicated.**

*DS05149

177. Does $2x + 8 = 12$?

(1) $2x + 10 = 14$

(2) $3x + 8 = 14$

DS01503

178. If M is a set of consecutive even integers, is 0 in set M ?

(1) –6 is in set M.

(2) –2 is in set M.

DS15510

179. Rita's monthly salary is $\frac{2}{3}$ Juanita's monthly salary. What is their combined monthly salary?

(1) Rita's monthly salary is $4,000.

(2) Either Rita's monthly salary or Juanita's monthly salary is $6,000.

DS13384

180. What is the value of the integer x ?

(1) x rounded to the nearest hundred is 7,200.

(2) The hundreds digit of x is 2.

DS04644

181. Is $2x > 2y$?

(1) $x > y$

(2) $3x > 3y$

DS04636

182. If p and q are positive, is $\frac{p}{q}$ less than 1 ?

(1) p is less than 4.

(2) q is less than 4.

DS02779

183. In each quarter of 1998, Company M earned more money than in the previous quarter. What was the range of Company M's quarterly earnings in 1998?

(1) In the 2nd and 3rd quarters of 1998, Company M earned $4.0 million and $4.6 million, respectively.

(2) In the 1st and 4th quarters of 1998, Company M earned $3.8 million and $4.9 million, respectively.

DS04510

184. In a certain factory, hours worked by each employee in excess of 40 hours per week are overtime hours and are paid for at $1\frac{1}{2}$ times the employee's regular hourly pay rate. If an employee worked a total of 42 hours last week, how much was the employee's gross pay for the hours worked last week?

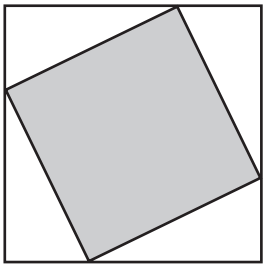
(1) The employee's gross pay for overtime hours worked last week was $30.

(2) The employee's gross pay for all hours worked last week was $30 more than for the previous week.

DS01104

185. Is the integer p even?

(1) The integer $p^2 + 1$ is odd.



(2) The integer $p + 2$ is even.

DS05172

186. If $x > 0$, what is the value of x^5 ?

(1) $\sqrt{x} = 32$

(2) $x^2 = 2^{20}$

DS17640

187. In the quilting pattern shown above, a small square has its vertices on the sides of a larger square. What is the side length, in centimeters, of the larger square?

(1) The side length of the smaller square is 10 cm.

(2) Each vertex of the small square cuts 1 side of the larger square into 2 segments with lengths in the ratio of 1:2.

DS02589

188. Did Insurance Company K have more than $300 million in total net profits last year?

(1) Last year Company K paid out $0.95 in claims for every dollar of premiums collected.

(2) Last year Company K earned a total of $150 million in profits from the investment of accumulated surplus premiums from previous years.

*These numbers correlate with the online test bank question number. See the GMAT Quantitative Review Online Index in the back of this book.

DS15349

189. How many hours would it take Pump A and Pump B working together, each at its own constant rate, to empty a tank that was initially full?

(1) Working alone at its constant rate, Pump A would empty the full tank in 4 hours 20 minutes.

(2) Working alone, Pump B would empty the full tank at its constant rate of 72 liters per minute.

DS04573

190. What is the value of the integer N?

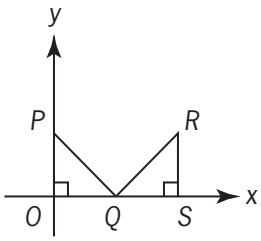
(1) $101 < N < 103$

(2) $202 < 2N < 206$

DS12033

191. Is zw positive?

(1) $z + w^3 = 20$



(2) z is positive.

DS03006

192. On the scale drawing of a certain house plan, if 1 centimeter represents x meters, what is the value of x?

(1) A rectangular room that has a floor area of 12 square meters is represented by a region of area 48 square centimeters.

(2) The 15-meter length of the house is represented by a segment 30 centimeters long.

DS03939

193. In the rectangular coordinate system above, if ΔOPQ and ΔQRS have equal area, what are the coordinates of point R?

(1) The coordinates of point P are (0,12).

(2) $OP = OQ$ and $QS = RS$.

DS07258

194. In a school that had a total of 600 students enrolled in the junior and senior classes, the students contributed to a certain fund. If all of the juniors but only half of the seniors contributed, was the total amount contributed more than \$740?

(1) Each junior contributed \$1 and each senior who contributed gave \$3.

(2) There were more juniors than seniors enrolled in the school.

DS06650

195. How much did credit-card fraud cost United States banks in year X to the nearest \$10 million?

(1) In year X, counterfeit cards and telephone and mail-order fraud accounted for 39 percent of the total amount that card fraud cost the banks.

(2) In year X, stolen cards accounted for \$158.4 million, or 16 percent, of the total amount that credit-card fraud cost the banks.

DS17319

196. Is the positive integer n odd?

(1) $n^2 + (n + 1)^2 + (n + 2)^2$ is even.

(2) $n^2 - (n + 1)^2 - (n + 2)^2$ is even.

DS01130

197. In the xy-plane, circle C has center (1,0) and radius 2. If line k is parallel to the y-axis, is line k tangent to circle C?

(1) Line k passes through the point (–1,0).

(2) Line k passes through the point (–1,–1).

DS14170

198. Company X's profits this year increased by 25% over last year's profits. Was the dollar amount of Company X's profits this year greater than the dollar amount of Company Y's?

(1) Last year, the ratio of Company Y's profits to Company X's profits was 5:2.

(2) Company Y experienced a 40% drop in profits from last year to this year.

DS09385

199. For all x, the expression x^* is defined to be $ax + a$, where a is a constant. What is the value of 2^*?

(1) $3^* = 2$

(2) $5^* = 3$

DS09260

200. Is $k + m < 0$?

(1) $k < 0$

(2) $km > 0$

DS08352

201. The symbol Δ represents which one of the following operations: addition, subtraction, or multiplication?

(1) $a \Delta (b \Delta c) \neq a \Delta (c \Delta b)$ for some numbers a, b, and c.

(2) $a \Delta (b \Delta c) \neq (a \Delta b) \Delta c$ for some numbers a, b, and c.

DS05989

202. What is the value of $2^x + 2^{-x}$?

(1) $x > 0$

(2) $4^x + 4^{-x} = 23$

DS13457

203. What is the ratio of c to d ?

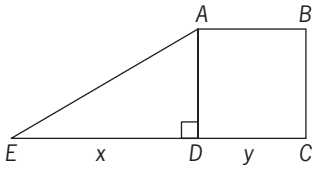
(1) The ratio of $3c$ to $3d$ is 3 to 4.

(2) The ratio of $c + 3$ to $d + 3$ is 4 to 5.

DS15099

204. A candle company determines that, for a certain specialty candle, the supply function is $p = m_1x + b_1$ and the demand function is $p = m_2x + b_2$, where p is the price of each candle, x is the number of candles supplied or demanded, and m_1, m_2, b_1, and b_2 are constants. At what value of x do the graphs of the supply function and demand function intersect?

(1) $m_1 = -m_2 = 0.005$



(2) $b_2 - b_1 = 6$

DS96502.01

205. Is the length of rectangular field F greater than the length of rectangular field G ?

(1) The area of F is greater than the area of G.

(2) The width of F is less than the width of G.

DS17502.01

206. In the figure above, is the area of triangular region ADE equal to the area of rectangular region $ABCD$?

(1) $x = 10$ and $y = 5$.

(2) $x = 2y$

DS97502.01

207. Last year Publisher X published 1,100 books, consisting of first editions, revised editions, and reprints. How many first editions did Publisher X publish last year?

(1) The number of first editions published was 50 more than twice the number of reprints published.

(2) The number of revised editions published was half the number of reprints published.

DS89502.01

208. How old is Jane?

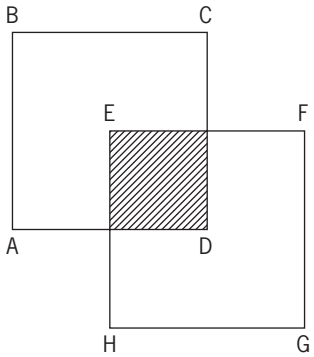
(1) Ten years ago she was one-third as old as she is now.

(2) In 15 years, she will be twice as old as she is now.

DS99502.01

209. What was the population of City X in 2002 ?

(1) X's population in 2002 increased by 2 percent, or 20,000 people, over 2001.



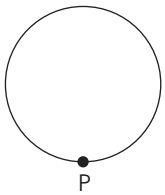
(2) In 2001, X's population was 1,000,000.

DS79502.01

210. What is the perimeter of triangle ABC ?

(1) $AB = 16$ inches

(2) ΔABC is equilateral.

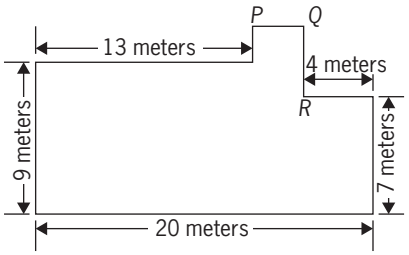


DS60602.01

211. In the figure above, is the shaded region a square region?

(1) $ABCD$ and $EFGH$ are squares.

(2) $BC = EF$

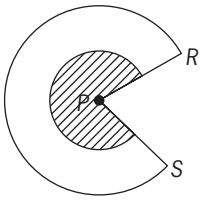


DS02602.01

212. P is a particle on the circle shown above. What is the length of the path traveled by P in one complete revolution around the circle?

(1) The diameter of the circle is 1.5 meters.

(2) The particle P moves in a clockwise direction at 0.5 meter per second.

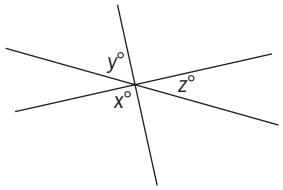


DS62602.01

213. The figure above shows the floor plan and inside dimensions of the ground level of a building. If all lines that intersect meet at right angles, what is the total floor area of this level of the building?

(1) $QR = 4$ meters

(2) PQ is less than QR.



DS82602.01

214. The figure above shows the top of a circular cake with a slice removed. The shaded region on top of the cake is the remaining part of a circular decoration that was centered on the cake. What is the area of the shaded region?

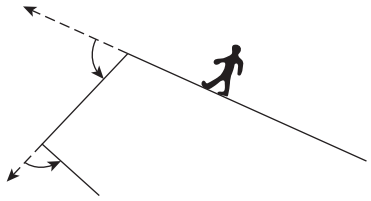
(1) P was the center of the top of the cake before the slice was removed and the angle of the slice, $\angle RPS$, is 60°.

(2) $PR = PS = 11$ centimeters

DS03602.01

215. If three straight lines intersect at a point as shown in the figure above, what is the value of x ?

(1) $x = y = z$



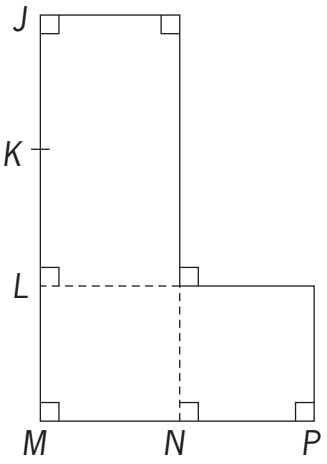
(2) $z = 60$

DS23602.01

216. What is the distance between City A and City C ?

(1) The distance between City A and City B is 75 kilometers.

(2) The distance between City B and City C is 135 kilometers.

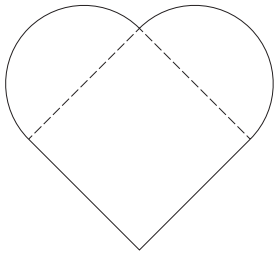


DS33602.01

217. A person walked completely around the edge of a park beginning at the midpoint of one edge and making the minimum number of turns, each with the minimum number of degrees necessary, as shown in the figure above. What is the sum of the degrees of all the turns that the person made?

(1) One of the turns is 80 degrees.

(2) The number of sides of the park is 4, all of the sides are straight, and each interior angle is less than 180 degrees.

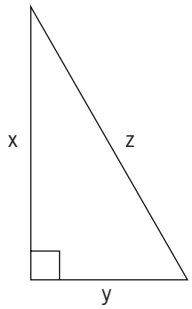


DS55602.01

218. What is the area, in square meters, of the building plot shown in the figure above?

(1) $KM = MP = 30$ meters

(2) $JK = KL = LM = MN = NP = 15$ meters

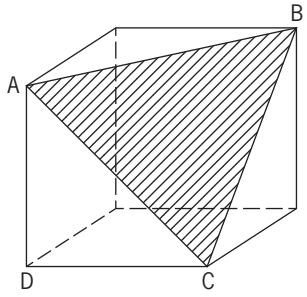


DS18502.01

219. The heart-shaped decoration shown in the figure above consists of a square and two semicircles. What is the radius of each semicircle?

(1) The diagonal of the square is $10\sqrt{2}$ centimeters long.

(2) The area of the square region minus the sum of the areas of the semicircular regions is $100 - 25\pi$ square centimeters.

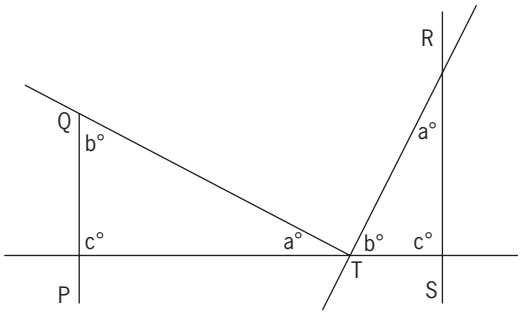


DS20602.01

220. If A is the area of a triangle with sides of lengths x, y, and z as shown above, what is the value of A?

(1) $z = 13$

(2) $A = \frac{5y}{2}$



DS80602.01

221. The figure above shows a piece of cheese with a corner cut off to expose plane surface ABC. What is the area of surface ABC?

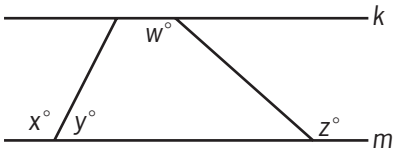
(1) $AD = 10$ centimeters

(2) The shape of the cheese was a cube before the corner was cut off.

DS31602.01

222. The figure above shows a portion of a road map on which the measures of certain angles are indicated. If all lines shown are straight and intersect as shown, is road PQ parallel to road RS?

(1) $b = 2a$



(2) $c = 3a$

DS14602.01

223. It costs \$2,250 to fill right circular cylindrical Tank R with a certain industrial chemical. If the cost to fill any tank with this chemical is directly proportional to the volume of the chemical needed to fill the tank, how much does it cost to fill right circular cylindrical Tank S with the chemical?

(1) The diameter of the interior of Tank R is twice the diameter of the interior of Tank S.

(2) The interiors of Tanks R and S have the same height.

DS12862

224. In the figure shown, lines k and m are parallel to each other. Is $x = z$?

(1) $x = w$

(2) $y = 180 - w$

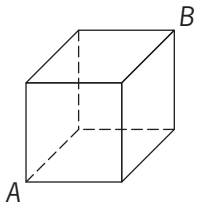
DS13097

225. If k and ℓ are lines in the xy-plane, is the slope of k less than the slope of ℓ?

(1) The x-intercept of line k is positive, and the x-intercept of line ℓ is negative.

(2) Lines k and ℓ intersect on the positive y-axis.

DS09642



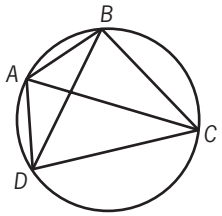
226. When the wind speed is 9 miles per hour, the wind-chill factor w is given by

$$w = -17.366 + 1.19t,$$

where t is the temperature in degrees Fahrenheit. If at noon yesterday the wind speed was 9 miles per hour, was the wind-chill factor greater than 0 ?

(1) The temperature at noon yesterday was greater than 10 degrees Fahrenheit.

(2) The temperature at noon yesterday was less than 20 degrees Fahrenheit.



DS08852

227. What is the volume of the cube above?

(1) The surface area of the cube is 600 square inches.

(2) The length of diagonal AB is $10\sqrt{3}$ inches.

DS03989

228. In the figure shown, quadrilateral $ABCD$ is inscribed in a circle of radius 5. What is the perimeter of quadrilateral $ABCD$?

(1) The length of AB is 6 and the length of CD is 8.

(2) AC is a diameter of the circle.

DS05766

229. How many members of a certain legislature voted against the measure to raise their salaries?

(1) $\frac{1}{4}$ of the members of the legislature did not vote on the measure.

(2) If 5 additional members of the legislature had voted against the measure, then the fraction of members of the legislature voting against the measure would have been $\frac{1}{3}$.

DS05986

230. If $y \neq 0$, is $|x| = 1$?

(1) $x = \frac{y}{|y|}$

(2) $|x| = -x$

DS08306

231. If x is a positive integer, what is the value of x ?

(1) $x^2 = \sqrt{x}$

(2) $\frac{n}{x} = n$ and $n \neq 0$.

DS07568

232. Is the median of the five numbers a, b, c, d, and e equal to d ?

(1) $a < c < e$

(2) $b < d < c$

DS10383

233. During a certain bicycle ride, was Sherry's average speed faster than 24 kilometers per hour? (1 kilometer = 1,000 meters)

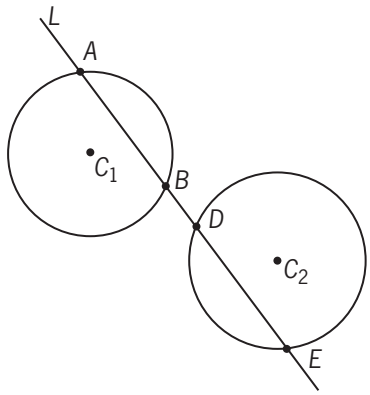
(1) Sherry's average speed during the bicycle ride was faster than 7 meters per second.

(2) Sherry's average speed during the bicycle ride was slower than 8 meters per second.

DS13907

234. Working together, Rafael and Salvador can tabulate a certain set of data in 2 hours. In how many hours can Rafael tabulate the data working alone?

(1) Working alone, Rafael can tabulate the data in 3 hours less time than Salvador, working alone, can tabulate the data.



(2) Working alone, Rafael can tabulate the data in $\frac{1}{2}$ the time that Salvador, working alone, can tabulate the data.

DS04039

235. If x and y are integers, what is the value of x ?

(1) $xy = 1$

(2) $x \neq -1$

Note: Figure not drawn to scale.

DS18386

236. The figure above shows Line L, Circle 1 with center at C_1, and Circle 2 with center at C_2. Line L intersects Circle 1 at points A and B, Line L intersects Circle 2 at points D and E, and points C_1 and C_2 are equidistant from line L. Is the area of ΔABC_1 less than the area of ΔDEC_2 ?

(1) The radius of Circle 1 is less than the radius of Circle 2.

(2) The length of chord $\overline{AB}$ is less than the length of chord $\overline{DE}$.

DS15938

237. Yesterday between 9:00 a.m. and 6:00 p.m. at Airport X, all flights to Atlanta departed at equally spaced times and all flights to New York City departed at equally spaced times. A flight to Atlanta and a flight to New York City both departed from Airport X at 1:00 p.m. yesterday. Between 1:00 p.m. and 3:00 p.m. yesterday, did another pair of flights to these 2 cities depart from Airport X at the same time?

(1) Yesterday at Airport X, a flight to Atlanta and a flight to New York City both departed at 10:00 a.m.

(2) Yesterday at Airport X, flights to New York City departed every 15 minutes between 9:00 a.m. and 6:00 p.m.

DS07206

238. Of the total number of copies of Magazine X sold last week, 40 percent were sold at full price. What was the total number of copies of the magazine sold last week?

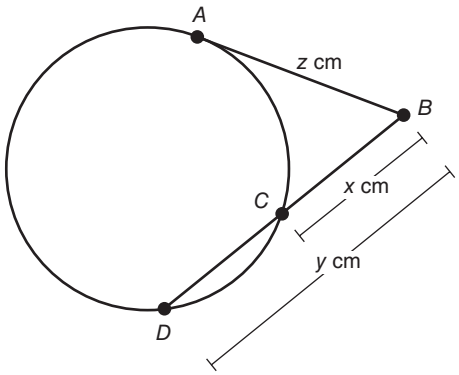
(1) Last week, full price for a copy of Magazine X was \$1.50 and the total revenue from full-price sales was \$112,500.

(2) The total number of copies of Magazine X sold last week at full price was 75,000.

DS11614

239. If p, s, and t are positive, is $|ps - pt| > p(s - t)$?

(1) $p < s$



(2) $s < t$

DS04468

240. Is $x > y$?

(1) $x + y > x - y$

(2) $3x > 2y$

DS17588

241. In the figure above, $\overline{AB}$, which has length z cm, is tangent to the circle at point A, and $\overline{BD}$, which has length y cm, intersects the circle at point C. If $BC = x$ cm and $z = \sqrt{xy}$, what is the value of x ?

(1) $CD = x$ cm

(2) $z = 5\sqrt{2}$

DS15863

242. Is the integer n a prime number?

(1) $24 \leq n \leq 28$

(2) n is not divisible by 2 or 3.

DS03615

243. What is the average (arithmetic mean) annual salary of the 6 employees of a toy company?

(1) If the 6 annual salaries were ordered from least to greatest, each annual salary would be \$6,300 greater than the preceding annual salary.

(2) The range of the 6 annual salaries is \$31,500.

DS17503

244. In a certain order, the pretax price of each regular pencil was \$0.03, the pretax price of each deluxe pencil was \$0.05, and there were 50% more deluxe pencils than regular pencils. All taxes on the order are a fixed percent of the pretax prices. The sum of the total pretax price of the order and the tax on the order was \$44.10. What was the amount, in dollars, of the tax on the order?

(1) The tax on the order was 5% of the total pretax price of the order.

(2) The order contained exactly 400 regular pencils.

DS06785

245. If m is an integer greater than 1, is m an even integer?

(1) 32 is a factor of m.

(2) m is a factor of 32.

DS05657

246. If the set S consists of five consecutive positive integers, what is the sum of these five integers?

(1) The integer 11 is in S, but 10 is not in S.

(2) The sum of the even integers in S is 26.

DS17543

247. If $x > 0$, what is the value of x?

(1) $x^3 - x = 0$

(2) $\sqrt[3]{x} - x = 0$

DS08307

248. A total of 20 amounts are entered on a spreadsheet that has 5 rows and 4 columns; each of the 20 positions in the spreadsheet contains one amount. The average (arithmetic mean) of the amounts in row i is R_i $(1 \le i \le 5)$. The average of the amounts in column j is C_j $(1 \le j \le 4)$. What is the average of all 20 amounts on the spreadsheet?

(1) $R_1 + R_2 + R_3 + R_4 + R_5 = 550$

(2) $C_1 + C_2 + C_3 + C_4 = 440$

DS13132

249. Was the range of the amounts of money that Company Y budgeted for its projects last year equal to the range of the amounts of money that it budgeted for its projects this year?

(1) Both last year and this year, Company Y budgeted money for 12 projects and the least amount of money that it budgeted for a project was $400.

(2) Both last year and this year, the average (arithmetic mean) amount of money that Company Y budgeted per project was $2,000.

DS01633

250. If a, b, c, and d are numbers on the number line shown and if the tick marks are equally spaced, what is the value of $a + c$?

(1) $a + b = -8$

(2) $a + d = 0$

DS06067

251. Is $xm < ym$?

(1) $x > y$

(2) $m < 0$

DS02899

252. If $y = x^2 - 6x + 9$, what is the value of x?

(1) $y = 0$

(2) $x + y = 3$

DS06810

253. What is the probability that Lee will make exactly 5 errors on a certain typing test?

(1) The probability that Lee will make 5 or more errors on the test is 0.27.

(2) The probability that Lee will make 5 or fewer errors on the test is 0.85.

DS19208

254. If p is a positive integer, is $2^p + 1$ a prime number?

(1) p is a prime number.

(2) p is an even number.

DS02741

255. In the xy-plane, point (r,s) lies on a circle with center at the origin. What is the value of $r^2 + s^2$?

(1) The circle has radius 2.

(2) The point $\left(\sqrt{2},-\sqrt{2}\right)$ lies on the circle.

DS06368

256. If r, s, and t are nonzero integers, is $r^5s^3t^4$ negative?

(1) rt is negative.

(2) s is negative.

DS13706

257. Each Type A machine fills 400 cans per minute, each Type B machine fills 600 cans per minute, and each Type C machine installs 2,400 lids per minute. A lid is installed on each can that is filled and on no can that is not filled. For a particular minute, what is the total number of machines working?

(1) A total of 4,800 cans are filled that minute.

(2) For that minute, there are 2 Type B machines working for every Type C machine working.

DS08660

258. If a and b are constants, what is the value of a?

(1) $a < b$

(2) $(t - a)(t - b) = t^2 + t - 12$, for all values of t.

DS04474

259. If x is a positive integer, is $\sqrt{x}$ an integer?

(1) $\sqrt{4x}$ is an integer.

(2) $\sqrt{3x}$ is not an integer.

DS16456

260. If p, q, x, y, and z are different positive integers, which of the five integers is the median?

(1) $p + x < q$

(2) $y < z$

DS16277

261. If $w + z = 28$, what is the value of wz?

(1) w and z are positive integers.

(2) w and z are consecutive odd integers.

DS02474

262. If $abc \neq 0$, is $\dfrac{\frac{a}{b}}{c} = \dfrac{a}{\frac{b}{c}}$?

(1) $a = 1$

(2) $c = 1$

DS14471

263. The arithmetic mean of a collection of 5 positive integers, not necessarily distinct, is 9. One additional positive integer is included in the collection and the arithmetic mean of the 6 integers is computed. Is the arithmetic mean of the 6 integers at least 10?

(1) The additional integer is at least 14.

(2) The additional integer is a multiple of 5.

DS11003

264. A certain list consists of 400 different numbers. Is the average (arithmetic mean) of the numbers in the list greater than the median of the numbers in the list?

(1) Of the numbers in the list, 280 are less than the average.

(2) Of the numbers in the list, 30 percent are greater than or equal to the average.

DS03678

265. In a two-month survey of shoppers, each shopper bought one of two brands of detergent, X or Y, in the first month and again bought one of these brands in the second month. In the survey, 90 percent of the shoppers who bought Brand X in the first month bought Brand X again in the second month, while 60 percent of the shoppers who bought Brand Y in the first month bought Brand Y again in the second month. What percent of the shoppers bought Brand Y in the second month?

(1) In the first month, 50 percent of the shoppers bought Brand X.

(2) The total number of shoppers surveyed was 5,000.

DS15902

266. If m and n are positive integers, is $m + n$ divisible by 4?

(1) m and n are each divisible by 2.

(2) Neither m nor n is divisible by 4.

DS02940

267. What is the area of rectangular region R?

(1) Each diagonal of R has length 5.

(2) The perimeter of R is 14.

DS17137

268. How many integers n are there such that $r < n < s$?

(1) $s - r = 5$

(2) r and s are not integers.

DS17147

269. If the total price of n equally priced shares of a certain stock was \$12,000, what was the price per share of the stock?

(1) If the price per share of the stock had been \$1 more, the total price of the n shares would have been \$300 more.

(2) If the price per share of the stock had been \$2 less, the total price of the n shares would have been 5 percent less.

DS02865

270. If n is positive, is $\sqrt{n} > 100$?

(1) $\sqrt{n-1} > 99$

(2) $\sqrt{n+1} > 101$

DS17150

271. Is $xy > 5$?

(1) $1 \leq x \leq 3$ and $2 \leq y \leq 4$.

(2) $x + y = 5$

DS17151

272. In Year X, 8.7 percent of the men in the labor force were unemployed in June compared with 8.4 percent in May. If the number of men in the labor force was the same for both months, how many men were unemployed in June of that year?

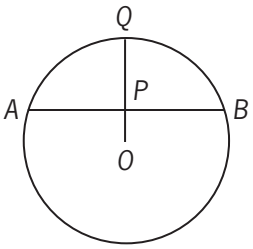
(1) In May of Year X, the number of unemployed men in the labor force was 3.36 million.

(2) In Year X, 120,000 more men in the labor force were unemployed in June than in May.

DS17112

273. If $x \neq 0$, what is the value of $\left(\frac{x^p}{x^q}\right)^4$?

(1) $p = q$



(2) $x = 3$

DS17153

274. On Monday morning a certain machine ran continuously at a uniform rate to fill a production order. At what time did it completely fill the order that morning?

(1) The machine began filling the order at 9:30 a.m.

(2) The machine had filled $\frac{1}{2}$ of the order by 10:30 a.m. and $\frac{5}{6}$ of the order by 11:10 a.m.

DS17107

275. What is the radius of the circle above with center O ?

(1) The ratio of OP to PQ is 1 to 2.

(2) P is the midpoint of chord AB.

DS15618

276. If a and b are positive integers, what is the value of the product ab ?

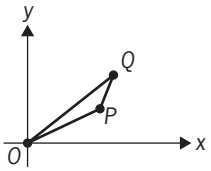
(1) The least common multiple of a and b is 48.

(2) The greatest common factor of a and b is 4.

DS17095

277. What is the number of 360-degree rotations that a bicycle wheel made while rolling 100 meters in a straight line without slipping?

(1) The diameter of the bicycle wheel, including the tire, was 0.5 meter.



(2) The wheel made twenty 360-degree rotations per minute.

DS17168

278. In the equation $x^2 + bx + 12 = 0$, x is a variable and b is a constant. What is the value of b ?

(1) $x - 3$ is a factor of $x^2 + bx + 12$.

(2) 4 is a root of the equation $x^2 + bx + 12 = 0$.

DS07715

279. In the figure above, line segment OP has slope $\frac{1}{2}$ and line segment PQ has slope 2. What is the slope of line segment OQ ?

(1) Line segment OP has length $2\sqrt{5}$.

(2) The coordinates of point Q are (5,4).

DS17164

280. In ΔXYZ, what is the length of YZ ?

(1) The length of XY is 3.

(2) The length of XZ is 5.

DS07217

281. If the average (arithmetic mean) of n consecutive odd integers is 10, what is the least of the integers?

(1) The range of the n integers is 14.

(2) The greatest of the n integers is 17.

DS16044

282. If x, y, and z are positive numbers, is $x > y > z$?

(1) $xz > yz$

(2) $yx > yz$

DS06644

283. K is a set of numbers such that

(i) if x is in K, then $-x$ is in K, and

(ii) if each of x and y is in K, then xy is in K.

Is 12 in K ?

(1) 2 is in K.

(2) 3 is in K.

DS05637

284. If $x^2 + y^2 = 29$, what is the value of $(x - y)^2$?

(1) $xy = 10$

(2) $x = 5$

DS16470

285. After winning 50 percent of the first 20 games it played, Team A won all of the remaining games it played. What was the total number of games that Team A won?

(1) Team A played 25 games altogether.

(2) Team A won 60 percent of all the games it played.

DS17181

286. Is x between 0 and 1 ?

(1) x^2 is less than x.

(2) x^3 is positive.

DS04083

287. If m and n are nonzero integers, is m^n an integer?

(1) n^m is positive.

(2) n^m is an integer.

DS16034

288. What is the value of xy ?

(1) $x + y = 10$

(2) $x - y = 6$

DS13189

289. If n is the least of three different integers greater than 1, what is the value of n ?

(1) The product of the three integers is 90.

(2) One of the integers is twice one of the other two integers.

DS16461

290. Is x^2 greater than x ?

(1) x^2 is greater than 1.

(2) x is greater than -1.

DS03503

291. Michael arranged all his books in a bookcase with 10 books on each shelf and no books left over. After Michael acquired 10 additional books, he arranged all his books in a new bookcase with 12 books on each shelf and no books left over. How many books did Michael have before he acquired the 10 additional books?

(1) Before Michael acquired the 10 additional books, he had fewer than 96 books.

(2) Before Michael acquired the 10 additional books, he had more than 24 books.

DS16469

292. If $xy > 0$, does $(x - 1)(y - 1) = 1$?

(1) $x + y = xy$

(2) $x = y$

DS06842

293. Last year in a group of 30 businesses, 21 reported a net profit and 15 had investments in foreign markets. How many of the businesses did not report a net profit nor invest in foreign markets last year?

(1) Last year 12 of the 30 businesses reported a net profit and had investments in foreign markets.

(2) Last year 24 of the 30 businesses reported a net profit or invested in foreign markets, or both.

DS17110

294. Is the perimeter of square S greater than the perimeter of equilateral triangle T ?

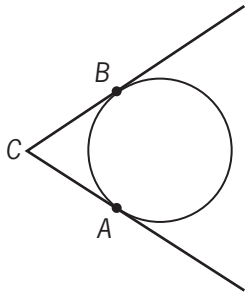
(1) The ratio of the length of a side of S to the length of a side of T is 4:5.

(2) The sum of the lengths of a side of S and a side of T is 18.

DS17136

295. If $x + y + z > 0$, is $z > 1$?

(1) $z > x + y + 1$



(2) $x + y + 1 < 0$

DS07832

296. For all z, $\lceil z \rceil$ denotes the least integer greater than or equal to z. Is $\lceil x \rceil = 0$?

(1) $-1 < x < -0.1$

(2) $\lceil x + 0.5 \rceil = 1$

DS16464

297. The circular base of an above-ground swimming pool lies in a level yard and just touches two straight sides of a fence at points A and B, as shown in the figure above. Point C is on the ground where the two sides of the fence meet. How far from the center of the pool's base is point A?

(1) The base has area 250 square feet.

(2) The center of the base is 20 feet from point C.

DS16050

298. If $xy = -6$, what is the value of $xy(x + y)$?

(1) $x - y = 5$

(2) $xy^2 = 18$

DS05519

299. $[y]$ denotes the greatest integer less than or equal to y. Is $d < 1$?

(1) $d = y - [y]$

(2) $[d] = 0$

DS14052

300. If N is a positive odd integer, is N prime?

(1) $N = 2^k + 1$ for some positive integer k.

(2) $N + 2$ and $N + 4$ are both prime.

DS01140

301. If m is a positive integer, then m^3 has how many digits?

(1) m has 3 digits.

(2) m^2 has 5 digits.

DS03308

302. What is the value of $x^2 - y^2$?

(1) $(x - y)^2 = 9$

(2) $x + y = 6$

DS01267

303. For each landscaping job that takes more than 4 hours, a certain contractor charges a total of r dollars for the first 4 hours plus $0.2r$ dollars for each additional hour or fraction of an hour, where $r > 100$. Did a particular landscaping job take more than 10 hours?

(1) The contractor charged a total of \$288 for the job.

(2) The contractor charged a total of $2.4r$ dollars for the job.

DS17600

304. If $x^2 = 2^x$, what is the value of x?

(1) $2x = \left(\frac{x}{2}\right)^3$

(2) $x = 2^{x-2}$

DS01169

305. The sequence $s_1, s_2, s_3, \ldots, s_n, \ldots$ is such that $s_n = \frac{1}{n} - \frac{1}{n+1}$ for all integers $n \geq 1$. If k is a positive integer, is the sum of the first k terms of the sequence greater than $\frac{9}{10}$?

(1) $k > 10$

(2) $k < 19$

DS05518

306. In the sequence S of numbers, each term after the first two terms is the sum of the two immediately preceding terms. What is the 5th term of S?

(1) The 6th term of S minus the 4th term equals 5.

(2) The 6th term of S plus the 7th term equals 21.

DS01121

307. If 75 percent of the guests at a certain banquet ordered dessert, what percent of the guests ordered coffee?

(1) 60 percent of the guests who ordered dessert also ordered coffee.

(2) 90 percent of the guests who ordered coffee also ordered dessert.

DS05302

308. A tank containing water started to leak. Did the tank contain more than 30 gallons of water when it started to leak? (Note: 1 gallon = 128 ounces)

(1) The water leaked from the tank at a constant rate of 6.4 ounces per minute.

(2) The tank became empty less than 12 hours after it started to leak.

DS12752

309. In the xy-plane, lines k and ℓ intersect at the point (1,1). Is the y-intercept of k greater than the y-intercept of ℓ?

(1) The slope of k is less than the slope of ℓ.

(2) The slope of ℓ is positive.

DS14588

310. A triangle has side lengths of a, b, and c centimeters. Does each angle in the triangle measure less than 90 degrees?

(1) The 3 semicircles whose diameters are the sides of the triangle have areas that are equal to 3 cm^2, 4 cm^2, and 6 cm^2, respectively.

(2) $c < a + b < c + 2$

DS00890

311. Each of the 45 books on a shelf is written either in English or in Spanish, and each of the books is either a hardcover book or a paperback. If a book is to be selected at random from the books on the shelf, is the probability less than $\frac{1}{2}$ that the book selected will be a paperback written in Spanish?

(1) Of the books on the shelf, 30 are paperbacks.

(2) Of the books on the shelf, 15 are written in Spanish.

DS06683

312. A small school has three foreign language classes, one in French, one in Spanish, and one in German. How many of the 34 students enrolled in the Spanish class are also enrolled in the French class?

(1) There are 27 students enrolled in the French class, and 49 students enrolled in either the French class, the Spanish class, or both of these classes.

(2) One-half of the students enrolled in the Spanish class are enrolled in more than one foreign language class.

DS04910

313. If S is a set of four numbers w, x, y, and z, is the range of the numbers in S greater than 2?

(1) $w - z > 2$

(2) z is the least number in S.

DS12187

314. Last year $\frac{3}{5}$ of the members of a certain club were males. This year the members of the club include all the members from last year plus some new members. Is the fraction of the members of the club who are males greater this year than last year?

(1) More than half of the new members are male.

(2) The number of members of the club this year is $\frac{6}{5}$ the number of members last year.

DS13640

315. If a, b, and c are consecutive integers and $0 < a < b < c$, is the product abc a multiple of 8?

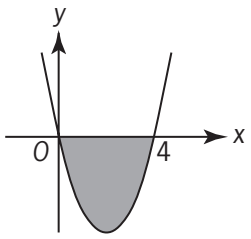
(1) The product ac is even.

(2) The product bc is a multiple of 4.

DS13837

316. M and N are integers such that $6 < M < N$. What is the value of N?

(1) The greatest common divisor of M and N is 6.



(2) The least common multiple of M and N is 36.

DS07575

317. Stations X and Y are connected by two separate, straight, parallel rail lines that are 250 miles long. Train P and train Q simultaneously left Station X and Station Y, respectively, and each train traveled to the other's point of departure. The two trains passed each other after traveling for 2 hours. When the two trains passed, which train was nearer to its destination?

(1) At the time when the two trains passed, train P had averaged a speed of 70 miles per hour.

(2) Train Q averaged a speed of 55 miles per hour for the entire trip.

DS01613

318. In the xy-plane shown, the shaded region consists of all points that lie above the graph of $y = x^2 - 4x$ and below the x-axis. Does the point (a,b) (not shown) lie in the shaded region if $b < 0$?

(1) $0 < a < 4$

(2) $a^2 - 4a < b$

DS01685

319. If a and b are positive integers, is $\sqrt[3]{ab}$ an integer?

(1) $\sqrt{a}$ is an integer.

(2) $b = \sqrt{a}$

5.5 Answer Explanations

The following discussion of data sufficiency is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to data sufficiency. The particular questions in this chapter are generally representative of the kinds of data sufficiency questions you will encounter on the GMAT. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

*DS05149

177. Does $2x + 8 = 12$?

(1) $2x + 10 = 14$

(2) $3x + 8 = 14$

Algebra First-degree equations

We need to determine, for each of statements 1 and 2, whether the statement is sufficient for determining whether $2x + 8 = 12$. Solving for x, we see that the equation $2x + 8 = 12$ is equivalent to $2x = 12 - 8 = 4$ and is thus equivalent to $x = 2$. We thus need to find whether the statements are sufficient for determining whether $x = 2$.

(1) Given that $2x + 10 = 14$, it follows that $2x = 14 - 10 = 4$, and that $x = 2$; SUFFICIENT.

(2) Similarly, given that $3x + 8 = 14$, it follows that $3x = 14 - 8 = 6$, and that $x = 2$; SUFFICIENT.

Alternatively, for both statements 1 and 2, it is only necessary to determine that it is possible to solve each of 1 and 2 to produce a unique value for x. Care must be taken with such an approach (there are cases such as, for example, $3y = 5 + 3y$, that cannot be solved for a unique value of the variable). However, the approach can save time.

The correct answer is D;
each statement alone is sufficient.

DS01503

178. If M is a set of consecutive even integers, is 0 in set M?

(1) -6 is in set M.

(2) -2 is in set M.

Arithmetic Series and sequences

For a set M of consecutive even integers, can we determine whether M contains the number 0?

(1) Given that -6 is in the set M, M could be a set of strictly negative integers or a set that contains both negative integers and zero (and perhaps positive integers). For example, it could be the set $\{-8, -6, -4\}$ or the set $\{-8, -6, -4, -2, 0, 2\}$; NOT sufficient.

(2) Similarly, given that -2 is in M, M could be a set of strictly negative integers or a set that contains both negative integers and zero (and perhaps positive integers). For example, it could be the set $\{-4, -2\}$ or the set $\{-8, -6, -4, -2, 0, 2\}$; NOT sufficient.

Furthermore we can see that statements 1 and 2 together are not sufficient. For example, $\{-8, -6, -4, -2, 0, 2\}$ contains -6, -2, and 0, while $\{-8, -6, -4, -2\}$ contains -6 and -2 but not 0.

The correct answer is E;
both statements together are not sufficient.

DS15510

179. Rita's monthly salary is $\frac{2}{3}$ Juanita's monthly salary. What is their combined monthly salary?

(1) Rita's monthly salary is \$4,000.

(2) Either Rita's monthly salary or Juanita's monthly salary is \$6,000.

Arithmetic Applied problems

Let R and J be Rita's and Juanita's monthly salaries, respectively, in dollars. It is given that $R = \frac{2}{3}J$. Determine the value of their combined salary, which can be expressed as $R + J = \frac{2}{3}J + J = \frac{5}{3}J$.

*These numbers correlate with the online test bank question number. See the GMAT Quantitative Review Online Index in the back of this book.

(1) Given that $R = 4{,}000$, it follows that $4{,}000 = \frac{2}{3}J$, or $J = \frac{3}{2}(4{,}000) = 6{,}000$. Therefore, $\frac{5}{3}J = \frac{5}{3}(6{,}000) = 10{,}000$; SUFFICIENT.

(2) Given that $R = 6{,}000$ or $J = 6{,}000$, then $J = \frac{3}{2}(6{,}000) = 9{,}000$ or $J = 6{,}000$. Thus, $\frac{5}{3}J = \frac{5}{3}(9{,}000) = 15{,}000$ or $\frac{5}{3}J = \frac{5}{3}(6{,}000) = 10{,}000$, and so it is not possible to determine the value of $\frac{5}{3}J$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS13384

180. What is the value of the integer x?

(1) x rounded to the nearest hundred is 7,200.

(2) The hundreds digit of x is 2.

Arithmetic Rounding

(1) Given that x rounded to the nearest hundred is 7,200, the value of x cannot be determined. For example, x could be 7,200 or x could be 7,201; NOT sufficient.

(2) Given that the hundreds digit of x is 2, the value of x cannot be determined. For example, x could be 7,200 or x could be 7,201; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples were used in both (1) and (2).

The correct answer is E;
both statements together are still not sufficient.

DS04644

181. Is $2x > 2y$?

(1) $x > y$

(2) $3x > 3y$

Algebra Inequalities

(1) It is given that $x > y$. Thus, multiplying both sides by the positive number 2, it follows that $2x > 2y$; SUFFICIENT.

(2) It is given that $3x > 3y$. Thus, multiplying both sides by the positive number $\frac{2}{3}$, it follows that $2x > 2y$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS04636

182. If p and q are positive, is $\frac{p}{q}$ less than 1?

(1) p is less than 4.

(2) q is less than 4.

Arithmetic Properties of numbers

(1) Given that p is less than 4, then it is not possible to determine whether $\frac{p}{q}$ is less than 1. For example, if $p = 1$ and $q = 2$, then $\frac{p}{q} = \frac{1}{2}$ and $\frac{1}{2}$ is less than 1. However, if $p = 2$ and $q = 1$, then $\frac{p}{q} = 2$ and 2 is not less than 1; NOT sufficient.

(2) Given that q is less than 4, then it is not possible to determine whether $\frac{p}{q}$ is less than 1. For example, if $p = 1$ and $q = 2$, then $\frac{p}{q} = \frac{1}{2}$ and $\frac{1}{2}$ is less than 1. However, if $p = 2$ and $q = 1$, then $\frac{p}{q} = 2$ and 2 is not less than 1; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples were used in both (1) and (2).

The correct answer is E;
both statements together are still not sufficient.

DS02779

183. In each quarter of 1998, Company M earned more money than in the previous quarter. What was the range of Company M's quarterly earnings in 1998?

(1) In the 2nd and 3rd quarters of 1998, Company M earned \$4.0 million and \$4.6 million, respectively.

(2) In the 1st and 4th quarters of 1998, Company M earned \$3.8 million and \$4.9 million, respectively.

Arithmetic Statistics

We know that for each of the quarters in 1998, Company M earned more money than in the previous quarter. Is it possible to determine the range of the company's quarterly earnings in 1998?

(1) Although we are told the value of the earnings for the 2nd and 3rd quarters, Company M's 4th quarter earnings could, consistent with statement 1, be any amount that is greater than the 3rd quarter earnings. Likewise, the company's 1st quarter earnings could be any positive amount that is less than the company's 2nd quarter earnings. The difference between these two values would be the range, and we see that it cannot be determined; NOT sufficient.

(2) We are given the earnings for the 1st and 4th quarters, and we already know that, from quarter to quarter, the earnings in 1998 have always increased. We can thus infer that Company M's earnings for the 2nd and 3rd quarters are less than the 4th quarter earnings but greater than the 1st quarter earnings. The difference between the greatest quarterly earnings and the least quarter earnings for 1998 is thus the difference between the 4th quarter earnings and the 1st quarter earnings—the values \$4.9 million and \$3.8 million, respectively, that we have been given; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS04510

184. In a certain factory, hours worked by each employee in excess of 40 hours per week are overtime hours and are paid for at $1\frac{1}{2}$ times the employee's regular hourly pay rate. If an employee worked a total of 42 hours last week, how much was the employee's gross pay for the hours worked last week?

(1) The employee's gross pay for overtime hours worked last week was \$30.

(2) The employee's gross pay for all hours worked last week was \$30 more than for the previous week.

Arithmetic Applied problems

If an employee's regular hourly rate was \$$R$ and the employee worked 42 hours last week, then the employee's gross pay for hours worked last week was $40R + 2(1.5R)$. Determine the value of $40R + 2(1.5R) = 43R$, or equivalently, the value of R.

(1) Given that the employee's gross pay for overtime hours worked last week was \$30, it follows that $2(1.5R) = 30$ and $R = 10$; SUFFICIENT.

(2) Given that the employee's gross pay for all hours worked last week was \$30 more than for the previous week, the value of R cannot be determined because nothing specific is known about the value of the employee's pay for all hours worked the previous week; NOT sufficient.

The correct answer is A;
statement (1) alone is sufficient.

DS01104

185. Is the integer p even?

(1) The integer $p^2 + 1$ is odd.

(2) The integer $p + 2$ is even.

Arithmetic Properties of integers

(1) For any odd number m, $m - 1$ must be even. Therefore, given that $p^2 + 1$ is odd, p^2 must be even. Now, if in this case p were odd, p would not be divisible by 2 and so would not have 2 as one of its prime factors. p^2 would also not have 2 as one of its prime factors, and so, if p were odd, p^2 would be odd. Therefore, given that $p^2 + 1$ is odd (and p^2 is even), p must not be odd. That is, p must be even; SUFFICIENT.

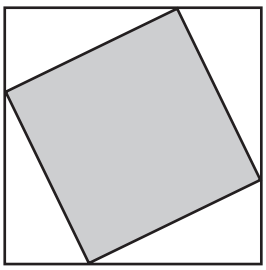
(2) Given that $p + 2$ is even, it follows that $p + 2$ is divisible by 2. That is, $p + 2 = 2k$, where k is an integer. Thus, $p = 2k - 2 = 2(k - 1)$, where $k - 1$ is an integer. The integer p is thus divisible by 2 and is therefore even; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS05172

186. If $x > 0$, what is the value of x^5 ?

(1) $\sqrt{x} = 32$



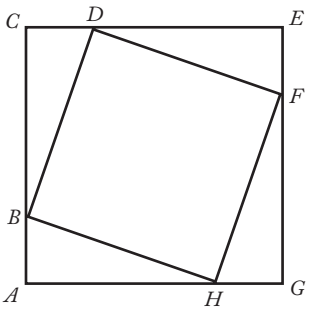
(2) $x^2 = 2^{20}$

Algebra Exponents

(1) Given that $\sqrt{x} = 32$, it follows that $x = 32^2$ and $x^5 = (32^2)^5$; SUFFICIENT.

(2) Given that $x^2 = 2^{20}$, since x is positive, it follows that $x = \sqrt{2^{20}} = 2^{10}$ and $x^5 = (2^{10})^5$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.



DS17640

187. In the quilting pattern shown above, a small square has its vertices on the sides of a larger square. What is the side length, in centimeters, of the larger square?

(1) The side length of the smaller square is 10 cm.

(2) Each vertex of the small square cuts 1 side of the larger square into 2 segments with lengths in the ratio of 1:2.

Geometry Triangles; Pythagorean theorem

Determine the side length of the larger square or, in the figure above, determine $AG = AH + HG$. Note that ΔBAH, ΔDCB, ΔFED, and ΔHGF are the same size and shape and that $AB = CD = EF = GH$ and $BC = DE = FG = HA$.

(1) This indicates that $HF = 10$, but it is possible that $HG = 6$ and $GF = 8$ $\left(\sqrt{6^2 + 8^2} = 10\right)$, from which it follows that the side length of the larger square is $6 + 8 = 14$, and it is possible that $HG = 1$ and $GF = \sqrt{99}$ $\left(\sqrt{1^2 + \left(\sqrt{99}\right)^2} = 10\right)$, from which it follows that the side length of the larger square is $1 + \sqrt{99}$; NOT sufficient.

(2) This indicates that if $HG = x$, then $AH = 2x$. If $x = 2$, then the side length of the larger square is $2 + 2(2) = 6$, but if $x = 5$, then the side length of the larger square is $5 + 2(5) = 15$; NOT sufficient.

Taking (1) and (2) together, $10 = \sqrt{x^2 + (2x)^2}$, which can be solved for x. Then taking 3 times the value of x gives the side length of the larger square.

The correct answer is C;
both statements together are sufficient.

DS02589

188. Did Insurance Company K have more than $300 million in total net profits last year?

(1) Last year Company K paid out $0.95 in claims for every dollar of premiums collected.

(2) Last year Company K earned a total of $150 million in profits from the investment of accumulated surplus premiums from previous years.

Arithmetic Applied problems

Letting R and E, respectively, represent the company's total revenue and total expenses last year, determine if $R - E >$ $300 million.

(1) This indicates that, for $\$x$ in premiums collected, the company paid $\$0.95x$ in claims, but gives no information about other sources of revenue or other types of expenses; NOT sufficient.

(2) This indicates that the company's profits from the investment of accumulated surplus premiums was $150 million last year, but gives no information about other sources of revenue or other types of expenses; NOT sufficient.

Taking (1) and (2) together gives information on profit resulting from collecting premiums and paying claims as well as profit resulting from investments from accumulated surplus premiums, but gives no indication whether there were other sources of revenue or other types of expenses.

The correct answer is E;
both statements together are still not sufficient.

DS15349

189. How many hours would it take Pump A and Pump B working together, each at its own constant rate, to empty a tank that was initially full?

(1) Working alone at its constant rate, Pump A would empty the full tank in 4 hours 20 minutes.

(2) Working alone, Pump B would empty the full tank at its constant rate of 72 liters per minute.

Arithmetic Applied problems

Determine how long it would take Pumps A and B working together, each at its own constant rate, to empty a full tank.

(1) This indicates how long it would take Pump A to empty the tank, but gives no information about Pump B's constant rate; NOT sufficient.

(2) This indicates the rate at which Pump B can empty the tank, but without information about the capacity of the tank or Pump A's rate, it is not possible to determine how long both pumps working together would take to empty the tank; NOT sufficient.

Taking (1) and (2) together gives the amount of time it would take Pump A to empty the tank and the rate at which Pump B can empty the tank, but without knowing the capacity of the tank, it is not possible to determine how long the pumps working together would take to empty the tank.

The correct answer is E;
both statements together are still not sufficient.

DS04573

190. What is the value of the integer N?

(1) $101 < N < 103$

(2) $202 < 2N < 206$

Arithmetic Inequalities

(1) Given that N is an integer and $101 < N < 103$, it follows that $N = 102$; SUFFICIENT.

(2) Given that N is an integer and $202 < 2N < 206$, it follows that $101 < N < 103$ and $N = 102$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS12033

191. Is zw positive?

(1) $z + w^3 = 20$

(2) z is positive.

Arithmetic Properties of numbers

(1) Given that $z + w^3 = 20$, if $z = 1$ and $w = \sqrt[3]{19}$ then $z + w^3 = 20$ and zw is positive. However, if $z = 20$ and $w = 0$, then $z + w^3 = 20$ and zw is not positive; NOT sufficient.

(2) Given that z is positive, if $z = 1$ and $w = \sqrt[3]{19}$, then zw is positive. However, if $z = 20$ and $w = 0$, then zw is not positive; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples were used in both (1) and (2).

The correct answer is E;
both statements together are still not sufficient.

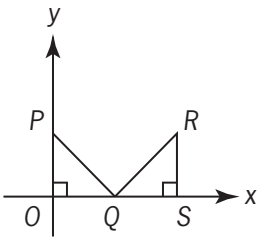
DS03006

192. On the scale drawing of a certain house plan, if 1 centimeter represents x meters, what is the value of x?

(1) A rectangular room that has a floor area of 12 square meters is represented by a region of area 48 square centimeters.

(2) The 15-meter length of the house is represented by a segment 30 centimeters long.

Arithmetic Ratio and proportion



It is given that on the scale drawing, 1 centimeter represents x meters. Determine the value of x. Note that 1 cm^2 represents x^2 m^2.

(1) This indicates that an area of 12 m^2 is represented by an area of 48 cm^2. Then,

dividing both 12 and 48 by 48, it follows that an area of $\frac{12}{48} = \frac{1}{4}$ m^2 is represented by an area of $\frac{48}{48} = 1$ cm^2 and so $x^2 = \frac{1}{4}$ or $x = \frac{1}{2}$; SUFFICIENT.

(2) This indicates that a length of 15 m is represented by a length of 30 cm. Then, dividing both 15 and 30 by 30, it follows that a length of $\frac{15}{30} = \frac{1}{2}$ m is represented by a length of $\frac{30}{30} = 1$ cm and so $x = \frac{1}{2}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS03939

193. In the rectangular coordinate system above, if ΔOPQ and ΔQRS have equal area, what are the coordinates of point R?

(1) The coordinates of point P are (0,12).

(2) $OP = OQ$ and $QS = RS$.

Geometry Coordinate geometry; Triangles

Since the area of ΔOPQ is equal to the area of ΔQRS, it follows that $\frac{1}{2}(OQ)(OP) = \frac{1}{2}(QS)(SR)$, or $(OQ)(OP) = (QS)(SR)$. Also, if both OS and SR are known, then the coordinates of point R will be known.

(1) Given that the y-coordinate of P is 12, it is not possible to determine the coordinates of point R. For example, if $OQ = QS = SR = 12$, then the equation $(OQ)(OP) = (QS)(SR)$ becomes $(12)(12) = (12)(12)$, which is true, and the x-coordinate of R is $OQ + QS = 24$ and the y-coordinate of R is $SR = 12$. However, if $OQ = 12$, $QS = 24$, and $SR = 6$, then the equation $(OQ)(OP) = (QS)(SR)$ becomes $(12)(12) = (24)(6)$, which is true, and the x-coordinate of R is $OQ + QS = 36$ and the y-coordinate of R is $SR = 6$; NOT sufficient.

(2) Given that $OP = OQ$ and $QS = RS$, it is not possible to determine the coordinates of point R, since everything given would still be true if all the lengths were doubled, but doing this would change the coordinates of point R; NOT sufficient.

Taking (1) and (2) together, it follows that $OP = OQ = 12$. Therefore, $(OQ)(OP) = (QS)(SR)$ becomes $(12)(12) = (QS)(SR)$, or $144 = (QS)(SR)$. Using $QS = RS$ in the last equation gives $144 = (QS)^2$, or $12 = QS$. Thus, $OQ = QS = SR = 12$ and point R has coordinates (24,12).

The correct answer is C;
both statements together are sufficient.

DS07258

194. In a school that had a total of 600 students enrolled in the junior and senior classes, the students contributed to a certain fund. If all of the juniors but only half of the seniors contributed, was the total amount contributed more than \$740 ?

(1) Each junior contributed \$1 and each senior who contributed gave \$3.

(2) There were more juniors than seniors enrolled in the school.

Arithmetic Applied problems

The task in this question is to determine whether the respective statements are sufficient for answering the question of whether the total amount contributed was more than \$740. In making this determination, it is important to remember that we are to use only the information that has been given. For example, it may seem plausible to assume that the number of seniors at the school is roughly equal to the number of juniors. However, because no such information has been provided, we cannot assume that this assumption holds. With this in mind, consider statements 1 and 2.

(1) If it were the case that half of the 600 students were seniors, then, given that half of the 300 seniors would have contributed

$3, there would have been 150 × $3 = $450 in contributions from the seniors and 300 × $1 = $300 in contributions from the juniors, for a total of $750—more than the figure of $740 with which the question is concerned. However, as noted, we cannot make such an assumption. To test the conditions that we have actually been given, we can consider extreme cases, which are often relatively simple. For example, given the information provided, it is possible that only two of the students are seniors and the other 598 students are juniors. If this were the case, then the contributions from the juniors would be $598 ($1 per student) and the contributions from the seniors would be $3 ($3 for the one senior who contributes, given that only half of the 2 seniors contribute). The total contributions would then be $598 + $3 = $601; NOT sufficient.

(2) Merely with this statement—and not statement 1—we have no information as to how much the students contributed. We therefore cannot determine the total amount contributed; NOT sufficient.

We still need to consider whether statements 1 and 2 are sufficient *together* for determining whether a minimum of $740 has been contributed. However, note that the reasoning in connection with statement 1 applies here as well. We considered there the possibility that the 600 students included only two seniors, with the other 598 students being juniors. Because this scenario also satisfies statement 2, we see that statements 1 and 2 taken together are not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS06650

195. How much did credit-card fraud cost United States banks in year X to the nearest $10 million?

(1) In year X, counterfeit cards and telephone and mail-order fraud accounted for 39 percent of the total amount that card fraud cost the banks.

(2) In year X, stolen cards accounted for $158.4 million, or 16 percent, of the total amount that credit-card fraud cost the banks.

Arithmetic Percents

(1) It is given that certain parts of the total fraud cost have a total that is 39% of the total fraud cost, but since no actual dollar amounts are specified, it is not possible to estimate the total fraud cost to the nearest $10 million; NOT sufficient.

(2) Given that $158.4 million represents 16% of the total fraud cost, it follows that the total fraud cost equals $158.4 million divided by 0.16; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS17319

196. Is the positive integer n odd?

(1) $n^2 + (n + 1)^2 + (n + 2)^2$ is even.

(2) $n^2 - (n + 1)^2 - (n + 2)^2$ is even.

Arithmetic Properties of numbers

The positive integer n is either odd or even. Determine if it is odd.

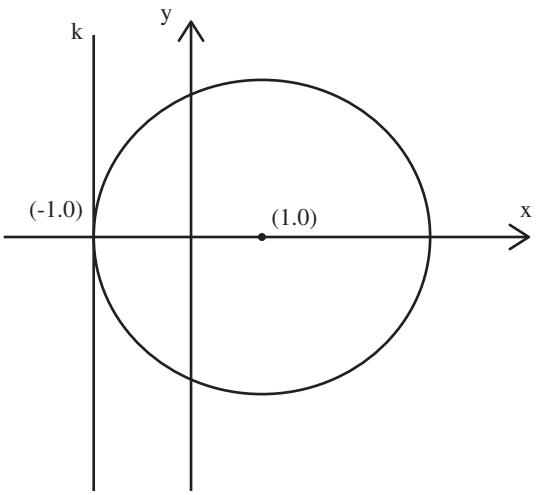
(1) This indicates that the sum of the squares of three consecutive integers, n^2, $(n + 1)^2$, and $(n + 2)^2$, is even. If n is even, then $n + 1$ is odd and $n + 2$ is even. It follows that n^2 is even, $(n + 1)^2$ is odd, and $(n + 2)^2$ is even and, therefore, that $n^2 + (n + 1)^2 + (n + 2)^2$ is odd. But, this contradicts the given information, and so, n must be odd; SUFFICIENT.

(2) This indicates that $n^2 - (n + 1)^2 - (n + 2)^2$ is even. Adding the even number represented by $2(n + 1)^2 + 2(n + 2)^2$ to the even number represented by $n^2 - (n + 1)^2 - (n + 2)^2$ gives the even number represented by $n^2 + (n + 1)^2 + (n + 2)^2$. This is Statement (1); SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS01130

197. In the xy-plane, circle C has center (1,0) and radius 2. If line k is parallel to the y-axis, is line k tangent to circle C?



(1) Line k passes through the point (–1,0).

(2) Line k passes through the point (–1,–1).

Geometry Coordinate geometry

Can we determine whether line k, which is parallel to the y-axis, is tangent to the circle C?

(1) Given that line k passes through the point $(-1,0)$, we can represent the scenario in the following diagram, which is not drawn to scale.

The points $(1,0)$ and $(-1,0)$ are two units apart on the x axis. We therefore know that circle C, with center $(1,0)$ and radius 2, passes through the point $(-1,0)$ and that, given that k passes through the point $(-1,0)$, the circle intersects line k at this point. Furthermore, the radial line from the center $(1,0)$ of the circle to point $(-1,0)$ on the circle rests on the x-axis and is therefore perpendicular to the y-axis. Line k, being parallel to the y-axis, must also be perpendicular to this radial line. Therefore, because line k both intersects the circle at a point at which a radial line intersects the circle and is perpendicular to this radial line, we see that that line k must be tangent to circle C; SUFFICIENT.

(2) The sufficiency of statement 2 follows from the sufficiency of statement 1. For, if k is perpendicular to the y-axis and passes through point $(-1,-1)$, then k must also pass through point $(-1,0)$; k is simply the line $x = -1$. The reasoning for statement 1 now applies; SUFFICIENT.

The correct answer is D;
Each statement alone is sufficient.

DS14170

198. Company X's profits this year increased by 25% over last year's profits. Was the dollar amount of Company X's profits this year greater than the dollar amount of Company Y's?

(1) Last year, the ratio of Company Y's profits to Company X's profits was 5:2.

(2) Company Y experienced a 40% drop in profits from last year to this year.

Algebra Applied problems

Let P_X and P_X', respectively, be the profits of Company X last year and this year, and let P_Y and P_Y', respectively, be the profits of Company Y last year and this year. Then $P_X' = 1.25P_X$. Is $P_X' > P_Y'$?

(1) Given that $\frac{P_Y}{P_X} = \frac{5}{2}$, it is not possible to determine whether $P_X' > P_Y'$ because nothing is known about the value of P_Y' other than P_Y' is positive; NOT sufficient.

(2) Given that $P_Y' = 0.6P_Y$, it is not possible to determine whether $P_X' > P_Y'$ because nothing is known that relates the profits of Company X for either year to the profits of Company Y for either year; NOT sufficient.

Taking (1) and (2) together, it is given that $P_X' = 1.25P_X$ and from (1) it follows that $\frac{P_Y}{P_X} = \frac{5}{2}$, or $P_X = \frac{2}{5}P_Y$, and thus $P_X' = (1.25)\left(\frac{2}{5}P_Y\right)$. From (2) it follows that $P_Y' = 0.6P_Y$, or $P_Y = \frac{1}{0.6}P_Y'$, and thus $P_X' = (1.25)\left(\frac{2}{5}\right)\left(\frac{1}{0.6}P_Y'\right)$. Since the last equation expresses P_X' as a specific number times P_Y', it follows that it can be determined whether or not $P_X' > P_Y'$. Note that $(1.25)\left(\frac{2}{5}\right)\left(\frac{1}{0.6}\right) = \left(\frac{5}{4}\right)\left(\frac{2}{5}\right)\left(\frac{5}{3}\right) = \frac{5}{6}$, and so the answer to the question "Is $P_X' > P_Y'$" is no.

The correct answer is C;
both statements together are sufficient.

DS09385

199. For all x, the expression x^* is defined to be $ax + a$, where a is a constant. What is the value of 2^* ?

(1) $3^* = 2$

(2) $5^* = 3$

Algebra Linear equations

Determine the value of $2^* = (a)(2) + a = 3a$, or equivalently, determine the value of a.

(1) Given that $3^* = 2$, it follows that $(a)(3) + a = 2$, or $4a = 2$, or $a = \frac{1}{2}$; SUFFICIENT.

(2) Given that $5^* = 3$, it follows that $(a)(5) + a = 3$, or $6a = 3$, or $a = \frac{1}{2}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS09260

200. Is $k + m < 0$?

(1) $k < 0$

(2) $km > 0$

Arithmetic Properties of numbers

(1) Given that k is negative, it is not possible to determine whether $k + m$ is negative. For example, if $k = -2$ and $m = 1$, then $k + m$ is negative. However, if $k = -2$ and $m = 3$, then $k + m$ is not negative; NOT sufficient.

(2) Given that km is positive, it is not possible to determine whether $k + m$ is negative. For example, if $k = -2$ and $m = -1$, then km is positive and $k + m$ is negative. However, if $k = 2$ and $m = 1$, then km is positive and $k + m$ is not negative; NOT sufficient.

Taking (1) and (2) together, k is negative and km is positive, it follows that m is negative. Therefore, both k and m are negative, and hence $k + m$ is negative.

The correct answer is C;
both statements together are sufficient.

DS08352

201. The symbol Δ represents which one of the following operations: addition, subtraction, or multiplication?

(1) $a \Delta (b \Delta c) \neq a \Delta (c \Delta b)$ for some numbers a, b, and c.

(2) $a \Delta (b \Delta c) \neq (a \Delta b) \Delta c$ for some numbers a, b, and c.

Arithmetic Arithmetic operations

Can we determine which of the operations—addition, subtraction, or multiplication—is the operation Δ?

(1) Given the condition that Δ has the property that, for some numbers a, b, and c, $a \Delta (b \Delta c) \neq a \Delta (c \Delta b)$, we can infer that, for some numbers b and c, $b \Delta c \neq c \Delta b$. Both addition and multiplication have the commutative property, whereby, for any numbers x and y, $x + y = y + x$ and $x \times y = y \times x$. For example, $7 + 2 = 9 = 2 + 7$, and $7 \times 2 = 14 = 2 \times 7$. We thus see that, for *all* numbers x, y, and z, both of the statements $x + (y + z) = x + (z + y)$ and $x \times (y \times z) = x \times (z \times y)$ are true. The operation Δ therefore cannot be addition or multiplication.

Subtraction, on the other hand, lacks the commutative property; for example, $7 - 2 = 5$ and $2 - 7 = -5$. The operation Δ could therefore be subtraction. Subtraction is therefore the one operation among addition, subtraction, and multiplication that satisfies statement 1; SUFFICIENT.

(2) The reasoning in this case is similar to the reasoning for statement 1, but concerning the associative property rather than the commutative property. Both addition and multiplication have this property. For any numbers x, y, and z, the statements $x + (y + z) = (x + y) + z$ and $x \times (y \times z) = (x \times y) \times z$ are always true. For example, in the case of multiplication, $2 \times (3 \times 5) = 2 \times 15 = 30 = 6 \times 5 = (2 \times 3) \times 5$. However, in contrast to addition and multiplication, the operation of subtraction does not have the associative property. For example, for the numbers 2, 3, and 5, $2 - (3 - 5) = 2 - (-2) = 4$, whereas $(2 - 3) - 4 = -1 - 4 = -5$. Subtraction is therefore the one operation among addition, subtraction, and multiplication that satisfies statement 2; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS05989

202. What is the value of $2^x + 2^{-x}$?

(1) $x > 0$

(2) $4^x + 4^{-x} = 23$

Algebra Equations

Can we determine the value of $2^x + 2^{-x}$?

(1) The condition $x > 0$ by itself is not sufficient for determining the value of $2^x + 2^{-x}$. For example, if $x = 1$, then $2^x + 2^{-x} = 2^1 + 2^{-1} = 2\frac{1}{2}$. And if $x = 2$, then $2^x + 2^{-x} = 2^2 + 2^{-2} = 4\frac{1}{4}$; NOT sufficient.

(2) Given $4^x + 4^{-x} = 23$, it may be tempting to reason that this is an equation with only one unknown, and that it is therefore possible to determine the value of x and then the value of $2^x + 2^{-x}$. However, this reasoning can often produce erroneous results. For example the equation $(y - 1)(y - 3) = 0$ has only one unknown but is consistent with two values for y (1 and 3). To be sure that the statement $4^x + 4^{-x} = 23$ is sufficient for determining the value of $2^x + 2^{-x}$, consider first the square of $2^x + 2^{-x}$.

$$\begin{aligned}(2^x + 2^{-x})^2 &= (2^x)^2 + (2^{-x})^2 + 2(2^x)(2^{-x}) \\ &= 2^{2x} + 2^{-2x} + 2(2^{x-x}) \\ &= (2^2)^x + (2^{-2})^x + 2 \\ &= 4^x + 4^{-x} + 2.\end{aligned}$$

So $4^x + 4^{-x} = (2^x + 2^{-x})^2 - 2$. The condition that $4^x + 4^{-x} = 23$ thus becomes $(2^x + 2^{-x})^2 - 2 = 23$, or $(2^x + 2^{-x})^2 = 25$. And because we know that $2^x + 2^{-x} > 0$ (because both $2^x > 0$ and $2^{-x} > 0$), we see that statement 1 implies $(2^x + 2^{-x}) = \sqrt{25} = 5$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS13457

203. What is the ratio of c to d?

(1) The ratio of $3c$ to $3d$ is 3 to 4.

(2) The ratio of $c + 3$ to $d + 3$ is 4 to 5.

Arithmetic Ratio and proportion

Determine the value of $\frac{c}{d}$.

(1) Given that $\frac{3c}{3d} = \frac{3}{4}$, it follows that $\frac{3c}{3d} = \frac{c}{d} = \frac{3}{4}$; SUFFICIENT.

(2) Given that $\frac{c+3}{d+3} = \frac{4}{5}$, then it is not possible to determine the value of $\frac{c}{d}$. For example, if $c = 1$ and $d = 2$, then $\frac{c+3}{d+3} = \frac{4}{5}$ and $\frac{c}{d} = \frac{1}{2}$. However, if $c = 5$ and $d = 7$, then $\frac{c+3}{d+3} = \frac{8}{10} = \frac{4}{5}$ and $\frac{c}{d} = \frac{5}{7}$; NOT sufficient.

The correct answer is A;
statement (1) alone is sufficient.

DS15099

204. A candle company determines that, for a certain specialty candle, the supply function is $p = m_1x + b_1$ and the demand function is $p = m_2x + b_2$, where p is the price of each candle, x is the number of candles supplied or demanded, and m_1, m_2, b_1, and b_2 are constants. At what value of x do the graphs of the supply function and demand function intersect?

(1) $m_1 = -m_2 = 0.005$

(2) $b_2 - b_1 = 6$

Algebra First-degree equations

The graphs will intersect at the value of x such that $m_1x + b_1 = m_2x + b_2$ or $(m_1 - m_2)x = b_2 - b_1$.

(1) This indicates that $m_1 = -m_2 = 0.005$. It follows that $m_1 - m_2 = 0.01$, and so $0.01x = b_2 - b_1$ or $x = 100(b_2 - b_1)$, which can vary as the values of b_2 and b_1 vary; NOT sufficient.

(2) This indicates that $b_2 - b_1 = 6$. It follows that $(m_1 - m_2)x = 6$. This implies that $m_1 \neq m_2$, and so $x = \frac{b_2 - b_1}{m_1 - m_2} = \frac{6}{m_1 - m_2}$, which can vary as the values of m_1 and m_2 vary; NOT sufficient.

Taking (1) and (2) together, $m_1 - m_2 = 0.01$ and $b_2 - b_1 = 6$ and so the value of x is $\frac{6}{0.01} = 600$.

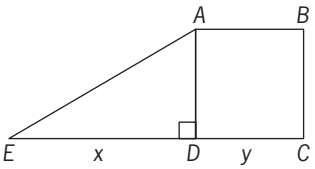
The correct answer is C;
both statements together are sufficient.

DS96502.01

205. Is the length of rectangular field F greater than the length of rectangular field G?

(1) The area of F is greater than the area of G.

(2) The width of F is less than the width of G.



Geometry Rectangles

(1) Given that the area of F is greater than the area of G, it is not possible to determine whether the length of F is greater than the length of G. For example, suppose F has length 2 and width 1, and G has length 1 and width 1. Then the area of F is $(2)(1) = 2$, the area of G is $(1)(1) = 1$, the area of F is greater than the area of G, and the length of F is greater than the length of G. However, suppose F has length 1 and width 2, and G has length 1 and width 1. Then the area of F is $(1)(2) = 2$, the area of G is $(1)(1) = 1$, the area of F is greater than the area of G, and the length of F is not greater than the length of G; NOT sufficient.

(2) Given that the width of F is less than the width of G, it is not possible to determine whether the length of F is greater than the length of G, since unless additional information is provided, there is no relation between the length and width of a rectangle other than that each must be a positive real number; NOT sufficient.

Taking (1) and (2) together, let L_F and L_G be the lengths, respectively, of F and G, and let W_F and W_G be the widths, respectively, of F and G. Suppose $L_F \leq L_G$. Multiplying both sides of this inequality by the positive quantity W_F gives $L_F W_F \leq L_G W_F$. From (2) it follows that $W_F < W_G$. Multiplying both sides of this last inequality by the positive quantity L_G gives $L_G W_F < L_G W_G$. From the inequalities $L_F W_F \leq L_G W_F$ and $L_G W_F < L_G W_G$ it follows that $L_F W_F < L_G W_G$, which contradicts (1). Therefore, $L_F \leq L_G$ is not possible, and it follows that $L_F > L_G$.

The correct answer is C;
both statements together are sufficient.

DS17502.01

206. In the figure above, is the area of triangular region ADE equal to the area of rectangular region $ABCD$?

(1) $x = 10$ and $y = 5$.

(2) $x = 2y$

Geometry Area

The area of triangle ADE is $\frac{1}{2}x(AD)$ and the area of rectangle $ABCD$ is $y(AD)$. Determine whether $\frac{1}{2}x(AD) = y(AD)$, or equivalently, determine whether $\frac{1}{2}x = y$.

(1) Given that $x = 10$ and $y = 5$, it follows that $\frac{1}{2}x = y$; SUFFICIENT.

(2) Given that $x = 2y$, it follows that $\frac{1}{2}x = y$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS97502.01

207. Last year Publisher X published 1,100 books, consisting of first editions, revised editions, and reprints. How many first editions did Publisher X publish last year?

(1) The number of first editions published was 50 more than twice the number of reprints published.

(2) The number of revised editions published was half the number of reprints published.

Algebra Simultaneous equations

Let A be the number of first editions, B be the number of revised editions, and C be the number of reprints. Then $A + B + C = 1{,}100$. Determine the value of A.

(1) Given that $A = 50 + 2C$, it is not possible to determine the value of A. This is because by choosing different values of C, different values of A can be obtained by using

the equation $A = 50 + 2C$, and then the equation $A + B + C = 1{,}100$ can be used to determine whether acceptable values of B (nonnegative integers) exist for these values of A and C. For example, choosing $C = 100$ leads to $A = 250$ and $B = 750$, and choosing $C = 200$ leads to $A = 450$ and $B = 450$; NOT sufficient.

(2) Given that $B = \frac{1}{2}C$, or $C = 2B$, it is not possible to determine the value of A. This is because by choosing different values of B, different values of C can be obtained by using the equation $C = 2B$, and then the equation $A + B + C = 1{,}100$ can be used to determine different values of A. For example, choosing $B = 100$ leads to $C = 200$ and $A = 800$, and choosing $B = 200$ leads to $C = 400$ and $A = 500$; NOT sufficient.

Taking $A = 50 + 2C$ from (1) and $C = 2B$ from (2) together gives $A = 50 + 4B$. Thus, in the equation $A + B + C = 1{,}100$, A can be replaced with $50 + 4B$ and C can be replaced with $2B$ to give $(50 + 4B) + B + 2B = 1{,}100$. Solving for B gives $B = 150$, and hence $C = 2B = 300$ and $A = 50 + 2C = 650$.

The correct answer is C;
both statements together are sufficient.

DS89502.01

208. How old is Jane?

(1) Ten years ago she was one-third as old as she is now.

(2) In 15 years, she will be twice as old as she is now.

Algebra First-degree equations

Determine the value of J, where J represents Jane's current age.

(1) In symbols, $J - 10$ represents Jane's age ten years ago and $\frac{1}{3}J$ represents one-third her current age. These expressions are equal by (1), so $J - 10 = \frac{1}{3}J$. This is a first-degree equation in the variable J and has a unique solution; SUFFICIENT.

(2) In symbols, $J + 15$ represents Jane's age 15 years from now and $2J$ represents twice her current age. These expressions are equal by (2), so $J + 15 = 2J$. This is a first-degree equation in the variable J and has a unique solution; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS99502.01

209. What was the population of City X in 2002 ?

(1) X's population in 2002 increased by 2 percent, or 20,000 people, over 2001.

(2) In 2001, X's population was 1,000,000.

Algebra Percents

Letting P_1 and P_2 represent City X's population in 2001 and 2002, respectively, the percent increase in population from 2001 to 2002 is given as a decimal by $\frac{P_2 - P_1}{P_1}$.

(1) By (1) the percent increase was 2 percent, so $\frac{P_2 - P_1}{P_1} = 0.02$ or $P_2 - P_1 = 0.02P_1$. Also, by (1), $P_2 - P_1 = 20{,}000$, so $20{,}000 = 0.02P_1$ from which the value of P_1 can be uniquely determined. Then $P_1 + 20{,}000 = P_2$, which is the population of City X in 2002; SUFFICIENT.

(2) Even though (2) gives $P_1 = 1{,}000{,}000$, it gives no information about the population of City X in 2002 either by itself or in relation to the population in 2001; NOT sufficient.

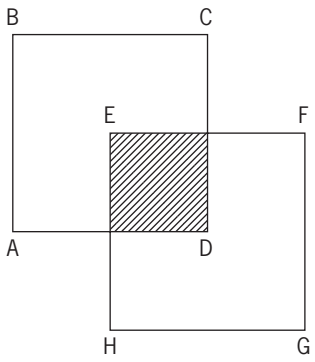
The correct answer is A;
statement 1 alone is sufficient.

DS79502.01

210. What is the perimeter of triangle ABC ?

(1) $AB = 16$ inches

(2) ΔABC is equilateral.



Geometry Triangles; Perimeter

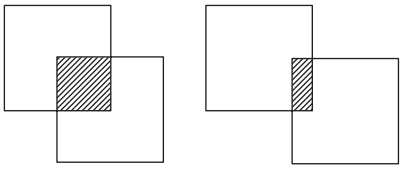
(1) Given that $AB = 16$, it is not possible to determine the perimeter of ΔABC. For example, $AB = BC = AC = 16$ is possible and gives a perimeter of 48. However, $AB = BC = 16$ and $AC = 17$ is possible and gives a perimeter of 49; NOT sufficient.

(2) Given that ΔABC is equilateral, it is not possible to determine the perimeter of ΔABC. For example, $AB = BC = AC = 16$ is possible and gives a perimeter of 48. However, $AB = BC = AC = 20$ is possible and gives a perimeter of 60; NOT sufficient.

Taking (1) and (2) together, it follows that $AB = 16$ and $AB = BC = AC$, and hence $AB = BC = AC = 16$. Therefore, the perimeter of ΔABC is 48.

The correct answer is C;
both statements together are sufficient.

DS60602.01

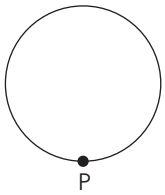


211. In the figure above, is the shaded region a square region?

(1) *ABCD* and *EFGH* are squares.

(2) $BC = EF$

Geometry Quadrilaterals



(1) The left figure below shows that the overlap of two squares can be a square region, but the figure on the right shows that the overlap can also not be a square region; NOT sufficient.

(2) In the figure above, the overlapping squares are the same size. The left figure shows that the overlap of two identically sized squares can be a square region, but the figure on the right shows that the overlap can also not be a square region; NOT sufficient.

Taking (1) and (2) together is also insufficient, because the same figures used to show that (1) is not sufficient also show that (2) is not sufficient.

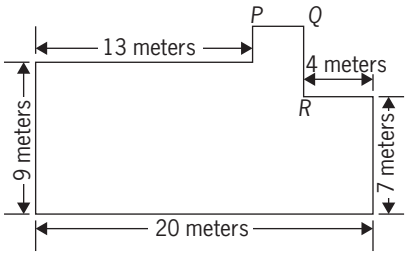
The correct answer is E;
both statements together still are not sufficient.

DS02602.01

212. *P* is a particle on the circle shown above. What is the length of the path traveled by *P* in one complete revolution around the circle?

(1) The diameter of the circle is 1.5 meters.

(2) The particle *P* moves in a clockwise direction at 0.5 meter per second.



Geometry Circles; Circumference

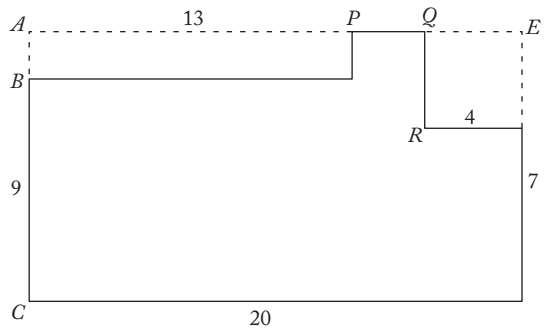
The length of the path traveled in one complete revolution is the circumference of the circle, which is equal to π times the diameter of the circle and hence can be determined if the diameter can be determined.

(1) Given that the diameter of the circle is 1.5 meters, it follows from the preliminary comments above that the length of the path traveled in one complete revolution can be determined; SUFFICIENT.

(2) Given that the particle moves clockwise at a speed of 0.5 meter per second, it is not possible to determine the length of the path traveled in one complete revolution, because no information about the size of the circle is provided; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS62602.01

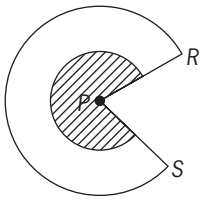


213. The figure above shows the floor plan and inside dimensions of the ground level of a building. If all lines that intersect meet at right angles, what is the total floor area of this level of the building?

(1) $QR = 4$ meters

(2) PQ is less than QR.

Geometry Polygons



As shown in the figure below, the total floor area is equal to the area of the rectangle with sides $\overline{AC}$ and $\overline{AE}$ minus the sum of the areas of the two rectangles each shown with a pair of dashed sides, or $(AC)(20) - (AB)(13) - (QR)(4)$.

(1) Given that $QR = 4$, it follows that $AC = 7 + 4 = 11$, and hence $AC = AB + BC$ becomes $11 = AB + 9$, which gives $AB = 2$. Therefore, from the preliminary comments above, the area of the floor is $(11)(20) - (2)(13) - (4)(4) = 178$; SUFFICIENT.

(2) Given that PQ is less than QR, and $PQ = 3$ (this is from $AP + PQ + QE = 20$, or $13 + PQ + 4 = 20$), it follows that QR is greater than 3. In particular, $QR = 4$ is possible and $QR = 5$ is possible. If $QR = 4$, then from the result obtained when (1) alone is assumed, the area of the floor is 178. On the other hand, if $QR = 5$, then the same method can be used: $AC = 7 + 5 = 12$, and hence $AC = AB + BC$ becomes $12 = AB + 9$, which gives $AB = 3$, and so the area of the floor is $(12)(20) - (3)(13) - (5)(4) = 181$; NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

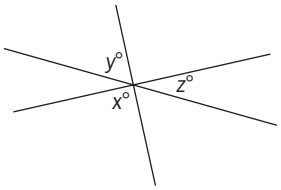
DS82602.01

214. The figure above shows the top of a circular cake with a slice removed. The shaded region on top of the cake is the remaining part of a circular decoration that was centered on the cake. What is the area of the shaded region?

(1) P was the center of the top of the cake before the slice was removed and the angle of the slice, $\angle RPS$, is 60°.

(2) $PR = PS = 11$ centimeters

Geometry Circles; Area



Let r cm be the radius of the circular decoration. Then the area of the circular decoration was πr^2 cm^2.

(1) Given that the measure of $\angle RPS$ is 60° and 60° is $\frac{1}{6}$ of 360°, the slice removed $\frac{1}{6}$ of the area of the circular decoration, and hence the area of the shaded region is $\frac{5}{6}\pi r^2$ cm^2. However, because the value of r cannot be determined, the area of the shaded region cannot be determined; NOT sufficient.

(2) Given that $PR = PS = 11$ cm, the area of the shaded region cannot be determined because neither the radius of the circular decoration nor the fraction of the circular decoration that was removed can be determined; NOT sufficient.

Taking (1) and (2) together, the area of the shaded region is $\frac{5}{6}\pi r^2$ cm^2 and the radius of the cake is 11 cm. However, because the value of r cannot be determined, the area of the shaded region cannot be determined.

The correct answer is E;
both statements together are still not sufficient.

DS03602.01

215. If three straight lines intersect at a point as shown in the figure above, what is the value of x ?

(1) $x = y = z$

(2) $z = 60$

Geometry Angles

The figure shows three pairs of vertical angles: one pair each with measure $x°$, a second pair each with measure $y°$, and a third pair each with measure $z°$. Therefore, x, y, and z are values for which $2x + 2y + 2z = 360$.

(1) Given $x = y = z$, it follows that, by substituting x for y and for z in $2x + 2y + 2z = 360$ the equation becomes $2x + 2x + 2x = 360$, so $6x = 360$ and $x = 60$; SUFFICIENT.

(2) Given that $z = 60$, then $2x + 2y + 120 = 360$. It follows that $x + y = 120$ and this equation has infinitely many solutions for x and y; NOT sufficient.

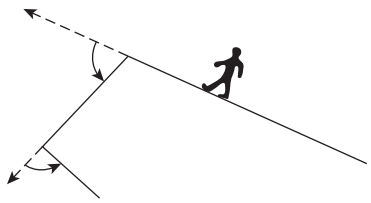
The correct answer is A;
statement 1 alone is sufficient.

DS23602.01

216. What is the distance between City A and City C ?

(1) The distance between City A and City B is 75 kilometers.

(2) The distance between City B and City C is 135 kilometers.



Geometry Triangles

(1) Given only that the distance between Cities A and B is 75 kilometers, the distance between Cities A and C cannot be determined; NOT sufficient.

(2) Given only that the distance between Cities B and C is 135 kilometers, the distance between Cities A and C cannot be determined; NOT sufficient.

Taking (1) and (2) together, if the three cities are on a straight line, the distance between Cities A and C is 75 + 135 kilometers. If the cities are not on a straight line, they are the vertices of a triangle and the distance between them is less than 75 + 135 kilometers since the sum of the lengths of two sides of a triangle is greater than the length of the third side.

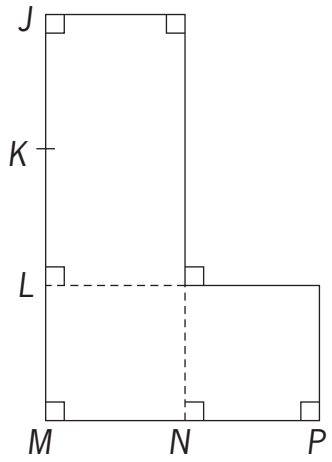
The correct answer is E;
both statements together are still not sufficient.

DS33602.01

217. A person walked completely around the edge of a park beginning at the midpoint of one edge and making the minimum number of turns, each with the minimum number of degrees necessary, as shown in the figure above. What is the sum of the degrees of all the turns that the person made?

(1) One of the turns is 80 degrees.

(2) The number of sides of the park is 4, all of the sides are straight, and each interior angle is less than 180 degrees.



Geometry Quadrilaterals

(1) Given that one of the turns is 80°, no information is given on the shape of the park and therefore no information is given on the number of other turns the person will make; NOT sufficient.

(2) Given that the park has 4 straight sides and that each interior angle is less than 180°, it follows that the park is in the shape of a quadrilateral and the turns the

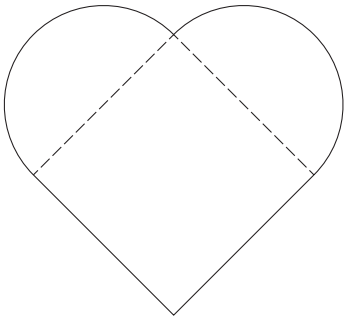
person makes are the exterior angles of the 4 interior angles of the quadrilateral. If a, b, c, and d are the measures, in degrees, of the interior angles of the quadrilateral, where $a + b + c + d = 360$, then the sum of the measures, in degrees, of the turns the person will make is $(180 - a) + (180 - b) + (180 - c) + (180 - d) = 720 - (a + b + c + d) = 720 - 360 = 360$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS55602.01

218. What is the area, in square meters, of the building plot shown in the figure above?

(1) $KM = MP = 30$ meters



(2) $JK = KL = LM = MN = NP = 15$ meters

Geometry Quadrilaterals

(1) Even with $KM = MP = 30$ meters given, it is not possible to determine the area of the plot without knowing JK as well as MN or NP; NOT sufficient.

(2) Given $JK = KL = LM = MN = NP = 15$ meters, the area of the plot is (4)(15)(15); SUFFICIENT.

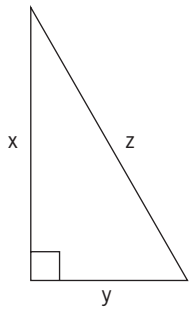
The correct answer is B;
statement 2 alone is sufficient.

DS18502.01

219. The heart-shaped decoration shown in the figure above consists of a square and two semicircles. What is the radius of each semicircle?

(1) The diagonal of the square is $10\sqrt{2}$ centimeters long.

(2) The area of the square region minus the sum of the areas of the semicircular regions is $100 - 25\pi$ square centimeters.



Geometry Circles; Pythagorean theorem

Let r cm be the radius of each semicircle. Then $2r$ cm is the side length of the square. Determine the value of r.

(1) Given that the length of the diagonal of the square is $10\sqrt{2}$, it follows from the Pythagorean theorem that $(2r)^2 + (2r)^2 = (10\sqrt{2})^2$, or $8r^2 = 200$. Therefore, $r^2 = 25$ and $r = 5$; SUFFICIENT.

(2) It is given that the area of the square, $(2r)^2 = 4r^2$, minus the total area of the two semicircular regions, πr^2, is equal to $100 - 25\pi$. That is, $4r^2 - \pi r^2 = 100 - 25\pi$, or $r^2(4 - \pi) = 25(4 - \pi)$. Dividing both sides of the last equation by $4 - \pi$ gives $r^2 = 25$ and $r = 5$; SUFFICIENT.

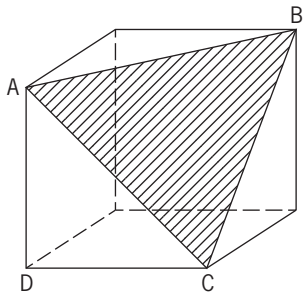
The correct answer is D;
each statement alone is sufficient.

DS20602.01

220. If A is the area of a triangle with sides of lengths x, y, and z as shown above, what is the value of A?

(1) $z = 13$

(2) $A = \frac{5y}{2}$



Geometry Triangles; Area

(1) By (1), $z = 13$, but the lengths of at least two sides of a right triangle must be known in order to find the area of the triangle; NOT sufficient.

(2) Using the notation on the figure, $A = \frac{1}{2}xy$ and by (2), $A = \frac{5y}{2}$. It follows that $\frac{1}{2}xy = \frac{5y}{2}$, from which the value of x can be determined. However, the lengths of at least two sides of a right triangle must be known in order to find the area of the triangle; NOT sufficient.

Taking (1) and (2) together gives values for z and x from which the value of y, and, therefore, the area of the triangle, which is given by $\frac{1}{2}xy$, can be determined.

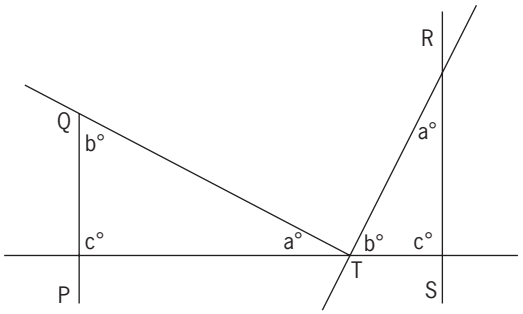
The correct answer is C;
both statements together are sufficient.

DS80602.01

221. The figure above shows a piece of cheese with a corner cut off to expose plane surface ABC. What is the area of surface ABC?

(1) $AD = 10$ centimeters

(2) The shape of the cheese was a cube before the corner was cut off.



Geometry Rectangular solids and cylinders; Pythagorean theorem

(1) Given that $AD = 10$ cm, and assuming that the cheese is in the shape of a rectangular solid, then it is not possible to determine the area of surface ABC because, for example, it is clear that different areas arise when the two other dimensions of the cheese are 10 cm, and when the two other dimensions of the cheese are 100 cm; NOT sufficient.

(2) Given that the shape of the cheese was a cube, it is not possible to determine the area of surface ABC because, for example, it is clear that different areas arise when the edge length of the cube is 10 cm, and when the edge length of the cube is 100 cm; NOT sufficient.

Taking (1) and (2) together, it follows that the cheese is in the shape of a cube with edge length 10 cm. Therefore, surface ABC is an equilateral triangle with side length equal to the length of a face diagonal of the cube. Since the length of a face diagonal can be determined, for example by applying the Pythagorean theorem to ΔADC to get $(AD)^2 + (DC)^2 = (AC)^2$ and $10^2 + 10^2 = (AC)^2$, and the area of an equilateral triangle can be determined when its side length is known, it follows that the area of surface ABC can be determined.

The correct answer is C;
both statements together are sufficient.

DS31602.01

222. The figure above shows a portion of a road map on which the measures of certain angles are indicated. If all lines shown are straight and intersect as shown, is road *PQ* parallel to road *RS*?

(1) $b = 2a$

(2) $c = 3a$

Geometry Triangles

Consider the following theorem: Two lines that are cut by a transversal are parallel if and only if the interior angles on the same side of the transversal are supplementary. In the figure, the two lines are $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$, the transversal is the line that goes through T and intersects $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ at the points where angles of degree measure c are indicated, and those angles with degree measure c are the interior angles on the same side of the transversal. Restated using the notation of the figure, the theorem says $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ are parallel if and only if $c + c = 180$ or if and only if $c = 90$. Equivalently, $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ are not parallel if and only if $c \neq 90$. Also note that $a + b + c = 180$ since a, b, and c are the interior angles of a triangle.

(1) Given that $b = 2a$, the values of a, b, and c could be 30, 60, and 90, respectively, (note that $60 = (2)(30)$ and $30 + 60 + 90 = 180$), in which case $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ would be parallel. However, the values of a, b, and c could be 32, 64, and 84, respectively (note that $64 = (2)(32)$ and $32 + 64 + 84 = 180$), in which case $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ would not be parallel; NOT sufficient.

(2) Given $c = 3a$, the values of a, b, and c could be 30, 60, and 90, respectively, (note that $90 = 3(30)$ and $30 + 60 + 90 = 180$), in which case $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ would be parallel. However, the values of a, b, and c could be 31, 56, and 93, respectively (note that $93 = (3)(31)$ and $31 + 56 + 93 = 180$), in which case $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ would not be parallel; NOT sufficient.

Taking (1) and (2) together, $b = 2a$ and $c = 3a$ so $a + b + c = a + 2a + 3a = 6a = 180$, from which it follows that $a = 30$ and $c = (3)(30) = 90$. Therefore, $\overleftrightarrow{PQ}$ and $\overleftrightarrow{RS}$ are parallel as are the roads PQ and RS that they represent.

The correct answer is C;
both statements together are sufficient.

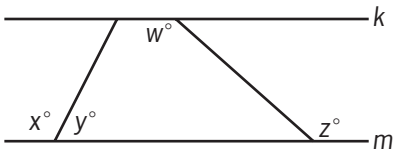
DS14602.01

223. It costs \$2,250 to fill right circular cylindrical Tank R with a certain industrial chemical. If the cost to fill any tank with this chemical is directly proportional to the volume of the chemical needed to fill the tank, how much does it cost to fill right circular cylindrical Tank S with the chemical?

(1) The diameter of the interior of Tank R is twice the diameter of the interior of Tank S.

(2) The interiors of Tanks R and S have the same height.

Geometry Volume



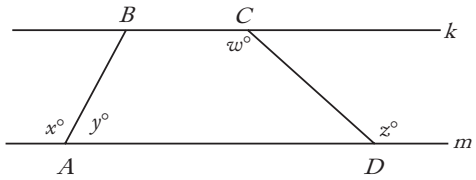
To find the cost of filling Tank S, which is directly proportional to the cost of filling Tank R, the ratio of the radii (or of the diameters) of the tanks and the ratio of their heights must be known.

(1) This gives the ratio for the diameters of Tank R and Tank S, but not the ratio for the heights of Tank R and Tank S; NOT sufficient.

(2) This gives the ratio for the heights of Tank R and Tank S, but not the ratio for the diameters of Tank R and Tank S; NOT sufficient.

Taking (1) and (2) together, the ratio of the diameter of Tank R to the diameter of Tank S is 2 (from which it follows that the ratio of the radius of Tank R to the radius of Tank S is 2) and the ratio of the height of Tank R to the height of Tank S is 1. If the radius of Tank R is r, then the radius of Tank S is $\frac{r}{2}$ and if the height of Tank R is h, then the height of Tank S is h. The volume of Tank R $= \pi r^2 h$ and the volume of Tank S $= \pi\left(\frac{r}{2}\right)^2 h = \frac{\pi r^2 h}{4}$. Therefore the cost of filling Tank S with the chemical is $\frac{1}{4}(\$2,250)$.

The correct answer is C;
both statements together are sufficient.



DS12862

224. In the figure shown, lines k and m are parallel to each other. Is $x = z$?

(1) $x = w$

(2) $y = 180 - w$

Geometry Angles

Since lines k and m are parallel, it follows from properties of parallel lines that in the diagram above x is the degree measure of $\angle ABC$ in quadrilateral $ABCD$. Therefore, because $y = 180 - x$, the four interior angles of quadrilateral $ABCD$ have degree measures $(180 - x)$, x, w, and $(180 - z)$.

(1) Given that $x = w$, then because the sum of the degree measures of the angles of the quadrilateral $ABCD$ is 360, it follows that $(180 - x) + x + x + (180 - z) = 360$, or $x - z = 0$, or $x = z$; SUFFICIENT.

(2) Given that $y = 180 - w$, then because $y = 180 - x$, it follows that $180 - w = 180 - x$, or $x = w$. However, it is shown in (1) that $x = w$ is sufficient; SUFFICIENT.

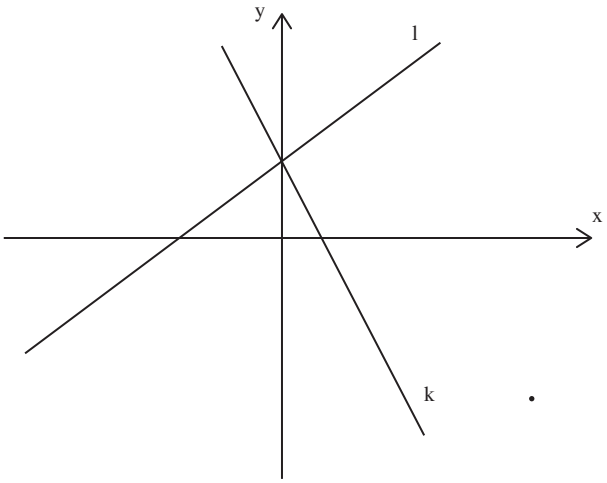
The correct answer is D;
each statement alone is sufficient.

DS13097

225. If k and ℓ are lines in the xy-plane, is the slope of k less than the slope of ℓ?

(1) The x-intercept of line k is positive, and the x-intercept of line ℓ is negative.

(2) Lines k and ℓ intersect on the positive y-axis.



Geometry Simple coordinate geometry

Can we determine, for lines k and l in the xy plane, whether the slope of k is less than the slope of l?

(1) Given that the x-intercept of k is positive and the x-intercept of line l is negative, we cannot determine whether the slope of k is less than the slope of l. For example, in the case of line k, we have only been told where (within a certain range) line k intersects another line (the x-axis). Although a line with only a single x-intercept would not be horizontal, the line k could have any non-horizontal slope. Likewise in the case of line l. For example, the slope of k could be positive and the slope of l negative, or vice versa; NOT sufficient.

(2) Given that k and l intersect on the positive y-axis, we cannot determine whether the slope of k is less than the slope of l. The point here is the same as the point with statement 1. With statement 2, we have only been given, for each of lines k and l, a condition on where the two lines intersect. And, given only that a line passes through a particular point (and regardless of whether another line happens to pass through this point), the line could have any slope. For example, again, the slope of k could be positive and the slope of l negative, or vice versa; NOT sufficient.

Considering statements 1 and 2 together, we have, for each of lines k and l, a condition on two of the points that the line passes through. As illustrated in the diagram, the two conditions together are sufficient for determining the relationship in question.

Because k intersects the positive y-axis and the positive x-axis, its slope must be downward (negative). And because l intersects the negative x-axis and the positive y-axis, its slope must be

upward (positive). The slope of k is therefore less than the slope of l.

The correct answer is C;
both statements together are sufficient.

DS09642

226. When the wind speed is 9 miles per hour, the wind-chill factor w is given by

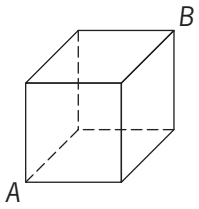
$$w = -17.366 + 1.19t,$$

where t is the temperature in degrees Fahrenheit. If at noon yesterday the wind speed was 9 miles per hour, was the wind-chill factor greater than 0 ?

(1) The temperature at noon yesterday was greater than 10 degrees Fahrenheit.

(2) The temperature at noon yesterday was less than 20 degrees Fahrenheit.

Algebra Applied problems



Determine whether $-17.366 + 1.19t$ is greater than 0.

(1) Given that $t > 10$, it follows that $-17.366 + 1.19t > -17.366 + 1.19(10)$, or $-17.366 + 1.19t > -5.466$. However, it is not possible to determine whether $-17.366 + 1.19t$ is greater than 0. For example, if $t = 19$, then $-17.366 + 1.19t = 5.244$ is greater than 0. However, if $t = 11$, then $-17.366 + 1.19t = -4.276$, which is not greater than 0; NOT sufficient.

(2) Given that $t < 20$, the same examples used in (1) show that it is not possible to determine whether $-17.366 + 1.19t$ is greater than 0; NOT sufficient.

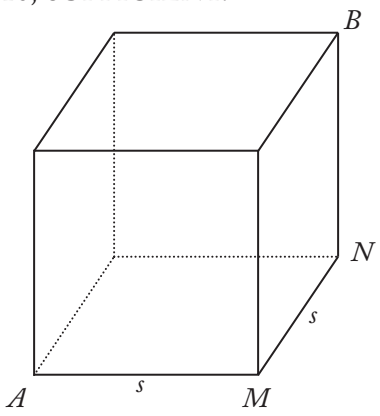
Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples were used in both (1) and (2).

The correct answer is E;
both statements together are still not sufficient.

DS08852

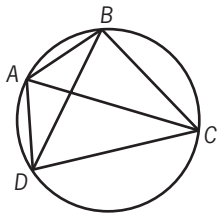
227. What is the volume of the cube above?

(1) The surface area of the cube is 600 square inches.



(2) The length of diagonal AB is $10\sqrt{3}$ inches.

Geometry Volume



This problem can be solved by determining the side length, s, of the cube.

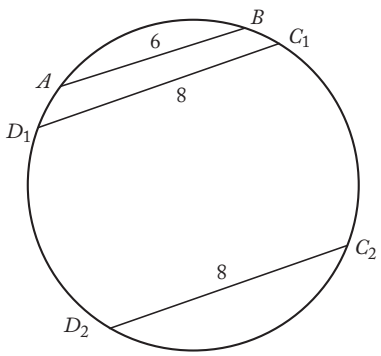
(1) This indicates that $6s^2 = 600$, from which it follows that $s^2 = 100$ and $s = 10$; SUFFICIENT.

(2) To determine diagonal AB, first determine diagonal AN by applying the Pythagorean theorem to ΔAMN: $AN = \sqrt{s^2 + s^2} = \sqrt{2s^2}$. Now determine AB by applying the Pythagorean theorem to ΔANB: $AB = \sqrt{(AN)^2 + (NB)^2} = \sqrt{2s^2 + s^2} = \sqrt{3s^2} = s\sqrt{3}$. It is given that $AB = 10\sqrt{3}$, and so $s = 10$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS03989

228. In the figure shown, quadrilateral *ABCD* is inscribed in a circle of radius 5. What is the perimeter of quadrilateral *ABCD*?



(1) The length of *AB* is 6 and the length of *CD* is 8.

(2) *AC* is a diameter of the circle.

Geometry Quadrilaterals; Perimeter; Pythagorean theorem

Determine the perimeter of quadrilateral *ABCD*, which is given by $AB + BC + CD + DA$.

(1) This indicates that $AB = 6$ and $CD = 8$, but gives no information about *BC* or *DA*.

For example, the perimeter of ABC_1D_1 is clearly different than the perimeter of ABC_2D_2 and $\overline{CD}$ could be positioned where $\overline{C_1D_1}$ is on the diagram or it could be positioned where $\overline{C_2D_2}$ is on the diagram; NOT sufficient.

(2) This indicates that $AC = 2(5) = 10$ since *AC* is a diameter of the circle and the radius of the circle is 5. It also indicates that $\angle ABC$ and $\angle ADC$ are right angles since each is inscribed in a semicircle. However, there is no information about *AB*, *BC*, *CD*, or *DA*. For example, if $AB = CD = 6$, then $BC = DA = \sqrt{10^2 - 6^2} = \sqrt{64} = 8$ and the perimeter of *ABCD* is $2(6 + 8) = 28$. However, if $AB = DA = 2$, then $BC = CD = \sqrt{10^2 - 2^2} = \sqrt{96}$ and the perimeter of $ABCD = 2(2 + \sqrt{96})$; NOT sufficient.

Taking (1) and (2) together, ΔABC is a right triangle with $AC = 10$ and $AB = 6$. It follows from the Pythagorean theorem that $BC = \sqrt{10^2 - 6^2} = \sqrt{64} = 8$. Likewise, ΔADC is a right triangle with $AC = 10$ and $CD = 8$. It follows from the Pythagorean theorem that $DA = \sqrt{10^2 - 8^2} = \sqrt{36} = 6$. Thus, the perimeter of quadrilateral *ABCD* can be determined.

The correct answer is C; both statements together are sufficient.

DS05766

229. How many members of a certain legislature voted against the measure to raise their salaries?

(1) $\frac{1}{4}$ of the members of the legislature did not vote on the measure.

(2) If 5 additional members of the legislature had voted against the measure, then the fraction of members of the legislature voting against the measure would have been $\frac{1}{3}$.

Arithmetic Ratio and proportion

The task in this question is to determine whether, on the basis of statements 1 and 2, it is possible to calculate the number of members of the legislature who voted against a certain measure.

(1) This statement, that $\frac{1}{4}$ of the members of the legislature did not vote on the measure, is compatible with any number of members of the legislature voting against the measure. After all, any number among the $\frac{3}{4}$ of the remaining members could have voted against the measure. Furthermore, based on statement 1, we do not know the number of members of the legislature (although we do know, based on this statement, that the number of members of the legislature is divisible by 4); NOT sufficient.

(2) This statement describes a scenario, of 5 additional members of the legislature voting against the measure, and stipulates that $\frac{1}{3}$ of the members of the legislature would have voted against the measure in the scenario. Given this condition, we know that the number of members of the legislature was divisible by 3, and that the

legislature had at least 15 members (to allow for the "5 additional members of the legislature" that could have voted against the measure, for a total of $\frac{1}{3}$ of the members voting against it). However, beyond this we know essentially nothing from statement 2. In particular, depending on the number of members of the legislature (which we have not been given), any number of members could have voted against the measure. For example, exactly one member could have voted against the measure, in which case the legislature would have had $(1 + 5) \times 3 = 18$ members. Exactly two members could have voted against the measure, in which case the legislature would have had $(2 + 5) \times 3 = 21$ members, and so on for 3 members voting against, 4 members voting against, etc.; NOT sufficient.

Considering the statements 1 and 2 together, the reasoning is similar to the reasoning for statement 2, but with the further condition that the total number of members of the legislature is divisible by 12 (so as to allow that both exactly $\frac{1}{4}$ of the members did not vote on the measure while exactly $\frac{1}{3}$ could have voted against the measure). For example, it could have been the case that the legislature had 24 members. In this case, $\frac{1}{3}$ of the members would have been 8 members, and, consistent with statements 1 and 2, 3 of the members (8 – 5) could have voted against the measure. Or the legislature could have had 36 members, in which case, consistent with statements 1 and 2, $\frac{1}{3}(36) - 5 = 12 - 5 = 7$ members could have voted against the measure.

The correct answer is E;
both statements together are still not sufficient.

DS05986

230. If $y \neq 0$, is $|x| = 1$?

(1) $x = \frac{y}{|y|}$

(2) $|x| = -x$

Algebra Absolute value

Can we determine whether $|x| = 1$?

(1) Given that $x = \frac{y}{|y|}$, we consider two cases: $y > 0$ and $y < 0$. If $y > 0$, then $|y| = y$ and $\frac{y}{|y|} = \frac{y}{y} = 1$. So if $y > 0$, then $x = 1$ and, of course, $|x| = 1$. If $y < 0$, then $|y| = (-1)\,y$ and $x = \frac{y}{|y|} = \frac{y}{(-1)\,y} = (-1)\frac{y}{y} = (-1)(1) = -1$. So $|x| = 1$. If $y < 0$, then $|x| = 1$. In both of the two cases, $|x| = 1$; SUFFICIENT.

(2) Given that $|x| = -x$, all we know is that x is not positive. For example, both -4 and -5 satisfy this condition on x: $|-4| = 4 = -(-4)$ and $|-5| = 5 = -(-5)$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS08306

231. If x is a positive integer, what is the value of x ?

(1) $x^2 = \sqrt{x}$

(2) $\frac{n}{x} = n$ and $n \neq 0$.

Algebra Operations with radicals

(1) It is given that x is a positive integer. Then,

$x^2 = \sqrt{x}$	given
$x^4 = x$	square both sides
$x^4 - x = 0$	subtract x from both sides
$x(x-1)(x^2 + x + 1) = 0$	factor left side

Thus, the positive integer value of x being sought will be a solution of this equation. One solution of this equation is $x = 0$, which is not a positive integer. Another solution is $x = 1$, which is a positive integer. Also, $x^2 + x + 1$ is a positive integer for all positive integer values of x, and so $x^2 + x + 1 = 0$ has no positive integer solutions. Thus, the only possible positive integer value of x is 1; SUFFICIENT.

(2) It is given that $n \neq 0$. Then,

$\frac{n}{x} = n$	given
$n = nx$	multiply both sides by x
$1 = x$	divide both sides by n, where $n \neq 0$

Thus, $x = 1$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS07568

232. Is the median of the five numbers a, b, c, d, and e equal to d?

(1) $a < c < e$

(2) $b < d < c$

Arithmetic Statistics

Determine if the median of the five numbers, a, b, c, d, and e, is equal to d.

(1) This indicates that $a < c < e$, but does not indicate a relationship of b and d with a, c, and e. For example, if $a = 5$, $b = 1$, $c = 10$, $d = 7$, and $e = 15$, then $a < c < e$, and d is the median. However, if $a = 5$, $b = 1$, $c = 10$, $d = 2$, and $e = 15$, then $a < c < e$, and a, not d, is the median; NOT sufficient.

(2) This indicates that $b < d < c$, but does not indicate a relationship of a and e with b, d, and c. For example, if $a = 5$, $b = 1$, $c = 10$, $d = 7$, and $e = 15$, then $b < d < c$, and d is the median. However, if $a = 5$, $b = 1$, $c = 10$, $d = 2$, and $e = 15$, then $b < d < c$, and a, not d, is the median; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately since the same examples used to show that (1) is not sufficient also show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS10383

233. During a certain bicycle ride, was Sherry's average speed faster than 24 kilometers per hour? (1 kilometer = 1,000 meters)

(1) Sherry's average speed during the bicycle ride was faster than 7 meters per second.

(2) Sherry's average speed during the bicycle ride was slower than 8 meters per second.

Arithmetic Applied problems

This problem can be solved by converting 24 kilometers per hour into meters per second. First, 24 kilometers is equivalent to 24,000 meters and 1 hour is equivalent to 3,600 seconds. Then, traveling 24 kilometers in 1 hour is equivalent to traveling 24,000 meters in 3,600 seconds, or $\frac{24,000}{3,600} = 6\frac{2}{3}$ meters per second.

(1) This indicates that Sherry's average speed was faster than 7 meters per second, which is faster than $6\frac{2}{3}$ meters per second and, therefore, faster than 24 kilometers per hour; SUFFICIENT.

(2) This indicates that Sherry's average speed was slower than 8 meters per second. Her average speed could have been 7 meters per second (since $7 < 8$), in which case her average speed was faster than $6\frac{2}{3}$ meters per second and, therefore, faster than 24 kilometers per hour. Or her average speed could have been 5 meters per second (since $5 < 8$), in which case her average speed was not faster than $6\frac{2}{3}$ meters per second and, therefore, not faster than 24 kilometers per hour; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS13907

234. Working together, Rafael and Salvador can tabulate a certain set of data in 2 hours. In how many hours can Rafael tabulate the data working alone?

(1) Working alone, Rafael can tabulate the data in 3 hours less time than Salvador, working alone, can tabulate the data.

(2) Working alone, Rafael can tabulate the data in $\frac{1}{2}$ the time that Salvador, working alone, can tabulate the data.

Algebra Simultaneous equations

We are given that Rafael and Salvador, working together, can tabulate the set of data in two hours. That is, if Rafael tabulates data at the rate of R units of data per hour and Salvador tabulates the data at the rate of S units per hour, then, if the set of data is made up of D units, then $2R + 2S = D$. Can we determine how much time, in hours, it takes Rafael to tabulate the data if working alone?

(1) First of all, note that the choice of units used to measure the amounts of data doesn't matter. In particular, we can define one unit of data to be D. Thus, $2R + 2S = 1$. With this in mind, consider the condition that Rafael, when working alone, can tabulate the data in 3 hours less time than Salvador can when working alone. Given that Rafael tabulates R units of data per unit time, he takes $\frac{1}{R}$ units of time to tabulate one unit of data. Similarly, Salvador takes $\frac{1}{S}$ units of time to tabulate one unit of data. This unit, as defined, is simply the entire set of data. Our given condition thus becomes $\frac{1}{R} = \frac{1}{S} - 3$, and we have the set of simultaneous equations made up of this equation and the equation $2R + 2S = 1$.

One way to determine the number of hours it would take Rafael to tabulate the data is to solve one of these equations for S and then substitute this solution into the other equation. Considering the first of these equations, we multiply both sides by RS and then manipulate the result as follows.

$$S = R - 3RS$$
$$S + 3RS = R$$
$$S(1 + 3R) = R$$
$$S = \frac{R}{1+3R}$$

Substituting into the equation $2R + 2S = 1$,

$$2R + \frac{2R}{1+3R} = 1$$

Multiplying both sides by $1 + 3R$ to eliminate the fraction,

$$2R(1 + 3R) + 2R = 1 + 3R$$
$$2R + 6R^2 = 1 + R$$
$$6R^2 + R - 1 = 0$$
$$(3R - 1)(2R + 1) = 0$$

This equation has two solutions, $-\frac{1}{2}$ and $\frac{1}{3}$. However, because the rate R cannot be negative, we find that Rafael tabulates $\frac{1}{3}$ of a unit of data every hour. Since one unit is the entire set, it takes Rafael 3 hours to tabulate the entire set; SUFFICIENT.

(2) We are given that Rafael, working alone, can tabulate the data in $\frac{1}{2}$ the amount of time it takes Salvador, working alone, to tabulate the data. As in the discussion of statement 1, we have that Rafael tabulates R units of data every hour, and takes $\frac{1}{R}$ hours to tabulate one unit of data. Similarly, it takes Salvador $\frac{1}{S}$ hours to tabulate one unit of data. One unit of data has been defined to be the size of the entire set to be tabulated, so statement 2 becomes the expression

$$\frac{1}{R} = \frac{1}{2} \times \frac{1}{S} = \frac{1}{2S}$$

We thus have $2S = R$. Substituting this value for $2S$ in the equation $2R + 2S = 1$, we have $R + 2R = 1$, and $3R = 1$. Solving for R we get $\frac{1}{3}$; SUFFICIENT.

Note that, for both statements 1 and 2, it would have been possible to stop calculating once we had determined whether it was possible to find a unique value for R. The ability to make such judgments accurately is part of what the test has been designed to measure.

The correct answer is D;
each statement alone is sufficient.

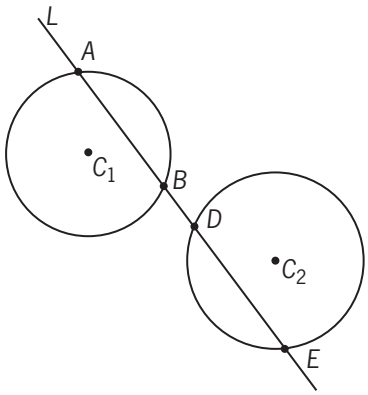
DS04039

235. If x and y are integers, what is the value of x?

(1) $xy = 1$

(2) $x \neq -1$

Arithmetic Properties of integers



Given that x and y are integers, determine the value of x.

(1) If $x = y = -1$, then $xy = 1$, and if $x = y = 1$, then $xy = 1$; NOT sufficient.

(2) Given that $x \neq -1$, the value of x could be any other integer; NOT sufficient.

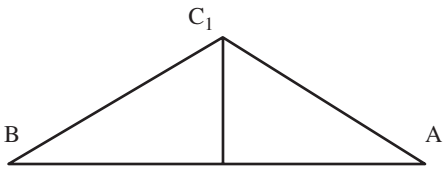
Taking (1) and (2) together, since the two possibilities for the value of x are $x = -1$ or $x = 1$ by (1), and $x \neq -1$ by (2), then $x = 1$.

The correct answer is C;
both statements together are sufficient.

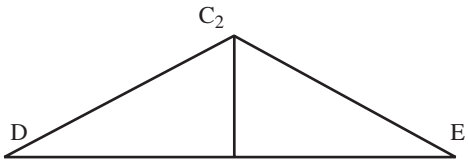
Note: Figure not drawn to scale.

DS18386

236. The figure above shows Line L, Circle 1 with center at C_1, and Circle 2 with center at C_2. Line L intersects Circle 1 at points A and B, Line L intersects Circle 2 at points D and E, and points C_1 and C_2 are equidistant from line L. Is the area of ΔABC_1 less than the area of ΔDEC_2 ?



(1) The radius of Circle 1 is less than the radius of Circle 2.



(2) The length of chord $\overline{AB}$ is less than the length of chord $\overline{DE}$.

Geometry Triangles

We are given various elements of information that apply regardless of whether we assume that statements 1, 2, or both are true, and asked whether it is possible, when considering one or both of these statements, to determine if the area of triangle ΔABC_1 is less than the area of ΔDEC_2.

(1) Given the condition that the radius of Circle 1 is less than the radius of Circle 2, it may be useful to consider the following diagrams of the triangles, in which they have been rotated so as to have the sides AB and DE represented as horizontal and on the bottom. The diagrams are not drawn to scale.

Note that the radius of the Circle 1 is equal to (the length) C_1B (= C_1A) and that the radius of Circle 2 is equal to C_2D (= C_2E). Furthermore, because line L is equidistant from points C_1 and C_2, we know that the respective heights of the triangles (distances from C_1 and C_2 to the respective bases BA and DE) are the same. However, because (with statement 1) the radius of Circle 1 is less than the radius of Circle 2, we know that C_1B and C_1A are less than C_2D and C_2E. Because the triangles have the same height, triangle ΔABC_1 must be less "wide" than ΔDEC_2 and must thus have a lesser base (length). And because the area of a triangle is always $\frac{1}{2} \times \text{base} \times \text{height}$, we can infer that the area of ΔABC_1 is less than the area of ΔDEC_2; SUFFICIENT.

(2) Given that AB is less than DE, we can infer that the area of ΔABC_1 is less than the area of ΔDEC_2. After all, we know that the heights of the two triangles are the same (because, as discussed in connection with statement 1, line L is equidistant from C_1 and C_2). The formula for the area of a triangle, $\frac{1}{2} \times \text{base} \times \text{height}$, thus allows us to make our inference; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS15938

237. Yesterday between 9:00 a.m. and 6:00 p.m. at Airport X, all flights to Atlanta departed at equally spaced times and all flights to New York City departed at equally spaced times. A flight to Atlanta and a flight to New York City both departed from Airport X at 1:00 p.m. yesterday. Between 1:00 p.m. and 3:00 p.m. yesterday, did another pair of flights to these 2 cities depart from Airport X at the same time?

(1) Yesterday at Airport X, a flight to Atlanta and a flight to New York City both departed at 10:00 a.m.

(2) Yesterday at Airport X, flights to New York City departed every 15 minutes between 9:00 a.m. and 6:00 p.m.

Arithmetic Applied problems

It is useful to note that although the departures discussed all lie between 9:00 a.m. and 6:00 p.m., there is no information concerning when the first departures took place during this time other than what is necessary for the information to be consistent. For example, since departures to both Atlanta and New York City took place at 1:00 p.m., the first departure to either of these cities could not have occurred after 1:00 p.m.

(1) Given that departures to both Atlanta and New York City took place at 10:00 a.m., it is not possible to determine whether simultaneous departures to these cities occurred between 1:00 p.m. and 3:00 p.m. For example, it is possible that departures to both Atlanta and New York City took place every 15 minutes beginning at 9:15 a.m., and thus it is possible that simultaneous departures to both these cities occurred between 1:00 p.m. and 3:00 p.m. However, it is also possible that departures to Atlanta took place every 3 hours beginning at 10:00 a.m. and departures to New York City took place every 15 minutes beginning at 9:15 a.m., and thus it is possible that no simultaneous departures to these cities occurred between 1:00 p.m. and 3:00 p.m.; NOT sufficient.

(2) Given that departures to New York City took place every 15 minutes, the same examples used in (1) can be used to show that it is not possible to determine whether simultaneous departures to these cities occurred between 1:00 p.m. and 3:00 p.m.; NOT sufficient.

Taking (1) and (2) together, it is still not possible to determine whether simultaneous departures to these cities occurred between 1:00 p.m. and 3:00 p.m. because both (1) and (2) are true for the examples above.

The correct answer is E;
both statements together are still not sufficient.

DS07206

238. Of the total number of copies of Magazine X sold last week, 40 percent were sold at full price. What was the total number of copies of the magazine sold last week?

(1) Last week, full price for a copy of Magazine X was $1.50 and the total revenue from full-price sales was $112,500.

(2) The total number of copies of Magazine X sold last week at full price was 75,000.

Algebra Applied problems

For the copies of Magazine X sold last week, let n be the total number of copies sold and let $\$p$ be the full price of each copy. Then for Magazine X last week, a total of $0.4n$ copies were each sold at price $\$p$. What is the value of n ?

(1) Given that $\$p = 1.50$ and $(0.4n)(\$p) = \$112{,}500$, it follows that $(0.4n)(1.5) = 112{,}500$, or $0.6n = 112{,}500$, or $n = \frac{112{,}500}{0.6}$; SUFFICIENT.

(2) Given that $0.4n = 75{,}000$, it follows that $n = \frac{75{,}000}{0.4}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS11614

239. If p, s, and t are positive, is $|ps - pt| > p(s - t)$?

(1) $p < s$

(2) $s < t$

Algebra Absolute value

Since p is positive, it follows that $|p(s-t)| = |p||s-t| = p|s-t|$. Therefore, the task is to determine if $|s-t| > s-t$. Since $|s-t| = s-t$ if and only if $s - t \geq 0$, it follows that $|s-t| > s-t$ if and only if $s - t < 0$.

(1) This indicates that $p < s$ but does not provide information about the relationship between s and t. For example, if $p = 5$, $s = 10$, and $t = 15$, then $p < s$ and $s < t$, but if $p = 5$, $s = 10$, and $t = 3$, then $p < s$ and $s > t$; NOT sufficient.

(2) This indicates that $s < t$, or equivalently, $s - t < 0$; SUFFICIENT.

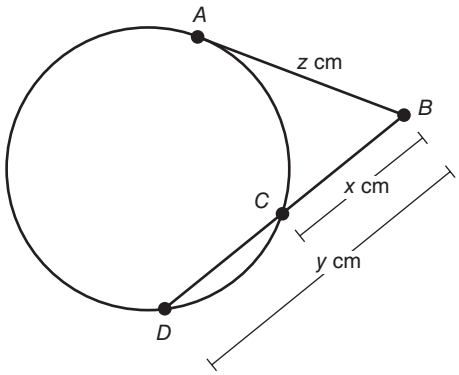
The correct answer is B;
statement 2 alone is sufficient.

DS04468

240. Is $x > y$?

(1) $x + y > x - y$

(2) $3x > 2y$



Algebra Inequalities

(1) Given that $x + y > x - y$, it follows that $y > -y$, or $2y > 0$, or $y > 0$. However, nothing is known about the value of x. If $x = 2$ and $y = 1$, then $x + y > x - y$ and the answer to the question is yes. However, if $x = 1$ and $y = 1$, then $x + y > x - y$ and the answer to the question is no; NOT sufficient.

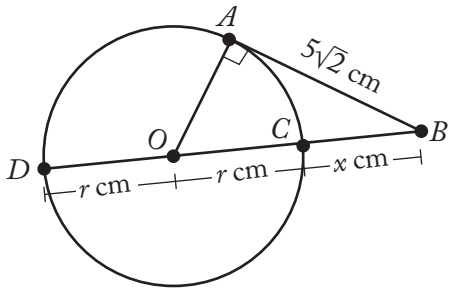
(2) Given that $3x > 2y$, then $x = 2$ and $y = 1$ is possible and the answer to the question is yes. However, if $3x > 2y$, then $x = 1$ and $y = 1$ is also possible and the answer to the question is no; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples used to show that (1) is not sufficient also show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS17588

241. In the figure above, $\overline{AB}$, which has length z cm, is tangent to the circle at point A, and $\overline{BD}$, which has length y cm, intersects the circle at point C. If $BC = x$ cm and $z = \sqrt{xy}$, what is the value of x?



(1) $CD = x$ cm

(2) $z = 5\sqrt{2}$

Geometry Circles

(1) Given that $CD = x$ cm, it is not possible to determine the value of x because all the given information continues to hold when all the parts of the figure increase in length by any given nonzero factor; NOT sufficient.

(2) Given that $z = 5\sqrt{2}$, the value of x will vary when the radius of the circle varies and $\overline{CD}$ is a diameter and thus passes through the center of the circle. To see this, let r be the radius, in centimeters, of the circle and let O be the center of the circle, as shown in the figure below. Then, because $\overline{CD}$ is a diameter, it follows that $CD = 2r$ and $y = x + CD = x + 2r$. Also, ΔOAB is a right triangle and the Pythagorean theorem gives $(OA)^2 + (AB)^2 = (OB)^2$, or $r^2 + (5\sqrt{2})^2 = (x + r)^2$, or $r^2 + 50 = x^2 + 2xr + r^2$, or $x(x + 2r) = 50$, which implies that $xy = z^2$ and $z = \sqrt{xy}$, since $y = x + 2r$ and $z = 5\sqrt{2}$. Therefore, if $z = 5\sqrt{2}$ and $\overline{CD}$ is a diameter, then $z = \sqrt{xy}$ holds, and the value of x can vary.

This can be seen by considering the equation $x(x + 2r) = 50$, or $x = \frac{50}{x + 2r}$. If the value of r changes slightly to a new value R, then the value of x must also change. Otherwise, there would be two different numbers, namely $\frac{50}{x + 2r}$ and $\frac{50}{x + 2R}$, equal to each other, which is a contradiction; NOT sufficient.

Taking (1) and (2) together, $y = x + CD = x + x = 2x$ and $z = 5\sqrt{2}$, so $z = \sqrt{xy}$ becomes $5\sqrt{2} = \sqrt{x(2x)}$, or $(5\sqrt{2})^2 = (\sqrt{x(2x)})^2$, or $50 = x(2x)$, or $x^2 = 25$, or $x = 5$.

The correct answer is C;
both statements together are sufficient.

DS15863

242. Is the integer n a prime number?

(1) $24 \le n \le 28$

(2) n is not divisible by 2 or 3.

Arithmetic Properties of numbers

Determine if the integer n is a prime number.

(1) This indicates that n is between 24 and 28, inclusive. It follows that the value of n can be 24, 25, 26, 27, or 28. Each of these is NOT a prime number. Thus, it can be determined that n is NOT a prime number; SUFFICIENT.

(2) This indicates that n is not divisible by 2 or 3. If $n = 7$, then n is not divisible by 2 or 3 and is a prime number. However, if $n = 25$, then n is not divisible by 2 or 3 and is a not prime number since 25 has a factor, namely 5, other than 1 and itself; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS03615

243. What is the average (arithmetic mean) annual salary of the 6 employees of a toy company?

(1) If the 6 annual salaries were ordered from least to greatest, each annual salary would be $6,300 greater than the preceding annual salary.

(2) The range of the 6 annual salaries is $31,500.

Arithmetic Statistics

Can we determine the arithmetic mean of the annual salaries of the 6 employees?

(1) Given only that the 6 annual salaries can be put into a sequence from least to greatest, with a difference of $6,300 between adjacent members of the sequence, we can infer certain things about the mean of the salaries. For example, because none of the salaries would be negative, we know from statement 1 that the mean of the salaries is greater than or equal to $\frac{0+\$6,300+\$12,600+\$18,900+\$25,200+\$31,500}{6}$. (It is not necessary to perform this calculation.) However, depending on what the least of the salaries is—that is, the value at which the sequence of salaries begins—the average of the salaries could, consistent with condition 1, take on any value greater than this quotient; NOT sufficient.

(2) Given the statement that the range of the salaries is $31,500, reasoning similar to the reasoning for statement 1 applies. A difference between least salary and greatest salary of $31,500 is consistent with any value for the least salary, so long as the greatest salary is $31,500 greater than the least salary. Furthermore, even if we knew what the least and the greatest salaries are, it would be impossible to determine the mean merely from the range; NOT sufficient.

As reflected in the numerator of the quotient in the discussion of statement 1, we can see that statement 1 implies statement 2. In the sequence of 6 salaries with a difference of $6,300 between adjacent members of the sequence, the difference between the least salary and the greatest salary is $5 \times \$6,300 = \$31,500$. Therefore, because statement 1 is insufficient for determining the mean of the salaries, the combination of statement 1 and statement 2 is also insufficient for determining the mean of the salaries.

The correct answer is E;
both statements together are not sufficient.

DS17503

244. In a certain order, the pretax price of each regular pencil was $0.03, the pretax price of each deluxe pencil was $0.05, and there were 50% more deluxe pencils than regular pencils. All taxes on the order are a fixed percent of the pretax prices. The sum of the total pretax price of the order and the tax on the order was $44.10. What was the amount, in dollars, of the tax on the order?

(1) The tax on the order was 5% of the total pretax price of the order.

(2) The order contained exactly 400 regular pencils.

Arithmetic Percents

Let n be the number of regular pencils in the order and let r% be the tax rate on the order as a percent of the pretax price. Then the order contains $1.5n$ deluxe pencils, the total pretax price of the order is $(\$0.03)n + (\$0.05)(1.5n) = \$0.105n$, and the sum of the total pretax price of the order and the tax

on the order is $\left(1+\frac{r}{100}\right)(\$0.105n)$. Given that $\left(1+\frac{r}{100}\right)(\$0.105n) = \$44.10$, what is the value of $\left(\frac{r}{100}\right)(\$0.105n)$?

(1) Given that $r = 5$, then $\left(1+\frac{r}{100}\right)(\$0.105n) = \$44.10$ becomes $(1.05)(0.105n) = 44.10$, which is a first-degree equation that can be solved for n. Since the value of r is known and the value of n can be determined, it follows that the value of $\left(\frac{r}{100}\right)(\$0.105n)$ can be determined; SUFFICIENT.

(2) Given that $n = 400$, then $\left(1+\frac{r}{100}\right)(\$0.105n) = \$44.10$ becomes $\left(1+\frac{r}{100}\right)(0.105)(400) = 44.10$, which is a first-degree equation that can be solved for r. Since the value of r can be determined and the value of n is known, it follows that the value of $\left(\frac{r}{100}\right)(\$0.105n)$ can be determined; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06785

245. If m is an integer greater than 1, is m an even integer?

(1) 32 is a factor of m.

(2) m is a factor of 32.

Arithmetic Properties of numbers

(1) Given that 32 is a factor of m, then each of the factors of 32, including 2, is a factor of m. Since 2 is a factor of m, it follows that m is an even integer; SUFFICIENT.

(2) Given that m is a factor of 32 and m is greater than 1, it follows that $m = 2, 4, 8, 16$, or 32. Since each of these is an even integer, m must be an even integer; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS05657

246. If the set S consists of five consecutive positive integers, what is the sum of these five integers?

(1) The integer 11 is in S, but 10 is not in S.

(2) The sum of the even integers in S is 26.

Arithmetic Sequences

(1) This indicates that the least integer in S is 11 since S consists of consecutive integers and 11 is in S, but 10 is not in S. Thus, the integers in S are 11, 12, 13, 14, and 15, and their sum can be determined; SUFFICIENT.

(2) This indicates that the sum of the even integers in S is 26. In a set of 5 consecutive integers, either two of the integers or three of the integers are even. If there are three even integers, then the first integer in S must be even. Also, since $\frac{26}{3} = 8\frac{2}{3}$, the three even integers must be around 8. The three even integers could be 6, 8, and 10, but are not because their sum is less than 26; or they could be 8, 10, and 12, but are not because their sum is greater than 26. Therefore, S cannot contain three even integers and must contain only two even integers. Those integers must be 12 and 14 since 12 + 14 = 26. It follows that the integers in S are 11, 12, 13, 14, and 15, and their sum can be determined; SUFFICIENT.

Alternately, if n, $n + 1$, $n + 2$, $n + 3$, and $n + 4$ represent the five consecutive integers and three of them are even, then $n + (n + 2) + (n + 4) = 26$, or $3n = 20$, or $n = \frac{20}{3}$, which is not an integer. On the other hand, if two of the integers are even, then $(n + 1) + (n + 3) = 26$, or $2n = 22$, or $n = 11$. It follows that the integers are 11, 12, 13, 14, and 15, and their sum can be determined; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS17543

247. If $x > 0$, what is the value of x?

(1) $x^3 - x = 0$

(2) $\sqrt[3]{x} - x = 0$

Algebra Factoring; Operations with radical expressions

(1) Given that $x^3 - x = 0$, factoring gives $x(x^2 - 1) = x(x - 1)(x + 1) = 0$. Hence, $x = 0$, $x = 1$, or $x = -1$. Since $x > 0$, the value of x cannot be 0 or -1, and so $x = 1$; SUFFICIENT.

(2) Given that $\sqrt[3]{x} - x = 0$, it follows that $\sqrt[3]{x} = x$, or $(\sqrt[3]{x})^3 = x^3$, or $x = x^3$. Therefore, $x^3 - x = 0$ and the discussion in (1) shows that the only positive value of x is $x = 1$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS08307

248. A total of 20 amounts are entered on a spreadsheet that has 5 rows and 4 columns; each of the 20 positions in the spreadsheet contains one amount. The average (arithmetic mean) of the amounts in row i is R_i $(1 \le i \le 5)$. The average of the amounts in column j is C_j $(1 \le j \le 4)$. What is the average of all 20 amounts on the spreadsheet?

(1) $R_1 + R_2 + R_3 + R_4 + R_5 = 550$

(2) $C_1 + C_2 + C_3 + C_4 = 440$

Arithmetic Statistics

It is given that R_i represents the average of the amounts in row i. Since there are four amounts in each row, $4R_i$ represents the total of the amounts in row i. Likewise, it is given that C_j represents the average of the amounts in column j. Since there are five amounts in each column, $5C_j$ represents the total of the amounts in column j.

(1) It is given that $R_1 + R_2 + R_3 + R_4 + R_5 = 550$, and so $4(R_1 + R_2 + R_3 + R_4 + R_5) = 4R_1 + 4R_2 + 4R_3 + 4R_4 + 4R_5 = 4(550) = 2{,}200$. Therefore, 2,200 is the sum of all 20 amounts (4 amounts in each of 5 rows), and the average of all 20 amounts is $\frac{2{,}200}{20} = 110$; SUFFICIENT.

(2) It is given that $C_1 + C_2 + C_3 + C_4 = 440$, and so $5(C_1 + C_2 + C_3 + C_4) = 5C_1 + 5C_2 + 5C_3 + 5C_4 = 5(440) = 2{,}200$. Therefore, 2,200 is the sum of all 20 amounts (5 amounts in each of 4 columns), and the average of all 20 amounts is $\frac{2{,}200}{20} = 110$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS13132

249. Was the range of the amounts of money that Company Y budgeted for its projects last year equal to the range of the amounts of money that it budgeted for its projects this year?

(1) Both last year and this year, Company Y budgeted money for 12 projects and the least amount of money that it budgeted for a project was \$400.

(2) Both last year and this year, the average (arithmetic mean) amount of money that Company Y budgeted per project was \$2,000.

Arithmetic Statistics

Let G_1 and L_1 represent the greatest and least amounts, respectively, of money that Company Y budgeted for its projects last year, and let G_2 and L_2 represent the greatest and least amounts, respectively, of money that Company Y budgeted for its projects this year. Determine if the range of the amounts of money Company Y budgeted for its projects last year is equal to the range of amounts budgeted for its projects this year; that is, determine if $G_1 - L_1 = G_2 - L_2$.

(1) This indicates that $L_1 = L_2 = \$400$, but does not give any information about G_1 or G_2; NOT sufficient.

(2) This indicates that the average amount Company Y budgeted for its projects both last year and this year was \$2,000 per project, but does not give any information about the least and greatest amounts that it budgeted for its projects either year; NOT sufficient.

Taking (1) and (2) together, it is known that $L_1 = L_2 = \$400$ and that the average amount Company Y budgeted for its projects both last year and this year was \$2,000 per project, but there is no information about G_1 or G_2. For example, if, for each year, Company Y budgeted \$400 for each of 2 projects and \$2,320 for each of the 10 others, then (1) and (2) are true and the

range for each year was \$2,320 – \$400 = \$1,920. However, if, last year, Company Y budgeted \$400 for each of 2 projects and \$2,320 for each of the 10 others, and, this year, budgeted \$400 for each of 11 projects and \$19,600 for 1 project, then (1) and (2) are true, but the range for last year was \$1,920 and the range for this year was \$19,600 – \$400 = \$19,200.

The correct answer is E;
both statements together are still not sufficient.

DS01633

250. If a, b, c, and d are numbers on the number line shown and if the tick marks are equally spaced, what is the value of $a + c$?

(1) $a + b = -8$

(2) $a + d = 0$

Algebra Sequences

It is given that the distance between a and b is the same as the distance between b and c, which is the same as the distance between c and d. Letting q represent this distance, then $b = a + q$, $c = a + 2q$, and $d = a + 3q$. The value of $a + c$ can be determined if the value of $a + (a + 2q) = 2a + 2q$ can be determined.

(1) It is given that $a + b = -8$. Then, $a + (a + q) = 2a + q = -8$. From this, the value of $2a + 2q$ cannot be determined. For example, the values of a and q could be -5 and 2, respectively, or they could be -6 and 4, respectively; NOT sufficient.

(2) It is given that $a + d = 0$. Then, $a + (a + 3q) = 2a + 3q = 0$. From this, the value of $2a + 2q$ cannot be determined. For example, the values of a and q could be -3 and 2, respectively, or they could be -6 and 4, respectively; NOT sufficient.

Taking (1) and (2) together, adding the equations, $2a + q = -8$ and $2a + 3q = 0$ gives $4a + 4q = -8$ and so $2a + 2q = \frac{-8}{2} = -4$.

The correct answer is C;
both statements together are sufficient.

DS06067

251. Is $xm < ym$?

(1) $x > y$

(2) $m < 0$

Algebra Inequalities

(1) Given that $x > y$, the inequality $xm < ym$ can be true (for example, if $m = -1$, then $xm < ym$ becomes $-x < -y$, or $x > y$, which is true by assumption) and it is possible that the inequality $xm < ym$ can be false (for example, if $m = 0$, then $xm < ym$ becomes $0 < 0$, which is false); NOT sufficient.

(2) Given that $m < 0$, the inequality $xm < ym$ can be true (for example, if $m = -1$, $x = 2$, and $y = 1$, then $xm < ym$ becomes $-2 < -1$, which is true) and it is possible that the inequality $xm < ym$ can be false (for example, if $m = -1$, $x = 1$, and $y = 2$, then $xm < ym$ becomes $-1 < -2$, which is false); NOT sufficient.

Taking (1) and (2) together, multiplying both sides of the inequality $x > y$ by m reverses the inequality sign (since $m < 0$), which gives $xm < ym$.

The correct answer is C;
both statements together are sufficient.

DS02899

252. If $y = x^2 - 6x + 9$, what is the value of x?

(1) $y = 0$

(2) $x + y = 3$

Algebra Second-degree equations

Given that $y = x^2 - 6x + 9 = (x - 3)^2$, what is the value of x?

(1) Given that $y = 0$, it follows that $(x - 3)^2 = 0$, or $x = 3$; SUFFICIENT.

(2) Given that $x + y = 3$, or $y = 3 - x$, then $x = 3$ and $y = 0$ are possible, since $y = (x - 3)^2$ becomes $0 = (3 - 3)^2$, which is true, and $y = 3 - x$ becomes $0 = 3 - 3$, which is true. However, $x = 2$ and $y = 1$ are also possible, since $y = (x - 3)^2$ becomes $1 = (2 - 3)^2$, which is true, and $y = 3 - x$ becomes $1 = 3 - 2$, which is true; NOT sufficient.

Note: The values for x and y used in (2) above can be found by solving $(x-3)^2 = 3 - x$, which can be rewritten as $x^2 - 6x + 9 = 3 - x$, or $x^2 - 5x + 6 = 0$, or $(x-3)(x-2) = 0$.

The correct answer is A;
statement 1 alone is sufficient.

DS06810

253. What is the probability that Lee will make exactly 5 errors on a certain typing test?

(1) The probability that Lee will make 5 or more errors on the test is 0.27.

(2) The probability that Lee will make 5 or fewer errors on the test is 0.85.

Arithmetic Probability

(1) Given that 0.27 is the probability that Lee will make 5 or more errors on the test, it is clearly not possible to determine the probability that Lee will make exactly 5 errors on the test; NOT sufficient.

(2) Given that 0.85 is the probability that Lee will make 5 or fewer errors on the test, it is clearly not possible to determine the probability that Lee will make exactly 5 errors on the test; NOT sufficient.

Taking (1) and (2) together, let E be the event that Lee will make 5 or more errors on the test and let F be the event that Lee will make 5 or fewer errors on the test. Then $P(E \text{ or } F) = 1$, since it will always be the case that, when taking the test, Lee will make at least 5 errors or at most 5 errors. Also, (1) and (2) can be expressed as $P(E) = 0.27$ and $P(F) = 0.85$, and the question asks for the value of $P(E \text{ and } F)$. Using the identity $P(E \text{ or } F) = P(E) + P(F) - P(E \text{ and } F)$, it follows that $1 = 0.27 + 0.85 - P(E \text{ and } F)$, or $P(E \text{ and } F) = 0.27 + 0.85 - 1 = 0.12$. Therefore, the probability that Lee will make exactly 5 errors on the test is 0.12.

The correct answer is C;
both statements together are sufficient.

DS19208

254. If p is a positive integer, is $2^p + 1$ a prime number?

(1) p is a prime number.

(2) p is an even number.

Arithmetic Properties of integers

Given that p is a positive integer, can we determine whether $2^p + 1$ is a prime number?

(1) Given that p is a prime number, we don't have enough information to determine whether $2^p + 1$ is a prime number. To see this, it best to consider some cases. If $p = 2$, then $2^p + 1 = 2^2 + 1 = 2 \times 2 + 1 = 4 + 1 = 5$, which is prime. And if $p = 3$, then $2^p + 1 = 2^3 + 1 = 2 \times 2 \times 2 + 1 = 8 + 1 = 9$, which is not prime (it is equal to 3×3); NOT sufficient.

(2) Given that p is an even number, we can again consider cases and see that it is impossible to determine whether $2^p + 1$ is a prime number. If $p = 2$ then $2^p + 1 = 2^2 + 1 = 4 + 1 = 5$, which, again, is prime. And if $p = 6$, then $2^p + 1 = 2^6 + 1 = 2 \times 2 \times 2 \times 2 \times 2 \times 2 + 1 = (2 \times 2 \times 2) \times (2 \times 2 \times 2) + 1 = 8 \times 8 + 1 = 64 + 1 = 65$, which is not prime (it is equal to 13×5); NOT sufficient.

Considering the two statements together, we have that p is both prime and even. The only even number that is not divisible by some other positive integer besides 1 is 2. That is, the only prime even integer is 2. $2^p + 1$ is therefore equal to $2^2 + 1 = 5$, which is prime.

The correct answer is C;
both statements together are sufficient.

DS02741

255. In the xy-plane, point (r,s) lies on a circle with center at the origin. What is the value of $r^2 + s^2$?

(1) The circle has radius 2.

(2) The point $\left(\sqrt{2}, -\sqrt{2}\right)$ lies on the circle.

Geometry Simple coordinate geometry

Let R be the radius of the circle. A right triangle with legs of lengths $|r|$ and $|s|$ can be formed so that the line segment with endpoints (r,s) and $(0,0)$ is the hypotenuse. Since the length of the hypotenuse is R, the Pythagorean theorem for this right triangle gives $R^2 = r^2 + s^2$. Therefore, to determine the value of $r^2 + s^2$, it is sufficient to determine the value of R.

(1) It is given that $R = 2$; SUFFICIENT.

(2) It is given that $\left(\sqrt{2},-\sqrt{2}\right)$ lies on the circle. A right triangle with legs each of length $\sqrt{2}$ can be formed so that the line segment with endpoints $\left(\sqrt{2},-\sqrt{2}\right)$ and (0,0) is the hypotenuse. Since the length of the hypotenuse is the radius of the circle, which is R, where $R^2 = r^2 + s^2$, the Pythagorean theorem for this right triangle gives $R^2 = \left(\sqrt{2}\right)^2 + \left(\sqrt{2}\right)^2 = 2 + 2 = 4$. Therefore, $r^2 + s^2 = 4$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06368

256. If r, s, and t are nonzero integers, is $r^5s^3t^4$ negative?

(1) rt is negative.

(2) s is negative.

Arithmetic Properties of numbers

Since $r^5s^3t^4 = (rt)^4rs^3$ and $(rt)^4$ is positive, $r^5s^3t^4$ will be negative if and only if rs^3 is negative, or if and only if r and s have opposite signs.

(1) It is given that rt is negative, but nothing can be determined about the sign of s. If the sign of s is the opposite of the sign of r, then $r^5s^3t^4 = (rt)^4rs^3$ will be negative. However, if the sign of s is the same as the sign of r, then $r^5s^3t^4 = (rt)^4rs^3$ will be positive; NOT sufficient.

(2) It is given that s is negative, but nothing can be determined about the sign of r. If r is positive, then $r^5s^3t^4 = (rt)^4rs^3$ will be negative. However, if r is negative, then $r^5s^3t^4 = (rt)^4rs^3$ will be positive; NOT sufficient.

Given (1) and (2), it is still not possible to determine whether r and s have opposite signs. For example, (1) and (2) hold if r is positive, s is negative, and t is negative, and in this case r and s have opposite signs. However, (1) and (2) hold if r is negative, s is negative, and t is positive, and in this case r and s have the same sign.

The correct answer is E;
both statements together are still not sufficient.

DS13706

257. Each Type A machine fills 400 cans per minute, each Type B machine fills 600 cans per minute, and each Type C machine installs 2,400 lids per minute. A lid is installed on each can that is filled and on no can that is not filled. For a particular minute, what is the total number of machines working?

(1) A total of 4,800 cans are filled that minute.

(2) For that minute, there are 2 Type B machines working for every Type C machine working.

Algebra Simultaneous equations

(1) Given that 4,800 cans were filled that minute, it is possible that 12 Type A machines, no Type B machines, and 2 Type C machines were working, for a total of 14 machines, since (12)(400) + (0)(600) = 4,800 and (2)(2,400) = 4,800. However, it is also possible that no Type A machines, 8 Type B machines, and 2 Type C machines were working, for a total of 10 machines, since (0)(400) + (8)(600) = 4,800 and (2)(2,400) = 4,800; NOT sufficient.

(2) Given that there are 2 Type B machines working for every Type C machine working, it is possible that there are 6 machines working—3 Type A machines, 2 Type B machines, and 1 Type C machine. This gives 3(400) + 2(600) = 2,400 cans and 1(2,400) = 2,400 lids. It is also possible that there are 12 machines working—6 Type A machines, 4 Type B machines, and 2 Type C machines. This gives 6(400) + 4(600) = 4,800 cans and 2(2,400) = 4,800 lids; NOT sufficient.

Taking (1) and (2) together, since there were 4,800 cans filled that minute, there were 4,800 lids installed that minute. It follows that 2 Type C machines were working that minute, since (2)(2,400) = 4,800. Since there were twice this number of Type B machines working that minute, it follows that 4 Type B machines were working that minute. These 4 Type B machines filled (4)(600) = 2,400 cans that minute, leaving 4,800 – 2,400 = 2,400 cans to be filled by Type A machines. Therefore, the number of Type A machines working that minute was $\frac{2,400}{400} = 6$,

and it follows that the total number of machines working that minute was $2 + 4 + 6 = 12$.

The correct answer is C;
both statements together are sufficient.

DS08660

258. If a and b are constants, what is the value of a?

(1) $a < b$

(2) $(t - a)(t - b) = t^2 + t - 12$, for all values of t.

Algebra Second-degree equations

(1) Given that $a < b$, it is not possible to determine the value of a. For example, $a < b$ is true when $a = 1$ and $b = 2$, and $a < b$ is true when $a = 2$ and $b = 3$; NOT sufficient.

(2) By factoring, what is given can be expressed as $(t - a)(t - b) = (t + 4)(t - 3)$, so either $a = -4$ and $b = 3$, or $a = 3$ and $b = -4$; NOT sufficient.

Taking (1) and (2) together, the relation $a < b$ is satisfied by only one of the two possibilities given in the discussion of (2) above, namely $a = -4$ and $b = 3$. Therefore, the value of a is -4.

The correct answer is C;
both statements together are sufficient.

DS04474

259. If x is a positive integer, is $\sqrt{x}$ an integer?

(1) $\sqrt{4x}$ is an integer.

(2) $\sqrt{3x}$ is not an integer.

Algebra Radicals

(1) It is given that $\sqrt{4x} = n$, or $4x = n^2$, for some positive integer n. Since $4x$ is the square of an integer, it follows that in the prime factorization of $4x$, each distinct prime factor is repeated an even number of times. Therefore, the same must be true for the prime factorization of x, since the prime factorization of x only differs from the prime factorization of $4x$ by two factors of 2, and hence by an even number of factors of 2; SUFFICIENT.

(2) Given that $\sqrt{3x}$ is not an integer, it is possible for $\sqrt{x}$ to be an integer (for example, $x = 1$) and it is possible for $\sqrt{x}$ to not be an integer (for example, $x = 2$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16456

260. If p, q, x, y, and z are different positive integers, which of the five integers is the median?

(1) $p + x < q$

(2) $y < z$

Arithmetic Statistics

Since there are five different integers, there are two integers greater and two integers less than the median, which is the middle number.

(1) No information is given about the order of y and z with respect to the other three numbers; NOT sufficient.

(2) This statement does not relate y and z to the other three integers; NOT sufficient.

Because (1) and (2) taken together do not relate p, x, and q to y and z, it is impossible to tell which is the median. For example, if $p = 3$, $x = 4$, $q = 8$, $y = 9$, and $z = 10$, then the median is 8, but if $p = 3$, $x = 4$, $q = 8$, $y = 1$, and $z = 2$, then the median is 3.

The correct answer is E;
both statements together are still not sufficient.

DS16277

261. If $w + z = 28$, what is the value of wz?

(1) w and z are positive integers.

(2) w and z are consecutive odd integers.

Arithmetic Arithmetic operations

(1) The fact that w and z are both positive integers does not allow the values of w and z to be determined because, for example, if $w = 20$ and $z = 8$, then $wz = 160$, and if $w = 10$ and $z = 18$, then $wz = 180$; NOT sufficient.

(2) Since w and z are consecutive odd integers whose sum is 28, it is reasonable to consider the possibilities for the sum of consecutive odd integers: …, $(-5) + (-3) = -8$, $(-3) + (-1) = -4$, $(-1) + 1 = 0$, $1 + 3 = 4$,…, $9 + 11 = 20$, $11 + 13 = 24$, $13 + 15 = 28$, $15 + 17 = 32$, …. From this list it follows that only one pair of consecutive odd integers has 28 for its sum, and hence there is exactly one possible value for wz.

This problem can also be solved algebraically by letting the consecutive odd integers w and

z be represented by $2n + 1$ and $2n + 3$, where n can be any integer. Since $28 = w + z$, it follows that

$28 = (2n+1)+(2n+3)$

$28 = 4n + 4$	simplify
$24 = 4n$	subtract 4 from both sides
$6 = n$	divide both sides by 4

Thus, $w = 2(6) + 1 = 13$, $z = 2(6) + 3 = 15$, and hence exactly one value can be determined for wz; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS02474

262. If $abc \neq 0$, is $\dfrac{\frac{a}{b}}{c} = \dfrac{a}{\frac{b}{c}}$?

(1) $a = 1$

(2) $c = 1$

Algebra Fractions

Since $\dfrac{\frac{a}{b}}{c} = \dfrac{a}{b} \div c = \dfrac{a}{b} \times \dfrac{1}{c} = \dfrac{a}{bc}$ and $\dfrac{a}{\frac{b}{c}} = a \div \dfrac{b}{c} = a \times \dfrac{c}{b} = \dfrac{ac}{b}$, it is to be determined whether $\dfrac{a}{bc} = \dfrac{ac}{b}$.

(1) Given that $a = 1$, the equation to be investigated, $\dfrac{a}{bc} = \dfrac{ac}{b}$, is $\dfrac{1}{bc} = \dfrac{c}{b}$. This equation can be true for some nonzero values of b and c (for example, $b = c = 1$) and false for other nonzero values of b and c (for example, $b = 1$ and $c = 2$); NOT sufficient.

(2) Given that $c = 1$, the equation to be investigated, $\dfrac{a}{bc} = \dfrac{ac}{b}$, is $\dfrac{a}{b} = \dfrac{a}{b}$. This equation is true for all nonzero values of a and b; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS14471

263. The arithmetic mean of a collection of 5 positive integers, not necessarily distinct, is 9. One additional positive integer is included in the collection and the arithmetic mean of the 6 integers is computed. Is the arithmetic mean of the 6 integers at least 10 ?

(1) The additional integer is at least 14.

(2) The additional integer is a multiple of 5.

Arithmetic Statistics

Since the arithmetic mean of the 5 integers is 9, the sum of the 5 integers divided by 5 is equal to 9, and hence the sum of the 5 integers is equal to $(5)(9) = 45$. Let x be the additional positive integer. Then the sum of the 6 integers is $45 + x$, and the arithmetic mean of the 6 integers is $\dfrac{45+x}{6}$. Determine whether $\dfrac{45+x}{6} \geq 10$, or equivalently, whether $45 + x \geq 60$, or equivalently, whether $x \geq 15$.

(1) Given that $x \geq 14$, then x could equal 14 and $x \geq 15$ is not true, or x could equal 15 and $x \geq 15$ is true; NOT sufficient.

(2) Given that x is a multiple of 5, then x could equal 10 and $x \geq 15$ is not true, or x could equal 15 and $x \geq 15$ is true; NOT sufficient.

Taking (1) and (2) together, then x is a multiple of 5 that is greater than or equal to 14, and so x could equal one of the numbers 15, 20, 25, 30, ... Each of these numbers is greater than or equal to 15.

The correct answer is C;
both statements together are sufficient.

DS11003

264. A certain list consists of 400 different numbers. Is the average (arithmetic mean) of the numbers in the list greater than the median of the numbers in the list?

(1) Of the numbers in the list, 280 are less than the average.

(2) Of the numbers in the list, 30 percent are greater than or equal to the average.

Arithmetic Statistics

In a list of 400 numbers, the median will be halfway between the 200th and the 201st numbers in the list when the numbers are ordered from least to greatest.

(1) This indicates that 280 of the 400 numbers in the list are less than the average of the 400 numbers. This means that both the 200th and the 201st numbers, as well as the median, are less than the average and, therefore, that the average is greater than the median; SUFFICIENT.

(2) This indicates that (0.3)(400) = 120 of the numbers are greater than or equal to the average. This means that the other 400 – 120 = 280 numbers are less than the average, which is the same as the information in (1); SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS03678

265. In a two-month survey of shoppers, each shopper bought one of two brands of detergent, X or Y, in the first month and again bought one of these brands in the second month. In the survey, 90 percent of the shoppers who bought Brand X in the first month bought Brand X again in the second month, while 60 percent of the shoppers who bought Brand Y in the first month bought Brand Y again in the second month. What percent of the shoppers bought Brand Y in the second month?

(1) In the first month, 50 percent of the shoppers bought Brand X.

(2) The total number of shoppers surveyed was 5,000.

Arithmetic Percents

This problem can be solved by using the following contingency table where A and B represent, respectively, the number of shoppers who bought Brand X and the number of shoppers who bought Brand Y in the first month; C and D represent, respectively, the number of shoppers who bought Brand X and the number of shoppers who bought Brand Y in the second month; and T represents the total number of shoppers in the survey. Also in the table, $0.9A$ represents the 90% of the shoppers who bought Brand X in the first month and also bought it in the second month, and $0.1A$ represents the (100 – 90)% = 10% of the shoppers who bought Brand X in the first month and Brand Y in the second month. Similarly, $0.6B$ represents the 60% of the shoppers who bought Brand Y in the first month and also bought it in the second month, and $0.4B$ represents the (100 – 60)% = 40% of the shoppers who bought Brand Y in the first month and Brand X in the second month.

		Second Month		
		X	**Y**	**Total**
First Month	**X**	$0.9A$	$0.1A$	A
	Y	$0.4B$	$0.6B$	B
	Total	C	D	T

Determine the value of $\frac{D}{T}$ as a percentage.

(1) This indicates that 50% of the shoppers bought Brand X in the first month, so $A = 0.5T$. It follows that the other 50% of the shoppers bought Brand Y in the first month, so $B = 0.5T$. Then, $D = 0.1A + 0.6B = 0.1(0.5T) + 0.6(0.5T) = 0.05T + 0.30T = 0.35T$. It follows that $\frac{D}{T} = \frac{0.35T}{T} = 0.35$, which is 35%; SUFFICIENT.

(2) This indicates that $T = 5{,}000$, as shown in the following table:

		Second Month		
		X	**Y**	**Total**
First Month	**X**	$0.9A$	$0.1A$	A
	Y	$0.4B$	$0.6B$	B
	Total	C	D	5,000

But not enough information is given to be able to determine D or D as a percentage of 5,000; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS15902

266. If m and n are positive integers, is $m + n$ divisible by 4 ?

(1) m and n are each divisible by 2.

(2) Neither m nor n is divisible by 4.

Arithmetic Properties of numbers

Determine whether the sum of the positive integers m and n is divisible by 4.

(1) It is given that m is divisible by 2 and n is divisible by 2. If, for example, $m = 2$ and $n = 2$, then each of m and n is divisible by 2 and $m + n = 2 + 2 = 4$, which is divisible by 4.

However, if $m = 2$ and $n = 4$, then each of m and n is divisible by 2 and $m + n = 2 + 4 = 6$, which is not divisible by 4; NOT sufficient.

(2) It is given that neither m nor n is divisible by 4. If, for example, $m = 3$ and $n = 5$, then neither m nor n is divisible by 4 and $m + n = 3 + 5 = 8$, which is divisible by 4. On the other hand, if $m = 3$ and $n = 6$, then neither m nor n is divisible by 4 and $m + n = 3 + 6 = 9$, which is not divisible by 4; NOT sufficient.

Taking (1) and (2) together, m is not divisible by 4, so $m = 4q + r$, where q is a positive integer and $0 < r < 4$. However, m is divisible by 2, so r must be even. Since the only positive even integer less than 4 is 2, then $r = 2$ and $m = 4q + 2$. Similarly, since n is divisible by 2 but not by 4, $n = 4s + 2$. It follows that $m + n = (4q + 2) + (4s + 2) = 4q + 4s + 4 = 4(q + s + 1)$, and $m + n$ is divisible by 4.

The correct answer is C;
both statements together are sufficient.

DS02940

267. What is the area of rectangular region R?

(1) Each diagonal of R has length 5.

(2) The perimeter of R is 14.

Geometry Rectangles

Let L and W be the length and width of the rectangle, respectively. Determine the value of LW.

(1) It is given that a diagonal's length is 5. Thus, by the Pythagorean theorem, it follows that $L^2 + W^2 = 5^2 = 25$. The value of LW cannot be determined, however, because $L = \sqrt{15}$ and $W = \sqrt{10}$ satisfy $L^2 + W^2 = 25$ with $LW = \sqrt{150}$, and $L = \sqrt{5}$ and $W = \sqrt{20}$ satisfy $L^2 + W^2 = 25$ with $LW = \sqrt{100}$; NOT sufficient.

(2) It is given that $2L + 2W = 14$, or $L + W = 7$, or $L = 7 - W$. Therefore, $LW = (7 - W)W$, which can vary in value. For example, if $L = 3$ and $W = 4$, then $L + W = 7$ and $LW = 12$. However, if $L = 2$ and $W = 5$, then $L + W = 7$ and $LW = 10$; NOT sufficient.

Given (1) and (2) together, it follows from (2) that $(L + W)^2 = 7^2 = 49$, or $L^2 + W^2 + 2LW = 49$. Using (1), 25 can be substituted for $L^2 + W^2$ to obtain $25 + 2LW = 49$, or $2LW = 24$, or $LW = 12$. Alternatively, $7 - W$ can be substituted for L in $L^2 + W^2 = 25$ to obtain the quadratic equation $(7 - W)^2 + W^2 = 25$, or $49 - 14W + W^2 + W^2 = 25$, or $2W^2 - 14W + 24 = 0$, or $W^2 - 7W + 12 = 0$. The left side of the last equation can be factored to give $(W - 4)(W - 3) = 0$. Therefore, $W = 4$, which gives $L = 7 - W = 7 - 4 = 3$ and $LW = (3)(4) = 12$, or $W = 3$, which gives $L = 7 - W = 7 - 3 = 4$ and $LW = (4)(3) = 12$. Since $LW = 12$ in either case, a unique value for LW can be determined.

The correct answer is C;
both statements together are sufficient.

DS17137

268. How many integers n are there such that $r < n < s$?

(1) $s - r = 5$

(2) r and s are not integers.

Arithmetic Properties of numbers

(1) The difference between s and r is 5. If r and s are integers (e.g., 7 and 12), the number of integers between them (i.e., n could be 8, 9, 10, or 11) is 4. If r and s are not integers (e.g., 6.5 and 11.5), then the number of integers between them (i.e., n could be 7, 8, 9, 10, or 11) is 5. No information is given that allows a determination of whether s and r are integers; NOT sufficient.

(2) No information is given about the difference between r and s. If $r = 0.4$ and $s = 0.5$, then r and s have no integers between them. However, if $r = 0.4$ and $s = 3.5$, then r and s have 3 integers between them; NOT sufficient.

Using the information from both (1) and (2), it can be determined that, because r and s are not integers, there are 5 integers between them.

The correct answer is C;
both statements together are sufficient.

DS17147

269. If the total price of n equally priced shares of a certain stock was \$12,000, what was the price per share of the stock?

(1) If the price per share of the stock had been \$1 more, the total price of the n shares would have been \$300 more.

(2) If the price per share of the stock had been \$2 less, the total price of the n shares would have been 5 percent less.

Arithmetic Arithmetic operations; Percents

Since the price per share of the stock can be expressed as $\frac{\$12,000}{n}$, determining the value of n is sufficient to answer this question.

(1) A per-share increase of \$1 and a total increase of \$300 for n shares of stock mean together that $n(\$1) = \$300$. It follows that $n = 300$; SUFFICIENT.

(2) If the price of each of the n shares had been reduced by \$2, the total reduction in price would have been 5 percent less or $0.05(\$12,000)$. The equation $2n = 0.05(\$12,000)$ expresses this relationship. The value of n can be determined to be 300 from this equation; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS02865

270. If n is positive, is $\sqrt{n} > 100$?

(1) $\sqrt{n-1} > 99$

(2) $\sqrt{n+1} > 101$

Algebra Radicals

Determine if $\sqrt{n} > 100$ or equivalently, if $n > (100)(100) = 10,000$.

(1) Given that $\sqrt{n-1} > 99$, or equivalently, $n - 1 > (99)(99)$, it follows from

$$\begin{aligned}(99)(99) &= 99(100-1)\\ &= 9,900-99\\ &= 9,801\end{aligned}$$

that $\sqrt{n-1} > 99$ is equivalent to $n - 1 > 9,801$, or $n > 9,802$. Since $n > 9,802$ allows for values of n that are greater than 10,000 and $n > 9,802$ allows for values of n that are not greater than 10,000, it cannot be determined if $n > 10,000$; NOT sufficient.

(2) Given that $\sqrt{n+1} > 101$, or equivalently, $n + 1 > (101)(101)$, it follows from

$$\begin{aligned}(101)(101) &= 101(100+1)\\ &= 10,100+101\\ &= 10,201\end{aligned}$$

that $\sqrt{n+1} > 101$ is equivalent to $n + 1 > 10,201$, or $n > 10,200$. Since $10,200 > 10,000$, it can be determined that $n > 10,000$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS17150

271. Is $xy > 5$?

(1) $1 \le x \le 3$ and $2 \le y \le 4$.

(2) $x + y = 5$

Algebra Inequalities

(1) While it is known that $1 \le x \le 3$ and $2 \le y \le 4$, xy could be $(3)(4) = 12$, which is greater than 5, or xy could be $(1)(2) = 2$, which is not greater than 5; NOT sufficient.

(2) Given that $x + y = 5$, xy could be 6 (when $x = 2$ and $y = 3$), which is greater than 5, and xy could be 4 (when $x = 1$ and $y = 4$), which is not greater than 5; NOT sufficient.

Both (1) and (2) together are not sufficient since the two examples given in (2) are consistent with both statements.

The correct answer is E;
both statements together are still not sufficient.

DS17151

272. In Year X, 8.7 percent of the men in the labor force were unemployed in June compared with 8.4 percent in May. If the number of men in the labor force was the same for both months, how many men were unemployed in June of that year?

(1) In May of Year X, the number of unemployed men in the labor force was 3.36 million.

(2) In Year X, 120,000 more men in the labor force were unemployed in June than in May.

Arithmetic Percents

Since 8.7 percent of the men in the labor force were unemployed in June, the number of unemployed men could be calculated if the total number of men in the labor force was known. Let t represent the total number of men in the labor force.

(1) This implies that for May $(8.4\%)t = 3,360,000$, from which the value of t can be determined; SUFFICIENT.

(2) This implies that $(8.7\% - 8.4\%)t = 120{,}000$ or $(0.3\%)t = 120{,}000$. This equation can be solved for t; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS17112

273. If $x \neq 0$, what is the value of $\left(\frac{x^p}{x^q}\right)^4$?

(1) $p = q$

(2) $x = 3$

Arithmetic; Algebra Arithmetic operations; Simplifying expressions

(1) Since $p = q$, it follows that $\left(\frac{x^p}{x^q}\right)^4 = \left(\frac{x^p}{x^p}\right)^4 = (1)^4$; SUFFICIENT.

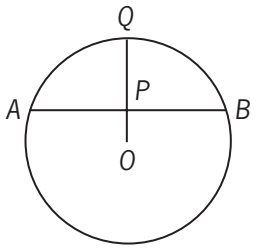
(2) Since $x = 3$ (and, therefore, $x \neq 1$) and the values of p or q are unknown, the value of the expression $\left(\frac{x^p}{x^q}\right)^4$ cannot be determined; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS17153

274. On Monday morning a certain machine ran continuously at a uniform rate to fill a production order. At what time did it completely fill the order that morning?

(1) The machine began filling the order at 9:30 a.m.



(2) The machine had filled $\frac{1}{2}$ of the order by 10:30 a.m. and $\frac{5}{6}$ of the order by 11:10 a.m.

Arithmetic Arithmetic operations

(1) This merely states what time the machine began filling the order; NOT sufficient.

(2) In the 40 minutes between 10:30 a.m. and 11:10 a.m., $\frac{5}{6} - \frac{1}{2} = \frac{1}{3}$ of the order was filled. Therefore, the entire order was completely filled in $3 \times 40 = 120$ minutes, or 2 hours. Since half the order took 1 hour and was filled by 10:30 a.m., the second half of the order, and thus the entire order, was filled by 11:30 a.m.; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS17107

275. What is the radius of the circle above with center O ?

(1) The ratio of OP to PQ is 1 to 2.

(2) P is the midpoint of chord AB.

Geometry Circles

(1) It can be concluded only that the radius is 3 times the length of OP, which is unknown; NOT sufficient.

(2) It can be concluded only that $AP = PB$, and the chord is irrelevant to the radius; NOT sufficient.

Together, (1) and (2) do not give the length of any line segment shown in the circle. In fact, if the circle and all the line segments were uniformly expanded by a factor of, say, 5, the resulting circle and line segments would still satisfy both (1) and (2). Therefore, the radius of the circle cannot be determined from (1) and (2) together.

The correct answer is E;
both statements together are still not sufficient.

DS15618

276. If a and b are positive integers, what is the value of the product ab ?

(1) The least common multiple of a and b is 48.

(2) The greatest common factor of a and b is 4.

Arithmetic Properties of numbers

Determine the value of the product of positive integers a and b.

(1) This indicates that the least common multiple (lcm) of a and b is 48, which means that 48 is the least integer that is a multiple of both a and b. If $a = 24$ and $b = 16$, then the multiples of a are 24, 48, 72, . . ., and the multiples of b are 16, 32, 48, 64, ... So, 48 is the lcm of 24 and 16, and $ab = (24)(16)$. However, if $a = 48$ and $b = 16$, then the multiples of a are 48, 96, . . ., and the multiples of b are 16, 32, 48, 64,

. . . . So, 48 is the lcm of 48 and 16, and ab = (48)(16); NOT sufficient.

(2) This indicates that 4 is the greatest common factor (gcf) of a and b, which means that 4 is the greatest integer that is a factor of both a and b. If $a = 4$ and $b = 4$, then 4 is the gcf a and b, and ab = (4)(4). However, if $a = 4$ and $b = 16$, then 4 is the gcf of a and b, and ab = (4)(16); NOT sufficient.

Taking (1) and (2) together, each of a and b is a multiple of 4 (which means that each of a and b is divisible by 4) and 48 is a multiple of each of a and b (which means that 48 is divisible by each of a and b). It follows that the only possible values for a and b are 4, 8, 12, 16, 24, and 48. The following table shows all possible pairs of these values and that only 4 of them ($a = 4$ and $b = 48$, $a = 12$ and $b = 16$, $a = 16$ and $b = 12$, $a = 48$ and $b = 4$), satisfy both (1) and (2).

		b					
		4	**8**	**12**	**16**	**24**	**48**
a	**4**	lcm is 4, not 48	lcm is 8, not 48	lcm is 12, not 48	lcm is 16, not 48	lcm is 24, not 48	lcm is 48, gcf is 4
	8	lcm is 8, not 48	lcm is 8, not 48	lcm is 24, not 48	gcf is 8, not 4	gcf is 8, not 4	gcf is 8, not 4
	12	lcm is 12, not 48	lcm is 24, not 48	gcf is 12, not 4	lcm is 48, gcf is 4	gcf is 12, not 4	gcf is 12, not 4
	16	lcm is 16, not 48	gcf is 8, not 4	lcm is 48, gcf is 4	gcf is 16, not 4	gcf is 8, not 4	gcf is 16, not 4
	24	lcm is 24, not 48	gcf is 8, not 4	gcf is 12, not 4	gcf is 8, not 4	gcf is 24, not 4	gcf is 24, not 4
	48	lcm is 48, gcf is 4	gcf is 8, not 4	gcf is 12, not 4	gcf is 16, not 4	gcf is 24, not 4	gcf is 48, not 4

In each case where both (1) and (2) are satisfied, ab = 192.

Alternatively,

(1) Using prime factorizations, since the least common multiple of a and b is 48 and $48 = 2^4 \cdot 3^1$, it follows that $a = 2^p \cdot 3^q$, where $p \le 4$ and $q \le 1$, and $b = 2^r \cdot 3^s$, where $r \le 4$ and $s \le 1$. Since the least common multiple of two positive integers is the product of the highest power of each prime in the prime factorizations of the two integers, one of p or r must be 4 and one of q or s must be 1. If, for example, $p = 4$, $q = 1$, and $r = s = 0$, then $a = 2^4 \cdot 3^1 = 48$, $b = 2^0 \cdot 3^0 = 1$, and ab = (48)(1) = 48. However, if $p = 4$, $q = 1$, $r = 4$, and $s = 1$, then $a = 2^4 \cdot 3^1 = 48$, $b = 2^4 \cdot 3^1 = 48$, and ab = (48)(48) = 2,304; NOT sufficient.

(2) If $a = 4$ and $b = 4$, then the greatest common factor of a and b is 4 and ab = (4)(4) = 16. However, if $a = 4$ and $b = 12$, then the greatest common factor of a and b is 4 and ab = (4)(12) = 48; NOT sufficient.

Taking (1) and (2) together, by (1), $a = 2^p \cdot 3^q$, where $p \le 4$ and $q \le 1$, and $b = 2^r \cdot 3^s$, where $r \le 4$ and $s \le 1$. Since the least common multiple of two positive integers is the product of the highest power of each prime in the prime factorizations of the two integers, exactly one of p or r must be 4 and the other one must be 2. Otherwise, either the least common multiple of a and b would not be 48 or the greatest common factor would not be 4. Likewise, exactly one of q or s must be 1 and the other one must be 0. The following table gives all possible combinations of values for p, q, r, and s along with corresponding values of a, b, and ab.

p	q	r	s	$a = 2^p \cdot 3^q$	$b = 2^r \cdot 3^s$	ab
2	0	4	1	$2^2 \cdot 3^0 = 4$	$2^4 \cdot 3^1 = 48$	192
2	1	4	0	$2^2 \cdot 3^1 = 12$	$2^4 \cdot 3^0 = 16$	192
4	0	2	1	$2^4 \cdot 3^0 = 16$	$2^2 \cdot 3^1 = 12$	192
4	1	2	0	$2^4 \cdot 3^1 = 48$	$2^2 \cdot 3^0 = 4$	192

In each case, ab = 192.

The correct answer is C;
both statements together are sufficient.

DS17095

277. What is the number of 360-degree rotations that a bicycle wheel made while rolling 100 meters in a straight line without slipping?

(1) The diameter of the bicycle wheel, including the tire, was 0.5 meter.

(2) The wheel made twenty 360-degree rotations per minute.

Geometry Circles

For each 360-degree rotation, the wheel has traveled a distance equal to its circumference. Given either the circumference of the wheel or the means to calculate its circumference, it is thus possible to determine the number of times the circumference of the wheel was laid out along the straight-line path of 100 meters.

(1) The circumference of the bicycle wheel can be determined from the given diameter using the equation $C = \pi d$, where d = the diameter; SUFFICIENT.

(2) The speed of the rotations is irrelevant, and no dimensions of the wheel are given; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS17168

278. In the equation $x^2 + bx + 12 = 0$, x is a variable and b is a constant. What is the value of b?

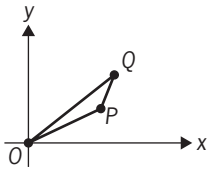
(1) $x - 3$ is a factor of $x^2 + bx + 12$.

(2) 4 is a root of the equation $x^2 + bx + 12 = 0$.

Algebra First- and second-degree equations

(1) Method 1: If $x - 3$ is a factor, then $x^2 + bx + 12 = (x - 3)(x + c)$ for some constant c. Equating the constant terms (or substituting $x = 0$), it follows that $12 = -3c$, or $c = -4$. Therefore, the quadratic polynomial is $(x - 3)(x - 4)$, which is equal to $x^2 - 7x + 12$, and hence $b = -7$.

Method 2: If $x - 3$ is a factor of $x^2 + bx + 12$, then 3 is a root of $x^2 + bx + 12 = 0$. Therefore, $3^2 + 3b + 12 = 0$, which can be solved to get $b = -7$.



Method 3: The value of b can be found by long division:

$$\begin{array}{r} x + (b+3) \\ x-3 \overline{)\, x^2 + bx + 12} \\ \underline{x^2 - 3x} \\ (b+3)x + 12 \\ \underline{(b+3)x - 3b - 9} \\ 3b + 21 \end{array}$$

These calculations show that the remainder is $3b + 21$. Since the remainder must be 0, it follows that $3b + 21 = 0$, or $b = -7$; SUFFICIENT.

(2) If 4 is a root of the equation, then 4 can be substituted for x in the equation $x^2 + bx + 12 = 0$, yielding $4^2 + 4b + 12 = 0$. This last equation can be solved to obtain a unique value for b; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS07715

279. In the figure above, line segment OP has slope $\frac{1}{2}$ and line segment PQ has slope 2. What is the slope of line segment OQ?

(1) Line segment OP has length $2\sqrt{5}$.

(2) The coordinates of point Q are (5,4).

Geometry Coordinate geometry

Let P have coordinates (a,b) and Q have coordinates (x,y). Since the slope of $\overline{OP}$ is $\frac{1}{2}$, it follows that $\frac{b-0}{a-0} = \frac{1}{2}$, or $a = 2b$. What is the slope of $\overline{OQ}$?

(1) Given that $\overline{OP}$ has length $2\sqrt{5}$, it follows from the Pythagorean theorem that $a^2 + b^2 = \left(2\sqrt{5}\right)^2$, or $(2b)^2 + b^2 = 20$, or $5b^2 = 20$. The only positive solution of this equation is $b = 2$, and therefore $a = 2b = 4$

and the coordinates of P are $(a,b) = (4,2)$. However, nothing is known about how far Q is from P. If Q is close to P, then the slope of $\overline{OQ}$ will be close to $\frac{1}{2}$ (the slope of $\overline{OP}$), and if Q is far from P, then the slope of $\overline{OQ}$ will be close to 2 (the slope of $\overline{PQ}$). To be explicit, since the slope of $\overline{PQ}$ is 2, it follows that $\frac{y-2}{x-4} = 2$, or $y = 2x - 6$. Choosing $x = 4.1$ and $y = 2(4.1) - 6 = 2.2$ gives $(x,y) = (4.1,2.2)$, and the slope of $\overline{OQ}$ is $\frac{2.2}{4.1}$, which is close to $\frac{1}{2}$. On the other hand, choosing $x = 100$ and $y = 2(100) - 6 = 194$ gives $(x,y) = (100,194)$, and the slope of $\overline{OQ}$ is $\frac{194}{100}$, which is close to 2; NOT sufficient.

(2) Given that the coordinates of point Q are $(5,4)$, it follows that the slope of $\overline{OQ}$ is $\frac{4-0}{5-0} = \frac{4}{5}$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS17164

280. In ΔXYZ, what is the length of YZ?

(1) The length of XY is 3.

(2) The length of XZ is 5.

Geometry Triangles

Given the length of one side of a triangle, it is known that the sum of the lengths of the other two sides is greater than that given length. The length of either of the other two sides, however, can be any positive number.

(1) Only the length of one side, XY, is given, and that is not enough to determine the length of YZ; NOT sufficient.

(2) Again, only the length of one side, XZ, is given and that is not enough to determine the length of YZ; NOT sufficient.

Even by using the triangle inequality stated above, only a range of values for YZ can be determined from (1) and (2). If the length of side YZ is represented by k, then it is known both that $3 + 5 > k$ and that $3 + k > 5$, or $k > 2$. Combining these inequalities to determine the length of k yields only that $8 > k > 2$.

The correct answer is E;
both statements together are still not sufficient.

DS07217

281. If the average (arithmetic mean) of n consecutive odd integers is 10, what is the least of the integers?

(1) The range of the n integers is 14.

(2) The greatest of the n integers is 17.

Arithmetic Statistics

Let k be the least of the n consecutive odd integers. Then the n consecutive odd integers are $k, k + 2, k + 4, \ldots, k + 2(n - 1)$, where $k + 2(n - 1)$ is the greatest of the n consecutive odd integers and $[k + 2(n - 1)] - k = 2(n - 1)$ is the range of the n consecutive odd integers. Determine the value of k.

(1) Given that the range of the odd integers is 14, it follows that $2(n - 1) = 14$, or $n - 1 = 7$, or $n = 8$. It is also given that the average of the 8 consecutive odd integers is 10, and so, $\frac{k+(k+2)+(k+4)+\ldots+(k+14)}{8} = 10$ from which a unique value for k can be determined; SUFFICIENT.

(2) Given that the greatest of the odd integers is 17, it follows that the n consecutive odd integers can be expressed as $17, 17 - 2, 17 - 4, \ldots, 17 - 2(n - 1)$. Since the average of the n consecutive odd integers is 10, then

$$\frac{17+(17-2)+(17-4)+\ldots+[17-2(n-1)]}{n} = 10,$$

or

$$17+(17-2)+(17-4)+\ldots+[17-2(n-1)] = 10n \text{ (i)}$$

The n consecutive odd integers can also be expressed as $k, k + 2, k + 4, \ldots, k + 2(n - 1)$.

Since the average of the n consecutive odd integers is 10, then

$$\frac{k+(k+2)+(k+4)+\ldots+[k+2(n-1)]}{n} = 10,$$

or

$$k+(k+2)+(k+4)+\ldots+[k+2(n-1)] = 10n \text{ (ii)}$$

Adding equations (i) and (ii) gives

$$(17+k)+(17+k)+(17+k)+\ldots+(17+k)=20n$$

$$n(17+k)=20n$$

$$17+k=20$$

$$k=3$$

Alternatively, because the numbers are consecutive odd integers, they form a data set that is symmetric about its average, and so the average of the numbers is the average of the least and greatest numbers. Therefore, $10=\frac{k+17}{2}$, from which a unique value for k can be determined; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS16044

282. If x, y, and z are positive numbers, is $x > y > z$?

(1) $xz > yz$

(2) $yx > yz$

Algebra Inequalities

(1) Dividing both sides of the inequality by z yields $x > y$. However, there is no information relating z to either x or y; NOT sufficient.

(2) Dividing both sides of the inequality by y yields only that $x > z$, with no further information relating y to either x or z; NOT sufficient.

From (1) and (2) it can be determined that x is greater than both y and z. Since it still cannot be determined which of y or z is the least, the correct ordering of the three numbers also cannot be determined.

The correct answer is E;
both statements together are still not sufficient.

DS06644

283. K is a set of numbers such that

(i) if x is in K, then $-x$ is in K, and

(ii) if each of x and y is in K, then xy is in K.

Is 12 in K?

(1) 2 is in K.

(2) 3 is in K.

Arithmetic Properties of numbers

(1) Given that 2 is in K, it follows that K could be the set of all real numbers, which contains 12. However, if K is the set $\{\ldots, -16, -8, -4, -2, 2, 4, 8, 16, \ldots\}$, then K contains 2 and K satisfies both (i) and (ii), but K does not contain 12. To see that K satisfies (ii), note that K can be written as $\{\ldots, -2^4, -2^3, -2^2, -2^1, 2^1, 2^2, 2^3, 2^4, \ldots\}$, and thus a verification of (ii) can reduce to verifying that the sum of two positive integer exponents is a positive integer exponent; NOT sufficient.

(2) Given that 3 is in K, it follows that K could be the set of all real numbers, which contains 12. However, if K is the set $\{\ldots, -81, -27, -9, -3, 3, 9, 27, 81, \ldots\}$, then K contains 3 and K satisfies both (i) and (ii), but K does not contain 12. To see that K satisfies (ii), note that K can be written as $\{\ldots, -3^4, -3^3, -3^2, -3^1, 3^1, 3^2, 3^3, 3^4, \ldots\}$, and thus a verification of (ii) can reduce to verifying that the sum of two positive integer exponents is a positive integer exponent; NOT sufficient.

Given (1) and (2), it follows that both 2 and 3 are in K. Thus, by (ii), (2)(3) = 6 is in K. Therefore, by (ii), (2)(6) = 12 is in K.

The correct answer is C;
both statements together are sufficient.

DS05637

284. If $x^2 + y^2 = 29$, what is the value of $(x - y)^2$?

(1) $xy = 10$

(2) $x = 5$

Algebra Simplifying algebraic expressions

Since $(x - y)^2 = (x^2 + y^2) - 2xy$ and it is given that $x^2 + y^2 = 29$, it follows that $(x - y)^2 = 29 - 2xy$. Therefore, the value of $(x - y)^2$ can be determined if and only if the value of xy can be determined.

(1) Since the value of xy is given, the value of $(x - y)^2$ can be determined; SUFFICIENT.

(2) Given only that $x = 5$, it is not possible to determine the value of xy. Therefore, the value of $(x - y)^2$ cannot be determined; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16470

285. After winning 50 percent of the first 20 games it played, Team A won all of the remaining games it played. What was the total number of games that Team A won?

(1) Team A played 25 games altogether.

(2) Team A won 60 percent of all the games it played.

Arithmetic Percents

Let r be the number of the remaining games played, all of which the team won. Since the team won (50%)(20) = 10 of the first 20 games and the r remaining games, the total number of games the team won is $10 + r$. Also, the total number of games the team played is $20 + r$. Determine the value of r.

(1) Given that the total number of games played is 25, it follows that $20 + r = 25$, or $r = 5$; SUFFICIENT.

(2) It is given that the total number of games won is $(60\%)(20 + r)$, which can be expanded as $12 + 0.6r$. Since it is also known that the number of games won is $10 + r$, it follows that $12 + 0.6r = 10 + r$. Solving this equation gives $12 - 10 = r - 0.6r$, or $2 = 0.4r$, or $r = 5$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS17181

286. Is x between 0 and 1 ?

(1) x^2 is less than x.

(2) x^3 is positive.

Arithmetic Arithmetic operations

(1) Since x^2 is always nonnegative, it follows that here x must also be nonnegative, that is, greater than or equal to 0. If $x = 0$ or 1, then $x^2 = x$. Furthermore, if x is greater than 1, then x^2 is greater than x. Therefore, x must be between 0 and 1; SUFFICIENT.

(2) If x^3 is positive, then x is positive, but x can be any positive number; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS04083

287. If m and n are nonzero integers, is m^n an integer?

(1) n^m is positive.

(2) n^m is an integer.

Arithmetic Properties of numbers

It is useful to note that if $m > 1$ and $n < 0$, then $0 < m^n < 1$, and therefore m^n will not be an integer. For example, if $m = 3$ and $n = -2$, then $m^n = 3^{-2} = \frac{1}{3^2} = \frac{1}{9}$.

(1) Although it is given that n^m is positive, m^n can be an integer or m^n can fail to be an integer. For example, if $m = 2$ and $n = 2$, then $n^m = 2^2 = 4$ is positive and $m^n = 2^2 = 4$ is an integer. However, if $m = 2$ and $n = -2$, then $n^m = (-2)^2 = 4$ is positive and $m^n = 2^{-2} = \frac{1}{2^2} = \frac{1}{4}$ is not an integer; NOT sufficient.

(2) Although it is given that n^m is an integer, m^n can be an integer or m^n can fail to be an integer. For example, if $m = 2$ and $n = 2$, then $n^m = 2^2 = 4$ is an integer and $m^n = 2^2 = 4$ is an integer. However, if $m = 2$ and $n = -2$, then $n^m = (-2)^2 = 4$ is an integer and $m^n = 2^{-2} = \frac{1}{2^2} = \frac{1}{4}$ is not an integer; NOT sufficient.

Taking (1) and (2) together, it is still not possible to determine if m^n is an integer, since the same examples are used in both (1) and (2) above.

The correct answer is E;
both statements together are still not sufficient.

DS16034

288. What is the value of xy ?

(1) $x + y = 10$

(2) $x - y = 6$

Algebra First- and second-degree equations; Simultaneous equations

(1) Given $x + y = 10$, or $y = 10 - x$, it follows that $xy = x(10 - x)$, which does not have a unique value. For example, if $x = 0$, then $xy = (0)(10) = 0$, but if $x = 1$, then $xy = (1)(9) = 9$; NOT sufficient.

(2) Given $x - y = 6$, or $y = x - 6$, it follows that $xy = x(x - 6)$, which does not have a unique value. For example, if $x = 0$, then $xy = (0)(-6) = 0$, but if $x = 1$, then $xy = (1)(-5) = -5$; NOT sufficient.

Using (1) and (2) together, the two equations can be solved simultaneously for x and y. One way to do this is by adding the two equations, $x + y = 10$ and $x - y = 6$, to get $2x = 16$, or $x = 8$. Then substitute into either of the equations to obtain an equation that can be solved to get $y = 2$. Thus, xy can be determined to have the value $(8)(2) = 16$. Alternatively, the two equations correspond to a pair of nonparallel lines in the (x,y) coordinate plane, which have a unique point in common.

The correct answer is C;
both statements together are sufficient.

DS13189

289. If n is the least of three different integers greater than 1, what is the value of n?

(1) The product of the three integers is 90.

(2) One of the integers is twice one of the other two integers.

Arithmetic Operations with integers

Given that n is the least of three different integers n, p, and q, where $1 < n < p < q$, determine the value of n.

(1) This indicates that the product of the three integers is 90. The integers could be 2, 5, and 9 since $(2)(5)(9) = 90$, and n would be 2. However, the integers could be 3, 5, and 6 since $(3)(5)(6) = 90$, and n would be 3; NOT sufficient.

(2) This indicates that one of the integers is twice one of the others. It could be that $p = 2n$, or $q = 2n$, or $q = 2p$. For example, if $n = 2$, $p = 4$, and $q = 5$, then $p = 2n$, and the value of n would be 2. If $n = 3$, $p = 4$, and $q = 6$, then $q = 2n$, and the value of n would be 3; NOT sufficient.

Taking (1) and (2) together, if $p = 2n$, then $npq = (n)(2n)(q) = 90$, or $n^2q = 45$. It follows that $n = 3$, $p = (2)(3) = 6$, and $q = 5$. The value of n is 3. If $q = 2n$, then $npq = (n)(p)(2n) = 90$ or $n^2p = 45$. It follows that $n = 3$, $p = 5$, and $q = (2)(3) = 6$. The value of n is 3. If $q = 2p$, then $npq = (n)(p)(2p) = 90$ or $np^2 = 45$. It follows that $n = 5$, $p = 3$, and $q = (2)(3) = 6$, and this case can be eliminated because n is not the least of the three integers. Therefore, the value of n is 3.

Alternatively, taking (1) and (2) together, the integers n, p, and q are among 2, 3, 5, 6, 9, 10, 15, 18, 30, and 45 since they are factors of 90 from (1). Because all three integers are different and $90 = (2)(3)(15) = (2)(3^2)(5)$, n, p, and q must be among the integers 2, 3, 5, 9, 10, and 15. Only two pairs of these integers satisfy (2): 3 and 6 since $6 = (2)(3)$ and 5 and 10 since $10 = (2)(5)$. However, for each possible value for n, $(n)(5)(10) > 90$. Therefore, the only pair that satisfies both (1) and (2) is 3 and 6, and the third integer is then $\frac{90}{(3)(6)} = 5$. Thus, the value of n is 3.

The correct answer is C;
both statements together are sufficient.

DS16461

290. Is x^2 greater than x?

(1) x^2 is greater than 1.

(2) x is greater than -1.

Arithmetic; Algebra Exponents; Inequalities

(1) Given $x^2 > 1$, it follows that either $x > 1$ or $x < -1$. If $x > 1$, then multiplying both sides of the inequality by the positive number x gives $x^2 > x$. On the other hand, if $x < -1$, then x is negative and x^2 is positive (because $x^2 > 1$), which also gives $x^2 > x$; SUFFICIENT.

(2) Given $x > -1$, x^2 can be greater than x (for example, $x = 2$) and x^2 can fail to be greater than x (for example, $x = 0$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS03503

291. Michael arranged all his books in a bookcase with 10 books on each shelf and no books left over. After Michael acquired 10 additional books, he arranged all his books in a new bookcase with 12 books on each shelf and no books left over. How many books did Michael have before he acquired the 10 additional books?

(1) Before Michael acquired the 10 additional books, he had fewer than 96 books.

(2) Before Michael acquired the 10 additional books, he had more than 24 books.

Arithmetic Properties of numbers

If x is the number of books Michael had before he acquired the 10 additional books, then x is a multiple of 10. After Michael acquired the 10 additional books, he had $x + 10$ books and $x + 10$ is a multiple of 12.

(1) If $x < 96$, where x is a multiple of 10, then $x = 10, 20, 30, 40, 50, 60, 70, 80$, or 90 and $x + 10 = 20, 30, 40, 50, 60, 70, 80, 90$, or 100. Since $x + 10$ is a multiple of 12, then $x + 10 = 60$ and $x = 50$; SUFFICIENT.

(2) If $x > 24$, where x is a multiple of 10, then x must be one of the numbers 30, 40, 50, 60, 70, 80, 90, 100, 110, …, and $x + 10$ must be one of the numbers 40, 50, 60, 70, 80, 90, 100, 110, 120, …. Since there is more than one multiple of 12 among these numbers (for example, 60 and 120), the value of $x + 10$, and therefore the value of x, cannot be determined; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16469

292. If $xy > 0$, does $(x - 1)(y - 1) = 1$?

(1) $x + y = xy$

(2) $x = y$

Algebra First- and second-degree equations

By expanding the product $(x - 1)(y - 1)$, the question is equivalent to whether $xy - y - x + 1 = 1$, or $xy - y - x = 0$, when $xy > 0$.

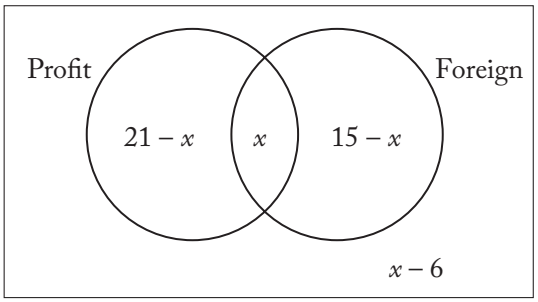
(1) If $x + y = xy$, then $xy - y - x = 0$, and hence by the remarks above, $(x - 1)(y - 1) = 1$; SUFFICIENT.

(2) If $x = y$, then $(x - 1)(y - 1) = 1$ can be true $(x = y = 2)$ and $(x - 1)(y - 1) = 1$ can be false $(x = y = 1)$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS06842

293. Last year in a group of 30 businesses, 21 reported a net profit and 15 had investments in foreign markets. How many of the businesses did not report a net profit nor invest in foreign markets last year?



(1) Last year 12 of the 30 businesses reported a net profit and had investments in foreign markets.

(2) Last year 24 of the 30 businesses reported a net profit or invested in foreign markets, or both.

Arithmetic Concepts of sets

Consider the Venn diagram below in which x represents the number of businesses that reported a net profit and had investments in foreign markets. Since 21 businesses reported a net profit, $21 - x$ businesses reported a net profit only. Since 15 businesses had investments in foreign markets, $15 - x$ businesses had investments in foreign markets only. Finally, since there is a total of 30 businesses, the number of businesses that did not report a net profit and did not invest in foreign markets is $30 - (21 - x + x + 15 - x) = x - 6$.

Determine the value of $x - 6$, or equivalently, the value of x.

(1) It is given that $12 = x$; SUFFICIENT.

(2) It is given that $24 = (21 - x) + x + (15 - x)$. Therefore, $24 = 36 - x$, or $x = 12$.

Alternatively, the information given is exactly the number of businesses that are not among those to be counted in answering the question posed in the problem, and therefore the number of businesses that are to be counted is $30 - 24 = 6$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS17110

294. Is the perimeter of square S greater than the perimeter of equilateral triangle T?

(1) The ratio of the length of a side of S to the length of a side of T is 4:5.

(2) The sum of the lengths of a side of S and a side of T is 18.

Geometry Perimeter

Letting s and t be the side lengths of square S and triangle T, respectively, the task is to determine if $4s > 3t$, which is equivalent (divide both sides by $4t$) to determining if $\frac{s}{t} > \frac{3}{4}$.

(1) It is given that $\frac{s}{t} = \frac{4}{5}$. Since $\frac{4}{5} > \frac{3}{4}$, it follows that $\frac{s}{t} > \frac{3}{4}$; SUFFICIENT.

(2) Many possible pairs of numbers have the sum of 18. For some of these (s,t) pairs it is the case that $\frac{s}{t} > \frac{3}{4}$ (for example, $s = t = 9$), and for others of these pairs it is not the case that $\frac{s}{t} > \frac{3}{4}$ (for example, $s = 1$ and $t = 17$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS17136

295. If $x + y + z > 0$, is $z > 1$?

(1) $z > x + y + 1$

(2) $x + y + 1 < 0$

Algebra Inequalities

(1) The inequality $x + y + z > 0$ gives $z > -x - y$. Adding this last inequality to the given inequality, $z > x + y + 1$, gives $2z > 1$, or $z > \frac{1}{2}$, which suggests that (1) is not sufficient. Indeed, z could be 2 ($x = y = 0$ and $z = 2$ satisfy both $x + y + z > 0$ and $z > x + y + 1$), which is greater than 1, and z could be $\frac{3}{4}$ ($x = y = -\frac{1}{4}$ and $z = \frac{3}{4}$ satisfy both $x + y + z > 0$ and $z > x + y + 1$), which is not greater than 1; NOT sufficient.

(2) It follows from the inequality $x + y + z > 0$ that $z > -(x + y)$. It is given that $x + y + 1 < 0$, or $(x + y) < -1$, or $-(x + y) > 1$. Therefore, $z > -(x + y)$ and $-(x + y) > 1$, from which it follows that $z > 1$; SUFFICIENT.

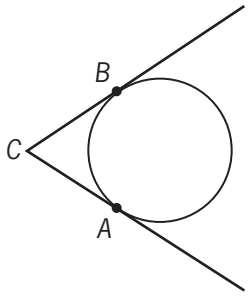
The correct answer is B;
statement 2 alone is sufficient.

DS07832

296. For all z, $\lceil z \rceil$ denotes the least integer greater than or equal to z. Is $\lceil x \rceil = 0$?

(1) $-1 < x < -0.1$

(2) $\lceil x + 0.5 \rceil = 1$



Algebra Operations with real numbers

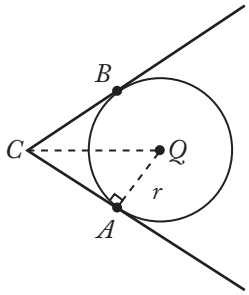
Determining if $\lceil x \rceil = 0$ is equivalent to determining if $-1 < x \leq 0$. This can be inferred by examining a few representative examples, such as $\lceil -1.1 \rceil = -1, \lceil -1 \rceil = -1, \lceil -0.9 \rceil = 0, \lceil -0.1 \rceil = 0, \lceil 0 \rceil = 0$, and $\lceil 0.1 \rceil = 1$.

(1) Given $-1 < x < -0.1$, it follows that $-1 < x \leq 0$, since $-1 < x \leq 0$ represents all numbers x that satisfy $-1 < x < -0.1$ along with all numbers x that satisfy $-0.1 \leq x \leq 0$; SUFFICIENT.

(2) Given $\lceil x + 0.5 \rceil = 1$, it follows from the same reasoning used just before (1) above that this equality is equivalent to $0 < x + 0.5 \leq 1$, which in turn is equivalent to $-0.5 < x \leq 0.5$. Since from among these values of x it is possible for $-1 < x \leq 0$ to be true (for example, $x = -0.1$) and it is possible for $-1 < x \leq 0$ to be false (for example, $x = 0.1$), it cannot be determined if $\lceil x \rceil = 0$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16464



297. The circular base of an above-ground swimming pool lies in a level yard and just touches two straight sides of a fence at points *A* and *B*, as shown in the figure above. Point *C* is on the ground where the two sides of the fence meet. How far from the center of the pool's base is point *A*?

(1) The base has area 250 square feet.

(2) The center of the base is 20 feet from point *C*.

Geometry Circles

Let Q be the center of the pool's base and r be the distance from Q to A, as shown in the figure below.

Since A is a point on the circular base, QA is a radius (r) of the base.

(1) Since the formula for the area of a circle is area $= \pi r^2$, this information can be stated as $250 = \pi r^2$ or $\sqrt{\frac{250}{\pi}} = r$; SUFFICIENT.

(2) Since $\overline{CA}$ is tangent to the base, ΔQAC is a right triangle. It is given that $QC = 20$, but there is not enough information to use the Pythagorean theorem to determine the length of $\overline{QA}$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16050

298. If $xy = -6$, what is the value of $xy(x + y)$?

(1) $x - y = 5$

(2) $xy^2 = 18$

Algebra First- and second-degree equations

By substituting -6 as the value of xy, the question can be simplified to "What is the value of $-6(x + y)$?"

(1) Adding y to both sides of $x - y = 5$ gives $x = y + 5$. When $y + 5$ is substituted for x in the equation $xy = -6$, the equation yields $(y + 5)y = -6$, or $y^2 + 5y + 6 = 0$. Factoring the left side of this equation gives $(y + 2)(y + 3) = 0$. Thus, y may have a value of -2 or -3. Since a unique value of y is not determined, neither the value of x nor the value of xy can be determined; NOT sufficient.

(2) Since $xy^2 = (xy)y$ and $xy^2 = 18$, it follows that $(xy)y = 18$. When -6 is substituted for xy, this equation yields $-6y = 18$, and hence $y = -3$. Since $y = -3$ and $xy = -6$, it follows that $-3x = -6$, or $x = 2$. Therefore, the value of $x + y$, and hence the value of $xy(x + y) = -6(x + y)$ can be determined; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS05519

299. $[y]$ denotes the greatest integer less than or equal to y. Is $d < 1$?

(1) $d = y - [y]$

(2) $[d] = 0$

Algebra Operations with real numbers

(1) It is given $d = y - [y]$. If y is an integer, then $y = [y]$, and thus $y - [y] = 0$, which is less than 1. If y is not an integer, then y lies between two consecutive integers, the smaller of which is equal to $[y]$. Since each of these two consecutive integers is at a distance of less than 1 from y, it follows that $[y]$ is at a distance of less than 1 from y, or $y - [y] < 1$. Thus, regardless of whether y is an integer or y is not an integer, it can be determined that $d < 1$; SUFFICIENT.

(2) It is given that $[d] = 0$, which is equivalent to $0 \le d < 1$. This can be inferred by examining a few representative examples, such as $[-0.1] = -1$, $[0] = 0$, $[0.1] = 0$, $[0.9] = 0$, and $[1.1] = 1$. From $0 \le d < 1$, it follows that $d < 1$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS14052

300. If N is a positive odd integer, is N prime?

(1) $N = 2^k + 1$ for some positive integer k.

(2) $N + 2$ and $N + 4$ are both prime.

Arithmetic Properties of numbers

Determine whether the positive odd integer N is prime.

(1) This indicates that $N = 2^k + 1$ for some positive integer k. If $k = 1$, then $N = 2^1 + 1 = 3$ and N is prime. However, if $k = 3$, then $N = 2^3 + 1 = 9$ and N is not prime; NOT sufficient.

(2) This indicates that both $N + 2$ and $N + 4$ are prime. If $N = 3$, then $N + 2 = 5$ and $N + 4 = 7$ are both prime and N is prime. However, if $N = 9$, then $N + 2 = 11$ and $N + 4 = 13$ are both prime and N is not prime; NOT sufficient.

Taking (1) and (2) together is of no more help than (1) and (2) taken separately since the same examples were used to show that neither (1) nor (2) is sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS01140

301. If m is a positive integer, then m^3 has how many digits?

(1) m has 3 digits.

(2) m^2 has 5 digits.

Arithmetic Properties of numbers

(1) Given that m has 3 digits, then m could be 100 and $m^3 = 1{,}000{,}000$ would have 7 digits, or m could be 300 and $m^3 = 27{,}000{,}000$ would have 8 digits; NOT sufficient.

(2) Given that m^2 has 5 digits, then m could be 100 (because $100^2 = 10{,}000$ has 5 digits) or m could be 300 (because $300^2 = 90{,}000$ has 5 digits). In the former case, $m^3 = 1{,}000{,}000$ has 7 digits and in the latter case, $m^3 = 27{,}000{,}000$ has 8 digits; NOT sufficient.

Given (1) and (2), it is still possible for m to be 100 or for m to be 300, and thus m^3 could have 7 digits or m^3 could have 8 digits.

The correct answer is E;
both statements together are still not sufficient.

DS03308

302. What is the value of $x^2 - y^2$?

(1) $(x - y)^2 = 9$

(2) $x + y = 6$

Algebra Second-degree equations

Determine the value of $x^2 - y^2$.

(1) This indicates that $(x - y)^2 = 9$. It follows that $x - y = -3$ or $x - y = 3$, which gives information about the value of $x - y$ but not specific information about the value of x, y, or $x^2 - y^2$. For example, if $x = \frac{9}{2}$ and $y = \frac{3}{2}$, then $(x - y)^2 = \left(\frac{9}{2} - \frac{3}{2}\right)^2 = 9$ and $x^2 - y^2 = \frac{81}{4} - \frac{9}{4} = 18$. But if $x = \frac{3}{2}$ and $y = \frac{9}{2}$, then $(x - y)^2 = \left(\frac{3}{2} - \frac{9}{2}\right)^2 = 9$ and $x^2 - y^2 = \frac{9}{4} - \frac{81}{4} = -18$; NOT sufficient.

(2) This indicates that $x + y = 6$ but does not give specific information about the value of x, y, or $x^2 - y^2$. For example, if $x = \frac{9}{2}$ and $y = \frac{3}{2}$, then $x + y = \frac{9}{2} + \frac{3}{2} = 6$ and $x^2 - y^2 = \frac{81}{4} - \frac{9}{4} = 18$. But if $x = \frac{3}{2}$ and $y = \frac{9}{2}$, then $x + y = \frac{3}{2} + \frac{9}{2} = 6$ and $x^2 - y^2 = \frac{9}{4} - \frac{81}{4} = -18$; NOT sufficient.

Taking (1) and (2) together is of no more help than (1) and (2) taken separately since the same examples were used to show that neither (1) nor (2) is sufficient.

Alternatively, note that $x^2 - y^2 = (x - y)(x + y)$. From (1), $x - y = \pm 3$, and from (2), $x + y = 6$. Therefore,

taking (1) and (2) together allows for both $x^2 - y^2 = (3)(6) = 18$ and $x^2 - y^2 = (-3)(6) = -18$.

The correct answer is E;
both statements together are still not sufficient.

DS01267

303. For each landscaping job that takes more than 4 hours, a certain contractor charges a total of r dollars for the first 4 hours plus $0.2r$ dollars for each additional hour or fraction of an hour, where $r > 100$. Did a particular landscaping job take more than 10 hours?

(1) The contractor charged a total of $288 for the job.

(2) The contractor charged a total of $2.4r$ dollars for the job.

Algebra Applied problems

If y represents the total number of hours the particular landscaping job took, determine if $y > 10$.

(1) This indicates that the total charge for the job was $288, which means that $r + 0.2r(y - 4) = 288$. From this it cannot be determined if $y > 10$. For example, if $r = 120$ and $y = 11$, then $120 + 0.2(120)(7) = 288$, and the job took more than 10 hours. However, if $r = 160$ and $y = 8$, then $160 + 0.2(160)(4) = 288$, and the job took less than 10 hours; NOT sufficient.

(2) This indicates that $r + 0.2r(y - 4) = 2.4r$, from which it follows that

$r + 0.2ry - 0.8r = 2.4r$	use distributive property
$0.2ry = 2.2r$	subtract $(r - 0.8r)$ from both sides
$y = 11$	divide both sides by $0.2r$

Therefore, the job took more than 10 hours; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS17600

304. If $x^2 = 2^x$, what is the value of x?

(1) $2x = \left(\frac{x}{2}\right)^3$

(2) $x = 2^{x-2}$

Algebra Exponents

Given $x^2 = 2^x$, determine the value of x. Note that $x \neq 0$ because $0^2 = 0$ and $2^0 = 1$.

(1) This indicates that $2x = \left(\frac{x}{2}\right)^3$, so $2x = \frac{x^3}{8}$ and $16x = x^3$. Since $x \neq 0$, then $16 = x^2$, so $x = -4$ or $x = 4$. However, $(-4)^2 = 16$ and $2^{-4} = \frac{1}{16}$, so $x \neq -4$. Therefore, $x = 4$; SUFFICIENT.

(2) This indicates that $x = 2^{x-2}$, so $x = \frac{2^x}{2^2}$ and $4x = 2^x$. Since it is given that $x^2 = 2^x$, then $4x = x^2$ and, because $x \neq 0$, it follows that $x = 4$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS01169

305. The sequence $s_1, s_2, s_3, \ldots, s_n, \ldots$ is such that $s_n = \frac{1}{n} - \frac{1}{n+1}$ for all integers $n \geq 1$. If k is a positive integer, is the sum of the first k terms of the sequence greater than $\frac{9}{10}$?

(1) $k > 10$

(2) $k < 19$

Arithmetic Sequences

The sum of the first k terms can be written as

$$\left(\frac{1}{1} - \frac{1}{2}\right) + \left(\frac{1}{2} - \frac{1}{3}\right) + \ldots + \left(\frac{1}{k-1} - \frac{1}{k}\right) + \left(\frac{1}{k} - \frac{1}{k+1}\right)$$
$$= 1 + \left(-\frac{1}{2} + \frac{1}{2}\right) + \left(-\frac{1}{3} + \frac{1}{3}\right) + \ldots + \left(-\frac{1}{k} + \frac{1}{k}\right) - \frac{1}{k+1}$$
$$= 1 - \frac{1}{k+1}.$$

Therefore, the sum of the first k terms is greater than $\frac{9}{10}$ if and only if $1 - \frac{1}{k+1} > \frac{9}{10}$, or $1 - \frac{9}{10} > \frac{1}{k+1}$, or $\frac{1}{10} > \frac{1}{k+1}$. Multiplying both sides of the last inequality by $10(k + 1)$ gives the equivalent condition $k + 1 > 10$, or $k > 9$.

(1) Given that $k > 10$, then it follows that $k > 9$; SUFFICIENT.

(2) Given that $k < 19$, it is possible to have $k > 9$ (for example, $k = 15$) and it is possible to not have $k > 9$ (for example, $k = 5$); NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

DS05518

306. In the sequence S of numbers, each term after the first two terms is the sum of the two immediately preceding terms. What is the 5th term of S?

(1) The 6th term of S minus the 4th term equals 5.

(2) The 6th term of S plus the 7th term equals 21.

Arithmetic Sequences

If the first two terms of sequence S are a and b, then the remaining terms of sequence S can be expressed in terms of a and b as follows.

n	nth term of sequence S
1	a
2	b
3	$a + b$
4	$a + 2b$
5	$2a + 3b$
6	$3a + 5b$
7	$5a + 8b$

For example, the 6th term of sequence S is $3a + 5b$ because $(a + 2b) + (2a + 3b) = 3a + 5b$. Determine the value of the 5th term of sequence S, that is, the value of $2a + 3b$.

(1) Given that the 6th term of S minus the 4th term of S is 5, it follows that $(3a + 5b) - (a + 2b) = 5$. Combining like terms, this equation can be rewritten as $2a + 3b = 5$, and thus the 5th term of sequence S is 5; SUFFICIENT.

(2) Given that the 6th term of S plus the 7th term of S is 21, it follows that $(3a + 5b) + (5a + 8b) = 21$. Combining like terms, this equation can be rewritten as $8a + 13b = 21$. Letting e represent the 5th term of sequence S, this last equation is equivalent to $4(2a + 3b) + b = 21$, or $4e + b = 21$, which gives a direct correspondence between the 5th term of sequence S and the 2nd term of sequence S. Therefore, the 5th term of sequence S can be determined if and only if the 2nd term of sequence S can be determined. Since the 2nd term of sequence S cannot be determined, the 5th term of sequence S cannot be determined. For example, if $a = 1$ and $b = 1$, then $8a + 13b = 8(1) + 13(1) = 21$ and the 5th term of sequence S is $2a + 3b = 2(1) + 3(1) = 5$. However, if $a = 0$ and $b = \frac{21}{13}$, then

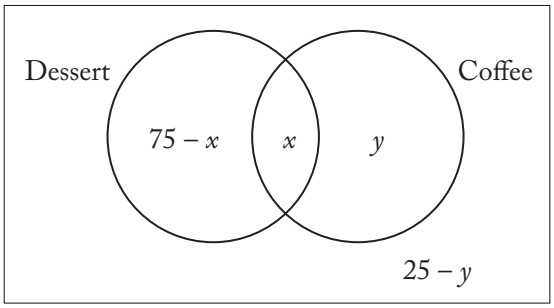
$$8a + 13b = 8(0) + 13\left(\frac{21}{13}\right) = 21$$

and the 5th term of sequence S is

$$2a + 3b = 2(0) + 3\left(\frac{21}{13}\right) = \frac{63}{13}$$; NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

DS01121



307. If 75 percent of the guests at a certain banquet ordered dessert, what percent of the guests ordered coffee?

(1) 60 percent of the guests who ordered dessert also ordered coffee.

(2) 90 percent of the guests who ordered coffee also ordered dessert.

Arithmetic Concepts of sets; Percents

Consider the Venn diagram below that displays the various percentages of 4 groups of the guests. Thus, x percent of the guests ordered both dessert and coffee and y percent of the guests ordered coffee only. Since 75 percent of the guests ordered dessert, $(75 - x)$% of the guests ordered dessert only. Also, because the 4 percentages represented in the Venn diagram have a total sum of 100 percent, the percentage of guests who did not order either dessert or coffee is $100 - [(75 - x) + x + y] = 25 - y$. Determine the percentage of guests who ordered coffee, or equivalently, the value of $x + y$.

(1) Given that x is equal to 60 percent of 75, or 45, the value of $x + y$ cannot be determined; NOT sufficient.

(2) Given that 90 percent of $x + y$ is equal to x, it follows that $0.9(x + y) = x$, or $9(x + y) = 10x$. Therefore, $9x + 9y = 10x$, or $9y = x$. From this the value of $x + y$ cannot be determined. For example, if $x = 9$ and $y = 1$, then all 4 percentages in the Venn diagram are between 0 and 100, $9y = x$, and $x + y = 10$. However, if $x = 18$ and $y = 2$, then all 4 percentages in the Venn diagram are between 0 and 100, $9y = x$, and $x + y = 20$; NOT sufficient.

Given both (1) and (2), it follows that $x = 45$ and $9y = x$. Therefore, $9y = 45$, or $y = 5$, and hence $x + y = 45 + 5 = 50$.

The correct answer is C;
both statements together are sufficient.

DS05302

308. A tank containing water started to leak. Did the tank contain more than 30 gallons of water when it started to leak? (Note: 1 gallon = 128 ounces)

(1) The water leaked from the tank at a constant rate of 6.4 ounces per minute.

(2) The tank became empty less than 12 hours after it started to leak.

Arithmetic Rate problems

(1) Given that the water leaked from the tank at a constant rate of 6.4 ounces per minute, it is not possible to determine if the tank leaked more than 30 gallons of water. In fact, any nonzero amount of water leaking from the tank is consistent with a leakage rate of 6.4 ounces per minute, since nothing can be determined about the amount of time the water was leaking from the tank; NOT sufficient.

(2) Given that the tank became empty in less than 12 hours, it is not possible to determine if the tank leaked more than 30 gallons of water because the rate at which water leaked from the tank is unknown. For example, the tank could have originally contained 1 gallon of water that emptied in exactly 10 hours or the tank could have originally contained 31 gallons of water that emptied in exactly 10 hours; NOT sufficient.

Given (1) and (2) together, the tank emptied at a constant rate of

$$\left(6.4\frac{\text{oz}}{\text{min}}\right)\left(60\frac{\text{min}}{\text{hr}}\right)\left(\frac{1}{128}\frac{\text{gal}}{\text{oz}}\right)=\frac{(64)(6)}{128}\frac{\text{gal}}{\text{hr}}=$$

$$\frac{(64)(6)}{(64)(2)}\frac{\text{gal}}{\text{hr}}=3\frac{\text{gal}}{\text{hr}}$$ for less than 12 hours.

If t is the total number of hours the water leaked from the tank, then the total amount of water emptied from the tank, in gallons, is $3t$, which is therefore less than (3)(12) = 36. From this it is not possible to determine if the tank originally contained more than 30 gallons of water. For example, if the tank leaked water for a total of 11 hours, then the tank originally contained (3)(11) gallons of water, which is more than 30 gallons of water. However, if the tank leaked water for a total of 2 hours, then the tank originally contained (3)(2) gallons of water, which is not more than 30 gallons of water.

The correct answer is E;
both statements together are still not sufficient.

DS12752

309. In the xy-plane, lines k and ℓ intersect at the point (1,1). Is the y-intercept of k greater than the y-intercept of ℓ?

(1) The slope of k is less than the slope of ℓ.

(2) The slope of ℓ is positive.

Algebra Coordinate geometry

Let m_1 and m_2 represent the slopes of lines k and ℓ, respectively. Then, using the point-slope form for the equation of a line, an equation of line k can be determined: $y - 1 = m_1(x - 1)$, or $y = m_1x + (1 - m_1)$. Similarly, an equation for line ℓ is $y = m_2x + (1 - m_2)$. Determine if $(1 - m_1) > (1 - m_2)$, or equivalently if $m_1 < m_2$.

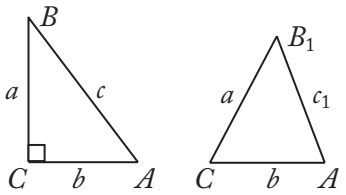
(1) This indicates that $m_1 < m_2$; SUFFICIENT.

(2) This indicates that $m_2 > 0$. If $m_1 = -1$, for example, then $m_1 < m_2$, but if $m_2 = 4$ and $m_1 = 5$, then $m_1 > m_2$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS14588

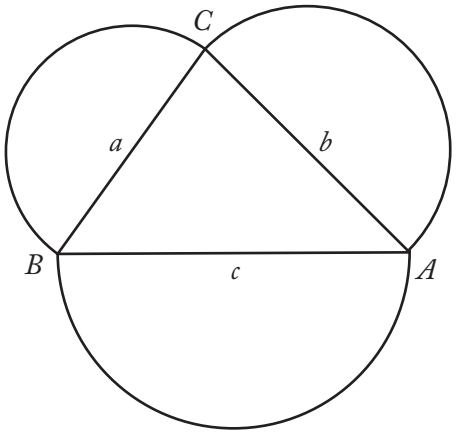
310. A triangle has side lengths of a, b, and c centimeters. Does each angle in the triangle measure less than 90 degrees?



(1) The 3 semicircles whose diameters are the sides of the triangle have areas that are equal to 3 cm^2, 4 cm^2, and 6 cm^2, respectively.

(2) $c < a + b < c + 2$

Geometry Triangles; Pythagorean theorem



Given a triangle with sides of lengths a, b, and c centimeters, determine whether each angle of the triangle measures less than 90°. Assume that the vertices of the triangle are A, B, and C and that a is the side length of the side opposite $\angle A$, b is the side length of the side opposite $\angle B$, and c is the side length of the side opposite $\angle C$, where $a \le b \le c$.

Note that for a right triangle, $a^2 + b^2 = c^2$. However, if $a^2 + b^2 > c^2$, then the triangle is acute (i.e., a triangle with each angle measuring less than 90°). This is illustrated by the following figures.

ΔBCA on the left is a right triangle with sides $BC = a$, $CA = b$, and $AB = c$, where $a^2 + b^2 = c^2$ by the Pythagorean theorem. The triangle on the right, ΔB_1CA, has sides $B_1C = a$, $CA = b$, and $AB_1 = c_1$. Clearly $AB = c > AB_1 = c_1$, so $c^2 > {c_1}^2$. Since $a^2 + b^2 = c^2$ and $c^2 > {c_1}^2$, it follows that $a^2 + b^2 > {c_1}^2$, and ΔB_1CA is clearly an acute triangle.

(1) This indicates that the areas of the 3 semicircles whose diameters are the sides of the triangle are 3 cm^2, 4 cm^2, and 6 cm^2, respectively. Then, because "respectively" implies that a is the diameter of the semicircle with area 3 cm^2, b is the diameter of the semicircle with area 4 cm^2, and c is the diameter of the semicircle with area 6 cm^2, as shown below, then $3 = \frac{1}{2}\pi\left(\frac{a}{2}\right)^2$ from which it follows that $a^2 = \frac{24}{\pi}$. Similarly, $b^2 = \frac{32}{\pi}$, and $c^2 = \frac{48}{\pi}$.

Because $a^2 + b^2 = \frac{24}{\pi} + \frac{32}{\pi} = \frac{56}{\pi} > \frac{48}{\pi} = c^2$, the angle with greatest measure (i.e., the angle at C) is an acute angle, which implies that each angle in the triangle is acute and measures less than 90°; SUFFICIENT.

(2) This indicates that $c < a + b < c + 2$. If $a = 1$, $b = 1$, and $c = 1$, then $1 < 1 + 1 < 1 + 2$. It follows that the triangle is equilateral; therefore, each angle measures less than 90°. However, if $a = 1$, $b = 1$, and $c = \sqrt{2}$, then $\sqrt{2} < 1 + 1 < \sqrt{2} + 2$, but $1^2 + 1^2 = (\sqrt{2})^2$ and the triangle is a right triangle; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS00890

311. Each of the 45 books on a shelf is written either in English or in Spanish, and each of the books is either a hardcover book or a paperback. If a book is to be selected at random from the books on the shelf, is the probability less than $\frac{1}{2}$ that the book selected will be a paperback written in Spanish?

(1) Of the books on the shelf, 30 are paperbacks.

(2) Of the books on the shelf, 15 are written in Spanish.

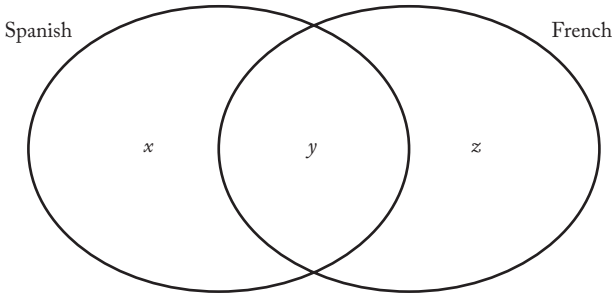
Arithmetic Probability

(1) This indicates that 30 of the 45 books are paperbacks. Of the 30 paperbacks, 25 could be written in Spanish. In this case, the probability of randomly selecting a paperback book written in Spanish is $\frac{25}{45} > \frac{1}{2}$. On the other hand, it is possible that only 5 of the paperback books are written in Spanish. In this case, the probability of randomly selecting a paperback book written in Spanish is $\frac{5}{45} < \frac{1}{2}$; NOT sufficient.

(2) This indicates that 15 of the books are written in Spanish. Then, at most 15 of the 45 books on the shelf are paperbacks written in Spanish, and the probability of randomly selecting a paperback book written in Spanish is at most $\frac{15}{45} < \frac{1}{2}$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS06683



312. A small school has three foreign language classes, one in French, one in Spanish, and one in German. How many of the 34 students enrolled in the Spanish class are also enrolled in the French class?

(1) There are 27 students enrolled in the French class, and 49 students enrolled in either the French class, the Spanish class, or both of these classes.

(2) One-half of the students enrolled in the Spanish class are enrolled in more than one foreign language class.

Arithmetic Sets

Given that 34 students are enrolled in the Spanish class, how many students are enrolled in both the Spanish and French classes? In other words, given that $x + y = 34$ in the diagram below, what is the value of y ?

(1) It is given that $y + z = 27$ and $x + y + z = 49$. Adding the equations $x + y = 34$ and $y + z = 27$ gives $x + 2y + z = 34 + 27 = 61$, or $y + (x + y + z) = 61$. Since $x + y + z = 49$, it follows that $y + 49 = 61$, or $y = 12$; SUFFICIENT.

(2) Given that half the students enrolled in the Spanish class are enrolled in more than one foreign language class, then it is possible that no students are enrolled in the French and German classes only and 17 students are enrolled in both the Spanish and French classes. On the other hand, it is also possible that there are 17 students enrolled in the French and German classes only and no students enrolled in both the Spanish and French classes; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS04910

313. If S is a set of four numbers w, x, y, and z, is the range of the numbers in S greater than 2 ?

(1) $w - z > 2$

(2) z is the least number in S.

Arithmetic Statistics

The range of the numbers w, x, y, and z is equal to the greatest of those numbers minus the least of those numbers.

(1) This reveals that the difference between two of the numbers in the set is greater than 2, which means that the range of the four numbers must also be greater than 2; SUFFICIENT.

(2) The information that z is the least number gives no information regarding the other numbers or their range; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS12187

314. Last year $\frac{3}{5}$ of the members of a certain club were males. This year the members of the club include all the members from last year plus some new members. Is the fraction of the members of the club who are males greater this year than last year?

(1) More than half of the new members are male.

(2) The number of members of the club this year is $\frac{6}{5}$ the number of members last year.

Arithmetic Operations with fractions

Let L represent the number of members last year; N the number of new members added this year; and x the number of members added this year who are males. It is given that $\frac{3}{5}$ of the members last year were males. It follows that the number of members who are male this year is $\frac{3}{5}L + x$. Also, the total number of members this year is $L + N$. Determine if $\frac{\frac{3}{5}L + x}{L + N} > \frac{3}{5}$, or equivalently, determine if $3L + 5x > 3L + 3N$ or simply if $x > \frac{3}{5}N$.

(1) This indicates that $x > \frac{1}{2}N$. If, for example, $N = 20$ and $x = 11$, then $11 > \frac{1}{2}(20) = 10$, but $11 \not> \frac{3}{5}(20) = 12$. On the other hand, if $N = 20$ and $x = 16$, then $16 > \frac{1}{2}(20) = 10$, and $16 > \frac{3}{5}(20) = 12$; NOT sufficient.

(2) This indicates that $L + N = \frac{6}{5}L$. It follows that $N = \frac{1}{5}L$. If, for example, $L = 100$, then $N = \frac{1}{5}(100) = 20$. If $x = 11$, then $11 \not> \frac{3}{5}(20) = 12$. On the other hand, if $x = 16$, then $16 > \frac{1}{2}(20) = 10$, and $16 > \frac{3}{5}(20) = 12$; NOT sufficient.

Taking (1) and (2) together is of no more help than (1) and (2) taken separately since the same examples were used to show that neither (1) nor (2) is sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS13640

315. If a, b, and c are consecutive integers and $0 < a < b < c$, is the product abc a multiple of 8?

(1) The product ac is even.

(2) The product bc is a multiple of 4.

Arithmetic Operations with integers

Determine whether the product of three consecutive positive integers, a, b and c, where $a < b < c$, is a multiple of 8.

Since a, b, and c are consecutive integers, then either both a and c are even and b is odd, or both a and c are odd and b is even.

(1) This indicates that at least one of a or c is even, so both a and c are even. Since, when counting from 1, every fourth integer is a multiple of 4, one integer of the pair of consecutive even integers a and c is a multiple of 4. Since the other integer of the pair is even, the product ac is a multiple of 8, and, therefore, abc is a multiple of 8; SUFFICIENT.

(2) This indicates that bc is a multiple of 4. If $b = 3$ and $c = 4$, then $a = 2$ and $bc = 12$, which is a multiple of 4. In this case, $abc = (2)(3)(4) = 24$, which is a multiple of 8. However, if $b = 4$ and $c = 5$, then $a = 3$ and $bc = 20$, which is a multiple of 4. In this case, $abc = (3)(4)(5) = 60$, which is not a multiple of 8; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS13837

316. M and N are integers such that $6 < M < N$. What is the value of N?

(1) The greatest common divisor of M and N is 6.

(2) The least common multiple of M and N is 36.

Arithmetic Properties of numbers

(1) Given that the greatest common divisor (GCD) of M and N is 6 and $6 < M < N$, then it is possible that $M = (6)(5) = 30$ and $N = (6)(7) = 42$. However, it is also possible that $M = (6)(7) = 42$ and $N = (6)(11) = 66$; NOT sufficient.

(2) Given that the least common multiple (LCM) of M and N is 36 and $6 < M < N$, then it is possible that $M = (4)(3) = 12$ and $N = (9)(2) = 18$. However, it is also possible that $M = (4)(3) = 12$ and $N = (9)(4) = 36$; NOT sufficient.

Taking (1) and (2) together, it follows that 6 is a divisor of M and M is a divisor of 36. Therefore, M is among the numbers 6, 12, 18, and 36. For the same reason, N is among the numbers 6, 12, 18, and 36. Since $6 < M < N$, it follows that M cannot be 6 or 36 and N cannot be 6. Thus, there are three choices for M and N such that $M < N$. These three choices are displayed in the table below, which indicates why only one of the choices, namely $M = 12$ and $N = 18$, satisfies both (1) and (2).

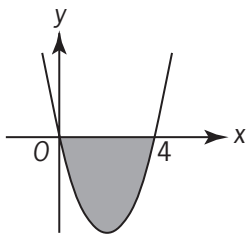
M	N	GCD	LCM
12	18	6	36
12	36	12	36
18	36	18	36

The correct answer is C;
both statements together are sufficient.

DS07575

317. Stations X and Y are connected by two separate, straight, parallel rail lines that are 250 miles long. Train P and train Q simultaneously left Station X and Station Y, respectively, and each train traveled to the other's point of departure. The two trains passed each other after traveling for 2 hours. When the two trains passed, which train was nearer to its destination?

(1) At the time when the two trains passed, train P had averaged a speed of 70 miles per hour.



(2) Train Q averaged a speed of 55 miles per hour for the entire trip.

Arithmetic Applied problems; Rates

(1) This indicates that Train P had traveled $2(70) = 140$ miles when it passed Train Q. It follows that Train P was $250 - 140 = 110$ miles from its destination and Train Q was 140 miles from its destination, which means that Train P was nearer to its destination when the trains passed each other; SUFFICIENT.

(2) This indicates that Train Q averaged a speed of 55 miles per hour for the entire trip, but no information is given about the speed of Train P. If Train Q traveled for 2 hours at an average speed of 55 miles per hour and Train P traveled for 2 hours at an average speed of 70 miles per hour, then Train P was nearer to its destination when the trains passed. However, if Train Q traveled for 2 hours at an average speed of 65 miles per hour and Train P traveled for 2 hours at an average speed of 60 miles per hour, then Train Q was nearer to its destination when the trains passed. Note that if Train Q traveled at $\frac{(120)(55)}{140} = 47\frac{1}{7}$ miles per hour for the remainder of the trip, then its average speed for the whole trip was 55 miles per hour; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS01613

318. In the xy-plane shown, the shaded region consists of all points that lie above the graph of $y = x^2 - 4x$ and below the x-axis. Does the point (a,b) (not shown) lie in the shaded region if $b < 0$?

(1) $0 < a < 4$

(2) $a^2 - 4a < b$

Algebra Coordinate geometry

In order for (a,b) to lie in the shaded region, it must lie above the graph of $y = x^2 - 4x$ and below the x-axis. Since $b < 0$, the point (a,b) lies below the x-axis. In order for (a,b) to lie above the graph of $y = x^2 - 4x$, it must be true that $b > a^2 - 4a$.

(1) This indicates that $0 < a < 4$. If $a = 2$, then $a^2 - 4a = 2^2 - 4(2) = -4$, so if $b = -1$, then $b > a^2 - 4a$ and (a,b) is in the shaded region. But if $b = -5$, then $b < a^2 - 4a$ and

(a,b) is not in the shaded region; NOT sufficient.

(2) This indicates that $b > a^2 - 4a$, and thus, (a,b) is in the shaded region; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS01685

319. If a and b are positive integers, is $\sqrt[3]{ab}$ an integer?

(1) $\sqrt{a}$ is an integer.

(2) $b = \sqrt{a}$

Arithmetic Properties of numbers

(1) Given that $\sqrt{a}$ is an integer, then $a = 4$ is possible. If, in addition $b = 1$, then $\sqrt[3]{ab} = \sqrt[3]{4}$ is not an integer. However, if, in addition $b = 2$, then $\sqrt[3]{ab} = \sqrt[3]{8} = 2$ is an integer; NOT sufficient.

(2) Given that $b = \sqrt{a}$, then $\sqrt[3]{ab} = \sqrt[3]{a\sqrt{a}} = \sqrt[3]{\sqrt{a^3}} = \sqrt{\sqrt[3]{a^3}} = \sqrt{a} = b$ is an integer; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

6.0 Quantitative Review Question Index

6.0 Quantitative Review Question Index

The Quantitative Review Question index is organized by difficulty level, GMAT section, and then by math concept. All numbers below are associated with the problem numbers in the guide and not the page numbers.

There are different ways you can classify and categorize each of the different types of problems. Below are the GMAC classification and categorization of the quantitative practice problems.

Polygons; Triangles: 146
Solids: 149
Triangles; Area; Inequalities: 164

7.0 GMAT™ Official Guide Quantitative Review Online Index

7.0 GMAT™ Official Guide Quantitative Review Online Index

ARE YOU USING BOTH THE BOOK AND THE ONLINE QUESTION BANK TO STUDY? If so, use the following index to locate a question from the online question bank in the book.

To locate a question from the online question bank in the book—Every question in the online question bank has a unique ID, called the Practice Question Identifier or PQID, which appears above the question number. Look up the PQID in the table to find its problem number and page number in the book.

Graduate Management Admission Council™

Caution!

The penalties for cheating on the GMAT™ Exam are severe.

The following is considered cheating:

- Hiring someone to take the test
- Taking the test for someone else
- Memorizing test questions
- Sharing answers with others

The penalties for cheating are:

- Cancellation of your scores
- Ban on future testing
- School notification
- Possible legal prosecution

Has someone been trying to get you to cheat?

File a report via email: **pvtestsecurity@pearson.com**

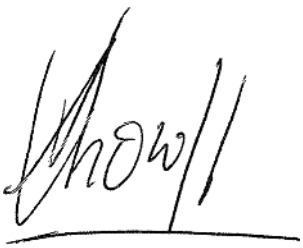
Dear GMAT Test-Taker,

Thank you for your interest in graduate management education. Today more than 7,000 graduate programs around the world use the GMAT™ exam to establish their MBA, business master's, and other graduate-level management degree programs as hallmarks of excellence. Nine of out 10 new MBA enrollments globally are made using a GMAT score.*

By using the *GMAT™ Official Guide* to prepare for the GMAT exam, you're taking a very important step toward achieving your goals and pursuing admission to the MBA or business master's program that is the best fit for you.



This book, *GMAT™ Official Guide Verbal Review 2020*, is designed to help you prepare for and build confidence to do your best on the GMAT exam. It's the only guide that features real questions from past exams published by the Graduate Management Admission Council (GMAC), the makers of the GMAT™ exam.

For more than 60 years, the GMAT exam has helped candidates like you demonstrate their command of the skills needed for success in the classroom and showcase to schools their commitment to pursuing a graduate business degree. Schools use and trust the GMAT exam as part of their admissions process because it's a proven predictor of classroom success and your ability to excel in your chosen program.

The mission of GMAC is to ensure no talent goes undiscovered. We are driven to continue improving the GMAT exam as well as helping you find and connect with the best-fit schools and programs for you. I applaud your commitment to educational success. This guide and the other GMAT™ Official Prep products available at mba.com will give you the confidence to achieve your personal best on the GMAT exam and launch or reinvigorate a rewarding career.

I wish you the best success on all your future educational and professional endeavors.

Sincerely,

Sangeet Chowfla
President & CEO of the Graduate Management Admission Council

*Top 100 *Financial Times* full-time MBA programs

GMAT™ Official Guide Verbal Review 2020

1.0 What Is the GMAT™ Exam?

1.0 What Is the GMAT™ Exam?

The Graduate Management Admission Test™ (GMAT™) exam is a standardized exam used in admissions decisions by more than 7,000 graduate management programs worldwide, at approximately 2,300 graduate business schools worldwide. It helps you gauge, and demonstrate to schools, your academic potential for success in graduate-level management studies.

The four-part exam measures your Analytical Writing, Integrated Reasoning, Verbal Reasoning, and Quantitative Reasoning skills—higher-order reasoning skills that management faculty, admissions professionals, and employers worldwide have identified as important for incoming students to have. "Higher-order" reasoning skills involve complex judgments, and include critical thinking, analysis, and problem solving. Unlike undergraduate grades and curricula, which vary in their meaning across regions and institutions, your GMAT scores provide a standardized, statistically valid and reliable measure of how you are likely to perform academically in the core curriculum of a graduate management program. The GMAT exam's validity, fairness, and value in admissions have been well-established through numerous academic studies.

The GMAT exam is delivered entirely in English and solely on a computer. It is not a test of business knowledge, subject-matter mastery, English vocabulary, or advanced computational skills. The GMAT exam also does not measure other factors related to success in graduate management study, such as job experience, leadership ability, motivation, and interpersonal skills. Your GMAT score is intended to be used as one admissions criterion among other, more subjective, criteria, such as admissions essays and interviews.

1.1 Why Take the GMAT™ Exam?

Launched in 1954 by a group of nine business schools to provide a uniform measure of the academic skills needed to succeed in their programs, the GMAT exam is now used by more than 7,000 graduate management programs at approximately 2,300 institutions worldwide.

Taking the GMAT exam helps you stand out in the admissions process and demonstrate your readiness and commitment to pursuing graduate management education. Schools use GMAT scores to help them select the most qualified applicants—because they know that candidates who take the GMAT exam are serious about earning a graduate business degree, and it's a proven predictor of a student's ability to succeed in his or her chosen program. When you consider which programs to apply to, you can look at a school's use of the GMAT exam as one indicator of quality. Schools that use the GMAT exam typically list score ranges or average scores in their class profiles, so you may also find these profiles helpful in gauging the academic competitiveness of a program you are considering and how well your performance on the exam compares with that of the students enrolled in the program.

Myth -vs- FACT

M – **If I don't achieve a high score on the GMAT, I won't get into my top choice schools.**

F – There are great schools available for candidates at any GMAT score range.

Fewer than 50 of the more than 250,000 people taking the GMAT exam each year get a perfect score of 800; and many more get into top business school programs around the world each year. Admissions Officers use GMAT scores as one component in their admissions decisions, in conjunction with undergraduate records, application essays, interviews, letters of recommendation, and other information when deciding whom to accept into their programs. Visit School Finder on mba.com to learn about schools that are the best fit for you.

No matter how you perform on the GMAT exam, you should contact the schools that interest you to learn more and to ask how they use GMAT scores and other criteria (such as your undergraduate

grades, essays, and letters of recommendation) in their admissions processes. School admissions offices, web sites, and materials published by schools are the key sources of information when you are doing research about where you might want to go to business school.

For more information on the GMAT exam, test preparation materials, registration, how to use and send your GMAT scores to schools, and applying to business school, please visit mba.com.

1.2 GMAT™ Exam Format

The GMAT exam consists of four separately timed sections (see the table on the next page). The Analytical Writing Assessment (AWA) section consists of one essay. The Integrated Reasoning section consists of graphical and data analysis questions in multiple response formats. The Quantitative and Verbal Reasoning sections consist of multiple-choice questions.

The Quantitative and Verbal Reasoning sections of the GMAT exam are computer adaptive, which means that the test draws from a large bank of questions to tailor itself to your ability level, and you won't get many questions that are too hard or too easy for you. The first question will be of medium difficulty. As you answer each question, the computer scores your answer and uses it—as well as your responses to all preceding questions—to select the next question.

Computer-adaptive tests become more difficult the more questions you answer correctly, but if you get a question that seems easier than the last one, it does not necessarily mean you answered the last question incorrectly. The test has to cover a range of content, both in the type of question asked and the subject matter presented.

Myth-vs- FACT

M – Getting an easier question means I answered the last one wrong.

F – You should not become distracted by the difficulty level of a question.

Many different factors contribute to the difficulty of a question, so don't worry when taking the test or waste valuable time trying to determine the difficulty of the question you are answering.

To ensure that everyone receives the same content, the test selects a specific number of questions of each type. The test may call for your next problem to be a relatively hard data sufficiency question involving arithmetic operations. But, if there are no more relatively difficult data sufficiency questions involving arithmetic, you might be given an easier question.

Because the computer uses your answers to select your next questions, you may not skip questions or go back and change your answer to a previous question. If you don't know the answer to a question, try to eliminate as many choices as possible, then select the answer you think is best.

Though the individual questions are different, the mix of question types is the same for every GMAT exam. Your score is determined by the difficulty and statistical characteristics of the questions you answer as well as the number of questions you answer correctly. By adapting to each test-taker, the GMAT exam is able to accurately and efficiently gauge skill levels over a full range of abilities, from very high to very low.

The test includes the types of questions found in this book and online at gmat.wiley.com, but the format and presentation of the questions are different on the computer. When you take the test:

- Only one question or question prompt at a time is presented on the computer screen.
- The answer choices for the multiple-choice questions will be preceded by radio buttons, rather than by letters.

- Different question types appear in random order in the multiple-choice and Integrated Reasoning sections.
- You must select your answer using the computer.
- You must choose an answer and confirm your choice before moving on to the next question.
- You may not go back to previous screens to change answers to previous questions.

Format of the GMAT™ Exam

	Questions	Timing
Analytical Writing Assessment	1	30 min.
Integrated Reasoning Multi-Source Reasoning Table Analysis Graphics Interpretation Two-Part Analysis	12	30 min.
Quantitative Reasoning Problem Solving Data Sufficiency	31	62 min.
Verbal Reasoning Reading Comprehension Critical Reasoning Sentence Correction	36	65 min.
	Total Time:	187 min.

Immediately prior to starting your exam, you will have the flexibility to select the order for the section of the GMAT exam from three options.

Order #1	Order #2	Order #3
Analytical Writing Assessment	Verbal Reasoning	Quantitative Reasoning
Integrated Reasoning		
Optional 8-minute break		
Quantitative Reasoning	Quantitative Reasoning	Verbal Reasoning
Optional 8-minute break		
Verbal Reasoning	Integrated Reasoning	Integrated Reasoning
	Analytical Writing Assessment	Analytical Writing Assessment

The section order selection will take place at the test center on exam date, immediately prior to the start of the GMAT exam.

1.3 What Is the Content of the Exam Like?

The GMAT exam measures higher-order analytical skills encompassing several types of reasoning. The Analytical Writing Assessment asks you to analyze the reasoning behind an argument and respond in writing; the Integrated Reasoning section asks you to interpret and synthesize information from multiple sources and in different formats to make reasoned conclusions; the Quantitative Reasoning section asks you to reason quantitatively using basic arithmetic, algebra, and geometry; and the Verbal Reasoning section asks you to read and comprehend written material and to reason and evaluate arguments.

Test questions may address a variety of subjects, but all of the information you need to answer the questions will be included on the exam, with no outside knowledge of the subject matter necessary. The GMAT exam is not a test of business knowledge, English vocabulary, or advanced computational skills. You will need to read and write in English and have basic math and English skills to perform well on the test, but its difficulty comes from analytical and critical thinking abilities.

The questions in this book are organized by question type and from easiest to most difficult, but keep in mind that when you take the test, you may see different types of questions in any order within each section.

1.4 Analytical Writing Assessment

The Analytical Writing Assessment (AWA) consists of one 30-minute writing task: Analysis of an Argument. The AWA measures your ability to think critically, communicate your ideas, and formulate an appropriate and constructive critique. You will type your essay on a computer keyboard.

1.5 Integrated Reasoning Section

The Integrated Reasoning section highlights the relevant skills that business managers in today's data-driven world need in order to analyze sophisticated streams of data and solve complex problems. It measures your ability to understand and evaluate multiple sources and types of information—graphic, numeric, and verbal—as they relate to one another. This section will require you to use both quantitative and verbal reasoning to solve complex problems and solve multiple problems in relation to one another.

Four types of questions are used in the Integrated Reasoning section:

- Multi-Source Reasoning
- Table Analysis
- Graphics Interpretation
- Two-Part Analysis

Integrated Reasoning questions may require quantitative or verbal reasoning skills, or a combination of both. You will have to interpret graphics and sort tables to extract meaning from data, but advanced statistical knowledge and spreadsheet manipulation skills are not necessary. You will have access to an on-screen calculator with basic functions for the Integrated Reasoning section, but note that the calculator is *not* available on the Quantitative Reasoning section.

1.6 Quantitative Reasoning Section

The GMAT Quantitative Reasoning section measures your ability to reason quantitatively, solve quantitative problems, and interpret graphic data.

Two types of multiple-choice questions are used in the Quantitative Reasoning section:

- Problem Solving
- Data Sufficiency

Both are intermingled throughout the Quantitative Reasoning section, and require basic knowledge of arithmetic, elementary algebra, and commonly known concepts of geometry.

For test-taking tips specific to each question type in the Quantitative Reasoning section, practice questions and answer explanations, see *GMAT™ Official Guide 2020* or *GMAT™ Official Guide Quantitative Review 2020*; both are available for purchase at mba.com.

1.7 Verbal Reasoning Section

The GMAT Verbal Reasoning section measures your ability to read and comprehend written material and to reason and evaluate arguments. The Verbal Reasoning section includes reading sections from several different content areas. Although you may be generally familiar with some of the material, neither the reading passages nor the questions assume detailed knowledge of the topics discussed.

Three types of multiple-choice questions are intermingled throughout the Verbal Reasoning section:

- Reading Comprehension
- Critical Reasoning
- Sentence Correction

All three require basic knowledge of the English language, but the Verbal Reasoning section is not a test of advanced vocabulary.

For test-taking tips specific to each question type in the Verbal Reasoning section, practice questions, and answer explanations, see chapters 3 through 5.

1.8 What Are the Test Centers Like?

The GMAT exam is administered under standardized conditions at over 700 test centers worldwide. Each test center has a proctored testing room with individual computer workstations that allow you to sit for the exam under quiet conditions and with some privacy. You will be able to take two optional 8-minute breaks during the course of the exam. You may not take notes or scratch paper with you into the testing room, but an erasable notepad and marker will be provided for you to use during the test. For more information about exam day visit mba.com.

1.9 How Are Scores Calculated?

Verbal Reasoning and Quantitative Reasoning sections are scored on a scale of 6 to 51, in one-point increments. The Total GMAT score ranges from 200 to 800 and is based on your performance in these two sections. Your score is determined by:

- The number of questions you answer
- The number of questions you answer correctly or incorrectly
- The level of difficulty and other statistical characteristics of each question

Your Verbal, Quantitative, and Total GMAT scores are determined by an algorithm that takes into account the difficulty of the questions that were presented to you and how you answered them. When you answer the easier questions correctly, you get a chance to answer harder questions, making it possible to earn a higher score. After you have completed all the questions on the test, or when your time is expired, the computer will calculate your scores.

You will receive three scores: Total Score (which is based on your Quantitative Reasoning and Verbal Reasoning scores), Integrated Reasoning Score, and Analytical Writing Assessment Score. The following table summarizes the different types of scores, the scales, and the increments.

Type of Score	Scale	Increments
Total (based on Quantitative Reasoning and Verbal Reasoning)	200–800	10
Quantitative Reasoning	6–51	1
Verbal Reasoning	6–51	1
Integrated Reasoning	1–8	1
Analytical Writing Assessment	0–6	.5

The schools that you have designated to receive your scores may receive a copy of your Analytical Writing Assessment essay with your score report. Your own copy of your score report will not include your actual essay.

Your GMAT score includes a percentile ranking that compares your skill level with other test-takers from the past three years. The percentile rank of your score shows the percentage of tests taken with scores lower than your score. Every July, percentile ranking tables are updated. Visit mba.com to view the most recent percentile rankings tables.

2.0 How to Prepare

2.0 How to Prepare

2.1 How Should I Prepare to Take the Test?

The GMAT exam is designed specifically to measure reasoning skills needed for management education, and the test contains several question formats unique to the GMAT exam. At a minimum, you should be familiar with the test format and the question formats before you sit for the test. Because the GMAT exam is a timed exam, you should practice answering test questions, not only to better understand the question formats and the skills they require, but also to help you learn to pace yourself so you can finish each section when you sit for the exam.

Because the exam measures reasoning rather than subject-matter knowledge, you most likely will not find it helpful to memorize facts. You do not need to study advanced mathematical concepts, but you should be sure your grasp of basic arithmetic, algebra, and geometry is sound enough that you can use these skills in quantitative problem solving. Likewise, you do not need to study advanced vocabulary words, but you should have a firm understanding of basic English vocabulary and grammar for reading, writing, and reasoning.

Myth -vs- FACT

M – You need very advanced math skills to get a high GMAT score.

F – The GMAT measures your reasoning and critical thinking abilities, rather than your advanced math skills.

The GMAT exam only requires basic quantitative skills. You should review the math skills (algebra, geometry, basic arithmetic) presented in the *GMAT™ Official Guide 2020* and the *GMAT™ Official Guide Quantitative Review 2020*. The difficulty of GMAT Quantitative questions stems from the logic and analysis used to solve the problems and not the underlying math skills.

This book and other study materials released by the Graduate Management Admission Council (GMAC) are the ONLY source of questions that have been retired from the GMAT exam. All questions that appear or have appeared on the GMAT exam are copyrighted and owned by GMAC, which does not license them to be reprinted elsewhere. Accessing live Integrated Reasoning, Quantitative, or Verbal test questions in advance or sharing test content during or after you take the test is a serious violation, which could cause your scores to be canceled and schools to be notified. In cases of a serious violation, you may be banned from future testing and other legal remedies may be pursued.

2.2 Using GMAT Official Prep Products

Because the GMAT exam is administered on a computer, we encourage you to practice the questions in the *GMAT™ Official Guide Verbal Review* online at gmat.wiley.com. All of the questions in this book are available there, and you'll be able to create practice sets and track progress more easily.

In addition to the *GMAT™ Official Guide Verbal Review*, we recommend using some or all of our six GMAT Official Practice Exams in your preparation. Because the GMAT exam is computer adaptive, meaning that it adjusts to your ability as you answer questions on the exam, the best simulation of the GMAT exam experience is through GMAT Official Practice Exams. Like the real thing, the Official Practice Exams adjust to your ability and use the same scoring algorithm as the actual GMAT exam.

To maximize your studying efforts, we recommend starting by learning about the GMAT exam and the question types in the *GMAT™ Official Guide* and in the GMAT™ Official Starter Kit. Then, take GMAT Official Practice Exam 1 to familiarize yourself with the exam and to get a baseline score. Don't worry about your score on the first practice exam! The goal is to become familiar with the exam and set a baseline for measuring your progress. Following that, go to gmat.wiley.com and practice the questions in the *Official Guide*, focusing on areas that require your attention. As you continue to practice, take additional Official Practice Exams to gauge your progress. Before your real GMAT exam, take a final Official Practice Exam to see where you are and do a "dry run" of the true experience.

Remember: the first two GMAT Official Practice Exams are part of the free GMAT™ Official Starter Kit + Practice Exams 1 and 2, which also include 90 free practice questions, available to everyone with an mba.com account.

2.3 Where Can I Get Additional Practice?

If you would like additional practice, *GMAT™ Official Guide 2020* and *GMAT™ Official Guide Quantitative Review 2020* offer additional questions that are not published in this guide. You can also find more Quantitative, Verbal, and Integrated Reasoning practice questions, full-length, computer-adaptive practice exams, Analytical Writing Assessment practice prompts, and other helpful study materials at mba.com.

2.4 General Test-Taking Suggestions

Specific test-taking strategies for individual question types are presented later in this book. The following are general suggestions to help you perform your best on the test.

1. **Use your time wisely.**
   Although the GMAT exam stresses accuracy more than speed, it is important to use your time wisely. On average, you will have about 1¾ minutes for each Verbal question, about 2 minutes for each Quantitative question, and about 2½ minutes for each Integrated Reasoning question, some of which have multiple questions. Once you start the test, an onscreen clock will show the time you have left. You can hide this display if you want, but it is a good idea to check the clock periodically to monitor your progress. The clock will automatically alert you when 5 minutes remain for the section you are working on.

2. **Determine your preferred section order before the actual exam.**
   The GMAT exam allows you to select the order in which to take the sections. Use the GMAT Official Practice Exams as an opportunity to practice and determine your preferred order. Remember: there is no "right" order in which to take the exam; you can practice each order and see which one works best for you.

3. **Answer practice questions ahead of time.**
   After you become generally familiar with all question types, use the practice questions in this book and online at gmat.wiley.com to prepare for the actual test (note that Integrated Reasoning questions are only available online). It may be useful to time yourself as you answer the practice questions to get an idea of how long you will have for each question when you sit for the actual test, as well as to determine whether you are answering quickly enough to finish the test in the allotted time.

4. **Read all test directions carefully.**
The directions explain exactly what is required to answer each question type. If you read hastily, you may miss important instructions and impact your ability to answer correctly. To review directions during the test, click on the Help icon. But be aware that the time you spend reviewing directions will count against your time allotment for that section of the test.

5. **Read each question carefully and thoroughly.**
Before you answer a question, determine exactly what is being asked and then select the best choice. Never skim a question or the possible answers; skimming may cause you to miss important information or nuances.

6. **Do not spend too much time on any one question.**
If you do not know the correct answer, or if the question is too time consuming, try to eliminate choices you know are wrong, select the best of the remaining answer choices, and move on to the next question.

   Not completing sections and randomly guessing answers to questions at the end of each test section can significantly lower your score. As long as you have worked on each section, you will receive a score even if you do not finish one or more sections in the allotted time. You will not earn points for questions you never get to see.

7. **Confirm your answers ONLY when you are ready to move on.**
On the Quantitative Reasoning and Verbal Reasoning sections, once you have selected your answer to a multiple-choice question, you will be asked to confirm it. Once you confirm your response, you cannot go back and change it. You may not skip questions. In the Integrated Reasoning section, there may be several questions based on information provided in the same question prompt. When there is more than one response on a single screen, you can change your response to any of the questions on the screen before moving on to the next screen. However, you may not navigate back to a previous screen to change any responses.

8. **Plan your essay answer before you begin to write.**
The best way to approach the Analysis of an Argument section is to read the directions carefully, take a few minutes to think about the question, and plan a response before you begin writing. Take time to organize your ideas and develop them fully, but leave time to reread your response and make any revisions that you think would improve it.

Myth -vs- FACT

M – **It is more important to respond correctly to the test questions than it is to finish the test.**

F – **There is a significant penalty for not completing the GMAT exam.**

Pacing is important. If you are stumped by a question, give it your best guess and move on. If you guess incorrectly, the computer program will likely give you an easier question, which you are likely to answer correctly, and the computer will rapidly return to giving you questions matched to your ability. If you don't finish the test, your score will be reduced. Failing to answer five verbal questions, for example, could reduce your score from the 91st percentile to the 77th percentile.

Myth -vs- FACT

M – **The first 10 questions are critical and you should invest the most time on those.**

F – **All questions count.**

The computer-adaptive testing algorithm uses each answered question to obtain an *initial* estimate. However, as you continue to answer questions, the algorithm self-corrects by computing an updated estimate on the basis of all the questions you have answered, and then administers questions that are closely matched to this new estimate of your ability. Your final score is based on all your responses and considers the difficulty of all the questions you answered. Taking additional time on the first 10 questions will not game the system and can hurt your ability to finish the test.

3.0 Reading Comprehension

3.0 Reading Comprehension

Reading comprehension questions appear in the Verbal Reasoning section of the GMAT™ exam. The Verbal Reasoning section uses multiple-choice questions to measure your ability to read and comprehend written material, to reason and evaluate arguments, and to correct written material to conform to standard written English. Because the Verbal Reasoning section includes content from a variety of topics, you may be generally familiar with some of the material; however, neither the passages nor the questions assume knowledge of the topics discussed. Reading comprehension questions are intermingled with critical reasoning and sentence correction questions throughout the Verbal Reasoning section of the test.

You will have 65 minutes to complete the Verbal Reasoning section, or an average of about 1¾ minutes to answer each question. Keep in mind you will need time to read the passages, so the average time you spend on the reading comprehension questions will probably be slightly longer than the overall Verbal Reasoning section average. However, the difference will typically be offset by shorter times spent on some of the less time-consuming sentence correction questions if you work efficiently and manage your time wisely throughout the section.

Reading comprehension questions refer to written passages consisting of around 200 words or around 350 words. The passages discuss topics in the social sciences, humanities, and physical or biological sciences and such business-related fields as marketing, economics, and human resource management. Each passage is accompanied by a short series of questions that will ask you to interpret the text, apply the information you gather from the reading, and make inferences (or informed assumptions) based on the reading. For these questions, you will see a split computer screen. The written passage will remain visible on the left side as each question associated with that passage appears, in turn, on the right side. You will see only one question at a time. However, the number of questions associated with each passage may vary.

As you move through the reading comprehension sample questions, try to determine a process that works best for you. You might begin by reading a passage carefully and thoroughly. Some test-takers prefer to skim the passages the first time through, or even to read the first question before reading the passage. You may want to reread any sentences that present complicated ideas or introduce terms that are new to you. Read each question and series of answers carefully. Make sure you understand exactly what the question is asking and what the answer choices are.

If you need to, you may reread any parts of the passage that are relevant to answering the question that you are currently viewing, but you will not be able to return to other questions after you have answered them and moved on. Some questions ask explicitly about particular portions of the passages to which they refer. In some cases, the portion referred to is highlighted while the relevant question is displayed. In such cases, the question will explicitly refer to the highlighted part.

The following pages describe what reading comprehension questions are designed to measure, present the directions that will precede questions of this type, and describe the various question types. This chapter also provides test-taking strategies, sample questions, and detailed explanations of all the questions. The explanations further illustrate the ways in which reading comprehension questions evaluate basic reading skills.

3.1 What Is Measured

Reading comprehension questions measure your ability to understand, analyze, apply, and evaluate information and concepts presented in written form. All questions are to be answered on the basis of what is stated or implied in the reading material, and no specific prior knowledge of the material is required. Success in all types of GMAT questions—except those that are purely mathematical—requires strong reading skills. People without the necessary level of reading skill will be less likely than proficient readers to do well on those questions. Thus, for some examinees, critical reasoning, sentence correction, and word-based quantitative questions inevitably test reading comprehension in addition to the skills that they primarily target. But they do so only indirectly and only at the level of proficiency needed to demonstrate the skills that are directly targeted. By contrast, the reading comprehension questions are designed to focus directly on various components of reading comprehension and to measure different levels of skill in those components.

The GMAT reading comprehension questions evaluate your ability to do the following:

- **Understand complex, sophisticated nontechnical writing.**
  Effective reading involves both understanding words and phrases in context and accurately interpreting the overall messages conveyed by the writer. Although the questions do not directly measure your vocabulary knowledge (they will not ask you to show that you know the standard meanings of terms), some of them may test your ability to interpret special meanings of terms as they are used in the reading passages.
- **Understand the purposes and functions of passage components and the logical and rhetorical relationships among concepts and among pieces of information.**
  Questions that focus on this type of skill may ask you, for example, to determine how a part of a passage relates to other parts, to determine the strong and weak points of an argument, or to evaluate the relative importance of arguments and ideas in a passage.
- **Draw inferences from facts and statements.**
  Anyone who thoroughly comprehends a text should be able, with a little reflection, to determine what further information can be inferred from it. The inference questions will ask you to consider factual statements, authors' claims and opinions, or other components of a reading passage and reach conclusions on the basis of those components.
- **Understand and follow the development of quantitative concepts as they are presented in written material.**
  Reading comprehension questions do not measure mathematical knowledge. However, the passages sometimes contain quantitative information or opinions about such matters as percentages, proportions, trends, probabilities, or statistics, expressed in ways that should be understandable without technical mathematical training. You may be asked to interpret, evaluate, or apply such quantitative information or to draw inferences from it. In some cases, you might even need to use some very simple arithmetic.

There are six kinds of reading comprehension questions, each of which focuses directly on a different skill. However, there is inevitably some peripheral overlap between the skills tested by one kind of question and those tested by others. For example, identifying the main point of a passage often depends on recognizing, at least intuitively, the logical or rhetorical structure of the text, and drawing inferences or applying information depends on an accurate understanding of the passage's main idea and supporting ideas.

During the test, there will be no label telling which kind of reading comprehension question you are looking at, but the wording of each question will clearly indicate what you need to do. Most of the reading comprehension question types will be represented among the several reading comprehension sets in your test, but you may not see all of the types.

The reading comprehension questions ask about the following areas:

Main idea

Each passage is a unified whole—that is, the individual sentences and paragraphs support and develop one main idea or central point and have a single unified purpose. Sometimes you will be told the central point in the passage itself, and sometimes it will be necessary for you to determine the central point from the overall organization or development of the passage. You may be asked in this kind of question to

- recognize an accurate summary, restatement, or paraphrase of the main idea of a passage
- identify the author's primary purpose or objective in writing the passage
- assign a title that summarizes, briefly and pointedly, the main idea developed in the passage.

Main idea questions are usually easy to identify as such. They generally ask explicitly about the main idea or main purpose, using phrases such as "Which of the following most accurately expresses the main idea of the passage?", "The primary purpose of the passage as a whole is to . . .", or "In the passage, the author seeks primarily to . . .".

Incorrect answer choices for these questions often take the form of ideas in the passage that are subsidiary or tangential to the main point rather than the main point of the passage as a whole, statements that are superficially similar to the main idea but are demonstrably inaccurate, or statements that are simply outside the scope of the passage discussion even though they may be conceptually related to it.

You may find it helpful, as you read through a passage, to consider the type of rhetorical strategy the author is using. For example, is the author primarily reporting facts, events, or other writers' views; arguing for a point of view; or commenting on others' views or on events or states of affairs? This is essential in answering main idea questions that ask for the passage's purpose but can also help focus your thoughts for those that ask for a main idea as such. Here are some major rhetorical types that you may encounter in the reading passages:

Argumentation (primarily presenting reasons or evidence in support of a position). In passages of this type, the correct answer to a main-idea question will typically be a paraphrase or description of the conclusion of the argument—that is, the position that the author wants readers to accept. That position is sometimes, but not always, stated explicitly in the passage. When it is not, the nature of the argumentation will make it clear to careful, perceptive readers what the author is arguing for. The correct answer choice may also include a brief reference to the reasons given in support of the position. For example, "An analysis of recent findings supports the hypothesis that . . ." Argumentative passages have many different purposes and follow many different reasoning strategies. Some of the major types are:

- prescriptive (primarily advocating the adoption or rejection of policies, procedures, or laws or arguing for the acceptance of ethical viewpoints)
- evaluative (primarily arguing that something is good or bad, desirable or undesirable, without advocating any particular policy or course of action)
- causal (primarily arguing for or against an account of the causes, reasons, or motivations underlying an event, condition, decision, or outcome or an account of the influences underlying a literary or artistic style or movement). In some passages of this type, the author offers reasons for or against another author's scientific, historical, or social hypothesis
- interpretive (primarily arguing for or against an account of the meaning, importance, or implications of a set of observations, a theory, an artistic or literary work, or a historical event).

Exposition (primarily presenting established facts, conveying other information, or reporting someone else's views, actions, or research findings). Like argumentative passages, expository passages follow many different strategies. Some of the major types are:

- narrative (primarily reporting or describing sequences of events). The answer to a main idea question about a narrative passage can take various forms, depending on the author's purpose and focus. For example, it may be expressed as a concise one-sentence summary of the events described or a statement of the overall outcome of the events, depending on the author's focus
- reporting (primarily telling the views or findings of another author, researcher, theorist, or critic or reporting research findings, artistic accomplishments, innovations, etc.)
- descriptive (primarily describing the appearance, nature, or characteristics of something—for example, a place, society, artistic work, device, invention, etc.)
- informative with no further function (primarily informing readers of established scientific, historical, or other facts without arguing for any particular viewpoint regarding them).

Supporting idea

These questions measure your ability to comprehend ideas that are directly expressed in a passage and differentiate them from ideas that are neither expressed nor implied in the passage. They also measure your ability to differentiate supporting ideas from the main idea and from ideas that are implied by the author but are not explicitly stated.

Like main idea questions, supporting idea questions simply assess whether you understand the messages conveyed in the writing, without asking you to do anything further with the information. *Supporting* does not refer only to ideas that are expressed as premises supporting a main conclusion. Since each GMAT reading comprehension passage has an overall main point or purpose, every part of the writing can be thought of as supporting that main point or purpose in some way, either directly or tangentially. Therefore, supporting idea questions may ask you to understand and identify anything (other than the main point) that is said in the passage.

Correct answers to supporting idea questions almost never consist of verbatim quotations from the passage, so you will need to be able to recognize paraphrases or more abstract expressions of the passage material. Among the passage components you may be asked to understand and recognize are:

- a premise of an argument
- a tangential point such as an acknowledgment of a potential objection to the author's position or a mention of an exception to a principle or generalization
- an example given to illustrate a principle or generalization
- a counterexample intended to provide evidence against a principle or generalization
- a fact cited as background information relevant to the main idea or to a subsidiary idea
- a component of a complex explanation, description, or narration
- a brief statement of a position against which the author's reasoning is directed
- a descriptive detail used to support or elaborate on the main idea.

Whereas questions about the main idea ask you to determine the meaning of a passage as a whole, questions about supporting ideas ask you to determine the meanings of individual phrases, sentences,

and paragraphs that contribute to the meaning of the passage as a whole. In many cases, these questions can be thought of as asking for the main point of one small part of the passage. Supporting idea questions often contain key phrases such as: "According to the passage . . ." "Which of the following does the author cite as . . . ?" "The passage mentions which of the following . . ." or "Which of the following does the author propose . . . ?"

Success in answering supporting idea questions depends on remembering or quickly locating the relevant information in the passage. Occasionally, it may be possible to answer a question by quickly glancing to find the needed information without first reading through the passage, but as a general approach, that could be risky and even time-consuming. Supporting idea questions typically require a good understanding of the relationships among parts of the passage. In many cases, they will ask you to identify a piece of information that plays a specified role or is presented in a specified context. Thus, they may contain phrases such as: "Which of the following does the author offer as an objection to the theory discussed in the second paragraph?" "According to the passage, new businesses are more likely to fail if they . . ." "The passage compares the sea turtle's thermoregulation to . . .".

Inference

These questions ask about ideas that are not explicitly stated in a passage but are implied by the author or otherwise follow logically from the information in the passage. Unlike questions about supporting ideas, which ask about information that is directly expressed in a passage, inference questions ask about ideas or meanings that must be inferred from information that is directly stated.

Authors can make their points in indirect ways, suggesting ideas without actually stating them. Inference questions measure your ability to understand an author's intended meaning in parts of a passage where the meaning is only suggested. They sometimes also measure your ability to understand further implications that clearly follow from the information in the passage, even if the author does not directly intend them to be inferred. Therefore, when you read a passage, you should concentrate not only on the explicit meaning of the author's words, but also on the subtler meanings and unstated implications of those words. These questions do not ask about obscure or tenuous implications that are very remote from the passage; rather, they ask about things that any astute, observant reader should be able to infer from the passage after a little reflection.

Among the types of inferences that you may be asked to draw are:

- a likely cause of a phenomenon or situation described in the passage
- a likely effect of a phenomenon or situation described in the passage
- a specific instance or subset based on a generalization given in the passage. For example, if the passage indicates that all reptiles have a certain property and also mentions that crocodiles are reptiles, you could infer that crocodiles have the property in question.
- a statement that the author (or someone referred to in the passage) likely considers true or false
- an evaluative position that the author (or someone referred to in the passage) likely holds. For example, it may be possible to infer from the author's words that she or he disapproves of something that is discussed in the passage
- the intended meaning of a word or phrase based on how it is used in the passage. However, GMAT reading comprehension questions will not ask you to define a word that is used in the passage with a standard meaning that could be accurately guessed from background vocabulary knowledge.

In some cases, the inference you are asked to draw will follow from a single statement or series of statements in the passage. In other cases, it will require consideration of two or more separate parts of the passage, and none of those parts will be sufficient when considered alone. The relevant parts may be close together or far apart, but in either case, they will be significant aspects of the passage, not irrelevant or highly obscure details. The question may refer explicitly to one or more portions of the passage or it may leave it up to you to locate or remember the relevant information.

Inference questions often contain phrases such as: "Which of the following statements about . . . is most strongly supported by the passage?" "It can be inferred from the passage that . . ." "If the claims made by the author about . . . are true, which of the following is most likely also true?" "The passage implies that . . ." "The information in the passage suggests that . . .".

Some of the inferences might depend on commonly known and obviously true facts in addition to the information supplied by the passage. For example, if the passage says that an event happened during a snowstorm, you could reasonably infer that the weather was not hot at that location at that time.

Incorrect answer choices for inference questions are often statements that appear superficially related to the passage but are not supported by the information in question. When the question asks what can be inferred from a specific aspect of the passage, you should be careful not to select an answer that follows from some other part of the passage but not from the part in question.

You should not expect to be able to tell which answer choice is correct on the basis of whether it is true or false. Incorrect answers are often true even though they are not supported by the information in the passage. In other cases, the correct answer could be a false statement that is implied by false information in the passage. For example, when the author explains why a theory is mistaken, you might be asked to infer that if the theory were true, such and such incorrect information would also have to be true.

Occasionally, it may not be possible to tell, merely from the wording of a question, whether it is asking for an inference or for recognition of something that is directly expressed. For example, "In the passage, the author suggests . . ." could be asking you to note that the author explicitly makes a certain suggestion in the passage. More typically, a phrase like "The passage suggests . . ." will be asking you about something the text implies even though the author does not directly claim that it does so. However, if you understand the passage and the relationships and implications of its parts, you will be able to find the correct answer without having to worry about how the test writers may have classified the question.

Application

Application questions measure your ability to discern relationships between situations or ideas presented in the passage and other situations or ideas beyond the direct scope of the passage. The most crucial skill involved in answering these questions is that of abstracting key features or principles from one context and applying them effectively to other contexts. This is a skill that people often need when working with scholarly, legal, professional, or business writings. The relevant features can be of various types, especially logical, practical, functional, or structural.

Application questions take many forms. They are often hypothetical or speculative and therefore may contain words such as *would*, *could*, *might*, or *should* or phrases such as *most clearly exemplifies*, *is most similar to*, or *is most likely ruled out by*. Some of these questions pose analogies between passage topics and other topics.

Because application questions can be about the relationships of the passage to topics outside its scope, you should not expect to be able to eliminate any answer choice based on the fact that its topic does not

appear in the passage. For instance, all the answer choices for an analogy question relating to a passage's explanation of a water-treatment process might refer to book-publishing processes.

Here are some major application types that you may encounter in the test:

Analogies. These could include:

- a function or purpose that is similar to the function or purpose of something described in the passage. A question might ask, for instance, "In which of the following is the role played by a computer program most analogous to the role of the protein molecule in the pesticide discussed in the passage?"
- a method or procedure that is similar to one described in the passage even though it is used in a different context
- a goal or purpose that is similar to the goal or purpose of something discussed in the passage. For example, a protest demonstration's goal of bringing about a change in one country's environmental policies would be more analogous to a political speaker's goal of changing another country's food-safety regulations than it would to an employee's goal of finding a new job.
- a part-whole relationship that is similar to a part-whole relationship described in the passage. This could be, for example, the way in which a machine or organism relates to the rest of the system or the way in which a book chapter relates to the book as a whole.
- a logical relationship that is similar to the relationship between parts of the passage or between elements of someone's reasoning described in the passage

Principles, policies, and procedures. You may be asked to identify, for example,

- a rule or policy that if enforced could help bring about a goal presented in the passage
- a principle that is not explicitly formulated in the passage but can be understood as underlying the author's reasoning
- a generalization that is likely to be true based on a range of specific instances referred to in the passage
- an action or situation that would violate or conform to a rule or policy mentioned in the passage
- a potential solution to a problem discussed in the passage
- an alternative approach that could have the same effect as one discussed in the passage

Extensions of the author's rhetorical strategies. These include such things as:

- an example that would effectively illustrate a point made by the author
- a statement representing how the author would most likely respond to an objection to her or his position
- an additional topic that could be relevantly added to the discussion in the passage
- an idea that is not expressed in the passage but that the author would probably agree or disagree with on the basis of statements made in the passage

What-if scenarios. You might need to identify, for example,

- a hypothetical extension of a trend or series of developments described in the passage: What would be a likely consequence if the trend continued?

- how a researcher's conclusions would have been logically affected if some observed data had been different from the data reported in the passage
- how circumstances would likely have been different if a set of developments described in the passage had not occurred
- how someone whose views are described in the passage would likely respond if that person read the passage.

Evaluation

These questions require you to analyze and evaluate the organization and logic of a passage. They fall broadly into two subcategories, analysis and critique.

Analysis-type evaluation questions require you to determine how parts of the passage work and how they relate to other parts. These are often expressed in terms of the author's purpose. Thus, they have something in common with main idea questions that ask about authors' purposes, but for main idea questions you will identify a holistic purpose of the entire passage. In those cases, you probably will not need to explicitly analyze relationships among parts. In contrast, evaluation questions target the purposes of specific elements within the passage, and those purposes usually involve relationships to other parts. Some evaluation questions may ask you to identify the logical structure of the passage or of a portion of the passage.

Critique-type evaluation questions require you to judge the strengths, weaknesses, relevance, or effectiveness of parts of the passage and their relationships to potential objections or justifications. These often involve some of the same types of reasoning that you would encounter in critical reasoning questions but with a slightly different approach and in a different context. Neither critical reasoning questions nor reading comprehension evaluation questions rely on technical knowledge of formal logic—nor do they require you to be familiar with specific terms of logic or argumentation. You can answer these using the information in the passage and careful reasoning.

Evaluation questions often contain phrases such as "The purpose of . . ." "Most accurately describes the structure of . . ." "Most strengthens . . ." "Would most justify . . ." "Is most vulnerable to the objection that . . ." "Which . . . additional information would most help . . ." Answer choices are often abstract and might not contain any words or concepts that appear in the passage. For example, a question that asks about the function of a paragraph might have answer choices of the form: "It rejects a theory that is presented in the preceding paragraph and offers some criteria that an alternative theory would need to meet."

Here are some major application types that you may encounter in the test:

Analysis. Answers to these questions might be, for example, statements or descriptions of:

- how the passage as a whole is constructed. In such a case, the answer will sometimes be expressed as an abstract summary of the elements that make up the passage
- how a portion of the passage is constructed
- the purpose or function of a specified part of the passage—for instance, does it define, compare or contrast, present a new idea, or refute an idea?
- how a specified portion of the passage relates logically or rhetorically to surrounding parts
- how the author tries to persuade readers to accept his or her assertions
- a likely reason or motivation for a view that the author expresses or attributes to someone.

Critique. In these questions, you may be asked to identify, for example,

- an assumption that is involved in the author's reasoning or in someone else's reasoning discussed in the passage
- crucial gaps in the information provided in the passage
- a potential discovery that would help resolve an issue discussed in the passage
- a statement that, if true, would strengthen or weaken the author's reasoning or someone else's reasoning presented in the passage
- a potential counterexample to a general claim made in the passage.

Style and tone

Effective reading often depends on recognizing and evaluating the author's attitude toward a topic and the effect that the author intends the writing to have on readers. These things are often implicit in the passage's style and tone rather than stated explicitly.

Some questions focus directly and exclusively on the style or tone of the passage as a whole. They often involve phrases such as "The overall tone of the passage can be most accurately described as . . ." "The passage as a whole functions primarily as a . . ." or "The author's approach to . . . can be most accurately described as . . ." In the answer choices, you may be asked to select an adjective or adjective phrase that accurately describes the tone of a passage—for instance, *critical*, *questioning*, *objective*, *dismissive*, or *enthusiastic*. Answers may also take the form of nouns or noun phrases such as *advocacy for a political position*, *a sarcastic portrayal of a historical trend*, or *a journalistic exploration of some attempts to solve a problem*. They may also be more complex descriptions of the author's approach.

To answer this type of question, you will typically have to consider the language of the passage as a whole. It takes more than one pointed, critical word to make the tone of an entire passage or section critical. Sometimes, style and tone questions ask what audience the passage was probably intended for or what type of publication it would most appropriately appear in. To answer any question involving style and tone, you must ask yourself what attitudes or objectives are conveyed by the words of a passage beyond the literal meanings.

You may sometimes need to consider style and tone in answering any type of reading comprehension question, even one that does not explicitly ask about that aspect of the passage. Some question types are more likely than others to involve this type of consideration. An inference question, for example, may ask you to infer the author's attitude toward a topic, so you may need to consider the passage's tone in order to confidently identify its purpose, and some evaluation questions require you to recognize the rhetorical approach the author takes in a portion of the passage.

3.2 Test-Taking Strategies

1. **Do not expect to be completely familiar with any of the material presented in reading comprehension passages.**
   You may find some passages easier to understand than others, but all passages are designed to present a challenge. If you have some familiarity with the material presented in a passage, do not let this knowledge influence your choice of answers to the questions. Answer all questions on the basis of what is *stated or implied* in the passage itself.

2. **Analyze each passage carefully, because the questions require you to have a specific and detailed understanding of the material.**
   You may find it easier to do the analysis first before moving to the questions. You may find that you prefer to skim the passage the first time and read more carefully once you understand what a question asks. You may even want to read the question before reading the passage. You should choose the method most suitable for you.

3. **Focus on key words and phrases, and make every effort to avoid losing the sense of what is discussed in the passage.**

   Keep the following in mind:

   - Note how each fact relates to an idea or an argument
   - Note where the passage moves from one idea to the next
   - Separate main ideas from supporting ideas
   - Determine what conclusions are reached and why.

4. **Read the questions carefully, making certain that you understand what is asked.**
   An answer choice that accurately restates information in the passage may be incorrect if it does not answer the question. If you need to, refer back to the passage for clarification.

5. **Read all the choices carefully.**
   Never assume that you have selected the best answer without first reading all the choices.

6. **Select the choice that answers the question best in terms of the information given in the passage.**
   Do not rely on outside knowledge of the material to help you answer the questions.

7. **Remember that comprehension—not speed—is the critical success factor when it comes to reading comprehension questions.**

3.3 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

3.4 Sample Questions

Each of the reading comprehension questions is based on the content of a passage. After reading the passage, answer all questions pertaining to it on the basis of what is stated or implied in the passage. For each question, select the best answer of the choices given.

Line Human beings, born with a drive to explore and experiment, thrive on learning. Unfortunately, corporations are oriented predominantly toward controlling employees, not fostering their learning. (5) Ironically, this orientation creates the very conditions that predestine employees to mediocre performances. Over time, superior performance requires superior learning, because long-term corporate survival depends on continually exploring (10) new business and organizational opportunities that can create new sources of growth.

To survive in the future, corporations must become "learning organizations," enterprises that are constantly able to adapt and expand their (15) capabilities. To accomplish this, corporations must change how they view employees. The traditional view that a single charismatic leader should set the corporation's direction and make key decisions is rooted in an individualistic worldview. In an (20) increasingly interdependent world, such a view is no longer viable. In learning organizations, thinking and acting are integrated at all job levels. Corporate leadership is shared, and leaders become designers, teachers, and stewards, roles requiring (25) new skills: the ability to build shared vision, to reveal and challenge prevailing mental models, and to foster broader, more integrated patterns of thinking. In short, leaders in learning organizations are responsible for building organizations in which (30) employees are continually learning new skills and expanding their capabilities to shape their future.

Questions 1–4 refer to the passage.

*RC00184-01

1. According to the passage, traditional corporate leaders differ from leaders in learning organizations in that the former

(A) encourage employees to concentrate on developing a wide range of skills

(B) enable employees to recognize and confront dominant corporate models and to develop alternative models

(C) make important policy decisions alone and then require employees in the corporation to abide by those decisions

(D) instill confidence in employees because of their willingness to make risky decisions and accept their consequences

(E) are concerned with offering employees frequent advice and career guidance

RC00184-02

2. Which of the following best describes employee behavior encouraged within learning organizations, as such organizations are described in the passage?

(A) Carefully defining one's job description and taking care to avoid deviations from it

(B) Designing mentoring programs that train new employees to follow procedures that have been used for many years

(C) Concentrating one's efforts on mastering one aspect of a complicated task

(D) Studying an organizational problem, preparing a report, and submitting it to a corporate leader for approval

(E) Analyzing a problem related to productivity, making a decision about a solution, and implementing that solution

*These numbers correlate with the online test bank question number. See the GMAT Verbal Review Online Index in the back of this book.

RC00184-03

3. According to the author of the passage, corporate leaders of the future should do which of the following?

(A) They should encourage employees to put long-term goals ahead of short-term profits.

(B) They should exercise more control over employees in order to constrain production costs.

(C) They should redefine incentives for employees' performance improvement.

(D) They should provide employees with opportunities to gain new skills and expand their capabilities.

(E) They should promote individual managers who are committed to established company policies.

RC00184-04

4. The primary purpose of the passage is to

(A) endorse a traditional corporate structure

(B) introduce a new approach to corporate leadership and evaluate criticisms of it

(C) explain competing theories about management practices and reconcile them

(D) contrast two typical corporate organizational structures

(E) propose an alternative to a common corporate approach

Line Structural unemployment—the unemployment that remains even at the peak of the economy's upswings—is caused by an imbalance between the types and locations of available employment on the (5) one hand and the qualifications and locations of workers on the other hand. When such an imbalance exists, both labor shortages and unemployment may occur, despite a balance between supply and demand for labor in the economy as a whole.

(10) Because technological change is likely to displace some workers, it is a major factor in producing structural unemployment. While technological advance almost invariably results in shifts in demands for different types of workers, it does not (15) necessarily result in unemployment. Relatively small or gradual changes in demand are likely to cause little unemployment. In the individual firm or even in the labor market as a whole, normal attrition may be sufficient to reduce the size of the work force in (20) the affected occupations. Relatively large or rapid changes, however, can cause serious problems. Workers may lose their jobs and find themselves without the skills necessary to obtain new jobs. Whether this displacement leads to structural (25) unemployment depends on the amount of public and private sector resources devoted to retraining and placing those workers. Workers can be encouraged to move where there are jobs, to reeducate or retrain themselves, or to retire. In addition, other factors (30) affecting structural unemployment, such as capital movement, can be controlled.

Increased structural unemployment, should it occur, makes it difficult for the economy to achieve desired low rates of unemployment along with low rates of inflation. (35) If there is a growing pool of workers who lack the necessary skills for the available jobs, increases in total labor demand will rapidly generate shortages of qualified workers. As the wages of those workers are bid up, labor costs, and thus prices, rise. This phenomenon (40) may be an important factor in the rising trend, observed for the past two decades, of unemployment combined with inflation. Government policy has placed a priority on reducing inflation, but these efforts have nevertheless caused unemployment to increase.

Questions 5–10 refer to the passage.

RC00144-03

5. All of the following are mentioned as ways of controlling the magnitude of structural unemployment EXCEPT

(A) using public funds to create jobs
(B) teaching new skills to displaced workers
(C) allowing displaced workers to retire
(D) controlling the movement of capital
(E) encouraging workers to move to where jobs are available

RC00144-04

6. The passage suggests that a potential outcome of higher structural unemployment is

(A) increased public spending for social services
(B) placement of workers in jobs for which they are not qualified
(C) higher wages for those workers who have skills that are in demand
(D) an increase in the length of time jobs remain unfilled
(E) a shift in the government's economic policy priorities

RC00144-05

7. It can be inferred from the passage that even when there are unemployed workers, labor shortages are still likely to occur if

(A) the inflation rate is unusually high
(B) there is insufficient technological innovation
(C) the level of structural unemployment is exceptionally low
(D) the jobs available in certain places require skills that the labor force in those areas lacks
(E) the workers in some industries are dissatisfied with the pay offered in those industries

RC00144-06

8. The passage suggests that the phenomenon of combined unemployment and inflation is

(A) a socioeconomic problem that can only be addressed by government intervention
(B) a socioeconomic problem that can be characteristic of periods of structural unemployment
(C) an economic problem that results from government intervention in management-labor relations
(D) an economic problem that results from imperfect applications of technology
(E) an economic problem that can be eliminated by relatively small changes in the labor force

RC00144-07

9. The passage is primarily concerned with

(A) clarifying the definition of a concept
(B) proposing a way to eliminate an undesirable condition
(C) discussing the sources and consequences of a problem
(D) suggesting ways to alleviate the effects of a particular social policy
(E) evaluating the steps that have been taken to correct an imbalance

RC00144-08

10. According to the passage, small downward shifts in the demand for labor will not usually cause unemployment because

(A) such shifts are frequently accompanied by upswings in the economy
(B) such shifts usually occur slowly
(C) workers can be encouraged to move to where there are jobs
(D) normal attrition is often sufficient to reduce the size of the work force
(E) workers are usually flexible enough to learn new skills and switch to new jobs

Line In 1971 researchers hoping to predict earthquakes in the short term by identifying precursory phenomena (those that occur a few days before large quakes but not otherwise) turned their attention to changes in seismic waves that had been detected prior to earthquakes. An explanation for such changes was offered by "dilatancy theory," based on a well-known phenomenon observed in rocks in the laboratory: as stress builds, microfractures in rock close, decreasing the rock's volume. But as stress continues to increase, the rock begins to crack and expand in volume, allowing groundwater to seep in, weakening the rock. According to this theory, such effects could lead to several precursory phenomena in the field, including a change in the velocity of seismic waves, and an increase in small, nearby tremors.

Researchers initially reported success in identifying these possible precursors, but subsequent analyses of their data proved disheartening. Seismic waves with unusual velocities were recorded before some earthquakes, but while the historical record confirms that most large earthquakes are preceded by minor tremors, these foreshocks indicate nothing about the magnitude of an impending quake and are indistinguishable from other minor tremors that occur without large earthquakes.

In the 1980s, some researchers turned their efforts from short-term to long-term prediction. Noting that earthquakes tend to occur repeatedly in certain regions, Lindh and Baker attempted to identify patterns of recurrence, or earthquake cycles, on which to base predictions. In a study of earthquake-prone sites along the San Andreas Fault, they determined that quakes occurred at intervals of approximately 22 years near one site and concluded that there was a 95 percent probability of an earthquake in that area by 1992. The earthquake did not occur within the time frame predicted, however.

Line Evidence against the kind of regular earthquake cycles that Lindh and Baker tried to establish has come from a relatively new field, paleoseismology. Paleoseismologists have unearthed and dated geological features such as fault scarps that were caused by earthquakes thousands of years ago. They have determined that the average interval between ten earthquakes that took place at one site along the San Andreas Fault in the past two millennia was 132 years, but individual intervals ranged greatly, from 44 to 332 years.

Questions 11–16 refer to the passage.

RC00113-01

11. The passage is primarily concerned with

(A) explaining why one method of earthquake prediction has proven more practicable than an alternative method

(B) suggesting that accurate earthquake forecasting must combine elements of long-term and short-term prediction

(C) challenging the usefulness of dilatancy theory for explaining the occurrence of precursory phenomena

(D) discussing the deficiency of two methods by which researchers have attempted to predict the occurrence of earthquakes

(E) describing the development of methods for establishing patterns in the occurrence of past earthquakes

RC00113-02

12. According to the passage, laboratory evidence concerning the effects of stress on rocks might help account for

(A) differences in magnitude among earthquakes

(B) certain phenomena that occur prior to earthquakes

(C) variations in the intervals between earthquakes in a particular area

(D) differences in the frequency with which earthquakes occur in various areas

(E) the unreliability of short-term earthquake predictions

RC00113-03

13. It can be inferred from the passage that one problem with using precursory phenomena to predict earthquakes is that minor tremors

(A) typically occur some distance from the sites of the large earthquakes that follow them

(B) are directly linked to the mechanisms that cause earthquakes

(C) are difficult to distinguish from major tremors

(D) have proven difficult to measure accurately

(E) are not always followed by large earthquakes

RC00113-04

14. According to the passage, some researchers based their research about long-term earthquake prediction on which of the following facts?

(A) The historical record confirms that most earthquakes have been preceded by minor tremors.

(B) The average interval between earthquakes in one region of the San Andreas Fault is 132 years.

(C) Some regions tend to be the site of numerous earthquakes over the course of many years.

(D) Changes in the volume of rock can occur as a result of building stress and can lead to the weakening of rock.

(E) Paleoseismologists have been able to unearth and date geological features caused by past earthquakes.

RC00113-05

15. The passage suggests which of the following about the paleoseismologists' findings described in lines 42–50?

(A) They suggest that the frequency with which earthquakes occurred at a particular site decreased significantly over the past two millennia.

(B) They suggest that paleoseismologists may someday be able to make reasonably accurate long-term earthquake predictions.

(C) They suggest that researchers may someday be able to determine which past occurrences of minor tremors were actually followed by large earthquakes.

(D) They suggest that the recurrence of earthquakes in earthquake-prone sites is too irregular to serve as a basis for earthquake prediction.

(E) They indicate that researchers attempting to develop long-term methods of earthquake prediction have overlooked important evidence concerning the causes of earthquakes.

RC00113-07

16. The author implies which of the following about the ability of the researchers mentioned in line 18 to predict earthquakes?

(A) They can identify when an earthquake is likely to occur but not how large it will be.

(B) They can identify the regions where earthquakes are likely to occur but not when they will occur.

(C) They are unable to determine either the time or the place that earthquakes are likely to occur.

(D) They are likely to be more accurate at short-term earthquake prediction than at long-term earthquake prediction.

(E) They can determine the regions where earthquakes have occurred in the past but not the regions where they are likely to occur in the future.

Line A key decision required of advertising managers is whether a "hard-sell" or "soft-sell" strategy is appropriate for a specific target market. The hard-sell approach involves the use of direct, forceful claims regarding the benefits of the advertised brand over competitors' offerings. In contrast, the soft-sell approach involves the use of advertising claims that imply superiority more subtly.

One positive aspect of the hard-sell approach is its use of very simple and straightforward product claims presented as explicit conclusions, with little room for confusion regarding the advertiser's message. However, some consumers may resent being told what to believe and some may distrust the message. Resentment and distrust often lead to counterargumentation and to boomerang effects where consumers come to believe conclusions diametrically opposed to conclusions endorsed in advertising claims. By contrast, the risk of boomerang effects is greatly reduced with soft-sell approaches. One way to implement the soft-sell approach is to provide information that implies the main conclusions the advertiser wants the consumer to draw, but leave the conclusions themselves unstated. Because consumers are invited to make up their own minds, implicit conclusions reduce the risk of resentment, distrust, and counterargumentation.

Recent research on consumer memory and judgment suggests another advantage of implicit conclusions. Beliefs or conclusions that are self-generated are more accessible from memory than beliefs from conclusions provided explicitly by other individuals, and thus have a greater impact on judgment and decision making. Moreover, self-generated beliefs are often perceived as more accurate and valid than the beliefs of others, because other individuals may be perceived as less knowledgeable, or may be perceived as manipulative or deliberately misleading.

Line Despite these advantages, implicit conclusions may not always be more effective than explicit conclusions. One risk is that some consumers may fail to draw their own conclusions and thus miss the point of the message. Inferential activity is likely only when consumers are motivated and able to engage in effortful cognitive processes. Another risk is that some consumers may draw conclusions other than the one intended. Even if inferential activity is likely there is no guarantee that consumers will follow the path provided by the advertiser. Finally, a third risk is that consumers may infer the intended conclusion but question the validity of their inference.

Questions 17–23 refer to the passage.

RC00492-01

17. It can be inferred from the passage that one reason an advertiser might prefer a hard-sell approach to a soft-sell approach is that

(A) the risks of boomerang effects are minimized when the conclusions an advertiser wants the consumer to draw are themselves left unstated

(B) counterargumentation is likely from consumers who fail to draw their own conclusions regarding an advertising claim

(C) inferential activity is likely to occur even if consumers perceive themselves to be more knowledgeable than the individuals presenting product claims

(D) research on consumer memory suggests that the explicit conclusions provided by an advertiser using the hard-sell approach have a significant impact on decision making

(E) the information presented by an advertiser using the soft-sell approach may imply different conclusions to different consumers

RC00492-02

18. Each of the following is mentioned in the passage as a characteristic of the hard-sell approach EXCEPT:

(A) Its overall message is readily grasped.

(B) It appeals to consumers' knowledge about the product.

(C) It makes explicit claims that the advertised brand is superior to other brands.

(D) It uses statements that are expressed very clearly.

(E) It makes claims in the form of direct conclusions.

RC00492-03

19. It can be inferred from the passage that advertisers could reduce one of the risks discussed in the last paragraph if they were able to provide

(A) motivation for consumers to think about the advertisement's message

(B) information that implies the advertiser's intended conclusion but leaves that conclusion unstated

(C) subtle evidence that the advertised product is superior to that of competitors

(D) information comparing the advertised product with its competitors

(E) opportunity for consumers to generate their own beliefs or conclusions

RC00492-04

20. The primary purpose of the passage is to

(A) point out the risks involved in the use of a particular advertising strategy

(B) make a case for the superiority of one advertising strategy over another

(C) illustrate the ways in which two advertising strategies may be implemented

(D) present the advantages and disadvantages of two advertising strategies

(E) contrast the types of target markets for which two advertising strategies are appropriate

RC00492-05

21. Which of the following best describes the function of the sentence in lines 25–28 in the context of the passage as a whole?

(A) It reiterates a distinction between two advertising strategies that is made in the first paragraph.

(B) It explains how a particular strategy avoids a drawback described earlier in the paragraph.

(C) It suggests that a risk described earlier in the paragraph is less serious than some researchers believe it to be.

(D) It outlines why the strategy described in the previous sentence involves certain risks for an advertiser.

(E) It introduces an argument that will be refuted in the following paragraph.

RC00492-06

22. It can be inferred from the passage that one situation in which the boomerang effect often occurs is when consumers

(A) have been exposed to forceful claims that are diametrically opposed to those in an advertiser's message

(B) have previous self-generated beliefs or conclusions that are readily accessible from memory

(C) are subjected to advertising messages that are targeted at specific markets to which those consumers do not belong

(D) are confused regarding the point of the advertiser's message

(E) come to view the advertiser's message with suspicion

RC00492-07

23. It can be inferred from the passage that the research mentioned in line 29 supports which of the following statements?

(A) Implicit conclusions are more likely to capture accurately the point of the advertiser's message than are explicit conclusions.

(B) Counterargumentation is less likely to occur if an individual's beliefs or conclusions are readily accessible from memory.

(C) The hard-sell approach results in conclusions that are more difficult for the consumer to recall than are conclusions resulting from the soft-sell approach.

(D) When the beliefs of others are presented as definite and forceful claims, they are perceived to be as accurate as self-generated beliefs.

(E) Despite the advantages of implicit conclusions, the hard-sell approach involves fewer risks for the advertiser than does the soft-sell approach.

Line Suppose we were in a spaceship in free fall, where objects are weightless, and wanted to know a small solid object's mass. We could not simply balance that object against another of known weight, as we would on Earth. The unknown mass could be determined, however, by placing the object on a spring scale and swinging the scale in a circle at the end of a string. The scale would measure the tension in the string, which would depend on both the speed of revolution and the mass of the object. The tension would be greater, the greater the mass or the greater the speed of revolution. From the measured tension and speed of whirling, we could determine the object's mass.

Astronomers use an analogous procedure to "weigh" double-star systems. The speed with which the two stars in a double-star system circle one another depends on the gravitational force between them, which holds the system together. This attractive force, analogous to the tension in the string, is proportional to the stars' combined mass, according to Newton's law of gravitation. By observing the time required for the stars to circle each other (the period) and measuring the distance between them, we can deduce the restraining force, and hence the masses.

Questions 24–27 refer to the passage.

RC00222-01

24. It can be inferred from the passage that the two procedures described in the passage have which of the following in common?

(A) They have been applied in practice.
(B) They rely on the use of a device that measures tension.
(C) Their purpose is to determine an unknown mass.
(D) They can only be applied to small solid objects.
(E) They involve attraction between objects of similar mass.

RC00222-02

25. According to the passage, the tension in the string mentioned in lines 8–9 is analogous to which of the following aspects of a double-star system?

(A) The speed with which one star orbits the other
(B) The gravitational attraction between the stars
(C) The amount of time it takes for the stars to circle one another
(D) The distance between the two stars
(E) The combined mass of the two stars

RC00222-03

26. Which of the following best describes the relationship between the first and the second paragraph of the passage?

(A) The first paragraph provides an illustration useful for understanding a procedure described in the second paragraph.
(B) The first paragraph describes a hypothetical situation whose plausibility is tested in the second paragraph.
(C) The first paragraph evaluates the usefulness of a procedure whose application is described further in the second paragraph.
(D) The second paragraph provides evidence to support a claim made in the first paragraph.
(E) The second paragraph analyzes the practical implications of a methodology proposed in the first paragraph.

RC00222-04

27. The author of the passage mentions observations regarding the period of a double-star system as being useful for determining

(A) the distance between the two stars in the system

(B) the time it takes for each star to rotate on its axis

(C) the size of the orbit the system's two stars occupy

(D) the degree of gravitational attraction between the system's stars

(E) the speed at which the star system moves through space

Line The dry mountain ranges of the western United States contain rocks dating back 440 to 510 million years, to the Ordovician period, and teeming with evidence of tropical marine life. This rock record (5) provides clues about one of the most significant radiations (periods when existing life-forms gave rise to variations that would eventually evolve into entirely new species) in the history of marine invertebrates. During this radiation the number of marine biological (10) families increased greatly, and these families included species that would dominate the marine ecosystems of the area for the next 215 million years. Although the radiation spanned tens of millions of years, major changes in many species occurred during a (15) geologically short time span within the radiation and, furthermore, appear to have occurred worldwide, suggesting that external events were major factors in the radiation. In fact, there is evidence of major ecological and geological changes during this period: (20) the sea level dropped drastically and mountain ranges were formed. In this instance, rather than leading to large-scale extinctions, these kinds of environmental changes may have resulted in an enriched pattern of habitats and nutrients, which in turn gave rise to the (25) Ordovician radiation. However, the actual relationship between these environmental factors and the diversification of life-forms is not yet fully understood.

Questions 28–30 refer to the passage.

RC00267-01

28. The passage is primarily concerned with

(A) evaluating the evidence of a major geologic period and determining its duration

(B) describing an evolutionary phenomenon and speculating about its cause

(C) explaining the mechanisms through which marine life-forms evolved during a particular period

(D) analyzing the impact on later life-forms of an important evolutionary development

(E) contrasting a period of evolutionary change with other such periods

RC00267-02

29. Which of the following can be inferred from the passage regarding the geologic changes that occurred during the Ordovician period?

(A) They were more drastic than those associated with other radiations.

(B) They may have created conditions favorable to the evolution of many new life-forms.

(C) They may have caused the extinction of many of the marine species living in shallow waters.

(D) They may have been a factor in the development of new species adapted to living both on land and in water.

(E) They hastened the formation of the extensive dry regions found in the western United States.

RC00267-03

30. Which of the following best describes the function of the last sentence of the passage?

(A) It points out that the events described in the passage may be atypical.

(B) It alludes to the fact that there is disagreement in the scientific community over the importance of the Ordovician radiation.

(C) It concludes that the evidence presented in the passage is insufficient to support the proposed hypothesis because it comes from a limited geographic area.

(D) It warns the reader against seeing a connection between the biological and geologic changes described in the passage.

(E) It alerts the reader that current knowledge cannot completely explain the relationship suggested by the evidence presented in the passage.

Line Seventeenth-century philosopher John Locke stated that as much as 99 percent of the value of any useful product can be attributed to "the effects of labor." For Locke's intellectual heirs it was only a short step (5) to the "labor theory of value," whose formulators held that 100 percent of the value of any product is generated by labor (the human work needed to produce goods) and that therefore the employer who appropriates any part of the product's value as profit (10) is practicing theft.

Although human effort is required to produce goods for the consumer market, effort is also invested in making capital goods (tools, machines, etc.), which are used to facilitate the production of consumer (15) goods. In modern economies about one-third of the total output of consumer goods is attributable to the use of capital goods. Approximately two-thirds of the income derived from this total output is paid out to workers as wages and salaries, the remaining (20) third serving as compensation to the owners of the capital goods. Moreover, part of this remaining third is received by workers who are shareholders, pension beneficiaries, and the like. The labor theory of value systematically disregards the productive contribution (25) of capital goods—a failing for which Locke must bear part of the blame.

Questions 31–36 refer to the passage.

RC00141-01

31. The author of the passage is primarily concerned with

(A) criticizing Locke's economic theories

(B) discounting the contribution of labor in a modern economy

(C) questioning the validity of the labor theory of value

(D) arguing for a more equitable distribution of business profits

(E) contending that employers are overcompensated for capital goods

RC00141-02

32. According to the author of the passage, which of the following is true of the distribution of the income derived from the total output of consumer goods in a modern economy?

(A) Workers receive a share of this income that is significantly smaller than the value of their labor as a contribution to total output.

(B) Owners of capital goods receive a share of this income that is significantly greater than the contribution to total output attributable to the use of capital goods.

(C) Owners of capital goods receive a share of this income that is no greater than the proportion of total output attributable to the use of capital goods.

(D) Owners of capital goods are not fully compensated for their investment because they pay out most of their share of this income to workers as wages and benefits.

(E) Workers receive a share of this income that is greater than the value of their labor because the labor theory of value overestimates their contribution to total output.

RC00141-04

33. Which of the following statements, if true, would most effectively counter the author's criticism of Locke at the end of the passage?

(A) Locke was unfamiliar with the labor theory of value as it was formulated by his intellectual heirs.

(B) In Locke's day, there was no possibility of ordinary workers becoming shareholders or pension beneficiaries.

(C) During Locke's lifetime, capital goods did not make a significant productive contribution to the economy.

(D) The precise statistical calculation of the productive contributions of labor and capital goods is not possible without computers.

(E) The terms "capital goods" and "consumer goods" were coined by modern economists and do not appear in Locke's writings.

RC00141-05

34. Which of the following best describes the organization of the passage?

(A) The author explores the origins of a theory and explains why the theory never gained widespread acceptance.

(B) The author introduces the premise of a theory, evaluates the premise by relating it to objective reality, then proposes a modification of the theory.

(C) After quoting a well-known authority, the author describes the evolution of a theory, then traces its modern form back to the original quotation.

(D) After citing a precursor of a theory, the author outlines and refutes the theory, then links its flaw to the precursor.

(E) After tracing the roots of a theory, the author attempts to undermine the theory by discrediting its originator.

RC00141-06

35. Which of the following arguments would a proponent of the labor theory of value, as it is presented in the first paragraph, be most likely to use in response to lines 23–25?

(A) The productive contributions of workers and capital goods cannot be compared because the productive life span of capital goods is longer than that of workers.

(B) The author's analysis of the distribution of income is misleading because only a small percentage of workers are also shareholders.

(C) Capital goods are valuable only insofar as they contribute directly to the production of consumer goods.

(D) The productive contribution of capital goods must be discounted because capital goods require maintenance.

(E) The productive contribution of capital goods must be attributed to labor because capital goods are themselves products of labor.

RC00141-07

36. The author of the passage implies which of the following regarding the formulators of the labor theory of value?

(A) They came from a working-class background.

(B) Their views were too radical to have popular appeal.

(C) At least one of them was a close contemporary of Locke.

(D) They were familiar with Locke's views on the relationship between labor and the value of products.

(E) They underestimated the importance of consumer goods in a modern economy.

Line Exactly when in the early modern era Native Americans began exchanging animal furs with Europeans for European-made goods is uncertain. What is fairly certain, even though they left (5) no written evidence of having done so, is that the first Europeans to conduct such trade during the modern period were fishing crews working the waters around Newfoundland. Archaeologists had noticed that sixteenth-century Native American (10) sites were strewn with iron bolts and metal pins. Only later, upon reading Nicolas Denys's 1672 account of seventeenth-century European settlements in North America, did archaeologists realize that sixteenth-century European fishing (15) crews had dismantled and exchanged parts of their ships for furs.

By the time Europeans sailing the Atlantic coast of North America first documented the fur trade, it was apparently well underway. The first to record (20) such trade—the captain of a Portuguese vessel sailing from Newfoundland in 1501—observed that a Native American aboard the ship wore Venetian silver earrings. Another early chronicler noted in 1524 that Native Americans living along the coast of what is now (25) New England had become selective about European trade goods: they accepted only knives, fishhooks, and sharp metal. By the time Cartier sailed the Saint Lawrence River ten years later, Native Americans had traded with Europeans for more than thirty years, (30) perhaps half a century.

Questions 37–45 refer to the passage.

RC00204-01

37. The author of the passage draws conclusions about the fur trade in North America from all of the following sources EXCEPT

(A) Cartier's accounts of trading with Native Americans

(B) a seventeenth-century account of European settlements

(C) a sixteenth-century account written by a sailing vessel captain

(D) archaeological observations of sixteenth-century Native American sites

(E) a sixteenth-century account of Native Americans in what is now New England

RC00204-02

38. The passage suggests that which of the following is partially responsible for the difficulty in establishing the precise date when the fur trade in North America began?

(A) A lack of written accounts before that of Nicolas Denys in 1672

(B) A lack of written documentation before 1501

(C) Ambiguities in the evidence from Native American sources

(D) Uncertainty about Native American trade networks

(E) Uncertainty about the origin of artifacts supposedly traded by European fishing crews for furs

RC00204-03

39. Which of the following, if true, most strengthens the author's assertion in the first sentence of the second paragraph?

(A) When Europeans retraced Cartier's voyage in the first years of the seventeenth century, they frequently traded with Native Americans.

(B) Furs from beavers, which were plentiful in North America but nearly extinct in Europe, became extremely fashionable in Europe in the final decades of the sixteenth century.

(C) Firing arms were rarely found on sixteenth-century Native American sites or on European lists of trading goods since such arms required frequent maintenance and repair.

(D) Europeans and Native Americans had established trade protocols, such as body language assuring one another of their peaceful intentions, that antedate the earliest records of trade.

(E) During the first quarter of the sixteenth century, an Italian explorer recorded seeing many Native Americans with what appeared to be copper beads, though they may have been made of indigenous copper.

RC00204-04

40. Which of the following best describes the primary function of lines 11–16?

(A) It offers a reconsideration of a claim made in the preceding sentence.

(B) It reveals how archaeologists arrived at an interpretation of the evidence mentioned in the preceding sentence.

(C) It shows how scholars misinterpreted the significance of certain evidence mentioned in the preceding sentence.

(D) It identifies one of the first significant accounts of seventeenth-century European settlements in North America.

(E) It explains why Denys's account of seventeenth-century European settlements is thought to be significant.

RC00204-05

41. It can be inferred from the passage that the author would agree with which of the following statements about the fur trade between Native Americans and Europeans in the early modern era?

(A) This trade may have begun as early as the 1480s.

(B) This trade probably did not continue much beyond the 1530s.

(C) This trade was most likely at its peak in the mid-1520s.

(D) This trade probably did not begin prior to 1500.

(E) There is no written evidence of this trade prior to the seventeenth century.

RC00204-06

42. Which of the following can be inferred from the passage about the Native Americans mentioned in line 24?

(A) They had little use for decorative objects such as earrings.

(B) They became increasingly dependent on fishing between 1501 and 1524.

(C) By 1524, only certain groups of Europeans were willing to trade with them.

(D) The selectivity of their trading choices made it difficult for them to engage in widespread trade with Europeans.

(E) The selectivity of their trading choices indicates that they had been trading with Europeans for a significant period of time prior to 1524.

RC00204-07

43. The passage supports which of the following statements about sixteenth-century European fishing crews working the waters off Newfoundland?

(A) They wrote no accounts of their fishing voyages.

(B) They primarily sailed under the flag of Portugal.

(C) They exchanged ship parts with Native Americans for furs.

(D) They commonly traded jewelry with Native Americans for furs.

(E) They carried surplus metal implements to trade with Native Americans for furs.

RC00204-08

44. Which of the following can be inferred from the passage about evidence pertaining to the fur trade between Native Americans and Europeans in the early modern era?

(A) A lack of written evidence has made it difficult to establish which Europeans first participated in this trade.

(B) In general, the physical evidence pertaining to this trade has been more useful than the written evidence has been.

(C) There is more written evidence pertaining to this trade from the early part of the sixteenth century than from later in that century.

(D) The earliest written evidence pertaining to this trade dates from a time when the trade was already well established.

(E) Some important pieces of evidence pertaining to this trade, such as Denys's 1672 account, were long overlooked by archaeologists.

RC00204-09

45. The passage suggests which of the following about the sixteenth-century Native Americans who traded with Europeans on the coast of what is now called New England?

(A) By 1524 they had become accustomed to exchanging goods with Europeans.

(B) They were unfamiliar with metals before encountering Europeans.

(C) They had no practical uses for European goods other than metals and metal implements.

(D) By 1524 they had become disdainful of European traders because such traders had treated them unfairly in the past.

(E) By 1524 they demanded only the most prized European goods because they had come to realize how valuable furs were on European markets.

Line Determining whether a given population of animals constitutes a distinct species can be difficult because no single accepted definition of the term exists. One approach, called the biological species concept, bases the definition on reproductive compatibility. According to this view, a species is a group of animals that can mate with one another to produce fertile offspring but cannot mate successfully with members of a different group. Yet this idea can be too restrictive. First, mating between groups labeled as different species (hybridization), as often occurs in the canine family, is quite common in nature. Second, sometimes the differences between two populations might not prevent them from interbreeding, even though they are dissimilar in traits unrelated to reproduction; some biologists question whether such disparate groups should be considered a single species. A third problem with the biological species concept is that investigators cannot always determine whether two groups that live in different places are capable of interbreeding.

When the biological species concept is difficult to apply, some investigators use phenotype, an organism's observable characteristics, instead. Two groups that have evolved separately are likely to display measurable differences in many of their traits, such as skull size or width of teeth. If the distribution of measurements from one group does not overlap with those of another, the two groups might reasonably be considered distinct species.

Questions 46–49 refer to the passage.

RC00201-01

46. The passage is primarily concerned with

(A) describing the development of the biological species concept

(B) responding to a critique of reproductive compatibility as a criterion for defining a species

(C) considering two different approaches to identifying biological species

(D) pointing out the advantage of one method of distinguishing related species

(E) identifying an obstacle to the classification of biological species

RC00201-03

47. The author of the passage mentions "groups that live in different places" (line 21) most probably in order to

(A) point out a theoretical inconsistency in the biological species concept

(B) offer evidence in support of the biological species concept

(C) identify an obstacle to the application of the biological species concept

(D) note an instance in which phenotype classification is customarily used

(E) describe an alternative to the biological species concept

RC00201-04

48. With which of the following statements regarding the classification of individual species would the author most likely agree?

(A) Phenotype comparison may help to classify species when application of the biological species concept proves inconclusive.

(B) Because no standard definition exists for what constitutes a species, the classification of animal populations is inevitably an arbitrary process.

(C) The criteria used by biologists to classify species have not been based on adequate research.

(D) The existence of hybrids in wild animal species is the chief factor casting doubt on the usefulness of research into reproductive compatibility as a way of classifying species.

(E) Phenotype overlap should be used as the basic criterion for standardizing species classification.

RC00201-05

49. Which of the following best describes the function of lines 10–13?

(A) It elaborates the definition of the biological species concept given in a previous sentence.

(B) It develops a point about the biological species concept made in the previous sentence.

(C) It states the author's central point about the biological species concept.

(D) It identifies a central assumption underlying the biological species concept.

(E) It demonstrates why the biological species concept is invalid.

Line Researchers studying how genes control animal behavior have had to deal with many uncertainties. In the first place, most behaviors are governed by more than one gene, and until recently geneticists (5) had no method for identifying the multiple genes involved. In addition, even when a single gene is found to control a behavior, researchers in different fields do not necessarily agree that it is a "behavioral gene." Neuroscientists, whose interest (10) in genetic research is to understand the nervous system (which generates behavior), define the term broadly. But ethologists—specialists in animal behavior—are interested in evolution, so they define the term narrowly. They insist that mutations (15) in a behavioral gene must alter a specific normal behavior and not merely make the organism ill, so that the genetically induced behavioral change will provide variation that natural selection can act upon, possibly leading to the evolution of a new species. (20) For example, in the fruit fly, researchers have identified the gene Shaker, mutations in which cause flies to shake violently under anesthesia. Since shaking is not healthy, ethologists do not consider Shaker a behavioral gene. In contrast, ethologists (25) do consider the gene period (per), which controls the fruit fly's circadian (24-hour) rhythm, a behavioral gene because flies with mutated per genes are healthy; they simply have different rhythms.

Questions 50–52 refer to the passage.

RC00322-01

50. The primary purpose of the passage is to

(A) summarize findings in an area of research
(B) discuss different perspectives on a scientific question
(C) outline the major questions in a scientific discipline
(D) illustrate the usefulness of investigating a research topic
(E) reconcile differences between two definitions of a term

RC00322-02

51. The passage suggests that neuroscientists would most likely consider Shaker to be which of the following?

(A) An example of a behavioral gene
(B) One of multiple genes that control a single behavior
(C) A gene that, when mutated, causes an alteration in a specific normal behavior without making the organism ill
(D) A gene of interest to ethologists but of no interest to neuroscientists
(E) A poor source of information about the nervous system

RC00322-05

52. It can be inferred from the passage that which of the following, if true, would be most likely to influence ethologists' opinions about whether a particular gene in a species is a behavioral gene?

(A) The gene is found only in that species.
(B) The gene is extremely difficult to identify.
(C) The only effect of mutations in the gene is to make the organism ill.
(D) Neuroscientists consider the gene to be a behavioral gene.
(E) Geneticists consider the gene to be a behavioral gene.

Line For most species of animals, the number of individuals in the species is inversely proportional to the average body size for members of the species: the smaller the body size, the larger the number of individual animals. The tamarin, a small South American monkey, breaks this rule. Of the ten primate species studied in Peru's Manu National Park, for example, the two species of tamarins, saddle-backed and emperor, are the eighth and ninth least abundant, respectively. Only the pygmy marmoset, which is even smaller, is less abundant. The tamarin's scarcity is not easily explained; it cannot be dismissed as a consequence of diet, because tamarins feed on the same mixture of fruit, nectar, and small prey as do several of their more numerous larger counterparts, including the two capuchins known as the squirrel monkey and the night monkey. Although the relative proportions of fruits consumed varies somewhat among species, it is hard to imagine that such subtle differences are crucial to understanding the relative rarity of tamarins.

To emphasize just how anomalously rare tamarins are, we can compare them to the other omnivorous primates in the community. In terms of numbers of individuals per square kilometer, they rank well below the two capuchins, the squirrel monkey and the night monkey. And in terms of biomass, or the total weight of the individuals that occupy a unit area of habitat, each tamarin species is present at only one-twentieth the mass of brown capuchins or one-tenth that of squirrel monkeys. To gain another perspective, consider the spatial requirements of tamarins. Tamarins are rigidly territorial, vigorously expelling any intruders that may stray within the sharply defined boundaries of their domains. Groups invest an appreciable part of their time and energy in patrolling their territorial boundaries, announcing their presence to their neighbors with shrill, sweeping cries. Such concerted territoriality is rather exceptional among primates, though the gibbons and siamangs of Asia show it, as do a few other New World species such as the titi and night monkeys. What is most surprising about tamarin territories is their size.

Line Titi monkeys routinely live within territories of 6 to 8 hectares, and night monkeys seldom defend more than 10 hectares, but tamarin groups routinely occupy areas of 30 to 120 hectares. Contrast this with the 1 to 2 hectares needed by the common North American gray squirrel, a nonterritorial mammal of about the same size. A group of tamarins uses about as much space as a troop of brown capuchins, though the latter weighs 15 times as much. Thus, in addition to being rare, tamarins require an amount of space that seems completely out of proportion to their size.

Questions 53–59 refer to the passage.

RC22661-01.01

53. The author indicates that tamarin territories are

(A) surprisingly large
(B) poorly situated
(C) unusually abundant in food resources
(D) incapable of supporting large troops of tamarins
(E) larger in Peru than in other parts of South America

RC22661-02.01

54. The author mentions the spatial requirements of the gray squirrel in order to

(A) explain why they are so common
(B) demonstrate the consequences of their nonterritoriality
(C) emphasize the unusual territorial requirements of the tamarin
(D) provide an example of a major difference between squirrels and monkeys
(E) provide an example of an animal with requirements similar to those of the tamarin

RC22661-03.01

55. The author regards the differences between the diets of the tamarins and several larger species as

(A) generally explicable in terms of territory size
(B) apparently too small to explain the rarity of tamarins
(C) wholly predictable on the basis of differences in body size
(D) a result of the rigid territoriality of tamarins
(E) a significant factor in determining behavioral differences

RC22661-04.01

56. Which of the following would most probably be regarded by the author as anomalous?

(A) A large primate species that eats mostly plants
(B) A species of small mammals that is fiercely territorial
(C) Two species of small primates that share the same territories
(D) A species of small birds that is more abundant than many species of larger birds
(E) A species of small rodents that requires more living space per individual than most species of larger rodents

RC22661-05.01

57. The author most probably regards the tamarins studied in Manu National Park as

(A) an endangered species
(B) typical tamarins
(C) unusually docile
(D) the most unusual primates anywhere
(E) too small a sample to be significant

RC22661-06.01

58. Which of the following is NOT mentioned in the passage as a species whose groups display territoriality?

(A) Gibbons
(B) Siamangs
(C) Titi monkeys
(D) Squirrel monkeys
(E) Night monkeys

RC22661-07.01

59. The primary concern of the passage is to

(A) recommend a policy
(B) evaluate a theory
(C) describe an unusual condition
(D) explain the development of a hypothesis
(E) support one of several competing hypotheses

Line According to many analysts, labor-management relations in the United States are undergoing a fundamental change: traditional adversarialism is giving way to a new cooperative relationship between the (5) two sides and even to concessions from labor. These analysts say the twin shocks of nonunion competition in this country and low-cost, high-quality imports from abroad are forcing unions to look more favorably at a variety of management demands: the need for (10) wage restraint and reduced benefits as well as the abolition of "rigid" work rules, seniority rights, and job classifications.

Sophisticated proponents of these new developments cast their observations in a prolabor (15) light. In return for their concessions, they point out, some unions have bargained for profit sharing, retraining rights, and job-security guarantees. Unions can also trade concessions for more say on the shop floor, where techniques such as quality circles and (20) quality-of-work-life programs promise workers greater control over their own jobs. Unions may even win a voice in investment and pricing strategy, plant location, and other major corporate policy decisions previously reserved to management.

(25) Opponents of these concessions from labor argue that such concessions do not save jobs, but either prolong the agony of dying plants or finance the plant relocations that employers had intended anyway. Companies make investment decisions to fit their (30) strategic plans and their profit objectives, opponents point out, and labor costs are usually just a small factor in the equation. Moreover, unrestrained by either loyalty to their work force or political or legislative constraints on their mobility, the companies eventually (35) cut and run, concessions or no concessions.

Wage-related concessions have come under particular attack, since opponents believe that high union wages underlay much of the success of United States industry in this century. They point out that a (40) long-standing principle, shared by both management and labor, has been that workers should earn wages that give them the income they need to buy what they make. Moreover, high wages have given workers the buying power to propel the economy forward.

(45) If proposals for pay cuts, two-tier wage systems, and subminimum wages for young workers continue to gain credence, opponents believe the U.S. social structure will move toward that of a less-developed nation: a small group of wealthy investors, a sizable (50) but still minority bloc of elite professionals and highly skilled employees, and a huge mass of marginal workers and unskilled laborers. Further, they argue that if unions willingly engage in concession bargaining on the false grounds that labor costs are the source (55) of a company's problems, unions will find themselves competing with Third World pay levels—a competition they cannot win.

Questions 60–66 refer to the passage.

RC32661-01.01

60. It can be inferred from the passage that opponents of labor concessions would most likely describe many plant-relocation decisions made by United States companies as

(A) capricious
(B) self-serving
(C) naive
(D) impulsive
(E) illogical

RC32661-02.01

61. It can be inferred from the passage that, until recently, which of the following has been true of United States industry in the twentieth century?

(A) Unions have consistently participated in major corporate policy decisions.
(B) Maintaining adequate quality control in manufacturing processes has been a principal problem.
(C) Union workers have been paid relatively high wages.
(D) Two-tier wage systems have been the norm.
(E) Goods produced have been priced beyond the means of most workers.

RC32661-03.01

62. The passage provides information to answer which of the following questions?

(A) What has caused unions to consider wage restraints and reduced benefits?

(B) Why do analysts study United States labor-management relations?

(C) How do job-security guarantees operate?

(D) Are investment and pricing strategies effective in combating imports?

(E) Do quality circles improve product performance and value?

RC32661-04.01

63. The passage is primarily concerned with the

(A) reasons for adversarialism between labor and management

(B) importance of cooperative labor-management relations

(C) consequences of labor concessions to management

(D) effects of foreign competition on the United States economy

(E) effects of nonunion competition on union bargaining strategies

RC32661-05.01

64. The sentence "If proposals for pay cuts . . . unskilled laborers" serves primarily to

(A) disprove a theory

(B) clarify an ambiguity

(C) reconcile opposing views

(D) present a hypothesis

(E) contradict accepted data

RC32661-06.01

65. It can be inferred from the passage that opponents of labor concessions believe that if concession bargaining continues, then

(A) plants will close instead of relocating

(B) young workers will need continued job retraining

(C) professional workers will outnumber marginal workers

(D) wealthy investors will invest in Third World countries instead of the United States

(E) the social structure of the United States will be negatively affected

RC32661-07.01

66. According to the author, "Sophisticated proponents" of concessions do which of the following?

(A) Support the traditional adversarialism characteristic of labor-management relations.

(B) Emphasize the benefits unions can gain by granting concessions.

(C) Focus on thorough analyses of current economic conditions.

(D) Present management's reasons for demanding concessions.

(E) Explain domestic economic developments in terms of worldwide trends.

Line Historians who study European women of the Renaissance try to measure "independence," "options," and other indicators of the degree to which the expression of women's individuality was either
(5) permitted or suppressed. Influenced by Western individualism, these historians define a peculiar form of personhood: an innately bounded unit, autonomous and standing apart from both nature and society. An anthropologist, however, would contend that a person
(10) can be conceived in ways other than as an "individual." In many societies a person's identity is not intrinsically unique and self-contained but instead is defined within a complex web of social relationships.

In her study of the fifteenth-century Florentine
(15) widow Alessandra Strozzi, a historian who specializes in European women of the Renaissance attributes individual intention and authorship of actions to her subject. This historian assumes that Alessandra had goals and interests different from those of her sons,
(20) yet much of the historian's own research reveals that Alessandra acted primarily as a champion of her sons' interests, taking their goals as her own. Thus Alessandra conforms more closely to the anthropologist's notion that personal motivation is
(25) embedded in a social context. Indeed, one could argue that Alessandra did not distinguish her personhood from that of her sons. In Renaissance Europe the boundaries of the conceptual self were not always firm and closed and did not necessarily coincide with the
(30) boundaries of the bodily self.

Questions 67–71 refer to the passage.

RC00097-02

67. According to the passage, much of the research on Alessandra Strozzi done by the historian mentioned in the second paragraph supports which of the following conclusions?

(A) Alessandra used her position as her sons' sole guardian to further interests different from those of her sons.

(B) Alessandra unwillingly sacrificed her own interests in favor of those of her sons.

(C) Alessandra's actions indicate that her motivations and intentions were those of an independent individual.

(D) Alessandra's social context encouraged her to take independent action.

(E) Alessandra regarded her sons' goals and interests as her own.

RC00097-03

68. In the first paragraph, the author of the passage mentions a contention that would be made by an anthropologist most likely in order to

(A) present a theory that will be undermined in the discussion of a historian's study later in the passage

(B) offer a perspective on the concept of personhood that can usefully be applied to the study of women in Renaissance Europe

(C) undermine the view that the individuality of European women of the Renaissance was largely suppressed

(D) argue that anthropologists have applied the Western concept of individualism in their research

(E) lay the groundwork for the conclusion that Alessandra's is a unique case among European women of the Renaissance whose lives have been studied by historians

RC00097-04

69. The passage suggests that the historians referred to in line 1 make which of the following assumptions about Renaissance Europe?

(A) That anthropologists overestimate the importance of the individual in Renaissance European society

(B) That in Renaissance Europe, women were typically allowed to express their individuality

(C) That European women of the Renaissance had the possibility of acting independently of the social context in which they lived

(D) That studying an individual such as Alessandra is the best way to draw general conclusions about the lives of women in Renaissance Europe

(E) That people in Renaissance Europe had greater personal autonomy than people do currently

RC00097-05

70. It can be inferred that the author of the passage believes which of the following about the study of Alessandra Strozzi done by the historian mentioned in the second paragraph?

(A) Alessandra was atypical of her time and was therefore an inappropriate choice for the subject of the historian's research.

(B) In order to bolster her thesis, the historian adopted the anthropological perspective on personhood.

(C) The historian argues that the boundaries of the conceptual self were not always firm and closed in Renaissance Europe.

(D) In her study, the historian reverts to a traditional approach that is out of step with the work of other historians of Renaissance Europe.

(E) The interpretation of Alessandra's actions that the historian puts forward is not supported by much of the historian's research.

RC00097-06

71. The passage suggests that the historian mentioned in the second paragraph would be most likely to agree with which of the following assertions regarding Alessandra Strozzi?

(A) Alessandra was able to act more independently than most women of her time because she was a widow.

(B) Alessandra was aware that her personal motivation was embedded in a social context.

(C) Alessandra had goals and interests similar to those of many other widows in her society.

(D) Alessandra is an example of a Renaissance woman who expressed her individuality through independent action.

(E) Alessandra was exceptional because she was able to effect changes in the social constraints placed upon women in her society.

Line In addition to conventional galaxies, the universe contains very dim galaxies that until recently went unnoticed by astronomers. Possibly as numerous as conventional galaxies, these galaxies have the (5) same general shape and even the same approximate number of stars as a common type of conventional galaxy, the spiral, but tend to be much larger. Because these galaxies' mass is spread out over larger areas, they have far fewer stars per unit (10) volume than do conventional galaxies. Apparently these low-surface-brightness galaxies, as they are called, take much longer than conventional galaxies to condense their primordial gas and convert it to stars—that is, they evolve much more slowly.

(15) These galaxies may constitute an answer to the long-standing puzzle of the missing baryonic mass in the universe. Baryons—subatomic particles that are generally protons or neutrons—are the source of stellar, and therefore galactic, luminosity, and so (20) their numbers can be estimated based on how luminous galaxies are. However, the amount of helium in the universe, as measured by spectroscopy, suggests that there are far more baryons in the universe than estimates based on (25) galactic luminosity indicate. Astronomers have long speculated that the missing baryonic mass might eventually be discovered in intergalactic space or as some large population of galaxies that are difficult to detect.

Questions 72–78 refer to the passage.

RC00054-01

72. According to the passage, conventional spiral galaxies differ from low-surface-brightness galaxies in which of the following ways?

(A) They have fewer stars than do low-surface-brightness galaxies.

(B) They evolve more quickly than low-surface-brightness galaxies.

(C) They are more diffuse than low-surface-brightness galaxies.

(D) They contain less helium than do low-surface-brightness galaxies.

(E) They are larger than low-surface-brightness galaxies.

RC00054-02

73. It can be inferred from the passage that which of the following is an accurate physical description of typical low-surface-brightness galaxies?

(A) They are large spiral galaxies containing fewer stars than conventional galaxies.

(B) They are compact but very dim spiral galaxies.

(C) They are diffuse spiral galaxies that occupy a large volume of space.

(D) They are small, young spiral galaxies that contain a high proportion of primordial gas.

(E) They are large, dense spirals with low luminosity.

RC00054-03

74. It can be inferred from the passage that the "long-standing puzzle" refers to which of the following?

(A) The difference between the rate at which conventional galaxies evolve and the rate at which low-surface-brightness galaxies evolve

(B) The discrepancy between estimates of total baryonic mass derived from measuring helium and estimates based on measuring galactic luminosity

(C) The inconsistency between the observed amount of helium in the universe and the number of stars in typical low-surface-brightness galaxies

(D) Uncertainties regarding what proportion of baryonic mass is contained in intergalactic space and what proportion in conventional galaxies

(E) Difficulties involved in detecting very distant galaxies and in investigating their luminosity

RC00054-04

75. The author implies that low-surface-brightness galaxies could constitute an answer to the puzzle discussed in the second paragraph primarily because

(A) they contain baryonic mass that was not taken into account by researchers using galactic luminosity to estimate the number of baryons in the universe

(B) they, like conventional galaxies that contain many baryons, have evolved from massive, primordial gas clouds

(C) they may contain relatively more helium, and hence more baryons, than do galaxies whose helium content has been studied using spectroscopy

(D) they have recently been discovered to contain more baryonic mass than scientists had thought when low-surface-brightness galaxies were first observed

(E) they contain stars that are significantly more luminous than would have been predicted on the basis of initial studies of luminosity in low-surface-brightness galaxies

RC00054-05

76. The author mentions the fact that baryons are the source of stars' luminosity primarily in order to explain

(A) how astronomers determine that some galaxies contain fewer stars per unit volume than do others

(B) how astronomers are able to calculate the total luminosity of a galaxy

(C) why astronomers can use galactic luminosity to estimate baryonic mass

(D) why astronomers' estimates of baryonic mass based on galactic luminosity are more reliable than those based on spectroscopic studies of helium

(E) how astronomers know bright galaxies contain more baryons than do dim galaxies

RC00054-06

77. The author of the passage would be most likely to disagree with which of the following statements?

(A) Low-surface-brightness galaxies are more difficult to detect than are conventional galaxies.

(B) Low-surface-brightness galaxies are often spiral in shape.

(C) Astronomers have advanced plausible ideas about where missing baryonic mass might be found.

(D) Astronomers have devised a useful way of estimating the total baryonic mass in the universe.

(E) Astronomers have discovered a substantial amount of baryonic mass in intergalactic space.

RC00054-07

78. The primary purpose of the passage is to

(A) describe a phenomenon and consider its scientific significance

(B) contrast two phenomena and discuss a puzzling difference between them

(C) identify a newly discovered phenomenon and explain its origins

(D) compare two classes of objects and discuss the physical properties of each

(E) discuss a discovery and point out its inconsistency with existing theory

Line The fact that superior service can generate a competitive advantage for a company does not mean that every attempt at improving service will create such an advantage. Investments in service, (5) like those in production and distribution, must be balanced against other types of investments on the basis of direct, tangible benefits such as cost reduction and increased revenues. If a company is already effectively on a par with its competitors (10) because it provides service that avoids a damaging reputation and keeps customers from leaving at an unacceptable rate, then investment in higher service levels may be wasted, since service is a deciding factor for customers only in extreme (15) situations.

This truth was not apparent to managers of one regional bank, which failed to improve its competitive position despite its investment in reducing the time a customer had to wait for a (20) teller. The bank managers did not recognize the level of customer inertia in the consumer banking industry that arises from the inconvenience of switching banks. Nor did they analyze their service improvement to determine whether it would attract (25) new customers by producing a new standard of service that would excite customers or by proving difficult for competitors to copy. The only merit of the improvement was that it could easily be described to customers.

Questions 79–84 refer to the passage.

RC11238-01

79. The primary purpose of the passage is to

(A) contrast possible outcomes of a type of business investment

(B) suggest more careful evaluation of a type of business investment

(C) illustrate various ways in which a type of business investment could fail to enhance revenues

(D) trace the general problems of a company to a certain type of business investment

(E) criticize the way in which managers tend to analyze the costs and benefits of business investments

RC11238-02

80. According to the passage, investments in service are comparable to investments in production and distribution in terms of the

(A) tangibility of the benefits that they tend to confer

(B) increased revenues that they ultimately produce

(C) basis on which they need to be weighed

(D) insufficient analysis that managers devote to them

(E) degree of competitive advantage that they are likely to provide

RC11238-03

81. The passage suggests which of the following about service provided by the regional bank prior to its investment in enhancing that service?

(A) It enabled the bank to retain customers at an acceptable rate.

(B) It threatened to weaken the bank's competitive position with respect to other regional banks.

(C) It had already been improved after having caused damage to the bank's reputation in the past.

(D) It was slightly superior to that of the bank's regional competitors.

(E) It needed to be improved to attain parity with the service provided by competing banks.

RC11238-04

82. The passage suggests that bank managers failed to consider whether or not the service improvement mentioned in lines 18–20

(A) was too complicated to be easily described to prospective customers

(B) made a measurable change in the experiences of customers in the bank's offices

(C) could be sustained if the number of customers increased significantly

(D) was an innovation that competing banks could have imitated

(E) was adequate to bring the bank's general level of service to a level that was comparable with that of its competitors

RC11238-05

83. The discussion of the regional bank in the second paragraph serves which of the following functions within the passage as a whole?

(A) It describes an exceptional case in which investment in service actually failed to produce a competitive advantage.

(B) It illustrates the pitfalls of choosing to invest in service at a time when investment is needed more urgently in another area.

(C) It demonstrates the kind of analysis that managers apply when they choose one kind of service investment over another.

(D) It supports the argument that investments in certain aspects of service are more advantageous than investments in other aspects of service.

(E) It provides an example of the point about investment in service made in the first paragraph.

RC11238-06

84. The author uses the word "only" in line 27 most likely in order to

(A) highlight the oddity of the service improvement

(B) emphasize the relatively low value of the investment in service improvement

(C) distinguish the primary attribute of the service improvement from secondary attributes

(D) single out a certain merit of the service improvement from other merits

(E) point out the limited duration of the actual service improvement

Line Antonia Castañeda has utilized scholarship from women's studies and Mexican-American history to examine nineteenth-century literary portrayals of Mexican women. As Castañeda notes, scholars of (5) women's history observe that in the United States, male novelists of the period—during which, according to these scholars, women's traditional economic role in home-based agriculture was threatened by the transition to a factory-based industrial economy—(10) define women solely in their domestic roles of wife and mother. Castañeda finds that during the same period that saw non-Hispanic women being economically displaced by industrialization, Hispanic law in territorial California protected the economic position of (15) "Californianas" (the Mexican women of the territory) by ensuring them property rights and inheritance rights equal to those of males.

For Castañeda, the laws explain a stereotypical plot created primarily by male, non-Hispanic novelists: (20) the story of an ambitious non-Hispanic merchant or trader desirous of marrying an elite Californiana. These novels' favorable portrayal of such women is noteworthy, since Mexican-American historians have concluded that unflattering literary depictions (25) of Mexicans were vital in rallying the United States public's support for the Mexican-American War (1846–1848). The importance of economic alliances forged through marriages with Californianas explains this apparent contradiction. Because of their real-(30) life economic significance, the Californianas were portrayed more favorably than were others of the same nationality.

Questions 85–87 refer to the passage.

RC00548-03

85. The "apparent contradiction" mentioned in line 29 refers to the discrepancy between the

(A) legal status of Mexican women in territorial California and their status in the United States

(B) unflattering depiction of Mexicans in novels and the actual public sentiment about the Mexican-American War

(C) existence of many marriages between Californianas and non-Hispanic merchants and the strictures against them expressed in novels

(D) literary depiction of elite Californianas and the literary depiction of other Mexican individuals

(E) novelistic portrayals of elite Californianas' privileged lives and the actual circumstances of those lives

RC00548-04

86. Which of the following could best serve as an example of the kind of fictional plot discussed by Antonia Castañeda?

(A) A land speculator of English ancestry weds the daughter of a Mexican vineyard owner after the speculator has migrated to California to seek his fortune.

(B) A Californian woman of Hispanic ancestry finds that her agricultural livelihood is threatened when her husband is forced to seek work in a textile mill.

(C) A Mexican rancher who loses his land as a result of the Mexican-American War migrates to the northern United States and marries an immigrant schoolteacher.

(D) A wealthy Californiana whose father has bequeathed her all his property contends with avaricious relatives for her inheritance.

(E) A poor married couple emigrate from French Canada and gradually become wealthy as merchants in territorial California.

RC00548-05

87. Which of the following, if true, would provide the most support for Castañeda's explanation of the "stereotypical plot" mentioned in the lines 18–19?

(A) Non-Hispanic traders found business more profitable in California while it was a territory than when it became a state.

(B) Very few marriages between Hispanic women and non-Hispanic men in nineteenth-century territorial California have actually been documented.

(C) Records from the nineteenth century indicate that some large and valuable properties were owned by elite Californianas in their own right.

(D) Unmarried non-Hispanic women in the nineteenth-century United States were sometimes able to control property in their own right.

(E) Most of the property in nineteenth-century territorial California was controlled by Hispanic men.

Line *This passage is excerpted from material published in 1997.*

Scientists have been puzzled by the seeming disparity between models of global warming based on greenhouse gas emissions and actual climatological data. In short, the world is not warming up as much as these models have predicted. In the early 1990s, Pat Michaels sought to explain this disparity, suggesting that sulfate emissions in industrial areas had a cooling effect, thus temporarily retarding global warming. Michaels later came to doubt this idea, however, pointing out that since most sulfate is emitted in the Northern Hemisphere, its cooling influence should be largely limited to that hemisphere. Yet, since 1987, warming in the Southern Hemisphere, which had been relatively intense, has virtually ceased, while warming in the north has accelerated. Thus, Michaels not only doubted the idea of sulfate cooling, but came to feel that global warming models themselves may be flawed.

Ben Santer disagrees. Santer contends that, in general, global warming occurs more slowly in the south because this hemisphere is dominated by oceans, which warm more slowly than the landmasses that dominate the Northern Hemisphere. But, according to Santer, the situation remains complicated by sulfate cooling, which peaked in the north in the mid-twentieth century. It drastically slowed warming in the Northern Hemisphere, and warming in the Southern Hemisphere raced ahead. Since 1987, Santer argues, the greenhouse effect has reasserted itself, and the north has taken the lead. Thus, Santer disputes Michaels's claim that model predictions and observed data differ fundamentally.

Questions 88–90 refer to the passage.

RC00533-03

88. The passage suggests that, in the early 1990s, Michaels would have been most likely to agree with which of the following statements about the disparity mentioned in the lines 3–4?

(A) This disparity is relatively less extreme in the Northern Hemisphere because of sulfate cooling.

(B) This disparity is only a short-term phenomenon brought about by sulfate cooling.

(C) This disparity is most significant in those parts of the world dominated by oceans.

(D) The extent of this disparity is being masked by the temporary effect of sulfate cooling.

(E) The disparity confirms that current models of global warming are correct.

RC00533-04

89. According to the passage, Santer asserts which of the following about global warming?

(A) It will become a more serious problem in the Southern Hemisphere than in the Northern Hemisphere in spite of the cooling influence of oceans in the south.

(B) It is unlikely to be a serious problem in the future because of the pervasive effect of sulfate cooling.

(C) It will proceed at the same general rate in the Northern and Southern Hemispheres once the temporary influence of sulfate cooling comes to an end.

(D) Until the late 1980s, it was moderated in the Northern Hemisphere by the effect of sulfate cooling.

(E) Largely because of the cooling influence of oceans, it has had no discernible impact on the Southern Hemisphere.

RC00533-05

90. The passage suggests that Santer and Michaels would be most likely to DISAGREE over which of the following issues?

(A) Whether climatological data invalidates global warming models

(B) Whether warming in the Northern Hemisphere has intensified since 1987

(C) Whether disparities between global warming models and climatological data can be detected

(D) Whether landmasses warm more rapidly than oceans

(E) Whether oceans have a significant effect on global climate patterns

Line Micro-wear patterns found on the teeth of long-extinct specimens of the primate species australopithecine may provide evidence about their diets. For example, on the basis of tooth micro-wear
(5) patterns, Walker dismisses Jolly's hypothesis that australopithecines ate hard seeds. He also disputes Szalay's suggestion that the heavy enamel of australopithecine teeth is an adaptation to bone crunching, since both seed cracking and bone
(10) crunching produce distinctive micro-wear characteristics on teeth. His conclusion that australopithecines were frugivores (fruit eaters) is based upon his observation that the tooth micro-wear characteristics of east African
(15) australopithecine specimens are indistinguishable from those of chimpanzees and orangutans, which are commonly assumed to be frugivorous primates.

However, research on the diets of contemporary primates suggests that micro-wear
(20) studies may have limited utility in determining the foods that are actually eaten. For example, insect eating, which can cause distinct micro-wear patterns, would not cause much tooth abrasion in modern baboons, who eat only soft-bodied insects
(25) rather than hard-bodied insects. In addition, the diets of current omnivorous primates vary considerably depending on the environments that different groups within a primate species inhabit; if australopithecines were omnivores too, we might
(30) expect to find considerable population variation in their tooth micro-wear patterns. Thus, Walker's description of possible australopithecine diets may need to be expanded to include a much more diverse diet.

Questions 91–97 refer to the passage.

RC00613-01

91. According to the passage, Walker and Szalay disagree on which of the following points?

(A) The structure and composition of australopithecine teeth

(B) The kinds of conclusions that can be drawn from the micro-wear patterns on australopithecine teeth

(C) The idea that fruit was a part of the australopithecine diet

(D) The extent to which seed cracking and bone crunching produce similar micro-wear patterns on teeth

(E) The function of the heavy enamel on australopithecine teeth

RC00613-02

92. The passage suggests that Walker's research indicated which of the following about australopithecine teeth?

(A) They had micro-wear characteristics indicating that fruit constituted only a small part of their diet.

(B) They lacked micro-wear characteristics associated with seed eating and bone crunching.

(C) They had micro-wear characteristics that differed in certain ways from the micro-wear patterns of chimpanzees and orangutans.

(D) They had micro-wear characteristics suggesting that the diet of australopithecines varied from one region to another.

(E) They lacked the micro-wear characteristics distinctive of modern frugivores.

RC00613-03

93. The passage suggests that which of the following would be true of studies of tooth micro-wear patterns conducted on modern baboons?

(A) They would inaccurately suggest that some baboons eat more soft-bodied than hard-bodied insects.

(B) They would suggest that insects constitute the largest part of some baboons' diets.

(C) They would reveal that there are no significant differences in tooth micro-wear patterns among baboon populations.

(D) They would inadequately reflect the extent to which some baboons consume certain types of insects.

(E) They would indicate that baboons in certain regions eat only soft-bodied insects, whereas baboons in other regions eat hard-bodied insects.

RC00613-04

94. The passage suggests which of the following about the micro-wear patterns found on the teeth of omnivorous primates?

(A) The patterns provide information about what kinds of foods are not eaten by the particular species of primate, but not about the foods actually eaten.

(B) The patterns of various primate species living in the same environment resemble one another.

(C) The patterns may not provide information about the extent to which a particular species' diet includes seeds.

(D) The patterns provide more information about these primates' diet than do the tooth micro-wear patterns of primates who are frugivores.

(E) The patterns may differ among groups within a species depending on the environment within which a particular group lives.

RC00613-05

95. It can be inferred from the passage that if studies of tooth micro-wear patterns were conducted on modern baboons, which of the following would most likely be true of the results obtained?

(A) There would be enough abrasion to allow a determination of whether baboons are frugivorous or insectivorous.

(B) The results would suggest that insects constitute the largest part of the baboons' diet.

(C) The results would reveal that there are no significant differences in tooth micro-wear patterns from one regional baboon population to another.

(D) The results would provide an accurate indication of the absence of some kinds of insects from the baboons' diet.

(E) The results would be unlikely to provide any indication of what inferences about the australopithecine diet can or cannot be drawn from micro-wear studies.

RC00613-08

96. It can be inferred from the passage that Walker's conclusion about the australopithecine diet would be called into question under which of the following circumstances?

(A) The tooth enamel of australopithecines is found to be much heavier than that of modern frugivorous primates.

(B) The micro-wear patterns of australopithecine teeth from regions other than east Africa are analyzed.

(C) Orangutans are found to have a much broader diet than is currently recognized.

(D) The environment of east Africa at the time australopithecines lived there is found to have been far more varied than is currently thought.

(E) The area in which the australopithecine specimens were found is discovered to have been very rich in soft-bodied insects during the period when australopithecines lived there.

RC00613-10

97. The author of the passage mentions the diets of baboons and other living primates most likely in order to

(A) provide evidence that refutes Walker's conclusions about the foods making up the diets of australopithecines

(B) suggest that studies of tooth micro-wear patterns are primarily useful for determining the diets of living primates

(C) suggest that australopithecines were probably omnivores rather than frugivores

(D) illustrate some of the limitations of using tooth micro-wear patterns to draw definitive conclusions about a group's diet

(E) suggest that tooth micro-wear patterns are caused by persistent, as opposed to occasional, consumption of particular foods

Line In current historiography, the picture of a consistent, unequivocal decline in women's status with the advent of capitalism and industrialization is giving way to an analysis that not only emphasizes both change (whether (5) improvement or decline) and continuity but also accounts for geographical and occupational variation. The history of women's work in English farmhouse cheese making between 1800 and 1930 is a case in point. In her influential *Women Workers and the Industrial* (10) *Revolution* (1930), Pinchbeck argued that the agricultural revolution of the eighteenth and early nineteenth centuries, with its attendant specialization and enlarged scale of operation, curtailed women's participation in the business of cheese production. Earlier, she (15) maintained, women had concerned themselves with feeding cows, rearing calves, and even selling the cheese in local markets and fairs. Pinchbeck thought that the advent of specialization meant that women's work in cheese dairying was reduced simply to (20) processing the milk. "Dairymen" (a new social category) raised and fed cows and sold the cheese through factors, who were also men. With this narrowing of the scope of work, Pinchbeck believed, women lost business ability, independence, and initiative.

(25) Though Pinchbeck portrayed precapitalist, preindustrial conditions as superior to what followed, recent scholarship has seriously questioned the notion of a golden age for women in precapitalist society. For example, scholars note that women's control seldom (30) extended to the disposal of the proceeds of their work. In the case of cheese, the rise of factors may have compromised women's ability to market cheese at fairs. But merely selling the cheese did not necessarily imply access to the money: Davidoff cites (35) the case of an Essex man who appropriated all but a fraction of the money from his wife's cheese sales.

By focusing on somewhat peripheral operations, moreover, Pinchbeck missed a substantial element of continuity in women's participation: throughout the (40) period women did the central work of actually making cheese. Their persistence in English cheese dairying contrasts with women's early disappearance from arable agriculture in southeast England and from American cheese dairying. Comparing these (45) three divergent developments yields some reasons for the differences among them. English cheese-making women worked in a setting in which cultural values, agricultural conditions, and the nature of their work combined to support their continued (50) participation. In the other cases, one or more of these elements was lacking.

Questions 98–101 refer to the passage.

RC00512-01

98. The primary purpose of the passage is to

(A) present recently discovered evidence that supports a conventional interpretation of a historical period

(B) describe how reinterpretations of available evidence have reinvigorated a once-discredited scholarly position

(C) explain why some historians have tended to emphasize change rather than continuity in discussing a particular period

(D) explore how changes in a particular occupation serve to counter the prevailing view of a historical period

(E) examine a particular area of historical research in order to exemplify a general scholarly trend

RC00512-03

99. Regarding English local markets and fairs, which of the following can be inferred from the passage?

(A) Both before and after the agricultural revolution, the sellers of agricultural products at these venues were men.

(B) Knowing who the active sellers were at these venues may not give a reliable indication of who controlled the revenue from the sales.

(C) There were no parallel institutions at which American cheese makers could sell their own products.

(D) Prior to the agricultural revolution, the sellers of agricultural products at these venues were generally the producers themselves.

(E) Prior to the agricultural revolution, women sold not only cheese but also products of arable agriculture at these venues.

RC00512-05

100. The passage describes the work of Pinchbeck primarily in order to

(A) demonstrate that some of the conclusions reached by recent historians were anticipated in earlier scholarship

(B) provide an instance of the viewpoint that, according to the passage's author, is being superseded

(C) illustrate the ways in which recent historians have built on the work of their predecessors

(D) provide a point of reference for subsequent scholarship on women's work during the agricultural revolution

(E) show the effect that the specialization introduced in the agricultural and industrial revolutions had on women's work

RC00512-07

101. It can be inferred from the passage that women did work in

(A) American cheesemaking at some point prior to industrialization

(B) arable agriculture in northern England both before and after the agricultural revolution

(C) arable agriculture in southeast England after the agricultural revolution, in those locales in which cultural values supported their participation

(D) the sale of cheese at local markets in England even after the agricultural revolution

(E) some areas of American cheese dairying after industrialization

3.6 Answer Explanations

The following discussion of reading comprehension is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to reading comprehension. The particular questions in this chapter are generally representative of the kinds of reading comprehension questions you will encounter on the GMAT. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

Questions 1–4 refer to the passage on page 26.

*RC00184-01

1. According to the passage, traditional corporate leaders differ from leaders in learning organizations in that the former

(A) encourage employees to concentrate on developing a wide range of skills

(B) enable employees to recognize and confront dominant corporate models and to develop alternative models

(C) make important policy decisions alone and then require employees in the corporation to abide by those decisions

(D) instill confidence in employees because of their willingness to make risky decisions and accept their consequences

(E) are concerned with offering employees frequent advice and career guidance

Supporting idea

This question requires understanding of the contrast the passage draws between leaders of traditional corporations and leaders of learning organizations. According to the second paragraph, the former are traditionally charismatic leaders who set policy and make decisions, while the latter foster integrated thinking at all levels of the organization.

A According to the passage, it is leaders in learning organizations, not traditional corporate leaders, who encourage the development of a wide range of skills.

B Leaders in learning organizations are those who want their employees to challenge dominant models.

C Correct. The second paragraph states that traditional corporate leaders are individualistic; they alone *set the corporation's direction and make key decisions*.

D The passage does not address the question of whether traditional corporate leaders instill confidence in employees. In fact, the first paragraph suggests that they may not; rather, they might come across as objectionably controlling.

E The passage suggests that advice and guidance are more likely to be offered by leaders of learning organizations than by leaders of traditional corporations.

The correct answer is C.

RC00184-02

2. Which of the following best describes employee behavior encouraged within learning organizations, as such organizations are described in the passage?

(A) Carefully defining one's job description and taking care to avoid deviations from it

(B) Designing mentoring programs that train new employees to follow procedures that have been used for many years

(C) Concentrating one's efforts on mastering one aspect of a complicated task

(D) Studying an organizational problem, preparing a report, and submitting it to a corporate leader for approval

(E) Analyzing a problem related to productivity, making a decision about a solution, and implementing that solution

*These numbers correlate with the online test bank question number. See the GMAT Verbal Review Online Index in the back of this book.

Application

The second paragraph of the passage indicates that employees of learning organizations are encouraged to think and act for themselves; they learn new skills and expand their capabilities.

A Avoiding deviations from one's carefully defined job description would more likely be encouraged in a traditional corporation, as described in the first paragraph, than in a learning organization.

B Any employee training that involves following long-standing procedures would more likely be encouraged in a traditional corporation than a learning organization.

C According to the passage, mastering only one aspect of a task, no matter how complicated, would be insufficient in a learning organization, in which broad patterns of thinking are encouraged.

D As described in the passage, the role of corporate leaders in learning organizations is not, characteristically, to approve employees' solutions to problems, but rather to enable and empower employees to implement solutions on their own.

E **Correct.** Employees in learning organizations are expected to act on their own initiative; thus, they would be encouraged to analyze and solve problems on their own, implementing whatever solutions they devised.

The correct answer is E.

RC00184-03

3. According to the author of the passage, corporate leaders of the future should do which of the following?

(A) They should encourage employees to put long-term goals ahead of short-term profits.

(B) They should exercise more control over employees in order to constrain production costs.

(C) They should redefine incentives for employees' performance improvement.

(D) They should provide employees with opportunities to gain new skills and expand their capabilities.

(E) They should promote individual managers who are committed to established company policies.

Supporting idea

This question focuses on what the author recommends in the passage for future corporate leaders. In the second paragraph, the author states that, among other things, corporate leaders need to be teachers to provide challenges to their employees and create an atmosphere where *employees are continually learning new skills and expanding their capabilities to shape their future*.

A The passage does not directly discuss the issue of corporate goals and profitability in the long or short term.

B The passage does not address the topic of production costs, and it suggests that its author would favor reducing, rather than increasing, corporate leaders' control over employees. The first paragraph states that leaders who attempt to control employees lead those employees to perform in mediocre fashion.

C The passage does not discuss incentivizing employees' performance; rather, employees' performance will improve, the passage suggests, under different corporate leadership.

D **Correct.** The final sentence of the passage states directly that leaders must build organizations in which employees can learn new skills and expand their capabilities.

E The first paragraph indicates that clinging to established company policies is a strategy for the future that is likely to be unproductive.

The correct answer is D.

RC00184-04

4. The primary purpose of the passage is to

(A) endorse a traditional corporate structure

(B) introduce a new approach to corporate leadership and evaluate criticisms of it

(C) explain competing theories about management practices and reconcile them

(D) contrast two typical corporate organizational structures

(E) propose an alternative to a common corporate approach

Main idea

This question depends on understanding the passage as a whole. The first paragraph explains the way in which corporations fail to facilitate how humans learn. The second paragraph suggests that corporations should change the way they view employees in order to promote learning, and it explains the positive outcomes that would result from that shift in thinking.

A The first paragraph explains that the traditional corporate structure leads to mediocre performance; it does not endorse that structure.

B The second paragraph introduces the concept of a *learning organization* and its attendant approach to corporate leadership. Rather than identifying any criticisms of that approach, the passage endorses it wholeheartedly.

C The passage discusses the difference between the idea of a single charismatic leader and that of a shared corporate leadership, but it does not attempt to reconcile these two ideas.

D The passage's main focus is on advocating a particular approach, not on merely contrasting it with another. Furthermore, it portrays only one of the approaches as typical. It suggests that the organizational structure that relies on a single charismatic leader is typical but that another approach, that in which leadership is shared, should instead become typical.

E **Correct.** The passage identifies a common corporate approach, one based on controlling employees, and proposes that corporations should instead become *learning organizations*.

The correct answer is E.

Questions 5–10 refer to the passage on page 28.

RC00144-03

5. All of the following are mentioned as ways of controlling the magnitude of structural unemployment EXCEPT

(A) using public funds to create jobs
(B) teaching new skills to displaced workers
(C) allowing displaced workers to retire
(D) controlling the movement of capital
(E) encouraging workers to move to where jobs are available

Supporting idea

This question addresses what the passage states directly about how the magnitude of structural unemployment can be controlled. The last few sentences of the second paragraph state several ways in which this control may be exerted.

A **Correct.** The passage mentions using public sector resources, but it does not say that those resources could be used to create jobs.

B The passage states that workers can be reeducated or retrained as a way of addressing structural unemployment.

C Encouraging workers to retire is one of the options mentioned in the passage for controlling structural unemployment.

D Capital movement is one of the factors affecting structural unemployment, and the passage states that controlling this movement can be used as a way of controlling structural unemployment.

E The passage indicates that encouraging displaced workers to move where there are jobs is a way to help control structural unemployment.

The correct answer is A.

RC00144-04

6. The passage suggests that a potential outcome of higher structural unemployment is

(A) increased public spending for social services

(B) placement of workers in jobs for which they are not qualified

(C) higher wages for those workers who have skills that are in demand

(D) an increase in the length of time jobs remain unfilled

(E) a shift in the government's economic policy priorities

Supporting idea

The third paragraph discusses a potential result of higher structural unemployment: if more workers lack skills that are in demand, there will be shortages of qualified workers. The wages of workers who do have the desired skills will thus rise.

A While higher structural unemployment might result in an increased demand for social services, such as job training and the like, the passage does not suggest that the government would in fact respond by spending more on such services.

B Nothing in the passage indicates that employers would hire workers who lack necessary skills—indeed, the lack of qualified workers is itself a cause of increased structural unemployment.

C **Correct.** The passage indicates that when growth in demand for workers with certain skills outpaces the growth in the number of workers who possess those skills, the wages of those workers are bid up, resulting in increased pay for the skilled workers.

D The passage does not discuss the length of time that jobs are likely to remain unfilled as structural unemployment increases. The amount of time jobs remain unfilled could remain the same, but the number or type of jobs that go unfilled may change.

E The passage suggests that certain types of public sector spending (presumably spending as a result of government policy) can help control the magnitude of structural unemployment, but the passage does not indicate whether the government is in fact likely to change policy so as to try to control this magnitude. Furthermore, the passage states that government policy has placed a priority on reducing inflation. Yet there is no suggestion that the government is likely to shift away from this priority in the face of higher structural unemployment.

The correct answer is C.

RC00144-05

7. It can be inferred from the passage that even when there are unemployed workers, labor shortages are still likely to occur if

(A) the inflation rate is unusually high

(B) there is insufficient technological innovation

(C) the level of structural unemployment is exceptionally low

(D) the jobs available in certain places require skills that the labor force in those areas lacks

(E) the workers in some industries are dissatisfied with the pay offered in those industries

Inference

This question relies on the passage's characterization of structural unemployment—that there is a mismatch between the number of jobs available in a certain location and the number of workers in that location who possess the skills required for those jobs. Even if there is a sufficient number of workers in the area to fill the positions, if those workers had the requisite skills, labor shortages will occur if an insufficient number of those workers lack the required skills.

A The passage in the third paragraph explains that structural unemployment and inflation can coexist, but it does not suggest that a high rate of inflation will make labor shortages likely; rather, the passage indicates that structural unemployment may lead to inflation by pushing wages, and thus prices, higher.

B The passage indicates that greater technological innovation can produce structural unemployment, not that insufficient technological innovation can.

C When there are unemployed workers, labor shortages would be unlikely to occur if the level of structural unemployment is low, because low structural unemployment would mean that no imbalance exists between available employment and workers with requisite skills. Thus, unemployed workers would likely be able to find jobs.

D **Correct.** The labor shortages associated with structural unemployment can, according to the passage, be caused by a mismatch in a certain location between available jobs requiring particular skills and the number of workers possessing those skills.

E The passage does not discuss what would happen if some industries' workers are dissatisfied with their pay. Presumably, though, even if those workers were to quit their jobs due to that dissatisfaction, unemployed workers may very well be happy to take those jobs (assuming they are not lacking the requisite skills). So the passage gives us no reason to think that labor shortages would be likely to occur—at least without a situation like that described in answer choice D.

The correct answer is D.

RC00144-06

8. The passage suggests that the phenomenon of combined unemployment and inflation is

(A) a socioeconomic problem that can only be addressed by government intervention

(B) a socioeconomic problem that can be characteristic of periods of structural unemployment

(C) an economic problem that results from government intervention in management-labor relations

(D) an economic problem that results from imperfect applications of technology

(E) an economic problem that can be eliminated by relatively small changes in the labor force

Supporting idea

This question depends on understanding the phenomenon of combined unemployment and inflation, which is addressed in the third paragraph. That paragraph states that a trend associated with structural unemployment—that of rising labor costs and prices—is responsible for the phenomenon.

A The third paragraph indicates that government policy has been unable, thus far, to remedy the problem of combined unemployment and inflation, and it gives no indication whether a nongovernmental solution is available.

B **Correct.** Periods of structural unemployment have, according to the passage, featured both inflation and unemployment.

C The passage does not discuss government intervention into management-labor relations.

D Certain applications of technology may be responsible for increasing structural unemployment, but the passage provides no way to distinguish between imperfect and other such applications.

E The passage discusses the phenomenon of combined unemployment and inflation only in relation to structural unemployment, which the passage suggests is likely to arise only in relation to large or rapid changes in demand for labor. Therefore, it seems unlikely that relatively small changes in the labor force can eliminate the phenomenon of combined unemployment and inflation.

The correct answer is B.

RC00144-07

9. The passage is primarily concerned with

(A) clarifying the definition of a concept

(B) proposing a way to eliminate an undesirable condition

(C) discussing the sources and consequences of a problem

(D) suggesting ways to alleviate the effects of a particular social policy

(E) evaluating the steps that have been taken to correct an imbalance

Main idea

This question depends on understanding the passage as a whole in order to identify its primary concern. The first paragraph defines structural unemployment (which the passage, in its second paragraph, indicates is a *serious problem*). The second paragraph describes a major factor that can cause structural unemployment, as well as some steps that might be taken to alleviate it. Finally, the third paragraph identifies possible effects of structural unemployment, including wage and price inflation.

A The first paragraph clarifies the definition of structural unemployment, but this definition is not the passage's primary concern.

B The passage's second paragraph indicates some ways that an increase in structural unemployment can be mitigated, but nowhere does the passage suggest that the condition can be eliminated entirely.

C **Correct.** The passage discusses the problem of structural unemployment, explaining how it can arise and what some of its consequences may be.

D The passage does suggest some ways in which structural unemployment might be alleviated, but this kind of unemployment is not characterized as an effect of a social policy. Rather, it is a state of economic affairs.

E The second paragraph identifies some steps that could be taken to correct a particular situation of worker displacement. It does not, however, evaluate those steps.

The correct answer is C.

RC00144-08

10. According to the passage, small downward shifts in the demand for labor will not usually cause unemployment because

(A) such shifts are frequently accompanied by upswings in the economy

(B) such shifts usually occur slowly

(C) workers can be encouraged to move to where there are jobs

(D) normal attrition is often sufficient to reduce the size of the work force

(E) workers are usually flexible enough to learn new skills and switch to new jobs

Supporting idea

This question requires noting that the second paragraph of the passage discusses small changes in demand for labor: their effect on unemployment is likely to be small because normal attrition can reduce the size of the work force accordingly.

A The passage does not mention upswings in the economy in relation to small shifts in demand for labor. Furthermore, the passage indicates that structural unemployment can occur even at peaks of economic upswings, so presumably even if small downward shifts in the demand for labor are frequently accompanied by economic upswings, structural unemployment could still result.

B The passage suggests that shifts in demand for workers that do not result in unemployment may be small *or* gradual. Nothing indicates that small changes are also necessarily gradual.

C The second paragraph indicates that workers being encouraged to move to where there are jobs would be a reasonable response to large or rapid changes in demand for workers; it does not discuss such encouragement in relation to small shifts in demand.

D **Correct.** The passage identifies normal attrition as a factor that can reduce the work force sufficiently to accommodate small reductions in the demand for labor in particular occupations.

E Workers' ability to learn new skills is identified in the passage as a factor affecting whether structural unemployment will grow in response to large or rapid changes, not small changes, in the demand for workers in particular occupations.

The correct answer is D.

Questions 11–16 refer to the passage on page 30.

RC00113-01

11. The passage is primarily concerned with

(A) explaining why one method of earthquake prediction has proven more practicable than an alternative method

(B) suggesting that accurate earthquake forecasting must combine elements of long-term and short-term prediction

(C) challenging the usefulness of dilatancy theory for explaining the occurrence of precursory phenomena

(D) discussing the deficiency of two methods by which researchers have attempted to predict the occurrence of earthquakes

(E) describing the development of methods for establishing patterns in the occurrence of past earthquakes

Main idea

To answer this question, focus on what the passage as a whole is trying to do. The first paragraph describes a method for predicting the occurrence of earthquakes, and the second paragraph explains problems with that method. The third paragraph describes a second method for predicting the occurrence of earthquakes, and the fourth paragraph explains problems with that method. Thus, the passage as a whole is primarily concerned with explaining the deficiencies of two methods for predicting the occurrence of earthquakes.

A The passage does not compare the practicability of the two methods.

B The passage does not discuss combining long-term and short-term methods.

C Only the first half of the passage discusses dilatancy theory; the second half discusses a different method for predicting the occurrence of earthquakes.

D **Correct.** The passage describes two methods for predicting the occurrence of earthquakes and explains the shortcomings of each method.

E Only the second half of the passage discusses patterns in the occurrence of past earthquakes; the first half discusses a different method for predicting the occurrence of earthquakes.

The correct answer is D.

RC00113-02

12. According to the passage, laboratory evidence concerning the effects of stress on rocks might help account for

(A) differences in magnitude among earthquakes

(B) certain phenomena that occur prior to earthquakes

(C) variations in the intervals between earthquakes in a particular area

(D) differences in the frequency with which earthquakes occur in various areas

(E) the unreliability of short-term earthquake predictions

Supporting ideas

This question asks for information explicitly stated in the passage. The first paragraph explains that rocks subjected to stress in the laboratory undergo multiple changes. According to *dilatancy theory*, such changes happening to rocks in the field could lead to earthquake precursors—phenomena that occur before large earthquakes.

A The passage explains how laboratory evidence might be used to predict the occurrence of large earthquakes, not to differentiate between earthquakes' magnitudes.

B **Correct.** According to dilatancy theory, the sort of changes that have been observed in laboratories to occur in rocks might lead to earthquake precursors in the field.

C Although the passage discusses variation in earthquake intervals, that evidence is based on historical records, not laboratory evidence.

D The passage does not refer in any way to differences in the frequency of earthquakes in various regions.

E The unreliability of one method for making short-term earthquake predictions is implied by information gathered in the field, not by laboratory evidence.

The correct answer is B.

RC00113-03

13. It can be inferred from the passage that one problem with using precursory phenomena to predict earthquakes is that minor tremors

(A) typically occur some distance from the sites of the large earthquakes that follow them

(B) are directly linked to the mechanisms that cause earthquakes

(C) are difficult to distinguish from major tremors

(D) have proven difficult to measure accurately

(E) are not always followed by large earthquakes

Inference

This question asks what can be inferred from certain information in the passage. The second paragraph explains two problems with using minor tremors to predict earthquakes. First, minor tremors provide no information about how large an impending earthquake will be. Second, the minor tremors that occur prior to a large earthquake are indistinguishable from other minor tremors. Thus, it can be inferred that minor tremors sometimes occur when no large earthquake follows.

A The passage does not mention the distance between minor tremors and ensuing earthquakes.

B The passage implies that minor tremors sometimes occur without an ensuing earthquake, so the phenomena are most likely not directly linked.

C The passage suggests no difficulty in distinguishing between minor tremors and major tremors.

D The passage does not mention any difficulties in the measurement of minor tremors.

E Correct. The passage indicates that minor tremors occurring prior to a large earthquake are indistinguishable from minor tremors that are not followed by large earthquakes. So the fact that minor tremors are not always followed by large earthquakes, together with the inability to distinguish between those that are and those that are not, poses a problem for any attempt to predict large earthquakes on the basis of this type of precursory phenomena.

The correct answer is E.

RC00113-04

14. According to the passage, some researchers based their research about long-term earthquake prediction on which of the following facts?

(A) The historical record confirms that most earthquakes have been preceded by minor tremors.

(B) The average interval between earthquakes in one region of the San Andreas Fault is 132 years.

(C) Some regions tend to be the site of numerous earthquakes over the course of many years.

(D) Changes in the volume of rock can occur as a result of building stress and can lead to the weakening of rock.

(E) Paleoseismologists have been able to unearth and date geological features caused by past earthquakes.

Supporting idea

This question asks for information explicitly provided in the passage. The question asks what the basis is for the research into long-term earthquake prediction described in the third paragraph. Based on the fact that numerous earthquakes occur in some regions over the course of many years, the researchers tried to identify regular earthquake intervals that would assist in making long-term predictions. Thus, the basis of their research is the occurrence of numerous earthquakes at particular sites.

A The passage indicates that minor tremors are used by some scientists to make short-term earthquake predictions, not that they were the basis for research about long-term predictions.

B This fact about the San Andreas Fault was used by paleoseismologists to show the inadequacy of the long-term prediction research, since actual earthquake intervals varied greatly from the average.

C **Correct.** Since earthquakes occur repeatedly in certain regions, researchers tried to identify regular cycles in earthquake intervals.

D The passage indicates that changes in rock volume have been used by some scientists to make short-term earthquake predictions, not that they were the basis for research about long-term predictions.

E Paleoseismologists' research provided evidence against the existence of regular earthquake cycles used in making long-term predictions.

The correct answer is C.

RC00113-05

15. The passage suggests which of the following about the paleoseismologists' findings described in lines 42–50?

(A) They suggest that the frequency with which earthquakes occurred at a particular site decreased significantly over the past two millennia.

(B) They suggest that paleoseismologists may someday be able to make reasonably accurate long-term earthquake predictions.

(C) They suggest that researchers may someday be able to determine which past occurrences of minor tremors were actually followed by large earthquakes.

(D) They suggest that the recurrence of earthquakes in earthquake-prone sites is too irregular to serve as a basis for earthquake prediction.

(E) They indicate that researchers attempting to develop long-term methods of earthquake prediction have overlooked important evidence concerning the causes of earthquakes.

Inference

This question asks about what can be inferred from a particular portion of the passage (lines 42–50). The third paragraph describes research that attempted to identify regular patterns of recurrence in earthquake-prone regions, to aid in long-term earthquake prediction. The fourth paragraph describes evidence discovered by paleoseismologists that undermines this idea that regular earthquake cycles exist. The paragraph indicates that in one region along the San Andreas Fault, the average interval between earthquakes was 132 years, but individual intervals varied widely—from 44 to 332 years. This information implies that earthquake intervals are too irregular to be used for accurate long-term earthquake prediction.

A The evidence suggests that the earthquake intervals are irregular, not that they have become shorter over time.

B The findings provide evidence against the use of regular earthquake cycles in long-term earthquake prediction.

C The findings do not clearly pertain to minor tremors.

D **Correct.** The great variation in intervals between earthquakes suggests that recurrence is too irregular to serve as the basis for long-term earthquake prediction.

E The paleoseismologists studied evidence showing when earthquakes occurred. The passage does not suggest that the evidence has any implications regarding the causes of earthquakes.

The correct answer is D.

RC00113-07

16. The author implies which of the following about the ability of the researchers mentioned in line 18 to predict earthquakes?

(A) They can identify when an earthquake is likely to occur but not how large it will be.

(B) They can identify the regions where earthquakes are likely to occur but not when they will occur.

(C) They are unable to determine either the time or the place that earthquakes are likely to occur.

(D) They are likely to be more accurate at short-term earthquake prediction than at long-term earthquake prediction.

(E) They can determine the regions where earthquakes have occurred in the past but not the regions where they are likely to occur in the future.

Supporting idea

The question asks for information explicitly provided in the passage. The second paragraph indicates that researchers at first reported success in identifying earthquake precursors, but further analysis of the data undermined their theory. The passage then explains that atypical seismic waves were recorded before some earthquakes; this evidence at first seemed to support the researchers' theory, before further analysis proved the evidence inadequate.

A Although earthquakes are caused by stress on rock, the passage does not indicate that this fact encouraged researchers to believe that precursors could be used to predict earthquakes.

B This fact would undermine the theory that changes in seismic waves are precursory phenomena that can be used to predict earthquakes.

C **Correct.** Seismic waves with unusual velocities occurring before earthquakes at first seemed to provide support for researchers' theory that earthquakes could be predicted by precursory phenomena.

D Though earthquakes' recurrence in certain regions is mentioned as being important to researchers seeking to make long-term earthquake predictions, it is not mentioned as being relevant to researchers' theory that earthquakes can be predicted by precursory phenomena.

E This is not mentioned as being relevant to scientists' belief that earthquakes could be predicted on the basis of precursory phenomena.

The correct answer is C.

Questions 17–23 refer to the passage on page 32.

RC00492-01

17. It can be inferred from the passage that one reason an advertiser might prefer a hard-sell approach to a soft-sell approach is that

(A) the risks of boomerang effects are minimized when the conclusions an advertiser wants the consumer to draw are themselves left unstated

(B) counterargumentation is likely from consumers who fail to draw their own conclusions regarding an advertising claim

(C) inferential activity is likely to occur even if consumers perceive themselves to be more knowledgeable than the individuals presenting product claims

(D) research on consumer memory suggests that the explicit conclusions provided by an advertiser using the hard-sell approach have a significant impact on decision making

(E) the information presented by an advertiser using the soft-sell approach may imply different conclusions to different consumers

Inference

This question relies on what the passage suggests about the difference between the hard-sell and soft-sell approaches—and why the hard-sell approach might be preferred. The hard-sell approach, according to the second paragraph, presents explicit conclusions. The soft-sell approach, on the other hand, does not explicitly state conclusions about products; instead, consumers make up their own minds.

A While the passage makes clear that boomerang effects are minimized when conclusions are left unstated, this is an advantage of the soft-sell approach over the hard-sell approach.

B According to the second paragraph, counterargumentation is a disadvantage, not an advantage, of the hard-sell approach. This is a reason not to prefer the hard sell.

C The third paragraph suggests that in cases in which consumers may perceive themselves as more knowledgeable than individuals presenting product claims, the soft-sell approach offers an advantage over the hard-sell approach.

D According to the third paragraph, self-generated conclusions that are associated with the soft-sell approach have a greater impact on decision making than explicit conclusions. The passage does not allude to any research on memory that would favor the hard-sell approach.

E **Correct.** The fourth paragraph suggests that one problem with the soft-sell approach is that consumers could miss the point; they may not come to the conclusions that the advertiser would prefer. Thus an advertiser might prefer a hard-sell approach.

The correct answer is E.

RC00492-02

18. Each of the following is mentioned in the passage as a characteristic of the hard-sell approach EXCEPT:

(A) Its overall message is readily grasped.

(B) It appeals to consumers' knowledge about the product.

(C) It makes explicit claims that the advertised brand is superior to other brands.

(D) It uses statements that are expressed very clearly.

(E) It makes claims in the form of direct conclusions.

Supporting idea

This question asks about what is directly stated in the passage about the hard-sell approach. The first and second paragraphs provide the details about this approach, including that it uses *direct, forceful claims* about benefits of a brand over competitors' brands; its claims are simple and straightforward, in the form of explicit conclusions; and consumers are generally left with little room for confusion about the message.

A The second paragraph states that there is little room for confusion about the message.

B **Correct.** The extent of consumers' knowledge about the product is not mentioned in the passage.

C The first paragraph indicates that in the hard-sell approach advertisers make direct claims regarding the benefits of the advertised brand over other offerings.

D The first and second paragraphs say that hard-sell claims are direct, simple, and straightforward.

E The second paragraph emphasizes that the hard-sell approach presents it claims in the form of explicit conclusions.

The correct answer is B.

RC00492-03

19. It can be inferred from the passage that advertisers could reduce one of the risks discussed in the last paragraph if they were able to provide

(A) motivation for consumers to think about the advertisement's message

(B) information that implies the advertiser's intended conclusion but leaves that conclusion unstated

(C) subtle evidence that the advertised product is superior to that of competitors

(D) information comparing the advertised product with its competitors

(E) opportunity for consumers to generate their own beliefs or conclusions

Inference

This question requires understanding the risks discussed in the last paragraph of the passage. Those risks are, first, that consumers would not be motivated to think about the advertisement and thus would miss the message's point; second, that consumers may draw conclusions that the advertiser did not intend; and finally, that consumers could question the validity of the conclusions they reach, even if those conclusions are what advertisers intend.

A **Correct.** Providing motivation for consumers to think about an advertisement's message would reduce the first risk discussed in the last paragraph: that consumers would fail to draw any conclusions because they would lack motivation to engage with advertisements.

B Providing *information that implies a conclusion but leaves it unstated* is the very definition of the soft-sell approach, and it is this approach that gives rise to the risks discussed in the last paragraph.

C Providing subtle evidence that a product is superior is most likely to give rise to all three of the risks identified in the last paragraph, in that its subtlety would leave consumers free to draw their own conclusions, to fail to draw those conclusions, or to question the validity of their own conclusions.

D A direct comparison of the advertised product with its competitors would run all the risks identified in the last paragraph: consumers might not find the comparison motivating; they could draw conclusions that the advertiser did not intend (e.g., that the competing products are superior); or they could question whatever conclusions they do draw.

E Giving consumers the opportunity *to generate their own beliefs or conclusions* is an intrinsic part of the soft-sell approach, which produces the risks discussed in the last paragraph.

The correct answer is A.

RC00492-04

20. The primary purpose of the passage is to

(A) point out the risks involved in the use of a particular advertising strategy

(B) make a case for the superiority of one advertising strategy over another

(C) illustrate the ways in which two advertising strategies may be implemented

(D) present the advantages and disadvantages of two advertising strategies

(E) contrast the types of target markets for which two advertising strategies are appropriate

Inference

Overall, the passage is concerned with two advertising strategies. The first paragraph introduces the strategies. The second paragraph explains how a particular aspect of one approach may be both positive and negative and how the second approach mitigates these problems. The third paragraph continues this discussion of mitigation, while the fourth paragraph points out that there are drawbacks to this approach, too. Thus, according to the passage, both strategies have positive and negative aspects.

A The passage is concerned not with one particular advertising strategy but with two, and it discusses benefits, as well as risks, involved with both strategies.

B The passage does not suggest that one strategy is superior to the other but rather that each has positive and negative aspects.

C The passage does not discuss how to implement either of the strategies it is concerned with; instead, it deals with how consumers are likely to respond once the implementation has already taken place.

D **Correct.** The passage is primarily concerned with showing that both of the strategies described have advantages and disadvantages.

E The passage provides some indirect grounds for inferring the target markets for which each advertising strategy might be appropriate, but it is not primarily concerned with contrasting those markets.

The correct answer is D.

RC00492-05

21. Which of the following best describes the function of the sentence in lines 25–28 in the context of the passage as a whole?

(A) It reiterates a distinction between two advertising strategies that is made in the first paragraph.

(B) It explains how a particular strategy avoids a drawback described earlier in the paragraph.

(C) It suggests that a risk described earlier in the paragraph is less serious than some researchers believe it to be.

(D) It outlines why the strategy described in the previous sentence involves certain risks for an advertiser.

(E) It introduces an argument that will be refuted in the following paragraph.

Evaluation

The sentence in lines 25–28 explains how the kinds of conclusions consumers are invited to draw based on the soft-sell approach reduce the risk that consumers will respond with *resentment, distrust, and counterargumentation*—that is, the possible *boomerang effect* identified earlier in the paragraph as a drawback of the hard-sell approach.

A The sentence does not reiterate the distinction between the hard- and soft-sell approaches; rather, it explains an advantage of the soft-sell approach.

B **Correct.** The sentence explains how the soft-sell approach avoids the problems that can arise from the hard-sell approach's explicitly stated conclusions.

C The sentence suggests that the risk of boomerang effects described earlier in the paragraph is serious but that a different approach can mitigate it.

D The sentence outlines why the strategy described in the previous sentence reduces advertisers' risks, not why it involves risks.

E At no point does the passage refute the idea that implicit conclusions reduce the risk of boomerang effects. It does say that there could be drawbacks to the soft-sell approach, but those drawbacks are related to the problem with implicit conclusions themselves and how people reach them. In addition, the *following paragraph* does not mention the drawbacks, only the advantages of implicit conclusions.

The correct answer is B.

RC00492-06

22. It can be inferred from the passage that one situation in which the boomerang effect often occurs is when consumers

(A) have been exposed to forceful claims that are diametrically opposed to those in an advertiser's message

(B) have previous self-generated beliefs or conclusions that are readily accessible from memory

(C) are subjected to advertising messages that are targeted at specific markets to which those consumers do not belong

(D) are confused regarding the point of the advertiser's message

(E) come to view the advertiser's message with suspicion

Inference

The passage discusses the boomerang effect in the second paragraph. This effect is defined as consumers deriving conclusions from advertising that are the opposite of those that advertisers intended to present, and it occurs when consumers resent and/or distrust what they are being told.

A The passage provides no grounds for inferring that consumers need to be exposed to opposing claims in order to believe such claims; they may reach opposing claims on their own.

B The passage indicates that the boomerang effect can be reduced by using a soft-sell approach, which can result in self-generated conclusions, but it provides no evidence about any possible effects of preexisting self-generated beliefs or conclusions on the boomerang effect.

C The passage does not address how consumers who are subjected to advertising messages not intended for them might respond.

D Confusion regarding the point of the advertiser's message is more likely to occur, the passage suggests, when advertisers use a soft-sell approach—but it is the hard-sell approach, not the soft-sell, that is likely to result in the boomerang effect.

E **Correct.** The second paragraph indicates that consumers who resent being told what to believe and come to distrust the advertiser's message—that is, those who view the message with suspicion—may experience a boomerang effect, believing the opposite of the conclusions offered.

The correct answer is E.

RC00492-07

23. It can be inferred from the passage that the research mentioned in line 29 supports which of the following statements?

(A) Implicit conclusions are more likely to capture accurately the point of the advertiser's message than are explicit conclusions.

(B) Counterargumentation is less likely to occur if an individual's beliefs or conclusions are readily accessible from memory.

(C) The hard-sell approach results in conclusions that are more difficult for the consumer to recall than are conclusions resulting from the soft-sell approach.

(D) When the beliefs of others are presented as definite and forceful claims, they are perceived to be as accurate as self-generated beliefs.

(E) Despite the advantages of implicit conclusions, the hard-sell approach involves fewer risks for the advertiser than does the soft-sell approach.

Inference

The research this item refers to—research on consumer memory and judgment—indicates that beliefs are more memorable when they are self-generated and so matter when making judgments and decisions. Further, self-generated beliefs seem more believable to those who have them than beliefs that come from elsewhere.

A The fourth paragraph indicates that implicit conclusions are more likely to fail to replicate the advertiser's message than explicit conclusions are.

B The research discussed in the passage does not address when counterargumentation is more or less likely to occur. Even though counterargumentation is a risk when consumers distrust the advertiser's message—as they may do when harder-to-recall explicit conclusions are given—it may be as much of a risk when consumers reach an implicit conclusion that is readily accessible from memory.

C **Correct.** The research indicates that it is easier for consumers to recall conclusions they have reached on their own—that is, the sorts of conclusions that are encouraged by the soft-sell approach—than conclusions that have been provided explicitly, as happens in the hard-sell approach.

D The research does not show that the forcefulness with which claims are presented increases perceptions of the accuracy of those claims. Indeed, it is most likely the opposite, as the forcefulness of others' claims may make them seem even less related to any conclusions the consumer might generate for him- or herself.

E The research suggests that it is the soft-sell, not the hard-sell, approach that has fewer risks. The fourth paragraph indicates that there could be some risks to the implicit conclusions that consumers draw, but this is not part of the research in question.

The correct answer is C.

Questions 24–27 refer to the passage on page 34.

RC00222-01

24. It can be inferred from the passage that the two procedures described in the passage have which of the following in common?

(A) They have been applied in practice.

(B) They rely on the use of a device that measures tension.

(C) Their purpose is to determine an unknown mass.

(D) They can only be applied to small solid objects.

(E) They involve attraction between objects of similar mass.

Inference

The procedures described in the passage are introduced by the suggestion in the first paragraph that someone in a spaceship who wanted to determine a solid object's mass could do so in a particular way. The second paragraph uses the word *weigh* in quotes to refer to a similar procedure for determining the mass of a double-star system.

A The language of the first paragraph is hypothetical: we *could* do particular things. Thus, there is no way to determine from the passage whether that procedure has been applied in practice.

B The first procedure relies on a spring scale, which measures tension, but the second procedure measures time and distance to determine restraining force.

C **Correct.** Both procedures determine mass: the first procedure can determine the mass of a small solid object on a spaceship in free fall, and the second can determine the mass of a double-star system.

D The first procedure would, according to the passage, be applied to a small solid object, but the second *weighs* double-star systems, which are clearly not small objects.

E The second procedure involves attraction between two stars, which could be of similar mass, in the same system, but the first procedure involves measuring tension in a string and speed of whirling, not attraction between objects.

The correct answer is C.

RC00222-02

25. According to the passage, the tension in the string mentioned in lines 8–9 is analogous to which of the following aspects of a double-star system?

(A) The speed with which one star orbits the other

(B) The gravitational attraction between the stars

(C) The amount of time it takes for the stars to circle one another

(D) The distance between the two stars

(E) The combined mass of the two stars

Supporting idea

The second paragraph states that an *attractive force* is analogous to the tension in the string. This attractive force is identified in the previous sentence as the gravitational force between the two stars in a double-star system.

A The second paragraph states that the speed with which the stars circle each other depends on the gravitational force between them, but it is that force that is analogous to the tension in the string.

B **Correct.** The second paragraph clearly identifies the gravitational force between the two stars as the attractive force that is analogous to the tension in the spring scale's string.

C The amount of time it takes for the stars to circle one another is necessary for calculating the force that holds them together, but it is the force itself that is analogous to the string's tension.

D The distance between the stars must be measured if the attraction between them is to be determined, but the attraction, not the distance, is analogous to the string's tension.

E The combined mass of the two stars is what the procedure is designed to determine; it is analogous to the mass of the small solid object, as described in the first paragraph.

The correct answer is B.

RC00222-03

26. Which of the following best describes the relationship between the first and the second paragraph of the passage?

(A) The first paragraph provides an illustration useful for understanding a procedure described in the second paragraph.

(B) The first paragraph describes a hypothetical situation whose plausibility is tested in the second paragraph.

(C) The first paragraph evaluates the usefulness of a procedure whose application is described further in the second paragraph.

(D) The second paragraph provides evidence to support a claim made in the first paragraph.

(E) The second paragraph analyzes the practical implications of a methodology proposed in the first paragraph.

Evaluation

This question requires understanding that the second paragraph describes a somewhat difficult-to-understand procedure that the first paragraph illustrates in smaller, and simpler, terms.

A **Correct.** The first paragraph illustrates, hypothetically, a simple procedure for determining mass, and this illustration provides the grounds on which the passage explains the procedure of the second paragraph.

B The first paragraph describes a situation in hypothetical terms, but the second paragraph does not test that situation's plausibility. Instead, the second paragraph draws an analogy between the initial situation and another procedure.

C The first paragraph does not evaluate the usefulness of the procedure for determining a small solid object's mass while in a spaceship in freefall; it simply describes how that procedure would work.

D The second paragraph provides no evidence; it describes a procedure analogous to what is described in the first paragraph.

E The second paragraph does not discuss the practical implications of the first paragraph's methodology but rather a procedure that is analogous to the hypothetical situation of the first paragraph.

The correct answer is A.

RC00222-04

27. The author of the passage mentions observations regarding the period of a double-star system as being useful for determining

(A) the distance between the two stars in the system

(B) the time it takes for each star to rotate on its axis

(C) the size of the orbit the system's two stars occupy

(D) the degree of gravitational attraction between the system's stars

(E) the speed at which the star system moves through space

Supporting idea

The author mentions the period of a double-star system in the final sentence of the second paragraph, defining it as the time required for stars to circle each other. Knowing this time, in combination with the distance between the stars, enables the determination of the restraining force between the stars.

A The final sentence of the second paragraph indicates that the period of a double-star system is measured independently of the distance between the two stars in the system.

B The passage is not concerned with how long it takes each star to rotate on its axis.

C The passage does not mention anyone's trying to determine the size of the orbit of a system's two stars. It does mention the related topic of distance between the stars but indicates that knowing such distance is required for measuring the stars' mass, not that it can be inferred from the period of the system.

D **Correct.** According to the passage, the restraining force, or gravitational attraction, between the two stars can be deduced based on the period and the distance between them.

E The passage does not mention the speed at which the star system moves through space.

The correct answer is D.

Questions 28–30 refer to the passage on page 36.

RC00267-01

28. The passage is primarily concerned with

(A) evaluating the evidence of a major geologic period and determining its duration

(B) describing an evolutionary phenomenon and speculating about its cause

(C) explaining the mechanisms through which marine life-forms evolved during a particular period

(D) analyzing the impact on later life-forms of an important evolutionary development

(E) contrasting a period of evolutionary change with other such periods

Main idea

This question asks for an assessment of what the passage as a whole is doing. The passage is mainly concerned with a possible link between certain geological and ecological changes that occurred during the Ordovician period and the Ordovician radiation (when existing marine invertebrate life-forms gave rise to new variations that would eventually lead to new species).

A The passage is not particularly concerned with determining the length of the period in question.

B **Correct.** The passage is mainly concerned with a possible link between the evolutionary phenomenon of the Ordovician radiation and certain environmental changes that may have resulted in an enriched pattern of habitats and nutrients that could have fostered that radiation.

C The passage indicates that the particular mechanisms through which marine life-forms evolved are not well understood.

D Although the passage indicates that the changes it discusses ultimately did lead to new life-forms, it does not analyze that relationship.

E The passage does not discuss any period of evolutionary change besides the Ordovician radiation.

The correct answer is B.

RC00267-02

29. Which of the following can be inferred from the passage regarding the geologic changes that occurred during the Ordovician period?

(A) They were more drastic than those associated with other radiations.

(B) They may have created conditions favorable to the evolution of many new life-forms.

(C) They may have caused the extinction of many of the marine species living in shallow waters.

(D) They may have been a factor in the development of new species adapted to living both on land and in water.

(E) They hastened the formation of the extensive dry regions found in the western United States.

Inference

The question asks what can be inferred from the passage's claims regarding the geologic changes that took place during the Ordovician period. The passage indicates that during this period the sea level dropped and mountain ranges were formed and that these changes, rather than leading to large-scale extinctions, may have created more favorable habitats providing greater nutrients, which would likely have been favorable to newly evolved life-forms.

A The passage does not mention other radiations and does not compare the Ordovician geologic changes to geologic changes associated with other radiations.

B **Correct.** The passage does suggest that certain geologic changes that occurred during the Ordovician period may have created conditions favorable to the new life-forms associated with the Ordovician radiation.

C The passage does not indicate whether any marine species became extinct; in fact, it explicitly denies that the geologic changes led to any large-scale extinctions.

D The passage does not indicate that any new species were adapted to living both on land and in water. It merely discusses marine life-forms.

E Although these geologic changes did likely create newly dry areas in the western United States, it does not indicate that these areas are *extensive*.

The correct answer is B.

RC00267-03

30. Which of the following best describes the function of the last sentence of the passage?

(A) It points out that the events described in the passage may be atypical.

(B) It alludes to the fact that there is disagreement in the scientific community over the importance of the Ordovician radiation.

(C) It concludes that the evidence presented in the passage is insufficient to support the proposed hypothesis because it comes from a limited geographic area.

(D) It warns the reader against seeing a connection between the biological and geologic changes described in the passage.

(E) It alerts the reader that current knowledge cannot completely explain the relationship suggested by the evidence presented in the passage.

Evaluation

The last sentence of the passage functions primarily to indicate that, though certain evidence from the geologic record suggests a possible cause of the Ordovician radiation, the current level of knowledge regarding the relationship between environmental factors and that radiation is not sufficient for a full understanding of that relationship.

A Although there may be certain geologic or evolutionary aspects of the Ordovician period that are atypical, the final sentence of the passage does not address them.

B Neither the final sentence nor the rest of the passage addresses any disagreements within the scientific community.

C Although the final sentence of the passage does indicate that current understanding of the relationship between the environmental factors discussed and the Ordovician radiation is incomplete, it does not indicate that it is because the evidence comes from a limited geographic area that the evidence is insufficient.

D The last sentence does not advise against seeing a connection between the biological and geologic changes discussed; it merely advises that such a connection is not yet fully understood.

E **Correct.** The last sentence indicates to the reader that current knowledge is insufficient for fully explaining the relationships among the evidence provided in the passage regarding geologic, ecological, and evolutionary changes.

The correct answer is E.

Questions 31–36 refer to the passage on page 38.

RC00141-01

31. The author of the passage is primarily concerned with

(A) criticizing Locke's economic theories

(B) discounting the contribution of labor in a modern economy

(C) questioning the validity of the labor theory of value

(D) arguing for a more equitable distribution of business profits

(E) contending that employers are overcompensated for capital goods

Main idea

This question depends on an understanding of the passage as a whole. The first paragraph describes the labor theory of value and the theory's historical origins in the philosophy of John Locke. The second paragraph provides some analysis of the theory and uses the analysis to support a critique.

A The passages describes an historical connection between the labor theory of value and Locke's economic theories and suggests that the influence of Locke on the labor theory of value is one reason why, according to the author, the theory may be inadequate. This perhaps suggests an indirect criticism of Locke and his theories, via his influence on more recent theories. However, Locke's economic theories are not criticized directly and are not the focus of the passage.

B Although the passage may suggest that a particular economic theory—the labor theory of value—may exaggerate the "contribution of labor in a modern economy" because the theory may neglect the importance of capital goods, the author does not suggest that the contribution of labor is unimportant.

C **Correct.** This is the best answer. The second paragraph—more than half of the passage—is almost entirely focused on critiquing the labor theory of value. The first paragraph, by introducing the theory and providing some historical context, can be seen as supporting the critique, by introducing the theory to readers who may not be familiar with it.

D The passage offers no argument for or against a more equitable distribution of business profits.

E The point at issue in this option is similar to the point at issue in D, to do with what might be right or wrong, or more equitable, in matters concerning the distribution of money or "compensation." The passage makes no argument as to what might be right or wrong in this respect.

The correct answer is C.

RC00141-02

32. According to the author of the passage, which of the following is true of the distribution of the income derived from the total output of consumer goods in a modern economy?

(A) Workers receive a share of this income that is significantly smaller than the value of their labor as a contribution to total output.

(B) Owners of capital goods receive a share of this income that is significantly greater than the contribution to total output attributable to the use of capital goods.

(C) Owners of capital goods receive a share of this income that is no greater than the proportion of total output attributable to the use of capital goods.

(D) Owners of capital goods are not fully compensated for their investment because they pay out most of their share of this income to workers as wages and benefits.

(E) Workers receive a share of this income that is greater than the value of their labor because the labor theory of value overestimates their contribution to total output.

Supporting idea

This question asks us to identify something that is true of the distribution of the income derived from all of the consumer goods that are produced in the modern economy.

A The passage makes certain claims about the relative distribution of income between workers and the owners of capital goods, with respect to the income derived from the total output of consumer goods. However, no clear comparison is made between the share thus received by workers and the "value" of their labor.

B The passage states that roughly one-third of the total output of consumer goods is attributable to the use of capital goods and that the owners of capital receive one-third of the income from this total output. The shares of income are roughly the same.

C **Correct.** This is the best answer. As mentioned in connection with option B, the share of income to the owners of capital goods is roughly equal to the proportion of total output of consumer goods that can be attributed to the use of capital goods.

D Although the passage mentions that some workers, because they are shareholders or pension beneficiaries, receive some of the income that "serves as compensation to the owners of capital goods," there is no indication that this is *most* of the share that serves as the compensation to these owners. Furthermore, the workers who are, say, shareholders, may be owners of capital themselves. Therefore, the income that these workers receive as shareholders may be no reduction at all to the income received by the owners of capital.

E The passage does not suggest that workers receive a share of the income derived from the total output of consumer goods that is greater than the value of their labor. And it provides no explanation of such a phenomenon.

The correct answer is C.

RC00141-04

33. Which of the following statements, if true, would most effectively counter the author's criticism of Locke at the end of the passage?

(A) Locke was unfamiliar with the labor theory of value as it was formulated by his intellectual heirs.

(B) In Locke's day, there was no possibility of ordinary workers becoming shareholders or pension beneficiaries.

(C) During Locke's lifetime, capital goods did not make a significant productive contribution to the economy.

(D) The precise statistical calculation of the productive contributions of labor and capital goods is not possible without computers.

(E) The terms "capital goods" and "consumer goods" were coined by modern economists and do not appear in Locke's writings.

Application

The question asks us to identify the most effective counter to the criticism of Locke that he is at least somewhat responsible for the fact, according to the author of the passage, that the labor theory of value "systematically disregards" the contribution of capital goods to production.

A The criticism of Locke in question has to do with his supposed responsibility for a supposed flaw in a certain theory, presumably because of his influence on later theorizers. That Locke was "unfamiliar" with this theory, which did not exist at the time of Locke, does not significantly mitigate Locke's (supposed) responsibility for the (supposed) flaw in the theory.

B Once we see what the criticism of Locke is, to do with a claim that he is responsible for a "systematic disregard" of a certain theory of the productive contribution of capital goods, we can see that this option is irrelevant.

C **Correct.** Whatever the flaws in Locke's theories, it would seem wrong to hold him responsible for "neglecting" something—capital goods in this case—that was not a significant factor in his day. Given the fact (assuming that it is a fact) that capital goods were not a significant factor when Locke was alive, the responsibility for neglecting them (assuming that they have been neglected by economic theorists) may seem to rest with those who have neglected them after they have become a significant factor.

D The precision of the calculation of the productive contributions of labor and capital goods—to the degree for which a computer would be necessary—is not a factor anywhere in the passage, and it would not be relevant to the criticism of Locke.

E That certain terms are used today that were not used in the past does not indicate that there were not other terms that were used to refer to the same thing. And the mere fact of the word we happen to use to refer to capital goods is not relevant to the criticism of Locke.

The correct answer is C.

RC00141-05

34. Which of the following best describes the organization of the passage?

(A) The author explores the origins of a theory and explains why the theory never gained widespread acceptance.

(B) The author introduces the premise of a theory, evaluates the premise by relating it to objective reality, then proposes a modification of the theory.

(C) After quoting a well-known authority, the author describes the evolution of a theory, then traces its modern form back to the original quotation.

(D) After citing a precursor of a theory, the author outlines and refutes the theory, then links its flaw to the precursor.

(E) After tracing the roots of a theory, the author attempts to undermine the theory by discrediting its originator.

Evaluation

The question asks us to identify the statement that most accurately describes the organization of the passage.

A The author indeed explores an aspect of the origin of the labor theory of value, to do with the philosopher John Locke. However, the author neither claims that the theory never gained widespread acceptance nor tries to explain a supposed fact that the theory never gained widespread acceptance.

B Although the author explains a fundamental aspect of a theory—the labor theory of value—and then may seem to evaluate this aspect by "relating it to objective reality," she or he does not propose a modification of the theory.

C The passage indeed quotes John Locke, who is well known and may be considered an authority on certain matters. However, Locke would not be considered an authority on the contents of the labor theory of value, which, the passage suggests, did not exist at the time of Locke. Furthermore, much of the passage is devoted to developing a criticism of the theory. A good characterization of the passage would need to at least mention this criticism.

D **Correct.** The author begins the passage by describing a theory of John Locke that is, according to the author, a precursor to the labor theory of value. Most of the second paragraph is devoted to a criticism of the theory, which the author ends by claiming that Locke is somewhat responsible for the supposed flaw.

E The criticism of the labor theory of value is based on certain purported claims, made by the theory, about the economy that, according to the author, do not agree with the theory. The criticism of John Locke is then based on this critique of the theory, and the claim that Locke is somewhat responsible for the flaw in the theory that the author claims to identify. Because the critique of the theory is thus not based on the critique of Locke, and thus not on something that would purportedly "discredit" him, this option is clearly incorrect.

The correct answer is D.

RC00141-06

35. Which of the following arguments would a proponent of the labor theory of value, as it is presented in the first paragraph, be most likely to use in response to lines 23–25?

(A) The productive contributions of workers and capital goods cannot be compared because the productive life span of capital goods is longer than that of workers.

(B) The author's analysis of the distribution of income is misleading because only a small percentage of workers are also shareholders.

(C) Capital goods are valuable only insofar as they contribute directly to the production of consumer goods.

(D) The productive contribution of capital goods must be discounted because capital goods require maintenance.

(E) The productive contribution of capital goods must be attributed to labor because capital goods are themselves products of labor.

Application

The passage asks us to identify the most likely response of a proponent of the labor theory of value, as the theory is described in the passage, to lines 23–25. Because the statement in lines 23–25 is a criticism of the theory, it is reasonable to expect that a likely response of a proponent of the theory may be to defend the theory against this criticism.

A The labor theory of value, as described by the author, would suggest that the relative contributions of workers and capital goods can be compared. According to the theory (as described by the author), it is labor that makes the fundamental contribution—a clear comparison. So the statement that the relative contributions cannot be so compared would not defend the theory.

B Although this option may offer a reasonable criticism of an aspect of the passage, it does not offer a criticism of the point that is made in lines 23–25.

C The statement in this option may seem to describe how, according to the author, capital goods get their value. Restating this point of the author would not defend the labor theory of value against the author's arguments.

D This statement is consistent with the content of the passage; for example, the discount due to maintenance could already be figured into the calculations behind the author's claims as to the relative importance of capital goods and labor.

E **Correct.** If the productive contribution of capital goods is attributed to labor, then the author's claim, against the labor theory of value, that this productive contribution should not be attributed to labor, would be incorrect. The labor theory of value might therefore be justified when, according to lines 23–25, it "systematically disregards the productive contribution of capital goods."

The correct answer is E.

RC00141-07

36. The author of the passage implies which of the following regarding the formulators of the labor theory of value?

(A) They came from a working-class background.

(B) Their views were too radical to have popular appeal.

(C) At least one of them was a close contemporary of Locke.

(D) They were familiar with Locke's views on the relationship between labor and the value of products.

(E) They underestimated the importance of consumer goods in a modern economy.

Inference

The question asks us to identify an inference that can be made regarding the people who formulated the labor theory of value.

A Although it is plausible that the formulators of the theory may have been sympathetic with the interests of people who may be described as working class, there is no indication that the author of the passage actually has a working-class background.

B Although at least some proponents of the theory have been considered radical, there is nothing in the passage that indicates this, or indicates whether or not the theory had popular appeal.

C The "short step," mentioned in the passage, from Locke's theory of value to the labor theory of value, could seem to indicate a short step in time, whereby at least one of the formulators of the theory would be a rough contemporary of Locke. However, this would be an incorrect reading. Rather than a "step" in time, the "short step" in the passage refers to a logical step, whereby it would be a "short step" from one theory to another that resembles it in fundamental respects.

D **Correct.** The passage strongly suggests that the formulators of the labor theory of value were influenced by Locke's views in certain fundamental respects. This indicates that the formulators would likely have been familiar with these views.

E Although the author of the passage suggests that proponents of the labor theory of value may have significantly underestimated the importance of capital goods in the economy, no such suggestion is made about the importance of consumer goods.

The correct answer is D.

Questions 37–45 refer to the passage on page 40.

RC00204-01

37. The author of the passage draws conclusions about the fur trade in North America from all of the following sources EXCEPT

(A) Cartier's accounts of trading with Native Americans

(B) a seventeenth-century account of European settlements

(C) a sixteenth-century account written by a sailing vessel captain

(D) archaeological observations of sixteenth-century Native American sites

(E) a sixteenth-century account of Native Americans in what is now New England

Supporting idea

This question asks about the sources mentioned by the author of the passage. Answering the question correctly requires determining which answer option is NOT referred to in the passage as a source of evidence regarding the North American fur trade.

A **Correct.** The passage mentions Cartier's voyage but does not refer to Cartier's accounts of his trading.

B In the first paragraph, Nicolas Denys's 1672 account of European settlements provides evidence of fur trading by sixteenth-century European fishing crews.

C In the second paragraph, a Portuguese captain's records provide evidence that the fur trade was going on for some time prior to his 1501 account.

D In the first paragraph, archaeologists' observations of sixteenth-century Native American sites provide evidence of fur trading at that time.

E In the second paragraph, a 1524 account provides evidence that Native Americans living in what is now New England had become selective about which European goods they would accept in trade for furs.

The correct answer is A.

RC00204-02

38. The passage suggests that which of the following is partially responsible for the difficulty in establishing the precise date when the fur trade in North America began?

(A) A lack of written accounts before that of Nicolas Denys in 1672

(B) A lack of written documentation before 1501

(C) Ambiguities in the evidence from Native American sources

(D) Uncertainty about Native American trade networks

(E) Uncertainty about the origin of artifacts supposedly traded by European fishing crews for furs

Inference

The question asks about information implied by the passage. The first paragraph points out the difficulty of establishing exactly when the fur trade between Native Americans and Europeans began. The second paragraph explains that the first written record of the fur trade (at least the earliest known to scholars who study the history of the trade) dates to 1501, but that trading was already well established by that time. Thus, it can be inferred that lack of written records prior to 1501 contributes to the difficulty in establishing an exact date for the beginning of the fur trade.

A Two written records of the fur trade prior to the account by Nicolas Denys are mentioned in the passage. The passage does not suggest that a lack of written records from before 1672 is a source of the difficulty in establishing the date.

B **Correct.** The passage indicates that the fur trade was well established by the time of the documentation dating from 1501 but strongly suggests that there is no known earlier documentation regarding that trade, so a lack of records before that time contributes to the difficulty in establishing an exact date.

C The only Native American sources mentioned in the passage are archaeological sites, and there is no indication of ambiguities at those sites.

D Native American trade networks are not mentioned in the passage.

E The passage mentions that fishing crews exchanged parts of their ships for furs and does not suggest any uncertainty about the origin of those artifacts.

The correct answer is B.

RC00204-03

39. Which of the following, if true, most strengthens the author's assertion in the first sentence of the second paragraph?

(A) When Europeans retraced Cartier's voyage in the first years of the seventeenth century, they frequently traded with Native Americans.

(B) Furs from beavers, which were plentiful in North America but nearly extinct in Europe, became extremely fashionable in Europe in the final decades of the sixteenth century.

(C) Firing arms were rarely found on sixteenth-century Native American sites or on European lists of trading goods since such arms required frequent maintenance and repair.

(D) Europeans and Native Americans had established trade protocols, such as body language assuring one another of their peaceful intentions, that antedate the earliest records of trade.

(E) During the first quarter of the sixteenth century, an Italian explorer recorded seeing many Native Americans with what appeared to be copper beads, though they may have been made of indigenous copper.

Evaluation

The question depends on evaluating an assertion made in the passage and determining which additional evidence would most strengthen it. The first sentence of the second paragraph claims that the fur trade was well established by the time Europeans sailing the Atlantic coast of America first documented it. The passage then indicates that the first written documentation of the trade dates to 1501. Thus, evidence showing that trade had been going on for some time before 1501 would strengthen (support) the assertion.

A This evidence shows trade occurring in the first years of the seventeenth century, not prior to the first records from 1501.

B This evidence shows trade occurring in the final decades of the sixteenth century, not prior to the first records from 1501.

C This evidence does not indicate that trade took place prior to the first records from 1501.

D **Correct.** Evidence that trade protocols had developed before the trade was first recorded (in 1501) would strengthen support for the assertion that trade was taking place prior to the earliest documentation.

E Because the copper beads may have been made by Native Americans rather than acquired through trade with other societies, this observation would not provide evidence that trade with Europeans took place prior to 1501.

The correct answer is D.

RC00204-04

40. Which of the following best describes the primary function of lines 11–16?

(A) It offers a reconsideration of a claim made in the preceding sentence.

(B) It reveals how archaeologists arrived at an interpretation of the evidence mentioned in the preceding sentence.

(C) It shows how scholars misinterpreted the significance of certain evidence mentioned in the preceding sentence.

(D) It identifies one of the first significant accounts of seventeenth-century European settlements in North America.

(E) It explains why Denys's account of seventeenth-century European settlements is thought to be significant.

Evaluation

This question depends on understanding how the last sentence of the first paragraph functions in relation to the larger passage. The first paragraph explains that the earliest Europeans to trade with Native Americans were fishing crews near Newfoundland. The second-to-last sentence of the paragraph describes archaeological artifacts from Native American sites. The last sentence then explains that Nicolas Denys's 1672 account helped archaeologists realize that the artifacts were evidence of trade with fishing crews. Thus, the last sentence of the passage shows how archaeologists learned to interpret the evidence mentioned in the previous sentence.

A The only claim made in the previous sentence is that archaeologists found a particular type of evidence. The final sentence of the paragraph does not suggest that this claim should be reconsidered.

B **Correct.** After reading Denys's account, archaeologists were able to interpret the archaeological evidence mentioned in the previous sentence.

C The passage suggests that archaeologists correctly interpreted the evidence, not misinterpreted it.

D Denys's account is mentioned primarily to explain how archaeologists learned to interpret the archaeological evidence, not primarily to identify an important early account of settlements.

E The passage does not discuss why Denys's account is significant, only that archaeologists used it to help understand the evidence mentioned in the previous sentence.

The correct answer is B.

RC00204-05

41. It can be inferred from the passage that the author would agree with which of the following statements about the fur trade between Native Americans and Europeans in the early modern era?

(A) This trade may have begun as early as the 1480s.

(B) This trade probably did not continue much beyond the 1530s.

(C) This trade was most likely at its peak in the mid-1520s.

(D) This trade probably did not begin prior to 1500.

(E) There is no written evidence of this trade prior to the seventeenth century.

Inference

The question requires determining which statement can most reasonably be inferred from the information in the passage. The passage argues that it is difficult to determine when the fur trade between Native Americans and Europeans began, since the earliest people to participate in that trade apparently left no written records. The second paragraph notes that at the time of the earliest known record in 1501, trade was already *well underway*. In the final two sentences of the passage, the author mentions an event that occurred in 1534 and then says that by that time the trade may have been going on for *perhaps half a century*.

A **Correct.** The next-to-last sentence of the passage cites evidence of fur trade between Native Americans and Europeans in 1524. In the final sentence of the passage, the author mentions an event that happened a decade after that date—thus in 1534—and expresses the opinion that the trade started *perhaps half a century* (fifty years) before that later date. Fifty years before 1534 would be 1484. This implies that the author accepts that the trade may have begun by the 1480s.

B The passage gives no indication that the author believes trade ended shortly after the 1530s.

C The passage does not discuss when the fur trade was at its peak.

D To the contrary, the passage argues that trade began well before 1501.

E The passage mentions written evidence of the trade from 1501 and 1524.

The correct answer is A.

RC00204-06

42. Which of the following can be inferred from the passage about the Native Americans mentioned in line 24?

(A) They had little use for decorative objects such as earrings.

(B) They became increasingly dependent on fishing between 1501 and 1524.

(C) By 1524, only certain groups of Europeans were willing to trade with them.

(D) The selectivity of their trading choices made it difficult for them to engage in widespread trade with Europeans.

(E) The selectivity of their trading choices indicates that they had been trading with Europeans for a significant period of time prior to 1524.

Inference

The question asks about information that can be inferred from the passage. The Native Americans mentioned in the 1524 chronicles accepted only certain kinds of European goods in trade. The passage indicates that these Native Americans *had become selective* about which goods they would accept, which implies that by 1524 they had been trading long enough to determine which European goods were most valuable to them.

A The passage does not imply that these Native Americans had no use for decorative objects, only that they did not desire to obtain such items through trade with Europeans.

B The passage does not suggest that the Native Americans' dependency on fishing changed over time.

C There is no indication that any groups of Europeans were unwilling to trade with these Native Americans.

D The passage notes that the Native Americans were selective in their trade choices but does not suggest that such selectivity made widespread trade difficult.

E **Correct.** The passage notes that by 1524, the Native Americans had become selective about which European goods they would accept, and the passage takes this to indicate that the trade with Europeans significantly predated 1524.

The correct answer is E.

RC00204-07

43. The passage supports which of the following statements about sixteenth-century European fishing crews working the waters off Newfoundland?

(A) They wrote no accounts of their fishing voyages.

(B) They primarily sailed under the flag of Portugal.

(C) They exchanged ship parts with Native Americans for furs.

(D) They commonly traded jewelry with Native Americans for furs.

(E) They carried surplus metal implements to trade with Native Americans for furs.

Inference

The question asks which statement is supported by information provided in the passage. The first paragraph states that European fishing crews around Newfoundland were the first Europeans to trade goods for furs with Native Americans in the modern period. The last sentence of the paragraph states that archaeological evidence indicates the crews had dismantled their ships to trade ship parts for furs.

A The second sentence states that the crews left no written accounts of their trade with Native Americans, but it does not suggest that they left no written accounts of their voyages.

B The passage mentions one Portuguese vessel but does not suggest that the European crews who fished off Newfoundland were mostly on Portuguese vessels.

C **Correct.** The last sentence of the first paragraph supports the conclusion that the crews traded ship parts for furs.

D The passage mentions one instance of a Native American acquiring earrings from Europeans but does not suggest that trades for such goods were common.

E The passage indicates that fishing crews traded metal implements with Native Americans but does not suggest that they brought surplus implements for that purpose—and in fact mentions that sometimes traded metal articles had been parts of their own ships.

The correct answer is C.

RC00204-08

44. Which of the following can be inferred from the passage about evidence pertaining to the fur trade between Native Americans and Europeans in the early modern era?

(A) A lack of written evidence has made it difficult to establish which Europeans first participated in this trade.

(B) In general, the physical evidence pertaining to this trade has been more useful than the written evidence has been.

(C) There is more written evidence pertaining to this trade from the early part of the sixteenth century than from later in that century.

(D) The earliest written evidence pertaining to this trade dates from a time when the trade was already well established.

(E) Some important pieces of evidence pertaining to this trade, such as Denys's 1672 account, were long overlooked by archaeologists.

Inference

This question asks about information that can be inferred from the passage. Any suggestion that Native Americans may have produced written evidence of the early-modern trade with Europeans is absent from the passage. The second paragraph states that by the time Europeans first documented the fur trade, it was already well underway. This statement, in the context of the passage, implies that the earliest written records of the trade date to a time after it was well established.

A The first paragraph indicates that the first Europeans to participate in the trade were quite certainly fishing crews near Newfoundland.

B The passage gives no indication that physical evidence of the trade has been more useful than written evidence.

C Although the passage does not cite written evidence from the late sixteenth century, the passage gives no reason to believe that less written evidence exists from that time.

D **Correct.** According to the passage, the fur trade was well underway when written evidence of the trade was first documented by Europeans. The passage contains no suggestion that there might have been earlier documentation of that trade by anybody other than Europeans.

E The passage does not imply that archaeologists overlooked evidence for long periods of time.

The correct answer is D.

RC00204-09

45. The passage suggests which of the following about the sixteenth-century Native Americans who traded with Europeans on the coast of what is now called New England?

(A) By 1524 they had become accustomed to exchanging goods with Europeans.

(B) They were unfamiliar with metals before encountering Europeans.

(C) They had no practical uses for European goods other than metals and metal implements.

(D) By 1524 they had become disdainful of European traders because such traders had treated them unfairly in the past.

(E) By 1524 they demanded only the most prized European goods because they had come to realize how valuable furs were on European markets.

Inference

The question asks about what is implied in the passage. The Native Americans trading with Europeans on the coast of what is now called New England are discussed in the 1524 chronicles mentioned in the second paragraph. The passage indicates that these Native Americans *had become selective* about which European goods they would accept in trade, which suggests they had become accustomed to trading with Europeans.

A **Correct.** By the time the chronicle was written, the Native Americans were familiar enough with trade to be able to specify which European goods they would accept.

B Although the Native Americans chose to trade furs for European metal goods, the passage does not imply they were unfamiliar with any metals prior to encountering Europeans.

C The passage does not suggest why Native Americans preferred certain goods over others.

D The passage does not attribute disdain for European traders to Native Americans.

E There is no indication in the passage that Native Americans were aware of furs' value in European markets.

The correct answer is A.

Questions 46–49 refer to the passage on page 42.

RC00201-01

46. The passage is primarily concerned with

(A) describing the development of the biological species concept

(B) responding to a critique of reproductive compatibility as a criterion for defining a species

(C) considering two different approaches to identifying biological species

(D) pointing out the advantage of one method of distinguishing related species

(E) identifying an obstacle to the classification of biological species

Main idea

This question depends on understanding the passage as a whole. The passage begins by explaining that identifying a species can be difficult, because there are different ways of defining the term. The biological species concept is one approach, but it has problems. Phenotype is another approach that can be used when the biological species concept proves difficult.

A The first paragraph defines the biological species concept and identifies some problems with its application, but it does not explain how that concept developed.

B The passage presents some critiques of reproductive compatibility as a way of identifying a biological species; it does not concern itself with responding to those critiques.

C **Correct.** The passage considers the biological species concept and the idea of phenotype as ways of identifying biological species.

D While the passage identifies two ways of distinguishing species and states that some investigators use one of those methods—the phenotype method—when the biological method is difficult to apply, the passage is not primarily concerned with pointing out that either one is better than the other.

E The passage does discuss certain obstacles to the classification of species. First, it points out that there is no single accepted definition of *distinct species*. Second, it points out obstacles related to one particular approach to the classification of species. However, the passage considers these obstacles in service of its primary concern, namely considering two different approaches to identifying biological species.

The correct answer is C.

RC00201-03

47. The author of the passage mentions "groups that live in different places" (line 21) most probably in order to

(A) point out a theoretical inconsistency in the biological species concept

(B) offer evidence in support of the biological species concept

(C) identify an obstacle to the application of the biological species concept

(D) note an instance in which phenotype classification is customarily used

(E) describe an alternative to the biological species concept

Evaluation

The author's mention of *groups that live in different places* comes at the end of the first paragraph, in the context of discussing a third problem with the biological species concept: that investigators may not know whether animals in such groups are able to interbreed.

A The author does not address theoretical inconsistencies in the biological species concept.

B The author mentions groups that live in different places in order to address a problem with the biological species concept, not to support it.

C **Correct.** One obstacle to applying the biological species concept is that those attempting to distinguish among species may not be able to determine whether geographically separated groups of animals can interbreed.

D The passage does mention that some investigators use phenotype classification when the biological species concept is difficult to apply, but it does not mention specifically that a situation in which groups live in different places is an instance in which phenotype classification is customarily used.

E Animal groups that live in different places pose a problem for the application of the biological species concept, according to the author. The author does not mention these groups in order to describe an alternative to that concept.

The correct answer is C.

RC00201-04

48. With which of the following statements regarding the classification of individual species would the author most likely agree?

(A) Phenotype comparison may help to classify species when application of the biological species concept proves inconclusive.

(B) Because no standard definition exists for what constitutes a species, the classification of animal populations is inevitably an arbitrary process.

(C) The criteria used by biologists to classify species have not been based on adequate research.

(D) The existence of hybrids in wild animal species is the chief factor casting doubt on the usefulness of research into reproductive compatibility as a way of classifying species.

(E) Phenotype overlap should be used as the basic criterion for standardizing species classification.

Inference

This question depends on understanding the general points the author makes with regard to classification of individual species. The author explains that there is no single definition of species and then describes the biological species concept, which depends on reproductive compatibility. This approach has several problems, however, and the author goes on to say that phenotype may be used when the biological species concept is difficult to apply.

A **Correct.** The author states at the beginning of the second paragraph that some investigators use phenotype when they find it difficult to apply the biological species concept, and the passage provides no reason to believe that the author would disagree with the idea that phenotype comparison can be helpful in these situations.

B The author would most likely not agree that classification of animal populations is arbitrary. Investigators use clearly defined approaches, such as the biological species concept and phenotype classification, to make such classifications. That there may be problems with an approach does not make it arbitrary.

C The author states that the biological species concept can be too restrictive, but there is no suggestion that the author finds this approach, or phenotype classification, to be inadequately researched.

D The author mentions hybridization first as a factor casting doubt on the usefulness of the biological species concept, but nothing in the passage suggests that the author thinks that it is more significant than the other reasons offered for finding the biological species concept too restrictive.

E Phenotype overlap does not receive the author's endorsement as the best, or most basic, way of classifying species; instead, the author states merely that some investigators rely on this approach when they cannot apply the biological species concept.

The correct answer is A.

RC00201-05

49. Which of the following best describes the function of lines 10–13?

(A) It elaborates the definition of the biological species concept given in a previous sentence.

(B) It develops a point about the biological species concept made in the previous sentence.

(C) It states the author's central point about the biological species concept.

(D) It identifies a central assumption underlying the biological species concept.

(E) It demonstrates why the biological species concept is invalid.

Evaluation

The sentence in question discusses hybridization as a first factor complicating the applicability of the biological species concept. Thus its function is to help explain why, as the previous sentence states, that concept is too restrictive.

A The sentence in question brings up a problem with the biological species concept; it does not elaborate the definition of that concept.

B **Correct.** According to the sentence that precedes the sentence in question, the biological species concept can be too restrictive. The author offers three reasons to develop this point, and the first reason is given in the sentence in question.

C The sentence in question could be said to support the author's central point about the biological species concept—that it is one (flawed) way of determining whether a population is a species—but it does not state that central point.

D The sentence in question expresses a problem with the biological species concept, not a central assumption of it.

E The sentence in question serves to indicate a problem with the biological species concept, but it does not go so far as to demonstrate that it is invalid.

The correct answer is B.

Questions 50–52 refer to the passage on page 44.

RC00322-01

50. The primary purpose of the passage is to

(A) summarize findings in an area of research

(B) discuss different perspectives on a scientific question

(C) outline the major questions in a scientific discipline

(D) illustrate the usefulness of investigating a research topic

(E) reconcile differences between two definitions of a term

Main idea

The passage discusses two problems confronting researchers studying the genetic bases of animal behavior: the complexity of the control of most behaviors by multiple genes, and divergence between research fields in what counts as a behavioral gene. The passage focuses mainly on the latter issue, discussing how ethologists define "behavioral gene" in a narrower manner than neuroscientists, who define the term broadly. To elucidate the ethologists' approach, two genes are discussed, one a behavioral gene, the other not.

A The passage primarily aims to explain how researchers in two different research areas define "behavioral gene." It does not try to summarize the research findings of either area.

B **Correct.** The primary purpose of the passage is to identify differing perspectives on the scientific question of how genes control animal behavior.

C The scientific disciplines of genetics, neuroscience, and ethology—all subdisciplines of biology—contain many different "major questions," and the passage does not try to outline the great variety of such questions in any one of those subdisciplines.

D The topic of the utility of doing research is not part of the passage discussion.

E An important purpose of the passage is to illustrate divergence among scientific fields in how a key term is defined, but the point is to show how the definitions differ rather than to "reconcile" the difference.

The correct answer is B.

RC00322-02

51. The passage suggests that neuroscientists would most likely consider Shaker to be which of the following?

(A) An example of a behavioral gene

(B) One of multiple genes that control a single behavior

(C) A gene that, when mutated, causes an alteration in a specific normal behavior without making the organism ill

(D) A gene of interest to ethologists but of no interest to neuroscientists

(E) A poor source of information about the nervous system

Application

The passage asserts that ethologists do not regard *Shaker* as a behavioral gene because it merely makes fruit flies exhibit unhealthy behavior (shaking under anesthesia). But neuroscientists, according to the passage, are mainly interested in how genes, via the nervous system, contribute to behavior. The passage suggests that neuroscientists, unlike ethologists, have no reservation about using the term *behavioral gene* to apply to any gene that contributes to behavior. The implication is that neuroscientists would probably regard *Shaker* as a behavioral gene.

A **Correct.** The passage suggests that neuroscientists would probably regard *Shaker* as a behavioral gene.

B The passage indicates that research shows *Shaker* is a sufficient cause, in fruit flies, of shaking under anesthesia. Although some organism might display a behavior controlled by *Shaker* in concert with other genes, the passage is silent on any such possibility.

C The passage lacks information as to whether there is any alteration—one that neuroscientists would likely consider healthy—in a normal behavior if the alteration is caused by a mutation in *Shaker*.

D The passage indicates that neuroscientists' interest in genetics is part of their effort to understand the nervous system. This seems to imply that neuroscientists might be interested in *Shaker*.

E The passage is silent on how neuroscientists would evaluate the potential for *Shaker* to contribute to understanding of the nervous system.

The correct answer is A.

RC00322-05

52. It can be inferred from the passage that which of the following, if true, would be most likely to influence ethologists' opinions about whether a particular gene in a species is a behavioral gene?

(A) The gene is found only in that species.

(B) The gene is extremely difficult to identify.

(C) The only effect of mutations in the gene is to make the organism ill.

(D) Neuroscientists consider the gene to be a behavioral gene.

(E) Geneticists consider the gene to be a behavioral gene.

Application

The passage identifies two criteria that ethologists use in deciding whether a gene should count as a behavioral gene: a mutation in the gene alters a specific normal behavior and the mutation does not merely make the organism ill.

A The passage is silent on whether either of two genes identified by ethologists in fruit flies are to be found only in fruit flies. The two criteria mentioned used by ethologists carry no implication as to whether any gene unique to a given species would count as a behavioral gene.

B The difficulty of identifying a gene can obviously be due to many factors, such as limitations in existing scientific techniques, and the passage does not imply that such difficulty increases the likelihood that a gene would count as a behavioral gene for ethologists.

C **Correct.** The passage implies that if this were found to be true, ethologists would regard it as sufficient reason for not counting the gene as a behavioral gene.

D A central theme of the passage is that whether ethologists would count a gene as a behavioral gene is largely unaffected by whether neuroscientists do so, given the divergent perspectives of the scientists' respective disciplines.

E The main contrast in the passage with respect to definitions of the term *behavioral gene* is between ethologists and neuroscientists, and no specific definitional criteria for this term are explicitly attributed to geneticists. However, there is a slight suggestion that since geneticists find that most behaviors are governed by multiple genes, geneticists might regard any gene involved in the governance of a behavior as a behavioral gene. This approach, however, would be unlikely to influence the opinions of ethologists concerning definition.

The correct answer is C.

Questions 53–59 refer to the passage on page 45.

RC22661-01.01

53. The author indicates that tamarin territories are

(A) surprisingly large
(B) poorly situated
(C) unusually abundant in food resources
(D) incapable of supporting large troops of tamarins
(E) larger in Peru than in other parts of South America

Supporting idea

This question depends on understanding what the passage says about tamarin territories. In the second paragraph, the passage claims that the most surprising thing about tamarins is the size of their territories, and it indicates how large these territories are by comparing them to the territories of certain other animals.

A **Correct.** The passage indicates that the size of tamarins' territories—large in comparison to the territories of several other species—is surprising.

B The passage gives no indication as to whether tamarin territories are poorly situated.

C Although the passage does discuss the tamarin diet, it does not indicate how abundant in food sources tamarin territories are.

D The passage does indicate that relatively few tamarins live per square kilometer, but it does not claim that this is so because the territories are incapable of supporting a larger number of tamarins. In fact, there is some suggestion that the territories would seem to be capable of supporting more, which is one reason the size of the territories is so surprising.

E The passage does not compare the size of tamarin territories in Peru to tamarin territories elsewhere in South America.

The correct answer is A.

RC22661-02.01

54. The author mentions the spatial requirements of the gray squirrel in order to

(A) explain why they are so common
(B) demonstrate the consequences of their nonterritoriality
(C) emphasize the unusual territorial requirements of the tamarin
(D) provide an example of a major difference between squirrels and monkeys
(E) provide an example of an animal with requirements similar to those of the tamarin

Evaluation

The passage mentions the spatial requirements of the gray squirrel as part of its discussion of the surprising size of tamarin territories. Gray squirrel territories are mentioned for the specific purpose of highlighting how much more space tamarins require compared to another animal of roughly equal size.

A The passage does refer to "the common gray squirrel," but it does not explain why they are so common.

B The passage does not say anything about the consequences of the gray squirrel's nonterritoriality.

C **Correct.** The spatial requirements of gray squirrels are mentioned to highlight, by contrast, how expansive the spatial requirements of tamarins are.

D Although the passage mentions the spatial requirements of the gray squirrel to highlight how different the spatial requirements of one particular type of monkey, the tamarin, are from those of other animals, the passage does not mention the squirrels' spatial requirements to provide an example of a difference between squirrels and monkeys in general.

E The passage actually does the opposite of this—it mentions the gray squirrel's spatial requirements to provide an example of an animal with requirements vastly different from those of the tamarin.

The correct answer is C.

RC22661-03.01

55. The author regards the differences between the diets of the tamarins and several larger species as

(A) generally explicable in terms of territory size

(B) apparently too small to explain the rarity of tamarins

(C) wholly predictable on the basis of differences in body size

(D) a result of the rigid territoriality of tamarins

(E) a significant factor in determining behavioral differences

Supporting Idea

This question depends on recognizing that the passage rejects the idea that any differences between the diets of tamarins and those of certain larger animals are large enough to explain tamarins' relative rarity. The passage points out that these animals feed on the same fruits, nectar, and small prey, and claims that though the proportions of the fruits consumed varies somewhat, this variation is not sufficient to explain the tamarin's rarity.

A The author does not seek to explain why these differences in diet—which the passage indicates are minimal—exist. Given that the author indicates that differences in territory size are large and differences in diet are small, it is unlikely, in any case, that the author would regard the former as explaining the latter.

B **Correct.** The passage indicates that the differences in diet among these animals are too small to explain the rarity of tamarins.

C The author does not give any indication that the differences in the diets of these animals are predictable based on differences in body size.

D The author does indicate that tamarins are rather unusual among primates in their rigid territoriality, but there is no indication that this rigid territoriality explains the small differences in diet among tamarins and certain larger animals.

E The author mentions differences in diet merely to rule out that these differences are large enough to explain tamarins' rarity; these differences are not mentioned as a factor in determining behavioral differences.

The correct answer is B.

RC22661-04.01

56. Which of the following would most probably be regarded by the author as anomalous?

(A) A large primate species that eats mostly plants

(B) A species of small mammals that is fiercely territorial

(C) Two species of small primates that share the same territories

(D) A species of small birds that is more abundant than many species of larger birds

(E) A species of small rodents that requires more living space per individual than most species of larger rodents

Application

This question requires you to understand an underlying principle of the passage and to apply that principle to an instance that is not specifically discussed in the passage. The passage is concerned with how anomalous tamarins are: they are exceptions to the general rule that in general the number of animals in a species is proportional to the average body size of individuals within the species. The author also points out that tamarins are unusual in that the amount of space they require is out of proportion to their body size, suggesting the principle that an animal's spatial requirement is generally proportional to the animal's body size. And, though the passage is generally concerned with comparing tamarins to other primates, the author also compares tamarins' spatial requirements to those of gray squirrels, a type of rodent.

A The author does not give any indication whether it would be anomalous for a species of large primates to eat mostly plants. The author does not present a general principle about the diets of primates, and says nothing specific about species of large primates.

B Although the author indicates that the "rigid" territoriality of tamarins is "rather exceptional among primates," the author lists several other primate species that are also territorial. The author does not indicate whether such territoriality is rare among small mammals in general.

C The author indicates that most primates do not have "such concerted territoriality" as tamarins do, suggesting that the author may not think that two other species of small primates sharing territories would be anomalous.

D Given that the author indicates that generally the number of individuals within a species is inversely proportional to the average body size of the members of the species, the author would probably expect that a species of small birds would be more abundant than most species of larger birds and would not regard this as anomalous.

E **Correct.** The author would generally expect that smaller animals would require less living space than larger animals.

The correct answer is E.

RC22661-05.01

57. The author most probably regards the tamarins studied in Manu National Park as

(A) an endangered species

(B) typical tamarins

(C) unusually docile

(D) the most unusual primates anywhere

(E) too small a sample to be significant

Inference

This question requires you to make an inference from what the author says about the tamarins studied in Manu National Park to a claim about how the author most likely regards these tamarins. The author considers certain information that has been gathered about the two tamarin species studied in the park, and on the basis of that, makes claims about tamarins in general (note that the author elsewhere in the passage simply refers to "tamarins" without qualification, i.e., without referring specifically to "the tamarins studied in Manu National Park"). This suggests that the author would regard the tamarins studied in the park as being typical of tamarins generally, at least in the ways discussed.

A It is possible that the two tamarin species studied in the park are endangered, but apart from noting the surprisingly small number of individuals belonging to the species, there is no information that would suggest that they are endangered, and the mere fact that the number of members is relatively small compared to the number of members in other species is not sufficient to indicate that they are endangered, as that number could nonetheless be stable or even growing.

B **Correct.** The author does not specifically mention anything that would indicate that these tamarins are atypical of tamarins in general, and appears to make inferences about tamarins in general on the basis of the two species studied in the park. The author would not be justified in making such inferences if the author believed that the tamarins observed in the park were not in fact typical.

C The author does not give any indication that these species are unusually docile, and in fact suggests the opposite by indicating that tamarins vigorously expel any intruders from their territories.

D The author does note some ways in which these tamarin species are unusual among primates, but does not indicate that they are "the most unusual primates anywhere." The author, in fact, indicates that in one of the ways that these species are unusual—their relative scarcity despite their small body size—another primate species, the pygmy marmoset, is even more unusual.

E Because the author appears to make some inferences from information about the tamarins studied in the park to claims about tamarins in general, the author does not seem to regard the tamarins studied in the park as too small a sample to be significant.

The correct answer is B.

RC22661-06.01

58. Which of the following is NOT mentioned in the passage as a species whose groups display territoriality?

(A) Gibbons
(B) Siamangs
(C) Titi monkeys
(D) Squirrel monkeys
(E) Night monkeys

Inference

This question requires you, by process of elimination, to identify the species that is NOT explicitly mentioned as being a species displaying territoriality. Each of the species given in the answer choices is explicitly mentioned in the passage, and all but one of these species are explicitly described as displaying territoriality. In lines 38–41, the author states, "concerted territoriality [like that of tamarins] is rather exceptional among primates, though the gibbons and siamangs of Asia show it, as do a few other New World species such as the titi and night monkeys." So, clearly, gibbons, siamangs, titi monkeys, and night monkeys are each said to display territoriality. Squirrel monkeys, the remaining answer choice, are mentioned three different times in the passage (see lines 16, 25, 30), but never as displaying territoriality.

A Gibbons are identified as displaying "concerted territoriality" (line 39).

B Siamangs are identified as displaying "concerted territoriality" (line 39).

C Titi monkeys are identified as displaying "concerted territoriality" (line 41).

D **Correct.** Although squirrel monkeys are mentioned three times in the passage (lines 16, 25, and 30), in none of the instances are they mentioned as displaying territoriality.

E Night monkeys are identified as displaying "concerted territoriality" (line 41).

The correct answer is D.

RC22661-07.01

59. The primary concern of the passage is to

(A) recommend a policy
(B) evaluate a theory
(C) describe an unusual condition
(D) explain the development of a hypothesis
(E) support one of several competing hypotheses

Main idea

Answering this question requires identifying an abstract description of the primary purpose of the passage. The passage focuses in different ways on an unusual condition, namely, the anomalous relationship between tamarins' relatively small

average body size and the number of individuals in the species.

A The passage is not concerned with recommending any policy.

B The passage does not focus on any theory; it considers a phenomenon, but proposes no theory to explain that phenomenon.

C **Correct.** The passage's primary concern is to describe an unusual phenomenon, namely, how tamarins "break the rule" that, in general, the number of individuals in a species is inversely proportional to the average body size of members of the species.

D The passage is primarily concerned with a particular, unusual phenomenon, but it offers no hypothesis regarding it, nor does it discuss the development of any such hypothesis.

E Although the passage gives passing consideration to some hypotheses, its primary concern is to note certain characteristics of tamarins. The passage does not primarily concern itself with any hypotheses.

The correct answer is C.

Questions 60–66 refer to the passage on page 47.

RC32661-01.01

60. It can be inferred from the passage that opponents of labor concessions would most likely describe many plant-relocation decisions made by United States companies as

(A) capricious
(B) self-serving
(C) naive
(D) impulsive
(E) illogical

Evaluation

This question requires you to pick a word that the passage suggests opponents of labor concessions would apply to many plant-relocation decisions made by U.S. companies. The passage indicates that those who oppose labor concessions often do so on the grounds that companies will move their production overseas if it matches their perceived self-interest—regardless of any concessions labor has made in order to preserve jobs. According to the passage, opponents of labor concessions therefore tend to view such plant-relocation decisions as self-serving.

A The passage does not attribute to opponents of labor concessions the view that corporate decisions are variable in a way that makes them unpredictable.

B **Correct.** According to the passage, the opponents of labor concessions believe that companies make investment decisions that fit their strategic plans and profit objectives.

C The passage suggests that the opponents may view plant managers' relocation decisions as based on realistic assessments of corporate interests.

D The passage does not attribute to the opponents the view that companies make plant-relocation decisions on impulse; rather, it suggests that these opponents tend to see relocation decisions as based on analysis of how relocation would advance predetermined strategies and objectives.

E According to the passage, the opponents see an inflexible logic governing such relocation decisions, which are based on an assessment of how best to serve companies' interests, as judged by reference to predetermined investment strategies and profit objectives.

The correct answer is B.

RC32661-02.01

61. It can be inferred from the passage that, until recently, which of the following has been true of United States industry in the twentieth century?

(A) Unions have consistently participated in major corporate policy decisions.
(B) Maintaining adequate quality control in manufacturing processes has been a principal problem.
(C) Union workers have been paid relatively high wages.
(D) Two-tier wage systems have been the norm.
(E) Goods produced have been priced beyond the means of most workers.

Inference

This question requires you to draw a conclusion about United States industry in the twentieth century from the information in the passage. The passage indicates that even opponents of labor concessions believe that union workers have traditionally been paid relatively high wages and that high wages underlay much of the success of industry in the United States in the twentieth century.

A The passage suggests otherwise. It tells us that advocates of labor concessions believe it may eventually be possible for labor to participate in management decisions in a way that was not traditionally the case.

B The passage mentions "quality circles" as a benefit that, according to some proponents of labor concessions, may eventually be gained in the context of having more say on the shop floor. But that does not imply that quality control in manufacturing has been a major problem.

C **Correct.** The passage attributes a belief that this was so to opponents of labor concessions.

D The passage tells us that opponents of labor concessions believe that proposals for two-tier wage systems could become a reality—which indicates that such systems have not been the norm.

E According to the passage, opponents of labor concessions admit that wages have been relatively high for union workers and that labor and management have long been committed to the idea that workers should be able to afford to purchase the products they make.

The correct answer is C.

RC32661-03.01

62. The passage provides information to answer which of the following questions?

(A) What has caused unions to consider wage restraints and reduced benefits?

(B) Why do analysts study United States labor-management relations?

(C) How do job-security guarantees operate?

(D) Are investment and pricing strategies effective in combating imports?

(E) Do quality circles improve product performance and value?

Evaluation

This question requires you to identify a question that the passage provides an answer to. In paragraph 1, the passage indicates some factors ("twin shocks") that have contributed to a change in the approach of labor unions to negotiations with management.

A **Correct.** The passage claims that competition from non-union companies and imports of low-priced high-quality products from abroad have induced labor unions to be more flexible in meeting the demands of management.

B The passage does not address this question either directly or indirectly.

C According to the passage, proponents of labor concessions claim that job-security guarantees can be negotiated if concessions are made, but the passage provides no further detail that would shed light on how such guarantees operate.

D The passage is silent on the effectiveness of investment and pricing strategies in combating imports.

E The passage mentions quality circles, but provides no information on their impact. Presumably, quality circles aim to improve quality, and such improvements would be pointless absent any payoff in "performance and value."

The correct answer is A.

RC32661-04.01

63. The passage is primarily concerned with the

(A) reasons for adversarialism between labor and management

(B) importance of cooperative labor-management relations

(C) consequences of labor concessions to management

(D) effects of foreign competition on the United States economy

(E) effects of nonunion competition on union bargaining strategies

Main idea

This question asks us to identify the overall theme of the passage, i.e., the topic that motivates the discussion of various subtopics.

A The traditionally adversarial relationship between labor and management is mentioned in passing, but the reasons for that relationship are not probed.

B The passage details benefits that some labor unionists perceive in cooperative labor-management relations, but does not assess the importance of such relations.

C **Correct.** The passage explores this theme by looking at the new approach of some labor unions by discussing the pros and cons of labor concessions as perceived by proponents and opponents of such concessions.

D The passage alludes to these effects, but no sustained exploration of this topic is present in the passage.

E The passage alludes to these effects, but no sustained exploration of this topic is present in the passage.

The correct answer is C.

RC32661-05.01

64. The sentence "If proposals for pay cuts . . . unskilled laborers" serves primarily to

(A) disprove a theory

(B) clarify an ambiguity

(C) reconcile opposing views

(D) present a hypothesis

(E) contradict accepted data

Evaluation

This question asks you to determine the intended purpose of one of the passage's sentences. This sentence, found in the final paragraph, describes what opponents of labor concessions predict are possible consequences if labor unions agree to pay cuts, two-tier wage systems, or lower wages for newly hired workers. These hypothesized consequences can be summarized as a significant degradation in the overall material welfare of large sections of the population because of grossly unequal distribution of wealth and income such as exist in some less-developed societies.

A The sentence describes what is perceived as something that could occur if labor unions were to make concessions resulting in reductions in wages. It is not framed as evidence to refute a theory, since it is merely a prediction of what could occur.

B The sentence does not function in resolving an ambiguity; no ambiguity that the sentence could be meant to resolve is described or suggested.

C The sentence does nothing to reconcile opposing views; it articulates a vision of a possible future that it attributes to those who oppose wage-reduction concessions by labor unions.

D **Correct.** The sentence presents a hypothesis about the possible long-term consequences of labor-union concessions that would result in significantly lower wages.

E Accepted data can be contradicted only by alternative datasets, but the sentence in question does not provide alternative data, only a prediction of what the future might bring for workers' material welfare if drastic wage reductions were to be conceded by labor unions.

The correct answer is D.

RC32661-06.01

65. It can be inferred from the passage that opponents of labor concessions believe that if concession bargaining continues, then

(A) plants will close instead of relocating

(B) young workers will need continued job retraining

(C) professional workers will outnumber marginal workers

(D) wealthy investors will invest in Third World countries instead of the United States

(E) the social structure of the United States will be negatively affected

Inference

This question concerns the beliefs of opponents of labor concessions, as those beliefs are represented in the passage. The passage attributes to those opponents the view that if the idea of reducing wages gains credence, the U.S. social structure will begin to decline and will eventually be on a par with the social structures of less-developed nations. Moreover, the passage represents the opponents as believing that if labor unions negotiate on the premise that high labor costs are causing a company's problems, eventually wages will be reduced drastically—potentially to Third World levels. In paragraph 1, the passage reports that analysts say that labor unions are currently forced to favorably consider management demands for "wage restraint" and concessions on benefits.

A The passage indicates that the opponents believe companies relocate their plants whenever companies perceive this as in accord with their investment strategies and profit objectives.

B A need for continued retraining of young workers is not a belief attributed by the passage to opponents of labor concessions.

C The passage, in referring to "a huge mass of marginal workers," attributes a contrary view to opponents of labor concessions.

D The passage does not attribute this view to opponents of labor concessions.

E **Correct.** We learn from the passage that labor unions are engaged in concession bargaining, on topics that include wage restraint. The opponents of labor concessions believe, according to the passage, that eventually the result will be wage reductions, and the ultimate result will be degradation of the U.S. social structure, resulting in a social structure more like that of a less-developed nation.

The correct answer is E.

RC32661-07.01

66. According to the author, "Sophisticated proponents" of concessions do which of the following?

(A) Support the traditional adversarialism characteristic of labor-management relations.

(B) Emphasize the benefits unions can gain by granting concessions.

(C) Focus on thorough analyses of current economic conditions.

(D) Present management's reasons for demanding concessions.

(E) Explain domestic economic developments in terms of worldwide trends.

Supporting Ideas

This question requires you to identify what the passage says "sophisticated proponents" of concessions do. According to the passage, these sophisticated proponents represent their concessions in a "prolabor light." They suggest that concessions by labor can bargain for profit sharing, retraining rights, and job-security guarantees—and can even bargain for "more say on the shop floor" and a voice in company strategy and decision making.

A According to the passage, analysts say that labor-management relations are increasingly cooperative rather than adversarial.

B **Correct.** As indicated above, the proponents of labor concessions represent concessions in a prolabor light by detailing the types of labor gains that can come from such concessions.

C The proponents probably conduct such analyses, but no information about this is given in the passage.

D Sophisticated proponents may sometimes do this, but the passage emphasizes their focus on the opportunities for labor gains.

E Sophisticated proponents may sometimes do this, but the passage emphasizes their focus on the opportunities for labor gains.

The correct answer is B.

Questions 67–71 refer to the passage on page 49.

RC00097-02

67. According to the passage, much of the research on Alessandra Strozzi done by the historian mentioned in the second paragraph supports which of the following conclusions?

(A) Alessandra used her position as her sons' sole guardian to further interests different from those of her sons.

(B) Alessandra unwillingly sacrificed her own interests in favor of those of her sons.

(C) Alessandra's actions indicate that her motivations and intentions were those of an independent individual.

(D) Alessandra's social context encouraged her to take independent action.

(E) Alessandra regarded her sons' goals and interests as her own.

Supporting ideas

According to the passage, a historian of women in Renaissance Europe attributes to a Florentine widow Alessandra Strozzi "individual intention and authorship of actions" and argues that she had significant individual goals and interests other than those of her sons. But the passage states that much of the historian's research indicates otherwise.

A According to the passage, the historian's research provides much evidence that Alessandra Strozzi acted primarily to further her sons' interests.

B The passage does not cite any of the historian's research to suggest that Strozzi was an unwilling champion of her sons' interest.

C A theme of the passage is that the historian's research provides weak, if any, support for this claim.

D The historian's research is not invoked in the passage to support this. The passage suggests that such a claim is more compatible with an anthropologist's idea that identity is socially and culturally determined and not necessarily "independent," as various historians assume.

E **Correct.** The passage states: "much of the historian's own research reveals that Alessandra acted primarily as a champion of her sons' interests, taking their goals as her own."

The correct answer is E.

RC00097-03

68. In the first paragraph, the author of the passage mentions a contention that would be made by an anthropologist most likely in order to

(A) present a theory that will be undermined in the discussion of a historian's study later in the passage

(B) offer a perspective on the concept of personhood that can usefully be applied to the study of women in Renaissance Europe

(C) undermine the view that the individuality of European women of the Renaissance was largely suppressed

(D) argue that anthropologists have applied the Western concept of individualism in their research

(E) lay the groundwork for the conclusion that Alessandra's is a unique case among European women of the Renaissance whose lives have been studied by historians

Evaluation

The passage asserts that an anthropologist would contend that "a person can be conceived in ways other than as an 'individual.'" Immediately preceding this assertion, the passage asserts that certain historians think of a person as "an innately bounded unit, autonomous and standing apart from both nature and society." The passage invokes anthropology to support the view that perhaps the findings of those historians regarding individualism among women in Renaissance Europe are biased.

A Anthropology is invoked to provide a corrective to the findings of the historians mentioned—not to provide a critique of any anthropological theory.

B **Correct.** The passage makes the case that the anthropological view may be more useful than the historian's in the study of women in Renaissance Europe.

C The passage cites no claim by historians that individuality of women in Renaissance Europe was largely suppressed, and the passage presents no argument to critique or refute such a claim.

D The passage makes no such claim about anthropologists, but does make a similar claim about certain historians.

E The passage does not state or imply that Strozzi was atypical of women in Renaissance Europe that historians have studied, nor is the anthropological conception of personhood invoked to underpin any such view.

The correct answer is B.

RC00097-04

69. The passage suggests that the historians referred to in line 1 make which of the following assumptions about Renaissance Europe?

(A) That anthropologists overestimate the importance of the individual in Renaissance European society

(B) That in Renaissance Europe, women were typically allowed to express their individuality

(C) That European women of the Renaissance had the possibility of acting independently of the social context in which they lived

(D) That studying an individual such as Alessandra is the best way to draw general conclusions about the lives of women in Renaissance Europe

(E) That people in Renaissance Europe had greater personal autonomy than people do currently

Evaluation

The passage suggests that the historians, in their studies of women in Renaissance Europe, held a preconceived notion of personhood—a notion that implied at least the possibility of individual autonomous action unaffected by social context. By implication, the passage ascribes a similar preconception to the historian whose study of Strozzi is discussed.

A No view concerning anthropologists or their work is attributed, even by implication, to the historians.

B Even if the historians held a view regarding the scope of what women in Renaissance Europe were typically allowed to do, the passage does not attribute such a view to them.

C **Correct.** The passage implies that the historians assumed it was at least sometimes possible for women in Renaissance Europe to act autonomously, unaffected by social context.

D The passage does not indicate that the historians assumed study of a single individual was the best approach to study of women's lives in Renaissance Europe.

E The passage neither explicitly nor implicitly claims that the historians assumed women had more personal autonomy in Renaissance Europe than women have currently.

The correct answer is C.

RC00097-05

70. It can be inferred that the author of the passage believes which of the following about the study of Alessandra Strozzi done by the historian mentioned in the second paragraph?

(A) Alessandra was atypical of her time and was therefore an inappropriate choice for the subject of the historian's research.

(B) In order to bolster her thesis, the historian adopted the anthropological perspective on personhood.

(C) The historian argues that the boundaries of the conceptual self were not always firm and closed in Renaissance Europe.

(D) In her study, the historian reverts to a traditional approach that is out of step with the work of other historians of Renaissance Europe.

(E) The interpretation of Alessandra's actions that the historian puts forward is not supported by much of the historian's research.

Inference

The passage tells us that the historian who studied Strozzi "attributes individual intention and authorship of actions" to her. But the passage author claims that much of the historian's own research supports the view that, contrary to the historian's interpretation, "Alessandra did not distinguish her personhood from that of her sons"—and therefore that her actions did not primarily express personal autonomy.

A Nothing in the passage implies that this is true or that the passage author believes it was so.

B The passage is in direct contradiction with this claim about the historian, and it strongly suggests that the author of the passage would reject this claim.

C The passage author makes this point concerning "the boundaries of the conceptual self" as part of the critique of the historian's approach.

D The passage author characterizes the historian's approach neither as traditional nor as nontraditional; nor does the passage author contrast the historian's approach with that of any other historian.

E **Correct.** The passage author suggest that much of the historian's research provides support for an interpretation that is incompatible with the historian's own interpretation.

The correct answer is E.

RC00097-06

71. The passage suggests that the historian mentioned in the second paragraph would be most likely to agree with which of the following assertions regarding Alessandra Strozzi?

(A) Alessandra was able to act more independently than most women of her time because she was a widow.

(B) Alessandra was aware that her personal motivation was embedded in a social context.

(C) Alessandra had goals and interests similar to those of many other widows in her society.

(D) Alessandra is an example of a Renaissance woman who expressed her individuality through independent action.

(E) Alessandra was exceptional because she was able to effect changes in the social constraints placed upon women in her society.

Application

According to the passage, the historian whose study of Strozzi is discussed "attributes individual intention and authorship of actions" to her. The passage does not discuss whether, or how, the historian may have regarded Strozzi's widowhood as relevant to her exercise of autonomy; nor does the passage discuss the extent to which, if at all, the historian regarded Strozzi's actions, goals, or interests as typical of women in Renaissance Europe.

A The passage provides no evidence as to whether the historian would agree with this.

B The passage does not attribute to the historian, even implicitly, a view that Strozzi's personal motivation was primarily "embedded in a social context"; so the historian would likely believe that Strozzi herself did not see her personal motivation as so embedded.

C The passage provides no evidence as to whether the historian would regard Strozzi's goals and interests as resembling those of other widows in her society.

D **Correct.** The first sentence of the second paragraph indicates that the historian treats Strozzi as an example of a Renaissance woman who expressed her individuality through independent action.

E The passage provides no evidence that the historian viewed Strozzi as exceptional in effecting any kind of social change.

The correct answer is D.

Questions 72–78 refer to the passage on page 51.

RC00054-01

72. According to the passage, conventional spiral galaxies differ from low-surface-brightness galaxies in which of the following ways?

(A) They have fewer stars than do low-surface-brightness galaxies.

(B) They evolve more quickly than low-surface-brightness galaxies.

(C) They are more diffuse than low-surface-brightness galaxies.

(D) They contain less helium than do low-surface-brightness galaxies.

(E) They are larger than low-surface-brightness galaxies.

Supporting ideas

This question requires recognizing information that is provided in the passage. The first paragraph describes and compares two types of galaxies: conventional galaxies and dim, or low-surface-brightness, galaxies. It states that dim galaxies have the same approximate number of stars as a common type of conventional galaxy but tend to be larger and more diffuse because their mass is spread over wider areas (lines 4–10). The passage also indicates that dim galaxies take longer than conventional galaxies to convert their primordial gases into stars, meaning that dim galaxies evolve much more slowly than conventional galaxies (lines 10–14), which entails that conventional galaxies evolve more quickly than dim galaxies.

A The passage states that dim galaxies have approximately the same numbers of stars as a common type of conventional galaxy.

B **Correct.** The passage indicates that dim galaxies evolve much more slowly than conventional galaxies, which entails that conventional galaxies evolve more quickly.

C The passage states that dim galaxies are more spread out, and therefore more diffuse, than conventional galaxies.

D The passage does not mention the relative amounts of helium in the two types of galaxies under discussion.

E The passage states that dim galaxies tend to be much larger than conventional galaxies.

The correct answer is B.

RC00054-02

73. It can be inferred from the passage that which of the following is an accurate physical description of typical low-surface-brightness galaxies?

(A) They are large spiral galaxies containing fewer stars than conventional galaxies.

(B) They are compact but very dim spiral galaxies.

(C) They are diffuse spiral galaxies that occupy a large volume of space.

(D) They are small, young spiral galaxies that contain a high proportion of primordial gas.

(E) They are large, dense spirals with low luminosity.

Inference

This question requires drawing an inference from information given in the passage. The first paragraph compares dim galaxies and conventional galaxies. Dim galaxies are described as having the same general shape (lines 4–5) as a common type of conventional galaxy, the spiral galaxy, suggesting that dim galaxies are, themselves, spiral shaped. The passage also indicates that, although both types of galaxies tend to have approximately the same number of stars, dim galaxies tend to be much larger and spread out over larger areas of space (lines 4–10) than conventional galaxies.

A The passage states that the two types of galaxies have approximately the same number of stars.

B The passage indicates that dim galaxies are relatively large and spread out.

C **Correct.** The passage indicates that dim galaxies have the same general shape as spiral galaxies and that their mass is spread out over large areas of space.

D The passage indicates that dim galaxies are relatively large and spread out.

E The passage states that dim galaxies have few stars per unit of volume, suggesting that they are not dense but diffuse.

The correct answer is C.

RC00054-03

74. It can be inferred from the passage that the "long-standing puzzle" refers to which of the following?

(A) The difference between the rate at which conventional galaxies evolve and the rate at which low-surface-brightness galaxies evolve

(B) The discrepancy between estimates of total baryonic mass derived from measuring helium and estimates based on measuring galactic luminosity

(C) The inconsistency between the observed amount of helium in the universe and the number of stars in typical low-surface-brightness galaxies

(D) Uncertainties regarding what proportion of baryonic mass is contained in intergalactic space and what proportion in conventional galaxies

(E) Difficulties involved in detecting very distant galaxies and in investigating their luminosity

Inference

This question requires drawing an inference from information given in the passage. The second paragraph describes *the long-standing puzzle of the missing baryonic mass in the universe*. The passage states that baryons are the source of galactic luminosity, and so scientists can estimate the amount of baryonic mass in the universe by measuring the luminosity of galaxies (lines 17–21). The puzzle is that spectroscopic measures of helium in the universe suggest that the baryonic mass in the universe is much higher than measures of luminosity would indicate (21–25).

A The differences between the rates of evolution of the two types of galaxies is not treated as being controversial in the passage.

B **Correct.** The passage indicates that measurements using spectroscopy and measurements using luminosity result in puzzling differences in estimates of the universe's baryonic mass.

C The passage does not suggest how helium might relate to the numbers of stars in dim galaxies.

D The passage indicates that astronomers have speculated that the missing baryonic mass might be discovered in intergalactic space or hard-to-detect galaxies but does not suggest that these speculations are constituents of the long-standing puzzle.

E The passage does not mention how the distance to galaxies affects scientists' ability to detect these galaxies.

The correct answer is B.

RC00054-04

75. The author implies that low-surface-brightness galaxies could constitute an answer to the puzzle discussed in the second paragraph primarily because

(A) they contain baryonic mass that was not taken into account by researchers using galactic luminosity to estimate the number of baryons in the universe

(B) they, like conventional galaxies that contain many baryons, have evolved from massive, primordial gas clouds

(C) they may contain relatively more helium, and hence more baryons, than do galaxies whose helium content has been studied using spectroscopy

(D) they have recently been discovered to contain more baryonic mass than scientists had thought when low-surface-brightness galaxies were first observed

(E) they contain stars that are significantly more luminous than would have been predicted on the basis of initial studies of luminosity in low-surface-brightness galaxies

Inference

This question requires drawing an inference from information given in the passage. The puzzle is that estimates of the baryonic mass of the universe based on luminosity are lower than those based on spectroscopy (lines 21–25). The passage states that astronomers did not notice dim galaxies until recently (lines 2–3) and that these galaxies may help account for the missing baryonic mass in the universe (lines 15–17). The passage also suggests that astronomers measure the luminosity of specific galaxies (lines 19–21). Thus it can be inferred that, prior to their being noticed by astronomers, the luminosity of these dim galaxies was not measured, and their baryonic mass was not taken into account in the estimates of luminosity that led to the long-standing puzzle.

A **Correct.** The passage states that the missing baryonic mass in the universe may be discovered in the dim galaxies that have only recently been noticed by astronomers.

B The passage does not suggest that dim and conventional galaxies both originating from primordial gas clouds help solve the long-standing puzzle of the missing baryonic mass in the universe.

C The passage does not suggest that dim galaxies might contain more helium than do conventional galaxies or that measures of baryonic mass using spectroscopy do not take some dim galaxies into account.

D The passage does not suggest that dim galaxies contain more baryonic mass than scientists originally believed upon discovering these galaxies.

E The passage suggests that scientists measured the luminosity of galaxies, not of individual stars.

The correct answer is A.

RC00054-05

76. The author mentions the fact that baryons are the source of stars' luminosity primarily in order to explain

(A) how astronomers determine that some galaxies contain fewer stars per unit volume than do others

(B) how astronomers are able to calculate the total luminosity of a galaxy

(C) why astronomers can use galactic luminosity to estimate baryonic mass

(D) why astronomers' estimates of baryonic mass based on galactic luminosity are more reliable than those based on spectroscopic studies of helium

(E) how astronomers know bright galaxies contain more baryons than do dim galaxies

Evaluation

This question requires understanding how one aspect of the passage relates to the reasoning in a larger portion of the passage. The second paragraph explains that scientists have been puzzled over missing baryonic mass in the universe as measured by luminosity (lines 21–25). Given that baryons are the source of luminosity in the galaxy (lines 17–19), astronomers can estimate the baryonic mass of a galaxy by measuring its luminosity.

A The passage discussion of baryons does not address the number of stars in individual galaxies.

B The passage discusses how the luminosity of galaxies can be used to estimate baryonic mass but does not address how total luminosity is measured.

C **Correct.** The passage indicates that because baryons are the source of galactic luminosity, measuring luminosity can be used to estimate baryonic mass of galaxies.

D The passage suggests that estimates based on luminosity may have been less accurate, not more accurate, than those based on spectroscopy.

E The passage does not indicate that bright galaxies contain more baryons than do dim galaxies.

The correct answer is C.

RC00054-06

77. The author of the passage would be most likely to disagree with which of the following statements?

(A) Low-surface-brightness galaxies are more difficult to detect than are conventional galaxies.

(B) Low-surface-brightness galaxies are often spiral in shape.

(C) Astronomers have advanced plausible ideas about where missing baryonic mass might be found.

(D) Astronomers have devised a useful way of estimating the total baryonic mass in the universe.

(E) Astronomers have discovered a substantial amount of baryonic mass in intergalactic space.

Inference

This question involves identifying which answer option potentially conflicts with the information the author has provided in the passage. The second paragraph indicates that astronomers' estimates of the baryonic mass of the universe is lower when measured using luminosity than it is when measured using spectroscopy (lines 21–25). The final sentence states that astronomers have speculated that the missing baryonic mass might be discovered in intergalactic space or in hard-to-detect galaxies (lines 25–29). Although the passage does indicate that the discovery of dim, low-surface-brightness galaxies might help account for the missing baryonic mass (lines 15–17), the passage provides no support for the possibility that baryonic mass has been discovered in intergalactic space.

A The passage indicates that low-surface-brightness galaxies went unnoticed until recently, unlike conventional galaxies.

B The passage indicates that low-surface-brightness galaxies have the same general shape as spiral galaxies.

C The passage describes two possible explanations astronomers have given for the missing baryonic mass, one of which was made more plausible by the discovery of low-surface-brightness galaxies.

D The passage indicates that astronomers have used spectroscopy to estimate baryonic mass and gives no reason to suspect that this method is not useful.

E **Correct.** The passage does not indicate that astronomers have found any baryonic mass in intergalactic space.

The correct answer is E.

RC00054-07

78. The primary purpose of the passage is to

(A) describe a phenomenon and consider its scientific significance

(B) contrast two phenomena and discuss a puzzling difference between them

(C) identify a newly discovered phenomenon and explain its origins

(D) compare two classes of objects and discuss the physical properties of each

(E) discuss a discovery and point out its inconsistency with existing theory

Main idea

This question requires understanding, in broad terms, the purpose of the passage as a whole. The first paragraph describes a phenomenon: the discovery of dim galaxies and some of their general attributes. The second paragraph describes how this discovery may help astronomers to solve a long-standing puzzle about the baryonic mass of the universe.

A **Correct.** The passage describes the phenomenon of dim galaxies and describes their significance in solving the long-standing puzzle of the missing baryonic mass in the universe.

B Although the passage discusses the puzzling difference between the two estimates of baryonic mass, this option does not account for the broader topic of dim galaxies.

C While the passage identifies the newly discovered phenomenon of dim galaxies, it does not offer a significant explanation for these galaxies' origins.

D Although the passage compares dim and conventional galaxies in the first paragraph, this option does not account for the important detail that dim galaxies may help solve a long-standing puzzle.

E The discovery of dim galaxies discussed in the passage is not said to be inconsistent with any existing scientific theory.

The correct answer is A.

Questions 79–84 refer to the passage on page 53.

RC11238-01

79. The primary purpose of the passage is to

(A) contrast possible outcomes of a type of business investment

(B) suggest more careful evaluation of a type of business investment

(C) illustrate various ways in which a type of business investment could fail to enhance revenues

(D) trace the general problems of a company to a certain type of business investment

(E) criticize the way in which managers tend to analyze the costs and benefits of business investments

Main idea

Look at the passage as a whole to find the primary purpose. This passage uses an example, described in the second paragraph, to illustrate the principle of business practice explained in the first paragraph. The author begins by saying that efforts to improve service do not always result in a *competitive advantage* for a company. Thus, an investment in service must be carefully evaluated to determine if it will reduce costs or increase revenues (lines 4–8).

A Only one outcome, failure to gain a competitive advantage, is examined.

B **Correct.** Investments in service must be carefully evaluated for the returns they will bring.

C Only one way, an unnecessary investment in improved service, is discussed.

D The example of the bank is used only to illustrate a general business principle; the bank itself is not the focus of the passage.

E The passage criticizes the absence of such an analysis, not the way it is conducted.

The correct answer is B.

RC11238-02

80. According to the passage, investments in service are comparable to investments in production and distribution in terms of the

(A) tangibility of the benefits that they tend to confer

(B) increased revenues that they ultimately produce

(C) basis on which they need to be weighed

(D) insufficient analysis that managers devote to them

(E) degree of competitive advantage that they are likely to provide

Supporting ideas

The phrase *according to the passage* indicates that the question covers material that is explicitly stated in the passage. The answer to this question demands a careful reading of the second sentence (lines 4–8). Investments in service are like investments in production and distribution because they *must be balanced against other types of investments on the basis of direct, tangible benefits*. Thus, these investments should be weighed on the same basis.

A The author is not equating the tangible benefits the different kinds of investments reap but rather the basis on which decisions to make investments are made.

B Revenues generated from investing in service are not said to be comparable to revenues generated from investing in production and distribution.

C **Correct.** An evaluation of whether or not to make these investments must be made on the same basis.

D How managers analyze investments in production and distribution is not discussed.

E The competitive advantage of superior service is acknowledged, but not the degree of it; it is not mentioned at all in the context of production and distribution.

The correct answer is C.

RC11238-03

81. The passage suggests which of the following about service provided by the regional bank prior to its investment in enhancing that service?

(A) It enabled the bank to retain customers at an acceptable rate.

(B) It threatened to weaken the bank's competitive position with respect to other regional banks.

(C) It had already been improved after having caused damage to the bank's reputation in the past.

(D) It was slightly superior to that of the bank's regional competitors.

(E) It needed to be improved to attain parity with the service provided by competing banks.

Inference

Because the question uses the word *suggests*, finding the answer depends on making an inference about service at the bank. The paragraph that discusses the bank begins with the transitional expression, *this truth*, which refers to the previous sentence (lines 8–15). The *truth* is that investing in improved service is a waste *if a company is already effectively on a par with its competitors because it provides service that avoids*

a damaging reputation and keeps customers from leaving at an unacceptable rate. Because of the way the author has linked this generalization to the description of the bank after investment, it is reasonable to infer that the hypothetical company's situation describes the bank prior to its investment in improved service.

A **Correct.** The bank's service would have been good enough to avoid a damaging reputation and to retain customers at an acceptable rate.

B The passage does not suggest that the bank's service was either poor or deficient to that of its competitors.

C The passage implies that the bank's service avoided *a damaging reputation*.

D The bank would have been *on a par with its competitors*, not superior to them.

E The bank would have been *on a par with its competitors*, not inferior to them.

The correct answer is A.

RC11238-04

82. The passage suggests that bank managers failed to consider whether or not the service improvement mentioned in lines 18–20

(A) was too complicated to be easily described to prospective customers

(B) made a measurable change in the experiences of customers in the bank's offices

(C) could be sustained if the number of customers increased significantly

(D) was an innovation that competing banks could have imitated

(E) was adequate to bring the bank's general level of service to a level that was comparable with that of its competitors

Inference

The question's use of the word *suggests* means that the answer depends on making an inference. To answer this question, look at the entire second paragraph. Managers failed to think ahead. Would the service improvement attract new customers because other banks would find it difficult to copy? Or would the service improvement be easily imitated by competitors? The managers should have investigated this area before investing in improved service.

A The passage states the improvement *could easily be described to customers* (lines 28–29).

B No evidence in the passage shows that the managers failed to think about their customers' experience in the bank.

C The passage does not imply that managers failed to consider an increase in clients.

D **Correct.** The managers did not wonder if other banks would copy their service improvement.

E Lines 8–12 imply that the bank enjoyed a comparable level of service before investing in service improvement.

The correct answer is D.

RC11238-05

83. The discussion of the regional bank in the second paragraph serves which of the following functions within the passage as a whole?

(A) It describes an exceptional case in which investment in service actually failed to produce a competitive advantage.

(B) It illustrates the pitfalls of choosing to invest in service at a time when investment is needed more urgently in another area.

(C) It demonstrates the kind of analysis that managers apply when they choose one kind of service investment over another.

(D) It supports the argument that investments in certain aspects of service are more advantageous than investments in other aspects of service.

(E) It provides an example of the point about investment in service made in the first paragraph.

Logical structure

This question requires thinking about what the second paragraph contributes to the whole passage. The first paragraph makes a generalization about investing in improvements in service; in certain conditions, such improvements do not result in the *competitive*

advantage a company hopes for. The second paragraph offers the bank as an example of this generalization.

A The first sentence of the passage explains that improving service does not necessarily bring a *competitive advantage*, so the bank is not exceptional.

B The bank illustrates the pitfall of not evaluating a service improvement on the basis of tangible benefits; other areas of the bank are not mentioned.

C The passage does not discuss how managers analyze and choose different service investments.

D Investments in different aspects of service are not evaluated in the passage.

E **Correct.** The bank is an example of the position stated in the first paragraph that investing in improved service can be a waste if the investment is not evaluated carefully.

The correct answer is E.

RC11238-06

84. The author uses the word "only" in line 27 most likely in order to

(A) highlight the oddity of the service improvement

(B) emphasize the relatively low value of the investment in service improvement

(C) distinguish the primary attribute of the service improvement from secondary attributes

(D) single out a certain merit of the service improvement from other merits

(E) point out the limited duration of the actual service improvement

Logical structure

The question asks you to consider the logic of the author's word choice. The previous two sentences discuss why the service improvement was a wasted investment. In contrast, the final sentence turns to the sole advantage of the service improvement, which is trivial by comparison. The author uses *only* to modify *merit* in order to emphasize the minimal nature of this advantage.

A The passage does not indicate that the service improvement is somehow strange or peculiar.

B **Correct.** *Only* emphasizes the low value attached to the single benefit.

C No attributes of the service improvement are mentioned.

D *Only* signifies that there was one sole merit of the service improvement.

E The duration of the benefit is not discussed in the passage.

The correct answer is B.

Questions 85–87 refer to the passage on page 55.

RC00548-03

85. The "apparent contradiction" mentioned in line 29 refers to the discrepancy between the

(A) legal status of Mexican women in territorial California and their status in the United States

(B) unflattering depiction of Mexicans in novels and the actual public sentiment about the Mexican-American War

(C) existence of many marriages between Californianas and non-Hispanic merchants and the strictures against them expressed in novels

(D) literary depiction of elite Californianas and the literary depiction of other Mexican individuals

(E) novelistic portrayals of elite Californianas' privileged lives and the actual circumstances of those lives

Supporting idea

The *apparent contradiction* in line 29 refers to the difference, noted in the previous sentence, between favorable literary portrayals of elite Californianas—that is, Mexican women of the California territory—on the one hand and novels' generally unflattering depictions of Mexicans on the other.

A The passage discusses the difference between the legal rights of Mexican women in the California territory and those of non-Hispanic women. The legal rights of Mexican women outside territorial California are not mentioned.

B The passage suggests that there is no contradiction between unflattering depictions of Mexicans in novels and public sentiment about the Mexican-American War: such depictions of Mexicans served to stir up sentiment in support of the war.

C According to the passage, novels expressed no strictures against marriages between Californianas and non-Hispanic merchants. Instead, the novels portrayed such marriages favorably.

D **Correct.** Non-Hispanic novelists glorified elite Californianas based on the importance of forging economic alliances with them, whereas novelists depicted other Mexicans in unflattering terms.

E The passage indicates that elite Californianas' lives were in fact privileged, at least in comparison to those of non-Hispanic women. It does not suggest that there was any contradiction between elite Californianas' lives and how those lives were portrayed in novels.

The correct answer is D.

RC00548-04

86. Which of the following could best serve as an example of the kind of fictional plot discussed by Antonia Castañeda?

(A) A land speculator of English ancestry weds the daughter of a Mexican vineyard owner after the speculator has migrated to California to seek his fortune.

(B) A Californian woman of Hispanic ancestry finds that her agricultural livelihood is threatened when her husband is forced to seek work in a textile mill.

(C) A Mexican rancher who loses his land as a result of the Mexican-American War migrates to the northern United States and marries an immigrant schoolteacher.

(D) A wealthy Californiana whose father has bequeathed her all his property contends with avaricious relatives for her inheritance.

(E) A poor married couple emigrate from French Canada and gradually become wealthy as merchants in territorial California.

Application

According to the passage, Castañeda focuses on a particular plot in which an elite Californiana is pursued by a non-Hispanic merchant or trader for the purpose of gaining economic advantage.

A **Correct.** The story of a non-Hispanic land speculator wedding a Californiana who is likely, based on the inheritance rights granted her by the Hispanic law in territorial California, to inherit her father's vineyard would precisely fit the plot that Castañeda discusses.

B This description fails to identify the ethnicity of the Californiana's husband and the reason he married her, so there is no way to determine whether the story would fit Castañeda's plot.

C Castañeda's plot involves a non-Hispanic male protagonist, so a Mexican rancher could not play the main male role in such a story.

D The presence of a wealthy Californiana who inherits property might make this story seem to be an example of the fictional plot that Castañeda discusses, but there is no mention of a non-Hispanic merchant or trader who seeks her hand in marriage.

E Simply taking place in territorial California would not make a story an appropriate example of the plot discussed by Castañeda.

The correct answer is A.

RC00548-05

87. Which of the following, if true, would provide the most support for Castañeda's explanation of the "stereotypical plot" mentioned in the lines 18–19?

(A) Non-Hispanic traders found business more profitable in California while it was a territory than when it became a state.

(B) Very few marriages between Hispanic women and non-Hispanic men in nineteenth-century territorial California have actually been documented.

(C) Records from the nineteenth century indicate that some large and valuable properties were owned by elite Californianas in their own right.

(D) Unmarried non-Hispanic women in the nineteenth-century United States were sometimes able to control property in their own right.

(E) Most of the property in nineteenth-century territorial California was controlled by Hispanic men.

Evaluation

Castañeda explains the *stereotypical plot* of a non-Hispanic merchant seeking to marry an elite Californiana based on economics: these women had property and inheritance rights equal to men. Novelists based their plots on the women's *real-life* economic power, which resulted in men's wishing to build economic alliances with them. Supporting this explanation requires supporting these economic ideas in some way.

A The profitability of non-Hispanic traders' business is not an issue in Castañeda's explanation; thus the change described has no significant relevance to that explanation.

B The lack of the type of documentation described, rather than providing support for Castañeda's explanation, signifies a deficit in documentary support for that explanation.

C **Correct.** If elite Californianas did in fact own valuable properties, Castañeda's economic explanation gains force. The women did have the real economic significance upon which Castañeda suggests the novelists drew.

D If it were true that some non-Hispanic women controlled property in this way, Castañeda's explanation of Californianas' uniqueness would be somewhat undermined.

E If most of the property in nineteenth-century territorial California was controlled by Hispanic men, that suggests that Californianas were less likely to possess the kind of economic power described in Castañeda's argument.

The correct answer is C.

Questions 88–90 refer to the passage on page 57.

RC00533-03

88. The passage suggests that, in the early 1990s, Michaels would have been most likely to agree with which of the following statements about the disparity mentioned in the lines 3–4?

(A) This disparity is relatively less extreme in the Northern Hemisphere because of sulfate cooling.

(B) This disparity is only a short-term phenomenon brought about by sulfate cooling.

(C) This disparity is most significant in those parts of the world dominated by oceans.

(D) The extent of this disparity is being masked by the temporary effect of sulfate cooling.

(E) The disparity confirms that current models of global warming are correct.

Inference

The disparity highlighted in this question is between global warming models and actual climate data—that is, that the models predicted warming that has not occurred. In the early 1990s, according to the passage, Michaels tried to explain this disparity by saying that industrial sulfate emissions had a cooling effect that slowed global warming briefly.

A The passage does not indicate that Michaels came to distinguish between the Northern and Southern Hemispheres until he began to doubt his early 1990s explanation for the mentioned disparity.

B **Correct.** Michaels claimed in the early 1990s that the disparity was temporary, and that it occurred due to the cooling effect of sulfate emissions.

C Santer's contention, not Michaels's, is based on the effect of oceans on global warming.

D In the early 1990s, Michaels used the idea of sulfate cooling to explain the observed disparity, not to suggest that the disparity itself was larger than observed.

E In seeking to explain the disparity, Michaels seems to have assumed, in the early 1990s at least, that the models of global warming were correct. But he did not take the disparity as evidence of their correctness.

The correct answer is B.

RC00533-04

89. According to the passage, Santer asserts which of the following about global warming?

(A) It will become a more serious problem in the Southern Hemisphere than in the Northern Hemisphere in spite of the cooling influence of oceans in the south.

(B) It is unlikely to be a serious problem in the future because of the pervasive effect of sulfate cooling.

(C) It will proceed at the same general rate in the Northern and Southern Hemispheres once the temporary influence of sulfate cooling comes to an end.

(D) Until the late 1980s, it was moderated in the Northern Hemisphere by the effect of sulfate cooling.

(E) Largely because of the cooling influence of oceans, it has had no discernible impact on the Southern Hemisphere.

Supporting idea

The second paragraph of the passage discusses Santer's take on global warming. He is concerned with the effect of oceans and of sulfate cooling on this process, and he argues that the rate of warming in the Southern and Northern Hemispheres has been differently affected by each of these. In general, oceans slow warming in the south, while sulfate cooling temporarily slowed warming in the north until the late 1980s.

A According to the passage, Santer has argued that since 1987 the Northern Hemisphere has warmed more significantly than the Southern Hemisphere.

B Santer maintains that sulfate cooling complicates our attempts to understand global warming. He notes, however, that sulfate cooling peaked in the Northern Hemisphere in the mid-1900s, and that that hemisphere's warming has increased considerably. So sulfate cooling's effect is not pervasive and has not mitigated the medium- and long-term problem of global warming.

C Santer argues that, in the absence of sulfate cooling, global warming would occur more slowly in the Southern Hemisphere due to the greater ocean coverage there.

D **Correct.** Santer says that sulfate cooling slowed warming in the Northern Hemisphere, but that in 1987, the influence of sulfate cooling was no longer significant.

E Santer maintains that global warming happens more slowly in the Southern Hemisphere due to the greater ocean coverage there, not that it has no discernible impact there.

The correct answer is D.

RC00533-05

90. The passage suggests that Santer and Michaels would be most likely to DISAGREE over which of the following issues?

(A) Whether climatological data invalidates global warming models

(B) Whether warming in the Northern Hemisphere has intensified since 1987

(C) Whether disparities between global warming models and climatological data can be detected

(D) Whether landmasses warm more rapidly than oceans

(E) Whether oceans have a significant effect on global climate patterns

Inference

According to the end of the first paragraph, Michaels began to doubt that sulfate cooling had an effect on global warming, and, further, based on the fact that he could not find an answer for why climatological data did not line up with global warming models, he questioned the accuracy of those models. The second paragraph explains that Santer, in contrast, offered a more nuanced explanation for the effect of sulfate cooling, and that based on this explanation, he disputed the claim that climatological data were inconsistent with the models' predictions.

A **Correct.** Based on the passage, Santer and Michaels would clearly disagree about whether climatological data invalidate global warming models: Michaels came to question the models on the basis of those data, while Santer found the model predictions were in fact ultimately consistent with the observed data.

B Both Santer and Michaels accept the idea that warming in the north has accelerated since 1987.

C Santer and Michaels both offered reasons for why the seeming disparity between models and data occurred—thus they agreed that such disparities were in fact detected.

D According to the second paragraph, Santer holds that landmasses warm more rapidly than oceans. But the passage offers no indication that Michaels disagrees with this.

E Santer's argument is based in large part on the effect of oceans on global climate patterns, but nothing in the passage's discussion of Michaels's work indicates that Michaels would disagree that oceans have such an effect.

The correct answer is A.

Questions 91–97 refer to the passage on page 59.

RC00613-01

91. According to the passage, Walker and Szalay disagree on which of the following points?

(A) The structure and composition of australopithecine teeth

(B) The kinds of conclusions that can be drawn from the micro-wear patterns on australopithecine teeth

(C) The idea that fruit was a part of the australopithecine diet

(D) The extent to which seed cracking and bone crunching produce similar micro-wear patterns on teeth

(E) The function of the heavy enamel on australopithecine teeth

Supporting idea

This question refers to the first paragraph, which states that Walker does not agree with Szalay's idea that *the heavy enamel of australopithecine teeth is an adaptation to bone crunching*.

A According to the passage, Walker and Szalay disagree about the function of heavy enamel on the teeth, not the structure and composition of the teeth.

B The passage does not indicate that Szalay has anything to say about the micro-wear patterns on the teeth.

C Walker does, according to the passage, believe that australopithecines ate fruit, but it gives no evidence about whether Szalay believes that they ate at least some fruit.

D According to the passage, Walker believes that seed cracking and bone crunching produce distinctive micro-wear patterns on teeth, but he does not necessarily believe that they are similar. The passage does not indicate Szalay's position on the difference between micro-wear patterns.

E **Correct.** The function of the heavy enamel on the teeth is the only idea about which the passage clearly indicates that Walker and Szalay disagree.

The correct answer is E.

RC00613-02

92. The passage suggests that Walker's research indicated which of the following about australopithecine teeth?

(A) They had micro-wear characteristics indicating that fruit constituted only a small part of their diet.

(B) They lacked micro-wear characteristics associated with seed eating and bone crunching.

(C) They had micro-wear characteristics that differed in certain ways from the micro-wear patterns of chimpanzees and orangutans.

(D) They had micro-wear characteristics suggesting that the diet of australopithecines varied from one region to another.

(E) They lacked the micro-wear characteristics distinctive of modern frugivores.

Inference

According to the passage, Walker's research focuses on micro-wear patterns on the teeth of australopithecines. He draws several conclusions on the basis of these patterns: first, that australopithecines did not eat hard seeds; next, that they did not crunch bones; and finally, that they ate fruit.

A The passage indicates that Walker's observation of micro-wear patterns led

him to conclude that australopithecines ate mostly fruit, not that *fruit constituted only a small part of their diet*.

B **Correct.** The first paragraph explains that Walker concluded from micro-wear patterns that australopithecines did not eat hard seeds and did not crunch bones; thus, his research must have indicated that they lacked micro-wear characteristics associated with such activities.

C According to the passage, the opposite is true: based on the observation that their micro-wear patterns were indistinguishable from those of chimpanzees and orangutans, Walker concluded that australopithecines ate fruit.

D The second paragraph of the passage complicates Walker's view by suggesting that australopithecines' diet might have varied from one region to another, but the passage says nothing about Walker's research from which to infer that it indicated such variation.

E Chimpanzees and orangutans are assumed to be frugivores, according to the passage, and Walker's research indicated that australopithecine teeth had micro-wear characteristics identical to theirs.

The correct answer is B.

RC00613-03

93. The passage suggests that which of the following would be true of studies of tooth micro-wear patterns conducted on modern baboons?

(A) They would inaccurately suggest that some baboons eat more soft-bodied than hard-bodied insects.

(B) They would suggest that insects constitute the largest part of some baboons' diets.

(C) They would reveal that there are no significant differences in tooth micro-wear patterns among baboon populations.

(D) They would inadequately reflect the extent to which some baboons consume certain types of insects.

(E) They would indicate that baboons in certain regions eat only soft-bodied insects, whereas baboons in other regions eat hard-bodied insects.

Inference

The second paragraph states that modern baboons eat *only soft-bodied insects* and so would not exhibit tooth abrasion to indicate that they were insectivores. Thus, it would be difficult to determine exactly which soft-bodied insects they ate.

A The passage states that baboons eat only soft-bodied insects—so it is in fact accurate to suggest that all baboons eat more soft-bodied than hard-bodied insects.

B The passage says that baboons eat only soft-bodied insects. It also suggests that soft-bodied insects do not leave significant enough abrasions on baboons' teeth to provide evidence of this aspect of their diet. Therefore, the tooth-wear patterns would give little or no information regarding what proportion of the baboons' overall diet consists of insects.

C The passage does not provide grounds for inferring anything about the differences, or lack thereof, among baboon populations in terms of tooth micro-wear patterns.

D **Correct.** Because soft-bodied insects cause little tooth abrasion, micro-wear patterns would most likely not reflect the extent to which baboons consume soft-bodied insects.

E The passage states that baboons eat *only soft-bodied insects*. Nothing in the passage suggests that baboons in certain regions eat hard-bodied insects.

The correct answer is D.

RC00613-04

94. The passage suggests which of the following about the micro-wear patterns found on the teeth of omnivorous primates?

(A) The patterns provide information about what kinds of foods are not eaten by the particular species of primate, but not about the foods actually eaten.

(B) The patterns of various primate species living in the same environment resemble one another.

(C) The patterns may not provide information about the extent to which a particular species' diet includes seeds.

(D) The patterns provide more information about these primates' diet than do the tooth micro-wear patterns of primates who are frugivores.

(E) The patterns may differ among groups within a species depending on the environment within which a particular group lives.

Inference

This question focuses mainly on the end of the second paragraph, which states that *the diets of current omnivorous primates vary considerably depending on the environments* in which they live. It goes on to conclude that australopithecines, if they were omnivores, would similarly consume varied diets, depending on environment, and exhibit varied tooth micro-wear patterns as well. Thus, it is reasonable to conclude that any omnivorous primates living in different environments and consuming different diets would exhibit varied micro-wear patterns.

A The passage indicates that the absence of certain types of micro-wear patterns can provide evidence about what foods a species does not eat. It also says that among omnivorous primates, one might expect to find considerable population variation in their tooth micro-wear patterns. Wherever micro-wear patterns are present, they provide evidence about what kinds of foods are eaten.

B The passage suggests that various primate species living in the same environment might consume a variety of different diets, so there is no reason to conclude that their micro-wear patterns would resemble one another.

C The passage indicates that seed-eating produces distinctive micro-wear patterns, so the patterns, or lack thereof, on the teeth of any species would most likely provide information about the extent to which the species' diet includes seeds.

D The end of the first paragraph suggests that frugivores' micro-wear patterns are distinctive; the passage provides no reason to believe that omnivores' diets provide more information.

E **Correct.** According to the passage, omnivorous primates of a particular species may consume different diets depending on where they live. Thus, their micro-wear patterns may differ on this basis.

The correct answer is E.

RC00613-05

95. It can be inferred from the passage that if studies of tooth micro-wear patterns were conducted on modern baboons, which of the following would most likely be true of the results obtained?

(A) There would be enough abrasion to allow a determination of whether baboons are frugivorous or insectivorous.

(B) The results would suggest that insects constitute the largest part of the baboons' diet.

(C) The results would reveal that there are no significant differences in tooth micro-wear patterns from one regional baboon population to another.

(D) The results would provide an accurate indication of the absence of some kinds of insects from the baboons' diet.

(E) The results would be unlikely to provide any indication of what inferences about the australopithecine diet can or cannot be drawn from micro-wear studies.

Inference

The second paragraph states that modern baboons eat soft-bodied insects but not hard-bodied ones—and it is hard-bodied insects, the passage suggests, that would cause particular micro-wear patterns on teeth. So the patterns on modern baboons' teeth most likely do not exhibit the patterns indicating hard-bodied insect consumption.

A The passage states that baboons' consumption of soft-bodied insects would not show up in the patterns on their teeth—so the abrasion would most likely not provide enough information for a determination of whether baboons are frugivorous or insectivorous.

B Since soft-bodied insects do not abrade the teeth significantly, it would be difficult to

determine, based on micro-wear patterns, the part such insects play in the baboons' diet. Furthermore, the passage does not suggest that micro-wear patterns can indicate the quantity of food an animal might have eaten.

C There could be differences in tooth micro-wear patterns from one regional baboon population to another if they consumed anything in addition to soft-bodied insects.

D **Correct.** Studying tooth micro-wear patterns on baboons' teeth would most likely show that their teeth do not exhibit patterns typical of creatures that consume hard-bodied insects.

E The passage suggests that based on results from micro-wear patterns on modern baboons' teeth, one cannot infer from micro-wear studies whether australopithecines ate soft-bodied insects.

The correct answer is D.

RC00613-08

96. It can be inferred from the passage that Walker's conclusion about the australopithecine diet would be called into question under which of the following circumstances?

(A) The tooth enamel of australopithecines is found to be much heavier than that of modern frugivorous primates.

(B) The micro-wear patterns of australopithecine teeth from regions other than east Africa are analyzed.

(C) Orangutans are found to have a much broader diet than is currently recognized.

(D) The environment of east Africa at the time australopithecines lived there is found to have been far more varied than is currently thought.

(E) The area in which the australopithecine specimens were found is discovered to have been very rich in soft-bodied insects during the period when australopithecines lived there.

Inference

The passage explains that Walker bases his conclusion about the frugivorous nature of the australopithecine diet on the fact that the micro-wear patterns on australopithecine teeth are indistinguishable from those of chimpanzees and orangutans, both of which are presumed to have frugivorous diets.

A The passage indicates that Walker took into account the fact that australopithecines had relatively heavy tooth enamel and that he rejected the view that this heaviness was evidence against the hypothesis that they were frugivorous. For all we can tell from the information in the passage, the australopithecines' tooth enamel was already known to be much heavier than that of modern frugivorous primates.

B It could be the case that analyzing the micro-wear patterns of australopithecine teeth from other regions would yield the same data as those from east Africa.

C **Correct.** According to the passage, Walker bases the conclusion that australopithecines were frugivorous on the similarity between their micro-wear patterns and those of modern chimpanzees and orangutans. If orangutans were found to have a diet that included a greater range of non-fruit foods than is currently recognized, then the correspondence between their micro-wear patterns and australopithecines' micro-wear patterns would be consistent with the hypothesis that australopithecines' diet was broader as well.

D Even if the environment of east Africa were more varied, that would not mean the australopithecines necessarily ate a more varied diet. Many species that live in very varied environments specialize narrowly on particular foods in those environments.

E Just because many soft-bodied insects might have been available to australopithecines does not mean that australopithecines ate them.

The correct answer is C.

RC00613-10

97. The author of the passage mentions the diets of baboons and other living primates most likely in order to

(A) provide evidence that refutes Walker's conclusions about the foods making up the diets of australopithecines

(B) suggest that studies of tooth micro-wear patterns are primarily useful for determining the diets of living primates

(C) suggest that australopithecines were probably omnivores rather than frugivores

(D) illustrate some of the limitations of using tooth micro-wear patterns to draw definitive conclusions about a group's diet

(E) suggest that tooth micro-wear patterns are caused by persistent, as opposed to occasional, consumption of particular foods

Evaluation

The passage discusses the diets of baboons and other living primates mainly in the second paragraph, which is concerned with explaining the limited utility of micro-wear studies.

A The author raises some doubts about Walker's conclusions but does not go as far as to try to refute them outright. The author argues only that, as the final sentence of the passage states, they may need to be expanded.

B The author discusses the diets of baboons and other living primates in relation to micro-wear research on extinct primates. Nothing in the discussion suggests that micro-wear studies would be more useful for determining the diets of living primates than for providing evidence regarding the diets of earlier primates or of other types of animals. Furthermore, the mention of baboon diets suggests that micro-wear studies may not be very useful for determining the diets of some living primates.

C The author leaves open the question of whether australopithecines were omnivores or frugivores. The passage suggests that some australopithecines might have been omnivores, if australopithecines' diets varied according to the environments they inhabited. Walker's conclusion regarding east African australopithecines' being frugivores might still hold, however.

D **Correct.** The author refers to baboons' diets and those of current omnivorous primates in order to suggest that there might be limitations to Walker's use of tooth micro-wear patterns to determine australopithecines' diet.

E The passage does not make a distinction between persistent and occasional consumption of particular foods.

The correct answer is D.

Questions 98–101 refer to the passage on page 62.

RC00512-01

98. The primary purpose of the passage is to

(A) present recently discovered evidence that supports a conventional interpretation of a historical period

(B) describe how reinterpretations of available evidence have reinvigorated a once-discredited scholarly position

(C) explain why some historians have tended to emphasize change rather than continuity in discussing a particular period

(D) explore how changes in a particular occupation serve to counter the prevailing view of a historical period

(E) examine a particular area of historical research in order to exemplify a general scholarly trend

Main idea

This question asks about the passage's main purpose. The first paragraph initially describes a way in which historiography is changing: the idea of a consistent, monolithic decline in women's status is being complicated by *recent research*. The rest of the passage uses the example of Pinchbeck's interpretation of women's work in English cheesemaking to show the limits of earlier ideas about women's status: Pinchbeck's work illustrates the idea of consistent decline, but recent scholarship has called that work into question.

A The first paragraph suggests that Pinchbeck's work represents the conventional position that women's status declined consistently with the advent of capitalism; according to the passage, recent evidence undermines, rather than supports, that position.

B According to the passage, reinterpretations of evidence have inspired new interpretations; they have not reinvigorated a discredited position.

C The passage is concerned with noting both change and continuity, as stated in the first sentence.

D In the passage, continuity, not change, in a particular occupation—English farmhouse cheesemaking—helps to counter the prevailing view.

E **Correct.** The passage's main purpose is to examine women's work in English farmhouse cheesemaking so as to illustrate a trend in historiography of women's status under capitalism and industrialization.

The correct answer is E.

RC00512-03

99. Regarding English local markets and fairs, which of the following can be inferred from the passage?

(A) Both before and after the agricultural revolution, the sellers of agricultural products at these venues were men.

(B) Knowing who the active sellers were at these venues may not give a reliable indication of who controlled the revenue from the sales.

(C) There were no parallel institutions at which American cheese makers could sell their own products.

(D) Prior to the agricultural revolution, the sellers of agricultural products at these venues were generally the producers themselves.

(E) Prior to the agricultural revolution, women sold not only cheese but also products of arable agriculture at these venues.

Inference

The passage discusses English local markets and fairs in the first and second paragraphs: the first paragraph states that before the agricultural revolution, women had sold cheese in such venues but that after that, factors, who were men, sold the cheese. The second paragraph argues that even though English women in precapitalist, preindustrial times may have at one point sold cheese at fairs, evidence indicates that in at least one case, a man appropriated most of the money his wife made from her sales.

A The first paragraph states that prior to the agricultural revolution, women sold cheese at local markets and fairs.

B **Correct.** As the second paragraph indicates, women may have sold the cheese, but there is evidence to suggest that they did not necessarily control the revenue from its sale.

C The passage does not provide evidence regarding any institutions at which American cheese makers sold their products.

D While the passage indicates that the producers of English farmhouse cheese may have been the ones who sold that cheese at local markets and fairs, there is no evidence to suggest that this was necessarily the case for other agricultural products.

E The passage provides no information regarding whether women sold products of arable agriculture in any venue.

The correct answer is B.

RC00512-05

100. The passage describes the work of Pinchbeck primarily in order to

(A) demonstrate that some of the conclusions reached by recent historians were anticipated in earlier scholarship

(B) provide an instance of the viewpoint that, according to the passage's author, is being superseded

(C) illustrate the ways in which recent historians have built on the work of their predecessors

(D) provide a point of reference for subsequent scholarship on women's work during the agricultural revolution

(E) show the effect that the specialization introduced in the agricultural and industrial revolutions had on women's work

Evaluation

This question focuses on the function of Pinchbeck's work in the passage. Pinchbeck's study of women's work in cheese production is, according to the passage, an illustration of the view that women's status declined consistently with the advent of industrialization. That view, the author claims, is being challenged by current historiography.

A The passage indicates that the conclusions of Pinchbeck, who represents earlier scholarship, did not anticipate recent work, but rather that recent work argues against those conclusions.

B **Correct.** Pinchbeck's work illustrates earlier trends in historiography, trends that the author suggests are now giving way to newer ideas.

C The passage does not focus on any ways in which recent historians have built on Pinchbeck's work; instead, it discusses how they have argued against its conclusions.

D Pinchbeck's work provides a point of reference only insofar as subsequent scholarship is arguing against it.

E Pinchbeck makes the argument that specialization caused women's status to decline, but the passage is concerned with undermining this argument.

The correct answer is B.

RC00512-07

101. It can be inferred from the passage that women did work in

(A) American cheesemaking at some point prior to industrialization

(B) arable agriculture in northern England both before and after the agricultural revolution

(C) arable agriculture in southeast England after the agricultural revolution, in those locales in which cultural values supported their participation

(D) the sale of cheese at local markets in England even after the agricultural revolution

(E) some areas of American cheese dairying after industrialization

Inference

This question focuses mainly on the final paragraph of the passage, in which women's continued work in English cheese dairying is contrasted with what the passage calls their *disappearance from arable agriculture in southeast England and from American cheese dairying*, presumably during the period of industrialization. The correct answer will be a conclusion that can be drawn from this information.

A **Correct.** That women "disappeared" from American cheese dairying during industrialization provides grounds for inferring that they did such dairying work at some point prior to industrialization.

B The passage says that women disappeared from arable agriculture in southeast England, but it gives no information about their participation in arable agriculture in northern England.

C The passage makes a blanket statement about women's *disappearance from arable agriculture in southeast England*, so there is no reason to infer that any locales supported women's participation in agriculture.

D The first paragraph states that factors, who were men, sold cheese after the agricultural revolution.

E The final paragraph explicitly states that women disappeared from American cheese dairying; thus, there is no basis for inferring that women worked in any areas of that field after industrialization.

The correct answer is A.

4.0 Critical Reasoning

4.0 Critical Reasoning

Critical reasoning questions are designed to test the reasoning skills involved in:

1. constructing an argument
2. evaluating an argument, and
3. formulating or evaluating a plan of action.

The materials on which questions are based are drawn from a variety of sources. The GMAT exam does not assume any familiarity with the subject matter of those materials beyond what is generally known.

Critical reasoning questions are based on passages that are typically fewer than 100 words in length, and—unlike reading comprehension passages—each critical reasoning passage has just one question associated with it. On the exam, you will see only one passage and question at a time.

Answering critical reasoning questions requires no specialized knowledge. You don't need to know the terminology or conventions of formal logic. You do need to be familiar with such generally known logical terms as "premise," "conclusion," and "assumption." The sample critical reasoning questions in this chapter illustrate the variety of topics the test may cover, the kinds of questions it may ask, and the level of analysis they require.

4.1 What Is Measured

A set of critical reasoning questions provides one measure of your ability to reason.

For the purposes of the GMAT, reasoning can be thought of as any series of statements of which at least one is given as logical support (evidence) for some other statement. Some examples include reasoning for the purpose of justifying a belief in some statement, justifying some plan of action, or explaining why a certain phenomenon occurs.

Many of the passages in critical reasoning questions contain or report reasoning. Some passages display no reasoning and simply present information. Every critical reasoning question, however, will require you to engage in reasoning based on the passage. You may, for example, be asked to draw a conclusion from the given information, i.e., to identify among the answer choices the one statement that is logically supported by the information. Or you may be asked to identify the one statement that most plausibly explains why a phenomenon described in the passage occurred, or to evaluate whether a particular plan of action is likely to achieve the intended goal.

Many different skills are involved in the analysis and evaluation of reasoning. The following table lists the major skills that critical reasoning questions measure.

Question type	Skill	Examples
Analyzing reasoning structure	Ability to identify premises, conclusions, explanations, plan rationales, or background information in passages that contain reasoning	• [in a dialogue] "Ming uses which of the following techniques in responding to Wei?" • Which of the following most accurately describes the functions of each boldfaced part of the passage?
Drawing conclusions (inference)	Ability to infer a statement (draw a conclusion) from given information	• Which of the following is most strongly supported by the information provided? Which of the following follows logically from the information provided?
Identifying sufficient or required assumptions	Ability to recognize an assumption that can help to complete a logical gap in a piece of reasoning associated with an explanation or the rationale for a policy or plan	• Which of the following is an assumption that Fang's reasoning requires? [or "on which Fang's reasoning depends"] • The conclusion follows logically if which of the following is assumed? • The plan will fail unless which of the following occurs?
Evaluating hypotheses	Ability to identify a hypothesis that most plausibly explains the occurrence of a phenomenon or event	• Which of the following, if true, most helps to explain the failure to achieve the plan's objective? • Which of the following is most likely to contribute to the occurrence of the phenomenon observed? • In order to evaluate the force of the archaeologists' evidence, it would be most useful to determine which of the following?
Resolving apparent inconsistency	Ability to reconcile two apparently conflicting states of affairs	• Which of the following most helps to resolve the discrepancy between the reported level of rainfall and the occurrence of flooding in City X?
Identifying information that strengthens or weakens reasoning	Ability to identify information that either provides additional support or undermines reasoning	• Which of the following, if discovered, would cast the most doubt on the engineer's reasoning? • Which of the following, if true, would most strengthen the support for the physician's diagnosis?

Question type	Skill	Examples
Recognizing and describing logical flaws	Ability to identify errors in reasoning such as confusing correlation with causation or confusing a sufficient condition with a necessary one	• Which of the following, if true, most strongly indicates the existence of a flaw in the reasoning? The reasoning attributed to the executive is most vulnerable to which of the following criticisms?
Identifying a point of disagreement	Ability to precisely identify the key issue on which two parties disagree, based on the statements they have made	• Which of the following is the main point of disagreement between Mandeep and Saumya?
Finding a solution to a practical problem	Ability to recognize a strategy for solving a practical problem	• Which of the following would most help the polling specialists overcome the difficulty they encountered in surveying a sample of likely voters?

4.2 Test-Taking Strategies

To answer critical reasoning questions, you must analyze and logically evaluate the passage on which each question is based, and then select the answer choice that most appropriately answers the question. Begin by carefully reading the passage and the question asked about the passage, then reading the five answer choices. If the correct answer is not immediately obvious to you, see whether you can eliminate some of the wrong answers. Reading the passage a second time may help illuminate subtleties not evident on first reading.

1. **Decide whether you benefit most from reading the passage or the question first.**

   Some test-takers may want to read the passage very carefully first and then read the question. But it can be advantageous to read the question first. Doing so can orient you toward noticing the content or structural features of the passage that are relevant for answering the question. Working through the practice questions in this guide should help you get a good feel for the approach that suits you best.

   Be careful to respond to the question asked. For example, here are two questions that, in a hurried reading, could easily be confused:

   (A) Which of the following is valued by most citizens of Nation X?

   (B) Which of the following is most valued by the citizens of Nation X?

   Something that is valued by most citizens of Nation X may not be the same as what is generally most valued by the citizens of Nation X. For example, the most justified answer to (A) could be "wealth" and the most justified answer to (B) could be "good community relations."

2. **Determine whether the passage contains reasoning or merely provides information.**

   To determine whether the passage contains reasoning, consider whether one or more of the statements are intended to support the truth of any other statement provided, or to justify a plan of action, or to explain some phenomenon. To help determine this, look for certain sorts of words or phrases, sometimes

called "inference indicators," that authors may provide when they are presenting a piece of reasoning. For instance, the word *therefore* is frequently used to indicate a conclusion, and the word *because* is frequently used to indicate a premise or reason. Here are other examples (the list is not exhaustive):

- Conclusion indicators: consequently, it follows that, so, hence
- Premise indicators: since, as, for, as is shown by, follows from

Some of these words have other uses; for example, *since* can signify time or can signify causation. Also, keep in mind that a passage may contain reasoning even if no such indicators are present. Ask yourself whether any of the statements support the truth of another statement, help explain a phenomenon described in the passage, or help support a plan proposed in the passage.

3. Identify the purpose and structure of any reasoning given in a passage.

A good first step in analyzing passages that contain reasoning is to determine the purpose of the reasoning. Does the reasoning aim to provide logical support for a conclusion? If so, then identifying that conclusion will help. Or perhaps the reasoning aims to explain a phenomenon, i.e., to indicate what has caused the phenomenon to occur. If so, identifying the statement that predicts or hypothesizes the occurrence of the phenomenon will help. A third possibility is that the reasoning provides a rationale for a plan or policy. If so, identifying a statement that indicates the goal of the plan or policy will help.

Once you have identified the purpose of the reasoning, then you can look at the structure of the reasoning (i.e., *how* the author makes the argument). Pay attention to how sentences relate to one another. For example, the passage may begin with a conclusion followed by a premise that supports that conclusion—or the premise may come first. An intermediate conclusion may, in turn, be used as a premise to support a larger, final conclusion. Consider the following:

> Among people currently employed, those who wish to retire early will probably not be able to afford to do so. Most people these days are spending almost all their income, and therefore few people are saving enough for early retirement.

In this argument, "Few people are saving enough for early retirement" is an intermediate conclusion, because it is both a conclusion (for which "Most people these days are spending almost all of their income" is a premise) and a premise for the argument's main conclusion ("Among people currently employed, those who wish to retire early will probably not be able to afford to do so").

4. To test reasoning, try to imagine scenarios in which the premises are true and the conclusion false.

Many critical reasoning questions will require you to evaluate the soundness of the reasoning presented in a passage. To evaluate reasoning, you do not need to decide whether premises or conclusions are actually true. Determining actual truth is beyond the scope of the test: no test-taker could determine the truth or falsity of every assertion present in critical reasoning passages. Moreover, many critical reasoning passages refer to fictional scenarios. Normally, in evaluating a piece of reasoning, you should try to *imagine* a situation in which the premises would all be true but the conclusion false. If such a situation would be very unlikely to occur, then the reasoning is strong. On the other hand, if such a situation could quite likely occur, then the reasoning is poor.

This does not mean that considerations of what you know to be true about the real world will not at times be helpful in evaluating reasoning. Consider the following:

> Medical procedure A is as effective and cost-efficient as medical procedure B but has fewer unwanted side-effects than B. Therefore, medical procedure A should be preferred over medical procedure B.

In evaluating this reasoning, you can use the obvious fact that, all else being equal, the procedure with fewer unwanted side-effects is preferable.

There are degrees of logical support. A piece of reasoning can be very weak, moderately weak, moderately strong, or even absolutely certain. Even if you are not directly asked to do so, it is good practice to evaluate any reasoning in a passage, including the plausibility of an explanation or the persuasiveness of the rationale for a plan's success. Also, note that reasoning can be strengthened by adding new information that, along with the information already given, increases the likelihood that the conclusion inferred would be true provided all the supporting information is true. Similarly, reasoning can be weakened by adding information that increases the likelihood of the conclusion's being false provided the supporting information is true.

4.3 Reasoning Concepts to Know for the GMAT

The following is intended to provide some pointers to help you analyze the critical reasoning issues you may encounter on the GMAT.

1. **Be alert to any unstated assumption on which the reasoning may depend.**

   A statement that helps fill a "gap" in the information offered to support the conclusion is an unstated assumption. If the reasoning depends on such an assumption and the assumption is highly implausible, the reasoning would be subject to criticism on that basis. Note that assumptions can be of two kinds:

   - **Necessary assumptions:** unstated facts or opinions that must be assumed if the reasoning is to succeed logically. The GMAT question will often contain phrases like *an assumption that the argument (reasoning) requires, an assumption on which the argument depends* (*relies).*

     Mario has booked a flight scheduled to arrive at 5:00 pm—which should allow him to get here around 6:30. So it will be about 7:00 pm when we will be going out to dinner with Mario.

     Assumption: The plane Mario is booked on will arrive not significantly later than the scheduled time. This assumption, though necessary, is not sufficient; for example, we also need to assume that Mario managed to catch his flight.

   - **Sufficient assumptions:** unstated facts or opinions that, if assumed, allow reasoning to succeed logically. One GMAT question form for sufficient assumptions is: *Which of the following, if assumed, would allow the conclusion to follow logically*.

     The study of poetry is entirely without value, since poetry has no practical use.

     Assumption: The study of what has no practical use is entirely without value. This assumption, along with the premise given, provides sufficient support for the conclusion: if both the premise and the assumption are true, then the conclusion must also be true. But the following, more complex, assumption would also be sufficient:

     Anything with no practical use is entirely without value, and the study of anything that is entirely without value is also entirely without value.

     This shows that two distinct assumptions can each be sufficient, neither of them being necessary.

2. Understand the logic of *if-then* statements and associated inferences.

A conditional statement is a compound statement consisting of the part that expresses a condition (the "if" portion) and a part that expresses a supposed consequence: for example, "If it has rained today, then the ground is wet." (The order can be reversed, and the word *then* omitted: "The ground is wet if it has rained today.")

There are certain errors that people often make in drawing inferences from conditional (*if-then*) statements. Consider the following:

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. But the jury will not find him guilty of embezzlement. So the executive is unlikely to receive a prison sentence. (Pattern: if A occurs, then B occurs. A does not occur. Therefore, B does not occur.)

A little consideration will indicate that, in the absence of additional information (e.g., that the executive will not be found guilty of any other crime), the inference is faulty. Similarly, the following argument is in error:

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. He will, I believe, receive a prison sentence. Therefore, the jury will find him guilty of embezzlement. (Pattern: If A occurs, then B occurs. B occurs. Therefore, A occurs.)

On the other hand, the following argument is logically correct (i.e., if both premises are true, then the conclusion must be true):

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. But he will not, I believe, receive a prison sentence. Therefore, the jury will not find him guilty of embezzlement. (Pattern: If A occurs, then B occurs. B does not occur. Therefore, A does not occur.)

The following argument is also logically correct:

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. And the jury will find him guilty of embezzlement, I believe. So he will receive a prison sentence. (Pattern: If A occurs, then B occurs. A occurs. Therefore, B occurs.)

In each of these cases, the second premise in the pattern is crucial: for correct reasoning, that premise should either affirm the *if*-clause, or deny the *then*-clause.

To thoroughly understand the logic of *if-then* statements, it is useful to note the structural equivalence displayed in the following simple pair of examples:

> In daytime, if the sky is entirely clear, then there is sunshine.
>
> In daytime, if there is no sunshine, the sky is not entirely clear.

Note, however, that we can easily imagine a situation when the each of these statements is true but the following statement false:

> In daytime, if the sky is not entirely clear, then there is no sunshine.

Therefore, this third statement does not follow logically from either of the others.

Conditional Statements: Correct and Incorrect Inference Patterns

Premise(s)	Conclusion
If A occurs, B occurs. A does occur.	B occurs (correct)
If A occurs, B occurs. B does not occur.	A does not occur (correct)
If A occurs, B occurs. B does occur.	A occurs (incorrect)
If A occurs, B occurs. A does not occur.	B does not occur (incorrect)

3. **Pay attention to statements that indicate a necessary condition or a sufficient condition.**

   There are many ways to indicate that something is necessary or sufficient for the occurrence of another event or phenomenon. Here is an example:

   Unless you sleep well tonight, you will not compete well in tomorrow's track events.

   This indicates that sleeping well tonight is a necessary condition of competing well in tomorrow's track events. This could be expressed by "Sleeping well tonight is necessary in order that you compete well in tomorrow's track events" or by "You will compete well in tomorrow's track events only if you sleep well tonight." *If-then* statements are sometimes used to indicate that something is a necessary condition or a sufficient condition, with the *if*-clause indicating a sufficient condition or the *then*-clause indicating a necessary condition. The statement "If you sleep well tonight, then you will compete well in tomorrow's track event" indicates that sleeping well tonight is a sufficient condition of competing well in tomorrow's track event—in the sense that, given the truth of the *if-then* statement, the situation in which you sleep well tonight but do not compete well in tomorrow's track event will not occur.

   Fulfillment of an accurately expressed sufficient condition "guarantees" that something else will occur, but the fulfillment of a necessary condition is no guarantee that something else will occur. Suppose sleeping well tonight is a necessary (but not a sufficient) condition of competing well tomorrow in the track events. Then even if you do sleep well tonight (and therefore fulfill the condition said to be necessary), you may still not compete well tomorrow; there may be one or more other necessary conditions that have not been fulfilled (e.g., that you will be in fine form, with adequate energy).

4. **Be careful with negatives applied to AND statements and OR statements.**

   When someone denies an *and*-statement or denies an *or*-statement, it is quite easy to make an incorrect inference from a mistaken understanding of what the denial implies. Consider the following dialogue:

   John: Humidity is high today and the temperature is high today.

   Joanna: I believe that's not correct.

   Is Joanna committed to the claim that humidity is not high today? Is she committed to the claim that the temperature is not high today? No. She is committed to the claim that humidity and temperature are *not both* high today—but not to the claim that neither is high today. Instead, her

position can be paraphrased as: "At least one of the two, humidity and temperature, is not high today." To affirm the negation of an *and*-statement is, in effect, to affirm an *or*-statement—a principle that we could represent as follows:

"It is false that both statement 1 AND statement 2 are true" is equivalent to "Statement 1 is false OR statement 2 is false, OR both are false."

A related point—in reverse—can be made about *or*-statements. Consider the following dialogue:

Economist 1: Inflation will rise next year or equities will decline.

Economist 2: I believe that's incorrect.

Economist 2 denies the statement made by Economist 1. Economist 2 is committed to the view that there will *neither* be increased inflation *nor* a decline in equities—or equivalently, to the view that inflation will not rise and equities will not decline. If Economist 1 had said "Either inflation will rise next year or equities will decline," the meaning would be that one but not both effects will occur. Since the statement was not an *either-or* statement, just a simple *or*-statement, it asserts that at least one of the effects will occur, i.e., it leaves open the possibility that both effects could occur.

5. Be aware of issues concerning general statements.

Statements about *all* or *some* members of a class are called "general statements." Some tempting inferences are incorrect—and sometimes obviously so, as in: "All primes are odd numbers. Therefore, all odd numbers are primes." The premise tells us that the subject class (primes) is entirely contained in the predicate class (odd numbers)—but there are odd numbers that are not primes, such as the number fifteen. So the premise is correct but the conclusion is false, and the following inference, which has an identical logical structure, is also incorrect: "All geniuses are exceptionally creative thinkers, so all exceptionally creative thinkers are geniuses."

A similar point can be made regarding certain statements of the form *some As are not Bs.* From the premise "Some citizens of India are not residents of Mumbai," can it be correctly inferred that "Some residents of Mumbai are not citizens of India?" No—this inference is incorrect, since it has a true premise and a false conclusion, just as in "Some odd numbers are not primes, so some primes are not odd numbers." Compare with the following: "Some biologists are not researchers, so some researchers are not biologists." Based on common knowledge, both the premise and conclusion are true—but the structure of the argument is the same as in the preceding two examples.

Even though "some" can sometimes be read, depending on the context, as meaning "some but not all," it should often be read as meaning "at least one"—even if a plural noun follows "some." If I say "Some voters are critical thinkers," that claim will be true whether all, or only one or two voters are critical thinkers.

Some confusion can arise in cases where general statements are negated or denied. Consider the following dialogue:

Jana: Some voters in modern democracies are critical thinkers.

Julio: I wonder about that—in fact I think it's not true at all.

Julio's statement commits him to the claim that no voters in modern democracies are critical thinkers—not just to the weaker claim that some voters in modern democracies are not critical thinkers. And consider the following:

Jana: Every voter in modern democracies is a critical thinker.

Julio: I wonder about that—in fact I think that's not true at all.

Julio's statement commits him to the claim that some voters—one or more—in modern democracies are not critical thinkers—but not to the more sweeping claim that no such voters are (his claim will be true, of course, if no such voters are).

Not every general statement carries an implication that the subject class is not empty, i.e., contains members. Consider the following:

Every *life-form native only to planets other than Earth* is carbon-based.

For all we know, the subject class—designated by the italicized phrase—may in reality be an "empty" class (equivalent to the null set), so we cannot correctly infer from this statement the following:

Some life-forms native only to planets other than Earth are carbon-based.

A s*ome*-statement always carries the implication that the subject-class is non-empty, i.e., has at least one member.

Some general statements can easily be misread. Learn to distinguish carefully the following statements:

Some food is the favorite of every adult in Nation X.

Every adult in Nation X has some favorite food.

These statements are not equivalent. The first says something that is unlikely to be true: that there is a particular food that is a *universal* favorite among adults in Nation X. The second says only that each adult in Nation X has some food that is his or her favorite—which may well be true.

6. Note ways in which definitions can be defective.

Definitions serve various purposes, but all have the goal of making things adequately clear. A definition can simply give a conventional dictionary meaning—but many ordinary words have more than one meaning, and a definition may be needed if the meaning is not clear enough from context. Sometimes a new term needs to be introduced or an existing term needs to have a precise definition for a special (perhaps technical) purpose. Definitions are flawed if they are too vague for the intended purpose—when it is not sufficiently clear whether a given entity would fall inside or outside the class of things apparently targeted by the defined term. Also, a definition can be too broad or too narrow—when the definition incorrectly includes or excludes one or more items. Consider the following: "An athlete is a fast runner or a high jumper." This is both too narrow and too imprecise—and perhaps too broad (depending on context): for example, does it include racehorses? A definition can be circular: "Atmospheric pressure is the air pressure in the earth's atmosphere." This is both circular and vague—and useless for scientific purposes.

7. Understand how hypotheses are confirmed.

A hypothesis is a proposed explanation that serves as a starting point for further investigation. On the GMAT exam, you may be asked to identify or evaluate a hypothesis that most plausibly explains a phenomenon or event. To do so, you should look for evidence that either supports or goes against the hypothesis.

Imagine the following research study designed to test the efficacy of a new teaching method for ten-year-old girls and boys. Sixty ten-year-old children are divided into two groups "matched" relative to gender distribution, measured performance in mathematics achievement, and all other factors presumed relevant. A new instructional method M for a set of designated mathematical skills is applied to one of the groups, and an established method, Method E, for the same skills is applied to

the other. Performance on the skills after ten weeks of instruction is measured for both groups, and a comparison made between the two data sets, appropriately processed. The goal is to discover whether the data confirms the following hypothesis (in the form of a prediction):

> If Method M is applied to groups of children like these, there will be a significantly larger gain in mathematical performance than if Method E is applied.

Suppose the data shows that the group subjected to Method M has a significantly larger gain in performance than the other group (the "control group"). This information provides some support for the hypothesis, provided adequate scientific controls and statistical processing have been correctly executed (ensuring these two conditions are met is not always easy). The confirmatory evidence supports the superior efficacy of Method M, but it is not conclusive. What the evidence shows is that the experimental results for these children are *consistent with* the hypothesis that Method M generally has superior efficacy for such children. The *if*-clause is true of one of these groups of children—presumed typical of a larger population of ten-year-old children—and so is the *then*-clause. It is one piece of evidence that the hypothetical statement given above has not been falsified—and therefore is quite possibly correct. If the *then*-clause turned out false, this would be evidence against the hypothesis. Accumulation of confirmatory evidence through replicated experiments will greatly strengthen the confirmation of the hypothesis.

The finding of Method M's efficacy can be validly generalized only to groups of children that resemble in relevant respects the children featured in the study. In other words, the groups of children must be typical, i.e., *representative*, of the large population of ten-year-old children to whom Method M may be applied if it is scientifically validated. A similar principle of representativeness must govern sample selection in any study that aims to establish scientific results generalizable to a larger group or population.

4.5 Sample Questions

Each of the critical reasoning questions is based on a short argument, a set of statements, or a plan of action. For each question, select the best answer of the choices given.

*CR14249

102. PhishCo runs a number of farms in the arid province of Nufa, depending largely on irrigation. Now, as part of a plan to efficiently increase the farms' total production, it plans to drill down to an aquifer containing warm, slightly salty water that will be used to raise fish in ponds. The water from the ponds will later be used to supplement piped-in irrigation water for PhishCo's vegetable fields, and the ponds and accompanying vegetation should help reduce the heat in the area of the farms.

Which of the following would, if true, most strongly suggest that the plan, if implemented, would increase the overall efficiency of PhishCo's farms?

(A) Most of the vegetation to be placed around the ponds is native to Nufa.

(B) Fish raised on PhishCo's farms are likely to be saleable in the nearest urban areas.

(C) Organic waste from fish in the pond water will help to fertilize fields where it is used for irrigation.

(D) The government of Nufa will help to arrange loan financing to partially cover the costs of drilling.

(E) Ponds will be located on low-lying land now partially occupied by grain crops.

CR07612

103. The sustained massive use of pesticides in farming has two effects that are especially pernicious. First, it often kills off the pests' natural enemies in the area. Second, it often unintentionally gives rise to insecticide-resistant pests, since those insects that survive a particular insecticide will be the ones most resistant to it, and they are the ones left to breed.

From the passage above, it can be properly inferred that the effectiveness of the sustained massive use of pesticides can be extended by doing which of the following, assuming that each is a realistic possibility?

(A) Using only chemically stable insecticides

(B) Periodically switching the type of insecticide used

(C) Gradually increasing the quantities of pesticides used

(D) Leaving a few fields fallow every year

(E) Breeding higher-yielding varieties of crop plants

*These numbers correlate with the online test bank question number. See the GMAT Verbal Review Online Index in the back of this book.

CR00701

104. Which of the following, if true, most logically completes the argument below?

Manufacturers are now required to make all cigarette lighters child-resistant by equipping them with safety levers. But this change is unlikely to result in a significant reduction in the number of fires caused by children playing with lighters, because children given the opportunity can figure out how to work the safety levers and _____.

(A) the addition of the safety levers has made lighters more expensive than they were before the requirement was instituted

(B) adults are more likely to leave child-resistant lighters than non-child-resistant lighters in places that are accessible to children

(C) many of the fires started by young children are quickly detected and extinguished by their parents

(D) unlike child-resistant lighters, lighters that are not child-resistant can be operated by children as young as two years old

(E) approximately 5,000 fires per year have been attributed to children playing with lighters before the safety levers were required

CR04192

105. Which of the following most logically completes the passage?

A business analysis of the Appenian railroad system divided its long-distance passenger routes into two categories: rural routes and interurban routes. The analysis found that, unlike the interurban routes, few rural routes carried a high enough passenger volume to be profitable. Closing unprofitable rural routes, however, will not necessarily enhance the profitability of the whole system, since _____.

(A) a large part of the passenger volume on interurban routes is accounted for by passengers who begin or end their journeys on rural routes

(B) within the last two decades several of the least used rural routes have been closed and their passenger services have been replaced by buses

(C) the rural routes were all originally constructed at least one hundred years ago, whereas some of the interurban routes were constructed recently for new high-speed express trains

(D) not all of Appenia's large cities are equally well served by interurban railroad services

(E) the greatest passenger volume, relative to the routes' capacity, is not on either category of long-distance routes but is on suburban commuter routes

CR52441.01

106. In its search for new technologies for solar energy that can produce lower-cost electricity, Smith-Diatom is developing a new way to make dye-sensitive solar cells, in which photons strike light-sensitive dyes. The process uses diatoms, which are unicellular algae that have silicon shells with a complex structure. First, the organic material is removed, and then the shells are coated with a titanium dioxide film that acts as a semiconductor. The diatoms' structure results in more photon activity and thus more efficient production of electricity than with current dye-sensitized solar cells, which in turn lowers the cost.

Which of the following considerations would, if true, most strongly support the hypothesis that the plan, if implemented, will produce low-cost electricity from dye-sensitive solar cells?

(A) Diatoms are an important link in oceanic food chains and help cycle carbon dioxide from the atmosphere.

(B) The current cost of electricity produced by dye-sensitive solar cells is roughly three times that of non-solar electricity.

(C) Because diatoms occur naturally, no special engineering processes are needed to produce the basic dye-sensitive solar cell structures.

(D) Dye-sensitive solar cells work somewhat more efficiently in lower light than previous solar cell technologies.

(E) The production of dye-sensitive solar cells primarily uses materials that do not harm the environment.

CR03129

107. Although Ackerburg's subway system is currently operating at a deficit, the transit authority will lower subway fares next year. The authority projects that the lower fares will result in a ten percent increase in the number of subway riders. Since the additional income from the larger ridership will more than offset the decrease due to lower fares, the transit authority actually expects the fare reduction to reduce or eliminate the subway system's operating deficit for next year.

Which of the following, if true, provides the most support for the transit authority's expectation of reducing the subway system's operating deficit?

(A) Throughout the years that the subway system has operated, fares have never before been reduced.

(B) The planned fare reduction will not apply to students, who can already ride the subway for a reduced fare.

(C) Next year, the transit authority will have to undertake several large-scale track maintenance projects.

(D) The subway system can accommodate a ten percent increase in ridership without increasing the number of trains it runs each day.

(E) The current subway fares in Ackerburg are higher than subway fares in other cities in the region.

CR20531.01

108. Sparrow Airlines is planning to reduce its costs by cleaning its planes' engines once a month, rather than the industry standard of every six months. With cleaner engines, Sparrow can postpone engine overhauls, which take planes out of service for up to 18 months. Furthermore, cleaning an engine reduces its fuel consumption by roughly 1.2 percent.

The airline's plan assumes that

(A) fuel prices are likely to rise in the near future and therefore cutting fuel consumption is an important goal

(B) the cost of monthly cleaning of an airplane's engines is not significantly greater in the long run than is the cost of an engine overhaul

(C) engine cleaning does not remove an airplane from service

(D) Sparrow Airlines has had greater problems with engine overhauls and fuel consumption than other airlines have

(E) cleaning engines once a month will give Sparrow Airlines a competitive advantage over other airlines

CR00828

109. Patrick usually provides child care for six children. Parents leave their children at Patrick's house in the morning and pick them up after work. At the end of each workweek, the parents pay Patrick at an hourly rate for the child care provided that week. The weekly income Patrick receives is usually adequate but not always uniform, particularly in the winter, when children are likely to get sick and be unpredictably absent.

Which of the following plans, if put into effect, has the best prospect of making Patrick's weekly income both uniform and adequate?

(A) Pool resources with a neighbor who provides child care under similar arrangements, so that the two of them cooperate in caring for twice as many children as Patrick currently does.

(B) Replace payment by actual hours of child care provided with a fixed weekly fee based upon the number of hours of child care that Patrick would typically be expected to provide.

(C) Hire a full-time helper and invest in facilities for providing child care to sick children.

(D) Increase the hourly rate to a level that would provide adequate income even in a week when half of the children Patrick usually cares for are absent.

(E) Increase the number of hours made available for child care each day, so that parents can leave their children in Patrick's care for a longer period each day at the current hourly rate.

CR10639

110. Editorial: Consumers in North America think that by drinking frozen concentrated orange juice, they are saving energy, because it takes fewer truckloads to transport it than it takes to transport an equivalent amount of not-from-concentrate juice. But they are mistaken, for the amount of energy required to concentrate the juice is far greater than the energy difference in the juices' transport.

Which of the following, if true, would provide the greatest additional support for the editorial's conclusion?

(A) Freezer trucks use substantially more energy per mile driven than do any other types of trucks.

(B) Frozen juice can be stored for several years, while not-from-concentrate juice lasts a much shorter time.

(C) Oranges grown in Brazil make up an increasing percentage of the fruit used in not-from-concentrate juice production.

(D) A serving of not-from-concentrate juice takes up to six times more space than a serving of frozen concentrated juice.

(E) Though frozen concentrated juice must be kept at a lower temperature, not-from-concentrate juice is far more sensitive to small temperature fluctuations.

CR07618

111. A computer equipped with signature-recognition software, which restricts access to a computer to those people whose signatures are on file, identifies a person's signature by analyzing not only the form of the signature but also such characteristics as pen pressure and signing speed. Even the most adept forgers cannot duplicate all of the characteristics the program analyzes.

Which of the following can be logically concluded from the passage above?

(A) The time it takes to record and analyze a signature makes the software impractical for everyday use.

(B) Computers equipped with the software will soon be installed in most banks.

(C) Nobody can gain access to a computer equipped with the software solely by virtue of skill at forging signatures.

(D) Signature-recognition software has taken many years to develop and perfect.

(E) In many cases even authorized users are denied legitimate access to computers equipped with the software.

CR02958

112. The rate at which a road wears depends on various factors, including climate, amount of traffic, and the size and weight of the vehicles using it. The only land transportation to Rittland's seaport is via a divided highway, one side carrying traffic to the seaport and one carrying traffic away from it. The side leading to the seaport has worn faster, even though each side has carried virtually the same amount of traffic, consisting mainly of large trucks.

Which of the following, if true, most helps to explain the difference in the rate of wear?

(A) The volume of traffic to and from Rittland's seaport has increased beyond the intended capacity of the highway that serves it.

(B) Wear on the highway that serves Rittland's seaport is considerably greater during the cold winter months.

(C) Wear on the side of the highway that leads to Rittland's seaport has encouraged people to take buses to the seaport rather than driving there in their own automobiles.

(D) A greater tonnage of goods is exported from Rittland's seaport than is imported through it.

(E) All of Rittland's automobiles are imported by ship.

CR75231.01

113. Ythex has developed a small diesel engine that produces 30 percent less particulate pollution than the engine made by its main rival, Onez, now widely used in Marania; Ythex's engine is well-suited for use in the thriving warehousing businesses in Marania, though it costs more than the Onez engine. The Maranian government plans to ban within the next two years the use of diesel engines with more than 80 percent of current diesel engine particulate emissions in Marania, and Onez will probably not be able to retool its engine to reduce emissions to reach this target. So if the ban is passed, the Ythex engine ought to sell well in Marania after that time.

Which of the following is an assumption on which the argument above depends?

(A) Marania's warehousing and transshipment business buys more diesel engines of any size than other types of engines.

(B) Ythex is likely to be able to reduce the cost of its small diesel engine within the next two years.

(C) The Maranian government is generally favorable to anti-pollution regulations.

(D) The government's ban on high levels of pollution caused by diesel engines, if passed, will not be difficult to enforce.

(E) The other manufacturers of small diesel engines in Marania, if there are any, have not produced an engine as popular and clean running as Ythex's new engine.

CR04073

114. In parts of South America, vitamin-A deficiency is a serious health problem, especially among children. In one region, agriculturists are attempting to improve nutrition by encouraging farmers to plant a new variety of sweet potato called SPK004 that is rich in beta-carotene, which the body converts into vitamin A. The plan has good chances of success, since sweet potato is a staple of the region's diet and agriculture, and the varieties currently grown contain little beta-carotene.

Which of the following, if true, most strongly supports the prediction that the plan will succeed?

(A) The growing conditions required by the varieties of sweet potato currently cultivated in the region are conditions in which SPK004 can flourish.

(B) The flesh of SPK004 differs from that of the currently cultivated sweet potatoes in color and texture, so traditional foods would look somewhat different when prepared from SPK004.

(C) There are no other varieties of sweet potato that are significantly richer in beta-carotene than SPK004 is.

(D) The varieties of sweet potato currently cultivated in the region contain some important nutrients that are lacking in SPK004.

(E) There are other vegetables currently grown in the region that contain more beta-carotene than the currently cultivated varieties of sweet potato do.

CR06018

115. Which of the following most logically completes the argument?

The last members of a now-extinct species of a European wild deer called the giant deer lived in Ireland about 16,000 years ago. Prehistoric cave paintings in France depict this animal as having a large hump on its back. Fossils of this animal, however, do not show any hump. Nevertheless, there is no reason to conclude that the cave paintings are therefore inaccurate in this regard, since _____.

(A) some prehistoric cave paintings in France also depict other animals as having a hump

(B) fossils of the giant deer are much more common in Ireland than in France

(C) animal humps are composed of fatty tissue, which does not fossilize

(D) the cave paintings of the giant deer were painted well before 16,000 years ago

(E) only one currently existing species of deer has any anatomical feature that even remotely resembles a hump

CR28931.01

116. Super Express Shipping Company has implemented a new distribution system that can get almost every package to its destination the day after it is sent. The company worries that this more efficient system will result in lower sales of its premium next-day delivery service, because its two-day service will usually arrive the following day anyway. The company plans to encourage sales of its next-day service by intentionally delaying delivery of its two-day packages so that they will not be delivered the following day, even if the package arrives at its destination city in time for next-day delivery.

The company's plan assumes that

(A) deliberate delay of packages will not affect the company's image in a way that significantly reduces its ability to attract and retain customers

(B) most people do not have a preference for either two-day or next-day delivery

(C) if the plan is not implemented, the company would lose more money in lost sales of overnight deliveries than it would save with its new efficient distribution system

(D) the overnight service is too expensive to be attractive to most customers currently

(E) competing companies' delivery services rarely deliver packages to their destination earlier than their promised time

CR04738

117. Cocoa grown organically on trees within the shade of the rain forest canopy commands a premium price. However, acquiring and maintaining the certification that allows the crop to be sold as organically grown is very time-consuming and laborious. Meanwhile, the price premium for the grower is about 30 percent, whereas cocoa trees grown in full sun using standard techniques can have twice the yield of organic, shade-grown trees. Financially, therefore, standard techniques are the better choice for the farmer.

Which of the following, if true, most seriously weakens the argument?

(A) Cocoa can be grown only in a climate that has the temperature and moisture characteristics of a tropical rain forest.

(B) Cocoa trees grown using standard techniques require costly applications of fertilizer and pesticides, unlike shade-grown trees.

(C) Although organically grown cocoa has long commanded a price premium over cocoa grown using standard techniques, its price has fluctuated considerably during that period.

(D) Cocoa is not the only cash crop that can be raised on plots that leave the rain forest canopy overhead essentially intact.

(E) Governments and international conservation organizations are working to streamline organic certification so as to relieve farmers of unnecessary work.

CR07547

118. High levels of fertilizer and pesticides, needed when farmers try to produce high yields of the same crop year after year, pollute water supplies. Experts therefore urge farmers to diversify their crops and to rotate their plantings yearly.

To receive governmental price-support benefits for a crop, farmers must have produced that same crop for the past several years.

The statements above, if true, best support which of the following conclusions?

(A) The rules for governmental support of farm prices work against efforts to reduce water pollution.

(B) The only solution to the problem of water pollution from fertilizers and pesticides is to take farmland out of production.

(C) Farmers can continue to make a profit by rotating diverse crops, thus reducing costs for chemicals, but not by planting the same crop each year.

(D) New farming techniques will be developed to make it possible for farmers to reduce the application of fertilizers and pesticides.

(E) Governmental price supports for farm products are set at levels that are not high enough to allow farmers to get out of debt.

CR02270

119. Ten years ago the number of taxpayers in Greenspace County was slightly greater than the number of registered voters. The number of taxpayers has doubled over the last ten years, while the number of registered voters has increased, but at a lower rate than has the number of taxpayers.

Which of the following must be true in Greenspace County if the statements above are true?

(A) The number of taxpayers is now smaller than the number of registered voters.

(B) Everyone who is a registered voter is also a taxpayer.

(C) The proportion of registered voters to taxpayers has increased over the last ten years.

(D) The proportion of registered voters to taxpayers has decreased over the last ten years.

(E) The proportion of registered voters to taxpayers has remained unchanged over the last ten years.

CR01298

120. From 1900 until the 1930s, pellagra, a disease later discovered to result from a deficiency of the vitamin niacin, was common among poor cotton farmers in the United States whose diet consisted mostly of corn, the least costly food they could buy. Corn does not contain niacin in usable form. Curiously, during the Depression of the early 1930s, when cotton's price collapsed and cotton farmers' income declined, the incidence of pellagra among those farmers also declined.

Which of the following, if true, most helps to explain the decline in the incidence of pellagra?

(A) When growing a cash crop could not generate adequate income, poor farmers in the United States responded by planting their land with vegetables and fruits for their own consumption.

(B) People whose diets consist largely of corn often suffer from protein deficiency as well as niacin deficiency.

(C) Until the discovery of pellagra's link with niacin, it was widely believed that the disease was an infection that could be transmitted from person to person.

(D) Effective treatment for pellagra became available once its link with niacin was established.

(E) In parts of Mexico, where people subsisted on corn but pellagra was uncommon, corn was typically processed with alkaline substances, which make the niacin in the corn absorbable.

CR07589

121. The interview is an essential part of a successful hiring program because, with it, job applicants who have personalities that are unsuited to the requirements of the job will be eliminated from consideration.

The argument above logically depends on which of the following assumptions?

(A) A hiring program will be successful if it includes interviews.

(B) The interview is a more important part of a successful hiring program than is the development of a job description.

(C) Interviewers can accurately identify applicants whose personalities are unsuited to the requirements of the job.

(D) The only purpose of an interview is to evaluate whether job applicants' personalities are suited to the requirements of the job.

(E) The fit of job applicants' personalities to the requirements of the job was once the most important factor in making hiring decisions.

CR07785

122. Many leadership theories have provided evidence that leaders affect group success rather than the success of particular individuals. So it is irrelevant to analyze the effects of supervisor traits on the attitudes of individuals whom they supervise. Instead, assessment of leadership effectiveness should occur only at the group level.

Which of the following would it be most useful to establish in order to evaluate the argument?

(A) Whether supervisors' documentation of individual supervisees' attitudes toward them is usually accurate

(B) Whether it is possible to assess individual supervisees' attitudes toward their supervisors without thereby changing those attitudes

(C) Whether any of the leadership theories in question hold that leaders should assess other leaders' attitudes

(D) Whether some types of groups do not need supervision in order to be successful in their endeavors

(E) Whether individuals' attitudes toward supervisors affect group success

CR03535

123. A major health insurance company in Lagolia pays for special procedures prescribed by physicians only if the procedure is first approved as "medically necessary" by a company-appointed review panel. The rule is intended to save the company the money it might otherwise spend on medically unnecessary procedures. The company has recently announced that in order to reduce its costs, it will abandon this rule.

Which of the following, if true, provides the strongest justification for the company's decision?

(A) Patients often register dissatisfaction with physicians who prescribe nothing for their ailments.

(B) Physicians often prescribe special procedures that are helpful but not altogether necessary for the health of the patient.

(C) The review process is expensive and practically always results in approval of the prescribed procedure.

(D) The company's review process does not interfere with the prerogative of physicians, in cases where more than one effective procedure is available, to select the one they personally prefer.

(E) The number of members of the company-appointed review panel who review a given procedure depends on the cost of the procedure.

CR03826

124. Automobile ownership was rare in Sabresia as recently as 30 years ago, but with continuing growth of personal income there, automobile ownership has become steadily more common. Consequently, there are now far more automobiles on Sabresia's roads than there were 30 years ago, and the annual number of automobile accidents has increased significantly. Yet the annual number of deaths and injuries resulting from automobile accidents has not increased significantly.

Which of the following, if true, most helps to explain why deaths and injuries resulting from automobile accidents have not increased significantly?

(A) Virtually all of the improvements in Sabresia's roads that were required to accommodate increased traffic were completed more than ten years ago.

(B) With more and more people owning cars, the average number of passengers in a car on the road has dropped dramatically.

(C) The increases in traffic volume have been most dramatic on Sabresia's highways, where speeds are well above those of other roads.

(D) Because of a vigorous market in used cars, the average age of cars on the road has actually increased throughout the years of steady growth in automobile ownership.

(E) Automobile ownership is still much less common in Sabresia than it is in other countries.

CR01430

125. To evaluate a plan to save money on office-space expenditures by having its employees work at home, XYZ Company asked volunteers from its staff to try the arrangement for six months. During this period, the productivity of these employees was as high as or higher than before.

Which of the following, if true, would argue most strongly against deciding, on the basis of the trial results, to implement the company's plan?

(A) The employees who agreed to participate in the test of the plan were among the company's most self-motivated and independent workers.

(B) The savings that would accrue from reduced office-space expenditures alone would be sufficient to justify the arrangement for the company, apart from any productivity increases.

(C) Other companies that have achieved successful results from work-at-home plans have workforces that are substantially larger than that of XYZ.

(D) The volunteers who worked at home were able to communicate with other employees as necessary for performing the work.

(E) Minor changes in the way office work is organized at XYZ would yield increases in employee productivity similar to those achieved in the trial.

CR04180

126. A child learning to play the piano will not succeed unless the child has an instrument at home on which to practice. However, good-quality pianos, whether new or secondhand, are costly. Buying one is justified only if the child has the necessary talent and perseverance, which is precisely what one cannot know in advance. Consequently, parents should buy an inexpensive secondhand instrument at first and upgrade if and when the child's ability and inclination are proven.

Which of the following, if true, casts the most serious doubt on the course of action recommended for parents?

(A) Learners, particularly those with genuine musical talent, are apt to lose interest in the instrument if they have to play on a piano that fails to produce a pleasing sound.

(B) Reputable piano teachers do not accept children as pupils unless they know that the children can practice on a piano at home.

(C) Ideally, the piano on which a child practices at home should be located in a room away from family activities going on at the same time.

(D) Very young beginners often make remarkable progress at playing the piano at first, but then appear to stand still for a considerable period of time.

(E) In some parents, spending increasing amounts of money on having their children learn to play the piano produces increasing anxiety to hear immediate results.

CR05096

127. Nutritionists are advising people to eat more fish, since the omega-3 fatty acids in fish help combat many diseases. If everyone took this advice, however, there would not be enough fish in oceans, rivers, and lakes to supply the demand; the oceans are already being overfished. The obvious method to ease the pressure on wild fish populations is for people to increase their consumption of farmed fish.

Which of the following, if true, raises the most serious doubt concerning the prospects for success of the solution proposed above?

(A) Aquaculture, or fish farming, raises more fish in a given volume of water than are generally present in the wild.

(B) Some fish farming, particularly of shrimp and other shellfish, takes place in enclosures in the ocean.

(C) There are large expanses of ocean waters that do not contain enough nutrients to support substantial fish populations.

(D) The feed for farmed ocean fish is largely made from small wild-caught fish, including the young of many popular food species.

(E) Some of the species that are now farmed extensively were not commonly eaten when they were only available in the wild.

CR02851

128. Which of the following most logically completes the market forecaster's argument?

Market forecaster: The price of pecans is high when pecans are comparatively scarce but drops sharply when pecans are abundant. Thus, in high-yield years, growers often store part of their crop in refrigerated warehouses until after the next year's harvest, hoping for higher prices then. Because of bad weather, this year's pecan crop will be very small. Nevertheless, pecan prices this year will not be significantly higher than last year, since _____.

(A) the last time the pecan crop was as small as it was this year, the practice of holding back part of one year's crop had not yet become widely established

(B) last year's pecan harvest was the largest in the last 40 years

(C) pecan prices have remained relatively stable in recent years

(D) pecan yields for some farmers were as high this year as they had been last year

(E) the quality of this year's pecan crop is as high as the quality of any pecan crop in the previous five years

CR06331

129. It is often said that high rates of inflation tend to diminish people's incentive to save and invest. This view must be incorrect, however, because people generally saved and invested more of their income in the 1970's when inflation rates were high than they did in the 1980's when inflation rates were low.

Of the following, the best criticism of the argument above is that it overlooks the possibility that

(A) all people do not respond in the same way to a given economic stimulus

(B) certain factors operating in the 1980's but not in the 1970's diminished people's incentive to save and invest

(C) the population was larger in the 1980's than it was in the 1970's

(D) the proponents of the view cited would stand to gain if inflation rates become lower

(E) a factor that affects people's savings behavior in a certain way could affect people's investment behavior quite differently

CR02704

130. Which of the following most logically completes the argument below?

Within the earth's core, which is iron, pressure increases with depth. Because the temperature at which iron melts increases with pressure, the inner core is solid and the outer core is molten. Physicists can determine the melting temperature of iron at any given pressure and the pressure for any given depth in the earth. Therefore, the actual temperature at the boundary of the earth's outer and inner cores—the melting temperature of iron there—can be determined, since _____.

(A) the depth beneath the earth's surface of the boundary between the outer and inner cores is known

(B) some of the heat from the earth's core flows to the surface of the earth

(C) pressures within the earth's outer core are much greater than pressures above the outer core

(D) nowhere in the earth's core can the temperature be measured directly

(E) the temperatures within the earth's inner core are higher than in the outer core

CR03659

131. Which of the following most logically completes the reasoning?

Either food scarcity or excessive hunting can threaten a population of animals. If the group faces food scarcity, individuals in the group will reach reproductive maturity later than otherwise. If the group faces excessive hunting, individuals that reach reproductive maturity earlier will come to predominate. Therefore, it should be possible to determine whether prehistoric mastodons became extinct because of food scarcity or human hunting, since there are fossilized mastodon remains from both before and after mastodon populations declined, and _____.

(A) there are more fossilized mastodon remains from the period before mastodon populations began to decline than from after that period

(B) the average age at which mastodons from a given period reached reproductive maturity can be established from their fossilized remains

(C) it can be accurately estimated from fossilized remains when mastodons became extinct

(D) it is not known when humans first began hunting mastodons

(E) climate changes may have gradually reduced the food available to mastodons

CR02518

132. Many office buildings designed to prevent outside air from entering have been shown to have elevated levels of various toxic substances circulating through the air inside, a phenomenon known as sick building syndrome. Yet the air in other office buildings does not have elevated levels of these substances, even though those buildings are the same age as the "sick" buildings and have similar designs and ventilation systems.

Which of the following, if true, most helps to explain why not all office buildings designed to prevent outside air from entering have air that contains elevated levels of toxic substances?

(A) Certain adhesives and drying agents used in particular types of furniture, carpets, and paint contribute the bulk of the toxic substances that circulate in the air of office buildings.

(B) Most office buildings with sick building syndrome were built between 1950 and 1990.

(C) Among buildings designed to prevent outside air from entering, houses are no less likely than office buildings to have air that contains elevated levels of toxic substances.

(D) The toxic substances that are found in the air of "sick" office buildings are substances that are found in at least small quantities in nearly every building.

(E) Office buildings with windows that can readily be opened are unlikely to suffer from sick building syndrome.

CR08756

133. Newsletter: **A condominium generally offers more value for its cost than an individual house because of economies of scale.** The homeowners in a condominium association can collectively buy products and services that they could not afford on their own. And since a professional management company handles maintenance of common areas, **condominium owners spend less time and money on maintenance than individual homeowners do.**

The two portions in boldface play which of the following roles in the newsletter's argument?

(A) The first is the argument's main conclusion; the second is another conclusion supporting the first.

(B) The first is a premise, for which no evidence is provided; the second is the argument's only conclusion.

(C) The first is a conclusion supporting the second; the second is the argument's main conclusion.

(D) The first is the argument's only conclusion; the second is a premise, for which no evidence is provided.

(E) Both are premises, for which no evidence is provided, and both support the argument's only conclusion.

CR00780

134. Which of the following most logically completes the argument?

When officials in Tannersburg released their plan to widen the city's main roads, environmentalists protested that widened roads would attract more traffic and lead to increased air pollution. In response, city officials pointed out that today's pollution-control devices are at their most effective in vehicles traveling at higher speeds and that widening roads would increase the average speed of traffic. However, this effect can hardly be expected to offset the effect pointed out by environmentalists, since _____.

(A) increases in traffic volume generally produce decreases in the average speed of traffic unless roads are widened

(B) several of the roads that are slated for widening will have to be closed temporarily while construction is underway

(C) most of the air pollution generated by urban traffic comes from vehicles that do not have functioning pollution-control devices

(D) the newly widened roads will not have increased traffic volume if the roads that must be used to reach them are inadequate

(E) a vehicle traveling on a route that goes through Tannersburg will spend less time on Tannersburg's roads once the roads are widened

CR70661.01

135. Platinum is a relatively rare metal vital to a wide variety of industries. Xagor Corporation, a major producer of platinum, has its production plant in a country that will soon begin imposing an export tax on platinum sold and shipped to customers abroad. As a consequence, the price of platinum on the world market is bound to rise.

Which of the following, if true, tends to confirm the conclusion above?

(A) An inexpensive substitute for platinum has been developed and will be available to industry for the first time this month.

(B) The largest of the industries that depend on platinum reported a drop in sales last month.

(C) The producers of platinum in other countries taken together cannot supply enough platinum to meet worldwide demand.

(D) Xagor produced more platinum last month than in any previous month.

(E) New deposits of platinum have been found in the country in which Xagor has its production plant.

CR80661.01

136. From 1973 to 1986, growth in the United States economy was over 33 percent, while the percent growth in United States energy consumption was zero. The number of barrels of oil being saved per day by energy-efficiency improvements made since 1973 is now 13 million.

If the information above is correct, which of the following conclusions can properly be drawn on the basis of it?

(A) It is more difficult to find new sources of oil than to institute new energy-conservation measures.

(B) Oil imports cannot be reduced unless energy consumption does not grow at all.

(C) A reduction in the consumption of gasoline was the reason overall energy consumption remained steady.

(D) It is possible for an economy to grow without consuming additional energy.

(E) The development of nontraditional energy sources will make it possible for the United States economy to grow even faster.

CR01661.01

137. Although many customers do not make a sufficient effort to conserve water, water companies must also be held responsible for wasteful consumption. Their own policies, in fact, encourage excessive water use, and attempts at conservation will succeed only if the water companies change their practices.

Which of the following, if true, would most strongly support the view above?

(A) Most water companies reduce the cost per unit of water as the amount of water used by a customer increases.

(B) Most water companies keep detailed records of the quantity of water used by different customers.

(C) Most water companies severely curtail the use of water during periods of drought.

(D) Federal authorities limit the range of policies that can be enforced by the water companies.

(E) The price per unit of water charged by the water companies has risen steadily in the last 10 years.

CR11661.01

138. Despite legislation designed to stem the accumulation of plastic waste, the plastics industry continued to grow rapidly last year, as can be seen from the fact that sales of the resin that is the raw material for manufacturing plastics grew by 10 percent to $28 billion.

In assessing the support provided by the evidence cited above for the statement that the plastics industry continued to grow, in addition to the information above it would be most useful to know

(A) whether the resin has other uses besides the manufacture of plastics

(B) the dollar amount of resin sales the year before last

(C) the plastics industry's attitude toward the legislation concerning plastic waste

(D) whether sales of all goods and services in the economy as a whole were increasing last year

(E) what proportion of the plastics industry's output eventually contributes to the accumulation of plastic waste

CR41661.01

139. Studies of the political orientations of 1,055 college students revealed that the plurality of students in an eastern, big-city, private university was liberal, whereas in a state-supported, southern college, the plurality was conservative. Orientations were independent of the student's region of origin, and the trends were much more pronounced in seniors than in beginning students.

Which of the following hypotheses is best supported by the observations stated above?

(A) The political orientations of college students are more similar to the political orientations of their parents when the students start college than when the students are seniors.

(B) The political orientations of college seniors depend significantly on experiences they have had while in college.

(C) A college senior originally from the South is more likely to be politically conservative than is a college senior originally from the East.

(D) Whether their college is state-supported or private is the determining factor in college students' political orientations.

(E) College students tend to become more conservative politically as they become older and are confronted with pressures for financial success.

CR90661.01

140. Donations of imported food will be distributed to children in famine-stricken countries in the form of free school meals. The process is efficient because the children are easy to reach at the schools and cooking facilities are often available on site.

Which of the following, if true, casts the most serious doubt on the efficiency of the proposed process?

(A) The emphasis on food will detract from the major function of the schools, which is to educate the children.

(B) A massive influx of donated food will tend to lower the price of food in the areas near the schools.

(C) Supplies of fuel needed for cooking at the schools arrive there only intermittently and in inadequate quantities.

(D) The reduction in farm surpluses in donor countries benefits the donor countries to a greater extent than the recipient countries are benefited by the donations.

(E) The donation of food tends to strengthen the standing of the political party that happens to be in power when the donation is made.

CR21661.01

141. *John:* You told me once that no United States citizen who supports union labor should buy an imported car. Yet you are buying an Alma. Since Alma is one of the biggest makers of imports, I infer that you no longer support unions.

Harry: I still support labor unions. Even though Alma is a foreign car company, the car I am buying, the Alma Deluxe, is designed, engineered, and manufactured in the United States.

Harry's method of defending his purchase of an Alma is to

(A) disown the principle he formerly held

(B) show that John's argument involves a false unstated assumption

(C) contradict John's conclusion without challenging John's reasoning in drawing that conclusion

(D) point out that one of the statements John makes in support of his argument is false

(E) claim that his is a special case in which the rule need not apply

CR31661.01

142. Public-sector (government-owned) companies are often unprofitable and a drain on the taxpayer. Such enterprises should be sold to the private sector, where competition will force them either to be efficient and profitable or else to close.

Which of the following, if true, identifies a flaw in the policy proposed above?

(A) The revenue gained from the sale of public-sector companies is likely to be negligible compared to the cost of maintaining them.

(B) By buying a public-sector company and then closing the company and selling its assets, a buyer can often make a profit.

(C) The services provided by many public-sector companies must be made available to citizens, even when a price that covers costs cannot be charged.

(D) Some unprofitable private-sector companies have become profitable after being taken over by the government to prevent their closing.

(E) The costs of environmental protection, contributions to social programs, and job-safety measures are the same in the public and private sectors.

CR91661.01

143. After receiving numerous complaints from residents about loud, highly amplified music played at local clubs, Middletown is considering a law that would prohibit clubs located in residential areas from employing musical groups that consist of more than three people.

The likelihood that the law would be effective in reducing noise would be most seriously diminished if which of the following were true?

(A) Groups that consist of more than three musicians are usually more expensive for clubs to hire than are groups that consist of fewer than three musicians.

(B) In towns that have passed similar laws, many clubs in residential areas have relocated to nonresidential areas.

(C) Most of the complaints about the music have come from people who do not regularly attend the clubs.

(D) Much of the music popular at the local clubs can be played only by groups of at least four musicians.

(E) Amplified music played by fewer than three musicians generally is as loud as amplified music played by more than three musicians.

CR02661.01

144. From enlargements that are commonly found on the ulna bones of the forearms of Ice Age human skeletons, anthropologists have drawn the conclusion that the Ice Age humans represented by those skeletons frequently hunted by throwing spears. The bone enlargements, the anthropologists believe, resulted from the stresses of habitual throwing.

Which of the following, if true, would be the LEAST appropriate to use as support for the conclusion drawn by the anthropologists?

(A) Humans typically favor one arm over the other when throwing, and most Ice Age human skeletons have enlargements on the ulna bone of only one arm.

(B) Such enlargements on the ulna bone do not appear on skeletons from other human cultures of the same time period whose diets are believed to have been mainly vegetarian.

(C) Cave paintings dating from approximately the same time period and located not far from where the skeletons were found show hunters carrying and throwing spears.

(D) Damaged bones in the skeletons show evidence of diseases that are believed to have afflicted most people living during the Ice Age.

(E) Twentieth-century athletes who use a throwing motion similar to that of a hunter throwing a spear often develop enlargements on the ulna bone similar to those detected on the Ice Age skeletons.

CR12661.01

145. The town council of North Tarrytown favored changing the name of the town to Sleepy Hollow. Council members argued that making the town's association with Washington Irving and his famous "legend" more obvious would increase tourism and result immediately in financial benefits for the town's inhabitants.

The council members' argument requires the assumption that

(A) most of the inhabitants would favor a change in the name of the town

(B) many inhabitants would be ready to supply tourists with information about Washington Irving and his "legend"

(C) the town can accomplish, at a very low cost per capita, the improvements in tourist facilities that an increase in tourism would require

(D) other towns in the region have changed their names to reflect historical associations and have, as a result, experienced a rise in tourism

(E) the immediate per capita cost to inhabitants of changing the name of the town would be less than the immediate per capita revenue they would receive from the change

CR06795

146. Premature babies who receive regular massages are more active than premature babies who do not. Even when all the babies drink the same amount of milk, the massaged babies gain more weight than do the unmassaged babies. This is puzzling because a more active person generally requires a greater food intake to maintain or gain weight.

Which of the following, if true, best reconciles the apparent discrepancy described above?

(A) Increased activity leads to increased levels of hunger, especially when food intake is not also increased.

(B) Massage increases premature babies' curiosity about their environment, and curiosity leads to increased activity.

(C) Increased activity causes the intestines of premature babies to mature more quickly, enabling the babies to digest and absorb more of the nutrients in the milk they drink.

(D) Massage does not increase the growth rate of babies over one year old, if the babies had not been previously massaged.

(E) Premature babies require a daily intake of nutrients that is significantly higher than that required by babies who were not born prematurely.

CR02865

147. In Australia, in years with below-average rainfall, less water goes into rivers and more water is extracted from rivers for drinking and irrigation. Consequently, in such years, water levels drop considerably and the rivers flow more slowly. Because algae grow better the more slowly the water in which they are growing moves, such years are generally beneficial to populations of algae. But, by contrast, populations of algae drop in periods of extreme drought.

Which of the following, if true, does most to explain the contrast?

(A) Algae grow better in ponds and lakes than in rivers.

(B) The more slowly water moves, the more conducive its temperature is to the growth of algae.

(C) Algae cannot survive in the absence of water.

(D) Algae must be filtered out of water before it can be used for drinking.

(E) The larger the population of algae in a body of water, the less sunlight reaches below the surface of the water.

CR00693

148. Which of the following, if true, most logically completes the politician's argument?

United States politician: Although the amount of United States goods shipped to Mexico doubled in the year after tariffs on trade between the two countries were reduced, it does not follow that the reduction in tariffs caused the sales of United States goods to companies and consumers in Mexico to double that year, because _____.

(A) many of the United States companies that produced goods that year had competitors based in Mexico that had long produced the same kind of goods

(B) most of the increase in goods shipped by United States companies to Mexico was in parts shipped to the companies' newly relocated subsidiaries for assembly and subsequent shipment back to the United States

(C) marketing goods to a previously unavailable group of consumers is most successful when advertising specifically targets those consumers, but developing such advertising often takes longer than a year

(D) the amount of Mexican goods shipped to the United States remained the same as it had been before the tariff reductions

(E) there was no significant change in the employment rate in either of the countries that year

CR06845

149. Budget constraints have made police officials consider reassigning a considerable number of officers from traffic enforcement to work on higher-priority, serious crimes. Reducing traffic enforcement for this reason would be counterproductive, however, in light of the tendency of criminals to use cars when engaged in the commission of serious crimes. An officer stopping a car for a traffic violation can make a search that turns up evidence of serious crime.

Which of the following, if true, most strengthens the argument given?

(A) An officer who stops a car containing evidence of the commission of a serious crime risks a violent confrontation, even if the vehicle was stopped only for a traffic violation.

(B) When the public becomes aware that traffic enforcement has lessened, it typically becomes lax in obeying traffic rules.

(C) Those willing to break the law to commit serious crimes are often in committing such crimes unwilling to observe what they regard as the lesser constraints of traffic law.

(D) The offenders committing serious crimes who would be caught because of traffic violations are not the same group of individuals as those who would be caught if the arresting officers were reassigned from traffic enforcement.

(E) The great majority of persons who are stopped by officers for traffic violations are not guilty of any serious crimes.

CR10106

150. Conventional wisdom suggests vaccinating elderly people first in flu season, because they are at greatest risk of dying if they contract the virus. This year's flu virus poses particular risk to elderly people and almost none at all to younger people, particularly children. Nevertheless, health professionals are recommending vaccinating children first against the virus rather than elderly people.

Which of the following, if true, provides the strongest reason for the health professionals' recommendation?

(A) Children are vulnerable to dangerous infections when their immune systems are severely weakened by other diseases.

(B) Children are particularly unconcerned with hygiene and therefore are the group most responsible for spreading the flu virus to others.

(C) The vaccinations received last year will confer no immunity to this year's flu virus.

(D) Children who catch one strain of the flu virus and then recover are likely to develop immunity to at least some strains with which they have not yet come in contact.

(E) Children are no more likely than adults to have immunity to a particular flu virus if they have never lived through a previous epidemic of the same virus.

CR01392

151. Pro-Tect Insurance Company has recently been paying out more on car-theft claims than it expected. Cars with special antitheft devices or alarm systems are much less likely to be stolen than are other cars. Consequently Pro-Tect, as part of an effort to reduce its annual payouts, will offer a discount to holders of car-theft policies if their cars have antitheft devices or alarm systems.

Which of the following, if true, provides the strongest indication that the plan is likely to achieve its goal?

(A) The decrease in the risk of car theft conferred by having a car alarm is greatest when only a few cars have such alarms.

(B) The number of policyholders who have filed a claim in the past year is higher for Pro-Tect than for other insurance companies.

(C) In one or two years, the discount that Pro-Tect is offering will amount to more than the cost of buying certain highly effective antitheft devices.

(D) Currently, Pro-Tect cannot legally raise the premiums it charges for a given amount of insurance against car theft.

(E) The amount Pro-Tect has been paying out on car-theft claims has been greater for some models of car than for others.

CR00783

152. While the total enrollment of public elementary and secondary schools in Sondland is one percent higher this academic year than last academic year, the number of teachers there increased by three percent. Thus, the Sondland Education Commission's prediction of a teacher shortage as early as next academic year is unfounded.

Which of the following, if true, most seriously weakens the claim that the prediction of a teacher shortage as early as next academic year is unfounded?

(A) Funding for public elementary schools in Sondland is expected to increase over the next ten years.

(B) Average salaries for Sondland's teachers increased at the rate of inflation from last academic year to this academic year.

(C) A new law has mandated that there be ten percent more teachers per pupil in Sondland's public schools next academic year than there were this academic year.

(D) In the past, increases in enrollments in public elementary and secondary schools in Sondland have generally been smaller than increases in the number of teachers.

(E) Because of reductions in funding, the number of students enrolling in teacher-training programs in Sondland is expected to decline beginning in the next academic year.

CR05590

153. Art restorers who have been studying the factors that cause Renaissance oil paintings to deteriorate physically when subject to climatic changes have found that the oil paint used in these paintings actually adjusts to these changes well. The restorers therefore hypothesize that it is a layer of material called gesso, which is under the paint, that causes the deterioration.

Which of the following, if true, most strongly supports the restorers' hypothesis?

(A) Renaissance oil paintings with a thin layer of gesso are less likely to show deterioration in response to climatic changes than those with a thicker layer.

(B) Renaissance oil paintings are often painted on wooden panels, which swell when humidity increases and contract when it declines.

(C) Oil paint expands and contracts readily in response to changes in temperature, but it absorbs little water and so is little affected by changes in humidity.

(D) An especially hard and nonabsorbent type of gesso was the raw material for moldings on the frames of Renaissance oil paintings.

(E) Gesso layers applied by Renaissance painters typically consisted of a coarse base layer onto which several increasingly fine-grained layers were applied.

CR10731

154. A newly discovered painting seems to be the work of one of two 17th-century artists, either the northern German Johannes Drechen or the Frenchman Louis Birelle, who sometimes painted in the same style as Drechen. Analysis of the carved picture frame, which has been identified as the painting's original 17th-century frame, showed that it is made of wood found widely in northern Germany at the time, but rare in the part of France where Birelle lived. This shows that the painting is most likely the work of Drechen.

Which of the following is an assumption that the argument requires?

(A) The frame was made from wood local to the region where the picture was painted.

(B) Drechen is unlikely to have ever visited the home region of Birelle in France.

(C) Sometimes a painting so closely resembles others of its era that no expert is able to confidently decide who painted it.

(D) The painter of the picture chose the frame for the picture.

(E) The carving style of the picture frame is not typical of any specific region of Europe.

CR09120

155. Archaeologists working in the Andes Mountains recently excavated a buried 4,000-year-old temple containing structures that align with a stone carving on a distant hill to indicate the direction of the rising sun at the summer solstice. Alignments in the temple were also found to point toward the position, at the summer solstice, of a constellation known in Andean culture as the Fox. Since the local mythology represents the fox as teaching people how to cultivate and irrigate plants, the ancient Andeans may have built the temple as a religious representation of the fox.

Which of the following is an assumption on which the argument is based?

(A) The constellation known as the Fox has the same position at the summer solstice as it did 4,000 years ago.

(B) In the region around the temple, the summer solstice marks the time for planting.

(C) The temple was protected from looters by dirt and debris built up over thousands of years.

(D) Other structural alignments at the temple point to further constellations with agricultural significance.

(E) The site containing the temple was occupied for a significant amount of time before abandonment.

CR05065

156. Meat from chickens contaminated with salmonella bacteria can cause serious food poisoning. Capsaicin, the chemical that gives chili peppers their hot flavor, has antibacterial properties. Chickens do not have taste receptors for capsaicin and will readily eat feed laced with capsaicin. When chickens were fed such feed and then exposed to salmonella bacteria, relatively few of them became contaminated with salmonella.

In deciding whether the feed would be useful in raising salmonella-free chicken for retail sale, it would be most helpful to determine which of the following?

(A) Whether feeding capsaicin to chickens affects the taste of their meat

(B) Whether eating capsaicin reduces the risk of salmonella poisoning for humans

(C) Whether chicken is more prone to salmonella contamination than other kinds of meat

(D) Whether appropriate cooking of chicken contaminated with salmonella can always prevent food poisoning

(E) Whether capsaicin can be obtained only from chili peppers

CR04532

157. Which of the following most logically completes the argument below?

When mercury-vapor streetlights are used in areas inhabited by insect-eating bats, the bats feed almost exclusively around the lights, because the lights attract flying insects. In Greenville, the mercury-vapor streetlights are about to be replaced with energy-saving sodium streetlights, which do not attract insects. This change is likely to result in a drop in the population of insect-eating bats in Greenville, since _____.

(A) the bats do not begin to hunt until after sundown

(B) the bats are unlikely to feed on insects that do not fly

(C) the highway department will be able to replace mercury-vapor streetlights with sodium streetlights within a relatively short time and without disrupting the continuity of lighting at the locations of the streetlights

(D) in the absence of local concentrations of the flying insects on which bats feed, the bats expend much more energy on hunting for food, requiring much larger quantities of insects to sustain each bat

(E) bats use echolocation to catch insects and therefore gain no advantage from the fact that insects flying in the vicinity of streetlights are visible at night

CR01353

158. Rats injected with morphine exhibit decreased activity of the immune system, the bodily system that fights off infections. These same rats exhibited heightened blood levels of corticosteroids, chemicals secreted by the adrenal glands. Since corticosteroids can interfere with immune-system activity, scientists hypothesized that the way morphine reduces immune responses in rats is by stimulating the adrenal glands to secrete additional corticosteroids into the bloodstream.

Which of the following experiments would yield the most useful results for evaluating the scientists' hypothesis?

(A) Injecting morphine into rats that already have heightened blood levels of corticosteroids and then observing their new blood levels of corticosteroids

(B) Testing the level of immune-system activity of rats, removing their adrenal glands, and then testing the rats' immune-system activity levels again

(C) Injecting rats with corticosteroids and then observing how many of the rats contracted infections

(D) Removing the adrenal glands of rats, injecting the rats with morphine, and then testing the level of the rats' immune-system responses

(E) Injecting rats with a drug that stimulates immune-system activity and then observing the level of corticosteroids in their bloodstreams

CR06831

159. Curator: If our museum lends *Venus* to the Hart Institute for their show this spring, they will lend us their Rembrandt etchings for our print exhibition next fall. Having those etchings will increase attendance to the exhibition and hence increase revenue from our general admission fee.

Museum Administrator: But *Venus* is our biggest attraction. Moreover the Hart's show will run for twice as long as our exhibition. So on balance the number of patrons may decrease.

The point of the administrator's response to the curator is to question

(A) whether getting the Rembrandt etchings from the Hart Institute is likely to increase attendance at the print exhibition

(B) whether the Hart Institute's Rembrandt etchings will be appreciated by those patrons of the curator's museum for whom the museum's biggest attraction is *Venus*

(C) whether the number of patrons attracted by the Hart Institute's Rembrandt etchings will be larger than the number of patrons who do not come in the spring because *Venus* is on loan

(D) whether, if *Venus* is lent, the museum's revenue from general admission fees during the print exhibition will exceed its revenue from general admission fees during the Hart Institute's exhibition

(E) whether the Hart Institute or the curator's museum will have the greater financial gain from the proposed exchange of artworks

CR03697

160. Which of the following most logically completes the passage?

Leaf beetles damage willow trees by stripping away their leaves, but a combination of parasites and predators generally keeps populations of these beetles in check. Researchers have found that severe air pollution results in reduced predator populations. The parasites, by contrast, are not adversely affected by pollution; nevertheless, the researchers' discovery probably does explain why leaf beetles cause particularly severe damage to willows in areas with severe air pollution, since _____.

(A) neither the predators nor the parasites of leaf beetles themselves attack willow trees

(B) the parasites that attack leaf beetles actually tend to be more prevalent in areas with severe air pollution than they are elsewhere

(C) the damage caused by leaf beetles is usually not enough to kill a willow tree outright

(D) where air pollution is not especially severe, predators have much more impact on leaf-beetle populations than parasites do

(E) willows often grow in areas where air pollution is especially severe

CR05438

161. On May first, in order to reduce the number of overdue books, a children's library instituted a policy of forgiving fines and giving bookmarks to children returning all of their overdue books. On July first there were twice as many overdue books as there had been on May first, although a record number of books had been returned during the interim.

Which of the following, if true, most helps to explain the apparent inconsistency in the results of the library's policy?

(A) The librarians did not keep accurate records of how many children took advantage of the grace period, and some of the children returning overdue books did not return all of their overdue books.

(B) Although the grace period enticed some children to return all of their overdue books, it did not convince all of the children with overdue books to return all of their books.

(C) The bookmarks became popular among the children, so in order to collect the bookmarks, many children borrowed many more books than they usually did and kept them past their due date.

(D) The children were allowed to borrow a maximum of five books for a two-week period, and hence each child could keep a maximum of fifteen books beyond their due date within a two-month period.

(E) Although the library forgave overdue fines during the grace period, the amount previously charged the children was minimal; hence, the forgiveness of the fines did not provide enough incentive for them to return their overdue books.

CR00663

162. A certain species of desert lizard digs tunnels in which to lay its eggs. The eggs must incubate inside the tunnel for several weeks before hatching, and they fail to hatch if they are disturbed at any time during this incubation period. Yet these lizards guard their tunnels for only a few days after laying their eggs.

Which of the following, if true, most helps explain why there is no need for lizards to guard their tunnels for more than a few days?

(A) The eggs are at risk of being disturbed only during the brief egg-laying season when many lizards are digging in a relatively small area.

(B) The length of the incubation period varies somewhat from one tunnel to another.

(C) Each female lizard lays from 15 to 20 eggs, only about 10 of which hatch even if the eggs are not disturbed at any time during the incubation period.

(D) The temperature and humidity within the tunnels will not be suitable for the incubating eggs unless the tunnels are plugged with sand immediately after the eggs are laid.

(E) The only way to disturb the eggs of this lizard species is by opening up one of the tunnels in which they are laid.

CR00677

163. Most banks that issue credit cards charge interest rates on credit card debt that are ten percentage points higher than the rates those banks charge for ordinary consumer loans. These banks' representatives claim the difference is fully justified, since it simply covers the difference between the costs to these banks associated with credit card debt and those associated with consumer loans.

Which of the following, if true, most seriously calls into question the reasoning offered by the banks' representatives?

(A) Some lenders that are not banks offer consumer loans at interest rates that are even higher than most banks charge on credit card debt.

(B) Most car rental companies require that their customers provide signed credit card charge slips or security deposits.

(C) Two to three percent of the selling price of every item bought with a given credit card goes to the bank that issued that credit card.

(D) Most people need not use credit cards to buy everyday necessities, but could buy those necessities with cash or pay by check.

(E) People who pay their credit card bills in full each month usually pay no interest on the amounts they charge.

CR00726

164. Often patients with ankle fractures that are stable, and thus do not require surgery, are given follow-up x-rays because their orthopedists are concerned about possibly having misjudged the stability of the fracture. When a number of follow-up x-rays were reviewed, however, all the fractures that had initially been judged stable were found to have healed correctly. Therefore, it is a waste of money to order follow-up x-rays of ankle fractures initially judged stable.

Which of the following, if true, most strengthens the argument?

(A) Doctors who are general practitioners rather than orthopedists are less likely than orthopedists to judge the stability of an ankle fracture correctly.

(B) Many ankle injuries for which an initial x-ray is ordered are revealed by the x-ray not to involve any fracture of the ankle.

(C) X-rays of patients of many different orthopedists working in several hospitals were reviewed.

(D) The healing of ankle fractures that have been surgically repaired is always checked by means of a follow-up x-ray.

(E) Orthopedists routinely order follow-up x-rays for fractures of bones other than ankle bones.

CR05431

165. In setting environmental standards for industry and others to meet, it is inadvisable to require the best results that state-of-the-art technology can achieve. Current technology is able to detect and eliminate even extremely minute amounts of contaminants, but at a cost that is exorbitant relative to the improvement achieved. So it would be reasonable instead to set standards by taking into account all of the current and future risks involved.

The argument given concerning the reasonable way to set standards presupposes that

(A) industry currently meets the standards that have been set by environmental authorities

(B) there are effective ways to take into account all of the relevant risks posed by allowing different levels of contaminants

(C) the only contaminants worth measuring are generated by industry

(D) it is not costly to prevent large amounts of contaminants from entering the environment

(E) minute amounts of some contaminants can be poisonous

CR05750

166. The chemical adenosine is released by brain cells when those cells are active. Adenosine then binds to more and more sites on cells in certain areas of the brain, as the total amount released gradually increases during wakefulness. During sleep, the number of sites to which adenosine is bound decreases. Some researchers have hypothesized that it is the cumulative binding of adenosine to a large number of sites that causes the onset of sleep.

Which of the following, if true, provides the most support for the researchers' hypothesis?

(A) Even after long periods of sleep when adenosine is at its lowest concentration in the brain, the number of brain cells bound with adenosine remains very large.

(B) Caffeine, which has the effect of making people remain wakeful, is known to interfere with the binding of adenosine to sites on brain cells.

(C) Besides binding to sites in the brain, adenosine is known to be involved in biochemical reactions throughout the body.

(D) Some areas of the brain that are relatively inactive nonetheless release some adenosine.

(E) Stress resulting from a dangerous situation can preserve wakefulness even when brain levels of bound adenosine are high.

CR01101

167. A two-year study beginning in 1977 found that, among 85-year-old people, those whose immune systems were weakest were twice as likely to die within two years as others in the study. The cause of their deaths, however, was more often heart disease, against which the immune system does not protect, than cancer or infections, which are attacked by the immune system.

Which of the following, if true, would offer the best prospects for explaining deaths in which weakness of the immune system, though present, played no causal role?

(A) There were twice as many infections among those in the study with the weakest immune systems as among those with the strongest immune systems.

(B) The majority of those in the study with the strongest immune systems died from infection or cancer by 1987.

(C) Some of the drugs that had been used to treat the symptoms of heart disease had a side effect of weakening the immune system.

(D) Most of those in the study who survived beyond the two-year period had recovered from a serious infection sometime prior to 1978.

(E) Those in the study who survived into the 1980s had, in 1976, strengthened their immune systems through drug therapy.

CR13093

168. Most scholars agree that King Alfred (A.D. 849–899) personally translated a number of Latin texts into Old English. One historian contends that Alfred also personally penned his own law code, arguing that the numerous differences between the language of the law code and Alfred's translations of Latin texts are outweighed by the even more numerous similarities. Linguistic similarities, however, are what one expects in texts from the same language, the same time, and the same region. Apart from Alfred's surviving translations and law code, there are only two other extant works from the same dialect and milieu, so it is risky to assume here that linguistic similarities point to common authorship.

The passage above proceeds by

(A) providing examples that underscore another argument's conclusion

(B) questioning the plausibility of an assumption on which another argument depends

(C) showing that a principle if generally applied would have anomalous consequences

(D) showing that the premises of another argument are mutually inconsistent

(E) using argument by analogy to undermine a principle implicit in another argument

CR01355

169. Parland's alligator population has been declining in recent years, primarily because of hunting. Alligators prey heavily on a species of freshwater fish that is highly valued as food by Parlanders, who had hoped that the decline in the alligator population would lead to an increase in the numbers of these fish available for human consumption. Yet the population of this fish species has also declined, even though the annual number caught for human consumption has not increased.

Which of the following, if true, most helps to explain the decline in the population of the fish species?

(A) The decline in the alligator population has meant that fishers can work in some parts of lakes and rivers that were formerly too dangerous.

(B) Over the last few years, Parland's commercial fishing enterprises have increased the number of fishing boats they use.

(C) Many Parlanders who hunt alligators do so because of the high market price of alligator skins, not because of the threat alligators pose to the fish population.

(D) During Parland's dry season, holes dug by alligators remain filled with water long enough to provide a safe place for the eggs of this fish species to hatch.

(E) In several neighboring countries through which Parland's rivers also flow, alligators are at risk of extinction as a result of extensive hunting.

CR05418

170. A company plans to develop a prototype weeding machine that uses cutting blades with optical sensors and microprocessors that distinguish weeds from crop plants by differences in shade of color. The inventor of the machine claims that it will reduce labor costs by virtually eliminating the need for manual weeding.

Which of the following is a consideration in favor of the company's implementing its plan to develop the prototype?

(A) There is a considerable degree of variation in shade of color between weeds of different species.

(B) The shade of color of some plants tends to change appreciably over the course of their growing season.

(C) When crops are weeded manually, overall size and leaf shape are taken into account in distinguishing crop plants from weeds.

(D) Selection and genetic manipulation allow plants of virtually any species to be economically bred to have a distinctive shade of color without altering their other characteristics.

(E) Farm laborers who are responsible for the manual weeding of crops carry out other agricultural duties at times in the growing season when extensive weeding is not necessary.

CR05079

171. Aroca City currently funds its public schools through taxes on property. **In place of this system, the city plans to introduce a sales tax of 3 percent on all retail sales in the city.** Critics protest that 3 percent of current retail sales falls short of the amount raised for schools by property taxes. The critics are correct on this point. **Nevertheless, implementing the plan will probably not reduce the money going to Aroca's schools.** Several large retailers have selected Aroca City as the site for huge new stores, and these are certain to draw large numbers of shoppers from neighboring municipalities, where sales are taxed at rates of 6 percent and more. In consequence, retail sales in Aroca City are bound to increase substantially.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first presents a plan that the argument concludes is unlikely to achieve its goal; the second expresses that conclusion.

(B) The first presents a plan that the argument concludes is unlikely to achieve its goal; the second presents evidence in support of that conclusion.

(C) The first presents a plan that the argument contends is the best available; the second is a conclusion drawn by the argument to justify that contention.

(D) The first presents a plan one of whose consequences is at issue in the argument; the second is the argument's conclusion about that consequence.

(E) The first presents a plan that the argument seeks to defend against a certain criticism; the second is that criticism.

CR06152

172. Which of the following most logically completes the argument?

A photograph of the night sky was taken with the camera shutter open for an extended period. The normal motion of stars across the sky caused the images of the stars in the photograph to appear as streaks. However, one bright spot was not streaked. Even if the spot were caused, as astronomers believe, by a celestial object, that object could still have been moving across the sky during the time the shutter was open, since _____.

(A) the spot was not the brightest object in the photograph

(B) the photograph contains many streaks that astronomers can identify as caused by noncelestial objects

(C) stars in the night sky do not appear to shift position relative to each other

(D) the spot could have been caused by an object that emitted a flash that lasted for only a fraction of the time that the camera shutter was open

(E) if the camera shutter had not been open for an extended period, it would have recorded substantially fewer celestial objects

CR09046

173. Economist: Paying extra for fair-trade coffee—coffee labeled with the Fairtrade logo—is intended to help poor farmers, because they receive a higher price for the fair-trade coffee they grow. But this practice may hurt more farmers in developing nations than it helps. By raising average prices for coffee, it encourages more coffee to be produced than consumers want to buy. This lowers prices for non-fair-trade coffee and thus lowers profits for non-fair-trade coffee farmers.

To evaluate the strength of the economist's argument, it would be most helpful to know which of the following?

(A) Whether there is a way of alleviating the impact of the increased average prices for coffee on non-fair-trade coffee farmers' profits

(B) What proportion of coffee farmers in developing nations produce fair-trade coffee

(C) Whether many coffee farmers in developing nations also derive income from other kinds of farming

(D) Whether consumers should pay extra for fair-trade coffee if doing so lowers profits for non-fair-trade coffee farmers

(E) How fair-trade coffee farmers in developing nations could be helped without lowering profits for non-fair-trade coffee farmers

CR01887

174. Tanco, a leather manufacturer, uses large quantities of common salt to preserve animal hides. New environmental regulations have significantly increased the cost of disposing of salt water that results from this use, and, in consequence, Tanco is considering a plan to use potassium chloride in place of common salt. Research has shown that Tanco could reprocess the by-product of potassium chloride use to yield a crop fertilizer, leaving a relatively small volume of waste for disposal.

In determining the impact on company profits of using potassium chloride in place of common salt, it would be important for Tanco to research all of the following EXCEPT:

(A) What difference, if any, is there between the cost of the common salt needed to preserve a given quantity of animal hides and the cost of the potassium chloride needed to preserve the same quantity of hides?

(B) To what extent is the equipment involved in preserving animal hides using common salt suitable for preserving animal hides using potassium chloride?

(C) What environmental regulations, if any, constrain the disposal of the waste generated in reprocessing the by-product of potassium chloride?

(D) How closely does leather that results when common salt is used to preserve hides resemble that which results when potassium chloride is used?

(E) Are the chemical properties that make potassium chloride an effective means for preserving animal hides the same as those that make common salt an effective means for doing so?

CR04999

175. Colorless diamonds can command high prices as gemstones. A type of less valuable diamonds can be treated to remove all color. Only sophisticated tests can distinguish such treated diamonds from naturally colorless ones. However, only 2 percent of diamonds mined are of the colored type that can be successfully treated, and many of those are of insufficient quality to make the treatment worthwhile. Surely, therefore, the vast majority of colorless diamonds sold by jewelers are naturally colorless.

A serious flaw in the reasoning of the argument is that

(A) comparisons between the price diamonds command as gemstones and their value for other uses are omitted

(B) information about the rarity of treated diamonds is not combined with information about the rarity of naturally colorless, gemstone diamonds

(C) the possibility that colored diamonds might be used as gemstones, even without having been treated, is ignored

(D) the currently available method for making colorless diamonds from colored ones is treated as though it were the only possible method for doing so

(E) the difficulty that a customer of a jeweler would have in distinguishing a naturally colorless diamond from a treated one is not taken into account

CR14448

176. The Sumpton town council recently voted to pay a prominent artist to create an abstract sculpture for the town square. Critics of this decision protested that town residents tend to dislike most abstract art, and any art in the town square should reflect their tastes. But a town council spokesperson dismissed this criticism, pointing out that other public abstract sculptures that the same sculptor has installed in other cities have been extremely popular with those cities' local residents.

The statements above most strongly suggest that the main point of disagreement between the critics and the spokesperson is whether

(A) it would have been reasonable to consult town residents on the decision

(B) most Sumpton residents will find the new sculpture to their taste

(C) abstract sculptures by the same sculptor have truly been popular in other cities

(D) a more traditional sculpture in the town square would be popular among local residents

(E) public art that the residents of Sumpton would find desirable would probably be found desirable by the residents of other cities

CR09085

177. Jay: Of course there are many good reasons to support the expansion of preventive medical care, but arguments claiming that it will lead to greater societal economic gains are misguided. Some of the greatest societal expenses arise from frequent urgent-care needs for people who have attained a long life due to preventive care.

Sunil: Your argument fails because you neglect economic gains outside the health care system: society suffers an economic loss when any of its productive members suffer preventable illnesses.

Sunil's response to Jay makes which of the following assumptions?

(A) Those who receive preventive care are not more likely to need urgent care than are those who do not receive preventive care.

(B) Jay intends the phrase "economic gains" to refer only to gains accruing to institutions within the health care system.

(C) Productive members of society are more likely than others to suffer preventable illnesses.

(D) The economic contributions of those who receive preventive medical care may outweigh the economic losses caused by preventive care.

(E) Jay is incorrect in stating that patients who receive preventive medical care are long-lived.

CR01766

178. Boreal owls range over a much larger area than do other owls of similar size. The reason for this behavior is probably that the small mammals on which owls feed are especially scarce in the forests where boreal owls live, and the relative scarcity of prey requires the owls to range more extensively to find sufficient food.

Which of the following, if true, most helps to confirm the explanation above?

(A) Some boreal owls range over an area eight times larger than the area over which any other owl of similar size ranges.

(B) Boreal owls range over larger areas in regions where food of the sort eaten by small mammals is sparse than they do in regions where such food is abundant.

(C) After their young hatch, boreal owls must hunt more often than before in order to feed both themselves and their newly hatched young.

(D) Sometimes individual boreal owls hunt near a single location for many weeks at a time and do not range farther than a few hundred yards.

(E) The boreal owl requires less food, relative to its weight, than is required by members of other owl species.

CR12567

179. Microbiologist: A lethal strain of salmonella recently showed up in a European country, causing an outbreak of illness that killed two people and infected twenty-seven others. Investigators blame the severity of the outbreak on the overuse of antibiotics, since the salmonella bacteria tested were shown to be drug-resistant. But this is unlikely because patients in the country where the outbreak occurred cannot obtain antibiotics to treat illness without a prescription, and the country's doctors prescribe antibiotics less readily than do doctors in any other European country.

Which of the following, if true, would most weaken the microbiologist's reasoning?

(A) Physicians in the country where the outbreak occurred have become hesitant to prescribe antibiotics since they are frequently in short supply.

(B) People in the country where the outbreak occurred often consume foods produced from animals that eat antibiotics-laden livestock feed.

(C) Use of antibiotics in two countries that neighbor the country where the outbreak occurred has risen over the past decade.

(D) Drug-resistant strains of salmonella have not been found in countries in which antibiotics are not generally available.

(E) Salmonella has been shown to spread easily along the distribution chains of certain vegetables, such as raw tomatoes.

CR03416

180. Historian: Newton developed mathematical concepts and techniques that are fundamental to modern calculus. Leibniz developed closely analogous concepts and techniques. It has traditionally been thought that these discoveries were independent. Researchers have, however, recently discovered notes of Leibniz's that discuss one of Newton's books on mathematics. Several scholars have argued that since **the book includes a presentation of Newton's calculus concepts and techniques,** and since the notes were written before Leibniz's own development of calculus concepts and techniques, it is virtually certain **that the traditional view is false.** A more cautious conclusion than this is called for, however. Leibniz's notes are limited to early sections of Newton's book, sections that precede the ones in which Newton's calculus concepts and techniques are presented.

In the historian's reasoning, the two portions in **boldface** play which of the following roles?

(A) The first is a claim that the historian rejects; the second is a position that that claim has been used to support.

(B) The first is evidence that has been used to support a conclusion about which the historian expresses reservations; the second is that conclusion.

(C) The first provides evidence in support of a position that the historian defends; the second is that position.

(D) The first and the second each provide evidence in support of a position that the historian defends.

(E) The first has been used in support of a position that the historian rejects; the second is a conclusion that the historian draws from that position.

CR03867

181. For over two centuries, no one had been able to make Damascus blades—blades with a distinctive serpentine surface pattern—but a contemporary sword maker may just have rediscovered how. Using iron with trace impurities that precisely matched those present in the iron used in historic Damascus blades, this contemporary sword maker seems to have finally hit on an intricate process by which he can produce a blade indistinguishable from a true Damascus blade.

Which of the following, if true, provides the strongest support for the hypothesis that trace impurities in the iron are essential for the production of Damascus blades?

(A) There are surface features of every Damascus blade—including the blades produced by the contemporary sword maker—that are unique to that blade.

(B) The iron with which the contemporary sword maker made Damascus blades came from a source of iron that was unknown two centuries ago.

(C) Almost all the tools used by the contemporary sword maker were updated versions of tools that were used by sword makers over two centuries ago.

(D) Production of Damascus blades by sword makers of the past ceased abruptly after those sword makers' original source of iron became exhausted.

(E) Although Damascus blades were renowned for maintaining a sharp edge, the blade made by the contemporary sword maker suggests that they may have maintained their edge less well than blades made using what is now the standard process for making blades.

CR01903

182. Images from ground-based telescopes are invariably distorted by the Earth's atmosphere. Orbiting space telescopes, however, operating above Earth's atmosphere, should provide superbly detailed images. Therefore, ground-based telescopes will soon become obsolete for advanced astronomical research purposes.

Which of the following statements, if true, would cast the most doubt on the conclusion drawn above?

(A) An orbiting space telescope due to be launched this year is far behind schedule and over budget, whereas the largest ground-based telescope was both within budget and on schedule.

(B) Ground-based telescopes located on mountain summits are not subject to the kinds of atmospheric distortion which, at low altitudes, make stars appear to twinkle.

(C) By careful choice of observatory location, it is possible for large-aperture telescopes to avoid most of the kind of wind turbulence that can distort image quality.

(D) When large-aperture telescopes are located at high altitudes near the equator, they permit the best Earth-based observations of the center of the Milky Way Galaxy, a prime target of astronomical research.

(E) Detailed spectral analyses, upon which astronomers rely for determining the chemical composition and evolutionary history of stars, require telescopes with more light-gathering capacity than space telescopes can provide.

CR07562

183. Generally scientists enter their field with the goal of doing important new research and accept as their colleagues those with similar motivation. Therefore, when any scientist wins renown as an expounder of science to general audiences, most other scientists conclude that this popularizer should no longer be regarded as a true colleague.

The explanation offered above for the low esteem in which scientific popularizers are held by research scientists assumes that

(A) serious scientific research is not a solitary activity, but relies on active cooperation among a group of colleagues

(B) research scientists tend not to regard as colleagues those scientists whose renown they envy

(C) a scientist can become a famous popularizer without having completed any important research

(D) research scientists believe that those who are well known as popularizers of science are not motivated to do important new research

(E) no important new research can be accessible to or accurately assessed by those who are not themselves scientists

CR07676

184. Urban planner: When a city loses population due to migration, property taxes in that city tend to rise. This is because there are then fewer residents paying to maintain an infrastructure that was designed to support more people. Rising property taxes, in turn, drive more residents away, compounding the problem. Since the city of Stonebridge is starting to lose population, the city government should therefore refrain from raising property taxes.

Which of the following, if true, would most weaken the urban planner's argument?

(A) If Stonebridge does not raise taxes on its residents to maintain its infrastructure, the city will become much less attractive to live in as that infrastructure decays.

(B) Stonebridge at present benefits from grants provided by the national government to help maintain certain parts of its infrastructure.

(C) If there is a small increase in property taxes in Stonebridge and a slightly larger proportion of total revenue than at present is allocated to infrastructure maintenance, the funding will be adequate for that purpose.

(D) Demographers project that the population of a region that includes Stonebridge will start to increase substantially within the next several years.

(E) The property taxes in Stonebridge are significantly lower than those in many larger cities.

CR01338

185. Which of the following most logically completes the argument?

Utrania was formerly a major petroleum exporter, but in recent decades economic stagnation and restrictive regulations inhibited investment in new oil fields. In consequence, Utranian oil exports dropped steadily as old fields became depleted. Utrania's currently improving economic situation, together with less-restrictive regulations, will undoubtedly result in the rapid development of new fields. However, it would be premature to conclude that the rapid development of new fields will result in higher oil exports, because _____.

(A) the price of oil is expected to remain relatively stable over the next several years

(B) the improvement in the economic situation in Utrania is expected to result in a dramatic increase in the proportion of Utranians who own automobiles

(C) most of the investment in new oil fields in Utrania is expected to come from foreign sources

(D) new technology is available to recover oil from old oil fields formerly regarded as depleted

(E) many of the new oil fields in Utrania are likely to be as productive as those that were developed during the period when Utrania was a major oil exporter

CR09592

186. The use of growth-promoting antibiotics in hog farming can weaken their effectiveness in treating humans because such use can spread resistance to those antibiotics among microorganisms. But now the Smee Company, one of the largest pork marketers, may stop buying pork raised on feed containing these antibiotics. Smee has 60 percent of the pork market, and farmers who sell to Smee would certainly stop using antibiotics in order to avoid jeopardizing their sales. So if Smee makes this change, it will probably significantly slow the decline in antibiotics' effectiveness for humans.

Which of the following, if true, would most strengthen the argument above?

(A) Other major pork marketers will probably stop buying pork raised on feed containing growth-promoting antibiotics if Smee no longer buys such pork.

(B) The decline in hog growth due to discontinuation of antibiotics can be offset by improved hygiene.

(C) Authorities are promoting the use of antibiotics to which microorganisms have not yet developed resistance.

(D) A phaseout of use of antibiotics for hogs in one country reduced usage by over 50 percent over five years.

(E) If Smee stops buying pork raised with antibiotics, the firm's costs will probably increase.

CR10678

187. In an experiment, volunteers walked individually through a dark, abandoned theater. Half of the volunteers had been told that the theater was haunted and the other half that it was under renovation. The first half reported significantly more unusual experiences than the second did. The researchers concluded that reports of encounters with ghosts and other supernatural entities generally result from prior expectations of such experiences.

Which of the following, if true, would most seriously weaken the researchers' reasoning?

(A) None of the volunteers in the second half believed that the unusual experiences they reported were supernatural.

(B) All of the volunteers in the first half believed that the researchers' statement that the theater was haunted was a lie.

(C) Before being told about the theater, the volunteers within each group varied considerably in their prior beliefs about supernatural experiences.

(D) Each unusual experience reported by the volunteers had a cause that did not involve the supernatural.

(E) The researchers did not believe that the theater was haunted.

CR05665

188. In order to reduce dependence on imported oil, the government of Jalica has imposed minimum fuel-efficiency requirements on all new cars, beginning this year. The more fuel-efficient a car, the less pollution it produces per mile driven. As Jalicans replace their old cars with cars that meet the new requirements, annual pollution from car traffic is likely to decrease in Jalica.

Which of the following, if true, most seriously weakens the argument?

(A) In Jalica, domestically produced oil is more expensive than imported oil.

(B) The Jalican government did not intend the new fuel-efficiency requirement to be a pollution-reduction measure.

(C) Some pollution-control devices mandated in Jalica make cars less fuel-efficient than they would be without those devices.

(D) The new regulation requires no change in the chemical formulation of fuel for cars in Jalica.

(E) Jalicans who get cars that are more fuel-efficient tend to do more driving than before.

CR01173

189. Plantings of cotton bioengineered to produce its own insecticide against bollworms, a major cause of crop failure, sustained little bollworm damage until this year. This year the plantings are being seriously damaged by bollworms. Bollworms, however, are not necessarily developing resistance to the cotton's insecticide. Bollworms breed on corn, and last year more corn than usual was planted throughout cotton-growing regions. So it is likely that the cotton is simply being overwhelmed by corn-bred bollworms.

In evaluating the argument, which of the following would it be most useful to establish?

(A) Whether corn could be bioengineered to produce the insecticide

(B) Whether plantings of cotton that does not produce the insecticide are suffering unusually extensive damage from bollworms this year

(C) Whether other crops that have been bioengineered to produce their own insecticide successfully resist the pests against which the insecticide was to protect them

(D) Whether plantings of bioengineered cotton are frequently damaged by insect pests other than bollworms

(E) Whether there are insecticides that can be used against bollworms that have developed resistance to the insecticide produced by the bioengineered cotton

CR03331

190. Typically during thunderstorms most lightning strikes carry a negative electric charge; only a few carry a positive charge. Thunderstorms with unusually high proportions of positive-charge strikes tend to occur in smoky areas near forest fires. The fact that smoke carries positively charged smoke particles into the air above a fire suggests the hypothesis that the extra positive strikes occur because of the presence of such particles in the storm clouds.

Which of the following, if discovered to be true, most seriously undermines the hypothesis?

(A) Other kinds of rare lightning also occur with unusually high frequency in the vicinity of forest fires.

(B) The positive-charge strikes that occur near forest fires tend to be no more powerful than positive strikes normally are.

(C) A positive-charge strike is as likely to start a forest fire as a negative-charge strike is.

(D) Thunderstorms that occur in drifting clouds of smoke have extra positive-charge strikes weeks after the charge of the smoke particles has dissipated.

(E) The total number of lightning strikes during a thunderstorm is usually within the normal range in the vicinity of a forest fire.

CR01140

191. Many gardeners believe that the variety of clematis vine that is most popular among gardeners in North America is *jackmanii*. This belief is apparently correct since, of the one million clematis plants sold per year by the largest clematis nursery in North America, ten percent are *jackmanii*.

Which of the following is an assumption on which the argument depends?

(A) The nursery sells more than ten different varieties of clematis.

(B) The largest clematis nursery in North America sells nothing but clematis plants.

(C) Some of the *jackmanii* sold by the nursery are sold to gardeners outside North America.

(D) Most North American gardeners grow clematis in their gardens.

(E) For all nurseries in North America that specialize in clematis, at least ten percent of the clematis plants they sell are *jackmanii*.

CR06422

192. Since 1990 the percentage of bacterial sinus infections in Aqadestan that are resistant to the antibiotic perxicillin has increased substantially. Bacteria can quickly develop resistance to an antibiotic when it is prescribed indiscriminately or when patients fail to take it as prescribed. Since perxicillin has not been indiscriminately prescribed, health officials hypothesize that the increase in perxicillin-resistant sinus infections is largely due to patients' failure to take this medication as prescribed.

Which of the following, if true of Aqadestan, provides most support for the health officials' hypothesis?

(A) Resistance to several other commonly prescribed antibiotics has not increased since 1990 in Aqadestan.

(B) A large number of Aqadestanis never seek medical help when they have a sinus infection.

(C) When it first became available, perxicillin was much more effective in treating bacterial sinus infections than any other antibiotic used for such infections at the time.

(D) Many patients who take perxicillin experience severe side effects within the first few days of their prescribed regimen.

(E) Aqadestani health clinics provide antibiotics to their patients at cost.

CR07793

193. Psychologist: In a study, researchers gave 100 volunteers a psychological questionnaire designed to measure their self-esteem. The researchers then asked each volunteer to rate the strength of his or her own social skills. The volunteers with the highest levels of self-esteem consistently rated themselves as having much better social skills than did the volunteers with moderate levels. This suggests that attaining an exceptionally high level of self-esteem greatly improves one's social skills.

The psychologist's argument is most vulnerable to criticism on which of the following grounds?

(A) It fails to adequately address the possibility that many of the volunteers may not have understood what the psychological questionnaire was designed to measure.

(B) It takes for granted that the volunteers with the highest levels of self-esteem had better social skills than did the other volunteers, even before the former volunteers had attained their high levels of self-esteem.

(C) It overlooks the possibility that people with very high levels of self-esteem may tend to have a less accurate perception of the strength of their own social skills than do people with moderate levels of self-esteem.

(D) It relies on evidence from a group of volunteers that is too small to provide any support for any inferences regarding people in general.

(E) It overlooks the possibility that factors other than level of self-esteem may be of much greater importance in determining the strength of one's social skills.

CR06826

194. A product that represents a clear technological advance over competing products can generally command a high price. Because **technological advances tend to be quickly surpassed** and companies want to make large profits while they still can, **many companies charge the maximum possible price for such a product**. But large profits on the new product will give competitors a strong incentive to quickly match the new product's capabilities. Consequently, the strategy to maximize overall profit from a new product is to charge less than the greatest possible price.

In the argument above, the two portions in **boldface** play which of the following roles?

(A) The first is a consideration raised to argue that a certain strategy is counterproductive; the second presents that strategy.

(B) The first is a consideration raised to support the strategy that the argument recommends; the second presents that strategy.

(C) The first is a consideration raised to help explain the popularity of a certain strategy; the second presents that strategy.

(D) The first is an assumption, rejected by the argument, that has been used to justify a course of action; the second presents that course of action.

(E) The first is a consideration that has been used to justify adopting a certain strategy; the second presents the intended outcome of that strategy.

CR05554

195. Gortland has long been narrowly self-sufficient in both grain and meat. However, as per capita income in Gortland has risen toward the world average, per capita consumption of meat has also risen toward the world average, and it takes several pounds of grain to produce one pound of meat. Therefore, since per capita income continues to rise, whereas domestic grain production will not increase, Gortland will soon have to import either grain or meat or both.

Which of the following is an assumption on which the argument depends?

(A) The total acreage devoted to grain production in Gortland will not decrease substantially.

(B) The population of Gortland has remained relatively constant during the country's years of growing prosperity.

(C) The per capita consumption of meat in Gortland is roughly the same across all income levels.

(D) In Gortland, neither meat nor grain is subject to government price controls.

(E) People in Gortland who increase their consumption of meat will not radically decrease their consumption of grain.

CR05625

196. Political Advertisement:

Mayor Delmont's critics complain about the jobs that were lost in the city under Delmont's leadership. Yet the fact is that not only were more jobs created than were eliminated, but each year since Delmont took office the average pay for the new jobs created has been higher than that year's average pay for jobs citywide. So it stands to reason that throughout Delmont's tenure the average paycheck in this city has been getting steadily bigger.

Which of the following, if true, most seriously weakens the argument in the advertisement?

(A) The unemployment rate in the city is higher today than it was when Mayor Delmont took office.

(B) The average pay for jobs in the city was at a ten-year low when Mayor Delmont took office.

(C) Each year during Mayor Delmont's tenure, the average pay for jobs that were eliminated has been higher than the average pay for jobs citywide.

(D) Most of the jobs eliminated during Mayor Delmont's tenure were in declining industries.

(E) The average pay for jobs in the city is currently lower than it is for jobs in the suburbs surrounding the city.

CR04930

197. To prevent a newly built dam on the Chiff River from blocking the route of fish migrating to breeding grounds upstream, the dam includes a fish pass, a mechanism designed to allow fish through the dam. Before the construction of the dam and fish pass, several thousand fish a day swam upriver during spawning season. But in the first season after the project's completion, only 300 per day made the journey. Clearly, the fish pass is defective.

Which of the following, if true, most seriously weakens the argument?

(A) Fish that have migrated to the upstream breeding grounds do not return down the Chiff River again.

(B) On other rivers in the region, the construction of dams with fish passes has led to only small decreases in the number of fish migrating upstream.

(C) The construction of the dam stirred up potentially toxic river sediments that were carried downstream.

(D) Populations of migratory fish in the Chiff River have been declining slightly over the last 20 years.

(E) During spawning season, the dam releases sufficient water for migratory fish below the dam to swim upstream.

CR09969

198. Music critic: Fewer and fewer musicians are studying classical music, decreasing the likelihood that those with real aptitude for such music will be performing it. Audiences who hear these performances will not appreciate classical music's greatness and will thus decamp to other genres. So to maintain classical music's current meager popularity, we must encourage more young musicians to enter the field.

Which of the following, if true, most weakens the music critic's reasoning?

(A) Musicians who choose to study classical music do so because they believe they have an aptitude for the music.

(B) Classical music's current meager popularity is attributable to the profusion of other genres of music available to listeners.

(C) Most people who appreciate classical music come to do so through old recordings rather than live performances.

(D) It is possible to enjoy the music in a particular genre even when it is performed by musicians who are not ideally suited for that genre.

(E) The continued popularity of a given genre of music depends in part on the audiences being able to understand why that genre attained its original popularity.

CR05656

199. Commemorative plaques cast from brass are a characteristic art form of the Benin culture of West Africa. Some scholars, noting that the oldest surviving plaques date to the 1400s, hypothesize that brass-casting techniques were introduced by the Portuguese, who came to Benin in 1485 A.D. But Portuguese records of that expedition mention cast-brass jewelry sent to Benin's king from neighboring Ife. So it is unlikely that Benin's knowledge of brass casting derived from the Portuguese.

Which of the following, if true, most strengthens the argument?

(A) The Portuguese records do not indicate whether their expedition of 1485 included metalworkers.

(B) The Portuguese had no contact with Ife until the 1500s.

(C) In the 1400s the Portuguese did not use cast brass for commemorative plaques.

(D) As early as 1500 A.D., Benin artists were making brass plaques incorporating depictions of Europeans.

(E) Copper, which is required for making brass, can be found throughout Benin territory.

4.7 Answer Explanations

The following discussion is intended to familiarize you with the most efficient and effective approaches to critical reasoning questions. The particular questions in this chapter are generally representative of the kinds of critical reasoning questions you will encounter on the GMAT. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

*CR14249

102. PhishCo runs a number of farms in the arid province of Nufa, depending largely on irrigation. Now, as part of a plan to efficiently increase the farms' total production, it plans to drill down to an aquifer containing warm, slightly salty water that will be used to raise fish in ponds. The water from the ponds will later be used to supplement piped-in irrigation water for PhishCo's vegetable fields, and the ponds and accompanying vegetation should help reduce the heat in the area of the farms.

Which of the following would, if true, most strongly suggest that the plan, if implemented, would increase the overall efficiency of PhishCo's farms?

(A) Most of the vegetation to be placed around the ponds is native to Nufa.
(B) Fish raised on PhishCo's farms are likely to be saleable in the nearest urban areas.
(C) Organic waste from fish in the pond water will help to fertilize fields where it is used for irrigation.
(D) The government of Nufa will help to arrange loan financing to partially cover the costs of drilling.
(E) Ponds will be located on low-lying land now partially occupied by grain crops.

Evaluation of a Plan

Situation A company plans to increase the total efficiency of its farms in an arid region by drilling down to an aquifer whose water will be used to raise fish in ponds and to help irrigate the farms' vegetable fields. The ponds and accompanying vegetation should help reduce the heat around the farms.

Reasoning *What would make it most likely that implementing the plan would increase the farms' overall efficiency?* The farms will become more efficient if the plan significantly increases their production for little or no added cost.

A Vegetation native to an arid region may be no more likely to thrive around ponds than non-native vegetation would be, and in any case would not clearly increase the farms' total crop production or efficiency.

B This makes it slightly more likely that the plan would increase the farms' profitability, not their efficiency or productivity.

C **Correct.** Fertilizing the fields with the waste while irrigating the crops might significantly improve crop production. But it would cost little or nothing extra, since the waste would already be in the irrigation water. Thus, this feature of the plan would likely enhance the farms' efficiency by increasing their productivity for no significant extra cost.

D This government assistance might slightly reduce the work the company has to do to procure a loan. But probably it would neither increase the farms' production nor reduce the overall expense of implementing the plan (including the expense incurred by the government).

E If anything, this suggests that the plan might reduce the farms' efficiency by eliminating productive crop land.

The correct answer is C.

*These numbers correlate with the online test bank question number. See the GMAT Verbal Review Online Index in the back of this book.

CR07612

103. The sustained massive use of pesticides in farming has two effects that are especially pernicious. First, it often kills off the pests' natural enemies in the area. Second, it often unintentionally gives rise to insecticide-resistant pests, since those insects that survive a particular insecticide will be the ones most resistant to it, and they are the ones left to breed.

From the passage above, it can be properly inferred that the effectiveness of the sustained massive use of pesticides can be extended by doing which of the following, assuming that each is a realistic possibility?

(A) Using only chemically stable insecticides
(B) Periodically switching the type of insecticide used
(C) Gradually increasing the quantities of pesticides used
(D) Leaving a few fields fallow every year
(E) Breeding higher-yielding varieties of crop plants

Evaluation of a Plan

Situation Continued high-level pesticide use often kills off the targeted pests' natural enemies. In addition, the pests that survive the application of the pesticide may become resistant to it, and these pesticide-resistant pests will continue breeding.

Reasoning *What can be done to prolong the effectiveness of pesticide use?* It can be inferred that the ongoing use of a particular pesticide will not continue to be effective against the future generations of pests with an inherent resistance to that pesticide. What would be effective against these future generations? If farmers periodically change the particular pesticide they use, then pests resistant to one kind of pesticide might be killed by another. This would continue, with pests being killed off in cycles as the pesticides are changed. It is also possible that this rotation might allow some of the pests' natural enemies to survive, at least until the next cycle.

A Not enough information about chemically stable insecticides is given to make a sound inference.

B **Correct.** This statement properly identifies an action that could extend the effectiveness of pesticide use.

C Gradually increasing the amount of the pesticides being used will not help the situation since the pests are already resistant to it.

D Continued use of pesticides is assumed as part of the argument. Since pesticides would be unnecessary for fallow fields, this suggestion is irrelevant.

E Breeding higher-yielding varieties of crops does nothing to extend the effectiveness of the use of pesticides.

The correct answer is B.

CR00701

104. Which of the following, if true, most logically completes the argument below?

Manufacturers are now required to make all cigarette lighters child-resistant by equipping them with safety levers. But this change is unlikely to result in a significant reduction in the number of fires caused by children playing with lighters, because children given the opportunity can figure out how to work the safety levers and _____.

(A) the addition of the safety levers has made lighters more expensive than they were before the requirement was instituted

(B) adults are more likely to leave child-resistant lighters than non-child-resistant lighters in places that are accessible to children

(C) many of the fires started by young children are quickly detected and extinguished by their parents

(D) unlike child-resistant lighters, lighters that are not child-resistant can be operated by children as young as two years old

(E) approximately 5,000 fires per year have been attributed to children playing with lighters before the safety levers were required.

Argument Construction

Situation Manufacturers must equip all cigarette lighters with child-resistant safety levers, but children can figure out how to circumvent the safety levers and thereby often start fires.

Reasoning *What point would most logically complete the argument?* What would make it likely that the number of fires caused by children playing with lighters would remain the same? In order for children to start fires using lighters equipped with safety levers, they must be given the opportunity to figure out how the safety levers work and then to use them. They must, that is, have access to the lighters.

A If safety-lever-equipped lighters are more expensive than lighters that are not so equipped, fewer lighters might be sold. This would most likely afford children less access to lighters, thus giving them less opportunity to start fires with them.

B **Correct.** This statement properly identifies a point that logically completes the argument: it explains why children are likely to have access to lighters equipped with safety levers.

C The speed with which fires are extinguished does not have any bearing on the number of fires that are started.

D This provides a reason to believe that the number of fires started by children will most likely decrease, rather than stay the same: fewer children will be able to operate the lighters, and thus fewer fires are likely to be started.

E This information about how many fires were started by children before safety levers were required does not have any bearing on the question of how many fires are likely to be started by children now that the safety levers are required.

The correct answer is B.

CR04192

105. Which of the following most logically completes the passage?

A business analysis of the Appenian railroad system divided its long-distance passenger routes into two categories: rural routes and interurban routes. The analysis found that, unlike the interurban routes, few rural routes carried a high enough passenger volume to be profitable. Closing unprofitable rural routes, however, will not necessarily enhance the profitability of the whole system, since _____.

(A) a large part of the passenger volume on interurban routes is accounted for by passengers who begin or end their journeys on rural routes

(B) within the last two decades several of the least used rural routes have been closed and their passenger services have been replaced by buses

(C) the rural routes were all originally constructed at least one hundred years ago, whereas some of the interurban routes were constructed recently for new high-speed express trains

(D) not all of Appenia's large cities are equally well served by interurban railroad services

(E) the greatest passenger volume, relative to the routes' capacity, is not on either category of long-distance routes but is on suburban commuter routes

Argument Construction

Situation In the Appenian railroad system, interurban routes generally carry enough passengers to be profitable, but few rural routes do.

Reasoning *What would suggest that closing unprofitable rural routes would not enhance the railroad system's profitability?* Any evidence that closing the unprofitable rural routes would indirectly reduce the profitability of other components of the railroad system would support the conclusion that closing those rural routes will not enhance the system's profitability. Thus, a statement providing such evidence would logically complete the passage.

A **Correct.** This suggests that closing the rural routes could discourage many passengers from traveling on the profitable interurban routes as well, thus reducing the profitability of the railroad system as a whole.

B Even if some of the least used rural routes have already been closed, it remains true that most of the remaining rural routes are too little used to be profitable.

C Closing very old routes would be at least as likely to enhance the railroad system's profitability as closing newer routes would be.

D Even if there is better railroad service to some large cities than others, closing unprofitable rural routes could still enhance the system's profitability.

E Even if suburban routes are the most heavily used and profitable, closing underused, unprofitable rural routes could still enhance the system's profitability.

The correct answer is A.

CR52441.01

106. In its search for new technologies for solar energy that can produce lower-cost electricity, Smith-Diatom is developing a new way to make dye-sensitive solar cells, in which photons strike light-sensitive dyes. The process uses diatoms, which are unicellular algae that have silicon shells with a complex structure. First, the organic material is removed, and then the shells are coated with a titanium dioxide film that acts as a semiconductor. The diatoms' structure results in more photon activity and thus more efficient production of electricity than with current dye-sensitized solar cells, which in turn lowers the cost.

Which of the following considerations would, if true, most strongly support the hypothesis that the plan, if implemented, will produce low-cost electricity from dye-sensitive solar cells?

(A) Diatoms are an important link in oceanic food chains and help cycle carbon dioxide from the atmosphere.

(B) The current cost of electricity produced by dye-sensitive solar cells is roughly three times that of non-solar electricity.

(C) Because diatoms occur naturally, no special engineering processes are needed to produce the basic dye-sensitive solar cell structures.

(D) Dye-sensitive solar cells work somewhat more efficiently in lower light than previous solar cell technologies.

(E) The production of dye-sensitive solar cells primarily uses materials that do not harm the environment.

Evaluation of a Plan

Situation Smith-Diatom is trying to develop a new way to make dye-sensitive solar cells in hopes of developing a means for using solar energy to produce lower-cost electricity. Their new technology will use diatoms, single-celled algae with silicon shells that have a complex structure. This structure results in increased photon activity, which results in more efficient and lower-cost energy production than current dye-sensitive solar cells do.

Reasoning *What statement would provide the strongest support for the claim that Smith-Diatom's plan would result in the production of lower-cost energy than can be attained from the current dye-sensitive solar cells?* One potential problem with Smith-Diatom's plan would be if the intended use of diatoms would be costly. Any statement that ruled out a potentially costly aspects of production, e.g., costly engineering processes, would provide support for the claim in question.

A Nothing in Smith-Diatom's plan is related to diatom's connection to oceanic food chains or to their role in cycling carbon dioxide from the atmosphere.

B That producing electricity by means of dye-sensitive solar cells is much more costly than other types of electricity production would help explain why Smith-Diatom wants to find a lower-cost means of producing solar energy, but it does not give us reason to think that Smith-Diatom's plan will be successful.

C **Correct.** If no special engineering processes are needed to carry out Smith-Diatom's plan, one potential costly aspect of solar-electricity production is ruled out, thereby providing some reason to think Smith-Diatom's goal of producing lower-cost electricity might be attainable.

D The fact that dye-sensitive solar cells work more efficiently in lower light than other solar cell technologies would help support the claim in question only if we knew that the cost of producing such cells is not prohibitive. Also, it could be the case that although dye-sensitive solar cells work more efficiently in lower light than other solar cell technologies, the other solar cell technologies might work much more efficiently in good lighting conditions.

E If the production of dye-sensitive solar cells does not harm the environment, that might be good reason to use such solar cells, but it is not relevant to determining whether Smith-Diatom's plan will be likely to attain its goal.

The correct answer is C.

CR03129

107. Although Ackerburg's subway system is currently operating at a deficit, the transit authority will lower subway fares next year. The authority projects that the lower fares will result in a ten percent increase in the number of subway riders. Since the additional income from the larger ridership will more than offset the decrease due to lower fares, the transit authority actually expects the fare reduction to reduce or eliminate the subway system's operating deficit for next year.

Which of the following, if true, provides the most support for the transit authority's expectation of reducing the subway system's operating deficit?

(A) Throughout the years that the subway system has operated, fares have never before been reduced.

(B) The planned fare reduction will not apply to students, who can already ride the subway for a reduced fare.

(C) Next year, the transit authority will have to undertake several large-scale track maintenance projects.

(D) The subway system can accommodate a ten percent increase in ridership without increasing the number of trains it runs each day.

(E) The current subway fares in Ackerburg are higher than subway fares in other cities in the region.

Argument Evaluation

Situation Ackerburg's transit authority plans to lower subway fares, projecting that this will increase ridership by 10 percent and thereby reduce or eliminate the subway system's operating deficit.

Reasoning *What evidence would support the expectation that lowering subway fares will reduce the operating deficit?* The passage says the additional income from the projected increase in ridership will more than offset the decrease due to the lowered fares. The claim that lowering fares will reduce the operating deficit could be supported either by additional evidence that lowering the fares will increase ridership at least as much as projected or by evidence that the plan will not increase overall operating expenses.

A The fact that fares have never been reduced provides no evidence about what would happen if they were reduced.

B This suggests that the planned fare reduction would not affect revenue from student riders, but it does not suggest how it would affect revenue from all other riders.

C These maintenance projects will probably increase the operating deficit, making it less likely that the fare reduction will reduce or eliminate that deficit.

D **Correct.** This indicates that the plan will not involve extra operating expenses for running trains and thus increases the likelihood that the plan will reduce the operating deficit.

E Ackerburg may differ from other cities in the region in ways that make the higher fares optimal for Ackerburg's subway system.

The correct answer is D.

CR20531.01

108. Sparrow Airlines is planning to reduce its costs by cleaning its planes' engines once a month, rather than the industry standard of every six months. With cleaner engines, Sparrow can postpone engine overhauls, which take planes out of service for up to 18 months. Furthermore, cleaning an engine reduces its fuel consumption by roughly 1.2 percent.

The airline's plan assumes that

(A) fuel prices are likely to rise in the near future and therefore cutting fuel consumption is an important goal

(B) the cost of monthly cleaning of an airplane's engines is not significantly greater in the long run than is the cost of an engine overhaul

(C) engine cleaning does not remove an airplane from service

(D) Sparrow Airlines has had greater problems with engine overhauls and fuel consumption than other airlines have

(E) cleaning engines once a month will give Sparrow Airlines a competitive advantage over other airlines

Evaluation of a Plan

Situation Sparrow Airlines plans to clean the engines of its planes monthly rather than every six months. The goal is to reduce its costs.

Reasoning *Which statement provides an assumption underlying the plan?* The plan will enable Sparrow to postpone engine overhauls, which put a plane out of service for up to 18 months. The monthly cleaning will reduce its fuel consumption by 1.2 percent. But suppose the long-run cost of monthly cleanings were greater than the cost of an engine overhaul, then the rationale for the airline's plan would fail.

A Nothing in the information provided indicates that this is assumed in the plan.

B **Correct.** The plan makes sense only if this is assumed. If the long-run total cost of monthly cleaning significantly exceeded the total cost of engine overhaul—which would include, in the long run, more frequent downtime of 18 months if the plan were not adopted—then it seems likely that the projected benefit of postponement of engine overhauls would not be compensated for by the 1.2 percent fuel-cost savings.

C The plan does not have to assume this. Perhaps monthly engine cleaning requires only one day of down time.

D This is perhaps a good reason for Sparrow to put in place the proposed cost-saving plan, but it is not an assumption that the plan requires for it to make sense.

E The plan does not have to assume this, even if Sparrow's cost saving were to result in a competitive advantage. Sparrow's plan could equally be aimed at simply removing a competitive disadvantage. The issue of competition is not addressed in the given information.

The correct answer is B.

CR00828

109. Patrick usually provides child care for six children. Parents leave their children at Patrick's house in the morning and pick them up after work. At the end of each workweek, the parents pay Patrick at an hourly rate for the child care provided that week. The weekly income Patrick receives is usually adequate but not always uniform, particularly in the winter, when children are likely to get sick and be unpredictably absent.

Which of the following plans, if put into effect, has the best prospect of making Patrick's weekly income both uniform and adequate?

(A) Pool resources with a neighbor who provides child care under similar arrangements, so that the two of them cooperate in caring for twice as many children as Patrick currently does.

(B) Replace payment by actual hours of child care provided with a fixed weekly fee based upon the number of hours of child care that Patrick would typically be expected to provide.

(C) Hire a full-time helper and invest in facilities for providing child care to sick children.

(D) Increase the hourly rate to a level that would provide adequate income even in a week when half of the children Patrick usually cares for are absent.

(E) Increase the number of hours made available for child care each day, so that parents can leave their children in Patrick's care for a longer period each day at the current hourly rate.

Evaluation of a Plan

Situation At the end of the workweek, Patrick is paid a certain amount for each hour of child care he has provided. Patrick usually receives adequate weekly income under this arrangement, but in the winter Patrick's income fluctuates, because children are unpredictably absent due to illness.

Reasoning *Which plan would be most likely to meet the two goals of uniform weekly income and adequate weekly income?* Patrick must find a way to ensure that his weekly income is both adequate—that is, not reduced significantly from current levels—and uniform—that is, not subject to seasonal or other fluctuations. A successful plan would thus most likely be one that does not increase Patrick's costs. Further, the plan need not increase Patrick's weekly income; it must merely ensure that that income is more reliable. It should therefore also provide some way to mitigate the unexpected loss of income from children's absences.

A This plan might raise Patrick's income slightly, because he and the neighbor might pay out less in costs if they pool their resources. But this plan would have no effect on the problem that unpredictable absences pose for Patrick's weekly income.

B **Correct.** This statement properly identifies a plan that would most likely keep Patrick's income adequate (he would probably receive approximately the same amount of money per child as he does now) and uniform (he would receive the money regardless of whether a child was present or absent).

C While this plan might somewhat mitigate the unpredictability in Patrick's income that results from sick children's absences—because parents would be less likely to keep sick children at home—it would increase Patrick's costs. Paying a helper and investing in different facilities would reduce Patrick's income and might thus result in that income being inadequate.

D Under this plan, if we assume that parents did not balk at the increase in Patrick's hourly rate and find alternative child care, Patrick's income would most likely be adequate. But this plan would not help make Patrick's weekly income uniform. His income would continue to fluctuate when children are absent. Remember, there are two goals with regard to Patrick's income: adequacy and uniformity.

E This plan might increase Patrick's income, in that he might be paid for more hours of child care each week. The goals here, however, are to make Patrick's weekly income both adequate and uniform, and this plan does not address the issue of uniformity.

The correct answer is B.

CR10639

110. Editorial: Consumers in North America think that by drinking frozen concentrated orange juice, they are saving energy, because it takes fewer truckloads to transport it than it takes to transport an equivalent amount of not-from-concentrate juice. But they are mistaken, for the amount of energy required to concentrate the juice is far greater than the energy difference in the juices' transport.

Which of the following, if true, would provide the greatest additional support for the editorial's conclusion?

(A) Freezer trucks use substantially more energy per mile driven than do any other types of trucks.

(B) Frozen juice can be stored for several years, while not-from-concentrate juice lasts a much shorter time.

(C) Oranges grown in Brazil make up an increasing percentage of the fruit used in not-from-concentrate juice production.

(D) A serving of not-from-concentrate juice takes up to six times more space than a serving of frozen concentrated juice.

(E) Though frozen concentrated juice must be kept at a lower temperature, not-from-concentrate juice is far more sensitive to small temperature fluctuations.

Argument Evaluation

Situation North American consumers think that drinking frozen concentrated orange juice saves energy because the concentrated juice can be transported in fewer truckloads than an equivalent amount of not-from-concentrate juice. But more energy is required to concentrate the juice than is saved by this reduction in the number of truckloads used for transportation.

Reasoning *What additional evidence would most help to support the conclusion that drinking frozen concentrated orange juice rather than not-from-concentrate juice does not save energy?* Factors other than the concentration process and the number of truckloads used for transportation may also affect the amounts of energy used to provide the two types of juice. Evidence of any such factor that increases the amount of energy needed to provide frozen concentrated juice more than it increases the amount needed to provide the same amount of not-from-concentrate juice would help to support the editorial's conclusion.

A **Correct.** This suggests that it takes much more energy per truckload to transport frozen concentrated juice than to transport not-from-concentrate juice, which is not frozen.

B If anything, this suggests that a higher proportion of not-from-concentrate juice goes bad and is discarded rather than being drunk. This waste would increase the amount of energy used to provide each glass of not-from-concentrate juice that is drunk.

C Since Brazil is far from North America, this suggests that the average amount of energy used to transport each serving of not-from-concentrate juice may be increasing.

D Since both types of juice must be kept cold until ready to drink, this suggests that a much larger amount of space must be refrigerated to provide each serving of not-from-concentrate juice. That may mean that more energy needs to be used to keep each serving of not-from-concentrate juice cold.

E It may take extra energy to keep the temperature of not-from-concentrate juice more constant. If it does, that would increase the amount of energy used to provide each serving of not-from-concentrate juice.

The correct answer is A.

CR07618

111. A computer equipped with signature-recognition software, which restricts access to a computer to those people whose signatures are on file, identifies a person's signature by analyzing not only the form of the signature but also such characteristics as pen pressure and signing speed. Even the most adept forgers cannot duplicate all of the characteristics the program analyzes.

Which of the following can be logically concluded from the passage above?

(A) The time it takes to record and analyze a signature makes the software impractical for everyday use.

(B) Computers equipped with the software will soon be installed in most banks.

(C) Nobody can gain access to a computer equipped with the software solely by virtue of skill at forging signatures.

(D) Signature-recognition software has taken many years to develop and perfect.

(E) In many cases even authorized users are denied legitimate access to computers equipped with the software.

Argument Construction

Situation Forgers cannot duplicate all the characteristics that signature-recognition software analyzes, including the form of a signature, pen pressure, and signing speed. Computers equipped with this software restrict access to those whose signatures are on file.

Reasoning *What conclusion can be reached about computers equipped with this software?* The passage states that the software detects more characteristics in a signature than the most accomplished forger can possibly reproduce. Thus, skill at forging signatures is not enough to allow someone to gain access to a computer equipped with the software.

A No information about the speed of the analysis is given, so no such conclusion can be drawn.

B Although the software would likely be of benefit to banks, we cannot conclude that it will be installed in most banks because the passage doesn't rule out, e.g., that the software may be too costly or that there may be proprietary constraints.

C **Correct.** This statement properly identifies a conclusion that can be drawn from the passage.

D Although it seems reasonable to think that the software took a long time to develop, nothing in the passage justifies the claim that it took years.

E Nothing in the passage rules out the possibility that the software functions so well that authorized users will never be denied legitimate access to computers equipped with the software.

The correct answer is C.

CR02958

112. The rate at which a road wears depends on various factors, including climate, amount of traffic, and the size and weight of the vehicles using it. The only land transportation to Rittland's seaport is via a divided highway, one side carrying traffic to the seaport and one carrying traffic away from it. The side leading to the seaport has worn faster, even though each side has carried virtually the same amount of traffic, consisting mainly of large trucks.

Which of the following, if true, most helps to explain the difference in the rate of wear?

(A) The volume of traffic to and from Rittland's seaport has increased beyond the intended capacity of the highway that serves it.

(B) Wear on the highway that serves Rittland's seaport is considerably greater during the cold winter months.

(C) Wear on the side of the highway that leads to Rittland's seaport has encouraged people to take buses to the seaport rather than driving there in their own automobiles.

(D) A greater tonnage of goods is exported from Rittland's seaport than is imported through it.

(E) All of Rittland's automobiles are imported by ship.

Argument Construction

Situation The side of a divided highway leading to a seaport has worn faster than the side leading away from the seaport. Both sides carry roughly the same amount of traffic, mainly consisting of large trucks.

Reasoning *What could explain why the side of the highway leading to the seaport has worn faster than the other side?* We are told that climate, amount of traffic, and the size and weight of vehicles on a road affect how quickly the road wears. We are also told that the amounts of traffic on the two sides of the highway are almost identical. Probably the climate on the two sides is also almost identical. Thus, the most likely explanation for the different rates of wear is that the size or weight of the vehicles driving on the two sides differs significantly. So any factor that would make the vehicles' size or weight greater on the side leading to the seaport than on the other side could help explain the difference in wearing.

A The increased traffic volume affects both sides of the highway, so it does not help explain why one side is wearing faster than the other.

B The winter weather affects both sides of the highway, so it does not help explain why one side is wearing faster than the other.

C The buses may contribute to wear on the side of the highway leading to the seaport, but not necessarily more than the car traffic they are replacing would (though the increased use of buses instead of cars may decrease the amount of traffic, buses would be heavier than cars and thus may result in an equal or greater amount of wear). Furthermore, the buses have to come back on the other side, probably carrying the returning travelers who have not left their cars at the airport.

D **Correct.** This suggests that the many trucks visiting the seaport tend to be more heavily laden with goods when traveling on the side of the highway leading to the seaport than when returning on the other side. The resulting difference in the trucks' weight when traveling on the two sides could explain the different rates of wear.

E These automobiles would be transported along the side of the highway leading from the seaport, but not along the side leading to it. This would likely create a pattern of wear opposite to the one observed.

The correct answer is D.

CR75231.01

113. Ythex has developed a small diesel engine that produces 30 percent less particulate pollution than the engine made by its main rival, Onez, now widely used in Marania; Ythex's engine is well-suited for use in the thriving warehousing businesses in Marania, although it costs more than the Onez engine. The Maranian government plans to ban within the next two years the use of diesel engines with more than 80 percent of current diesel engine particulate emissions in Marania, and Onez will probably not be able to retool its engine to reduce emissions to reach this target. So if the ban is passed, the Ythex engine ought to sell well in Marania after that time.

Which of the following is an assumption on which the argument above depends?

(A) Marania's warehousing and transshipment business buys more diesel engines of any size than other types of engines.

(B) Ythex is likely to be able to reduce the cost of its small diesel engine within the next two years.

(C) The Maranian government is generally favorable to anti-pollution regulations.

(D) The government's ban on high levels of pollution caused by diesel engines, if passed, will not be difficult to enforce.

(E) The other manufacturers of small diesel engines in Marania, if there are any, have not produced an engine as popular and clean-running as Ythex's new engine.

Argument Evaluation

Situation Two companies, Ythex and Onez, produce diesel engines in Marania. Ythex has developed a small engine that produces less particulate pollution than the engine made by Onez, its main rival. The Maranian government will put a new maximum particulate-emission level in force within two years, but Onez will not be able to meet this target.

Reasoning *What would have to be assumed for the argument to support the prediction that Ythex's engine will sell well in two years when the new maximum particulate level is introduced?* To answer this, one might ask, for example: Will the maximum level be efficiently enforced? Will Ythex have any rivals other than Onez that will compete in the low-pollution diesel market?

A This tells us that there is a significant market for diesel engines, but this not an assumption that the reasoning depends on. The reasoning focuses only on the market for diesel engines and does not address the relative sizes of the market for diesel engines and that for non-diesel engines.

B If this is true, it provides additional support for the conclusion that Ythex's engine will sell well in two years. However, it is not an assumption on which the reasoning relies.

C This information is peripheral to the reasoning and not an assumption on which the reasoning relies. Adding it to the information given would not make the reasoning more logically compelling.

D The ban might be quite difficult to enforce, but a more important issue is whether the ban will be effectively enforced (so the reasoning does have to assume that the ban would be at least somewhat effective). No assumption about the relative difficulty of enforcing the ban needs to be made for the reasoning to be logically compelling.

E **Correct.** Are there one or more diesel engines from other companies that will be able to compete effectively with Ythex's engine when the ban is introduced? For the reasoning to be logically compelling, it needs to be assumed that the answer is no.

The correct answer is E.

CR04073

114. In parts of South America, vitamin-A deficiency is a serious health problem, especially among children. In one region, agriculturists are attempting to improve nutrition by encouraging farmers to plant a new variety of sweet potato called SPK004 that is rich in beta-carotene, which the body converts into vitamin A. The plan has good chances of success, since sweet potato is a staple of the region's diet and agriculture, and the varieties currently grown contain little beta-carotene.

Which of the following, if true, most strongly supports the prediction that the plan will succeed?

(A) The growing conditions required by the varieties of sweet potato currently cultivated in the region are conditions in which SPK004 can flourish.

(B) The flesh of SPK004 differs from that of the currently cultivated sweet potatoes in color and texture, so traditional foods would look somewhat different when prepared from SPK004.

(C) There are no other varieties of sweet potato that are significantly richer in beta-carotene than SPK004 is.

(D) The varieties of sweet potato currently cultivated in the region contain some important nutrients that are lacking in SPK004.

(E) There are other vegetables currently grown in the region that contain more beta-carotene than the currently cultivated varieties of sweet potato do.

Evaluation of a Plan

Situation Agriculturists believe that if farmers in a particular South American region plant a new beta-carotene-rich variety of sweet potato, SPK004, the vitamin-A deficiency suffered in that region can be alleviated. Even though sweet potatoes are a staple of the region and the body can convert a sweet potato's beta-carotene into vitamin A, the varieties currently grown there contain little beta-carotene.

Reasoning *What would most support the success of the plan to improve nutrition by encouraging farmers to plant SPK004?* What, that is, would make farmers respond positively to encouragement to plant SPK004? Farmers in the region would probably be inclined to substitute SPK004 for the varieties of sweet potato they currently grow if they could be assured that SPK004 would grow as well as those other varieties do. This would in turn most likely lead to SPK004 being substituted for current varieties of sweet potato in staple dishes, and thus to an improvement in nutrition in the region.

A **Correct.** This statement properly identifies a factor that would support a prediction of the plan's success.

B If dishes made with SPK004 look different than traditional sweet potato dishes in the region do, people might be less likely to eat those dishes; in such a situation, the plan's success would be less likely, rather than more likely.

C It is SPK004's beta-carotene content relative to the beta-carotene content of the sweet potatoes currently grown in the region that is relevant here, so it does not matter if there are other varieties of sweet potato that are richer in beta-carotene than SPK004 is.

D This suggests that switching from currently grown sweet potatoes to SPK004 could negatively affect nutrition in the region; this undermines, rather than supports, the prediction that the plan to improve nutrition will succeed.

E These other vegetables, despite their beta-carotene content being higher than that of the currently cultivated varieties of sweet potato, are clearly not sufficient to prevent a vitamin-A deficiency in the region. This information does nothing to support the prediction that encouraging farmers to plant SPK004 will help to meet those beta-carotene needs.

The correct answer is A.

CR06018

115. Which of the following most logically completes the argument?

The last members of a now-extinct species of a European wild deer called the giant deer lived in Ireland about 16,000 years ago. Prehistoric cave paintings in France depict this animal as having a large hump on its back. Fossils of this animal, however, do not show any hump. Nevertheless, there is no reason to conclude that the cave paintings are therefore inaccurate in this regard, since _____.

(A) some prehistoric cave paintings in France also depict other animals as having a hump

(B) fossils of the giant deer are much more common in Ireland than in France

(C) animal humps are composed of fatty tissue, which does not fossilize

(D) the cave paintings of the giant deer were painted well before 16,000 years ago

(E) only one currently existing species of deer has any anatomical feature that even remotely resembles a hump

Argument Construction

Situation Representations found in prehistoric cave paintings in France of the now-extinct giant deer species—the last members of which lived in Ireland about 16,000 years ago—depict the deer as having a hump on its back. Fossils of the deer, however, do not feature a hump.

Reasoning *What point would most logically complete the argument? That is, what would show that the cave paintings are not inaccurate even though fossils of the giant deer show no hump?* How could it be the case that the paintings show a hump while the fossils do not? One way in which this could be so is if the humps are not part of the fossils—that is, if there is some reason why a hump would not be preserved with the rest of an animal's remains.

A We do not know whether these other cave paintings accurately depict the animals as having humps, so this provides no reason to think that the depictions of giant deer are accurate.

B Where giant deer fossils are found has no bearing on whether cave paintings of giant deer that show a hump on the animal's back are inaccurate. It could be that this suggests that the painters responsible for the representations would not be very familiar with the species; if this were so, it would give some reason to conclude that the representations *were* inaccurate.

C **Correct.** This statement properly identifies a point that logically completes the argument. A hump would not be found as part of a giant deer's fossilized remains if the humps were fatty tissue that would not be fossilized.

D That the cave paintings were painted well before 16,000 years ago shows that they were executed before the giant deer became extinct, but this does not help to explain the discrepancy between the paintings' depiction of a hump on the deer's back and the fossil record's lack of such a hump. It could be that even though the cave painters coexisted with the giant deer, they were not sufficiently familiar with them to depict them accurately.

E That currently existing species of deer lack humps, or even that one species does have a feature resembling a hump, has little bearing on whether cave paintings in France accurately depict the giant deer as having a hump.

The correct answer is C.

CR28931.01

116. Super Express Shipping Company has implemented a new distribution system that can get almost every package to its destination the day after it is sent. The company worries that this more efficient system will result in lower sales of its premium next-day delivery service, because its two-day service will usually arrive the following day anyway. The company plans to encourage sales of its next-day service by intentionally delaying delivery of its two-day packages so that they will not be delivered the following day, even if the package arrives at its destination city in time for next-day delivery.

The company's plan assumes that

(A) deliberate delay of packages will not affect the company's image in a way that significantly reduces its ability to attract and retain customers

(B) most people do not have a preference for either two-day or next-day delivery

(C) if the plan is not implemented, the company would lose more money in lost sales of overnight deliveries than it would save with its new efficient distribution system

(D) the overnight service is too expensive to be attractive to most customers currently

(E) competing companies' delivery services rarely deliver packages to their destination earlier than their promised time

Evaluation of a Plan

Situation Super Express, a shipping company, is concerned that a new level of efficiency in its delivery process, resulting in next-day delivery even with guaranteed two-day delivery, might sabotage the company's more expensive "premium" next-day delivery service. To promote the premium delivery service, the company plans to delay, for one day, two-day delivery packages that arrive one day early at a center near the customer and could be delivered that same day.

Reasoning *What does the company's plan assume?* The company's rationale for its plan is that without the planned delay, its next-day premium service would lose revenue if potential customers realized that the less expensive two-day delivery service usually results in next-day delivery. So the plan must assume that the planned delivery day will not damage the company's image in a way that would cause significant loss of customers.

A **Correct.** If it became public that the company was deliberately delaying packages, its brand and reputation would likely suffer major damage and its ability to promote its services—including its premium next-day delivery service—would probably be seriously impaired. Since presumably the company wants to retain existing customers and even attract new ones, its plan (including the rationale for it) would not make sense unless it were assumed that such catastrophic consequences would not result.

B The given information indicates that the company believes that a sizeable number of customers would, in certain circumstances, prefer guaranteed next-day delivery and pay more for it.

C Neither the plan nor its rationale is based on assuming that no other, equally good, plan could be devised to achieve the company's major objective and prevent the consequence of overall revenue loss.

D The given information gives no indication that the company believes this is so, and nothing related to its plan implies otherwise.

E Nothing is assumed in the company's plan about the frequency with which its competitors deliver packages to customers earlier than the promised delivery time.

The correct answer is A.

CR04738

117. Cocoa grown organically on trees within the shade of the rain forest canopy commands a premium price. However, acquiring and maintaining the certification that allows the crop to be sold as organically grown is very time-consuming and laborious. Meanwhile, the price premium for the grower is about 30 percent, whereas cocoa trees grown in full sun using standard techniques can have twice the yield of organic, shade-grown trees. Financially, therefore, standard techniques are the better choice for the farmer.

Which of the following, if true, most seriously weakens the argument?

(A) Cocoa can be grown only in a climate that has the temperature and moisture characteristics of a tropical rain forest.

(B) Cocoa trees grown using standard techniques require costly applications of fertilizer and pesticides, unlike shade-grown trees.

(C) Although organically grown cocoa has long commanded a price premium over cocoa grown using standard techniques, its price has fluctuated considerably during that period.

(D) Cocoa is not the only cash crop that can be raised on plots that leave the rain forest canopy overhead essentially intact.

(E) Governments and international conservation organizations are working to streamline organic certification so as to relieve farmers of unnecessary work.

Argument Evaluation

Situation Cocoa grown organically under the rain forest canopy can obtain a price premium of 30 percent for the grower. But the certification needed for the cocoa to be sold as organic is time-consuming and laborious. Since cocoa grown in full sun by standard (non-organic) techniques can have twice the yield, it is concluded that standard techniques are better financially for the farmer.

Reasoning *Among the pieces of information presented, which one, assuming it is accurate, would most weaken the argument if added to the given information?* Specific information about the costs associated with growing cocoa using standard techniques is lacking in the given information. For example, does use of the "standard techniques" entail lower or higher costs than use of organic techniques? If we had information that the costs are much higher, such information would tend to weaken the argument—unless we also knew that the much higher yields more than compensate for the much higher costs. If we had information that consumers are becoming increasingly concerned about chemical residues in cocoa, that information would also tend to weaken the argument.

A If this is true, then the cocoa grown both in rain forest shade and in full sun satisfies the climate requirement.

B **Correct.** This tells us that use of chemical pesticides and fertilizers entails very high costs for growers; moreover, such use of chemicals risks making the cocoa less attractive to consumers, ultimately impacting the grower's financial benefits.

C If this were true only of the organic cocoa described in the given information, then it would tend to reinforce the argument rather than weaken it. If it were true of both kinds of cocoa, then it would neither strengthen nor weaken the argument.

D This information has no obvious bearing on the question asked.

E This information suggests that costs associated with growing organic cocoa may eventually decrease and the profits increase. But this does not weaken the argument as given, since its conclusion concerns what growing techniques are currently best for farmers.

The correct answer is B.

CR07547

118. High levels of fertilizer and pesticides, needed when farmers try to produce high yields of the same crop year after year, pollute water supplies. Experts therefore urge farmers to diversify their crops and to rotate their plantings yearly.

To receive governmental price-support benefits for a crop, farmers must have produced that same crop for the past several years.

The statements above, if true, best support which of the following conclusions?

(A) The rules for governmental support of farm prices work against efforts to reduce water pollution.

(B) The only solution to the problem of water pollution from fertilizers and pesticides is to take farmland out of production.

(C) Farmers can continue to make a profit by rotating diverse crops, thus reducing costs for chemicals, but not by planting the same crop each year.

(D) New farming techniques will be developed to make it possible for farmers to reduce the application of fertilizers and pesticides.

(E) Governmental price supports for farm products are set at levels that are not high enough to allow farmers to get out of debt.

Argument Construction

Situation Farmers are urged to rotate crops annually because the chemicals they must use when continuing to produce the same crops pollute water supplies. On the other hand, farmers may receive federal price-support benefits only if they have been producing the same crop for the past several years.

Reasoning *What conclusion can be drawn from this information?* Farmers wish to receive the price-support benefits offered by the government, so they grow the same crop for several years. In order to continue getting good yields, they use the high levels of chemicals necessary when the same crop is grown from year to year. The result is water pollution. The government's rules for price-support benefits work against the efforts to reduce water pollution.

A **Correct.** This statement properly identifies the conclusion supported by the evidence.

B The experts cited in the passage believe that the rotation of crops is the solution, not the removal of farmland from production.

C The conclusion that farmers cannot make a profit by producing the same crop year after year is not justified by the information given in the premises. The information given suggests that this conclusion would actually be false, since these farmers would benefit by price-support measures for such a crop.

D No information in the passage supports a conclusion about farming techniques other than crop diversification and rotation, which are clearly existing farming techniques and not new or yet to be developed.

E This conclusion is unwarranted because there is no information in the two statements about the levels of the price supports and of the farmers' debts.

The correct answer is A.

CR02270

119. Ten years ago the number of taxpayers in Greenspace County was slightly greater than the number of registered voters. The number of taxpayers has doubled over the last ten years, while the number of registered voters has increased, but at a lower rate than has the number of taxpayers.

Which of the following must be true in Greenspace County if the statements above are true?

(A) The number of taxpayers is now smaller than the number of registered voters.
(B) Everyone who is a registered voter is also a taxpayer.
(C) The proportion of registered voters to taxpayers has increased over the last ten years.
(D) The proportion of registered voters to taxpayers has decreased over the last ten years.
(E) The proportion of registered voters to taxpayers has remained unchanged over the last ten years.

Argument Evaluation

Situation Ten years ago a county had slightly more taxpayers than registered voters. Since then the number of taxpayers has doubled, while the number of registered voters has increased less.

Reasoning *What can be deduced from the information about the changing numbers of taxpayers and registered voters?* There were already slightly more taxpayers than registered voters ten years ago, but since then the number of taxpayers has increased more than proportionately to the number of registered voters. It follows that there must still be more taxpayers than registered voters, that the absolute number of taxpayers must have increased more than the absolute number of registered voters has, and that the ratio of taxpayers to registered voters must have increased.

A Since there were already more taxpayers than registered voters ten years ago, and since the number of taxpayers has increased more than the number of registered voters, there must still be more taxpayers than registered voters.

B Although there are more taxpayers than registered voters overall, there could still be many individual registered voters who are not taxpayers.

C Since the number of taxpayers has doubled while the number of registered voters has less than doubled, the proportion of registered voters to taxpayers must have decreased, not increased as this option claims.

D **Correct.** Since the number of taxpayers has doubled while the number of registered voters has less than doubled, the proportion of registered voters to taxpayers must have decreased.

E Since the number of taxpayers has doubled while the number of registered voters has less than doubled, the proportion of registered voters to taxpayers must have decreased, not remained unchanged.

The correct answer is D.

CR01298

120. From 1900 until the 1930s, pellagra, a disease later discovered to result from a deficiency of the vitamin niacin, was common among poor cotton farmers in the United States whose diet consisted mostly of corn, the least costly food they could buy. Corn does not contain niacin in usable form. Curiously, during the Depression of the early 1930s, when cotton's price collapsed and cotton farmers' income declined, the incidence of pellagra among those farmers also declined.

Which of the following, if true, most helps to explain the decline in the incidence of pellagra?

(A) When growing a cash crop could not generate adequate income, poor farmers in the United States responded by planting their land with vegetables and fruits for their own consumption.

(B) People whose diets consist largely of corn often suffer from protein deficiency as well as niacin deficiency.

(C) Until the discovery of pellagra's link with niacin, it was widely believed that the disease was an infection that could be transmitted from person to person.

(D) Effective treatment for pellagra became available once its link with niacin was established.

(E) In parts of Mexico, where people subsisted on corn but pellagra was uncommon, corn was typically processed with alkaline substances, which make the niacin in the corn absorbable.

Argument Construction

Situation The disease pellagra, which is due to a deficiency of the nutrient niacin, was common among poor cotton farmers in the United States during the early part of the 20th century, until the early 1930s. The diet of these farmers consisted mostly of the inexpensive grain corn, which lacked niacin in a form that can be absorbed by the body. However, when the cotton price collapsed during the Great Depression in the early 1930s, the incidence of pellagra decreased among these farmers.

Reasoning *What might explain the decline in incidence of pellagra among the cotton farmers during the Great Depression, despite the likelihood that the farmers would have experienced an increase in poverty?* It may seem "curious" that a disease associated with malnutrition and poverty would become less common during a severe economic downturn. Our task is to find something that would explain this curious fact.

A **Correct.** The passage suggests that the pellagra of the farmers was due to their diet of mostly corn, which they purchased. However, this option indicates that, during the time that the farmers grew much of their own food during the Great Depression, the diet of the farmers changed significantly and had greater variety. This point, together with the fact that pellagra among the farmers decreased during this time, suggests that the decrease in pellagra among the farmers was due to their growing their own food.

B Although this option mentions another aspect of nutritional deficiency due to narrowness of diet, the question to be addressed is about nutritional deficiency of niacin rather than of protein.

C The belief that pellagra was an infection transmitted from person to person would not explain why the incidence of pellagra decreased among the farmers during the Great Depression.

D This option might explain the decrease in incidence of pellagra among the farmers if it was true that the link of pellagra with niacin deficiency was discovered before the decrease in incidence of pellagra among the farmers. Given the information provided, we don't know whether or not this is true.

E This option might help to explain the decline in pellagra if it was the case that the cotton farmers started to eat corn that had been processed in the manner of the people in parts of Mexico. However, we have not been given a reason to suppose that the farmers ate corn that had been processed in this way.

The correct answer is A.

CR07589

121. The interview is an essential part of a successful hiring program because, with it, job applicants who have personalities that are unsuited to the requirements of the job will be eliminated from consideration.

The argument above logically depends on which of the following assumptions?

(A) A hiring program will be successful if it includes interviews.

(B) The interview is a more important part of a successful hiring program than is the development of a job description.

(C) Interviewers can accurately identify applicants whose personalities are unsuited to the requirements of the job.

(D) The only purpose of an interview is to evaluate whether job applicants' personalities are suited to the requirements of the job.

(E) The fit of job applicants' personalities to the requirements of the job was once the most important factor in making hiring decisions.

Argument Construction

Situation The interview is a necessary part of hiring because candidates with unsuitable personalities are eliminated from consideration.

Reasoning *What is being assumed in this argument?* The argument puts forth one reason that the interview is important: it eliminates candidates with unsuitable personalities. This presupposes that interviewers can, with a fair degree of accuracy, rule out those candidates whose personalities do not fit the needs of the job.

A The argument does not go so far as to say that interviews guarantee a successful hiring program.

B The argument does not prioritize the parts of a hiring program.

C **Correct.** This statement properly identifies the assumption underlying the argument.

D The argument gives one reason that the interview is important, but it does not say it is the *only* reason.

E This concerns past practices in hiring, and is irrelevant to the argument.

The correct answer is C.

CR07785

122. Many leadership theories have provided evidence that leaders affect group success rather than the success of particular individuals. So it is irrelevant to analyze the effects of supervisor traits on the attitudes of individuals whom they supervise. Instead, assessment of leadership effectiveness should occur only at the group level.

Which of the following would it be most useful to establish in order to evaluate the argument?

(A) Whether supervisors' documentation of individual supervisees' attitudes toward them is usually accurate

(B) Whether it is possible to assess individual supervisees' attitudes toward their supervisors without thereby changing those attitudes

(C) Whether any of the leadership theories in question hold that leaders should assess other leaders' attitudes

(D) Whether some types of groups do not need supervision in order to be successful in their endeavors

(E) Whether individuals' attitudes toward supervisors affect group success

Argument Evaluation

Situation Many leadership theories have provided evidence that leaders affect the success of groups but not of individuals.

Reasoning *What would be most helpful to know in order to evaluate how well the stated fact supports the conclusion that leadership effectiveness should be assessed only at the group level without considering supervisors' influence on the attitudes of the individuals they supervise?* Even if leaders do not affect the success of the individuals they lead, they might still affect those individuals' attitudes. And those attitudes in turn might affect group success. If so, the argument would be weak. So any evidence about the existence or strength of these possible effects in the relationship between supervisors and their supervisees would be helpful in evaluating the argument.

A How accurately supervisors document their supervisees' attitudes is not clearly relevant to how much the supervisors affect those attitudes, nor to how much the attitudes affect group success.

B Even if assessing supervisees' attitudes would in itself change those attitudes, the person doing the assessment might be able to predict this change and take it into account. Thus, considering individual supervisees' attitudes might still be worthwhile.

C The argument is not about interactions among leaders, but rather about interactions between supervisors and supervisees.

D The argument is not about groups without supervisors, or whether certain groups might be effective without a supervisor, but rather about how to assess the effectiveness of supervisors in groups that do have them.

E **Correct.** As explained above, if individual supervisees' attitudes affect group success, the argument would be weak. And probably individual supervisees' attitudes toward their supervisors are influenced by those supervisors. So knowing whether individual attitudes toward supervisors affect group success would be helpful in evaluating the argument

The correct answer is E.

CR03535

123. A major health insurance company in Lagolia pays for special procedures prescribed by physicians only if the procedure is first approved as "medically necessary" by a company-appointed review panel. The rule is intended to save the company the money it might otherwise spend on medically unnecessary procedures. The company has recently announced that in order to reduce its costs, it will abandon this rule.

Which of the following, if true, provides the strongest justification for the company's decision?

(A) Patients often register dissatisfaction with physicians who prescribe nothing for their ailments.

(B) Physicians often prescribe special procedures that are helpful but not altogether necessary for the health of the patient.

(C) The review process is expensive and practically always results in approval of the prescribed procedure.

(D) The company's review process does not interfere with the prerogative of physicians, in cases where more than one effective procedure is available, to select the one they personally prefer.

(E) The number of members of the company-appointed review panel who review a given procedure depends on the cost of the procedure.

Evaluation of a Plan

Situation In order to cut costs, a major health insurance company is abandoning a rule stating that it will pay for special procedures only if the procedure is approved as medically necessary by a review panel.

Reasoning *What piece of information would most help to justify the company's decision?* For the company to save money, it would need to be in some way cutting its costs by abandoning the rule. Under what circumstances might the rule cost, rather than save, the company money? The panel itself might be expensive to convene, for example. Further, the cost savings achieved by the panel might be minimal if the panel did not deny significant numbers of procedures.

A This suggests that patients might be pressuring their physicians to prescribe certain unnecessary procedures for their ailments, which in turn suggests that the panel is reviewing these procedures and denying them. But if so, then the panel is probably saving the insurance company money, so abandoning the panel's review would not reduce the company's costs.

B This suggests that certain procedures that are being prescribed by physicians are not medically necessary, which in turn suggests that the panel reviewing these procedures may be denying them. If this is the case, then the panel is probably saving the insurance company a significant amount of money, so abandoning the panel's review may well increase rather than decrease the company's costs.

C **Correct.** This statement properly identifies information that would help to justify the company's decision.

D Even if the panel does not interfere with physicians' choices when more than one medically effective procedure is available, the panel may still be denying pay for many procedures that are not medically necessary. In such cases the panel may be saving the insurance company money, and abandoning the review process would not reduce the company's costs.

E This suggests that the more expensive the procedure under review, the more expensive the panel itself is. Even so, if the panel denies payment for very expensive procedures, it may nonetheless save the company significantly more than the company has to pay to convene the panel, so abandoning the review process would not reduce the company's costs.

The correct answer is C.

CR03826

124. Automobile ownership was rare in Sabresia as recently as 30 years ago, but with continuing growth of personal income there, automobile ownership has become steadily more common. Consequently, there are now far more automobiles on Sabresia's roads than there were 30 years ago, and the annual number of automobile accidents has increased significantly. Yet the annual number of deaths and injuries resulting from automobile accidents has not increased significantly.

Which of the following, if true, most helps to explain why deaths and injuries resulting from automobile accidents have not increased significantly?

(A) Virtually all of the improvements in Sabresia's roads that were required to accommodate increased traffic were completed more than ten years ago.

(B) With more and more people owning cars, the average number of passengers in a car on the road has dropped dramatically.

(C) The increases in traffic volume have been most dramatic on Sabresia's highways, where speeds are well above those of other roads.

(D) Because of a vigorous market in used cars, the average age of cars on the road has actually increased throughout the years of steady growth in automobile ownership.

(E) Automobile ownership is still much less common in Sabresia than it is in other countries.

Argument Construction

Situation Many more cars are on Sabresia's roads than 30 years ago; and there are also many more car accidents. Yet the annual number of deaths and injuries resulting from car accidents has not increased much, which is quite puzzling.

Reasoning *What factor could help explain the puzzling fact that the increase in car accidents was not reflected in a similar increase in deaths and injuries from car accidents?* One (but perhaps unlikely) possibility is that a significantly greater proportion of the recent annual number of car accidents consisted of merely minor accidents, unlike 30 years ago. Another possibility is that cars are currently much better engineered for driver and passenger safety than 30 years ago. Yet a third possibility is that the total number of people traveling by car—passengers and drivers—has not increased significantly despite the large increase in the number of cars. This would mean that the average occupancy of a car has greatly decreased; so, even though the number of car accidents has significantly increased, the average number of people per car involved in an accident would have decreased significantly. On average, this would mean significantly fewer deaths and injuries per accident.

A This throws little light on the central puzzle: why the current number of car accidents is significantly higher than 30 years ago, while the number of deaths and injuries in car accidents is not. The fact that there has been a significant increase in car accidents suggests that the roads were not made as safe as they could have been, and this just deepens the puzzle about the lack of a significant increase in deaths and injuries.

B **Correct.** This implies that the average number of passengers per car accident is significantly less, and this helps explain why the total number of deaths and injuries has not increased significantly.

C This information does not help explain the mismatch between increased accident numbers and relatively stable death-and-injury numbers. High-speed car accidents would likely have caused more fatalities, on average, than other car accidents; so, given that the increase in traffic volume has been greatest on Sabresia's high-speed roads, one would expect a significant increase in the number of accidents, and consequently in the number of deaths and injuries. But this expectation has not been fulfilled.

D This does not help explain the surprisingly stable death-and-injury numbers in contrast with the significantly increased number of car accidents. The increase in average age of cars on the road might contribute to the increased number of accidents if older cars are more likely to be dangerously defective than newer ones.

E The central puzzle already described involves no comparisons between Sabresia and other countries, so this information is irrelevant to explaining the puzzling discrepancy.

The correct answer is B.

CR01430

125. To evaluate a plan to save money on office-space expenditures by having its employees work at home, XYZ Company asked volunteers from its staff to try the arrangement for six months. During this period, the productivity of these employees was as high as or higher than before.

Which of the following, if true, would argue most strongly against deciding, on the basis of the trial results, to implement the company's plan?

(A) The employees who agreed to participate in the test of the plan were among the company's most self-motivated and independent workers.

(B) The savings that would accrue from reduced office-space expenditures alone would be sufficient to justify the arrangement for the company, apart from any productivity increases.

(C) Other companies that have achieved successful results from work-at-home plans have workforces that are substantially larger than that of XYZ.

(D) The volunteers who worked at home were able to communicate with other employees as necessary for performing the work.

(E) Minor changes in the way office work is organized at XYZ would yield increases in employee productivity similar to those achieved in the trial.

Evaluation of a Plan

Situation To save money on office space expenditures, a company considers having employees work at home. A six-month trial with employees who have volunteered to test the plan shows their productivity to be as high as or higher than before.

Reasoning *Why would the trial results NOT provide a good reason to implement the plan?* Generalizing from a small sample to the group depends on having a sample that is representative. In this case, the employees who participated in the trial are not representative of all employees. The employees who volunteered for the trial may be the type of employees who would be most likely to work successfully at home. It would not be wise to base a generalization about all employees on this sample.

A **Correct.** This statement properly identifies a flaw in the trial that is the basis for the plan.

B This statement supports the implementation of the plan. Moreover, it is not based on the trial results, so it does not answer the question.

C The passage gives no information about how company size might affect the implementation of the plan or the reliability of the trial results.

D If anything, this would tend to support the plan.

E The goal of the plan is to save money on office space, not to increase productivity, so an alternative plan to increase productivity is irrelevant.

The correct answer is A.

CR04180

126. A child learning to play the piano will not succeed unless the child has an instrument at home on which to practice. However, good-quality pianos, whether new or secondhand, are costly. Buying one is justified only if the child has the necessary talent and perseverance, which is precisely what one cannot know in advance. Consequently, parents should buy an inexpensive secondhand instrument at first and upgrade if and when the child's ability and inclination are proven.

Which of the following, if true, casts the most serious doubt on the course of action recommended for parents?

(A) Learners, particularly those with genuine musical talent, are apt to lose interest in the instrument if they have to play on a piano that fails to produce a pleasing sound.

(B) Reputable piano teachers do not accept children as pupils unless they know that the children can practice on a piano at home.

(C) Ideally, the piano on which a child practices at home should be located in a room away from family activities going on at the same time.

(D) Very young beginners often make remarkable progress at playing the piano at first, but then appear to stand still for a considerable period of time.

(E) In some parents, spending increasing amounts of money on having their children learn to play the piano produces increasing anxiety to hear immediate results.

Evaluation of a Plan

Situation Children learning the piano need to have a piano on which to practice at home. Purchasing a high-quality piano is costly, and justified only if the child has talent and will persevere, which is hard to predict at an early stage. Parents should make do with a secondhand piano until the child's ability and inclination are proven.

Reasoning *Which of the statements given would cast the most serious doubt on the recommendation given to parents?* Suppose that a child, because possessed of very high musical talent, is especially sensitive to imprecisions in tuning or imperfections of tone in a secondhand, less expensive piano (presumably Mozart would have been so!). This could, over time, make the child less interested in using the piano—especially if the child had the opportunity to hear music on far superior pianos. The result could be total loss of interest in learning to play the piano.

A **Correct.** This, if true, would be a good reason to provide the child with the chance to practice regularly on a superior piano.

B The issue is whether it would be best to provide the child with a superior piano at home, not whether it would be important to provide some piano at home.

C This is irrelevant to the point at issue, which concerns how high a quality of piano should parents provide at home if they desire optimal development of the child's potential for piano musicianship.

D Fluctuations in the pace of learning the piano are possible, but not relevant to the central question raised about the quality of the piano to be provided.

E Investing so much in a piano, to the extent that doing so causes financial and psychological stress, might not be beneficial overall. However, if buying a new piano and buying a used piano are equally feasible financially for a given family, the question concerns which option would most achieve the objective of optimally developing the child's potential for piano musicianship.

The correct answer is A.

CR05096

127. Nutritionists are advising people to eat more fish, since the omega-3 fatty acids in fish help combat many diseases. If everyone took this advice, however, there would not be enough fish in oceans, rivers, and lakes to supply the demand; the oceans are already being overfished. The obvious method to ease the pressure on wild fish populations is for people to increase their consumption of farmed fish.

Which of the following, if true, raises the most serious doubt concerning the prospects for success of the solution proposed above?

(A) Aquaculture, or fish farming, raises more fish in a given volume of water than are generally present in the wild.

(B) Some fish farming, particularly of shrimp and other shellfish, takes place in enclosures in the ocean.

(C) There are large expanses of ocean waters that do not contain enough nutrients to support substantial fish populations.

(D) The feed for farmed ocean fish is largely made from small wild-caught fish, including the young of many popular food species.

(E) Some of the species that are now farmed extensively were not commonly eaten when they were only available in the wild.

Argument Evaluation

Situation Nutritionists advise people to eat fish for the omega-3 fatty acids, but there would not be enough fish to meet the demand if everyone followed this advice. Therefore, people should increase their consumption of farmed fish to ease pressure of wild fish populations.

Reasoning *What evidence would suggest that increasing consumption of farmed fish would not ease pressure on wild fish populations?* Any evidence suggesting that significantly increasing consumption of farmed fish would diminish the habitat or food available for wild fish would also suggest that increasing consumption of farmed fish would not ease pressure on wild fish populations.

A Probably the less space fish farming requires, the less pressure it creates on wild fish habitats and populations, other things being equal.

B Whether any fish farming takes place in enclosures in the ocean is not clearly relevant to whether it eases pressure on wild fish populations.

C Substantial fish populations may thrive in other large expanses of ocean water that contain more nutrients, and in rivers and lakes.

D **Correct.** This suggests that increasing consumption of farmed fish would require increased use of wild fish as feed for farmed fish and therefore would not ease pressure on wild fish populations.

E Even if some farmed fish are different species from the wild fish that are commonly eaten, increased consumption of the farmed fish could reduce demand for the wild fish and thereby ease pressure on wild fish populations.

The correct answer is D.

CR02851

128. Which of the following most logically completes the market forecaster's argument?

Market forecaster: The price of pecans is high when pecans are comparatively scarce but drops sharply when pecans are abundant. Thus, in high-yield years, growers often store part of their crop in refrigerated warehouses until after the next year's harvest, hoping for higher prices then. Because of bad weather, this year's pecan crop will be very small. Nevertheless, pecan prices this year will not be significantly higher than last year, since _____.

(A) the last time the pecan crop was as small as it was this year, the practice of holding back part of one year's crop had not yet become widely established

(B) last year's pecan harvest was the largest in the last 40 years

(C) pecan prices have remained relatively stable in recent years

(D) pecan yields for some farmers were as high this year as they had been last year

(E) the quality of this year's pecan crop is as high as the quality of any pecan crop in the previous five years

Argument Construction

Situation The price of pecans fluctuates based on the fluctuations in market supplies. When pecan farmers have a large harvest, they tend to save some of the crop in refrigerated storage until the following year, hoping to get higher prices then. This year's crop will be very small. But prices are not predicted to be significantly higher than last year.

Reasoning *What can most reasonably complete the argument by filling in the blank?* In other words, what would be the best reason for the prediction about this year's prices? This year's prices will be determined by the total market supply of pecans; this will include not only freshly harvested pecans but also pecans that were kept in storage from last year's harvest. Information about the relative size of last year's harvest could be partial evidence for a prediction about this year's prices.

A What this tells us, in effect, is that previous experience with very poor harvests provide a poor guide about this year's total market supply, since the practice of refrigerated storage of pecans had not existed then.

B **Correct.** This tells us that there was probably an unprecedented quantity of pecans in refrigerated storage from last year, so it is likely that the market supply of pecans this year will be relatively normal despite the poor harvest. This means that this year's prices will not be much higher than last year's; last year, the total pecan harvest was enormous and market supply probably relatively large.

C This creates a general expectation of prices not being inordinately high this year, but since the harvest this year was "very small," such a general expectation could remain unfulfilled, absent countervailing factors.

D This information is too vague to be useful. What percentage of farmers obtained satisfactory yields? Were these yields on farms that were by far the largest or the smallest?

E The reasoning is silent on the issue of pecan quality, even though perceived quality could perhaps affect prices obtained. The additional information does not tell us that this year's quality is better than that found in recent harvests.

The correct answer is B.

CR06331

129. It is often said that high rates of inflation tend to diminish people's incentive to save and invest. This view must be incorrect, however, because people generally saved and invested more of their income in the 1970's when inflation rates were high than they did in the 1980's when inflation rates were low.

Of the following, the best criticism of the argument above is that it overlooks the possibility that

(A) all people do not respond in the same way to a given economic stimulus
(B) certain factors operating in the 1980's but not in the 1970's diminished people's incentive to save and invest
(C) the population was larger in the 1980's than it was in the 1970's
(D) the proponents of the view cited would stand to gain if inflation rates become lower
(E) a factor that affects people's savings behavior in a certain way could affect people's investment behavior quite differently

Argument Evaluation

Situation People generally saved and invested more in the 1970's when inflation was high than in the 1980s when inflation was low, despite the fact that it is commonly believed that high inflation discourages savings and investment.

Reasoning *Why does the observation about savings, investment, and inflation rates in the 1970's and 1980's not justify the conclusion that high inflation does not generally diminish people's incentive to save and invest?* The argument observes that over the course of two decades there was a positive rather than a negative correlation between inflation on the one hand and savings and investment on the other. It infers from this that high rates of inflation do not tend to diminish people's incentive to save and invest. Is this inference justified? Note that the claim that this argument is trying to discredit is not that high rates of inflation always diminished people's incentive to save and invest. Rather, the claim is merely that high rates of inflation tend to do this. The argument overlooks the possibility that during the two decades in question other factors may have caused a positive correlation to briefly appear even if in general the correlation is negative.

A The argument is compatible with the hypothesis that some people respond to inflation by saving and investing more, while others do not.

B **Correct.** If these other factors, unrelated to the inflation rate, that operated in the 1980's but not the 1970's, created an even greater disincentive to savings and investment than high inflation rates provide, then those trends do not provide evidence about the general relationship among savings, investment, and inflation.

C The argument appears to concern savings and investment per capita, so total population size should be irrelevant. But increasing population would not explain declining total amounts of savings and investment, either.

D If anything, the possibility that the proponents' ulterior motives distorted their reasoning would help to support the argument's conclusion that the proponents' view is incorrect.

E The argument addresses this possibility by presenting evidence that inflation was positively correlated with both savings and investment during the 1970's and 1980's.

The correct answer is B.

CR02704

130. Which of the following most logically completes the argument below?

Within the earth's core, which is iron, pressure increases with depth. Because the temperature at which iron melts increases with pressure, the inner core is solid and the outer core is molten. Physicists can determine the melting temperature of iron at any given pressure and the pressure for any given depth in the earth. Therefore, the actual temperature at the boundary of the earth's outer and inner cores—the melting temperature of iron there—can be determined, since _____.

(A) the depth beneath the earth's surface of the boundary between the outer and inner cores is known

(B) some of the heat from the earth's core flows to the surface of the earth

(C) pressures within the earth's outer core are much greater than pressures above the outer core

(D) nowhere in the earth's core can the temperature be measured directly

(E) the temperatures within the earth's inner core are higher than in the outer core

Argument Construction

Situation Pressure within the earth's iron core increases with depth. Because the melting temperature of iron increases with pressure, the inner core is solid and the outer core molten. Physicists can determine iron's melting temperature at any pressure and the pressure it is under at any depth.

Reasoning *What further premise, combined with the information provided, would support the conclusion that physicists can determine the temperature at the boundary between the outer and inner cores?* Since physicists can determine iron's melting temperature at any pressure and the pressure it is under at any depth, they must be able to determine its melting temperature at any depth. The temperature at the boundary between the inner and outer cores must exactly equal the melting temperature there, since that is the boundary between the molten and solid parts of the core. To determine the temperature at the boundary, therefore, it would suffice to know the depth of the boundary.

A **Correct.** If physicists know the depth of the boundary between the inner and outer cores, they can determine the temperature at the boundary.

B The fact that *some heat* flows from the core to the surface is too vague to help in determining exact temperatures anywhere.

C The difference in pressures between the outer core and the region above it is only vaguely described here and is not clearly relevant to the temperature at the boundary between the outer core and the inner core below it.

D An absence of information would not be helpful in determining the temperature at the boundary between the outer and inner cores.

E This information is not sufficiently specific to show that the temperature at the boundary between the outer and inner cores can be determined.

The correct answer is A.

CR03659

131. Which of the following most logically completes the reasoning?

Either food scarcity or excessive hunting can threaten a population of animals. If the group faces food scarcity, individuals in the group will reach reproductive maturity later than otherwise. If the group faces excessive hunting, individuals that reach reproductive maturity earlier will come to predominate. Therefore, it should be possible to determine whether prehistoric mastodons became extinct because of food scarcity or human hunting, since there are fossilized mastodon remains from both before and after mastodon populations declined, and _____.

(A) there are more fossilized mastodon remains from the period before mastodon populations began to decline than from after that period

(B) the average age at which mastodons from a given period reached reproductive maturity can be established from their fossilized remains

(C) it can be accurately estimated from fossilized remains when mastodons became extinct

(D) it is not known when humans first began hunting mastodons

(E) climate changes may have gradually reduced the food available to mastodons

Argument Construction

Situation In a population of animals, food scarcity causes later reproductive maturity; if that population is hunted excessively, earlier-maturing animals will be more numerous in the population.

Reasoning *What point would most logically complete the argument?* For the information given to be of use in determining what caused mastodons' extinction, mastodon fossils would need to indicate the age at which mastodons reached reproductive maturity, since that is what the argument suggests can indicate cause of extinction. If fossilized remains exist from before and after mastodon populations began to decline, and if the age at which those fossilized mastodons reached reproductive maturity can be determined, then we will have a good idea of what caused their extinction: if they reached reproductive maturity late, it was probably food scarcity, but if they matured earlier, it was most likely hunting.

A This fact only helps indicate that there was a decline; it tells us nothing about what caused the decline.

B **Correct.** This statement properly identifies a point that logically completes the argument: it explains how the fossilized mastodon remains could be used to help determine what caused mastodons' extinction.

C The point at which mastodons became extinct is not part of this argument, which is concerned with the cause of their extinction. The only way in which this could be relevant to the issue at hand is if mastodons became extinct before humans took up hunting mastodons—but the argument includes no information on whether this was so.

D Not knowing when humans began hunting mastodons would have no effect on the argument, which is concerned with how mastodon fossils, combined with knowledge about how food scarcity and hunting affect mastodon reproductive maturity, can help determine how mastodons became extinct.

E This fact only shows that food scarcity *may* have led to mastodon's decline. It tells us nothing about whether fossilized remains can help determine whether it was food scarcity or human hunting that actually led to the decline.

The correct answer is B.

CR02518

132. Many office buildings designed to prevent outside air from entering have been shown to have elevated levels of various toxic substances circulating through the air inside, a phenomenon known as sick building syndrome. Yet the air in other office buildings does not have elevated levels of these substances, even though those buildings are the same age as the "sick" buildings and have similar designs and ventilation systems.

Which of the following, if true, most helps to explain why not all office buildings designed to prevent outside air from entering have air that contains elevated levels of toxic substances?

(A) Certain adhesives and drying agents used in particular types of furniture, carpets, and paint contribute the bulk of the toxic substances that circulate in the air of office buildings.

(B) Most office buildings with sick building syndrome were built between 1950 and 1990.

(C) Among buildings designed to prevent outside air from entering, houses are no less likely than office buildings to have air that contains elevated levels of toxic substances.

(D) The toxic substances that are found in the air of "sick" office buildings are substances that are found in at least small quantities in nearly every building.

(E) Office buildings with windows that can readily be opened are unlikely to suffer from sick building syndrome.

Argument Evaluation

Situation Many office buildings designed to prevent outside air from entering have elevated levels of toxic substances in their interior air, but other such buildings similar in age, design, and ventilation do not.

Reasoning *What would help to explain the difference in air quality among buildings similar in age, design, and ventilation*? If office buildings are designed to prevent outside air from entering, toxic substances emitted into the interior air might not be ventilated out quickly, and thus might become more concentrated inside the building. But if such toxic substances are not emitted into a building's interior air in the first place, they will not become concentrated there, even if the building is poorly ventilated. So any factor that suggests why toxic substances are emitted into the interior air of some buildings but not others of similar age and design would help to explain the difference in the buildings' air quality.

A **Correct.** Some buildings may have these types of furniture, carpets, and paint, while other buildings similar in age, design, and ventilation do not.

B Since all these buildings were built during the same period, this does not help to explain the difference in air quality among buildings similar in age.

C The passage concerns air quality in office buildings only, not in houses.

D This does not help to explain why these toxic substances are more concentrated in some office buildings than in others.

E The passage concerns the differences in air quality only among office buildings that were designed to prevent outside air from entering.

The correct answer is A.

CR08756

133. Newsletter: **A condominium generally offers more value for its cost than an individual house because of economies of scale.** The homeowners in a condominium association can collectively buy products and services that they could not afford on their own. And since a professional management company handles maintenance of common areas, **condominium owners spend less time and money on maintenance than individual homeowners do.**

The two portions in boldface play which of the following roles in the newsletter's argument?

(A) The first is the argument's main conclusion; the second is another conclusion supporting the first.

(B) The first is a premise, for which no evidence is provided; the second is the argument's only conclusion.

(C) The first is a conclusion supporting the second; the second is the argument's main conclusion.

(D) The first is the argument's only conclusion; the second is a premise, for which no evidence is provided.

(E) Both are premises, for which no evidence is provided, and both support the argument's only conclusion.

Argument Construction

Situation Homeowners in a condominium association can buy products and services collectively. A management company handles maintenance of condominium common areas.

Reasoning *What roles are played in the argument by the statement that a condominium generally offers more value for its cost than a house because of economies of scale and by the statement that condominium owners spend less time and money on maintenance than owners of individual homes do?* In the passage, the first sentence (the first boldface statement) is a generalization. The second sentence provides an example of the economies of scale mentioned in the first sentence, so it helps support the first sentence as a conclusion. In the third sentence, the word *since* indicates that the first clause is a premise supporting the second clause (the second boldface statement) as a conclusion. That conclusion itself provides another example of the economies of scale mentioned in the first sentence, so it also helps support that first sentence as a conclusion.

A **Correct.** As explained above, the first boldface statement is supported by the rest of the statements in the argument, so it is the main conclusion. The second boldface statement supports the first, but is itself a conclusion supported by the *since* clause preceding it.

B The second and third sentences in the argument provide examples of economies of scale. These examples are evidence supporting the first boldface statement as a conclusion.

C Since the second boldface statement provides evidence of the economies of scale described by the first, it supports the first as a conclusion.

D The *since* clause immediately preceding the second boldface statement provides evidence that supports it, so the second boldface statement is a conclusion.

E Both the second and the third sentences of the argument support the first boldface statement as a conclusion. And the *since* clause immediately preceding the second boldface statement supports it as a conclusion.

The correct answer is A.

CR00780

134. Which of the following most logically completes the argument?

When officials in Tannersburg released their plan to widen the city's main roads, environmentalists protested that widened roads would attract more traffic and lead to increased air pollution. In response, city officials pointed out that today's pollution-control devices are at their most effective in vehicles traveling at higher speeds and that widening roads would increase the average speed of traffic. However, this effect can hardly be expected to offset the effect pointed out by environmentalists, since _____.

(A) increases in traffic volume generally produce decreases in the average speed of traffic unless roads are widened

(B) several of the roads that are slated for widening will have to be closed temporarily while construction is underway

(C) most of the air pollution generated by urban traffic comes from vehicles that do not have functioning pollution-control devices

(D) the newly widened roads will not have increased traffic volume if the roads that must be used to reach them are inadequate

(E) a vehicle traveling on a route that goes through Tannersburg will spend less time on Tannersburg's roads once the roads are widened

Argument Evaluation

Situation Environmentalists protested a plan to widen a city's main roads on the grounds that it would increase traffic and air pollution. City officials replied that widening the roads would increase average traffic speeds, which would improve the effectiveness of vehicles' pollution-control devices.

Reasoning *What would most support the conclusion that the improved effectiveness of the pollution-control devices would be insufficient to prevent the increased traffic from increasing air pollution?* The word *since* preceding the blank space at the end of the argument indicates that the space should be filled with a premise supporting the conclusion stated immediately before the *since*. To support this conclusion, we would need evidence that widening the roads and increasing traffic speeds would not improve the pollution-control devices' effectiveness enough to compensate for the amount of added air pollution generated by the additional traffic on the widened roads.

A It is unclear whether traffic volume would increase if the roads were not widened. But if it did, this would cast doubt on the conclusion by suggesting that a combination of higher traffic volume and lower speeds could make air pollution worse if the roads were not widened than if they were widened.

B The argument is about the long-term effects of widening the roads, not about the temporary effects of closing them during construction.

C **Correct.** If most vehicles in the area lack air-pollution devices altogether or have ones that do not work, then it is highly questionable whether the greater efficiency of the few functioning devices would be sufficient to compensate for the increase in air pollution that would result from increased traffic.

D If anything, this casts doubt on the conclusion by suggesting that widening the roads may not increase traffic volume or air pollution at all.

E If anything, this casts doubt on the conclusion by suggesting that widening the roads will decrease the amount of time each vehicle spends generating air pollution on those roads.

The correct answer is C.

CR70661.01

135. Platinum is a relatively rare metal vital to a wide variety of industries. Xagor Corporation, a major producer of platinum, has its production plant in a country that will soon begin imposing an export tax on platinum sold and shipped to customers abroad. As a consequence, the price of platinum on the world market is bound to rise.

Which of the following, if true, tends to confirm the conclusion above?

(A) An inexpensive substitute for platinum has been developed and will be available to industry for the first time this month.

(B) The largest of the industries that depend on platinum reported a drop in sales last month.

(C) The producers of platinum in other countries taken together cannot supply enough platinum to meet worldwide demand.

(D) Xagor produced more platinum last month than in any previous month.

(E) New deposits of platinum have been found in the country in which Xagor has its production plant.

Argument Evaluation

Situation Xagor Corporation produces platinum, a rare metal vital to many industries. Xagor's plant is in a country that will soon impose an export tax on platinum. The world market price of platinum is predicted to rise.

Reasoning *Which of the pieces of information given, if true, would most tend to confirm the prediction given?* The conclusion of the argument is a causal prediction: the world market price of platinum will increase because of the export tax on platinum. The argument tells us that a wide range of industries need platinum, so the introduction of taxes on exported platinum would likely make that platinum more expensive for the importing industries. This, in turn, would likely raise the world market price of platinum. But what if those industries could get all their platinum from countries that did not tax platinum exports? Then the world market price might not rise if exports from those countries could adequately fulfill market demand.

A This information tends to undermine the reasoning and does not confirm the conclusion. If a less expensive platinum-substitute were to be developed, the world market price of platinum would tend to decline.

B This information somewhat weakens support for the conclusion. It suggests that overall demand for platinum might decline, at least temporarily, which would tend to lower the world market price of platinum.

C **Correct.** This information strengthens the support for the conclusion. It indicates that some platinum subject to the export tax will almost certainly be exported and will cost importers more than before. This would tend to cause the world market price of platinum to rise, especially since platinum producers in other countries could remain competitive and still raise their prices.

D This information could indicate a possible upswing in platinum production, which could increase the total world supply of platinum. If the supply increased relative to world demand, the world market price of platinum could decrease, not increase as the argument's conclusion predicts.

E This information suggests a possible increase in the world market supply of platinum, which would tend to reduce the world market price, provided world demand for platinum did not also increase at least proportionately.

The correct answer is C.

CR80661.01

136. From 1973 to 1986, growth in the United States economy was over 33 percent, while the percent growth in United States energy consumption was zero. The number of barrels of oil being saved per day by energy-efficiency improvements made since 1973 is now 13 million.

If the information above is correct, which of the following conclusions can properly be drawn on the basis of it?

(A) It is more difficult to find new sources of oil than to institute new energy-conservation measures.

(B) Oil imports cannot be reduced unless energy consumption does not grow at all.

(C) A reduction in the consumption of gasoline was the reason overall energy consumption remained steady.

(D) It is possible for an economy to grow without consuming additional energy.

(E) The development of nontraditional energy sources will make it possible for the United States economy to grow even faster.

Argument Construction

Situation From 1973 to 1986, the United States economy grew over 33 percent while energy consumption did not grow. Energy improvements have made dramatic savings in annual oil consumption since 1973.

Reasoning *If the given information in the passage is true, which of the five statements provided must be true based on that information?* To find that statement, look for the one that has the closest relevance to the information given. Certainly, all five statements refer to topics at least loosely associated with the topics discussed in the given information. But four of them introduce extraneous information, while just one relies solely on the given information, simply making explicit something implicit in that information.

A Nothing in the given information even implicitly depends on contrasting the relative difficulty of finding new oil with the difficulty of instituting new energy-conservation measures.

B Nothing in the given information refers, even implicitly, to oil imports, so this statement does not follow logically from the given information.

C This is new information that, if true, would help explain why there was zero percent growth in energy consumption in the period under discussion. But this new information could easily be false even if the given information is true. For instance, gasoline consumption could have held steady but the consumption of petroleum diesel or heating oil could have been reduced significantly.

D **Correct.** This statement must be true if the given information is accurate. If something of a given kind has occurred, then it must be possible for that kind of thing to occur. The given information cites an example of an economy that had 33 percent economic growth along with zero percent growth in energy consumption.

E The given information may be entirely accurate even if this claim is false. Even if this claim is true, the given information does not address, even implicitly, the development of nontraditional sources.

The correct answer is D.

CR01661.01

137. Although many customers do not make a sufficient effort to conserve water, water companies must also be held responsible for wasteful consumption. Their own policies, in fact, encourage excessive water use, and attempts at conservation will succeed only if the water companies change their practices.

Which of the following, if true, would most strongly support the view above?

(A) Most water companies reduce the cost per unit of water as the amount of water used by a customer increases.

(B) Most water companies keep detailed records of the quantity of water used by different customers.

(C) Most water companies severely curtail the use of water during periods of drought.

(D) Federal authorities limit the range of policies that can be enforced by the water companies.

(E) The price per unit of water charged by the water companies has risen steadily in the last 10 years.

Argument Evaluation

Situation Water companies have policies that encourage excessive water use. Water conservation cannot succeed unless water companies change their practices.

Reasoning *Which of the five pieces of information given would indicate that water companies' policies and practices lead to wasteful water use?* If the companies have policies or practices that reduce customers' incentive to consume less water, then wasteful water consumption would be more likely to occur. Water companies would be contributing to wasteful water use and should be held accountable for that waste if water conservation is to succeed.

A **Correct.** Water companies' charging customers less per additional unit of water consumed is likely to reduce customers' incentive to avoid wasteful water use. So water companies bear some responsibility for wasteful water use.

B This shows that water companies have adequate data to indicate trends in customers' water consumption. But this does not, by itself, indicate that water companies incentivize wasteful consumption.

C This indicates that water companies likely curtail wasteful water use during droughts, which somewhat weakens the argument.

D This information is too nonspecific to allow us to judge whether the federal authorities' regulatory regime directly or indirectly contributes to wasteful water use.

E If anything, this information tends to weaken the argument. Over a 10-year period, because most economies experience inflation, increases in the price per unit of water would naturally occur, absent special countervailing factors. But if the increases were large, they would, if anything, tend to reduce wasteful water use.

The correct answer is A.

CR11661.01

138. Despite legislation designed to stem the accumulation of plastic waste, the plastics industry continued to grow rapidly last year, as can be seen from the fact that sales of the resin that is the raw material for manufacturing plastics grew by 10 percent to $28 billion.

In assessing the support provided by the evidence cited above for the statement that the plastics industry continued to grow, in addition to the information above it would be most useful to know

(A) whether the resin has other uses besides the manufacture of plastics
(B) the dollar amount of resin sales the year before last
(C) the plastics industry's attitude toward the legislation concerning plastic waste
(D) whether sales of all goods and services in the economy as a whole were increasing last year
(E) what proportion of the plastics industry's output eventually contributes to the accumulation of plastic waste

Argument Evaluation

Situation There is legislation meant to slow the accumulation of plastic waste. Last year, however, the plastics industry continued to grow rapidly. Sales of the resin that is the raw material for plastics grew in monetary terms by 10 percent.

Reasoning *What additional information should we seek in order to evaluate the evidence offered for the conclusion that the plastics industry continued to grow rapidly last year?* The evidence offered is that sales of resin from which plastics can be made increased 10 percent over the preceding year. For example, we could inquire whether the resin is used exclusively for plastics manufacture. If this were found NOT to be so, then the evidence presented would be of little use in showing that the plastics industry grew rapidly last year.

A **Correct.** Knowing whether this is so is crucial for judging the evidential value of last year's growth in sales of resin.

B This information is implicit in the given information and is therefore not additional information.

C The central issue is whether the information about last year's resin sales is good evidence of the plastics industry growth. The question as to whether that industry favors curtailment of plastics pollution has little if any relevance to that issue.

D If the answer to this *whether*-question is yes, there was presumably some inflation in the currency, so the increase in nominal monetary value of resin sales may or may not reflect very strong evidence of growth in the plastics industry. If the answer to the question is no, the increase in resin sales could be evidence of growth but is not necessarily so. In either case, we would need further information, so either answer to the question would not be useful for assessing the evidence.

E Knowing the answer to this could be important, but it is irrelevant in determining the evidential value of the information about growth in resin sales last year.

The correct answer is A.

CR41661.01

139. Studies of the political orientations of 1,055 college students revealed that the plurality of students in an eastern, big-city, private university was liberal, whereas in a state-supported, southern college, the plurality was conservative. Orientations were independent of the student's region of origin, and the trends were much more pronounced in seniors than in beginning students.

Which of the following hypotheses is best supported by the observations stated above?

(A) The political orientations of college students are more similar to the political orientations of their parents when the students start college than when the students are seniors.

(B) The political orientations of college seniors depend significantly on experiences they have had while in college.

(C) A college senior originally from the South is more likely to be politically conservative than is a college senior originally from the East.

(D) Whether their college is state-supported or private is the determining factor in college students' political orientations.

(E) College students tend to become more conservative politically as they become older and are confronted with pressures for financial success.

Argument Evaluation

Situation Studies of a total of 1,055 college students in an eastern big-city private university and in a state-supported southern college found that, in the sample, the political orientation of most students in the private college was liberal and that of most students in the southern college was conservative. Among the liberal students identified in the private college and among the conservative students identified in the state-supported college, significantly more were seniors than beginning students.

Reasoning *What would best explain the trends observed in the college students' political orientations?* Five hypotheses to explain the trends are offered, and we are asked to identify the hypothesis that is most supported by the information already given about the studies. It should be noted that the information given is very limited, whereas the hypotheses offered involve quite broad generalizations, so whatever support is provided by the given information for any of these will at best be quite weak from a statistician's perspective. We should look for the hypothesis that makes the least ambitious claim and draws most closely on the given information.

A The given information, without unjustified introduction of unstated assumptions, provides no insight into the political orientations of the students' parents.

B **Correct.** Among the five hypotheses offered, this makes the least ambitious claim. Although its scope extends to college seniors in general (and in a statistical sense goes far beyond the evidence provided in the given information), it is the best supported of the five because it deviates least from the information we have. It is a good inference that the students' political re-orientation occurred as a result of the "experiences they have had while in college"—even if some of the truly mind-changing experiences were obtained in activities unrelated to their college life (e.g., speaking with fellow workers in a part-time restaurant job).

C We are given no information about the students' places of origin. The passage states: "orientations were independent of the student's region of origin."

D The given information provides no information regarding which among a multiplicity of conceivable influences contributed most strongly to the students' political orientations.

E We are not told in the given information that the students were "confronted with pressures for financial success"—although it is a truism that they were becoming older in their progress toward graduation.

The correct answer is B.

CR90661.01

140. Donations of imported food will be distributed to children in famine-stricken countries in the form of free school meals. The process is efficient because the children are easy to reach at the schools and cooking facilities are often available on site.

Which of the following, if true, casts the most serious doubt on the efficiency of the proposed process?

(A) The emphasis on food will detract from the major function of the schools, which is to educate the children.

(B) A massive influx of donated food will tend to lower the price of food in the areas near the schools.

(C) Supplies of fuel needed for cooking at the schools arrive there only intermittently and in inadequate quantities.

(D) The reduction in farm surpluses in donor countries benefits the donor countries to a greater extent than the recipient countries are benefited by the donations.

(E) The donation of food tends to strengthen the standing of the political party that happens to be in power when the donation is made.

Evaluation of a Plan

Situation On grounds of efficiency, it has been proposed that food donated to famine-stricken countries be distributed free to children through the schools. Many of the country's children attend school. Many schools have cooking facilities. Distributing the food through the schools is thus an efficient way of providing nutrition, at least to the children.

Reasoning *What would most cast doubt on the efficiency of the proposed distribution method?* The rationale offered for the method is twofold. First, many of the country's children attend school. Secondly, many schools have cooking facilities. Any additional information that weakens the significance of either of these two parts of the rationale would cast doubt on the efficiency of the proposed distribution process.

A This information does not cast significant doubt on the rationale. Of course, providing nutrition might take some time that could otherwise be devoted to teaching and would in that sense perhaps "detract" from the schools' main mission. However, the focus of the given information is on the efficiency of food distribution through the schools, presumably as compared with other methods of distribution that would provide children with adequate nutrition. The trade-off involving some loss of teaching time may be rendered less significant by the fact that children lacking adequate nutrition cannot learn well.

B This effect, if it occurred, could damage local markets but could also in the short term make locally grown food more available to those who need it. However, the point at issue is whether the rationale for distributing donated food through the schools to improve children's nutrition sufficiently indicates that this distribution method is efficient for that purpose.

C **Correct.** This information indicates that one part of the rationale given for the efficiency of the distribution method should carry less weight. If the "cooking facilities" at the schools are often inoperable due to lack of fuel, then some of the food to be distributed (for example, staples such as corn, millet, rice, or sorghum) may not be consumable.

D This information fails to address the central issue, which is the relative efficiency of the proposed distribution method for donated food, to improve children's nutrition.

E This addresses a possible effect of any food donation and fails to focus on the central issue identified in the foregoing discussion.

The correct answer is C.

CR21661.01

141. *John:* You told me once that no United States citizen who supports union labor should buy an imported car. Yet you are buying an Alma. Since Alma is one of the biggest makers of imports, I infer that you no longer support unions.

Harry: I still support labor unions. Even though Alma is a foreign car company, the car I am buying, the Alma Deluxe, is designed, engineered, and manufactured in the United States.

Harry's method of defending his purchase of an Alma is to

(A) disown the principle he formerly held

(B) show that John's argument involves a false unstated assumption

(C) contradict John's conclusion without challenging John's reasoning in drawing that conclusion

(D) point out that one of the statements John makes in support of his argument is false

(E) claim that his is a special case in which the rule need not apply

Evaluation of a Plan

Situation Harry has bought a car manufactured by Alma, a company among the largest makers of cars imported to the United States. From that fact John infers that Harry no longer holds a principle he formerly professed: that nobody who supports U.S. union labor should buy an imported car. Harry responds by clarifying that the Alma Deluxe he is buying is entirely a U.S. product.

Reasoning *What method has Harry used to show that his purchasing an Alma is not inconsistent with his principles?* Harry does this by showing that John is incorrectly assuming that the car Harry is purchasing has been imported.

A Harry does not disown the principle he formerly held; rather, he tries to show that his purchase is consistent with it.

B **Correct.** John mistakenly assumes—without asserting—that the Alma that Harry is buying must be an imported car, and Harry indicates that this assumption is false.

C Harry challenges John's conclusion but he also challenges John's reasoning, by indicating that it relies on a false unstated assumption.

D John does not state the assumption that Harry indicates is false, but Harry recognizes that the assumption in question is unstated.

E Harry does not claim this; he claims, rather, that the new Alma he is purchasing is not imported and so his purchase does not violate his principle concerning union labor.

The correct answer is B.

CR31661.01

142. Public-sector (government-owned) companies are often unprofitable and a drain on the taxpayer. Such enterprises should be sold to the private sector, where competition will force them either to be efficient and profitable or else to close.

Which of the following, if true, identifies a flaw in the policy proposed above?

(A) The revenue gained from the sale of public-sector companies is likely to be negligible compared to the cost of maintaining them.

(B) By buying a public-sector company and then closing the company and selling its assets, a buyer can often make a profit.

(C) The services provided by many public-sector companies must be made available to citizens, even when a price that covers costs cannot be charged.

(D) Some unprofitable private-sector companies have become profitable after being taken over by the government to prevent their closing.

(E) The costs of environmental protection, contributions to social programs, and job-safety measures are the same in the public and private sectors.

Evaluation of a Plan

Situation A policy position is advocated, i.e., that unprofitable public-sector companies that burden taxpayers should be sold to the private sector. As private-sector companies, they would either become efficient and profitable or go out of business.

Reasoning *In what way is the policy position flawed?* The rationale given for the policy is that unprofitable public-sector companies burden taxpayers and privatizing them would subject them to competition—which would force them either to become efficient and profitable or to go out of business. But one of the characteristics of some public-sector companies is that they must provide certain services in market segments where provision of the services cannot become profitable. For example, provision of transportation services in sparsely populated rural areas is likely to be unprofitable because utilization of the services is insufficient to cover the cost of those services at a price that the market can bear.

A This information does not clearly indicate a flaw, since elimination of an exorbitant recurring cost by selling off, even at a very low price, an inefficient public company could be financially rational, even if not rational in other ways.

B This scenario could result in the non-provision of services that should be provided in the public interest, but it represents an aberration relative to the privatization policy described and does not indicate an essential flaw in that policy.

C **Correct.** This information indicates an essential flaw in the privatization policy described, since private companies are unlikely to provide services, even those needed by the public, in situations where provision of those services is unprofitable.

D This information indicates that some government-controlled companies can be profitable even when those companies were not profitable when in the private sector. But this does not indicate a flaw in the reasoning concerning privatization.

E This information offers no help in identifying a flaw in the argument. The types of costs listed are only some of the costs that companies incur and may not be the most significant cost factors in determining whether a company is profitable or not.

The correct answer is C.

CR91661.01

143. After receiving numerous complaints from residents about loud, highly amplified music played at local clubs, Middletown is considering a law that would prohibit clubs located in residential areas from employing musical groups that consist of more than three people.

The likelihood that the law would be effective in reducing noise would be most seriously diminished if which of the following were true?

(A) Groups that consist of more than three musicians are usually more expensive for clubs to hire than are groups that consist of fewer than three musicians.

(B) In towns that have passed similar laws, many clubs in residential areas have relocated to nonresidential areas.

(C) Most of the complaints about the music have come from people who do not regularly attend the clubs.

(D) Much of the music popular at the local clubs can be played only by groups of at least four musicians.

(E) Amplified music played by fewer than three musicians generally is as loud as amplified music played by more than three musicians.

Evaluation of a Plan

Situation Middletown is considering a law to eliminate a nuisance that residents have complained about: loud, highly amplified music at local clubs. The proposed law would address this by prohibiting the clubs to have groups of more than three musicians playing at the club.

Reasoning *Which statement, if true, would be the strongest indication that the proposed law would fail to reduce the noise that residents complained of?* The proposed limit on group size depends on the assumption that the music played by a group of three musicians or fewer would not be loud enough to bother Middletown's residents. If this assumption is false, for example if some of the smaller groups felt a need to use powerful amplification, the proposed law would be unlikely to be eliminate the nuisance by reducing the noise sufficiently.

A We are given no information about whether Middletown, in framing its proposal, gave any consideration to the costs the clubs incur in hiring groups of various sizes. If the clubs' costs but not their revenues were to decrease by hiring smaller groups, they would likely obey the new law. However, this by itself would not indicate success for the noise abatement program.

B If the Middletown clubs were to relocate to nonresidential areas as a result of the law, this would contribute to the law's effectiveness in alleviating the noise disturbance.

C The proposal for the law is motivated by Middletown's need to respond to "numerous" resident complaints. If relatively few complaints come from residents who regularly attend the clubs, it may be because most of those residents either like loud music or are insensitive to it. But this has no bearing on whether the proposed law would be effective in addressing the noise level that bothers numerous other residents.

D This could make the law less acceptable to the clubs or their patrons. If the law proved unacceptable, an unacceptable frequency of violation might result unless the law is well designed for effective enforcement. But perhaps the law will be well designed for effective enforcement. Nothing in the passage suggests otherwise.

E **Correct.** This indicates that the size of a musical group generally has little impact on the volume of sound that the group produces. The proposed law is therefore likely to be ineffective in reducing the noise residents complained about.

The correct answer is E.

CR02661.01

144. From enlargements that are commonly found on the ulna bones of the forearms of Ice Age human skeletons, anthropologists have drawn the conclusion that the Ice Age humans represented by those skeletons frequently hunted by throwing spears. The bone enlargements, the anthropologists believe, resulted from the stresses of habitual throwing.

Which of the following, if true, would be the LEAST appropriate to use as support for the conclusion drawn by the anthropologists?

(A) Humans typically favor one arm over the other when throwing, and most Ice Age human skeletons have enlargements on the ulna bone of only one arm.

(B) Such enlargements on the ulna bone do not appear on skeletons from other human cultures of the same time period whose diets are believed to have been mainly vegetarian.

(C) Cave paintings dating from approximately the same time period and located not far from where the skeletons were found show hunters carrying and throwing spears.

(D) Damaged bones in the skeletons show evidence of diseases that are believed to have afflicted most people living during the Ice Age.

(E) Twentieth-century athletes who use a throwing motion similar to that of a hunter throwing a spear often develop enlargements on the ulna bone similar to those detected on the Ice Age skeletons.

Evaluation of a Plan

Situation The ulna-bone enlargements often found on forearms of skeletons of Ice Age humans have led anthropologists to conclude that those humans frequently hunted by throwing spears and that this practice caused the bone enlargement.

Reasoning *Which of the additional pieces of information offered provide the weakest (if any) support for the anthropologists' conclusion?* A premise of the anthropologists' reasoning is that many Ice Age humans developed enlarged ulna bones. Another premise is that the bone enlargements resulted from the stresses of habitual [spear] throwing. The anthropologists' conclusion is that those Ice Age humans frequently hunted by throwing spears. Several of the five additional pieces of information provide additional support for the anthropologists' conclusion.

A The information, if true, that the bone enlargement found on Ice Age skeletons is typically found on just one arm provides significant additional support for the argument's conclusion. Ice Age spear-throwing hunters would likely have been left-handed or right-handed and would have habitually used just one of their arms—either left or right—to throw spears.

B This information, if true, provides significant additional support for the anthropologists' conclusion. Ice Age humans with mainly vegetarian diets would have hunted, if at all, only infrequently—and so would not have been habitual spear-throwing hunters. We would expect, then, that if the anthropologists' conclusion is correct, enlarged ulna bones would not be found among the remains of such populations—and that is what the archaeological evidence indicates.

C This information, if true, provides compelling evidence that some Ice Age human populations hunted using spears, and so it provides significant additional support for the anthropologists' conclusion.

D **Correct.** This information, if true, tends to weaken the support for the anthropologists' conclusion. It vaguely suggests that diseases that were endemic in the Ice Age and caused bone damage might adequately explain the enlargement of ulna bones found in the archaeological evidence. If this were correct, then that bone enlargement could no longer be regarded as compelling evidence of spear-throwing.

E This information, if true, provides additional support for the anthropologists' conclusion. Twentieth-century athletes (perhaps javelin throwers, for example) use a throwing motion like that of spear throwers, and they often develop enlarged ulna bones like those found in the archaeological evidence.

The correct answer is D.

CR12661.01

145. The town council of North Tarrytown favored changing the name of the town to Sleepy Hollow. Council members argued that making the town's association with Washington Irving and his famous "legend" more obvious would increase tourism and result immediately in financial benefits for the town's inhabitants.

The council members' argument requires the assumption that

(A) most of the inhabitants would favor a change in the name of the town

(B) many inhabitants would be ready to supply tourists with information about Washington Irving and his "legend"

(C) the town can accomplish, at a very low cost per capita, the improvements in tourist facilities that an increase in tourism would require

(D) other towns in the region have changed their names to reflect historical associations and have, as a result, experienced a rise in tourism

(E) the immediate per capita cost to inhabitants of changing the name of the town would be less than the immediate per capita revenue they would receive from the change

Evaluation of a Plan

Situation Members of the North Tarrytown town council argued for changing the town's name to Sleepy Hollow (the name of a fictitious place in stories by early nineteenth-century author Washington Irving). The goal was to increase tourism.

Reasoning *What unstated assumption is required for the council members' argument to be logically compelling?* Their argument was that people who associate the name Sleepy Hollow with the author Washington Irving would come to visit the town because of that association. The resulting influx of tourists would provide additional spending that would "immediately" result in financial benefits for the town's inhabitants. There would not be such immediate benefits if the additional spending did not outweigh the costs of the name change.

A This information about the popular acceptability of the name-change strategy could provide additional logical support for the proposal, but the information is not strictly required for the council members' reasoning to logically succeed.

B If this occurred, it could benefit tourists and help enhance the town's reputation as a tourist venue, thus helping the name-change plan attain its goals. But an assumption that this would occur is not necessary for the logical success of the council members' reasoning.

C This could make it more likely that the proposed name-change strategy would attain its financial goals. But the council members' reasoning does not have to assume that the relevant costs would be "very low."

D This information, if true, would help dispel any doubts as to whether the proposed name change would attain its goals. But it is not information that is necessary for the council members' reasoning to logically succeed.

E **Correct.** To be logically successful, the council members' reasoning requires that this be assumed. Part of the council members' reasoning is that the proposed name change would "result immediately in financial benefits for the town's inhabitants." This result will not occur unless the immediate costs associated with implementing the change are less than the revenue accruing to the town's inhabitants as a result. In the medium and long term, the name change could provide increased financial benefits to the town's inhabitants, but the council members' reasoning requires that those benefits flow immediately.

The correct answer is E.

CR06795

146. Premature babies who receive regular massages are more active than premature babies who do not. Even when all the babies drink the same amount of milk, the massaged babies gain more weight than do the unmassaged babies. This is puzzling because a more active person generally requires a greater food intake to maintain or gain weight.

Which of the following, if true, best reconciles the apparent discrepancy described above?

(A) Increased activity leads to increased levels of hunger, especially when food intake is not also increased.

(B) Massage increases premature babies' curiosity about their environment, and curiosity leads to increased activity.

(C) Increased activity causes the intestines of premature babies to mature more quickly, enabling the babies to digest and absorb more of the nutrients in the milk they drink.

(D) Massage does not increase the growth rate of babies over one year old, if the babies had not been previously massaged.

(E) Premature babies require a daily intake of nutrients that is significantly higher than that required by babies who were not born prematurely.

Argument Construction

Situation Premature babies who receive regular massages are more active and gain more weight than unmassaged premature babies do, even when they drink the same amount of milk.

Reasoning *What would help to explain how the massaged babies could be more active than the unmassaged babies and yet still gain more weight without consuming more milk?* If the massaged babies are burning more calories than unmassaged babies through their extra activity, but are not consuming more calories in the form of milk, then how are they gaining more weight than the unmassaged babies? Possible explanations could cite factors suggesting how the massaged babies might not actually burn more calories despite their greater activity; how they might consume or absorb more calories even without consuming more milk; or how they might gain more weight without extra calorie intake.

A Increased hunger without increased food intake would not help to explain why the massaged babies are gaining more weight.

B This only helps to explain why the massaged babies are more active, not why they are gaining more weight without consuming more milk.

C **Correct.** This suggests that the increased activity of the massaged babies could increase their calorie and nutrient intake from a given amount of milk, thereby explaining how they could gain extra weight without drinking more milk.

D This suggests that the apparent discrepancy is only present in premature babies under one year old, but it does not explain why that discrepancy exists.

E The passage does not compare premature babies to babies that were not born prematurely, but rather only compares premature babies that are massaged to premature babies that are not massaged.

The correct answer is C.

CR02865

147. In Australia, in years with below-average rainfall, less water goes into rivers and more water is extracted from rivers for drinking and irrigation. Consequently, in such years, water levels drop considerably and the rivers flow more slowly. Because algae grow better the more slowly the water in which they are growing moves, such years are generally beneficial to populations of algae. But, by contrast, populations of algae drop in periods of extreme drought.

Which of the following, if true, does most to explain the contrast?

(A) Algae grow better in ponds and lakes than in rivers.

(B) The more slowly water moves, the more conducive its temperature is to the growth of algae.

(C) Algae cannot survive in the absence of water.

(D) Algae must be filtered out of water before it can be used for drinking.

(E) The larger the population of algae in a body of water, the less sunlight reaches below the surface of the water.

Argument Construction

Situation The quantity of water in Australian rivers greatly diminishes in years of below-average rainfall. When river levels become very low, the rivers flow more slowly. The low flow favors rapid algae growth. However, in periods of extreme drought, algae populations drop.

Reasoning *What information would most help to explain the two contrasting trends in algae growth?* The information given indicates that algae proliferate when rivers flow slowly. When the water levels become extremely low, algae populations decrease. In periods of extreme drought, presumably some rivers retain little or no water.

A This has no obvious relevance to explaining the contrast in the algae growth trends.

B Nothing in the given information is explicit about the effects of water temperature and how that changes in rivers with changes in rainfall rates.

C **Correct.** This information could help explain the decrease in algae populations during periods of extreme drought. It seems quite probable that during such periods, at least parts of some riverbeds would dry out.

D This information does not help explain the contrasting trends in algae growth. Algae filtered out of river water to be used for drinking might not be returned to rivers, and this conceivably could affect algae populations. But it seems likely, based on the given information, that this would occur mainly during low-rainfall non-drought periods, when proliferation of algae has increased, so the impact on algae populations would probably be minimal.

E This information is clearly irrelevant to the contrast that needs to be explained.

The correct answer is C.

CR00693

148. Which of the following, if true, most logically completes the politician's argument?

United States politician: Although the amount of United States goods shipped to Mexico doubled in the year after tariffs on trade between the two countries were reduced, it does not follow that the reduction in tariffs caused the sales of United States goods to companies and consumers in Mexico to double that year, because _____.

(A) many of the United States companies that produced goods that year had competitors based in Mexico that had long produced the same kind of goods

(B) most of the increase in goods shipped by United States companies to Mexico was in parts shipped to the companies' newly relocated subsidiaries for assembly and subsequent shipment back to the United States

(C) marketing goods to a previously unavailable group of consumers is most successful when advertising specifically targets those consumers, but developing such advertising often takes longer than a year

(D) the amount of Mexican goods shipped to the United States remained the same as it had been before the tariff reductions

(E) there was no significant change in the employment rate in either of the countries that year

Argument Construction

Situation The politician suggests that tariffs on trade between Mexico and the United States were reduced during a certain year and notes that, in the year after that year, the amount of United States goods shipped to Mexico doubled. It may seem from this that the decrease in tariffs, because they may have reduced the prices of United States goods to Mexican companies and consumers, caused Mexican companies and consumers to double their purchases of United States goods in the year after the reduction in tariffs. This might explain the doubling of shipments of goods to Mexico. However, the politician argues that the decrease in tariffs did *not* cause the purchase of United States goods by Mexican companies and consumers to double.

Reasoning *What possible facts would indicate that the decrease in tariffs may not have caused Mexican companies and consumers to double their purchases of United States goods?* The task in this question is to complete an argument that purports to show that a certain inference—that sales of United States goods to companies and consumers in Mexico increased as a result of the tariff decrease—does not follow logically from the fact that shipments of United States goods to Mexico doubled after the decrease in tariffs. Although it is not necessary to show that sales of United States goods to companies and consumers in Mexico did not double, any statement that would significantly decrease the strength of this inference may provide a reasonable answer to our question.

A The argument that the politician is criticizing concerns a change in a certain year that purportedly caused another purported change in the next year. This option, about longstanding relationships between United States and Mexican companies, does not address these changes.

B **Correct.** If the statement in this option is true, then we cannot, on the basis of an increase in shipments of goods to Mexico, infer that these goods were purchased by Mexican companies and consumers. The statement thus directly supports the politician's argument.

C The argument that the politician is criticizing has to do with purported changes in purchasing behavior by Mexican companies and consumers, due to an increase in tariffs. This option, being entirely concerned with the effectiveness of marketing and advertising, does not address the argument.

D Although this option may suggest that the change in tariffs did not cause a significant change in shipments of Mexican goods to the United States, it does not address the matter of shipments of United States goods to Mexico.

E This option addresses an aspect that would be of interest when examining the effects of the change in tariffs. But it does not address the purported change that is addressed by the politician's argument.

The correct answer is B.

CR06845

149. Budget constraints have made police officials consider reassigning a considerable number of officers from traffic enforcement to work on higher-priority, serious crimes. Reducing traffic enforcement for this reason would be counterproductive, however, in light of the tendency of criminals to use cars when engaged in the commission of serious crimes. An officer stopping a car for a traffic violation can make a search that turns up evidence of serious crime.

Which of the following, if true, most strengthens the argument given?

(A) An officer who stops a car containing evidence of the commission of a serious crime risks a violent confrontation, even if the vehicle was stopped only for a traffic violation.

(B) When the public becomes aware that traffic enforcement has lessened, it typically becomes lax in obeying traffic rules.

(C) Those willing to break the law to commit serious crimes are often in committing such crimes unwilling to observe what they regard as the lesser constraints of traffic law.

(D) The offenders committing serious crimes who would be caught because of traffic violations are not the same group of individuals as those who would be caught if the arresting officers were reassigned from traffic enforcement.

(E) The great majority of persons who are stopped by officers for traffic violations are not guilty of any serious crimes.

Argument Construction

Situation Budget constraints have made police officials consider reassigning many officers from traffic enforcement to work on serious crimes. But criminals often drive when committing serious crimes, and police who stop cars for traffic violations can find evidence of those crimes.

Reasoning *What additional information, when combined with the argument provided, would suggest that it would be counterproductive to reassign officers from traffic enforcement to work on serious crimes?* The argument implicitly reasons that because officers working on traffic enforcement can turn up evidence of serious crimes by searching cars that commit traffic violations, reassigning those officers would hinder police efforts to prevent serious crime, even if the officers were reassigned to work directly on serious crime. The argument could be strengthened by information suggesting that traffic enforcement may increase the probability that evidence relating to serious crimes will be discovered.

A If anything, this risk of violence might discourage traffic enforcement officers from stopping and searching as many cars, thus reducing their effectiveness at preventing serious crimes.

B This suggests that reassigning officers from traffic enforcement to work on serious crimes would increase the number of unpunished minor traffic violations, not the number of unpunished serious crimes.

C **Correct.** This suggests that people committing serious crimes often commit traffic violations as well, increasing the likelihood that traffic enforcement officers will stop and search their cars and find evidence of those crimes.

D The question at issue is not whether the same offenders would be caught if the officers were reassigned, but rather whether more or fewer offenders would be caught.

E This weakens the argument by suggesting that most work by traffic enforcement officers is unrelated to preventing serious crimes.

The correct answer is C.

CR10106

150. Conventional wisdom suggests vaccinating elderly people first in flu season, because they are at greatest risk of dying if they contract the virus. This year's flu virus poses particular risk to elderly people and almost none at all to younger people, particularly children. Nevertheless, health professionals are recommending vaccinating children first against the virus rather than elderly people.

Which of the following, if true, provides the strongest reason for the health professionals' recommendation?

(A) Children are vulnerable to dangerous infections when their immune systems are severely weakened by other diseases.

(B) Children are particularly unconcerned with hygiene and therefore are the group most responsible for spreading the flu virus to others.

(C) The vaccinations received last year will confer no immunity to this year's flu virus.

(D) Children who catch one strain of the flu virus and then recover are likely to develop immunity to at least some strains with which they have not yet come in contact.

(E) Children are no more likely than adults to have immunity to a particular flu virus if they have never lived through a previous epidemic of the same virus.

Argument Construction

Situation Although this year's flu virus poses particular risk to elderly people and almost no risk to children, health professionals are recommending vaccinating children before elderly people, contrary to what conventional wisdom recommends.

Reasoning *What would help justify the health professionals' recommendation?* Since children will experience almost no risk from the virus, vaccinating them first for their own sake appears unnecessary. However, individuals at no personal risk from a virus can still transmit it to more-vulnerable individuals. If children are especially likely to transmit the virus, it could be reasonable to vaccinate them first in order to protect others, including elderly people, by preventing the virus from spreading.

A This might be a reason to vaccinate certain children with severely weakened immune systems, if their weak immune systems would even respond effectively to the vaccine. However, it is not clearly a reason to vaccinate the vast majority of children.

B **Correct.** This suggests that children are especially likely to transmit the virus even if it does not endanger them. So as explained above, it provides a good reason for the health professionals' recommendation.

C This might be a good reason to vaccinate everyone, but it is not clearly a reason to vaccinate children before vaccinating elderly people.

D If anything, this would suggest that there might be a reason not to vaccinate children against this year's strain at all: unvaccinated children who catch this year's strain, which the argument claims is relatively harmless to children, may develop immunity to more dangerous strains that might arise in the future.

E The argument claims that this year's virus poses almost no risk to children. So even if they are not technically immune to it, it does not affect them significantly enough to justify vaccinating them before vaccinating elderly people.

The correct answer is B.

CR01392

151. Pro-Tect Insurance Company has recently been paying out more on car-theft claims than it expected. Cars with special antitheft devices or alarm systems are much less likely to be stolen than are other cars. Consequently Pro-Tect, as part of an effort to reduce its annual payouts, will offer a discount to holders of car-theft policies if their cars have antitheft devices or alarm systems.

Which of the following, if true, provides the strongest indication that the plan is likely to achieve its goal?

(A) The decrease in the risk of car theft conferred by having a car alarm is greatest when only a few cars have such alarms.

(B) The number of policyholders who have filed a claim in the past year is higher for Pro-Tect than for other insurance companies.

(C) In one or two years, the discount that Pro-Tect is offering will amount to more than the cost of buying certain highly effective antitheft devices.

(D) Currently, Pro-Tect cannot legally raise the premiums it charges for a given amount of insurance against car theft.

(E) The amount Pro-Tect has been paying out on car-theft claims has been greater for some models of car than for others.

Evaluation of a Plan

Situation An insurance company is paying more money on car-theft claims than anticipated. To reduce these payments, the company is planning to offer discounts to customers whose cars have antitheft devices or alarm systems, because such cars are less likely to be stolen.

Reasoning *What piece of information would indicate that the plan is likely to succeed?* Pro-Tect wishes to reduce its annual payouts, and one way for that to happen is for fewer cars insured by Pro-Tect to be stolen. To help accomplish this, Pro-Tect is offering discounts to policyholders whose cars are so equipped, because cars equipped with antitheft devices or alarm systems are less likely to be stolen than are cars without such devices. What would interfere with the success of Pro-Tect's plan? Car owners would probably resist investing in antitheft devices or alarm systems if the cost of such systems is higher than the discount they will receive. So if Pro-Tect sets the discount at a level that makes installing antitheft devices seem like a bargain to car owners, the plan will most likely succeed.

A Pro-Tect's plan is designed to increase the number of cars equipped with car alarms. If having more cars equipped with car alarms reduces those alarms' effectivity in preventing thefts, then Pro-Tect's plan is unlikely to achieve its goal.

B Pro-Tect's claims in relation to those of other insurance companies are not relevant to whether Pro-Tect's plan to reduce its own car-theft claims will achieve its goal.

C **Correct.** This statement suggests that Pro-Tect's plan will provide an effective incentive for car owners to install antitheft devices; this statement therefore properly identifies information that indicates the plan is likely to achieve its goal.

D Because Pro-Tect's plan does not involve raising the premiums it charges, restrictions on its ability to do so are irrelevant to whether that plan will achieve its goal.

E Pro-Tect's plan does not distinguish among different models of car, so this statement indicates nothing about whether the proposed plan will succeed.

The correct answer is C.

CR00783

152. While the total enrollment of public elementary and secondary schools in Sondland is one percent higher this academic year than last academic year, the number of teachers there increased by three percent. Thus, the Sondland Education Commission's prediction of a teacher shortage as early as next academic year is unfounded.

Which of the following, if true, most seriously weakens the claim that the prediction of a teacher shortage as early as next academic year is unfounded?

(A) Funding for public elementary schools in Sondland is expected to increase over the next ten years.

(B) Average salaries for Sondland's teachers increased at the rate of inflation from last academic year to this academic year.

(C) A new law has mandated that there be 10 percent more teachers per pupil in Sondland's public schools next academic year than there were this academic year.

(D) In the past, increases in enrollments in public elementary and secondary schools in Sondland have generally been smaller than increases in the number of teachers.

(E) Because of reductions in funding, the number of students enrolling in teacher-training programs in Sondland is expected to decline beginning in the next academic year.

Argument Evaluation

Situation In Sondland's public schools this academic year, the number of students is one percent higher and the number of teachers three percent higher than they were last academic year. For this reason, the Sondland Education Commission's prediction of a teacher shortage as early as next academic year is questionable.

Reasoning *What evidence would most weaken support for the claim that there will be no teacher shortage next academic year?* A teacher shortage will arise next academic year if the number of teachers needed will exceed the number of teachers employed. This will happen if the number of teachers needed increases without a sufficient increase in the number employed, or if the number employed decreases without a sufficient decrease in the number needed. Evidence that either or both of these changes will occur next academic year is evidence that the predicted shortage will occur, so any such evidence will weaken support for the claim that the prediction is unfounded.

A Increased funding will likely allow more teachers to be hired but will not necessarily increase the need for teachers, so it does not support the prediction of a teacher shortage (and indeed it very slightly undermines the prediction). Also, the funding is expected to increase over ten years, not necessarily next year. Furthermore, we are not told who expects this increase or why. Their expectation may be unjustifiable.

B A salary increase at the rate of inflation is equivalent to no change in the salary's actual value. The absence of a change in real salary in the past academic year does not by itself support any prediction of a change in the number of teachers needed or employed next academic year.

C **Correct.** The schools will need a lot more teachers next academic year to satisfy this mandate. It may be difficult for the schools to hire enough teachers in time. This provides at least some reason to predict that a teacher shortage will result.

D This means the number of students per teacher has been generally declining. It does not suggest that next academic year the number of teachers needed will increase, nor that the number employed will decrease.

E This does support the prediction that a shortage of trained teachers will arise eventually. But the declining number of students in teacher-training programs next academic year probably will not reduce the number of teachers available to teach during that same year.

The correct answer is C.

CR05590

153. Art restorers who have been studying the factors that cause Renaissance oil paintings to deteriorate physically when subject to climatic changes have found that the oil paint used in these paintings actually adjusts to these changes well. The restorers therefore hypothesize that it is a layer of material called gesso, which is under the paint, that causes the deterioration.

Which of the following, if true, most strongly supports the restorers' hypothesis?

(A) Renaissance oil paintings with a thin layer of gesso are less likely to show deterioration in response to climatic changes than those with a thicker layer.

(B) Renaissance oil paintings are often painted on wooden panels, which swell when humidity increases and contract when it declines.

(C) Oil paint expands and contracts readily in response to changes in temperature, but it absorbs little water and so is little affected by changes in humidity.

(D) An especially hard and nonabsorbent type of gesso was the raw material for moldings on the frames of Renaissance oil paintings.

(E) Gesso layers applied by Renaissance painters typically consisted of a coarse base layer onto which several increasingly fine-grained layers were applied.

Argument Evaluation

Situation Renaissance paintings are subject to deterioration due to changes in climate, but their actual paint is not a factor in this deterioration. Instead, restorers hypothesize, it is gesso, the material under the paint, that causes problems for the paintings.

Reasoning *What would most strongly support the hypothesis that gesso is causing the deterioration?* An indication that gesso is affected by climatic changes would be most helpful in supporting the hypothesis. What could show that gesso is affected in this way? If the extent of a painting's deterioration is directly related to the amount of gesso used under that painting, then the gesso clearly plays some part in that deterioration.

A **Correct.** This statement properly identifies a point supporting the hypothesis.

B This suggests that another factor—the wood of the panels—has a role in the paintings' deterioration. Thus it weakens the hypothesis that gesso causes the deterioration.

C This merely reinforces given information, that the paint itself is not responsible for the paintings' deterioration.

D Because this gives no information about any connection between this especially hard and nonabsorbent type of gesso and the type of gesso used under the paint in Renaissance paintings, the properties and usage of the former type of gesso are irrelevant to the question of whether gesso is responsible for the paintings' deterioration.

E Because we are told nothing about whether this technique of gesso application increases or decreases the likelihood that gesso will be affected by climatic change, it does not support the restorers' hypothesis.

The correct answer is A.

CR10731

154. A newly discovered painting seems to be the work of one of two 17th-century artists, either the northern German Johannes Drechen or the Frenchman Louis Birelle, who sometimes painted in the same style as Drechen. Analysis of the carved picture frame, which has been identified as the painting's original 17th-century frame, showed that it is made of wood found widely in northern Germany at the time, but rare in the part of France where Birelle lived. This shows that the painting is most likely the work of Drechen.

Which of the following is an assumption that the argument requires?

(A) The frame was made from wood local to the region where the picture was painted.

(B) Drechen is unlikely to have ever visited the home region of Birelle in France.

(C) Sometimes a painting so closely resembles others of its era that no expert is able to confidently decide who painted it.

(D) The painter of the picture chose the frame for the picture.

(E) The carving style of the picture frame is not typical of any specific region of Europe.

Argument Construction

Situation A 17th-century painting has been discovered that was either by Johannes Drechen from northern Germany or by French artist Louis Birelle. The painting's original picture frame is made of wood widely found in 17th-century northern Germany but rare in the French region where Birelle lived. So the painting was probably the work of Drechen.

Reasoning *Which of the five statements is an assumption required by the argument?* If the painting is correctly attributed to Drechen, then the wood that the frame was made from probably came from the region where Drechen lived and did his painting. The argument assumes that the specific wood used in the frame came from northern Germany rather than from some other place where that wood might have been found, and where (for all we know) Birelle might have visited.

A **Correct.** Without an assumption equivalent to this, the argument would fail.

B This is not a required assumption (unlike, for example, the following: Drechen did not give the picture frame to Birelle as a gift).

C This is a truism but is not required to make the argument's conclusion well supported.

D This does not need to be assumed; Drechen could, for example, have simply asked a local frame-maker to make a frame for his picture.

E Neither the affirmation nor the denial of this statement is needed to underpin the argument.

The correct answer is A.

CR09120

155. Archaeologists working in the Andes Mountains recently excavated a buried 4,000-year-old temple containing structures that align with a stone carving on a distant hill to indicate the direction of the rising sun at the summer solstice. Alignments in the temple were also found to point toward the position, at the summer solstice, of a constellation known in Andean culture as the Fox. Since the local mythology represents the fox as teaching people how to cultivate and irrigate plants, the ancient Andeans may have built the temple as a religious representation of the fox.

Which of the following is an assumption on which the argument is based?

(A) The constellation known as the Fox has the same position at the summer solstice as it did 4,000 years ago.

(B) In the region around the temple, the summer solstice marks the time for planting.

(C) The temple was protected from looters by dirt and debris built up over thousands of years.

(D) Other structural alignments at the temple point to further constellations with agricultural significance.

(E) The site containing the temple was occupied for a significant amount of time before abandonment.

Argument Construction

Situation A recently excavated 4,000-year-old temple contains structures that point toward the positions at the summer solstice of both the rising sun and a constellation known in local culture as the Fox. Local mythology represents the fox as teaching people how to cultivate and irrigate plants.

Reasoning *What must be true in order for the argument's premises to suggest that the temple was built to religiously represent the fox?* The argument's premises are all observations about current conditions: the current alignment at the summer solstice of the temple relative to the sunrise and to the constellation known as the Fox, the current local name for a constellation, and current local mythology. To support the conclusion about the temple's original purpose, the argument has to assume that all these conditions may still be essentially the same as they were 4,000 years ago when the temple was built.

A **Correct.** If the constellation's position at the summer solstice relative to the temple is different from what it was 4,000 years ago, the temple must not have been aligned to point toward it when it was built. In that case, the argument's justification for associating the temple with that constellation and with the fox is undermined.

B This does not have to be assumed for the argument to succeed, though if true, it might strengthen the argument by providing additional evidence associating the temple with the mythological fox as a teacher of agriculture. But the argument could be just as strong if the solstice were instead associated with agricultural activities other than planting.

C Even if the temple was not protected from looters, the conditions described in the argument's premises may still be the same as they were 4,000 years ago.

D This is not assumed. Additional structural alignments pointing to different constellations associated with mythological beings other than the fox might weaken or even undermine the argument's justification for associating the temple with the fox specifically.

E The argument makes no assumption regarding how long the temple was occupied, or even regarding whether the temple was ever occupied.

The correct answer is A.

CR05065

156. Meat from chickens contaminated with salmonella bacteria can cause serious food poisoning. Capsaicin, the chemical that gives chili peppers their hot flavor, has antibacterial properties. Chickens do not have taste receptors for capsaicin and will readily eat feed laced with capsaicin. When chickens were fed such feed and then exposed to salmonella bacteria, relatively few of them became contaminated with salmonella.

In deciding whether the feed would be useful in raising salmonella-free chicken for retail sale, it would be most helpful to determine which of the following?

(A) Whether feeding capsaicin to chickens affects the taste of their meat
(B) Whether eating capsaicin reduces the risk of salmonella poisoning for humans
(C) Whether chicken is more prone to salmonella contamination than other kinds of meat
(D) Whether appropriate cooking of chicken contaminated with salmonella can always prevent food poisoning
(E) Whether capsaicin can be obtained only from chili peppers

Argument Evaluation

Situation Chickens will readily eat feed laced with capsaicin, which appears to protect them from contamination with salmonella bacteria that can cause food poisoning.

Reasoning *What information would help determine whether using the feed would be an effective strategy for raising salmonella-free chicken for retail sale?* In order for the strategy to be effective, it must be economically feasible for farmers to raise chickens using the feed, and there must be enough consumer demand for chickens raised this way. So any information about factors likely to affect either the economic feasibility of raising the chickens or consumer demand for them could be helpful in determining how useful the feed would be.

A **Correct.** If chicken producers tried to market meat from capsaicin-fed chickens without knowing whether the taste is affected, they would risk alienating consumers. Of course, if they found that the taste is affected, they would then need to do further investigations to determine how consumers would likely respond to the difference. If consumers did not like the taste, this could negatively affect demand for the chickens. In that case, using the feed would not be an effective way to raise chickens for retail sale.

B There are two ways this might be considered relevant. First, it might be thought that because capsaicin reduces the risk of salmonella poisoning in humans, it will also do so in chickens; but we already have good evidence of that in the argument. Second, it might be thought that, if the capsaicin does not produce chickens that are totally salmonella free, then if any capsaicin remains in the chickens, it will help prevent any humans who consume the chicken from getting salmonella poisoning. But the relevant issue is whether the capsaicin will make the chickens salmonella free, not whether humans will be protected whether the chickens are salmonella free or not.

C The susceptibility of other types of meat to salmonella contamination would not affect the usefulness of the feed for preventing such contamination in chicken.

D Presumably many people do not cook contaminated chicken appropriately, so consumers could still benefit from salmonella-free chicken whether or not appropriate cooking methods could prevent food poisoning.

E Regardless of whether capsaicin can be obtained from other sources, chili peppers may be a perfectly viable source.

The correct answer is A.

CR04532

157. Which of the following most logically completes the argument below?

When mercury-vapor streetlights are used in areas inhabited by insect-eating bats, the bats feed almost exclusively around the lights, because the lights attract flying insects. In Greenville, the mercury-vapor streetlights are about to be replaced with energy-saving sodium streetlights, which do not attract insects. This change is likely to result in a drop in the population of insect-eating bats in Greenville, since _____.

(A) the bats do not begin to hunt until after sundown

(B) the bats are unlikely to feed on insects that do not fly

(C) the highway department will be able to replace mercury-vapor streetlights with sodium streetlights within a relatively short time and without disrupting the continuity of lighting at the locations of the streetlights

(D) in the absence of local concentrations of the flying insects on which bats feed, the bats expend much more energy on hunting for food, requiring much larger quantities of insects to sustain each bat

(E) bats use echolocation to catch insects and therefore gain no advantage from the fact that insects flying in the vicinity of streetlights are visible at night

Argument Construction

Situation In areas with mercury-vapor streetlights, any insect-eating bats feed almost exclusively around the lights, which attract flying insects. In Greenville, mercury-vapor streetlights will soon be replaced with sodium streetlights that do not attract insects.

Reasoning *What evidence would suggest that the change in streetlights will reduce Greenville's population of insect-eating bats?* Since the sodium streetlights will not attract flying insects, the bats will probably stop focusing their feeding around Greenville's streetlights after the lights are changed. A statement providing evidence that this will make it harder for the bats to get enough food to sustain themselves would support the conclusion that the change is likely to reduce Greenville's bat population and thus would logically complete the argument.

A Insect-eating bats existed long before streetlights did, so they can probably find insects away from streetlights even if they hunt only after sundown.

B Greenville will almost certainly still have flying insects for the bats to eat after the change, even if those insects no longer gather around the streetlights.

C If anything, such a smooth transition would be less likely to disturb the bats and therefore less likely to reduce their population.

D **Correct.** Since there will be no local concentrations of flying insects around Greenville streetlights after the change, the bats will most likely have more trouble getting enough to eat, and that their local population will therefore fall.

E The advantage that the bats gain from mercury-vapor streetlights comes from the high concentration of insects. The fact that the bats get no additional advantage from the insects' visibility tells us nothing about what affect the change to a different type of light might have.

The correct answer is D.

CR01353

158. Rats injected with morphine exhibit decreased activity of the immune system, the bodily system that fights off infections. These same rats exhibited heightened blood levels of corticosteroids, chemicals secreted by the adrenal glands. Since corticosteroids can interfere with immune-system activity, scientists hypothesized that the way morphine reduces immune responses in rats is by stimulating the adrenal glands to secrete additional corticosteroids into the bloodstream.

Which of the following experiments would yield the most useful results for evaluating the scientists' hypothesis?

(A) Injecting morphine into rats that already have heightened blood levels of corticosteroids and then observing their new blood levels of corticosteroids

(B) Testing the level of immune-system activity of rats, removing their adrenal glands, and then testing the rats' immune-system activity levels again

(C) Injecting rats with corticosteroids and then observing how many of the rats contracted infections

(D) Removing the adrenal glands of rats, injecting the rats with morphine, and then testing the level of the rats' immune-system responses

(E) Injecting rats with a drug that stimulates immune-system activity and then observing the level of corticosteroids in their bloodstreams

Argument Evaluation

Situation Rats injected with morphine exhibit decreased immune-system activity and increased levels of corticosteroids, which are secreted by the adrenal glands and can interfere with immune-system activity.

Reasoning *What further experiment would help determine whether morphine reduces immune responses in rats by stimulating the adrenal glands to release more corticosteroids?* Contrary to the scientists' hypothesis, the experimental results might have occurred because the morphine injections directly reduced immune-system activity. Or the injections might have blocked some mechanism that reduces corticosteroid levels in the blood, even if the morphine did not stimulate the adrenal glands to produce more corticosteroids. To evaluate whether the scientists' hypothesis is more plausible than these rival hypotheses, it would be helpful to know whether similar experimental results would occur after morphine injections even if adrenal gland activity did not change.

A Morphine could stimulate the adrenal glands of rats with normal corticosteroid levels to produce more corticosteroids, whether or not it does so in rats whose corticosteroid levels are already heightened.

B Such an experiment would not involve morphine and thus would not help to determine how morphine affects immune-system activity in rats.

C Whether or not rats contract infections may not reliably indicate their levels of immune-system activity.

D **Correct.** If the immune system responses decreased after the morphine injections in this experiment, the hypothesis that it was by stimulation of the adrenal glands that morphine reduced immune-system activity would be undermined. But if no decrease in immune-system responses occurred, the hypothesis would be confirmed.

E Even if the mechanism by which a drug other than morphine increases immune-system activity were discovered, this discovery would not necessarily reveal the mechanism by which morphine reduces immune-system activity.

The correct answer is D.

CR06831

159. Curator: If our museum lends *Venus* to the Hart Institute for their show this spring, they will lend us their Rembrandt etchings for our print exhibition next fall. Having those etchings will increase attendance to the exhibition and hence increase revenue from our general admission fee.

Museum Administrator: But *Venus* is our biggest attraction. Moreover the Hart's show will run for twice as long as our exhibition. So on balance the number of patrons may decrease.

The point of the administrator's response to the curator is to question

(A) whether getting the Rembrandt etchings from the Hart Institute is likely to increase attendance at the print exhibition

(B) whether the Hart Institute's Rembrandt etchings will be appreciated by those patrons of the curator's museum for whom the museum's biggest attraction is *Venus*

(C) whether the number of patrons attracted by the Hart Institute's Rembrandt etchings will be larger than the number of patrons who do not come in the spring because *Venus* is on loan

(D) whether, if *Venus* is lent, the museum's revenue from general admission fees during the print exhibition will exceed its revenue from general admission fees during the Hart Institute's exhibition

(E) whether the Hart Institute or the curator's museum will have the greater financial gain from the proposed exchange of artworks

Argument Construction

Situation A curator and a museum administrator debate whether lending a particular artwork to the Hart Institute in exchange for a loan of some of the Hart Institute's artworks would increase or decrease attendance and revenue at the museum.

Reasoning *Which of the curator's explicit or implicit claims is the museum administrator questioning?* The administrator's statements that *Venus* is the museum's biggest attraction and that the Hart Institute's show will run twice as long as the museum's exhibition do not directly conflict with any statement or assumption made by the curator. However, the administrator's conclusion is that on balance the number of patrons at the museum may decrease if the curator's proposal is followed. This conclusion calls into question the curator's claim that the proposal will increase revenue from the general admission fee, since that claim presupposes that on balance the proposal will increase the number of visitors to the museum. (The context suggests that the administrator is using the term *patrons* to mean visitors rather than donors.)

A The administrator does not dispute that the Rembrandt etchings would probably increase attendance at the print exhibition but rather suggests that this increase would be exceeded by the loss of visitors to the museum while the Hart Institute borrows *Venus*.

B Neither the curator nor the administrator comments on whether the patrons attracted to the Rembrandt etchings would be the same people attracted to *Venus*.

C **Correct.** The curator implicitly infers that the former number will be larger than the latter, whereas the administrator questions this by asserting that the latter number may be larger than the former.

D The administrator does not question whether the revenue during the print exhibition will exceed the revenue during the Hart Institute's exhibition, but rather whether it will exceed the loss of revenue during the Hart Institute's exhibition.

E Neither the curator nor the administrator comments on whether the museum would gain more or less from the exchange than the Hart Institute would.

The correct answer is C.

CR03697

160. Which of the following most logically completes the passage?

Leaf beetles damage willow trees by stripping away their leaves, but a combination of parasites and predators generally keeps populations of these beetles in check. Researchers have found that severe air pollution results in reduced predator populations. The parasites, by contrast, are not adversely affected by pollution; nevertheless, the researchers' discovery probably does explain why leaf beetles cause particularly severe damage to willows in areas with severe air pollution, since _____.

(A) neither the predators nor the parasites of leaf beetles themselves attack willow trees

(B) the parasites that attack leaf beetles actually tend to be more prevalent in areas with severe air pollution than they are elsewhere

(C) the damage caused by leaf beetles is usually not enough to kill a willow tree outright

(D) where air pollution is not especially severe, predators have much more impact on leaf-beetle populations than parasites do

(E) willows often grow in areas where air pollution is especially severe

Argument Construction

Situation Leaf beetles damage willow trees, but predators and parasites keep leaf beetle populations in check. Air pollution reduces populations of predators but not of parasites. Leaf beetles damage willows especially severely in areas with severe air pollution.

Reasoning *What would support the conclusion that air pollution's effects on the predator populations (but not on the parasite populations) explains why leaf beetles damage willows the most in areas with severe air pollution?* The word *since* preceding the blank space at the end of the passage indicates that the space should be filled with a premise supporting the conclusion stated immediately before the *since*. To support this conclusion, it would help to have evidence that predators play a predominant role in keeping leaf beetle populations in check, and thus that the reduction of predator populations by air pollution could be sufficient to enable leaf beetle populations to grow and cause especially severe damage.

A The fact that neither the predators nor the parasites directly contribute to harming the trees offers no reason to conclude that a difference in how they are affected by pollution would contribute to the harm that the beetles cause to the trees.

B If the parasites are more prevalent in areas with severe air pollution, then they are more likely to keep leaf beetle populations in check in those areas, despite the reduced predator populations. Thus, the decline in predator populations would more likely be insufficient to explain why the leaf beetles cause more damage in those areas.

C This observation is irrelevant to whether the decline in predator populations explains why leaf beetles damage willow trees more severely in areas with severe air pollution.

D **Correct.** This indicates that predators play a predominant role in keeping leaf beetle populations in check, so, as explained above, it supports the argument's conclusion.

E This is not clearly relevant to whether the decline in predator populations explains why leaf beetles damage willow trees more severely in areas with severe air pollution. The argument's conclusion could just as easily be true regardless of whether willows grow in such polluted areas frequently or infrequently.

The correct answer is D.

CR05438

161. On May first, in order to reduce the number of overdue books, a children's library instituted a policy of forgiving fines and giving bookmarks to children returning all of their overdue books. On July first there were twice as many overdue books as there had been on May first, although a record number of books had been returned during the interim.

Which of the following, if true, most helps to explain the apparent inconsistency in the results of the library's policy?

(A) The librarians did not keep accurate records of how many children took advantage of the grace period, and some of the children returning overdue books did not return all of their overdue books.

(B) Although the grace period enticed some children to return all of their overdue books, it did not convince all of the children with overdue books to return all of their books.

(C) The bookmarks became popular among the children, so in order to collect the bookmarks, many children borrowed many more books than they usually did and kept them past their due date.

(D) The children were allowed to borrow a maximum of five books for a two-week period, and hence each child could keep a maximum of fifteen books beyond their due date within a two-month period.

(E) Although the library forgave overdue fines during the grace period, the amount previously charged the children was minimal; hence, the forgiveness of the fines did not provide enough incentive for them to return their overdue books.

Argument Construction

Situation After a library started forgiving fines and giving bookmarks to children who returned all their overdue books, the number of books returned greatly increased, but so did the number of overdue books.

Reasoning *Why might the policy have simultaneously increased the number of overdue books and the number of books being returned*? In order to increase both these numbers, the policy must have resulted in more books being checked out, kept past their due dates, and then returned. But why would the policy have promoted that behavior? One possibility is that it rewarded the behavior. The policy involved giving children bookmarks as rewards for returning overdue books, while removing the fines that penalized the children for doing so. If the children liked the bookmarks, they might have tried to get more of them by deliberately checking books out in order to keep them past their due dates before returning them to get the bookmarks.

A Failing to keep accurate records of the number of children would not clearly increase the number of books being returned. And the policy change did not apply to children who returned only some of their overdue books.

B This suggests that the policy had limited effects, but does not help to explain why it had apparently inconsistent effects.

C **Correct.** This explains how the policy gave the children a motive to check out and return more books while also allowing them to keep more of the books past the due dates.

D This restriction would have limited the number of overdue books and thus would not help to explain why that number increased.

E This suggests that the policy had little effect but does not help to explain why it had apparently inconsistent effects.

The correct answer is C.

CR00663

162. A certain species of desert lizard digs tunnels in which to lay its eggs. The eggs must incubate inside the tunnel for several weeks before hatching, and they fail to hatch if they are disturbed at any time during this incubation period. Yet these lizards guard their tunnels for only a few days after laying their eggs.

Which of the following, if true, most helps explain why there is no need for lizards to guard their tunnels for more than a few days?

(A) The eggs are at risk of being disturbed only during the brief egg-laying season when many lizards are digging in a relatively small area.

(B) The length of the incubation period varies somewhat from one tunnel to another.

(C) Each female lizard lays from 15 to 20 eggs, only about 10 of which hatch even if the eggs are not disturbed at any time during the incubation period.

(D) The temperature and humidity within the tunnels will not be suitable for the incubating eggs unless the tunnels are plugged with sand immediately after the eggs are laid.

(E) The only way to disturb the eggs of this lizard species is by opening up one of the tunnels in which they are laid.

Argument Construction

Situation Lizards of a certain species dig tunnels in which they lay their eggs. Although the eggs fail to hatch if disturbed during their several weeks of incubation, the lizards guard the tunnels for only a few days after laying the eggs.

Reasoning *What would help to explain why the lizards have to guard their tunnels for only a few days?* For the lizards to survive as a species, their behaviors must ensure that enough of their eggs hatch. Thus, they must successfully prevent enough of their eggs from being disturbed in the tunnels throughout the several weeks of incubation. If guarding the tunnels for only a few days accomplishes this, then some other factor must prevent the eggs from being disturbed during the remaining weeks. Evidence of any such factor would help to explain why the lizards do not have to guard the tunnels longer. For example, to protect the eggs without guarding them, the lizards might conceal the tunnel entrances after the first few days. Or animals likely to disturb the eggs might only be present for those first days, in which case there would be nothing for the lizards to guard against thereafter.

A **Correct.** This suggests that the only creatures likely to disturb the eggs are other lizards of the same species digging tunnels to lay their own eggs at around the same time. If so, each lizard can safely leave its eggs unguarded after a few days because all the other lizards will have finished digging.

B Even if the incubation period varies somewhat, the passage says it always lasts several weeks. So this does not explain why the lizards have to guard the tunnels for only a few days.

C If many eggs fail to hatch even when undisturbed, that is all the more reason for the lizards to protect the remaining eggs from disturbance throughout the incubation period so that at least some will hatch. So it does not explain why the lizards guard their tunnels only for a few days.

D Whether or not immediately plugging the tunnels with sand is enough to protect the eggs, this behavior does not explain why the lizards subsequently guard the tunnels for a few days and then leave for the rest of the incubation period.

E Even if it is impossible to disturb the eggs without opening the tunnels, that does not explain why the lizards guard the tunnels for a few days and then leave for the rest of the incubation period.

The correct answer is A.

CR00677

163. Most banks that issue credit cards charge interest rates on credit card debt that are ten percentage points higher than the rates those banks charge for ordinary consumer loans. These banks' representatives claim the difference is fully justified, since it simply covers the difference between the costs to these banks associated with credit card debt and those associated with consumer loans.

Which of the following, if true, most seriously calls into question the reasoning offered by the banks' representatives?

(A) Some lenders that are not banks offer consumer loans at interest rates that are even higher than most banks charge on credit card debt.

(B) Most car rental companies require that their customers provide signed credit card charge slips or security deposits.

(C) Two to three percent of the selling price of every item bought with a given credit card goes to the bank that issued that credit card.

(D) Most people need not use credit cards to buy everyday necessities, but could buy those necessities with cash or pay by check.

(E) People who pay their credit card bills in full each month usually pay no interest on the amounts they charge.

Argument Evaluation

Situation Banks that issue credit cards tend to charge interest rates on the associated debt that are ten percentage points higher than the rates associated with "ordinary" consumer loans (consumer loans that are not associated with credit cards). Representatives of these banks have offered a justification of this practice, based on a claim that this difference in interest rates "simply covers the difference" in costs, to the banks, associated with these respective types of loans (loans associated with credit cards and consumer loans that are not associated with credit cards).

Reasoning *What additional facts would indicate a flaw in the bank representatives' argument*? Given the description of the bank representatives' argument, we may assume that, by their estimation, the costs to banks associated with credit card debt are greater than the costs associated with other consumer loans. The representatives' argument, that the difference in interest rates "simply covers" this difference in costs, may then be seen as an argument that all of the extra money that the banks collect from the higher interest rates is *necessary* if the banks are to cover this difference in costs. If we can find a fact whereby the ten percentage point difference is not necessary to cover the difference in costs, then we may be able to "call into question" the bank representatives' argument.

A The point of this response to the bank representatives' argument would seem to be that the relatively high interest rates on credit debt may be justified because certain other businesses charge even higher interest rates on consumer loans. Regardless of the merits of this response, it appears intended to *support* the argument of the representatives, whereas our task is to identify a fact that could be used to criticize the argument.

B This purported fact does not address the argument concerning the interest rates on credit-card debt.

C **Correct.** If two to three percent of the value of purchases made on credit cards goes to the issuing banks, then this money could be used to cover some of the difference in costs described by the bank representatives. The interest rates on credit cards could therefore be somewhat lower than they actually are, with the difference in costs nevertheless still fully covered. The difference in interest rates of ten percentage points may therefore not be necessary.

D This point might be used in support of an argument that consumers have a genuine choice as to whether to use credit cards, and that they are therefore responsible for the higher rates of interest that they pay for credit-card debt. Such an argument would seem to *support* the position of bank representatives.

E As with the point in option D, this point might seem to suggest that consumers bear some of the responsibility for the higher interest rates they pay, thus perhaps mitigating the responsibility of the banks. The point might thus seem to *support* the position of the banks' representatives.

The correct answer is C.

CR00726

164. Often patients with ankle fractures that are stable, and thus do not require surgery, are given follow-up x-rays because their orthopedists are concerned about possibly having misjudged the stability of the fracture. When a number of follow-up x-rays were reviewed, however, all the fractures that had initially been judged stable were found to have healed correctly. Therefore, it is a waste of money to order follow-up x-rays of ankle fractures initially judged stable.

Which of the following, if true, most strengthens the argument?

(A) Doctors who are general practitioners rather than orthopedists are less likely than orthopedists to judge the stability of an ankle fracture correctly.

(B) Many ankle injuries for which an initial x-ray is ordered are revealed by the x-ray not to involve any fracture of the ankle.

(C) X-rays of patients of many different orthopedists working in several hospitals were reviewed.

(D) The healing of ankle fractures that have been surgically repaired is always checked by means of a follow-up x-ray.

(E) Orthopedists routinely order follow-up x-rays for fractures of bones other than ankle bones.

Argument Evaluation

Situation Often patients with ankle fractures that their orthopedists have judged not to require surgery are given follow-up x-rays to check whether the fracture healed correctly. An examination of a sample of those x-rays found that the ankle had, in each case, healed properly.

Reasoning *The question is which of the options, if true, would most strengthen the argument.* The argument is based on data concerning follow-up x-rays, each of which revealed no problem with the orthopedist's initial judgment that the ankle fracture was stable (and would heal without surgery). This invites the question whether the follow-up x-rays are really needed. The argument concludes that they are a waste of money. But was the x-ray data truly representative of orthopedists generally? After all, some orthopedists—perhaps more experienced, better-trained, or employed at a facility with better staff or facilities—may be much better than others at judging ankle fractures. If we add the information that the data for the conclusion comes from many orthopedists working at many different hospitals, we have greater assurance that the x-ray data is representative, and the argument will be made much stronger.

A Neither the study nor the conclusion that is drawn from it concerns general practitioners, so this point is irrelevant.

B Naturally many ankle injuries do not involve fractures—x-rays may sometimes be used to determine this—but the argument concerns only cases where there have been ankle fractures.

C **Correct.** This shows that the sample of x-ray data examined was probably sufficiently representative of cases of ankle fracture judged to be stable by orthopedists.

D The argument does not concern cases of ankle fracture that have been surgically repaired.

E The argument concerns only x-rays of ankles. From the information given here, we cannot infer that orthopedists are generally wasteful in routinely ordering follow-up x-rays.

The correct answer is C.

CR05431

165. In setting environmental standards for industry and others to meet, it is inadvisable to require the best results that state-of-the-art technology can achieve. Current technology is able to detect and eliminate even extremely minute amounts of contaminants, but at a cost that is exorbitant relative to the improvement achieved. So it would be reasonable instead to set standards by taking into account all of the current and future risks involved.

The argument given concerning the reasonable way to set standards presupposes that

(A) industry currently meets the standards that have been set by environmental authorities

(B) there are effective ways to take into account all of the relevant risks posed by allowing different levels of contaminants

(C) the only contaminants worth measuring are generated by industry

(D) it is not costly to prevent large amounts of contaminants from entering the environment

(E) minute amounts of some contaminants can be poisonous

Argument Construction

Situation State-of-the-art technology can detect and eliminate even tiny amounts of environmental contaminants, but at a cost that is exorbitant relative to its benefits.

Reasoning *What must be true in order for the argument's premises to support its conclusion?* The argument is that environmental standards requiring the best results that state-of-the-art technology can provide are unreasonably expensive relative to their benefits, so it would be reasonable instead to set environmental standards that take into account all present and future risks from contaminants. In order for the premise to support the conclusion, the environmental standards based on present and future risks would have to be less expensive relative to their benefits than the *best results* environmental standards are. Furthermore, setting the *current and future risks* environmental standards cannot be reasonable unless it is feasible to assess present and future risks as those standards require.

A The argument does not say which standards, if any, environmental authorities have set. In any case, such standards could be reasonable or unreasonable regardless of whether industry currently meets them.

B **Correct.** If taking future risks into account were infeasible, then applying the *current and future risks* standards would also be infeasible. And setting those standards would be unreasonable if they could not feasibly be applied.

C According to the stimulus, the proposed *current and future risks* standards would apply to industry *and others*. So those standards could be reasonable even if the unspecified *others* also generated contaminants worth measuring, and even if the standards required measuring those contaminants.

D Even if it were costly to prevent large amounts of contaminants from entering the environment, the benefits of doing so to prevent present and future risks might outweigh the costs.

E The *current and future risks* standards could take into account any poisoning risks posed by minute amounts of contaminants.

The correct answer is B.

CR05750

166. The chemical adenosine is released by brain cells when those cells are active. Adenosine then binds to more and more sites on cells in certain areas of the brain, as the total amount released gradually increases during wakefulness. During sleep, the number of sites to which adenosine is bound decreases. Some researchers have hypothesized that it is the cumulative binding of adenosine to a large number of sites that causes the onset of sleep.

Which of the following, if true, provides the most support for the researchers' hypothesis?

(A) Even after long periods of sleep when adenosine is at its lowest concentration in the brain, the number of brain cells bound with adenosine remains very large.

(B) Caffeine, which has the effect of making people remain wakeful, is known to interfere with the binding of adenosine to sites on brain cells.

(C) Besides binding to sites in the brain, adenosine is known to be involved in biochemical reactions throughout the body.

(D) Some areas of the brain that are relatively inactive nonetheless release some adenosine.

(E) Stress resulting from a dangerous situation can preserve wakefulness even when brain levels of bound adenosine are high.

Argument Evaluation

Situation Adenosine is released from brain cells that are active. The amount of adenosine released increases during wakefulness, and it binds to more and more sites on cells in certain brain locations. The number of sites to which it is bound decreases during sleep. Researchers have hypothesized that the cumulative binding of adenosine to many sites causes the onset of sleep.

Reasoning *Which of the five pieces of information most strongly supports the hypothesis?* If the hypothesis is correct, then some factor that impedes the binding of adenosine should be closely associated with wakefulness. Therefore, finding some such factor, and observing that it is accompanied by wakefulness when the factor operates, would tend to confirm the hypothesis.

A Without further, more specific information, this piece of information suffices neither to confirm nor to refute the hypothesis.

B **Correct.** A finding that caffeine, known to induce wakefulness, inhibits adenosine from binding to sites on brain cells helps confirm the hypothesis.

C This piece of information lacks a clear relevance to the hypothesized impact on sleep, and therefore does not help confirm the hypothesis.

D This information lacks a clear relevance to the hypothesized impact on sleep, and therefore does not help confirm the hypothesis.

E What this indicates is that stress may impede the hypothesized sleep-inducing effect of adenosine. It does not refute the hypothesis but does not confirm it either.

The correct answer is B.

CR01101

167. A two-year study beginning in 1977 found that, among 85-year-old people, those whose immune systems were weakest were twice as likely to die within two years as others in the study. The cause of their deaths, however, was more often heart disease, against which the immune system does not protect, than cancer or infections, which are attacked by the immune system.

Which of the following, if true, would offer the best prospects for explaining deaths in which weakness of the immune system, though present, played no causal role?

(A) There were twice as many infections among those in the study with the weakest immune systems as among those with the strongest immune systems.

(B) The majority of those in the study with the strongest immune systems died from infection or cancer by 1987.

(C) Some of the drugs that had been used to treat the symptoms of heart disease had a side effect of weakening the immune system.

(D) Most of those in the study who survived beyond the two-year period had recovered from a serious infection sometime prior to 1978.

(E) Those in the study who survived into the 1980s had, in 1976, strengthened their immune systems through drug therapy.

Argument Construction

Situation This question presents a puzzling scenario and asks us to find a possible fact that could make the situation less puzzling. The scenario involves a study that was conducted a few decades ago on a certain group of older adults. Those with the weakest immune systems were much more likely to die within two years than were the other individuals in the study. However, among the individuals with the weakest immune systems, death was more often by heart disease, from which the immune system does not protect, than from cancer or infections, for which a strong immune system is protective.

Reasoning *For the participants in the study with the weakest immune systems, what might best explain the deaths that were not due to weakness of the immune system?* We might expect that the people with the weakest immune systems would be more likely to die from diseases that a strong immune system would protect them from than from other diseases. An explanation of the deaths that were not due to weakness of the immune system would explain why this is not the case.

A This point is irrelevant. The hypothesis that the participants in the study with the weakest immune systems had more infections than did the other participants does not explain why those participants died from conditions that were not infections.

B Our question involves identifying a possible explanation for the deaths of the participants in the study with the weakest immune systems. This option, about the deaths of those with strong immune systems, is thus irrelevant.

C **Correct.** This option suggests that those with heart disease—which would not have been due to weakness of the immune system—would have nevertheless had a weaker immune system due to the administration of certain drugs. Those with heart disease may for this reason have been among those with the weakest immune systems. If the individuals with weak immune systems due to treatment for heart disease formed a large-enough portion of the patients with the weakest immune systems, then we would have an explanation for why those with the weakest immune systems were more likely to die from heart disease than from infections or cancer.

D This option is not specific enough for us to use in the explanation we are looking for. For example, the "serious" infections in question may have occurred well before the 1977 study. Furthermore, there may appear to be no significant relationship between having had a serious infection and death from a condition that was not an infection.

E This option is also not specific enough to be a factor that might reasonably offer the explanation we are looking for. For example, given the information in this option, it could have been the case that all of the participants had the drug therapy.

The correct answer is C.

CR13093

168. Most scholars agree that King Alfred (A.D. 849–899) personally translated a number of Latin texts into Old English. One historian contends that Alfred also personally penned his own law code, arguing that the numerous differences between the language of the law code and Alfred's translations of Latin texts are outweighed by the even more numerous similarities. Linguistic similarities, however, are what one expects in texts from the same language, the same time, and the same region. Apart from Alfred's surviving translations and law code, there are only two other extant works from the same dialect and milieu, so it is risky to assume here that linguistic similarities point to common authorship.

The passage above proceeds by

(A) providing examples that underscore another argument's conclusion
(B) questioning the plausibility of an assumption on which another argument depends
(C) showing that a principle if generally applied would have anomalous consequences
(D) showing that the premises of another argument are mutually inconsistent
(E) using argument by analogy to undermine a principle implicit in another argument

Argument Evaluation

Situation A historian argues that King Alfred must have written his own law code, since there are more similarities than differences between the language in the law code and that in Alfred's translations of Latin texts. Apart from Alfred's translations and law code, there are only two other extant works in the same dialect and from the same milieu.

Reasoning *How does the reasoning in the passage proceed?* The first sentence presents a claim that is not disputed in the passage. The second sentence presents a historian's argument. Implicitly citing the undisputed claim in the passage's first sentence as evidence, the historian proposes an analogy between the law code and Alfred's translations, arguing on the basis of this analogy that Alfred wrote the law code. The third sentence of the passage casts doubt on this analogy, pointing out that it could plausibly apply to texts that Alfred did not write. The fourth sentence suggests that too few extant texts are available as evidence to rule out the possibility raised in the third sentence. Thus, the third and fourth sentences are intended to undermine the historian's argument.

A As explained above, the passage is intended to undermine the conclusion of the historian's argument, not to *underscore* (emphasize) it.

B **Correct.** The passage's third and fourth sentences question the plausibility of the historian's assumption that no one but Alfred would have been likely to write a text whose language has more similarities to than differences from the language in Alfred's translations.

C Although there might well be anomalous consequences from generalizing the assumption on which the historian's argument relies, the passage does not mention or allude to any such consequences.

D The passage does not mention, or suggest the existence of, any inconsistencies among the premises of the historian's argument.

E Although the historian argues by analogy, the passage does not itself argue by analogy; it does not suggest any specific counteranalogy to undermine the historian's argument.

The correct answer is B.

CR01355

169. Parland's alligator population has been declining in recent years, primarily because of hunting. Alligators prey heavily on a species of freshwater fish that is highly valued as food by Parlanders, who had hoped that the decline in the alligator population would lead to an increase in the numbers of these fish available for human consumption. Yet the population of this fish species has also declined, even though the annual number caught for human consumption has not increased.

Which of the following, if true, most helps to explain the decline in the population of the fish species?

(A) The decline in the alligator population has meant that fishers can work in some parts of lakes and rivers that were formerly too dangerous.

(B) Over the last few years, Parland's commercial fishing enterprises have increased the number of fishing boats they use.

(C) Many Parlanders who hunt alligators do so because of the high market price of alligator skins, not because of the threat alligators pose to the fish population.

(D) During Parland's dry season, holes dug by alligators remain filled with water long enough to provide a safe place for the eggs of this fish species to hatch.

(E) In several neighboring countries through which Parland's rivers also flow, alligators are at risk of extinction as a result of extensive hunting.

Argument Construction

Situation The alligators in a certain region prey heavily on a certain species of fish that is prized for human consumption. However, although in recent years hunting has reduced the population of alligators in the region, the population of the prized freshwater fish species has declined. The annual number caught for human consumption has not increased.

Reasoning *What might explain the decline in the population of the prized fish species, despite both the decrease in population of another species that preys heavily on the prized fish and the lack of increase in fishing for the species for human consumption?* The population of the fish species declined, despite both the presence of a factor that we might be expected to produce an increase in the population of the species and the absence of a factor that we might ordinarily expect to explain the decrease. This situation may seem puzzling, and we may thus wish to find an explanation for it.

A Given that fishers can work in parts of lakes and rivers that were formerly too dangerous to work in, we might expect fishing of the prized species to increase and thus expect the population of the species to decrease. Although this might explain a decrease in the population of the fish species if fishing for the species increased, we have been given reason to believe that fishing for the species *decreased*.

B As with option A, the statement in this option suggests that fishing in the region may have increased and thus that fishing for the prized fish species for human consumption may have increased. This might explain the decrease in the population of the fish species if the statement were correct. However, we have been given that fishing for the prized fish species for human consumption has decreased.

C The statement in this option provides an explanation of why the alligator hunting has occurred. Given that the alligators prey on the fish, this might help to explain an increase in the population of the prized fish species, had such an increase occurred. However, we are given that the population of the fish species in the region has decreased.

D **Correct.** Despite the fact that alligators prey on the prized fish species, this statement describes a way in which the fish species may be dependent on the alligators, in such a way that a decline in the population of the alligators could contribute to a decline in the fish species.

E The statement in this option serves to amplify a point that is given in the puzzling situation of a decline in the population of the fish species *despite* (among other factors) a decrease in the population of the alligators. It does not explain why a decline in the population of the alligator species may have contributed to a decline in the population of the fish species.

The correct answer is D.

CR05418

170. A company plans to develop a prototype weeding machine that uses cutting blades with optical sensors and microprocessors that distinguish weeds from crop plants by differences in shade of color. The inventor of the machine claims that it will reduce labor costs by virtually eliminating the need for manual weeding.

Which of the following is a consideration in favor of the company's implementing its plan to develop the prototype?

(A) There is a considerable degree of variation in shade of color between weeds of different species.

(B) The shade of color of some plants tends to change appreciably over the course of their growing season.

(C) When crops are weeded manually, overall size and leaf shape are taken into account in distinguishing crop plants from weeds.

(D) Selection and genetic manipulation allow plants of virtually any species to be economically bred to have a distinctive shade of color without altering their other characteristics.

(E) Farm laborers who are responsible for the manual weeding of crops carry out other agricultural duties at times in the growing season when extensive weeding is not necessary.

Evaluation of a Plan

Situation A company plans to develop an automated weeding machine that would distinguish weeds from crop plants by differences in shade of color. It is supposed to reduce labor costs by eliminating the need for manual weeding.

Reasoning *Which option describes a consideration that would favor the company's plan?* The passage supports the plan by claiming that the machine would reduce labor costs by virtually eliminating weeding by hand. The correct option will be one that adds to this support. Labor costs will be reduced only if the machine works well. The machine relies on shade of color to distinguish between weeds and crop plants. If crop plants can be bred to have distinctive color without sacrificing other qualities, it would be more likely that the machine could be used effectively.

A Greater variation among weed plants would make it more difficult for the machine to distinguish between weeds and crop plants, and this would make it less likely that the machine would be effective.

B This option tends to disfavor the effectiveness of the machine. The more changeable the colors of the plants to be distinguished, the more complex the task of distinguishing between weeds and crop plants based on their color.

C This option tends to disfavor the likely benefits of the machine because it indicates that manual weeding distinguishes weeds from crop plants by using criteria that the machine does not take into account. If the machine does not distinguish weeds from crop plants as accurately and reliably as manual weeding does, then the machine is less apt to make manual weeding unnecessary.

D **Correct.** Making crop plants easily distinguishable from weeds would facilitate the effective use of the weeding machine.

E This does not favor the company's implementing the plan to develop the machine. There would still be tasks other than weeding that would require hiring staff. Thus there would still be labor costs even if the need for manual weeding were eliminated.

The correct answer is D.

CR05079

171. Aroca City currently funds its public schools through taxes on property. **In place of this system, the city plans to introduce a sales tax of 3 percent on all retail sales in the city.** Critics protest that 3 percent of current retail sales falls short of the amount raised for schools by property taxes. The critics are correct on this point. **Nevertheless, implementing the plan will probably not reduce the money going to Aroca's schools.** Several large retailers have selected Aroca City as the site for huge new stores, and these are certain to draw large numbers of shoppers from neighboring municipalities, where sales are taxed at rates of 6 percent and more. In consequence, retail sales in Aroca City are bound to increase substantially.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first presents a plan that the argument concludes is unlikely to achieve its goal; the second expresses that conclusion.

(B) The first presents a plan that the argument concludes is unlikely to achieve its goal; the second presents evidence in support of that conclusion.

(C) The first presents a plan that the argument contends is the best available; the second is a conclusion drawn by the argument to justify that contention.

(D) The first presents a plan one of whose consequences is at issue in the argument; the second is the argument's conclusion about that consequence.

(E) The first presents a plan that the argument seeks to defend against a certain criticism; the second is that criticism.

Argument Evaluation

Situation Aroca City plans to switch the source of its public school funding from property taxes to a new local sales tax.

Reasoning *What argumentative roles do the two portions in boldface play in the passage?* The first boldface portion simply describes the city's plan. The next two sentences in the passage describe an observation some critics have made in objecting to the plan and say that the observation is correct. But then the second boldface portion rejects the critics' implicit conclusion that the plan will reduce school funding. The final two sentences in the passage present reasons to accept the statement in the second boldface portion, so they are premises supporting it as a conclusion.

A The argument concludes that the plan is unlikely to reduce funding for the schools. The passage does not mention the plan's goal, but presumably that goal is not to reduce school funding.

B The second boldface portion presents the argument's conclusion, not evidence to support the conclusion. The passage does not mention the plan's goal, but presumably that goal is not to reduce school funding.

C The passage does not say whether the plan is better than any other possible school funding plans.

D **Correct.** The plan's likely effect on the amount of school funding is at issue in the argument, whose conclusion is that the plan probably will not reduce that funding.

E The second boldface portion does not criticize the plan, but rather rejects a criticism of the plan by stating that the plan will probably not reduce school funding.

The correct answer is D.

CR06152

172. Which of the following most logically completes the argument?

A photograph of the night sky was taken with the camera shutter open for an extended period. The normal motion of stars across the sky caused the images of the stars in the photograph to appear as streaks. However, one bright spot was not streaked. Even if the spot were caused, as astronomers believe, by a celestial object, that object could still have been moving across the sky during the time the shutter was open, since _____.

(A) the spot was not the brightest object in the photograph

(B) the photograph contains many streaks that astronomers can identify as caused by noncelestial objects

(C) stars in the night sky do not appear to shift position relative to each other

(D) the spot could have been caused by an object that emitted a flash that lasted for only a fraction of the time that the camera shutter was open

(E) if the camera shutter had not been open for an extended period, it would have recorded substantially fewer celestial objects

Argument Construction

Situation In a photograph of the night sky taken with the camera shutter open for an extended period, the images of stars appeared as streaks because of the stars' normal motion across the sky, but one bright spot was not streaked.

Reasoning *What would most strongly suggest that a celestial object moving across the sky could have caused the spot?* An object moving across the sky that was bright throughout the time the camera shutter was open should have appeared as a streak in the photograph, just as the stars did. But if the moving object was bright for only a very brief moment, and thus not for an extended time while the camera shutter was open, the object's movement may not have been captured in the photograph, and thus would appear in the photograph as an unstreaked bright spot.

A The argument is not about how bright the spot was compared to other objects in the photograph.

B Streaks caused by noncelestial objects such as satellites or airplanes do not explain how only one of many celestial objects moving across the sky could have produced the unstreaked spot.

C The passage indicates that the stars were shifting position relative to the camera, not relative to one another. In any case, this observation does not help to explain how a celestial object that may not have been a star but that was moving across the sky could have produced the unstreaked spot in the photograph.

D **Correct.** As explained above, a moving celestial object that only produced a momentary flash of light would produce an unstreaked bright spot in the photograph.

E This may be true, given that fewer celestial objects might have moved into the camera's range of view if the camera shutter had not been open as long. But it does not provide any evidence that a moving celestial object could have produced the unstreaked spot.

The correct answer is D.

CR09046

173. Economist: Paying extra for fair-trade coffee—coffee labeled with the Fairtrade logo—is intended to help poor farmers, because they receive a higher price for the fair-trade coffee they grow. But this practice may hurt more farmers in developing nations than it helps. By raising average prices for coffee, it encourages more coffee to be produced than consumers want to buy. This lowers prices for non-fair-trade coffee and thus lowers profits for non-fair-trade coffee farmers.

To evaluate the strength of the economist's argument, it would be most helpful to know which of the following?

(A) Whether there is a way of alleviating the impact of the increased average prices for coffee on non-fair-trade coffee farmers' profits

(B) What proportion of coffee farmers in developing nations produce fair-trade coffee

(C) Whether many coffee farmers in developing nations also derive income from other kinds of farming

(D) Whether consumers should pay extra for fair-trade coffee if doing so lowers profits for non-fair-trade coffee farmers

(E) How fair-trade coffee farmers in developing nations could be helped without lowering profits for non-fair-trade coffee farmers

Argument Evaluation

Situation Poor farmers receive higher prices for fair-trade coffee. But paying extra for fair-trade coffee lowers prices for non-fair-trade coffee and thus lowers profits for non-fair-trade coffee farmers.

Reasoning *What would be most helpful to know to evaluate how well the economist's observations support the conclusion that buying fair-trade coffee hurts more farmers in developing nations than it helps?* The economist suggests that buying fair-trade coffee benefits farmers who grow it because they receive higher prices, but that it hurts non-fair-trade coffee farmers by reducing their profits. So to know whether the practice hurts more farmers in developing nations than it helps, it would be helpful to know whether developing nations have more farmers who produce non-fair-trade coffee than produce fair-trade coffee.

A Even if there were some potential way of alleviating the negative impact from buying fair-trade coffee on non-fair-trade coffee farmers, it still could be that the practice hurts more developing-nation farmers than it helps. Alleviating the negative impact does not entail that there is no negative impact.

B **Correct.** If fewer than half of these farmers produce fair-trade coffee, then the economist's observations do suggest that buying fair-trade coffee hurts more coffee farmers in developing nations than it helps. But if more than half do, those observations suggest the contrary.

C Although knowing this could be helpful in determining how intensely many farmers are economically affected by people buying fair-trade coffee, it is not helpful in determining whether more farmers are hurt than are helped.

D The argument's conclusion is only about the economic impact of buying fair-trade coffee, not about how consumers should or should not respond to that impact.

E Knowing how the fair-trade coffee farmers could potentially be helped without hurting the other coffee farmers is irrelevant to assessing whether the practice of buying fair-trade coffee hurts more developing-nation farmers than it helps.

The correct answer is B.

CR01887

174. Tanco, a leather manufacturer, uses large quantities of common salt to preserve animal hides. New environmental regulations have significantly increased the cost of disposing of salt water that results from this use, and, in consequence, Tanco is considering a plan to use potassium chloride in place of common salt. Research has shown that Tanco could reprocess the by-product of potassium chloride use to yield a crop fertilizer, leaving a relatively small volume of waste for disposal.

In determining the impact on company profits of using potassium chloride in place of common salt, it would be important for Tanco to research all of the following EXCEPT:

(A) What difference, if any, is there between the cost of the common salt needed to preserve a given quantity of animal hides and the cost of the potassium chloride needed to preserve the same quantity of hides?

(B) To what extent is the equipment involved in preserving animal hides using common salt suitable for preserving animal hides using potassium chloride?

(C) What environmental regulations, if any, constrain the disposal of the waste generated in reprocessing the by-product of potassium chloride?

(D) How closely does leather that results when common salt is used to preserve hides resemble that which results when potassium chloride is used?

(E) Are the chemical properties that make potassium chloride an effective means for preserving animal hides the same as those that make common salt an effective means for doing so?

Evaluation of a Plan

Situation New environmental regulations will increase the costs of disposing of the salt water that results from the use of large amounts of common salt in leather manufacturing. The manufacturer is considering switching from common salt to potassium chloride, because the by-product of the latter could be reprocessed to yield a crop fertilizer, with little waste left over to be disposed.

Reasoning *In order to determine whether it would be profitable to switch from using common salt to using potassium chloride, which of the five questions does the manufacturer NOT need to answer?* The chemical properties making potassium chloride an effective means of preserving animal hides might be quite different from those that make common salt effective, but there is no particular reason for thinking that this would impact the profitability of switching to potassium chloride. The relevant effects on the preserved hides might be the same even if the properties that brought about those effects were quite different. Thus, without more information than is provided in the passage, this question is irrelevant.

A The savings in waste disposal costs that would be gained by switching to potassium chloride could be cancelled out if the cost of potassium chloride needed far exceeded that for common salt.

B If switching to potassium chloride would force the manufacturer to replace the equipment it uses for preserving hides, then it might be less profitable to switch.

C Even though there is said to be relatively little waste associated with using potassium chloride in the process, if the costs of this disposal are very high due to environmental regulations, it might be less profitable to switch.

D If the leather that results from the use of potassium chloride looks substantially different from that which results when common salt has been used, then the leather might be less attractive to consumers, which would adversely affect the economics of switching to potassium chloride.

E **Correct.** Note that the question as stated here presupposes that potassium chloride and salt are both effective means for preserving animal hides—so it does not raise any issue as to whether potassium chloride is adequately effective or as effective as salt (clearly, an issue of effectiveness *would* be relevant to profitability).

The correct answer is E.

CR04999

175. Colorless diamonds can command high prices as gemstones. A type of less valuable diamonds can be treated to remove all color. Only sophisticated tests can distinguish such treated diamonds from naturally colorless ones. However, only 2 percent of diamonds mined are of the colored type that can be successfully treated, and many of those are of insufficient quality to make the treatment worthwhile. Surely, therefore, the vast majority of colorless diamonds sold by jewelers are naturally colorless.

A serious flaw in the reasoning of the argument is that

(A) comparisons between the price diamonds command as gemstones and their value for other uses are omitted

(B) information about the rarity of treated diamonds is not combined with information about the rarity of naturally colorless, gemstone diamonds

(C) the possibility that colored diamonds might be used as gemstones, even without having been treated, is ignored

(D) the currently available method for making colorless diamonds from colored ones is treated as though it were the only possible method for doing so

(E) the difficulty that a customer of a jeweler would have in distinguishing a naturally colorless diamond from a treated one is not taken into account

Argument Evaluation

Situation Colored diamonds of a type that comprises 2 percent of all mined diamonds can be treated so that they are not easily distinguishable from more valuable, naturally colorless diamonds, but many are too low in quality for the treatment to be worthwhile.

Reasoning *Why do the argument's premises not justify the conclusion that the vast majority of colorless diamonds sold by jewelers are naturally colorless?* Since the type of colored diamonds that can be treated make up only 2 percent of all mined diamonds, and many diamonds of that type are too low in quality for treatment to be worthwhile, the vast majority of mined diamonds must not be treated to have their color removed. However, we are not told what proportion of all mined diamonds are naturally colorless. Naturally colorless diamonds may be far rarer even than the uncommon diamonds that have been treated to have their color removed. Thus, for all we can tell from the passage, it could well be that most colorless diamonds sold by jewelers have been treated to remove all color.

A Even if some types of diamonds command higher prices for uses other than as gemstones, the types discussed in the passage evidently command high enough prices as gemstones to be sold as such by jewelers.

B **Correct.** The argument does not work if naturally colorless diamonds are rarer than treated diamonds, as they may be for all we can tell from the information provided.

C The argument's conclusion is only that jewelers sell more naturally colorless diamonds than diamonds treated to be colorless. Whether jewelers sell any colored diamonds or other gemstones is irrelevant.

D The argument only concerns the types of colorless diamonds sold now, not the types that may be sold in the future if other treatment methods are discovered.

E The argument does suggest this difficulty but implies that even so there are too few treated diamonds available for jewelers to sell in place of naturally colorless ones.

The correct answer is B.

CR14448

176. The Sumpton town council recently voted to pay a prominent artist to create an abstract sculpture for the town square. Critics of this decision protested that town residents tend to dislike most abstract art, and any art in the town square should reflect their tastes. But a town council spokesperson dismissed this criticism, pointing out that other public abstract sculptures that the same sculptor has installed in other cities have been extremely popular with those cities' local residents.

The statements above most strongly suggest that the main point of disagreement between the critics and the spokesperson is whether

(A) it would have been reasonable to consult town residents on the decision

(B) most Sumpton residents will find the new sculpture to their taste

(C) abstract sculptures by the same sculptor have truly been popular in other cities

(D) a more traditional sculpture in the town square would be popular among local residents

(E) public art that the residents of Sumpton would find desirable would probably be found desirable by the residents of other cities

Argument Construction

Situation After the Sumpton town council voted to pay a prominent sculptor to create an abstract sculpture for the town square, critics protested the decision. A town council spokesperson responded to the critics.

Reasoning *What do the critics and the spokesperson mainly disagree about?* The critics argue that Sumpton residents dislike most abstract art and that art in the town square should reflect their taste. Since the critics are protesting the town council's decision, they are clearly inferring from the residents' general attitude toward abstract art that the residents will dislike the specific sculpture the prominent sculptor will create. The spokesperson replies by arguing that in other cities, sculptures by the same sculptor have been very popular with local residents. The spokesperson implicitly infers from this that the sculpture the prominent sculptor will create for Sumpton will be popular with Sumpton residents—and therefore that the critics are mistaken.

A Neither the critics nor the spokesperson mentions consultation with the town residents on the decision.

B **Correct.** As explained above, the critics raise points implicitly suggesting that the residents will dislike the sculpture, whereas the spokesperson responds with a point implicitly supporting the opposite conclusion.

C The critics could concede that the sculptor's work has been popular in other cities, but nonetheless hold that Sumpton residents have different tastes from those of the other cities' residents.

D The spokesperson gives no indication regarding the attitudes of Sumpton residents regarding traditional sculpture.

E It may be that neither the critics nor the spokesperson holds this view. The spokesperson may hold that Sumpton residents are easier to please than residents of most other cities, whereas the critics may hold that Sumpton residents are far more traditional in their tastes than other cities' residents.

The correct answer is B.

CR09085

177. Jay: Of course there are many good reasons to support the expansion of preventive medical care, but arguments claiming that it will lead to greater societal economic gains are misguided. Some of the greatest societal expenses arise from frequent urgent-care needs for people who have attained a long life due to preventive care.

Sunil: Your argument fails because you neglect economic gains outside the health care system: society suffers an economic loss when any of its productive members suffer preventable illnesses.

Sunil's response to Jay makes which of the following assumptions?

(A) Those who receive preventive care are not more likely to need urgent care than are those who do not receive preventive care.

(B) Jay intends the phrase "economic gains" to refer only to gains accruing to institutions within the health care system.

(C) Productive members of society are more likely than others to suffer preventable illnesses.

(D) The economic contributions of those who receive preventive medical care may outweigh the economic losses caused by preventive care.

(E) Jay is incorrect in stating that patients who receive preventive medical care are long-lived.

Argument Construction

Situation Some of the greatest societal expenses arise from frequent urgent-care needs for people who have reached old age thanks to preventive medical care. But society also suffers economic loss when any of its productive members suffer preventable illnesses.

Reasoning *What is Sunil assuming in his argument that Jay's argument fails?* Jay implies that by helping people live longer, expanding preventive medical care may actually increase the amount of urgent medical care people need over the course of their lives, and that societal expenses for this additional urgent care may equal or exceed any societal economic benefits from expanding preventive care. Sunil responds by implying that expanding preventive care would allow society to avoid economic losses from lost productivity caused by preventable illnesses. In order for Sunil's argument to establish that Jay's argument fails, the potential economic benefits that Sunil implies would arise from expanded preventive care must be greater than the economic losses from the increased need for urgent care that Jay points out.

A This is not an assumption that underpins Sunil's suggestion that the societal economic benefits from expanded preventive care may exceed any resulting economic losses from urgent care.

B If Jay intends the phrase "economic gains" to refer only to gains within the health care system, then Sunil's point about economic gains outside the health care system is not even relevant to Jay's argument about economic gains within it.

C Even if productive members of society are not more likely than others to suffer preventable illnesses, it still may be true, as Sunil suggests, that the economic benefits of preventing productive members of society from suffering those illnesses may outweigh the economic losses of doing so. In that case, Jay's argument could still fail in the way Sunil indicates.

D **Correct.** Sunil must assume this in order to rebut Jay's argument. As explained above, if the economic contributions of those receiving preventive care definitely do not outweigh the economic losses caused by preventive care, then Sunil's implicit point that expanding preventive care would help to prevent the loss of such contributions is insufficient to rebut Jay's argument.

E Whether Jay is correct or incorrect in this respect, Sunil may be correct that Jay's argument fails because Jay has neglected to consider how preventive care produces larger economic gains outside the health care system.

The correct answer is D.

CR01766

178. Boreal owls range over a much larger area than do other owls of similar size. The reason for this behavior is probably that the small mammals on which owls feed are especially scarce in the forests where boreal owls live, and the relative scarcity of prey requires the owls to range more extensively to find sufficient food.

Which of the following, if true, most helps to confirm the explanation above?

(A) Some boreal owls range over an area eight times larger than the area over which any other owl of similar size ranges.

(B) Boreal owls range over larger areas in regions where food of the sort eaten by small mammals is sparse than they do in regions where such food is abundant.

(C) After their young hatch, boreal owls must hunt more often than before in order to feed both themselves and their newly hatched young.

(D) Sometimes individual boreal owls hunt near a single location for many weeks at a time and do not range farther than a few hundred yards.

(E) The boreal owl requires less food, relative to its weight, than is required by members of other owl species.

Argument Evaluation

Situation The small mammals on which owls prey are relatively scarce in the forests where boreal owls live. That is why boreal owls range more extensively than do other, similarly sized owls in search of food.

Reasoning *Which choice, if true, would most help confirm the proposed explanation?* One way to confirm an explanation is by finding further information that one would expect to be true *if* the explanation is valid. If the explanation in the passage is valid, then one would expect that variations in the population density of available small-animal prey for boreal owls would be accompanied by variations in the ranges of the boreal owls. Naturally the population density of available small-animal prey is likely to be affected by how plentiful food is for those small animals.

A The comparison between different groups of boreal owls is not relevant to the comparison between boreal owls and other owls.

B **Correct.** This indicates that abundance of food for the boreal owls' small-animal prey in an area (and therefore abundance of small animals in that area) correlates with a smaller range for the boreal owls there. This strengthens the proposed explanation.

C This option concerns a correlation between owls' need for food and the frequency with which owls hunt, whereas the phenomenon described in the passage and the proposed explanation have to do with the range over which owls hunt.

D If one were to assume that boreal owls never hunt near a single location for weeks, that would in no way undermine the proposed explanation.

E If anything, this option tends to undermine the proposed explanation, because it suggests the possibility that boreal owls need not make up for the relative scarcity of prey in their habitats by ranging over larger areas.

The correct answer is B.

CR12567

179. Microbiologist: A lethal strain of salmonella recently showed up in a European country, causing an outbreak of illness that killed two people and infected twenty-seven others. Investigators blame the severity of the outbreak on the overuse of antibiotics, since the salmonella bacteria tested were shown to be drug-resistant. But this is unlikely because patients in the country where the outbreak occurred cannot obtain antibiotics to treat illness without a prescription, and the country's doctors prescribe antibiotics less readily than do doctors in any other European country.

Which of the following, if true, would most weaken the microbiologist's reasoning?

(A) Physicians in the country where the outbreak occurred have become hesitant to prescribe antibiotics since they are frequently in short supply.

(B) People in the country where the outbreak occurred often consume foods produced from animals that eat antibiotics-laden livestock feed.

(C) Use of antibiotics in two countries that neighbor the country where the outbreak occurred has risen over the past decade.

(D) Drug-resistant strains of salmonella have not been found in countries in which antibiotics are not generally available.

(E) Salmonella has been shown to spread easily along the distribution chains of certain vegetables, such as raw tomatoes.

Argument Evaluation

Situation Antibiotic-resistant salmonella caused an outbreak of illness in a European country where patients need prescriptions to obtain antibiotics and where doctors dispense such prescriptions less readily than in other European countries.

Reasoning *What evidence would most strongly suggest that overuse of antibiotics was likely responsible for the outbreak, despite the cited facts?* The microbiologist reasons that because patients need prescriptions to obtain antibiotics in the country where the outbreak occurred, and the country's doctors dispense such prescriptions less readily than doctors in other European countries do, antibiotics are probably not being overused in the country—so antibiotic overuse was probably not responsible for the outbreak. Implicit in the microbiologist's reasoning is the assumption that overuse of antibiotics, if it had occurred, could probably have resulted only from overprescribing of antibiotics by physicians to treat illness in people in the country in question. Any evidence casting doubt on this complex assumption would suggest a weakness in the microbiologist's reasoning.

A This strengthens the argument by providing additional evidence that antibiotics are not being overprescribed in the country.

B **Correct.** This weakens the microbiologist's argument by indicating that an assumption implicit in the argument may be false: the salmonella outbreak could easily by explained by overuse of antibiotics in livestock feed (perhaps imported from other countries).

C Even if antibiotic use has risen in the two neighboring countries, antibiotics still might be underused in both countries.

D This suggests that antibiotic-resistant salmonella arises only in countries where antibiotics are used; even if this were true it would be quite compatible with the microbiologist's argument and does not weaken that argument.

E This describes one mechanism by which salmonella can spread in a population; it says nothing about whether an outbreak of antibiotic-resistant strains of salmonella might have been caused by antibiotic overuse.

The correct answer is B.

CR03416

180. Historian: Newton developed mathematical concepts and techniques that are fundamental to modern calculus. Leibniz developed closely analogous concepts and techniques. It has traditionally been thought that these discoveries were independent. Researchers have, however, recently discovered notes of Leibniz's that discuss one of Newton's books on mathematics. Several scholars have argued that since **the book includes a presentation of Newton's calculus concepts and techniques,** and since the notes were written before Leibniz's own development of calculus concepts and techniques, it is virtually certain **that the traditional view is false.** A more cautious conclusion than this is called for, however. Leibniz's notes are limited to early sections of Newton's book, sections that precede the ones in which Newton's calculus concepts and techniques are presented.

In the historian's reasoning, the two portions in **boldface** play which of the following roles?

(A) The first is a claim that the historian rejects; the second is a position that that claim has been used to support.

(B) The first is evidence that has been used to support a conclusion about which the historian expresses reservations; the second is that conclusion.

(C) The first provides evidence in support of a position that the historian defends; the second is that position.

(D) The first and the second each provide evidence in support of a position that the historian defends.

(E) The first has been used in support of a position that the historian rejects; the second is a conclusion that the historian draws from that position.

Argument Construction

Situation A historian discusses a controversy about whether or not Leibniz developed calculus concepts and techniques independently of Newton.

Reasoning *What argumentative roles do the two portions in boldface play in the passage?* The first four sentences of the passage simply provide background information. Both boldface sections are within the fifth sentence, which reports an argument by *several scholars*. The key word *since* indicates that the first boldface section is a premise in the scholars' argument. A second premise preceded by another *since* follows in the next clause. The final clause of the fifth sentence reveals that the second boldface section is the conclusion of the scholars' argument. In the sixth sentence, the historian expresses misgivings about the scholars' conclusion, for reasons presented in the seventh and final sentence.

A The historian does not reject the claim that Newton's book includes a presentation of Newton's calculus concepts and techniques. Instead, the historian merely points out that Leibniz's notes do not cover those sections of Newton's book.

B **Correct.** The first boldface section is one of two premises in the scholars' argument, and the second boldface section is that argument's conclusion. In the following sentence the historian expresses reservations about that conclusion.

C The historian does not defend the scholars' conclusion but rather expresses misgivings about it.

D The second boldface section is the scholars' conclusion and does not present any evidence. Nor does it support the historian's position that a more cautious conclusion is called for.

E The second boldface section presents not the historian's conclusion but rather the scholars' conclusion, about which the historian expresses misgivings.

The correct answer is B.

CR03867

181. For over two centuries, no one had been able to make Damascus blades—blades with a distinctive serpentine surface pattern—but a contemporary sword maker may just have rediscovered how. Using iron with trace impurities that precisely matched those present in the iron used in historic Damascus blades, this contemporary sword maker seems to have finally hit on an intricate process by which he can produce a blade indistinguishable from a true Damascus blade.

Which of the following, if true, provides the strongest support for the hypothesis that trace impurities in the iron are essential for the production of Damascus blades?

(A) There are surface features of every Damascus blade—including the blades produced by the contemporary sword maker—that are unique to that blade.

(B) The iron with which the contemporary sword maker made Damascus blades came from a source of iron that was unknown two centuries ago.

(C) Almost all the tools used by the contemporary sword maker were updated versions of tools that were used by sword makers over two centuries ago.

(D) Production of Damascus blades by sword makers of the past ceased abruptly after those sword makers' original source of iron became exhausted.

(E) Although Damascus blades were renowned for maintaining a sharp edge, the blade made by the contemporary sword maker suggests that they may have maintained their edge less well than blades made using what is now the standard process for making blades.

Argument Evaluation

Situation A sword maker may have recently rediscovered how to make Damascus blades using iron with trace impurities matching those in the iron from which historic Damascus blades were wrought.

Reasoning *What evidence would suggest that the trace impurities are essential for producing Damascus blades?* The passage says the sword maker seems to have created blades indistinguishable from historic Damascus blades by using iron with the same trace impurities found in those blades. But that does not prove the trace impurities are essential to the process. Evidence suggesting that Damascus blades have never been made from iron without the trace impurities would support the hypothesis that the trace impurities are essential to their manufacture.

A Damascus blades could vary in their surface features whether or not trace impurities are essential for their manufacture.

B Whatever the source of the iron the contemporary sword maker used, it contains the same trace impurities as the iron historically used to make Damascus blades, which is what the hypothesis is about.

C If anything, this might cast doubt on the hypothesis by suggesting that the special tools rather than the trace impurities could account for the distinctive features of Damascus blades.

D **Correct.** This suggests that when the historic sword makers lost access to the special iron with its trace impurities, they could no longer make Damascus blades. Thus, it supports the hypothesis that the trace impurities are necessary for manufacturing Damascus blades.

E Even if Damascus blades maintained their edges less well than most contemporary blades do, the trace impurities may not have been essential for manufacturing them.

The correct answer is D.

CR01903

182. Images from ground-based telescopes are invariably distorted by the Earth's atmosphere. Orbiting space telescopes, however, operating above Earth's atmosphere, should provide superbly detailed images. Therefore, ground-based telescopes will soon become obsolete for advanced astronomical research purposes.

Which of the following statements, if true, would cast the most doubt on the conclusion drawn above?

(A) An orbiting space telescope due to be launched this year is far behind schedule and over budget, whereas the largest ground-based telescope was both within budget and on schedule.

(B) Ground-based telescopes located on mountain summits are not subject to the kinds of atmospheric distortion which, at low altitudes, make stars appear to twinkle.

(C) By careful choice of observatory location, it is possible for large-aperture telescopes to avoid most of the kind of wind turbulence that can distort image quality.

(D) When large-aperture telescopes are located at high altitudes near the equator, they permit the best Earth-based observations of the center of the Milky Way Galaxy, a prime target of astronomical research.

(E) Detailed spectral analyses, upon which astronomers rely for determining the chemical composition and evolutionary history of stars, require telescopes with more light-gathering capacity than space telescopes can provide.

Argument Evaluation

Situation Earth's atmosphere distorts images from ground-based telescopes, whereas space telescopes orbiting above the atmosphere should provide superbly detailed images.

Reasoning *What evidence would undermine the claim that ground-based telescopes will soon become obsolete for advanced astronomical research?* The argument implicitly assumes that advanced astronomical research can be accomplished more effectively with the more detailed, less distorted images produced by space telescopes and that therefore almost all advanced astronomical research will soon be conducted with space telescopes. This reasoning would be undermined by evidence that ground-based telescopes have substantial advantages for advanced astronomical research despite their distorted images or by evidence that space telescopes will not soon become common or affordable enough to support most advanced astronomical research.

A Even if this is true, there may be several orbiting space telescopes that will be, or have been, launched on schedule and within budget, so this option does not cast doubt on the conclusion of the argument.

B Ground-based telescopes on mountain summits are still subject to more atmospheric distortion than are space telescopes orbiting above the atmosphere.

C Atmospheric distortion of telescopic images may result mainly from factors other than wind turbulence.

D Even the best Earth-based observations of the center of the Milky Way Galaxy may be vastly inferior to space-based observations.

E **Correct.** This indicates an inherent limitation of space-based telescopes: unlike Earth-based telescopes, they lack the light-gathering capacity that astronomers need to perform one of their primary tasks, i.e., detailed spectral analyses. So Earth-based telescopes are unlikely to soon become obsolete.

The correct answer is E.

CR07562

183. Generally scientists enter their field with the goal of doing important new research and accept as their colleagues those with similar motivation. Therefore, when any scientist wins renown as an expounder of science to general audiences, most other scientists conclude that this popularizer should no longer be regarded as a true colleague.

The explanation offered above for the low esteem in which scientific popularizers are held by research scientists assumes that

(A) serious scientific research is not a solitary activity, but relies on active cooperation among a group of colleagues

(B) research scientists tend not to regard as colleagues those scientists whose renown they envy

(C) a scientist can become a famous popularizer without having completed any important research

(D) research scientists believe that those who are well known as popularizers of science are not motivated to do important new research

(E) no important new research can be accessible to or accurately assessed by those who are not themselves scientists

Argument Construction

Situation Research scientists desire to do important new research and treat as colleagues just those who have a similar desire. When a scientist becomes popular among a general audience for explaining principles of science, other scientists have less esteem for this popularizer, no longer regarding such a scientist as a serious colleague.

Reasoning *What assumption do research scientists make about scientists who become popularizers?* The community of scientists shares a common goal: to do important new research. What would cause this community to disapprove of a popularizer and to cease to regard the popularizer as a colleague? It must be because many scientists believe that becoming a popularizer is incompatible with desiring to do important new research.

A Many scientists make this assumption, of course—but it is not an assumption on which the explanation specifically depends. The explanation concerns the scientists' motivation, not their style of doing research.

B This statement gives another reason that scientists may reject a popularizer, but because it is not the reason implied in the passage, it is not assumed.

C Even if this is true, it does not address the core issue of the argument: what scientists believe about the *motivation* of popularizers.

D **Correct.** This statement properly identifies an assumption on which the explanation for scientists' rejection of popularizers depends.

E The passage is not concerned with whether nonscientists can understand new research, but rather with the beliefs and motivations of scientists who reject popularizers as colleagues.

The correct answer is D.

CR07676

184. Urban planner: When a city loses population due to migration, property taxes in that city tend to rise. This is because there are then fewer residents paying to maintain an infrastructure that was designed to support more people. Rising property taxes, in turn, drive more residents away, compounding the problem. Since the city of Stonebridge is starting to lose population, the city government should therefore refrain from raising property taxes.

Which of the following, if true, would most weaken the urban planner's argument?

(A) If Stonebridge does not raise taxes on its residents to maintain its infrastructure, the city will become much less attractive to live in as that infrastructure decays.

(B) Stonebridge at present benefits from grants provided by the national government to help maintain certain parts of its infrastructure.

(C) If there is a small increase in property taxes in Stonebridge and a slightly larger proportion of total revenue than at present is allocated to infrastructure maintenance, the funding will be adequate for that purpose.

(D) Demographers project that the population of a region that includes Stonebridge will start to increase substantially within the next several years.

(E) The property taxes in Stonebridge are significantly lower than those in many larger cities.

Argument Evaluation

Situation When a city loses population due to migration, fewer residents remain to pay to maintain the city's infrastructure, so property taxes tend to rise. These rising property taxes then drive even more residents away. The city of Stonebridge is starting to lose population, so Stonebridge's government should not raise property taxes.

Reasoning *What would weaken the urban planner's justification for concluding that Stonebridge's government should refrain from raising property taxes?* The urban planner implicitly reasons that raising property taxes in Stonebridge in order to maintain the city's infrastructure would make the city lose even more residents, leaving even fewer paying to maintain the infrastructure, and that this would worsen the funding problem the tax increase would have been intended to solve. The urban planner's argument would be weakened by any evidence that raising property taxes in Stonebridge would not drive residents away or that refraining from raising property taxes would cause the same problems as raising them would cause, or worse.

A **Correct.** This suggests that refraining from raising property taxes could drive more residents out of Stonebridge than raising them would, and thus would not help the city avoid the problem the urban planner describes.

B This does slightly weaken the argument because the grants may still be provided to maintain certain parts of the infrastructure, even if increased property taxes drive more residents away. But losing more residents could still make it harder to raise enough funds to maintain the rest of the city's infrastructure, as the urban planner argues.

C Even if this approach would address the immediate maintenance funding problem, the small increase in property taxes could still drive more residents away, forcing additional future tax increases on those who remain, just as the urban planner suggests.

D This does slightly weaken the argument, but the residents who will move to the region might still avoid moving to Stonebridge if the property taxes there are too high, and those who live in Stonebridge might still move to other cities in the region.

E Residents fleeing Stonebridge because of high property taxes would likely avoid moving to the many larger cities with even higher property taxes, but they might be happy to move to many other places with low property taxes.

The correct answer is A.

CR01338

185. Which of the following most logically completes the argument?

Utrania was formerly a major petroleum exporter, but in recent decades economic stagnation and restrictive regulations inhibited investment in new oil fields. In consequence, Utranian oil exports dropped steadily as old fields became depleted. Utrania's currently improving economic situation, together with less-restrictive regulations, will undoubtedly result in the rapid development of new fields. However, it would be premature to conclude that the rapid development of new fields will result in higher oil exports, because _____.

(A) the price of oil is expected to remain relatively stable over the next several years

(B) the improvement in the economic situation in Utrania is expected to result in a dramatic increase in the proportion of Utranians who own automobiles

(C) most of the investment in new oil fields in Utrania is expected to come from foreign sources

(D) new technology is available to recover oil from old oil fields formerly regarded as depleted

(E) many of the new oil fields in Utrania are likely to be as productive as those that were developed during the period when Utrania was a major oil exporter

Argument Construction

Situation A country that had been a major oil exporter has seen its exports decline in recent decades due to economic stagnation, a failure to invest in new fields, and the steady depletion of its old fields. But looser regulations and an improving economy will bring rapid development of new oil fields in the country.

Reasoning *Which of the options would most logically complete the argument?* The passage describes the conditions that led to Utrania's no longer being a major oil exporter: a lack of investment in new oil fields due to a stagnant economy and restrictive regulations. The passage then says that due to changed regulatory and economic conditions, there will now be rapid development of new oil fields. Nonetheless, this might not bring about an increase in Utrania's oil exports. To logically complete the argument, one must explain how oil exports might not increase even when the condition that led to decreased oil exports has been removed. Suppose there were an increase in domestic oil consumption. A dramatic increase in the rate of car ownership in Utrania could reasonably be expected to significantly increase domestic oil consumption, which could eat up the added oil production from the new fields.

A This choice is incorrect. There is no reason why stable oil prices should prevent Utrania's oil exports from increasing.

B **Correct.** An increase in car ownership would increase Utrania's oil consumption—and this supports the claim that oil exports might not increase.

C If anything, this suggests that oil exports should increase. So it would not be a good choice for completion of the argument.

D The advent of new technology allowing oil to be extracted from fields previously thought to be depleted would mean that there is even more reason to think that Utrania's oil exports will increase.

E This does not help to explain why exports would not increase. On the contrary, it suggests that the new fields will lead to increased exports.

The correct answer is B.

CR09592

186. The use of growth-promoting antibiotics in hog farming can weaken their effectiveness in treating humans because such use can spread resistance to those antibiotics among microorganisms. But now the Smee Company, one of the largest pork marketers, may stop buying pork raised on feed containing these antibiotics. Smee has 60 percent of the pork market, and farmers who sell to Smee would certainly stop using antibiotics in order to avoid jeopardizing their sales. So if Smee makes this change, it will probably significantly slow the decline in antibiotics' effectiveness for humans.

Which of the following, if true, would most strengthen the argument above?

(A) Other major pork marketers will probably stop buying pork raised on feed containing growth-promoting antibiotics if Smee no longer buys such pork.

(B) The decline in hog growth due to discontinuation of antibiotics can be offset by improved hygiene.

(C) Authorities are promoting the use of antibiotics to which microorganisms have not yet developed resistance.

(D) A phaseout of use of antibiotics for hogs in one country reduced usage by over 50 percent over five years.

(E) If Smee stops buying pork raised with antibiotics, the firm's costs will probably increase.

Argument Evaluation

Situation Using growth-promoting antibiotics in hog farming can produce widespread resistance to antibiotics among microorganisms, thereby making the antibiotics less effective in treating humans. The Smee Company, a pork marketer with 60 percent of the pork market, may stop buying pork raised on feed containing these antibiotics.

Reasoning *What additional evidence would most help to support the conclusion that if Smee makes the change, it will significantly slow the decline in antibiotics' effectiveness for humans?* We are already informed that if Smee makes the change, it will eliminate the use of antibiotics in hog feed by farmers supplying at least 60 percent of the pork market. The argument would be strengthened by evidence that Smee's decision would indirectly cause use of the antibiotics to stop more broadly, for example in hog farms supplying significantly more than 60 percent of the total amount of pork marketed.

A **Correct.** This suggests that if Smee makes the change, hog farmers supplying other major pork marketers will also have to stop using antibiotics in hog feed, making the change more widespread and thus probably more effective.

B Even if the decline in hog growth from discontinuing the antibiotics cannot be offset, many hog farmers will still have to stop using the antibiotics as a result of Smee's decision. On the other hand, even if the decline can be offset with improved hygiene, that change might be too expensive or difficult to be worth its benefits for most hog farmers.

C Whatever new antibiotics authorities are promoting, microorganisms may soon develop resistance to them as well. Smee may or may not refuse to buy pork raised on feed containing these new antibiotics.

D This is evidence that Smee's decision may significantly reduce antibiotic use in hogs, but it provides no evidence of how this reduction may affect antibiotics' effectiveness for humans.

E If anything, this provides reason to suspect that Smee will not stick with the change for long after the costs increase, so it weakens rather than strengthens the argument that the change will significantly slow the decline in antibiotics' effectiveness.

The correct answer is A.

CR10678

187. In an experiment, volunteers walked individually through a dark, abandoned theater. Half of the volunteers had been told that the theater was haunted and the other half that it was under renovation. The first half reported significantly more unusual experiences than the second did. The researchers concluded that reports of encounters with ghosts and other supernatural entities generally result from prior expectations of such experiences.

Which of the following, if true, would most seriously weaken the researchers' reasoning?

(A) None of the volunteers in the second half believed that the unusual experiences they reported were supernatural.

(B) All of the volunteers in the first half believed that the researchers' statement that the theater was haunted was a lie.

(C) Before being told about the theater, the volunteers within each group varied considerably in their prior beliefs about supernatural experiences.

(D) Each unusual experience reported by the volunteers had a cause that did not involve the supernatural.

(E) The researchers did not believe that the theater was haunted.

Argument Evaluation

Situation Volunteers in an experiment walked through a dark, abandoned theater. Those who had been told the theater was haunted reported more unusual experiences than those who had been told it was under renovation.

Reasoning *What evidence would most strongly suggest that the experimental results do not indicate that reports of supernatural encounters result from prior expectations of such experiences?* The researcher assumes that the half of the volunteers who had been told the theater was haunted were more inclined to expect supernatural experiences in the theater than were the other half of the volunteers. Based on this assumption and the greater incidence of reports of unusual experiences among the first half of the volunteers, the researcher concludes that prior expectation of supernatural experiences makes people more likely to report such experiences. The researchers' reasoning would be weakened by evidence that the volunteers did not actually have the expectations the researchers assumed them to have, or by evidence that any such expectations did not influence their reports.

A This strengthens the argument by indicating that the volunteers whom the researchers did not lead to expect supernatural experiences reported no such experiences.

B **Correct.** If none of the volunteers believed the researchers' claim that the theater was haunted, then the implicit assumption that several of those volunteers expected supernatural experiences in the theater is flawed, and so the inference that their prior expectations probably account for their reports of supernatural experiences is flawed.

C This is compatible with the researchers' inference and does not undermine it. Even if the volunteers' initial beliefs about supernatural experiences varied, the researchers' claims about the theater might have strongly influenced how many volunteers in each group expected to have such experiences in the theater specifically.

D The researchers argue that the volunteers' prior expectations account for all the reports of unusual experiences, and this is compatible with there being no genuine supernatural occurrences in the theater.

E Whatever the researchers personally believed about the theater, they might still have successfully influenced the volunteers' beliefs about it.

The correct answer is B.

CR05665

188. In order to reduce dependence on imported oil, the government of Jalica has imposed minimum fuel-efficiency requirements on all new cars, beginning this year. The more fuel-efficient a car, the less pollution it produces per mile driven. As Jalicans replace their old cars with cars that meet the new requirements, annual pollution from car traffic is likely to decrease in Jalica.

Which of the following, if true, most seriously weakens the argument?

(A) In Jalica, domestically produced oil is more expensive than imported oil.

(B) The Jalican government did not intend the new fuel-efficiency requirement to be a pollution-reduction measure.

(C) Some pollution-control devices mandated in Jalica make cars less fuel-efficient than they would be without those devices.

(D) The new regulation requires no change in the chemical formulation of fuel for cars in Jalica.

(E) Jalicans who get cars that are more fuel-efficient tend to do more driving than before.

Argument Evaluation

Situation The Jalican government is requiring all new cars to meet minimum fuel-efficiency requirements starting this year. Cars that are more fuel efficient produce less pollution per mile driven.

Reasoning *What evidence would suggest that annual pollution from car traffic will not decrease in Jalica, despite the new policy?* Air pollution from car traffic is unlikely to decrease if the new standards will result in more cars on the road or more miles driven per car; or if air pollution from car traffic in Jalica is increasing because of unrelated factors such as growing numbers of Jalicans who can afford cars, construction of more roads, etc. Evidence that any of these factors is present would cast doubt on the argument's conclusion and thus weaken the argument.

A The question at issue is not whether the new policy will reduce dependence on imported oil as the government intends, but rather whether it will reduce air pollution from car traffic.

B A government policy may have consequences that the government did not intend it to have.

C Even if these pollution-control devices make cars less fuel efficient, the new fuel-efficiency standards may still improve cars' average fuel efficiency and thereby reduce air pollution.

D Even if the fuel is unchanged, the new fuel-efficiency standards may still result in cars using less fuel and may thereby reduce air pollution.

E **Correct.** If the new fuel-efficient cars are driven more miles per year than older cars are, they may produce as much or more pollution per year than older cars do even though they produce less pollution per mile driven.

The correct answer is E.

CR01173

189. Plantings of cotton bioengineered to produce its own insecticide against bollworms, a major cause of crop failure, sustained little bollworm damage until this year. This year the plantings are being seriously damaged by bollworms. Bollworms, however, are not necessarily developing resistance to the cotton's insecticide. Bollworms breed on corn, and last year more corn than usual was planted throughout cotton-growing regions. So it is likely that the cotton is simply being overwhelmed by corn-bred bollworms.

In evaluating the argument, which of the following would it be most useful to establish?

(A) Whether corn could be bioengineered to produce the insecticide

(B) Whether plantings of cotton that does not produce the insecticide are suffering unusually extensive damage from bollworms this year

(C) Whether other crops that have been bioengineered to produce their own insecticide successfully resist the pests against which the insecticide was to protect them

(D) Whether plantings of bioengineered cotton are frequently damaged by insect pests other than bollworms

(E) Whether there are insecticides that can be used against bollworms that have developed resistance to the insecticide produced by the bioengineered cotton

Argument Evaluation

Situation Although plantings of cotton bioengineered to produce an insecticide to combat bollworms were little damaged by the pests in previous years, they are being severely damaged this year. Since the bollworms breed on corn, and there has been more corn planted this year in cotton-growing areas, the cotton is probably being overwhelmed by the corn-bred bollworms.

Reasoning *In evaluating the argument, which question would it be most useful to have answered?* The argument states that the bioengineered cotton crop failures this year (1) have likely been due to the increased corn plantings and (2) not due to the pests having developed a resistance to the insecticide. This also implies (3) that the failures are not due to some third factor.

It would be useful to know how the bioengineered cotton is faring in comparison to the rest of this year's cotton crop. If the bioengineered cotton is faring better against the bollworms, that fact would support the argument because it would suggest that the insecticide is still combating bollworms. If, on the other hand, the bioengineered cotton is being more severely ravaged by bollworms than is other cotton, that suggests that there is some third cause that is primarily at fault.

A This would probably be useful information to those trying to alleviate the bollworm problem in bioengineered cotton. But whether such corn could be developed has no bearing on what is causing the bioengineered cotton to be damaged by bollworms this year.

B **Correct.** If bollworm damage on non-bioengineered cotton is worse than usual this year, then bollworm infestation in general is simply worse than usual, so pesticide resistance does not need to be invoked to explain the bollworm attacks on the bioengineered cotton.

C Even if other crops that have been bioengineered to resist pests have not successfully resisted them, that fact would not mean that the same is true of this cotton. Furthermore, the facts already suggest that the bioengineered cotton has resisted bollworms.

D Whether other types of pests often damage bioengineered cotton has no bearing on why bollworms are damaging this type of cotton more this year than in the past.

E This, too, might be useful information to those trying to alleviate the bollworm problem in bioengineered cotton, but it is not particularly useful in evaluating the argument. Even if there are pesticides that could be used against bollworms that have developed resistance to the insecticide of the bioengineered cotton, that does not mean that such pesticides are being used this year.

The correct answer is B.

CR03331

190. Typically during thunderstorms most lightning strikes carry a negative electric charge; only a few carry a positive charge. Thunderstorms with unusually high proportions of positive-charge strikes tend to occur in smoky areas near forest fires. The fact that smoke carries positively charged smoke particles into the air above a fire suggests the hypothesis that the extra positive strikes occur because of the presence of such particles in the storm clouds.

Which of the following, if discovered to be true, most seriously undermines the hypothesis?

(A) Other kinds of rare lightning also occur with unusually high frequency in the vicinity of forest fires.

(B) The positive-charge strikes that occur near forest fires tend to be no more powerful than positive strikes normally are.

(C) A positive-charge strike is as likely to start a forest fire as a negative-charge strike is.

(D) Thunderstorms that occur in drifting clouds of smoke have extra positive-charge strikes weeks after the charge of the smoke particles has dissipated.

(E) The total number of lightning strikes during a thunderstorm is usually within the normal range in the vicinity of a forest fire.

Argument Evaluation

Situation Thunderstorms with unusually high proportions of positive-charge lightning strikes tend to occur in smoky areas near forest fires. Smoke carries positively charged particles into the air above fires, suggesting that smoke particles in storm clouds are responsible for the higher proportion of positive strikes.

Reasoning *What would cast doubt on the hypothesis that the extra positive-charge lightning strikes in thunderstorms near forest fires result from positively charged smoke particles carried into the storm clouds?* The hypothesis would be weakened by evidence that the positively charged smoke particles do not enter the storm clouds in the first place, or that they do not retain their charge in the clouds long enough to produce an effect, or that their positive charge cannot affect the charges of the storm's lightning strikes in any case, or that some other factor tends to make the lightning strikes above these storms positively charged.

A It could be that positively charged smoke particles cause these other kinds of rare lightning, too, so this does not seriously undermine the hypothesis.

B The hypothesis is not about the power of the positive-charge lightning strikes, only about why a high proportion of them occur in thunderstorms near forest fires.

C The hypothesis is about why positive-charge strikes tend to occur in smoky areas near forest fires that have already started before the strikes occur. Furthermore, an equal likelihood of positive-charge and negative-charge strikes starting fires cannot explain a correlation between fires and positive-charge strikes specifically.

D **Correct.** This means that even when drifting clouds of smoke persist for weeks after a fire, when the charge of their particles has already dissipated, the smoke somehow still makes the strikes positively charged in any thunderstorms arising within it. If so, some factor other than positively charged smoke particles must affect the strikes' charge.

E This information does not undermine the hypothesis. The hypothesis does not concern the possibility that there might be more lightning strikes in the vicinity of forest fires; rather it concerns the proportion of all such lightning strikes that are positively charged.

The correct answer is D.

CR01140

191. Many gardeners believe that the variety of clematis vine that is most popular among gardeners in North America is *jackmanii*. This belief is apparently correct since, of the one million clematis plants sold per year by the largest clematis nursery in North America, ten percent are *jackmanii*.

Which of the following is an assumption on which the argument depends?

(A) The nursery sells more than ten different varieties of clematis.

(B) The largest clematis nursery in North America sells nothing but clematis plants.

(C) Some of the *jackmanii* sold by the nursery are sold to gardeners outside North America.

(D) Most North American gardeners grow clematis in their gardens.

(E) For all nurseries in North America that specialize in clematis, at least ten percent of the clematis plants they sell are *jackmanii*.

Argument Construction

Situation Of the clematis plants sold by the largest clematis nursery in North America, 10 percent are *jackmanii,* which many gardeners believe to be the most popular variety of clematis in North America.

Reasoning *What must be true in order for the fact that 10 percent of the clematis sold at the nursery are* jackmanii *to provide evidence that jackmanii is the most popular variety of clematis in North America?* The argument assumes that sales of different varieties of clematis at the nursery reflect the relative levels of popularity of those varieties among North American gardeners. It also assumes that *jackmanii* is the best-selling clematis variety at the nursery, an assumption which requires that less than 10 percent of the nursery's clematis sales are of any one variety other than *jackmanii*.

A **Correct.** Suppose the nursery sold ten or fewer varieties of clematis. Then at least one variety other than *jackmanii* would have to account for at least 10 percent of the nursery's clematis sales, so *jackmanii* would not be the best-selling clematis variety at the nursery as the argument assumes.

B The argument only concerns how popular *jackmanii* is relative to other varieties of clematis, not relative to any plants other than clematis that the nursery may sell.

C If anything, this would weaken the argument by suggesting that the nursery's *jackmanii* sales might reflect *jackmanii*'s popularity outside North America more than its popularity within North America.

D This would indicate that clematis is a popular plant among North American gardeners, not that *jackmanii* is the most popular variety of clematis.

E Even if *jackmanii* accounts for less than 10 percent of clematis sales at a few individual nurseries, it may still account for 10 percent or more of North American clematis sales overall.

The correct answer is A.

CR06422

192. Since 1990 the percentage of bacterial sinus infections in Aqadestan that are resistant to the antibiotic perxicillin has increased substantially. Bacteria can quickly develop resistance to an antibiotic when it is prescribed indiscriminately or when patients fail to take it as prescribed. Since perxicillin has not been indiscriminately prescribed, health officials hypothesize that the increase in perxicillin-resistant sinus infections is largely due to patients' failure to take this medication as prescribed.

Which of the following, if true of Aqadestan, provides most support for the health officials' hypothesis?

(A) Resistance to several other commonly prescribed antibiotics has not increased since 1990 in Aqadestan.

(B) A large number of Aqadestanis never seek medical help when they have a sinus infection.

(C) When it first became available, perxicillin was much more effective in treating bacterial sinus infections than any other antibiotic used for such infections at the time.

(D) Many patients who take perxicillin experience severe side effects within the first few days of their prescribed regimen.

(E) Aqadestani health clinics provide antibiotics to their patients at cost.

Argument Construction

Situation In Aqadestan the percentage of bacterial sinus infections resistant to the antibiotic perxicillin has been increasing even though perxicillin has not been indiscriminately prescribed.

Reasoning *What evidence most strongly suggests that the main reason perxicillin-resistant sinus infections are becoming more common is that patients are failing to take perxicillin as prescribed?* Any evidence suggesting that patients have in fact been failing to take perxicillin as prescribed would support the hypothesis, as would any evidence casting doubt on other possible explanations for the increasing proportion of perxicillin-resistant sinus infections.

A This suggests that some factor specific to perxicillin is increasing bacterial resistance to it, but that could be true whether or not the factor is patients' failure to take perxicillin as prescribed.

B If anything, this weakens the argument by suggesting that most people with sinus infections are never prescribed perxicillin, and that therefore relatively few people are getting prescriptions and then failing to follow them.

C The relative effectiveness of perxicillin when it first became available does not suggest that the reason it is now becoming less effective is that many patients are failing to take it as prescribed.

D **Correct.** These side effects would discourage patients from taking perxicillin as prescribed, so their existence provides evidence that many patients are not taking it as prescribed.

E If the clinics do not charge extra for perxicillin, that would make it more affordable and hence easier for many patients to take as prescribed.

The correct answer is D.

CR07793

193. Psychologist: In a study, researchers gave 100 volunteers a psychological questionnaire designed to measure their self-esteem. The researchers then asked each volunteer to rate the strength of his or her own social skills. The volunteers with the highest levels of self-esteem consistently rated themselves as having much better social skills than did the volunteers with moderate levels. This suggests that attaining an exceptionally high level of self-esteem greatly improves one's social skills.

The psychologist's argument is most vulnerable to criticism on which of the following grounds?

(A) It fails to adequately address the possibility that many of the volunteers may not have understood what the psychological questionnaire was designed to measure.

(B) It takes for granted that the volunteers with the highest levels of self-esteem had better social skills than did the other volunteers, even before the former volunteers had attained their high levels of self-esteem.

(C) It overlooks the possibility that people with very high levels of self-esteem may tend to have a less accurate perception of the strength of their own social skills than do people with moderate levels of self-esteem.

(D) It relies on evidence from a group of volunteers that is too small to provide any support for any inferences regarding people in general.

(E) It overlooks the possibility that factors other than level of self-esteem may be of much greater importance in determining the strength of one's social skills.

Argument Evaluation

Situation In a psychological study of 100 volunteers, those found to have the highest self-esteem consistently rated themselves as having much better social skills than did those found to have moderate self-esteem.

Reasoning *What is wrong with the psychologist citing the study's results to justify the conclusion that exceptionally high self-esteem greatly improves social skills?* The psychologist reasons that the study shows a correlation between very high self-esteem and how highly one rates one's social skills, and that this correlation in turn suggests that very high self-esteem improves social skills. This argument is vulnerable to at least two criticisms: First, the argument assumes that the volunteers' ratings of their own social skills are generally accurate. But very high self-esteem might in many cases result from a tendency to overestimate oneself and one's skills, including one's social skills. Second, the argument fails to address the possibility that good social skills promote high self-esteem rather than vice versa, as well as the possibility that some third factor (such as a sunny disposition or fortunate circumstances) promotes both high self-esteem and good social skills.

A An experiment's subjects do not have to understand the experiment's design in order for the experimental results to be accurate.

B To the contrary, the argument concludes that the volunteers with the highest self-esteem attained their enhanced social skills as a result of attaining such high self-esteem.

C **Correct.** As explained above, very high self-esteem may often result from a tendency to overestimate oneself in general, and thus to overestimate one's social skills.

D A group of 100 volunteers is large enough for an experiment to provide at least a little support for at least some inferences regarding people in general.

E As explained above, the argument overlooks the possibility that some third factor may play a significant role in determining the strength of one's social skills. But even if some factor other than self-esteem is more important in determining the strength of social skills, that would still be compatible with very high self-esteem being of some importance in improving one's social skills.

The correct answer is C.

CR06826

194. A product that represents a clear technological advance over competing products can generally command a high price. Because **technological advances tend to be quickly surpassed** and companies want to make large profits while they still can, **many companies charge the maximum possible price for such a product**. But large profits on the new product will give competitors a strong incentive to quickly match the new product's capabilities. Consequently, the strategy to maximize overall profit from a new product is to charge less than the greatest possible price.

In the argument above, the two portions in **boldface** play which of the following roles?

(A) The first is a consideration raised to argue that a certain strategy is counterproductive; the second presents that strategy.

(B) The first is a consideration raised to support the strategy that the argument recommends; the second presents that strategy.

(C) The first is a consideration raised to help explain the popularity of a certain strategy; the second presents that strategy.

(D) The first is an assumption, rejected by the argument, that has been used to justify a course of action; the second presents that course of action.

(E) The first is a consideration that has been used to justify adopting a certain strategy; the second presents the intended outcome of that strategy.

Argument Construction

Situation Often, when a company comes out with an innovative product, it will price the product as high as it can to maximize profits before the competitors quickly catch up. But this is not a good strategy because the very high price of the new product only encourages competitors to match the technological advance more quickly.

Reasoning *Which option best describes the roles that the boldface portions play in the argument?* This type of item concerns only the argument's structure—the way it is intended to work, not the quality of the argument or what might strengthen or weaken the argument. So even if a boldface portion could be used by the argument in a certain way, all that matters is its actual intended role. The fact that *technological advances tend to be quickly surpassed* serves to partly explain why *many companies charge the maximum possible price for such a product*. In other words, the first boldface portion helps explain the popularity of the strategy presented in the second boldface portion. The conclusion of the argument, however, is that the strategy exemplified in this latter boldface portion is unwise, so the argument as a whole opposes that strategy.

A Although the first boldface portion could be used as part of an argument that the strategy presented in the second boldface portion is counterproductive, that is not how it is used here. Rather, it immediately follows the word *because* and serves to explain the occurrence of what is described in the second boldface portion.

B This is clearly wrong because the second boldface portion presents the strategy that the argument opposes.

C **Correct.** It is the only choice that is consistent with the analysis of the reasoning presented above.

D The first boldface portion is not an assumption rejected by the argument; rather, it is affirmed in the argument.

E The argument does not expressly claim that the first boldface portion has been used to justify the strategy of setting the price as high as possible, although it implies that this is part of the justification that those adopting the strategy would give. More clearly, the second boldface portion does not describe the intended outcome of the strategy, but rather the means of bringing about that intended outcome (maximizing profits, by means of high prices).

The correct answer is C.

CR05554

195. Gortland has long been narrowly self-sufficient in both grain and meat. However, as per capita income in Gortland has risen toward the world average, per capita consumption of meat has also risen toward the world average, and it takes several pounds of grain to produce one pound of meat. Therefore, since per capita income continues to rise, whereas domestic grain production will not increase, Gortland will soon have to import either grain or meat or both.

Which of the following is an assumption on which the argument depends?

(A) The total acreage devoted to grain production in Gortland will not decrease substantially.

(B) The population of Gortland has remained relatively constant during the country's years of growing prosperity.

(C) The per capita consumption of meat in Gortland is roughly the same across all income levels.

(D) In Gortland, neither meat nor grain is subject to government price controls.

(E) People in Gortland who increase their consumption of meat will not radically decrease their consumption of grain.

Argument Construction

Situation A country previously self-sufficient in grain and meat will soon have to import one or the other or both because its consumption of meat has risen as per capita income has risen. It takes several pounds of grain to produce one pound of meat.

Reasoning *What conditions must be true for the conclusion to be true?* Meat consumption is rising. What about grain consumption? A sharp reduction in the amount of grain directly consumed by meat eaters could compensate for increased meat consumption, making the conclusion false. If people did radically decrease their grain consumption, it might not be necessary to import grain or meat. Since the argument concludes that the imports are necessary, it assumes that direct consumption of grain by those who begin to eat meat will not plunge.

A The argument makes no assumptions about the acreage devoted to grain; it assumes only that the demand for grain will rise.

B The argument is based on rising per capita income, not population levels.

C The argument involves only meat consumption in general, not its distribution by income level.

D Since the argument does not refer to price controls, it cannot depend on an assumption about them.

E **Correct.** This statement properly identifies the assumption that those who begin to eat meat do not then greatly decrease their direct consumption of grains.

The correct answer is E.

CR05625

196. Political Advertisement:

Mayor Delmont's critics complain about the jobs that were lost in the city under Delmont's leadership. Yet the fact is that not only were more jobs created than were eliminated, but each year since Delmont took office the average pay for the new jobs created has been higher than that year's average pay for jobs citywide. So it stands to reason that throughout Delmont's tenure the average paycheck in this city has been getting steadily bigger.

Which of the following, if true, most seriously weakens the argument in the advertisement?

(A) The unemployment rate in the city is higher today than it was when Mayor Delmont took office.

(B) The average pay for jobs in the city was at a ten-year low when Mayor Delmont took office.

(C) Each year during Mayor Delmont's tenure, the average pay for jobs that were eliminated has been higher than the average pay for jobs citywide.

(D) Most of the jobs eliminated during Mayor Delmont's tenure were in declining industries.

(E) The average pay for jobs in the city is currently lower than it is for jobs in the suburbs surrounding the city.

Argument Evaluation

Situation Every year since Mayor Delmont took office, average pay for new jobs has exceeded average pay for jobs citywide. So, the average paycheck in the city has been increasing since Delmont took office.

Reasoning *Which option, if true, would most seriously weaken the argument?* If average pay for new jobs continually exceeds that for jobs generally, new jobs pay better (on average) than old jobs that still exist. But suppose the following occurred. Every year all of the highest paying jobs are eliminated and replaced with somewhat lower-paying jobs that still pay more than the average job. The result would be that every year the average pay for a new job would be greater than that for existing jobs, but the average pay for all jobs would nonetheless decrease. Thus, if every year during the mayor's tenure the jobs that were eliminated paid better on average than jobs citywide, that would seriously weaken the argument: the conclusion could be false even if the information on which it is based is true.

A The percentage of people in the city who have a job has no direct bearing on whether the average pay for jobs citywide is increasing or decreasing.

B Whether the average pay was low when the mayor took office in comparison to the ten preceding years is immaterial to the comparison addressed in the argument's conclusion.

C **Correct.** This information weakens the argument because it opens up the possibility that the jobs eliminated had higher average pay than the jobs created during Mayor Delmont's tenure. This in turn would mean that the average pay was not increasing during Mayor Delmont's tenure.

D This, too, has no bearing on the argument, because we have no information about the average pay for jobs in those declining industries.

E This is also irrelevant. No comparison is made (or implied) in the argument between jobs in the city and jobs in the suburbs.

The correct answer is C.

CR04930

197. To prevent a newly built dam on the Chiff River from blocking the route of fish migrating to breeding grounds upstream, the dam includes a fish pass, a mechanism designed to allow fish through the dam. Before the construction of the dam and fish pass, several thousand fish a day swam upriver during spawning season. But in the first season after the project's completion, only 300 per day made the journey. Clearly, the fish pass is defective.

Which of the following, if true, most seriously weakens the argument?

(A) Fish that have migrated to the upstream breeding grounds do not return down the Chiff River again.

(B) On other rivers in the region, the construction of dams with fish passes has led to only small decreases in the number of fish migrating upstream.

(C) The construction of the dam stirred up potentially toxic river sediments that were carried downstream.

(D) Populations of migratory fish in the Chiff River have been declining slightly over the last 20 years.

(E) During spawning season, the dam releases sufficient water for migratory fish below the dam to swim upstream.

Argument Evaluation

Situation A new dam includes a mechanism called a fish pass designed to allow fish to migrate upstream past the dam to their breeding grounds. The number of migrating fish fell from several thousand per day before the dam was built to three hundred per day in the first season after it was built, indicating—according to the argument—that the fish pass is defective.

Reasoning *What evidence would suggest that the fish pass is not defective?* The argument implicitly reasons that a defective fish pass would make it difficult for the fish to migrate, which would explain why the number of migrating fish fell when the dam was completed. Any evidence suggesting an alternative explanation for the reduced number of migrating fish, such as an environmental change that occurred when the dam was built, would cast doubt on the argument's reasoning.

A A defective fish pass could prevent most of the fish from migrating upstream regardless of whether those that succeed ever return downstream.

B This would suggest that dams with properly functioning fish passes do not greatly reduce the number of migrating fish, so it would provide further evidence that the fish pass in this particular dam is defective.

C **Correct.** This suggests that the toxic sediments may have poisoned the fish and reduced their population. A smaller fish population could be sufficient to explain the reduced number of fish migrating, which casts doubt on the argument's assumption that the explanation for their declining numbers involves the fish pass.

D A slight and gradual ongoing decline in migratory fish populations would not explain an abrupt and extreme decline right after the dam was built.

E This supports the argument's proposed explanation for the declining fish population by ruling out the alternative explanation that the dam does not release enough water for the fish to migrate.

The correct answer is C.

CR09969

198. Music critic: Fewer and fewer musicians are studying classical music, decreasing the likelihood that those with real aptitude for such music will be performing it. Audiences who hear these performances will not appreciate classical music's greatness and will thus decamp to other genres. So to maintain classical music's current meager popularity, we must encourage more young musicians to enter the field.

Which of the following, if true, most weakens the music critic's reasoning?

(A) Musicians who choose to study classical music do so because they believe they have an aptitude for the music.

(B) Classical music's current meager popularity is attributable to the profusion of other genres of music available to listeners.

(C) Most people who appreciate classical music come to do so through old recordings rather than live performances.

(D) It is possible to enjoy the music in a particular genre even when it is performed by musicians who are not ideally suited for that genre.

(E) The continued popularity of a given genre of music depends in part on the audience's being able to understand why that genre attained its original popularity.

Argument Evaluation

Situation Fewer musicians are studying classical music. This reduces the likelihood that those performing the music will have real aptitude for it, which in turn reduces audience's appreciation of classical music performances.

Reasoning *What evidence would cast the most doubt on the support provided for the conclusion that encouraging more young musicians to study classical music is necessary in order to maintain the genre's meager popularity?* The music critic's argument is that because fewer talented classical musicians are performing, audiences hearing their performances will fail to appreciate the genre, and thus will abandon it. The critic reasons that to solve this problem, it will be necessary to encourage more young musicians to study classical music so that audiences will eventually be exposed to more talented classical performers and decide the genre is worthwhile after all. The argument would be weakened, for example, by evidence that hearing unremarkable live performances does not really drive many people away from classical music, or that the number of audience members hearing great performances does not depend much on the number of talented performers, or that encouraging young musicians to study classical music is either ineffective or not the only effective way to increase the number of talented classical performers.

A This does not weaken the critic's reasoning. However much confidence musicians studying classical music have in their own talent, a decline in the total number of classical musicians will probably result in a decline in the number of truly talented classical musicians, just as the critic assumes.

B The critic is only proposing a way to at least maintain classical music's current meager popularity, which might be accomplished even if the profusion of other genres prevents classical music's popularity from increasing.

C **Correct.** This suggests that classical music's meager popularity could at least be maintained by encouraging people to listen to great old recordings of classical music rather than by increasing the supply of great live performances.

D This does weaken the argument slightly. But even if a few audience members manage to enjoy mediocre classical music performances, they might still be more strongly drawn to other genres with more talented performers.

E Listeners exposed to more impressive live performances of classical music by talented performers would probably better understand why classical music was once popular than would listeners exposed only to mediocre classical performances.

The correct answer is C.

CR05656

199. Commemorative plaques cast from brass are a characteristic art form of the Benin culture of West Africa. Some scholars, noting that the oldest surviving plaques date to the 1400s, hypothesize that brass-casting techniques were introduced by the Portuguese, who came to Benin in 1485 A.D. But Portuguese records of that expedition mention cast-brass jewelry sent to Benin's king from neighboring Ife. So it is unlikely that Benin's knowledge of brass casting derived from the Portuguese.

Which of the following, if true, most strengthens the argument?

(A) The Portuguese records do not indicate whether their expedition of 1485 included metalworkers.

(B) The Portuguese had no contact with Ife until the 1500s.

(C) In the 1400s the Portuguese did not use cast brass for commemorative plaques.

(D) As early as 1500 A.D., Benin artists were making brass plaques incorporating depictions of Europeans.

(E) Copper, which is required for making brass, can be found throughout Benin territory.

Argument Construction

Situation The oldest surviving cast-brass plaques from the Benin culture date to the 1400s. Records of a Portuguese expedition to Benin in 1485 mention cast-brass jewelry sent to Benin's king from neighboring Ife.

Reasoning *What additional evidence, when combined with the argument's premises, would most help support the conclusion that Benin's knowledge of brass casting did not derive from the Portuguese?* The argument is that since the expedition records indicate that cast-brass jewelry from Ife was already known in Benin when the Portuguese first came there, Benin's knowledge of brass casting probably did not derive from the Portuguese. This argument assumes that receiving the brass-cast jewelry from Ife could have transmitted knowledge of brass casting to Benin, and also that knowledge of brass casting in Ife did not itself derive from the Portuguese. Any evidence supporting either of these assumptions would strengthen the argument.

A This is compatible with a Portuguese origin for brass-casting in Benin. The expedition might well have included metalworkers even if the records do not mention whether it did. Furthermore, other Portuguese expeditions with metalworkers might have quickly followed the initial expedition.

B **Correct.** If the Portuguese had no contact with Ife before 1500, then Ife's earlier knowledge of brass casting did not derive directly from the Portuguese. This increases the likelihood that knowledge of brass-casting in Benin did not derive from the Portuguese, even if it derived from Ife.

C This is compatible with a Portuguese origin for brass-casting in Benin. Even if the Portuguese did not use cast brass for commemorative plaques, they could have used it for jewelry or other items they brought to Benin or manufactured there, and thus they could have transmitted the knowledge to the Benin culture.

D This leaves open the possibility that the Benin culture learned about brass casting from the Portuguese in 1485 and started using it to produce plaques of this type by 1500.

E Even if copper has always been common in the Benin territory, brass-casting techniques could have been introduced by the Portuguese.

The correct answer is B.

5.0 Sentence Correction

5.0 Sentence Correction

Sentence correction questions appear in the Verbal Reasoning section of the GMAT™ exam. The Verbal Reasoning section uses multiple-choice questions to measure your ability to read and comprehend written material, to reason and evaluate arguments, and to correct written material to conform to standard written English. Because the Verbal Reasoning section includes passages from several different content areas, you may be generally familiar with some of the material; however, neither the passages nor the questions assume detailed knowledge of the topics discussed. Sentence correction questions are intermingled with critical reasoning and reading comprehension questions throughout the Verbal Reasoning section of the test. You will have 65 minutes to complete the Verbal Reasoning section or about 1¾ minutes to answer each question.

Sentence correction questions present a statement in which words are underlined. The questions ask you to select the best expression of the idea or relationship described in the underlined section from the answer options. The first answer choice always repeats the original phrasing, whereas the other four provide alternatives. In some cases, the original phrasing is the best choice. In other cases, the underlined section has obvious or subtle errors that require correction. These questions require you to be familiar with the stylistic conventions and grammatical rules of standard written English and to demonstrate your ability to improve incorrect or ineffective expressions.

You should begin these questions by reading the sentence carefully. Note whether there are any obvious grammatical errors as you read the underlined section. Then read the five answer choices carefully. If there was a subtle error you did not recognize the first time you read the sentence, it may become apparent after you have read the answer choices. If the error is still unclear, see whether you can eliminate some of the answers as being incorrect. Remember that in some cases, the original selection may be the best answer.

5.1 Some Comments About How It Works

Sentence Correction questions require a good understanding of how the conventions of standard written English can be used for effective communication. However, that understanding does not have to come from extensive explicit training in grammar and usage or from knowledge of specialized linguistic terminology. Many people may have the needed insights without being able to explain them in technical terms. Analogously, without knowing the scientific name of baker's yeast or the chemistry of the Maillard reaction, a talented baker or food critic may be able to tell whether a loaf of bread was properly prepared. This is not to say that explicit training in grammar and usage is unhelpful. As an adjunct to critical reading and writing experience, it can be a useful approach to developing insights into good written communication. It is good to be cautious, though; books and websites offering advice about how to write may occasionally stipulate outmoded or idiosyncratic rules that are not generally followed in effective professional writing.

The problems posed in Sentence Correction take a different approach and fall within a different domain from those in the other Verbal Reasoning Section types. But like those other types, they test skills of critical reasoning, problem solving, and reading comprehension. Sentence Correction tasks can be aptly thought of as requiring detective work. A key part of this work consists of understanding the differences among formulations offered in the answer choices and in seeing that some do not make sense when they are plugged into the larger sentence. In this way, the Sentence Correction questions pose some of the most refined and closely targeted reading comprehension tasks in the GMAT exam. To see why certain wordings do not work, you will need to use critical analysis, forming hypotheses about what the writer is trying to express and being ready to revise the hypotheses as you read through the answer choices.

The more difficult questions are not essentially designed to test for knowledge of rules or facts that are harder to learn or that require more technical training. Difficulty often stems from complexity and subtlety among the interconnected parts of the sentence and involves critical application of principles that all astute users of English should understand. Sentence Correction tasks are puzzles of a sort, but they are not merely arbitrarily contrived. Typically, the incorrect answer choices represent flaws that even an experienced writer might introduce by temporarily losing track of the structure of a sentence or by accidentally moving a piece of text to an unintended position.

Sometimes you may be able to think of a wording that works better than any of the options presented, but the task is to find the most effective of the available choices within the parameters of the problem posed. In writing, there are almost always tradeoffs. For example, conciseness is sometimes the enemy of precision and adequate specificity. Certain types of redundancy can be annoying and can make the writer seem inept, but other types of repetition and paraphrasing can improve readability and comprehension. Language serves many purposes, not all of which are cooperative or directly informative. In sincere straightforwardly informative writing—although not in all advertising, entertainment, and poetry—one should minimize ambiguity, yet in the end every sentence is at least somewhat open to multiple interpretations. Because one can never absolutely eliminate the risk of unintended interpretations, Sentence Correction answers should minimize that risk relative to the context, setting, and ordinary assumptions about the intent of the writer. It is safe to assume that any GMAT Sentence Correction sentence you encounter will be intended to sincerely inform, instruct, or inquire, rather than to parody bad writing, confuse the reader, or provoke laughter, outrage, or derision.

You will not be expected to take sides in contentious controversies about grammar, usage, or style or to apply rules that are widely regarded as highly pedantic or outdated. A few of these are mentioned in the discussions of the specific categories that follow.

5.2 The Eight Sentence Correction Categories

The problems to be solved in Sentence Correction questions are classified into eight grammar and usage categories. Each incorrect answer choice contains a flaw in at least one of these categories, and some span two or more categories. Each test contains questions representing a wide range of different types of problems. In the answer explanations in section 5.9, the categories shown in the heading for each question are the most salient, but many of the questions contain problems in other categories as well. Although these eight categories represent the full range of Sentence Correction problems, the discussions within each category below are not exhaustive and are not intended as a comprehensive guide to English grammar and usage. For each category, the discussion aims to provide a general understanding of the kinds of reasoning that may be involved in solving Sentence Correction problems of that type.

Agreement

Effective verbal communication requires clarity about how the elements of a sentence relate to one another. The conventions of agreement help maintain such clarity; constructions that violate these conventions can be confusing or even nonsensical. There are two types of agreement: subject-verb agreement and agreement of terms that have the same referent.

Subject–verb agreement: Singular subjects take singular verbs, whereas plural subjects take plural verbs. Standard contemporary English makes few distinctions in verb form among persons and numbers, but most English verbs do have a distinct present-tense form for third person singular, and *to be* has distinctive forms for first person singular (*am*, *was*).

Examples:
Correct: "I **walk** to the store."
Incorrect: "I **walks** to the store."

Correct: "Each of the circuits **has** its own switch."
Incorrect: "Each of the circuits **have** its own switch."

Correct: "The masses **have** spoken."
Incorrect: "The masses **has** spoken."

Agreement between terms that have the same referent: A pronoun that stands for another element in the discourse—a noun, a noun phrase, or another pronoun—must agree with its antecedent in person, number, and gender. Where a noun or noun phrase has the same referent as another noun or noun phrase, the two terms should agree in number.

Examples:
Correct: "When **you** dream, **you** are usually asleep."
Incorrect: "When **one** dreams, **you** are usually asleep."

The incorrect version is by no means ungrammatical, but it is puzzling and appears not to be intended to mean what it literally says. Thus, it is also a matter of logical predication and rhetorical construction, categories that are discussed under those headings below.

Correct: "I threw away the banana and the mango because **they were** both spoiled."
Incorrect: "I threw away the banana and the mango because **it was** both spoiled."

Correct: "The engineers are **friends** of mine."
Incorrect: "The engineers are **a friend** of mine."

Almost all educated users of English have internalized the conventions of agreement, yet we all occasionally make mistakes of this sort by accident or because we lose track of the structure of our wording. Keep in mind that as you evaluate different wording choices, context is vitally important. We can see immediately that an entire clause consisting of the words "You is working" would be incorrect. On the other hand, that same sequence of words is correct in the following sentence: "The team member who used to assist you is working on a different project now." This is easy to see, but doing so depends on recognizing that the subject of *is* is not *you* but rather the entire noun phrase preceding the verb. This recognition may be either intuitive or based on explicit analysis.

Similarly, no one would seriously claim that the plural *they* should stand for the singular noun *proposal*, but one might more easily overlook the failure of agreement in the following sentence: "From among the six submitted proposals, they chose number four, believing that they could be more easily implemented than the other five." Many readers may see the problem quickly, but in doing so they are noting some complex features of the sentence structure. In principle, *they* could refer to the six proposals or to those who chose from among them, but neither of those tentative interpretations makes sense. Here the reasoning overlaps with that involved in the category of logical predication. The choosers are not the sorts of things that could be implemented, and the comparative phrase *than the other five* rules out the hypothesis that the antecedent of *they* is the plural *six submitted proposals*. Changing *they* to *it* resolves the discrepancy by using a pronoun that clearly has the singular noun phrase *number four* as its antecedent.

Some complicating factors to consider:

When analyzing potential agreement issues in Sentence Correction, keep in mind that not all cases conform obviously and straightforwardly to the most basic rules of agreement. Here are a few special considerations. These are not intended to be exhaustive.

Quantities and quantifying phrases: In some cases, formally plural quantities may take plural verbs, and in other cases they are construed as singular. For example, "Six dollars were withdrawn from the box, one at a time" is correct, but so is "Six dollars is a high price for that."

Quantifying phrases (such as *a number of* and *a percentage of*) often function as subject modifiers in what could appear to be a subject position. In such cases, they are treated similarly to numbers. "A large proportion of the trees are flowering" is essentially like "Three of the trees are flowering." In other cases, similar phrases function as subjects. Consider, for example, the following correct phrases: "A small percentage of our profits is reinvested" and "A small percentage of our employees oppose the new plan."

As a pronoun, *each* is singular, distributing individually to the members of the set or collection referred to, as illustrated in "Each of the circuits has its own switch." When *each* is used as an adjective before a noun, the noun is singular ("Each machine has been inspected"), but in the predicate position *each* modifies the entire plural collection ("The machines have each been inspected").

Plurals that appear singular: All English users are aware that for some words the plural is the same as the singular (*sheep* and *deer*, for example), but there are subtle cases, as when a formally singular noun referring to a group or culture is construed as plural. No simple rule governs the use of such terms; one can say, for example, "the British are" or "the Inuit are" but not "the German are" or "the Cuban are." *Police* is plural, but many similar group words, such as *navy*, are typically construed as singular.

Collective nouns construed as singular or plural: Many nouns referring to groups of people or collections of things have a singular form (team, choir, platoon, crew, assembly, for example). In some editorial styles—and especially in British usage—these can sometimes be construed as plural. This occurs where the writer's intention is to distribute the predicate to the individual members of the group rather than to refer to the group as a single abstract entity. Thus, one may say "the staff are working in small groups" but also "the staff is larger than it used to be."

Plurals construed as singular: Some formally plural nouns, such as *news* are construed as singular in normal usage. A title that has a plural form (such as *The Grapes of Wrath*) takes a singular verb if it refers to a single work, and some names of organizations or political entities may be construed as singular, even though they have a plural form. For example, the phrase *the Cayman Islands* may be singular when referring to the country as a political entity and plural when referring to the islands as multiple pieces of land.

Singular verbs that could appear plural: For most English verbs (with the notable exception of *to be*), the infinitive is the same as the present plural, and the present subjunctive for all persons is the same as the infinitive. Furthermore, the singular past subjunctive is the same as the plural. Thus, there is a risk that at first glance a correct verb form used with a singular subject may appear plural. "The researcher suspend further testing" and "I were you" would be incorrect as complete sentences, but in the following sentences they are in the subjunctive mood and are correct: "We considered it imperative that the researcher suspend further testing." "I wouldn't do that if I were you." As a complete sentence, "The mayor attend the hearings" would be incorrect, but in the sentence, "In none of these cases will either the councilor or the mayor attend the hearings," the verb form is correct; it is an infinitive preceded by the auxiliary verb *will*.

Some issues that are not tested:

The following are a few examples of issues that are outside the scope of the agreement-related Sentence Correction questions.

Especially in informal discourse, the plural pronoun *they* and related forms *them*, *their*, and *theirs* are sometimes used as nonspecific, genderless ways of referring to a singular person. Consider, for example, "Somebody left their notebook on the conference room table." The reasoning surrounding such usage and the alternatives (*he*, *she*, s*he or he*, *she/he*) is complex and evolving. You should not expect to see questions that require you to judge which usage is preferable.

Although you should be able to recognize commonly used irregular plurals or special classes of plurals (such as *phenomena*, *cacti*, *genera*), you will not be asked to correct an improper plural spelling. For example, you will not be asked to correct "the genuses are" to "the genera are."

You will also not be expected to know whether certain highly technical terms or local organization names take singular or plural verbs and pronouns unless the context makes it clear whether they are singular or plural. For example, those who are very familiar with the Centers for Disease Control (a U.S. government organization) will know that it is normally referred to in the singular, but others would not be able to determine this merely from seeing the name.

Diction

Sentences that are structurally well formed can still be confusing, or can make the writer seem inept, if the words are not chosen appropriately and effectively. Effective diction involves using the right part of speech and observing other conventions regarding which words to use in which contexts. Word choices involving agreement and verb form may also be thought of partly as matters of diction, but they are treated separately under the Agreement and Verb Form headings. The diction issues you may encounter in Sentence Correction are too many and varied to list here, but here are a few salient categories into which risks of ineffective diction may fall:

Parts of speech: Even accomplished writers sometimes accidentally use an inappropriate part of speech, such as an adjective where an adverb is needed or a preposition where a conjunction is needed.

Examples:
Correct: "I could **easily** tell that the cat was friendly."
Incorrect: "I could **easy** tell that the cat was friendly."

Correct: "The concerto was **beautiful**."
Incorrect: "The concerto was **beautifully**."

Pronoun cases: Pronouns should be in the right case. A writer might compromise clarity by using a subject form of a pronoun as an object or vice versa or a reflexive pronoun in a nonreflexive context.

Examples:
Correct: "**She** and her friend were walking in the park."
Incorrect: "**Her** and her friend were walking in the park."

Correct: "We sent an email to **them**."
Incorrect: "We sent an email to **they**."

Correct: "I gave **him** a good performance rating."
Incorrect: "I gave **himself** a good performance rating."

Counting and quantifying: Although the conventions for quantification of mass nouns and count nouns have some subtle complexities, keep in mind the general rule that mass nouns are quantified by an amount, whereas count nouns are quantified by numbers or by words (such as *many*) that indicate multiple units. Except in certain technical mathematical contexts, *less* and *least* are typically reserved for comparisons of amount or degree, whereas *fewer* and *fewest* express comparisons of number. However, *more* and *most* are used for both comparisons of number and comparisons of degree. *Both* is appropriate only in referring to two entities or qualities.

Examples:
Correct: "We bought only a **small amount of** rice." "She wished me **much happiness**."
Incorrect: "We bought only **a few** rice." "She wished me **many happinesses**."

Correct: "**Fewer** deliveries arrived today than yesterday."
Incorrect: "**Less** deliveries arrived today than yesterday."

Correct: "**All five of the** trees in the garden need pruning."
Incorrect: "**Both of the five** trees in the garden need pruning."

Prepositions: Subtle differences of relationship are often expressed by different prepositions that function similarly to one another. Consider, for example, in/into/within, to/toward, on/onto/above, through/throughout, beside/besides, beside/along/against, and on/over/above.

Examples:
Correct: "We were standing **beside** the river."
Incorrect: "We were standing **besides** the river."

The incorrect version can also be thought of as displaying a problem of logical predication in that it appears to say illogically that the river was also standing.

Correct: "The editor was sitting **in** his office all afternoon."
Incorrect: "The editor was sitting **into** his office all afternoon."

Word choices that are inherently very simple and obvious can become a little more difficult in complex settings, and a Sentence Correction answer choice that appears appropriate on its own may not work when plugged into the larger sentence. In isolation, "distributed throughout" is recognizable as a standard phrase, but in the following sentence it does not make sense: "The computers were distributed throughout the generosity of a group of donors." Replacing *throughout* with *through* solves the problem. The issue here is a matter not only of diction but also of logical predication: the wording causes the sentence to make an illogical claim about the computers.

"We were confident" is fine as a freestanding sentence, but it is nonsense in the following context: "The lawyer who consulted with we were confident that we could negotiate a settlement." This displays combined problems of diction (*with we*), agreement (the plural *were* with the singular subject *lawyer*), and grammatical construction. "Us was confident" is strange out of context, but substituting *us was* for the offending part of the sentence solves the problem: "The lawyer who consulted with us was confident that we could negotiate a settlement."

Some complicating factors to consider:

The following are only a few examples of the types of subtleties and complexities that may be involved in deciding what words are appropriate.

Potentially misleading grammatical constructions: In some contexts, a verb might superficially appear to require an adverb in the predicate position when in fact a predicate adjective is appropriate. For example, it is correct to say "The surface feels rough" rather than "The surface feels roughly." "The animal does not smell well" means something very different from "The animal does not smell good." Both can be correct depending on what the writer wants to convey.

Words ending in *ing* that are derived from verbs (such as *going*, *assessing*, and *hurting*) can often be either gerunds or participles. Generally, in carefully crafted formal writing, a pronoun or noun that modifies a gerund will be possessive ("The schedule depends on our receiving the materials on time," not "Depends on us receiving"). However, in similar constructions the *ing* word is intended as a participle with the noun or pronoun as its subject. This can be seen in the following two examples: (1) "I was concerned about my friend's lying on the ground." Here the focus of the concern is on the situation the friend was in. (2) "I was concerned about my friend lying on the ground." In this case, the writer may intend the focus to be explicitly on the friend who was in that situation.

Words with multiple functions: In English, almost any noun can function as an adjective. Nouns that function also as verbs are well known (as in "she chaired the meeting" or "he tabled the motion"), but words that are not normally used as verbs can also be pressed into special service as verbs on an ad hoc basis. One could say, for example, "She plans to greenhouse her tender plants when the weather turns cold." Some words regularly function as both adjectives and adverbs. One can say, for example, both "This is a hard job" and "We are working hard." Likewise, *fast* is used correctly as both adjective and adverb in the following sentence: "This is not usually a fast train, but it is moving fast at this moment."

Considerations in applying between and among: Among is generally not appropriate for relationships that involve only two entities. It is standard to say "the distance between my house and yours," not "the distance among my house and yours." *Among* is usually needed instead of *between* for relationships involving more than two entities, but there are exceptions. *Between* is sometimes the more accurate preposition to use where the relationship holds, independently, between each member of the group and some other member. Thus, for example, it would be appropriate to say, "In planning your trip to the five destinations, consider the distances between cities and the driving conditions you may encounter."

Some issues that are not tested:

The following are a few examples of issues that are outside the scope of the diction-related Sentence Correction questions.

Which/that: Some American publishers have adopted the convention that *which*, used as a relative pronoun, should always be nonrestrictive and should be replaced with *that* in restrictive contexts (as in "Laws which have been repealed are no longer enforced" versus "laws that have been repealed are no longer enforced").You should not expect to see questions for which the deciding factor is merely whether the writer adheres to this convention.

Object words with "to be": Some usage advisors prescribe the use of nominative (subject) pronouns in both the subject position and the object position with the verb *to be.* According to this convention, "If I were her, I would be happy to accept the job" is incorrect; it should be "If I were she, I would be happy

to accept the job." In some contexts, this latter form of expression could seem annoyingly stilted and pedantic and thus could violate other standards of effective expression. You should not expect to see questions for which the deciding factor is merely whether the writer adheres to this convention.

Slang, archaic diction, and words that are distinctively regional or limited to certain subsets of English: You will not be expected, for example, to correct *thou* or *you-all* to *you*, to understand that *skint* could be paraphrased as *lacking resources*, to judge whether *mickle* is a synonym of *muckle* or whether either of these should be paraphrased with *large*, or to understand that *give* (a test) in some usages is synonymous with *take* (a test) in others.

Variant forms and spellings: You will not be asked to choose between variant forms that have the same function and meaning. Some examples of such variant pairs are: *whilst/while*, *toward/towards*, *until/till*, and *outward/outwards*.

Grammatical Construction

Many issues of agreement, verb form, parallelism, diction, and idiom can be described as matters of grammar, but those categories by no means cover the full range of grammar-related tasks in Sentence Correction. The Grammatical Construction category concerns issues of grammar that are not treated elsewhere in this classification scheme. For the most part, these are matters of syntax—the ways in which the elements of a sentence are arranged. Effective communication depends on shared understandings between the writer and reader about how the relative positions of words and phrases help convey meaning. A series of words and punctuation marks that does not follow predictable conventions of syntax can be puzzling, annoying, or even incomprehensible. Here are a few major principles guiding effective grammatical construction:

Complete structure: In English, a well-formed sentence or independent clause needs both a subject and a predicate containing a main verb.

Examples:
Correct: "The shipping **company promised that** the package would be delivered on time."
Incorrect: "The shipping **company that** the package would be delivered on time."

Here the main subject, *the shipping company*, has no verb; the only verb phrase, *would be delivered*, has *the package* as its subject and is embedded in the clause beginning with *that*.

Correct: "**In any case, the contract is** acceptable."
Incorrect: "**In any case is** acceptable."

In this incorrect example, there is no discernible subject.

Correct: "**Rushing to defend its nest, the swan** pecked at the intruder."
Incorrect: "**Rushing to defend its nest. The swan** pecked at the intruder."

The first part of this incorrect example represents a stereotypical variety of incompletely formed sentence known as a sentence fragment. Sentence fragments are punctuated as sentences but are grammatically incomplete and often seem to be left stranded from a preceding or following sentence.

Clear and correct linkages and punctuation: For clarity of meaning, the elements of a sentence need to be linked to, and separated from, one another with standard punctuation and with appropriate links such as conjunctions and relative pronouns.

Examples:
Correct: "The cupboard **contained two boxes of tea, a bag of rice, and a jar of pickles**."
Incorrect: "The cupboard **contained two boxes of tea a bag of rice, and contained a jar of pickles**."

In this case, the structure is both ungrammatical and confusingly nonparallel. Issues of the latter type are discussed under the Parallelism heading below.

Correct: "The weather yesterday was **hot, and there were** thunderstorms in the evening."
Incorrect: "The weather yesterday was **hot there were** thunderstorms in the evening."

Correct: "We should cancel the **cricket match; the rain will continue** all afternoon."
Incorrect: "We should cancel the **cricket match the rain will continue,** all afternoon."

Proper ordering of words and phrases: A sentence whose components do not follow standard conventions for English governing the sequence of parts can be confusing and can make the writer appear unfamiliar with the language.

Examples:
Correct: "The director's name is Juan."
Incorrect: "Is Juan, the director's name."

Correct: "The geranium has outgrown its pot and will need to be transplanted to a larger container."
Incorrect: "Outgrown its pot to a larger container and the geranium will need to be transplanted."

Correct: "Please call me tomorrow to discuss the contract."
Incorrect: "To discuss me please the contract tomorrow call."

This is an extreme case of obviously ungrammatical word arrangement. Incoherent word sequences such as this are sometimes described as "word salad." To the extent that this example makes any sense, it also appears illogically to be asking someone to telephone a contract and thus displays a problem of logical predication (discussed later under that heading).

To see how an answer choice affects a sentence's grammatical construction, you may need to analyze the relationship between widely separated parts. Consider the sentence, "If you clean the filter before it becomes so clogged that it impedes the flow can prevent costly repairs in the long run." It is important to see that the main verb phrase is *can prevent*; the intervening verbs are embedded in the clause modifying *clean the filter*. The opening phrase, *if you clean* . . . is not grammatically structured to function as a subject, but if that phrase is replaced with *cleaning*, the sentence becomes well formed and makes sense: "Cleaning the filter before it becomes so clogged that it impedes the flow can prevent costly repairs in the long run." The problem with *if you clean* involves both grammatical construction and verb form (discussed later under that heading).

Consider also the following ungrammatical sentence: "The headphones provided with the audio player that **although she bought them last year, they never worked**." The phrase "She bought last year never worked" would be ungrammatical in isolation, but if substituted for the boldface phrase, it makes the sentence grammatically correct: "The headphones provided with the audio player that **she bought last year never worked**." The crucial relationship here is between the opening words (*the headphones*) and the final phrase of the sentence.

Some complicating factors to consider:

Idiomatic constructions: Some idiomatic wording formats, especially those that use parallel structure to express comparisons, are widely treated as well-formed sentences even though they do not follow the basic conventions of grammatical construction. Some examples are: "The greater the thread count, the higher the price." "Better a small nutritious meal than a large unwholesome one." "Here today, gone tomorrow."

Inverted structures: In contemporary English, standard sentence structure puts subjects ahead of their verbs, but there are many exceptions for special purposes, including some quotations, negative constructions, and questions. Each of the following is readily recognizable as a well-formed sentence: "'Tell me about it,' said his uncle." "Were you at the meeting?" "In neither case could I find the needed information."

Elliptical constructions: In informal contexts and in many formal contexts where economy of words and smoothness of flow are key considerations, certain sentence elements may be omitted when the writer's intent is entirely clear without them. For example, *that* is often omitted at the start of a relative clause, as in "The film I saw last night was boring" or "I was afraid they might be angry." It is also often considered acceptable to omit infinitive verbs in some cases to avoid awkward repetition, with the preposition *to* left dangling, as in "I reviewed the report even though I didn't want to."

Some issues that are not tested:

The following are a few examples of issues that are outside the scope of the grammatical-construction-related Sentence Correction questions.

Fragments that function as complete sentences in special contexts: A group of words that has no subject or no verb can sometimes stand as a well-formed sentence. "No" can be a complete sentence in answer to a stated or hypothetical question, as can "The one on the left." Similarly, a clause beginning with a conjunction and not followed by any other clause can sometimes be an acceptable sentence, as, for example, "Because the delivery was late." Exclamations such as "Not again!" are also complete and well formed in special contexts. You should not expect to see a Sentence Correction question that appears likely to be drawn from a context in which it is intended to function in any of these ways or as a headline, title, or line of poetry.

Punctuation as editorial style: You will need to judge issues of punctuation only insofar as they involve standard conventions that make a difference for the meaning and coherence of the sentence. Beyond the basic grammatical principles, some punctuation conventions vary by region or academic discipline, are matters of pure style, or are determined by publishers or editors for their own purposes. You will not need to judge, for example, whether a comma should be inside or outside a closing quotation mark, whether emphasis should be indicated by italics, or whether an apostrophe should be inserted before the *s* in a plural non-word such as *IOUs/IOU's* or *1980s/1980's*.

Idiom

Idioms are standard forms of expression that consist of ordinary words but whose uses cannot be inferred from the meanings of their component parts or the basic conventions of grammar and usage. There is ultimately no logical reason why English speakers say "on average" rather than "at average" or "depending on" rather than "depending from." This is simply how we do things. Thus, knowing idiomatic constructions is rather like knowing vocabulary words. Accidentally using the wrong combination of words in an idiomatic construction or structuring a phrase in an unidiomatic way can make it difficult

for readers to discern the writer's intended meaning. Here are a few major categories of idiomatic wording issues that you may encounter in Sentence Correction:

Prepositions with abstract concepts: For abstract concepts there is no top, bottom, inside, or outside, yet with these we often use the same prepositions that denote spatial relationships between concrete objects. There are some patterns, but for the most part knowing which preposition to use with which abstract noun or verb depends on familiarity. The idiomatic pairings of prepositions with abstract concepts are far too many and varied to list here. A few illustrations are: *in* love, different *from* (also different *to* in British usage), *in* a while, *on* guard, *at* work.

Examples:
Correct: "**With regard to** your party invitation, I may not be able to go, because I will be **on call** at the clinic that evening."
Incorrect: "**On regard with** your party invitation, I may not be able to go, because I will be **in call** at the clinic that evening."

Correct: "The cost of the repairs will **depend on** what clever solutions the contractors **come up with**."
Incorrect: "The cost of the repairs will **depend from** what clever solutions the contractors **come out through**."

Correlatives: Certain standard correlative structures provide economical ways of expressing relationships between concepts. For example, it can be more efficient to say "Neither she nor he is going" than to say "He is not going, and she is also not going." However, if such structures are not skillfully handled in accordance with standard conventions, they can be puzzling and misleading. Other examples of such idiomatic correlative structures are *as . . . as, more/less/greater/smaller/etc.. . . than*, and *not only . . . but also*.

Examples:
Correct: "**Neither** the pomegranates **nor** the melons have arrived yet from the vendor."
Incorrect: "**Neither** the pomegranates have arrived yet **neither** the melons from the vendor."

Correct: "She was almost **as** sure that if we installed this system it would fail **as** that we would need some such system."
Incorrect: "She was almost **as** sure that if we installed this system it would fail **than** that we would need some such system."

Correct: "The prolonged drought is stressing **not only** the rabbits **but also** the wallabies."
Incorrect: "The prolonged drought is stressing the rabbits, **not** the wallabies **just only**."

Verb phrases: Many combinations of verbs with adverbs or prepositions, or with both adverbs and prepositions, have conventional meanings that do not follow directly from the meanings of their component parts. These include such phrases as *give up*, *give up on*, *come through with*, *come up*, *come up with*, *come down with*, *do without*, *have at*, *get over*, *get on with*, *go through*, *go through with*, and *get through with*. Similarly, there are many idiomatic combinations of verb and object, such as *have had it*, *make waves*, *make one's mark*, and *put one's finger on*.

Examples:
Correct: "The investigator has **given up on** determining what **happened to** the missing funds."
Incorrect: "The investigator has **given through over** determining what **happened on** the missing funds."

Correct: "When they checked the patient's temperature, it **turned out** that he was **running a fever**."
Incorrect: "When they checked the patient's temperature, it **veered off** that he was **doing a fever**."

Pronouns with no reference: English requires stated subjects in most sentences with active verb forms. Where there is no real subject, one uses specific referentless placeholder pronouns: *it* and *there*.

Examples:
Correct: "**It was raining** yesterday."
Incorrect: "**They were raining** yesterday."

Correct: "**There are** several reasons to prefer this theory over the proposed alternative."
Incorrect: "**Several reasons are** to prefer this theory over the proposed alternative."

Compound modifiers: Some adverbs and adjectives are idiomatically built out of multiple words. A few examples are: *all in all*, *by and by*, *by and large*, *on the whole*, *through and through*, *on the up and up*, and *on the other hand* (sometimes, but not always, correlated with o*n the one hand).*

Examples:
Correct: "She listened to the radio **off and on** throughout the day."
Incorrect: "She listened to the radio **off but again on** throughout the day."

Correct: "You wondered whether anyone would mention you at the meeting; **in fact**, two people **did so**."
Incorrect: "You wondered whether anyone would mention you at the meeting; **in the fact**, two people **did thus and so**."

Idiom-related problems do not always involve identifying malformed idioms. Sometimes the crucial insight may involve determining which of multiple idiomatic meanings is intended or whether a phrase should be treated as an idiom or a non-idiom. The meaning of the sentence "She asked for information **on** purpose of the order I had submitted" is unclear. However, a plausible hypothesis is that the writer meant to say "Information on the purpose," with *on* serving as an informal equivalent of *regarding*. On that reading, the apparent use of the idiom *on purpose* results from an accidental juxtaposition of the two words. Substituting a phrase such as *regarding the* for the boldface word *on* can turn this into a meaningful, well-formed sentence: "She asked for information **regarding the** purpose of the order I had submitted."

In the following sentence, *as long as* could appear at first glance to refer to a length of time: "We should be able to restart our assembly line tomorrow **as long as receiving** the replacement parts today." However, on that interpretation the temporal relationship does not make sense. The sentence can be made coherent by replacing *receiving* with *we receive*, but doing so requires reinterpreting the phrase *as long as* so that it functions as an idiom equivalent to *provided that*. The sentence then becomes "We should be able to restart our assembly line tomorrow **as long as we receive** the replacement parts today."

Some complicating factors to consider:

Here are just a few of the many subtleties that one may encounter in judging whether idiomatic usages are correct and effective:

Similar phrases often have very different idiomatic uses and meanings; consider, for example, *come through with*, *come down with*, and *come up with*. Some idiomatic preposition-plus-noun phrases have alternate forms. For example, it is correct to say either "with regard to" or "in regard to." Many idiomatic phrases have multiple meanings, which are not always similar. For example, *come out with*in some contexts means *express* and in others *publish* or *begin marketing*.

For many idiomatic expressions, there are special exceptions to the standard forms. For example, *not only . . . but* phrases are standardly completed with *also*, but there are special cases in which *also* is unnecessary or misleading. This can be seen in the following sentence: "Surprisingly, the endangered species was found not only at the lowest elevations but throughout the entire valley." If the lowest elevations referred to are in the valley, *but also* would misleadingly seem to indicate that the entire valley was a separate category rather than a more general category encompassing the lower elevations.

Words that form standard pairs, such as *neither* and *nor,* often have other meanings and uses as well. In some contexts, *neither* or *nor* might appear at first glance to need the other term. However, *neither* often occurs as an adjective (as in "Neither book has been opened"), a pronoun (as in "neither of them has been opened"), or a freestanding clause negator (as in "My supervisor is not fond of filing reports, but neither am I"). Similarly, *nor* can occur without *neither* (as in "None of the strata in the escarpment were fractured in the earthquake, nor were any of the exposed formations displaced").

Some issues that are not tested:

GMAT Sentence Correction questions neither assess nor presuppose knowledge of obsolete forms of idiomatic expression, highly specialized technical jargon, distinctive dialect constructions, or slang idioms that have not become standard forms of expression.

Logical Predication

Correct grammar is by no means the only type of structural relationship that matters for effective communication. Logical relationships among sentence elements are also crucial. A writer may accidentally structure a completely grammatical sentence in a way that has unintended meanings or implications. Issues of logical predication intersect with all the other categories discussed here and are involved in many of the Sentence Correction questions. Here are a few ways in which they may occur:

Position and scope of modifiers: Modifiers should be positioned so it is clear what word or words they are meant to modify. If modifiers are not positioned clearly, they can cause illogical references or comparisons or otherwise distort the meaning of the sentence.

Examples:
Correct: "I put **the cake that I baked** by the door."
Incorrect: "I put the cake by **the door that I baked**."

Although the better-worded version contains the potentially ambiguous phrase *I baked by the door*, the meaning is made clear by the fact that *put the cake* requires completion by an indication of where or how the cake was put. Therefore, *by the door* binds to the verb *put*.

Correct: "**Concerned that the snake might be venomous, the workers** left it in the crate untouched."
Incorrect: "**Concerned that it might be venomous, the snake** was left untouched by **the workers in the crate**."

Pronoun–antecedent relationships: A misplaced pronoun can bind to the wrong noun, pronoun, or noun phrase and thus create an unintended meaning.

Examples:
Correct: "The baker informed the customers **that the cakes were moldy** and would have to be discarded."
Incorrect: "The baker informed **the customers that they were moldy** and the cakes would have to be discarded."

Correct: "**After reviewing** the report from the consultants, **the company** may consider changing the logo."
Incorrect: "**After it has reviewed** the report from the consultants, **the logo** may be considered for changing by the company."

Compatibility of concepts: Careless wording can cause a predicate to say something inconsistent with the nature of the subject and vice versa.

Examples:
Correct: "The **three types** of wildlife most often seen in the park are sparrows, mallards, and squirrels, **in that order**."
Incorrect: "The **single** most often **type** of wildlife seen in the park is the sparrow, the mallard, and the squirrel, **in that order**."

Correct: "Stock prices **rose** abruptly today **to an all-time high**."
Incorrect: "Stock prices **dropped** abruptly today **to an all-time high**."

Ellipses and extraneous elements: Omission of a crucial word or phrase or inclusion of an extraneous element can shift the subject to an unintended element while leaving the sentence grammatically well formed. Accidents of this sort can also make an unintended noun or pronoun the subject or object of a verb.

Examples:
Correct: "Work on the stadium renovations **is temporarily at** a standstill."
Incorrect: "Work on the stadium renovations **is temporarily** a standstill."

Here the omission of *at* causes the sentence to make an illogical claim about the work (that it is a standstill).

Correct: "**The car was traveling** slowly along the highway."
Incorrect: "**The car's speed was traveling** slowly along the highway."

The redundant reference to speed causes this sentence to say, absurdly, that the speed was traveling along the highway.

Reversed relationships: An unintended meaning can result from accidentally or misguidedly reversing a relationship between sentence elements.

Examples:
Correct: "Last week's unusually high sales of electric fans can almost certainly be **blamed on** the unseasonably hot weather."
Incorrect: "Last week's unusually high sales of electric fans can almost certainly be **blamed for** the unseasonably hot weather."

(This also involves an issue of idiomatic usage of prepositions (discussed under the Idiom category above).

Correct: "**Forecasters said the cold front** will move through the region tomorrow."
Incorrect: "**Forecasters, said the cold front,** will move through the region tomorrow."

Ambiguous words and phrases: Writers should be cautious in using words or phrases that have multiple standard meanings. Often the context makes it clear which meaning is intended, but sometimes it does not. Paraphrasing to rule out unwanted meanings can sometimes require adding words or increasing the structural complexity of a sentence.

Examples:
Correct: "She has studied Greek and **speaks** that language **in addition to** Gujarati."
Incorrect: "She has studied Greek and **speaks** it **as well as** Gujarati."

As well as is an entirely acceptable equivalent of *and also* or *in addition to*, but it can be an unfortunate choice of words for a context in which *well* makes perfect sense as an evaluative judgment. Since there is no firm basis for deciding which way the latter version is intended, an alternate correct version could be "She has studied Greek and speaks it as well as she speaks Gujarati."

Correct: "Although visitors **are not permitted to** enter the loading docks, they **might** occasionally wander into the area."
Incorrect: "Although visitors **may not** enter the loading docks, they **may** occasionally wander into the area."

Here again, there is no firm basis for deciding which way the latter version is intended. In the incorrect version, both occurrences of *may* could mean either *are permitted to* or *might*.

Few incorrect answers in actual Sentence Correction questions will be as easy to dismiss as the most obvious of these illustrative examples. Most logical predication decisions will require careful analysis of the relationships between the answer choice and the nonunderlined portions of the sentence. Be alert for all types of problematic relationships among sentence parts, not just for stereotypical dangling modifiers.

Some complicating factors:

Given that all Sentence Correction questions are presented out of context, there may be no basis for certainty about which of several possible interpretations the writer intended to convey. You will not be given multiple equally good versions of a sentence and asked to guess which one accurately represents the writer's true intention. In principle, almost any illogically constructed sentence could be intended to convey a bizarre meaning. One could hypothesize that the writer of the first example under *Position and scope of modifiers* really did intend to say that she or he had baked the door. Even on that hypothesis, the most reasonable judgment for Sentence Correction purposes would be that the sentence is poorly constructed. A careful writer who wants to convey a straightforward message should make it clear that the unusual meaning is the intended one instead of leading the reader to believe that she or he is ineptly trying to convey the more plausible meaning.

Some issues that are not tested:

Occasionally, you may find a poorly worded version of a sentence amusing. However, you should not expect to see Sentence Correction sentences that can be most charitably interpreted as jokes. Among the answer choices, there will always be a serious way of resolving ambiguities and illogical meanings.

Parallelism

Words or phrases that have similar roles in a sentence should be treated in ways that make the similarity clear. This often requires ensuring that parallel clauses have parallel structure, that verbs having the same function are in the same form, and that elements within the scope of a modifier all relate to the modifier in the same way. Here are some major categories in which parallelism can be an issue:

Elements of a series: Where the elements of a series all have the same role or function, they should be in parallel form.

Examples:
Correct: "I **ate** supper, **went** for a walk, and then **visited** some friends."
Incorrect: "I **ate** supper, then **walking**, and then **visitation** of some friends."

Correct: "She tackled the problem **calmly**, **efficiently**, and **analytically**."
Incorrect: "She tackled the problem **calmly**, **by being efficient in tackling it**, and **was analytic**."

In both these examples, the nonparallel version is also awkward and wordy. Problems of these types are further discussed under the category of rhetorical construction.

Correlations and comparisons: The sides of a correlative structure often need parallel treatment to make the relationship clear and accurate.

Examples:
Correct: "We are neither **planning to** hire any new developers nor **trying to** find ways to reduce the workloads of the current staff."
Incorrect: "We are planning neither **to hire** any new developers nor **attempts at finding ways to** reduce workloads of the current staff."

Correct: "We were impressed not only **by the** beauty of the inlets and beaches but also **by the** diversity of the plant life."
Incorrect: "We were impressed not only **by the** beauty of the inlets and beaches but also **the diversity** of the plant life **impressed us**."

Issues of scope and repetition of elements: To determine what elements of a sentence should be made parallel to each other, it is sometimes necessary to determine how much of the wording should fall within the scope of a verb, preposition, or modifier. The scope may determine which elements need to be in parallel form and whether certain elements need to be repeated. Issues of this type overlap with those illustrated above.

Examples:
Correct: "He mended the torn fabric with **a needle and thread**."
Incorrect: "He **mended** the torn fabric **with a needle** and **mended** it **with thread**."

Assuming that the needle and thread were used together as a unit, the repetition of *with* misrepresents the relationship. In the correct version, the parallelism is between the two nouns, which are both within the scope of *mended with*. In the incorrect version, the parallelism is between the two verb phrases *mended with* . . . and *mended with* . . .

Correct: "He **punched holes** in the decoration **with a needle** and **tied** it to the lamp **with thread**."
Incorrect: "He **punched holes** in and **tied** the decoration to the lamp with **a needle and thread**."

Correct: "The house that was **on fire** was **on the list** of historically significant buildings."
Incorrect: "The house was **on fire and the list** of historically significant buildings."

On functions so differently in the two phrases that it makes no sense to subsume both the fire and the list under a single occurrence of the preposition. Therefore, we need the repetition of *on*.

Correct: "The mixture contains **dates, raisins, and figs**."
Incorrect: "The mixture **contains** dates, **contains** raisins, and **contains** figs."

The correct version has a parallelism among the three objects of the verb *contains*. In the incorrect version, the verb is awkwardly repeated, creating an unnecessary parallelism among three verb phrases. This also displays a problem of rhetorical construction.

Corresponding series: Where the elements of one series are supposed to correspond to those of another series, the order of elements in each series should parallel the order of elements in the other. This parallelism can help prevent confusion about how the two series relate to each other without using cumbersome repetition.

Example:
Correct: "Last week we had four meetings, of which the **first, second, and third** were on **Tuesday, Wednesday, and Thursday** and the last on Friday."
Incorrect: "Last week we had four meetings, of which the last was on Friday, with the **first, second, and third** being on **Thursday, Tuesday, and Wednesday**."

Grammatical considerations: Some requirements of parallelism, including some of those illustrated above, are also requirements of grammatical construction.

Examples:
Correct: "If **the warranty has expired**, **we will have to pay** for the repairs."
Incorrect: "If **the warranty has expired**, **our paying** for the repairs." In the correct version, the two sides of the conditional are parallel in that each is a complete clause with a subject and predicate.

Correct: "**The shipping delays** and **the** two-day **closure** have caused a backlog of orders."
Incorrect: "**The shipping delays** and **we were closed** for two days have caused a backlog of orders." To function properly as subjects of *have caused*, both of the stated causes need to be in the form of noun phrases.

Some complicating factors:

Problems of idiomatic structure and of logical predication sometimes involve parallelism as well. The following sentence displays all three: "Not only the CEO, and also the executive vice president's proposed policies, have been distributed to the relevant people in middle management." In presenting a faulty parallelism between the *not only* term and the *and also* term, it appears illogically to claim that the CEO has been distributed. It also falls short of the clarity that could be achieved with a more standardly idiomatic *not only . . . but also* structure.

Agreement, as discussed under that heading above, represents a special kind of parallelism. For example, where a singular noun and a pronoun refer to the same thing, the two terms should be parallel in both being singular, and when a verb has a plural subject, the two should be parallel in both being plural. However, in the Sentence Correction classification scheme, agreement is treated as a distinct category. Thus, agreement-related answer explanations in section 5.9 of this book will not automatically carry the parallelism label as well.

Some issues that are not tested:

Sentence Correction questions do not require decisions about purely aesthetic or decorative types of parallelism. For example, you will not be asked to decide whether a rhymed pair such as *highways and byways* would be preferable to another phrase that is equivalent in meaning and function.

Rhetorical Construction

A sentence that is grammatically and idiomatically correct and conforms to good standards of parallelism and logical predication may still be unclear or annoying or may appear ineptly written. Rhetorical construction problems arise in many ways, including the following.

Economy of wording: Superfluous words or unneeded punctuation, pointless redundancies, or convoluted structures that do not enhance precision and adequacy of detail can make a sentence confusing or simply annoying.

Examples:
Correct: "Bananas are almost always harvested green and allowed to ripen in transit or on supermarket shelves."
Incorrect: "With regard to the ways in which people harvest bananas, people almost always harvest such fruits—fruits of the banana variety—in a green condition, and since the thus-harvested bananas have a low ripeness level, people allow these unripe future-delectable-golden morsels to do their ripening while traveling ensconced in cargo devices after harvest, or even when, after transit, they have landed serenely on supermarket shelves."

Correct: "We will carefully review your memo and let you know whether we are interested in the solutions you propose."
Incorrect: "We will "review"—i.e., carefully scrutinize—your memo submitted, letting you know, vis-à-vis the memo's contained proposal details, whether there is interest, on our part, or not, in those."

Precision and adequacy of detail: Wording that is too vague, sparse, indeterminate, or incomplete can fail to effectively communicate the intended message. Precision often requires the inclusion of details and qualifying phrases. How much specificity and qualification are required depends on the purpose of the communication. Scientific and legal contexts, for example, often require far more precision than do casual communications between friends.

Examples:
Correct: "In medical diagnosis, influenza can be understood as an acute respiratory infection caused by any of the influenza viruses."
Incorrect: "In medical diagnosis, influenza can be understood as when a virus affects you."

Correct: "The contractor shall deliver the completed materials, as defined in Section 5 of this agreement, no later than the thirtieth calendar day after the date on which the signed and ratified contract is distributed to the contracting parties."
Incorrect: "The contractor shall finish taking the actions for relevant agreement sections in a month of distribution and related events."

The latter version of this sentence is indisputably badly constructed and very vague. The judgment that the former version is acceptable is based on the adequacy of the wording for the apparently intended purpose, but there is no way to tell, without background information, whether it refers to the right agreement section or delivery deadline.

Active and passive voice: The better-worded version of the "banana" sentence above uses passive verbs (*are harvested and [are] allowed)*. Passive voice is a means of bringing the object of a verb into the subject position. It can sometimes be more straightforward and economical than active voice where the cause of an effect is unknown or irrelevant. However, passive-voice constructions are often objectionably vague, awkward, or indirect.

Examples:
Correct: "We **had** lunch in the hotel and then **spent** the afternoon **looking** at paintings and sculptures in the museum."
Incorrect: "Lunch **was had** in the hotel **by** us before the afternoon **was spent** in the museum where there were paintings and sculptures **being looked at**."

Correct: "The fruits **are left** to dry for two weeks and then **collected**, **sorted**, and **packaged** for shipment."
Incorrect: "**Relevant people leave** the fruits to dry for two weeks, and then **people, devices, and systems collect** and sort them and package them before **someone or something ships** them."

Other types of awkwardness and inelegance: Problems of rhetorical construction take many different forms, some of which do not fall neatly into standard categories.

Examples:
Correct: "As expected, she did the job very well."
Incorrect: "Expectedly, the goodness of her doing the job was considerable."

Correct: "She hoped that humans would be able to explore some of the planets in other solar systems."
Incorrect: "Her hope was for other solar systems' planets' possible human exploration."

Some complicating factors:

Because rhetorical construction is one of the points tested in Sentence Correction, some people might be tempted to guess that shorter answer choices are a safer bet than longer ones. Wordiness is a stereotypical feature of some inelegant writing, and teachers and writing coaches often emphasize conciseness as a goal. Conversely, some might guess that a longer version or one with more qualifiers and caveats is more likely correct. No such guessing strategy is justified. Sentence Correction questions are designed to represent a wide range of issues. Highly professional expert question writers and test assemblers would be extremely unlikely to create predictable patterns that could be exploited in guessing. There is simply no substitute for careful analysis and understanding of the content of each question and answer choice.

Some issues that are not tested:

Sentence Correction questions do not require judgments about rhetorical appropriateness that depend on knowledge of highly technical or specialized vocabulary or syntax. Similarly, you should not expect to see questions for which the deciding factor is merely whether the writer uses jargon or buzzwords. For example, you would not be asked to determine whether *contact* might be preferable to *reach out to*—or whether *sunsetting* might be an effective substitute for *phasing out*—in a sentence such as: "I will reach out to various stakeholders to leverage decisions about the timeframe for phasing out the product."

Verb Form

Verbs should be in the right tenses and moods and should have the right relationships to other verbs. Uses of infinitives and participles should follow standard conventions so that the intended meanings are clear. Some of the problems posed in Sentence Correction questions involve choices among verb tenses, but many are concerned with other verb-form issues. Here are some categories in which verb-form problems may occur:

Temporal relationships: Because Sentence Correction questions are presented without any context, it is sometimes impossible to tell when they were written or whether the events they refer to were in the past, present, or future from the writer's point of view. Therefore, to the extent that verb tenses are at issue, they are often a matter of internal coherence of the parts of the sentence.

Examples:
Correct: "Chili peppers **belong** to the Solanaceae family of flowering plants."
Incorrect: "Chili peppers **are belonging** to the Solanaceae family of flowering plants."

The present progressive form is used unidiomatically in the incorrect version. That form indicates that the event or condition referred to is ongoing at the time of writing and may not continue. The simple present form *belong* is coherent with the permanence and timelessness of the stated fact.

Correct: "I am looking forward to my stay in Tianjin, a city that I **have never visited** before."
Incorrect: "I am looking forward to my stay in Tianjin, a city that I **will never visited** before."

In the correct version, the present perfect form *have never visited* effectively describes the writer's relationship to unspecified times in the past. In the incorrect version, the future form *will* is incompatible with the past-looking perspective indicated by *before* and *visited*.

Correct: "When the researcher **begins** the next phase of the experiment, she **will have been working** on the experiment for six weeks."
Incorrect: "When the researcher **will begin** the next phase of the experiment, she **had been working** on the experiment for six weeks."

The simple present, as used in the correct version, is the appropriate way in English to express a future event on which another future event is predicated. One could similarly use the present perfect *has begun*, which would have a slightly different nuance of meaning. In the incorrect version, *when . . . will begin* is unidiomatic, and the past perfect *had been working* makes no sense in this future context.

Correct: "When I **arrived** at the office, my colleagues **had** already **left**."
Incorrect: "When I **arrived** at the office, my colleagues **will** already **have been leaving**."

In the correct version, the past perfect form *had left* clearly indicates that the action of leaving was already completed at the past time referred to by the simple past form *arrived*. In the incorrect version, the future perfect progressive form makes no sense in relation to the overall past setting established by the verb *arrived*.

Conditionals and subjunctives: Conditional verb forms referring to conjectural or counterfactual events are typically created with the auxiliary *would*. *Would* constructions often require the antecedent (the "if" clause) to be in subjunctive form, but subjunctives have other purposes as well. Although English uses subjunctives less commonly than do some other languages, such forms are sometimes needed to clarify the meaning of a sentence. They appear in prescriptive and conjectural contexts and make

no commitment to whether an action will occur. Consider the difference between the following two sentences: "It is important that he eats high-calorie meals." "It is important that he eat high-calorie meals." The former presupposes that the person actually does eat such meals, and it says that the fact that he does so is important. Using the subjunctive form, the latter prescribes his eating high-calorie meals but makes no commitment to whether he actually does so. For some persons and tenses, the subjunctive is indistinguishable from the past or some other indicative forms.

Examples:
Correct: "If the piano **needed** tuning, I would pay to have that done, but I don't believe it needs tuning."
Incorrect: "When the piano **will need** tuning, I would pay to have that done, but I don't believe it needs tuning."

Correct: "**Were the piano** out of tune, **I would pay** to have it tuned."
Incorrect: "**The piano be** out of tune, **I pay** to have it tuned."

Correct: "If the piano **is** out of tune, I **will pay** to have it tuned."
Incorrect: "If the piano **were** out of tune, I **am going to pay** to have it tuned."

Auxiliary verbs: English uses auxiliary verbs for many purposes, some of which are mentioned in the discussions of temporal relationships and conditionals above. For effective communication, the use of auxiliary verbs should conform to standard conventions.

Examples:
Correct: "**Does the professor teach** that course often?"
Incorrect: "**Teaches** the professor that course often?"

In contemporary English, interrogative forms of most verbs are created using appropriate forms of the auxiliary verb *to do*. The simple inversion of subject and verb seen in the incorrect version is an obsolete form.

Correct: "We **cannot** find the website you recommended."
Incorrect: "We **do not can** find the website you recommended."

Can is a modal verb whose negative and interrogative forms are not created with *do*. Furthermore, *can* is one of a few verbs that have no infinitive form; its infinitive is expressed by a phrase such as *to be able*.

Correct: "The new book **might** turn out **to be** a best seller."
Incorrect: "The new book **might will** turn out **being** a best seller."

Treatment of participles, gerunds, and infinitives: Present participles (such as *finding* and *taking*) are used with the verb *to be* to express progressive verb forms (*is finding*, *had been taking*). They also function as modifiers in phrases such as "He bought the book, hoping he would like it" and as nouns in phrases such as "his buying the book was unexpected." When used as nouns, they are known as gerunds. Past participles (such as *found* and *taken*) are used with the verb *to have* to express perfect verb forms (*has found*, *will have taken*). They also function as adjectives in phrases such as "The book published last year" and "The plant is withered." The infinitive form is used for verbs that are modified by other verbs. With some modifying verbs, the infinitive must be preceded by *to*. With other verbs (certain modal and auxiliary verbs) it must not. With yet others (such as *help*, *go*, and *need*) it can be used either with or without *to*. Infinitives can be treated as nouns, serving as subjects or objects of verbs, as in "to laugh at one's own mistakes can be therapeutic."

Examples:
Correct: "**Having** nowhere else to go, **I wandered** through the airport all day."
Incorrect: "**My having** nowhere else to go **wandered** through the airport all day."

In that the incorrect version makes *having* the subject of *wandered*, it also exemplifies a problem of logical predication (discussed under that heading above).

Correct: "**Widely disliked**, the software went unused."
Incorrect: "**To have widely disliked it**, the software went unused."

Like the one above, this example contains a problem of both verb form and logical predication.

Correct: "You **must make** the reservation at least two days in advance."
Incorrect: "You **must to make** the reservation at least two days in advance."

Correct: "My colleague **went to find** another microphone."
Incorrect: "My colleague **went find** another microphone."

Although such expressions as *go find* and *go get* are standard, they are unidiomatic in affirmative past tenses, which require the preposition *to* with the infinitive ("went to find").

Some complicating factors to consider:

English verb forms and surrounding idiomatic wording conventions have many peculiarities and nuances. The following are reminders of just a few such complications.

It is important to keep in mind that the subtleties of how English tenses are used cannot always be inferred from the names of the tenses. For example, in some other European languages, actions that are currently occurring are indicated by the simple present tense. English typically uses the present progressive form for that purpose, as in "The dog is barking" or "The car is running." The simple present tense in English is typically reserved instead for events and conditions that occur at indefinite or unspecified times or that recur, as in "Dogs bark for various reasons" or "The car runs on unleaded fuel."

"Going to (do or happen)" is a standard way of expressing the future tense, but unlike in French, there is no parallel form "coming from (doing or happening)." To indicate that an action was recently completed, English uses the idiom *has/have/had just*, as in "I had just finished composing the email."

The preposition *to* has many different uses in combination with verbs. These differences can sometimes lead to ambiguous constructions and potential confusion. Stereotypically, *to* before a verb is thought of as an infinitive marker, but it can also indicate purpose or intention. Thus, for example, "I need your truck to haul the boxes" is indeterminate between two meanings. More precise expressions of these could be "I need your truck so that I can haul the boxes" and "It is essential for me that your truck haul the boxes." The latter may seem very formal but could be appropriate where precision is needed. *To* with a verb can also be prescriptive, as in "The borrower is to pay a fine if the materials are not returned by the due date," or simply predictive, as in "The visitors are to arrive soon." It can even express a past tense in a construction such as "but I was never to see him again" or "she was the last one to leave the building."

Shall also has multiple meanings. As a simple future-tense indicator, it is an alternative to *will* for first person verbs ("I shall tell you about it tomorrow"). However, it can also be used prescriptively, similarly to *must*, as in "The borrower shall pay a fine if the materials are not returned by the due date."

Some issues that are not tested:

You may hear that some usage advisors object to placing anything between *to* and an infinitive verb, as in "To finally reach the destination." You should not expect to see Sentence Correction questions for which the deciding factor is merely whether the writer follows this advice. However, you might encounter a sentence that is awkward and unclear because too many words—or words that would go better elsewhere—are crammed in between the preposition and the verb. This occurs in the following sentence: "I try to remember to scrupulously every day before I leave work log off my computer." This is an issue of general unclarity and inelegance falling under the heading of rhetorical construction, and not a mere case of "split infinitive."

5.3 Study Suggestions

There are two basic ways you can study for sentence correction questions:

- **Read material that reflects standard usage.**
  One way to gain familiarity with the basic conventions of standard written English is simply to read. Suitable material will usually be found in good magazines and nonfiction books, editorials in outstanding newspapers, and the collections of essays used by many college and university writing courses.
- **Review basic rules of grammar and practice with writing exercises.**
  Begin by reviewing the grammar rules laid out in this chapter. Then, if you have school assignments (such as essays and research papers) that have been carefully evaluated for grammatical errors, it may be helpful to review the comments and corrections.

5.4 What Is Measured

Sentence correction questions test three broad aspects of language proficiency:

- **Correct expression**
  A correct sentence is grammatically and structurally sound. It conforms to all the rules of standard written English, including noun-verb agreement, noun-pronoun agreement, pronoun consistency, pronoun case, and verb tense sequence. A correct sentence will not have dangling, misplaced, or improperly formed modifiers; unidiomatic or inconsistent expressions; or faults in parallel construction.
- **Effective expression**
  An effective sentence expresses an idea or relationship clearly and concisely as well as grammatically. This does not mean that the choice with the fewest and simplest words is necessarily the best answer. It means that there are no superfluous words or needlessly complicated expressions in the best choice.
- **Proper diction**
  An effective sentence also uses proper diction. (Diction refers to the standard dictionary meanings of words and the appropriateness of words in context.) In evaluating the diction of a sentence, you must be able to recognize whether the words are well chosen, accurate, and suitable for the context.

5.5 Test-Taking Strategies

1. **Read the entire sentence carefully.**
   Try to understand the specific idea or relationship that the sentence should express.

2. **Evaluate the underlined passage for errors and possible corrections before reading the answer choices.**
   This strategy will help you discriminate among the answer choices. Remember, in some cases the underlined passage is correct.

3. **Read each answer choice carefully**
   The first answer choice always repeats the underlined portion of the original sentence. Choose this answer if you think that the sentence is best as originally written, but do so only after examining all the other choices.

4. **Try to determine how to correct what you consider to be wrong with the original sentence.**
   Some of the answer choices may change things that are not wrong, whereas others may not change everything that is wrong.

5. **Make sure that you evaluate the sentence and the choices thoroughly.**
   Pay attention to general clarity, grammatical and idiomatic usage, economy and precision of language, and appropriateness of diction.

6. **Read the whole sentence, substituting the choice that you prefer for the underlined passage.**
   A choice may be wrong because it does not fit grammatically or structurally with the rest of the sentence. Remember that some sentences will require no correction. When the given sentence requires no correction, choose the first answer.

To register for the GMAT exam go to www.mba.com

5.7 Sample Questions

Each of the sentence correction questions presents a sentence, part of or all of which is underlined. Beneath the sentence you will find five ways of phrasing the underlined part. The first of these repeats the original; the other four are different. Follow the requirements of standard written English to choose your answer, paying attention to grammar, word choice, and sentence construction. Select the answer that produces the most effective sentence; your answer should make the sentence clear, exact, and free of grammatical error. It should also minimize awkwardness, ambiguity, and redundancy.

*SC01545

200. With respect to most species of animals, they are evenly divided in right- or left-handedness, unlike humans.

(A) With respect to most species of animals, they are evenly divided in right- or left-handedness, unlike humans.

(B) With respect to right- or left-handedness, most species of animals are evenly divided, unlike in humans.

(C) Unlike humans, most species of animals are evenly divided with respect to right- or left-handedness.

(D) Unlike in humans, most species of animals with respect to right- or left-handedness are evenly divided.

(E) Unlike humans, with respect to right- or left-handedness, in most species of animals it is evenly divided.

SC07435

201. Using digital enhancements of skull fragments from five prehistoric hominids dating to more than 350,000 years ago, anthropologists argue that these human ancestors probably had hearing similar to that of people today.

(A) anthropologists argue that these human ancestors

(B) anthropologists argue, so these human ancestors

(C) anthropologists argue, these human ancestors

(D) these human ancestors, anthropologists argue,

(E) these human ancestors are argued by anthropologists to have

SC14890

202. The interior minister explained that one of the village planning proposal's best characteristics was their not detracting from the project's overall benefit by being a burden on the development budget.

(A) one of the village planning proposal's best characteristics was their not detracting

(B) one of the village's planning proposal's best characteristics were its not taking

(C) one of the best characteristics of the village's planning proposal was that it did not detract

(D) a best characteristic of the village planning proposal was, it did not take

(E) among the village planning proposal's best characteristics, one was, it did not detract

SC02940

203. Like ants, termites have an elaborate social structure in which a few individuals reproduce and the rest are serving the colony by tending juveniles, gathering food, building the nest, or they battle intruders.

(A) are serving the colony by tending juveniles, gathering food, building the nest, or they battle

(B) are serving the colony in that they tend juveniles, gather food, build the nest, or battle

(C) serve the colony, tending juveniles, gathering food, building the nest, or by battling

(D) serve the colony by tending juveniles, gathering food, by building the nest, or by battling

(E) serve the colony by tending juveniles, gathering food, building the nest, or battling

SC01519

204. Global warming is said to be responsible for extreme weather changes, which, like the heavy rains that caused more than $2 billion in damages and led to flooding throughout the state of California, and the heat wave in the northeastern and midwestern United States, which was also the cause of a great amount of damage and destruction.

(A) which, like the heavy rains that caused more than $2 billion in damages and led to flooding throughout the state of California,

(B) which, like the heavy rains that throughout the state of California caused more than $2 billion in damages and led to flooding,

(C) like the heavy flooding that, because of rains throughout the state of California, caused more than $2 billion in damages,

(D) such as the heavy flooding that led to rains throughout the state of California causing more than $2 billion in damages,

(E) such as the heavy rains that led to flooding throughout the state of California, causing more than $2 billion in damages,

SC02548

205. Hundreds of species of fish generate and discharge electric currents, in bursts or as steady electric fields around their bodies, using their power either to find and attack prey, to defend themselves, or also for communicating and navigating.

(A) either to find and attack prey, to defend themselves, or also for communicating and navigating

(B) either for finding and attacking prey, defend themselves, or for communication and navigation

(C) to find and attack prey, for defense, or communication and navigation

(D) for finding and attacking prey, to defend themselves, or also for communication and navigation

(E) to find and attack prey, to defend themselves, or to communicate and navigate

SC05367

206. Native to South America, when peanuts were introduced to Africa by Portuguese explorers early in the sixteenth century they were quickly adopted into Africa's agriculture, probably because of being so similar to the Bambarra groundnut, a popular indigenous plant.

(A) when peanuts were introduced to Africa by Portuguese explorers early in the sixteenth century they were quickly adopted into Africa's agriculture, probably because of being

(B) peanuts having been introduced to Africa by Portuguese explorers early in the sixteenth century and quickly adopted into Africa's agriculture, probably because of being

(C) peanuts were introduced to Africa by Portuguese explorers early in the sixteenth century and were quickly adopted into Africa's agriculture, probably because they were

(D) peanuts, introduced to Africa by Portuguese explorers early in the sixteenth century and quickly adopted into Africa's agriculture, probably because they were

(E) peanuts, introduced to Africa by Portuguese explorers early in the sixteenth century and having been quickly adopted into Africa's agriculture, probably because they were

SC03552

207. It stood twelve feet tall, weighed nine thousand pounds, and wielded seven-inch claws, and *Megatherium americanum*, a giant ground sloth, may have been the largest hunting mammal ever to walk the Earth.

(A) It stood twelve feet tall, weighed nine thousand pounds, and wielded seven-inch claws, and *Megatherium americanum*, a giant ground sloth,

(B) It stood twelve feet tall, weighing nine thousand pounds, and wielding seven-inch claws, *Megatherium americanum* was a giant ground sloth and

(C) The giant ground sloth *Megatherium americanum*, having stood twelve feet tall, weighing nine thousand pounds, and wielding seven-inch claws, it

(D) Standing twelve feet tall, weighing nine thousand pounds, and wielding seven-inch claws, *Megatherium americanum*, a giant ground sloth,

(E) Standing twelve feet tall, weighing nine thousand pounds, it wielded seven-inch claws, and the giant ground sloth *Megatherium americanum*

SC04083

208. Studying skeletons unearthed near Rome, DNA evidence was recovered by scientists, who were able to deduce from this that an epidemic of malaria struck in the empire's waning days.

(A) Studying skeletons unearthed near Rome, DNA evidence was recovered by scientists, who were able to deduce from this

(B) In studying skeletons unearthed near Rome, DNA evidence was recovered by scientists, who were able to deduce from this

(C) Scientists recovered DNA evidence from studying skeletons unearthed near Rome, being able to deduce from this

(D) Skeletons unearthed near Rome allowed scientists to recover DNA evidence, and they were able to deduce from it

(E) Scientists studying skeletons unearthed near Rome recovered DNA evidence from which they were able to deduce

SC01594

209. Butterflies come in more than 17,000 species, displaying a wing pattern unique to each one.

(A) displaying a wing pattern unique to each one

(B) displaying a unique wing pattern in each

(C) each uniquely displaying a wing pattern

(D) each of which displays a unique wing pattern

(E) each of which uniquely displays a wing pattern

SC04652

210. A March 2000 Census Bureau survey showed that Mexico accounted for more than a quarter of all foreign-born residents of the United States, the largest share for any country to contribute since 1890, when about 30 percent of the country's foreign-born population was from Germany.

(A) the largest share for any country to contribute

(B) the largest share that any country has contributed

(C) which makes it the largest share for any country to contribute

(D) having the largest share to be contributed by any country

(E) having the largest share to have been contributed by any country

SC01579

211. Recently declassified information from military satellites in orbit thousands of miles above the Earth show the planet continually bombarded by large meteoroids that explode with the power of atomic bomb blasts.

(A) show the planet continually bombarded by

(B) show continual bombarding of the planet by

(C) show a continual bombardment of the planet from

(D) shows continually that the planet is bombarded from

(E) shows that the planet is continually bombarded by

SC04026

212. Child development specialists believe that, in confining babies much of the time to strollers, high chairs, playpens, and walkers, muscle development can be inhibited.

(A) that, in confining babies much of the time to strollers, high chairs, playpens, and walkers, muscle development can be inhibited

(B) that, in their confinement much of the time to strollers, high chairs, playpens, and walkers, muscle development can be inhibited in babies

(C) that confining babies much of the time to strollers, high chairs, playpens, and walkers can inhibit muscle development

(D) that babies, if confined much of the time to strollers, high chairs, playpens, and walkers can inhibit muscle development

(E) that strollers, high chairs, playpens, and walkers can, if babies are confined to them much of the time, result in muscle development being inhibited

SC01482

213. Together with Key Largo National Marine Sanctuary, the John Pennekamp Coral Reef State Park, the first underwater park in the United States, provide 165 square nautical miles of marine life for underwater explorers, which includes more than 500 species of fish and 55 varieties of coral.

(A) provide 165 square nautical miles of marine life for underwater explorers, which includes

(B) provide for underwater explorers 165 square nautical miles of marine life, which include

(C) provide 165 square nautical miles of marine life for underwater explorers and includes

(D) provides 165 square nautical miles of marine life for underwater explorers and including

(E) provides underwater explorers with 165 square nautical miles of marine life, including

SC01481

214. While Hollywood makes films primarily for entertainment, the motion picture was not first developed to entertain, but it was to allow detailed analysis of animal motion.

(A) was not first developed to entertain, but it was
(B) was developed not first to entertain, but it was
(C) was first developed not to entertain, but
(D) did not first develop for entertainment, but
(E) did not first develop for entertainment, but it was

SC01069

215. The personal income tax did not become permanent in the United States until the First World War; before that time the federal government was dependent on tariffs to be their main source of revenue.

(A) the federal government was dependent on tariffs to be their main source of revenue
(B) the federal government had depended on tariffs as its main source of revenue
(C) tariffs were what the federal government was dependent on to be its main source of revenue
(D) the main source of revenue for the federal government was dependent on tariffs
(E) for their main source of revenue, tariffs were depended on by the federal government

SC02628

216. In 1776 Adam Smith wrote that it is young people who have "the contempt of risk and the presumptuous hope of success" needed to found new businesses.

(A) who have
(B) with
(C) having
(D) who are those with
(E) who are the ones to have

SC04198

217. Palladium prices have soared, with Russia restricting exports and because automakers have started using it to make the huge engines in sport utility vehicles and other light trucks.

(A) Palladium prices have soared, with Russia restricting exports and because automakers have started using
(B) Palladium prices have soared, with Russia restricting exports, in addition to automakers that have started to use
(C) Prices for palladium have soared as Russia has restricted exports and automakers have started using
(D) Prices for palladium have soared as Russia has been restricting exports, in addition to automakers starting to use
(E) Prices for palladium have soared because Russia is restricting exports, as well as automakers that have started using

SC01543

218. Variability in individual physical traits both are determined through genetic factors, environmental factors, and interaction between these factors.

(A) both are determined through genetic factors, environmental factors, and interaction between
(B) are both determined by genetic factors, environmental factors, as well as interaction among
(C) both is determined by genetic factors, environmental factors, and interaction between
(D) is determined through genetic factors, environmental factors, as well as interaction among
(E) is determined by genetic factors, environmental factors, and interaction between

SC06613

219. In his *Uses of Enchantment* (1976), it was psychologist Bruno Bettelheim's assertion that the apparently cruel and arbitrary nature of many fairy tales actually are an instructive reflection of a child's natural and necessary "killing off" of successive phases in his or her own development.

(A) it was psychologist Bruno Bettelheim's assertion that the apparently cruel and arbitrary nature of many fairy tales actually are

(B) it was the assertion of psychologist Bruno Bettelheim that what is apparently the cruel and arbitrary nature of many fairy tales actually is

(C) psychologist Bruno Bettelheim's assertion that what is apparently the cruel and arbitrary nature of many fairy tales actually is

(D) psychologist Bruno Bettelheim asserted that the apparently cruel and arbitrary nature of many fairy tales actually are

(E) psychologist Bruno Bettelheim asserted that the apparently cruel and arbitrary nature of many fairy tales is actually

SC06012

220. After weeks of uncertainty about the course the country would pursue to stabilize its troubled economy, officials reached a revised agreement with the International Monetary Fund, pledging the enforcement of substantially greater budget discipline as that which was originally promised and to keep inflation below ten percent.

(A) the enforcement of substantially greater budget discipline as that which was originally promised and to keep inflation below ten percent

(B) the enforcement of substantially greater budget discipline than originally promised and keeping inflation below the ten percent figure

(C) to enforce substantially greater budget discipline than originally promised and to keep inflation below ten percent

(D) to enforce substantially greater budget discipline than that which was originally promised and keeping inflation less than the ten percent figure

(E) to enforce substantially greater budget discipline as that which was originally promised and to keep inflation less than ten percent

SC01596

221. A new satellite sweeping over the poles at altitudes of up to 32,000 miles is called POLAR, giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field.

(A) A new satellite sweeping over the poles at altitudes of up to 32,000 miles is called POLAR, giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field.

(B) A new satellite called POLAR that is giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field, sweeping over the poles at altitudes of up to 32,000 miles.

(C) Scientists are getting their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field, from a new satellite sweeping over the poles at altitudes of up to 32,000 miles called POLAR.

(D) Sweeping over the poles at altitudes of up to 32,000 miles, a new satellite called POLAR is giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field.

(E) Sweeping over the poles at altitudes of up to 32,000 miles, scientists' best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field, is coming from a new satellite called POLAR.

SC05787

222. The treasury market dropped in response to a decrease in the value of the dollar and to continued concern that the economy might be growing as fast as to accelerate inflation and drive interest rates higher.

(A) that the economy might be growing as fast as

(B) that the economy might be growing fast enough

(C) with the economy's possibly growing so fast as

(D) with the possibility of the economy growing fast enough so as

(E) with the possibility of the economy possibly growing fast enough

SC03724

223. Despite a growing population, in 1998 the United States used 38 billion fewer gallons of water a day when comparing it to the period of all-time highest consumption almost 20 years earlier.

(A) day when comparing it to the period of all-time highest consumption almost 20 years earlier
(B) day than it did during the period of all-time highest consumption almost 20 years earlier
(C) day than were used almost 20 years earlier, which had been the all-time high consumption
(D) day, compared to almost 20 years earlier, that having been the all-time high consumption
(E) day, which is in comparison to the period of all-time highest consumption almost 20 years earlier

SC01600

224. A federal advisory panel proposes expanding a national computerized file to permit law-enforcement agencies to track people under criminal investigation but have not yet been charged.

(A) under criminal investigation but
(B) under criminal investigation, but who
(C) under criminal investigation, but they
(D) who are under criminal investigation, but they
(E) who are under criminal investigation but

SC03779

225. Analysts believe that whereas bad decisions by elected leaders can certainly hurt the economy, no administration can really be said to control or manage all of the complex and interrelated forces that determine the nation's economic strength.

(A) no administration can really be said to control
(B) no administration can be said that it really controls
(C) that no administration can really be said to control
(D) that no administration can really be said that it controls
(E) that it cannot be said that any administration really controls

SC03146

226. Nearly unrivaled in their biological diversity, coral reefs provide a host of benefits that includes the supply of protein for people, protecting shorelines, and they contain biochemical sources for new life-saving medicines.

(A) coral reefs provide a host of benefits that includes the supply of protein for people, protecting shorelines,
(B) coral reefs provide a host of benefits: they supply people with protein, they protect the shorelines,
(C) coral reefs provide a host of benefits that include supplying protein for people, as well as shoreline protection,
(D) a coral reef provides a host of benefits; they supply protein for people, the protecting of shorelines,
(E) a coral reef provides a host of benefits, including protein for people, protecting shorelines,

SC12367

227. Literacy opened up entire realms of verifiable knowledge to ordinary men and women having been previously considered incapable of discerning truth for themselves.

(A) having been previously considered incapable of discerning truth for themselves
(B) who had previously been considered incapable of discerning truth for themselves
(C) previously considered incapable of discerning truth for himself or herself
(D) of whom it had previously been considered they were incapable of discerning truth for themselves
(E) who had previously been considered incapable of discerning truth for himself or herself

SC01915

228. In early Mesopotamian civilization, castor oil served not only as a laxative, but also a skin-softening lotion and it was a construction lubricant for sliding giant stone blocks over wooden rollers.

(A) not only as a laxative, but also a skin-softening lotion and it was a construction
(B) as not only a laxative, but also a skin-softening lotion, and it was a construction
(C) not only as a laxative but also as a skin-softening lotion and as a construction
(D) as not only a laxative but as a skin-softening lotion and in construction, as a
(E) not only as a laxative, but a skin-softening lotion and in construction, a

SC06935

229. An analysis of tree bark all over the globe shows that chemical insecticides have often spread thousands of miles from where they were originally used.

(A) that chemical insecticides have often spread thousands of miles from where they were originally used

(B) that chemical insecticides have spread, often thousands of miles from their original use

(C) chemical insecticides, having often spread thousands of miles from where they were used originally

(D) chemical insecticides, often spreading thousands of miles from where their original use

(E) chemical insecticides, often spreading thousands of miles from where they were originally used

SC02241

230. According to the Economic Development Corporation of Los Angeles County, if one were to count the Los Angeles metropolitan area as a separate nation, it would have the world's eleventh largest gross national product, that is bigger than that of Australia, Mexico, or the Netherlands.

(A) if one were to count the Los Angeles metropolitan area as a separate nation, it would have the world's eleventh largest gross national product, that is

(B) if the Los Angeles metropolitan area is counted as a separate nation, it has the world's eleventh largest gross national product, that being

(C) if the Los Angeles metropolitan area were a separate nation, it would have the world's eleventh largest gross national product,

(D) were the Los Angeles metropolitan area a separate nation, it will have the world's eleventh largest gross national product, which is

(E) when the Los Angeles metropolitan area is counted as a separate nation, it has the world's eleventh largest gross national product, thus

SC51661.01

231. Some sociologists claim to have found a direct link from the appearance of news stories about violence to the rate of homicide.

(A) from the appearance of news stories about violence to

(B) between the appearance of news stories about violence to

(C) between the appearance of news stories about violence and

(D) with the appearance of news stories about violence to

(E) with the appearance of news stories about violence and

SC61661.01

232. Government statistics on the size of foreign investment in real estate are inconclusive because neither federal nor state laws require disclosure of foreign ownership, and the Commerce Department, in its public tallies, does not categorize the owners.

(A) are inconclusive because neither federal nor state laws require

(B) are inconclusive because neither the federal nor state laws requires

(C) are inconclusive because neither federal laws or state laws require

(D) is inconclusive because neither the federal or state laws requires

(E) is inconclusive because neither federal laws nor state laws require

SC81661.01

233. In the United States one of the earliest challengers of the economic principle of free trade was Alexander Hamilton, who in 1791 advocated government policies that would encourage indigenous manufacturing and to protect it from competition from British exports.

(A) and to protect it

(B) but protecting it

(C) while protecting it

(D) for protecting them

(E) to protect them

SC71661.01

234. Desertification, a process in which the biological productivity of the land is sharply degraded by human abuse and natural phenomena, helped cause the famines that have killed hundreds of thousands in recent years.

(A) a process in which the biological productivity of the land is sharply degraded by human abuse and natural phenomena

(B) a process of the biological productivity of the land being sharply degraded by human abuse and natural phenomena

(C) a process of human abuse and natural phenomena that sharply degrade the biological productivity of the land

(D) which is the process of human abuse and natural phenomena sharply degrading the land's biological productivity

(E) which is the process of human abuse and natural phenomena that sharply degrade the land's biological productivity

SC42661.01

235. Open to the public and operated like conventional hotels, condominium hotels permit buyers to acquire a specific room or suite, as well as a proportionate interest in the rest of the establishment.

(A) condominium hotels permit buyers to acquire a specific room or suite, as well as

(B) buyers are permitted to acquire a specific room or suite in a condominium hotel, as well as

(C) a specific room or suite in condominium hotels may be acquired by buyers, as well as acquiring

(D) condominium hotels permit buyers to acquire a specific room or suite, as well as acquiring

(E) it is permitted for buyers to acquire a specific room or suite in a condominium hotel, as well as the acquisition of

SC52661.01

236. The methods proposed for reducing the amount of interest to be paid are not able to be used successfully without creating a problem of insufficient cash flow in the future.

(A) are not able to be used successfully without creating a problem of insufficient cash flow in the future

(B) are not able successfully to be used without creating a problem in the future of insufficient cash flow

(C) cannot successfully be used without creating a future problem of insufficient cash flow

(D) cannot be used without succeeding in creating a problem in the future of insufficient cash flow

(E) cannot be used without succeeding in creating a future problem of insufficient cash flow

SC62661.01

237. Despite the Puritan sumptuary laws prohibiting the wearing of bright or elaborate clothing, if you had either a liberal education or an annual income of two hundred pounds one was permitted to display their material prosperity in public.

(A) if you had either a liberal education or an annual income of two hundred pounds one was permitted to display their material prosperity in public

(B) if one had either a liberal education or annual income of two hundred pounds one was permitted the public display of their material prosperity

(C) having either a liberal education or annual income of two hundred pounds would allow one to publicly display their material prosperity

(D) those with either a liberal education or an annual income of two hundred pounds were allowed to display their material prosperity in public

(E) those having either a liberal education or annual income of two hundred pounds were permitted their public display of material prosperity

SC72661.01

238. Like Darwin and his fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped his remarkable career in natural science.

(A) Like Darwin and his fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped his remarkable career in natural science.

(B) Just as Darwin had a fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped a remarkable career as a natural scientist.

(C) Like Darwin's fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped a remarkable career in natural science.

(D) Just as Darwin's fruitful voyage on the *Beagle*, Banks sailed with Captain Cook on the *Endeavour*, inspiring and shaping his remarkable career as a natural scientist.

(E) Like Darwin's fruitful voyage on the *Beagle*, Banks sailed with Captain Cook on the *Endeavour*, which inspired and shaped a remarkable career in natural science.

SC82661.01

239. When more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, have become fewer and fewer.

(A) When more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, have become fewer and fewer.

(B) At the time that more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, become less and less.

(C) When more and more factories move out of the cities each year, then manufacturing jobs, historically the first step into the urban poor's job market, become less and less.

(D) Since more and more factories have moved out of the cities each year, manufacturing jobs, historically the first step into the urban poor's job market, have become less and less.

(E) As more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, become fewer and fewer.

SC92661.01

240. The thousands of volcanic islands and coral atolls of the South Seas have a total population of about four million, but the paucity of natural resources does not permit such economic development that would be needed by them to support more population.

(A) does not permit such economic development that would be needed by them to support more population

(B) does not permit economic development such as is needed for supporting a larger number

(C) does not permit the economic development needed to support a larger population

(D) do not permit the economic development needed to support a larger population

(E) do not permit needed economic development for supporting a larger number of people

SC03661.01

241. In contrast with a dark surface and its tendency toward heat absorption, a large expanse of snow and ice reflects incoming radiation into space.

(A) In contrast with a dark surface and its tendency toward heat absorption

(B) Contrasted with a dark surface's tendency to absorb heat

(C) Since it is in contrast to a dark surface and its tendency to absorb heat

(D) Contrasted to the tendency of a dark surface to absorb heat

(E) In contrast to a dark surface, which tends to absorb heat

SC37620.01

242. The greatest road system built in the Americas prior to the arrival of Christopher Columbus was the Incan highway, which, over 2,500 miles long and extending from northern Ecuador through Peru to southern Chile.

(A) Columbus was the Incan highway, which, over 2,500 miles long and extending

(B) Columbus was the Incan highway, over 2,500 miles in length, which had extended

(C) Columbus, the Incan highway, which was over 2,500 miles in length and extended

(D) Columbus, the Incan highway, being over 2,500 miles in length, was extended

(E) Columbus, the Incan highway was over 2,500 miles long, extending

SC99250.01

243. Due to poaching and increased cultivation in their native habitats, researchers have determined that there are fewer than 100 Arabian leopards left in the wild, and thus the leopards are many times as rare as China's giant pandas.

(A) Due to poaching and increased cultivation in their native habitats, researchers have determined that there are fewer than 100 Arabian leopards left in the wild, and thus the leopards are many times as rare as

(B) Due to poaching and increased cultivation in their native habitats, there are fewer than 100 Arabian leopards left in the wild, researchers have determined, making them many times more rare than

(C) There are fewer than 100 Arabian leopards left in the wild due to poaching and increased cultivation in their native habitats, researchers have determined, which makes the leopards many times more rare compared to

(D) Researchers have determined that, because of poaching and increased cultivation in their native habitats, there are fewer than 100 Arabian leopards left in the wild, thus making them many more times as rare as

(E) Researchers have determined that, because of poaching and increased cultivation in their native habitats, there are fewer than 100 Arabian leopards left in the wild, and thus the leopards are many times more rare than

SC04215

244. Developed by Pennsylvania's Palatine Germans about 1750, Conestoga wagons, with high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie and they had a floor curved upward on either end so as to prevent cargo from shifting on steep grades.

(A) wagons, with high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie and they had a floor curved upward on either end so as to prevent

(B) wagons, with high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie, and with a floor that was curved upward at both ends to prevent

(C) wagons, which had high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie, and floors curved upward on their ends so that they prevented

(D) wagons had high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie, and a floor that was curved upward at both ends to prevent

(E) wagons had high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie and floors curving upward at their ends so that it prevented

SC60440.01

245. The current economic downturn has significantly reduced advertising income both for business journals as well as general consumer magazines, especially if focusing on technology.

(A) has significantly reduced advertising income both for business journals as well as general consumer magazines, especially if focusing

(B) has significantly reduced advertising income both for business journals and for general consumer magazines, especially those focusing

(C) significantly reduced advertising income for both business journals and for general consumer magazines, especially when focused

(D) reduced both business journals' and general consumer magazines' advertising income significantly, especially if focused

(E) reduced advertising income significantly for both business journals, as well as for general consumer magazines, especially those focusing

SC01002

246. The reason many people consider the Mediterranean island to be ungovernable is because that the inhabitants long ago learned to distrust and neutralize all written laws.

(A) is because that the inhabitants long ago learned to distrust and neutralize

(B) is the inhabitants long ago learned distrusting and neutralizing

(C) was because of the inhabitants long ago learning to distrust and to be neutralizing

(D) is that the inhabitants long ago learned to distrust and to neutralize

(E) was on account of the inhabitants long ago learning to distrust and neutralize

SC28801.01

247. Though there is some overlap with the two concepts *market economy* and *laissez faire*, several important differences between them must be borne in mind.

(A) with the two concepts *market economy* and *laissez faire*, several important differences between them must be borne in mind

(B) between the two concepts *market economy* and *laissez faire*, several important differences must be borne in mind

(C) spanning the two concepts *market economy* and *laissez faire*, one must bear several important differences between them in mind

(D) among the two concepts of *market economy* and *laissez faire*, there are several important differences among them that must be borne in mind

(E) with the two concepts of *market economy* and *laissez faire*, one must bear in mind several important differences

SC71061.01

248. Because of the erratic pattern of sales increases this year, retailers and analysts hesitate to predict five-year trends in retail sales during the months that have historically been the most profitable.

(A) Because of the erratic pattern of sales increases this year, retailers and analysts hesitate to predict

(B) With the erratic pattern of this year's sales increases, retailers and analysts are hesitant in predicting

(C) This year, due to the erratic pattern of increasing sales, there is some hesitation among retailers and analysts in predicting

(D) The erratic pattern of sales increases have made retailers and analysts hesitate this year to predict

(E) This year's erratic pattern of increasing sales have made retailers and analysts hesitate to predict

SC89941.01

249. Proceeding without a definite plan for upcoming labor negotiations, like the firm had agreed to last year, it would surely have proven to be a disaster in the face of the skilled and resolute opposition involved this time.

(A) Proceeding without a definite plan for upcoming labor negotiations, like the firm had agreed to last year, it would surely have proven to be a disaster

(B) Proceeding without a definite plan for upcoming labor negotiations, as the firm agreed last year to do, would surely have proven to be a disaster

(C) Going ahead without the presence of a definite plan for upcoming labor negotiations, like the firm had agreed last year to do, would surely have proven disastrous

(D) To proceed without the presence of a definite plan for upcoming labor negotiations, as the firm had agreed to last year, would surely have proven disastrous

(E) Going ahead without their having a definite plan for upcoming labor negotiations, as they agreed to last year, it would surely have proven to be a disaster for the firm

SC03916

250. Because the collagen fibers in skin line up in the direction of tension, surgical cuts made along these so-called Langer's lines sever fewer fibers and is less likely to leave an unsightly scar.

(A) Because the collagen fibers in skin line up in the direction of tension, surgical cuts made along these so-called Langer's lines sever fewer

(B) Because the collagen fibers in skin line up in the direction of tension, a surgical cut having been made along these so-called Langer's lines severs less

(C) Because the collagen fibers in skin line up in the direction of tension, a surgical cut made along these so-called Langer's lines severs fewer

(D) With the collagen fibers in skin lining up in the direction of tension, surgical cuts made along these so-called Langer's lines sever less

(E) With the collagen fibers in skin lining up in the direction of tension, a surgical cut made along these so-called Langer's lines sever fewer

SC01639

251. The completion in 1925 of the Holland Tunnel, linking Manhattan with New Jersey's highways, which permitted 2,000 cars to pass through each tube every hour and was hailed as the decade's $48 million engineering masterpiece.

(A) Tunnel, linking Manhattan with New Jersey's highways, which permitted 2,000 cars to pass through each tube every hour and

(B) Tunnel, linking Manhattan with New Jersey's highways and permitting 2,000 cars to pass through each tube every hour, it

(C) Tunnel, linking Manhattan with New Jersey's highways and permitting 2,000 cars to pass through each tube every hour,

(D) Tunnel linked Manhattan with New Jersey's highways, which permitted 2,000 cars to pass through each tube every hour and

(E) Tunnel linked Manhattan with New Jersey's highways, permitting 2,000 cars to pass through each tube every hour,

SC03315

252. The World Wildlife Fund has declared that global warming, a phenomenon that most scientists agree is caused by human beings' burning of fossil fuels, will create havoc among migratory birds by harming their habitats as a result of altering the environment.

(A) by harming their habitats as a result of altering the environment

(B) by altering the environment to the extent of it harming their habitats

(C) by altering the environment in ways harmful to their habitats

(D) from the fact that their habitats will be harmed by the environment being altered

(E) from the fact that the environment will be altered and this will harm their habitats

SC05244

253. Tropical bats play an important role in the rain forest ecosystem, aiding in the dispersal of cashew, date, and fig seeds; pollinating banana, breadfruit, and mango trees; and indirectly help the producing of tequila by pollinating agave plants.

(A) pollinating banana, breadfruit, and mango trees; and indirectly help the producing of

(B) pollinating banana, breadfruit, and mango trees; and indirectly helping to produce

(C) pollinating banana, breadfruit, and mango trees; and they indirectly help to produce

(D) they pollinate banana, breadfruit, and mango trees; and indirectly help producing

(E) they pollinate banana, breadfruit, and mango trees; indirectly helping the producing of

SC04346

254. A recent court decision has qualified a 1998 ruling that workers cannot be laid off if they have been given reason to believe that their jobs will be safe, provided that their performance remains satisfactory.

(A) if they have been given reason to believe that their jobs will

(B) if they are given reason for believing that their jobs would still

(C) having been given reason for believing that their jobs would

(D) having been given reason to believe their jobs to

(E) given reason to believe that their jobs will still

SC04874

255. Of all the record companies involved in early jazz, the three most prominent were Columbia, Victor, and OKeh.

(A) Of all the record companies involved in early jazz, the three most prominent were Columbia, Victor, and OKeh.

(B) Three most prominent record companies of all the ones that were involved in early jazz were Columbia, Victor, and OKeh.

(C) Columbia, Victor, and OKeh were, of all the record companies involved in early jazz, the three of them that were most prominent.

(D) Columbia, Victor, and OKeh were three most prominent of all the record companies involved in early jazz.

(E) Out of all the record companies that were involved in early jazz, three of them that were the most prominent were Columbia, Victor, and OKeh.

SC01451

256. Since 1992, in an attempt to build up the Atlantic salmon population in each of the seven rivers in which salmon still spawn, state officials in Maine have stocked them with fry raised in hatcheries from eggs produced by wild fish found in that particular river.

(A) them

(B) the river

(C) the rivers

(D) each river

(E) that river

SC02382

257. On the tournament roster are listed several tennis students, most all of which play as good as their instructors.

(A) most all of which play as good

(B) most all of whom play as good

(C) almost all of which play as well

(D) almost all of whom play as good

(E) almost all of whom play as well

SC07143

258. In 1974 a large area of the surface of Mercury was photographed from varying distances, which revealed a degree of cratering similar to that of the Moon's.

(A) which revealed a degree of cratering similar to that of the Moon's

(B) to reveal a degree of cratering similar to the Moon

(C) revealing a degree of cratering similar to that of the Moon

(D) and revealed cratering similar in degree to the Moon

(E) that revealed cratering similar in degree to that of the Moon

SC05894

259. The computer company reported strong second-quarter earnings that surpassed Wall Street's estimates and announced the first in a series of price cuts intended to increase sales further.

(A) The computer company reported strong second-quarter earnings that surpassed Wall Street's estimates and announced the first in a series of price cuts intended to increase sales further.

(B) The report of the computer company showed strong second-quarter earnings, surpassing Wall Street's estimates, and they announced the first in a series of price cuts that they intend to increase sales further.

(C) Surpassing Wall Street's estimates, the report of the computer company showed strong second-quarter earnings, and, for the purpose of increasing sales further, they announced the first in a series of price cuts.

(D) The computer company reported strong second-quarter earnings, surpassing Wall Street's estimates, and announcing the first in a series of price cuts for the purpose of further increasing sales.

(E) The computer company, surpassing Wall Street's estimates, reported strong second-quarter earnings, while announcing that to increase sales further there would be the first in a series of price cuts.

SC01562

260. Long overshadowed by the Maya and Aztec civilizations, historians are now exploring the more ancient Olmec culture for the legacy it had for succeeding Mesoamerican societies.

(A) historians are now exploring the more ancient Olmec culture for the legacy it had for succeeding Mesoamerican societies

(B) historians' exploration is now of the more ancient Olmec culture's legacy to the Mesoamerican societies succeeding them

(C) the legacy of the more ancient Olmec culture to the Mesoamerican societies that succeeded them is what historians are now exploring

(D) the more ancient Olmec culture is now being explored by historians for its legacy to succeeding Mesoamerican societies

(E) the Olmec culture is more ancient and had a legacy to succeeding Mesoamerican societies that historians are now exploring

SC02370

261. The bank holds $3 billion in loans that are seriously delinquent or in such trouble that they do not expect payments when due.

(A) they do not expect payments when

(B) it does not expect payments when it is

(C) it does not expect payments to be made when they are

(D) payments are not to be expected to be paid when

(E) payments are not expected to be paid when they will be

SC01435

262. A researcher claims that a tornado of a given size and strength is likely to cause more deaths, both proportionately and in absolute numbers, in the southeastern region of the United States than in the northeastern.

(A) A researcher claims that a tornado of a given size and strength is likely to cause more deaths, both proportionately and in absolute numbers, in the southeastern region of the United States than in the northeastern.

(B) A researcher claims that a tornado, if of a given size and strength, is likely both proportionately and in absolute numbers to cause more deaths in the southeastern region of the United States than in the northeastern.

(C) A researcher claims that, with a tornado of a given size and strength, it is likely to cause more death, both proportionately and in absolute numbers, in the southeastern rather than in the northeastern region of the United States.

(D) If a tornado is of a given size and strength, a researcher claims, it is more likely, both proportionately and in absolute numbers, to cause death if it is in the southeastern region of the United States rather than in the northeastern region.

(E) Both proportionately and in absolute numbers, a researcher claims that a tornado of a given size and strength is likely to cause more deaths in the southeastern region of the United States rather than in the northeastern.

SC04603

263. Heirloom tomatoes, grown from seeds saved from the previous year, only look less appetizing than their round and red supermarket cousins, often green and striped, or have plenty of bumps and bruises, but are more flavorful.

(A) cousins, often green and striped, or have plenty of bumps and bruises, but are

(B) cousins, often green and striped, or with plenty of bumps and bruises, although

(C) cousins, often green and striped, or they have plenty of bumps and bruises, although they are

(D) cousins; they are often green and striped, or with plenty of bumps and bruises, although

(E) cousins; they are often green and striped, or have plenty of bumps and bruises, but they are

SC05381

264. In the textbook publishing business, the second quarter is historically weak, because revenues are low and marketing expenses are high as companies prepare for the coming school year.

(A) low and marketing expenses are high as companies prepare
(B) low and their marketing expenses are high as they prepare
(C) low with higher marketing expenses in preparation
(D) low, while marketing expenses are higher to prepare
(E) low, while their marketing expenses are higher in preparation

SC01485

265. Because of the sharp increases in the price of gold and silver, the value of Monica Taylor's portfolio rose as her daughter-in-law's dropped.

(A) as her daughter-in-law's dropped
(B) while her daughter-in-law's has dropped
(C) as there was a drop in her daughter-in-law's
(D) while that of her daughter-in-law's dropped
(E) as it dropped for her daughter-in-law's

SC02791

266. Ms. Chambers is among the forecasters who predict that the rate of addition to arable lands will drop while those of loss rise.

(A) those of loss rise
(B) it rises for loss
(C) those of losses rise
(D) the rate of loss rises
(E) there are rises for the rate of loss

SC00987

267. In keeping with her commitment to her Christian faith, Sojourner Truth demonstrated as a public speaker a dedication both to the nonviolent abolition of slavery as well as for women to be emancipated.

(A) a dedication both to the nonviolent abolition of slavery as well as for women to be emancipated
(B) her being dedicated to both the nonviolent abolishing of slavery as well as for women's emancipation
(C) a dedication to both the nonviolent abolition of slavery and the emancipation of women
(D) that she was dedicated both to abolishing slavery nonviolently and to emancipate women
(E) her dedication both to the nonviolent abolition of slavery and emancipation of women

SC01972

268. Less than 400 Sumatran rhinos survive on the Malay peninsula and on the islands of Sumatra and Borneo, and they occupy a small fraction of the species' former range.

(A) Less than 400 Sumatran rhinos survive on the Malay peninsula and on the islands of Sumatra and Borneo, and they occupy a small fraction of the species' former range.
(B) Less than 400 Sumatran rhinos, surviving on the Malay peninsula and on the islands of Sumatra and Borneo, occupy a small fraction of the species' former range.
(C) Occupying a small fraction of the species' former range, the Malay peninsula and the islands of Sumatra and Borneo are where fewer than 400 Sumatran rhinos survive.
(D) Occupying a small fraction of the species' former range, fewer than 400 Sumatran rhinos survive on the Malay peninsula and on the islands of Sumatra and Borneo.
(E) Surviving on the Malay peninsula and on the islands of Sumatra and Borneo, less than 400 Sumatran rhinos occupy a small fraction of the species' former range.

SC11068

269. Certain pesticides can become ineffective if used repeatedly in the same place; one reason is suggested by the finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals.

(A) Certain pesticides can become ineffective if used repeatedly in the same place; one reason is suggested by the finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals.

(B) If used repeatedly in the same place, one reason that certain pesticides can become ineffective is suggested by the finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals.

(C) If used repeatedly in the same place, one reason certain pesticides can become ineffective is suggested by the finding that much larger populations of pesticide-degrading microbes are found in soils with a relatively long history of pesticide use than those that are free of such chemicals.

(D) The finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals is suggestive of one reason, if used repeatedly in the same place, certain pesticides can become ineffective.

(E) The finding of much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in those that are free of such chemicals suggests one reason certain pesticides can become ineffective if used repeatedly in the same place.

SC11854

270. While some academicians believe that business ethics should be integrated into every business course, others say that students will take ethics seriously only if it would be taught as a separately required course.

(A) only if it would be taught as a separately required course

(B) only if it is taught as a separate, required course

(C) if it is taught only as a course required separately

(D) if it was taught only as a separate and required course

(E) if it would only be taught as a required course, separately

SC08272

271. Whether they will scale back their orders to pre-2003 levels or stop doing business with us altogether depends on whether the changes that their management has proposed will be fully implemented.

(A) Whether they will scale back their orders to pre-2003 levels or stop doing business with us altogether depends on whether the changes that their management has proposed will be fully implemented.

(B) Whether they scale back their orders to pre-2003 levels or whether they discontinue their business with us altogether depends on the changes their management has proposed, if fully implemented or not.

(C) Their either scaling back their orders in the future to pre-2003 levels, or their outright termination of business with us, depends on their management's proposed changes being fully implemented or not.

(D) Whether they will scale back their orders to pre-2003 levels or stop doing business with us altogether depends if the changes that their management has proposed become fully implemented.

(E) They will either scale back their orders to pre-2003 levels, or they will stop doing business with us altogether dependent on whether the changes their management has proposed will be fully implemented, or not.

SC00975

272. Until 1868 and Disraeli, Great Britain had no prime ministers not coming from a landed family.

(A) Until 1868 and Disraeli, Great Britain had no prime ministers not coming
(B) Until 1868 and Disraeli, Great Britain had had no prime ministers who have not come
(C) Until Disraeli in 1868, there were no prime ministers in Great Britain who have not come
(D) It was not until 1868 that Great Britain had a prime minister—Disraeli—who did not come
(E) It was only in 1868 and Disraeli that Great Britain had one of its prime ministers not coming

SC02011

273. Around 1900, fishermen in the Chesapeake Bay area landed more than seventeen million pounds of shad in a single year, but by 1920, overfishing and the proliferation of milldams and culverts that have blocked shad migrations up their spawning streams had reduced landings to less than four million pounds.

(A) that have blocked shad migrations up their spawning streams had reduced landings to less
(B) that blocked shad from migrating up their spawning streams had reduced landings to less
(C) that blocked shad from migrating up their spawning streams reduced landings to a lower amount
(D) having blocked shad from migrating up their spawning streams reduced landings to less
(E) having blocked shad migrations up their spawning streams had reduced landings to an amount lower

SC04492

274. By offering lower prices and a menu of personal communications options, such as caller identification and voice mail, the new telecommunications company has not only captured customers from other phone companies but also forced them to offer competitive prices.

(A) has not only captured customers from other phone companies but also forced them
(B) has not only captured customers from other phone companies, but it also forced them
(C) has not only captured customers from other phone companies but also forced these companies
(D) not only has captured customers from other phone companies but also these companies have been forced
(E) not only captured customers from other phone companies, but it also has forced them

SC06132

275. After suffering $2 billion in losses and 25,000 layoffs, the nation's semiconductor industry, which makes chips that run everything from computers and spy satellites to dishwashers, appears to have made a long-awaited recovery.

(A) computers and spy satellites to dishwashers, appears to have
(B) computers, spy satellites, and dishwashers, appears having
(C) computers, spy satellites, and dishwashers, appears that it has
(D) computers and spy satellites to dishwashers, appears that it has
(E) computers and spy satellites as well as dishwashers, appears to have

SC04588

276. Over a range of frequencies from 100 to 5,000 hertz, monkeys and marmosets have a hearing sensitivity remarkably similar to humans, above which the sensitivity begins to differ.

(A) Over a range of frequencies from 100 to 5,000 hertz, monkeys and marmosets have a hearing sensitivity remarkably similar to humans
(B) Compared to humans, the hearing sensitivity of monkeys and marmosets are remarkably similar over a range of frequencies from 100 to 5,000 hertz
(C) Compared to humans over a range of frequencies from 100 to 5,000 hertz, the hearing sensitivity of monkeys and marmosets is remarkably similar
(D) The hearing sensitivity of monkeys and marmosets, when compared to humans over a range of frequencies from 100 to 5,000 hertz, is remarkably similar
(E) The hearing sensitivity of monkeys, marmosets, and humans is remarkably similar over a range of frequencies from 100 to 5,000 hertz

SC03998

277. The computer company has announced that it will purchase the color-printing division of a rival company for $950 million, which is part of a deal that will make it the largest manufacturer in the office color-printing market.

(A) million, which is part of a deal that will make
(B) million, a part of a deal that makes
(C) million, a part of a deal making
(D) million as a part of a deal to make
(E) million as part of a deal that will make

SC03289

278. Kudzu, an Asian vine that has grown rampantly in the southern United States since introducing it in the 1920s to thwart soil erosion, has overrun many houses and countless acres of roadside.

(A) that has grown rampantly in the southern United States since introducing it in the 1920s to thwart
(B) that has grown rampantly in the southern United States, since it was introduced in the 1920s for thwarting
(C) that has grown rampant in the southern United States since it was introduced in the 1920s to thwart
(D) growing rampant in the southern United States since introducing it in the 1920s for thwarting
(E) growing rampantly in the southern United States, since it was introduced in the 1920s to thwart

SC01712

279. Unable to build nests or care for their young, a female cowbird lays up to 40 eggs a year in the nests of other birds, including warblers, vireos, flycatchers, and thrushes.

(A) a female cowbird lays up to 40 eggs a year in the nests of other birds, including
(B) a female cowbird will use the nests of other birds to lay up to 40 eggs a year, including those of
(C) female cowbirds use the nests of other birds to lay up to 40 eggs a year, including those of
(D) female cowbirds lay up to 40 eggs a year in the nests of other birds, including
(E) up to 40 eggs a year are laid by female cowbirds in the nests of other birds, including

SC01954

280. Bluegrass musician Bill Monroe, whose repertory, views on musical collaboration, and vocal style were influential on generations of bluegrass artists, was also an inspiration to many musicians, that included Elvis Presley and Jerry Garcia, whose music differed significantly from his own.

(A) were influential on generations of bluegrass artists, was also an inspiration to many musicians, that included Elvis Presley and Jerry Garcia, whose music differed significantly from
(B) influenced generations of bluegrass artists, also inspired many musicians, including Elvis Presley and Jerry Garcia, whose music differed significantly from
(C) was influential to generations of bluegrass artists, was also inspirational to many musicians, that included Elvis Presley and Jerry Garcia, whose music was different significantly in comparison to
(D) was influential to generations of bluegrass artists, also inspired many musicians, who included Elvis Presley and Jerry Garcia, the music of whom differed significantly when compared to
(E) were an influence on generations of bluegrass artists, was also an inspiration to many musicians, including Elvis Presley and Jerry Garcia, whose music was significantly different from that of

SC12645

281. In many of the world's regions, increasing pressure on water resources has resulted both from expanding development, changes in climate, and from pollution, so that the future supply in some of the more arid areas is a concern going forward.

(A) both from expanding development, changes in climate, and from pollution, so that the future supply in some of the more arid areas is a concern going forward

(B) both from expanding development or changes in climate, and pollution, so that future supplies in some of the more arid areas are a concern

(C) from expanding development, changes in climate, and also from pollution, so that the future supply in some of the more arid areas is a matter of concern going forward

(D) from expanding development, changes in climate, and pollution, so that future supplies in some of the more arid areas are a concern

(E) from expansion of development, changes in climate, and from pollution, so that supplies in some of the more arid areas are a future concern

SC01747

282. The computer company's present troubles are a result of technological stagnation, marketing missteps, and managerial blunders so that several attempts to revise corporate strategies have failed to correct it.

(A) so that several attempts to revise corporate strategies have failed to correct it

(B) so that several attempts at revising corporate strategies have failed to correct

(C) in that several attempts at revising corporate strategies have failed to correct them

(D) that several attempts to revise corporate strategies have failed to correct

(E) that several attempts at revising corporate strategies have failed to correct them

SC11880

283. The root systems of most flowering perennials either become too crowded, which results in loss in vigor, and spread too far outward, producing a bare center.

(A) which results in loss in vigor, and spread

(B) resulting in loss in vigor, or spreading

(C) with the result of loss of vigor, or spreading

(D) resulting in loss of vigor, or spread

(E) with a resulting loss of vigor, and spread

SC11910

284. In theory, international civil servants at the United Nations are prohibited from continuing to draw salaries from their own governments; in practice, however, some governments merely substitute living allowances for their employees' paychecks, assigned by them to the United Nations.

(A) for their employees' paychecks, assigned by them

(B) for the paychecks of their employees who have been assigned

(C) for the paychecks of their employees, having been assigned

(D) in place of their employees' paychecks, for those of them assigned

(E) in place of the paychecks of their employees to have been assigned by them

SC05216

285. Industry analysts said that the recent rise in fuel prices may be an early signal of the possibility of gasoline and heating oil prices staying higher than usually through the end of the year.

(A) of the possibility of gasoline and heating oil prices staying higher than usually through

(B) of the possibility that gasoline and heating oil prices could stay higher than usual throughout

(C) of prices of gasoline and heating oil possibly staying higher than usually through

(D) that prices of gasoline and heating oil could stay higher than they usually are throughout

(E) that prices of gasoline and heating oil will stay higher than usual through

SC07141

286. The Anasazi settlements at Chaco Canyon were built on a spectacular scale, with more than 75 carefully engineered structures, of up to 600 rooms each, were connected by a complex regional system of roads.

(A) scale, with more than 75 carefully engineered structures, of up to 600 rooms each, were

(B) scale, with more than 75 carefully engineered structures, of up to 600 rooms each,

(C) scale of more than 75 carefully engineered structures of up to 600 rooms, each that had been

(D) scale of more than 75 carefully engineered structures of up to 600 rooms and with each

(E) scale of more than 75 carefully engineered structures of up to 600 rooms, each had been

SC07066

287. Even though the overall consumer price index did not change in April, indicating the absence of any general inflation or deflation, prices in several categories of merchandise have fallen over the last several months.

(A) April, indicating the absence of any general inflation or deflation, prices in several categories of merchandise have fallen

(B) April, indicating that any general inflation or deflation were absent, prices in several categories of merchandise fell

(C) April and indicated that absence of any general inflation or deflation, prices in several categories of merchandise fell

(D) April, having indicated the absence of any general inflation or deflation, prices in several categories of merchandise fell

(E) April, which indicated that any general inflation or deflation were absent, prices in several categories of merchandise have fallen

SC12460

288. Despite Japan's relative isolation from world trade at the time, the prolonged peace during the Tokugawa shogunate produced an almost explosive expansion of commerce.

(A) Japan's relative isolation from world trade at the time, the prolonged peace during the Tokugawa shogunate

(B) the relative isolation of Japan from world trade at the time and the Tokugawa shogunate's prolonged peace, it

(C) being relatively isolated from world trade at the time, the prolonged peace during Japan's Tokugawa shogunate

(D) Japan's relative isolation from world trade at the time during the Tokugawa shogunate, prolonged peace

(E) its relative isolation from world trade then, prolonged peace in Japan during the Tokugawa shogunate

SC02333

289. Government officials announced that restrictions on the use of water would continue because no appreciative increase in the level of the river resulted from the intermittent showers that had fallen throughout the area the day before.

(A) restrictions on the use of water would continue because no appreciative increase in the level of the river

(B) restricting the use of water would continue because there had not been any appreciative increase in the river's level that

(C) the use of water would continue to be restricted because not any appreciable increase in the river's level had

(D) restrictions on the use of water would continue because no appreciable increase in the level of the river had

(E) using water would continue being restricted because not any appreciable increase in the level of the river

SC04732

290. According to United States census data, while there was about one-third of mothers with young children working outside the home in 1975, in 2000, almost two-thirds of those mothers were employed outside the home.

(A) while there was about one-third of mothers with young children working outside the home in 1975, in 2000, almost two-thirds of those mothers were employed outside the home

(B) there were about one-third of mothers with young children who worked outside the home in 1975; in 2000, almost two-thirds of those mothers were employed outside the home

(C) in 1975 about one-third of mothers with young children worked outside the home; in 2000, almost two-thirds of such mothers were employed outside the home

(D) even though in 1975 there were about one-third of mothers with young children who worked outside the home, almost two-thirds of such mothers were employed outside the home in 2000

(E) with about one-third of mothers with young children working outside the home in 1975, almost two-thirds of such mothers were employed outside the home in 2000

SC04672

291. Clouds are formed from the evaporation of the oceans' water that is warmed by the sun and rises high into the atmosphere, condensing in tiny droplets on minute particles of dust.

(A) Clouds are formed from the evaporation of the oceans' water that is warmed by the sun and rises high into the atmosphere, condensing in tiny droplets on minute particles of dust.

(B) Clouds form by the sun's warmth evaporating the water in the oceans, which rises high into the atmosphere, condensing in tiny droplets on minute particles of dust.

(C) Warmed by the sun, ocean water evaporates, rises high into the atmosphere, and condenses in tiny droplets on minute particles of dust to form clouds.

(D) The water in the oceans evaporates, warmed by the sun, rises high into the atmosphere, and condenses in tiny droplets on minute particles of dust, which forms clouds.

(E) Ocean water, warmed by the sun, evaporates and rises high into the atmosphere, which then condenses in tiny droplets on minute particles of dust to form as clouds.

SC02664

292. Schistosomiasis, a disease caused by a parasitic worm, is prevalent in hot, humid climates, and it has become more widespread as irrigation projects have enlarged the habitat of the freshwater snails that are the parasite's hosts for part of its life cycle.

(A) the freshwater snails that are the parasite's hosts for part of its life cycle

(B) the freshwater snails that are the parasite's hosts in part of their life cycle

(C) freshwater snails which become the parasite's hosts for part of its life cycles

(D) freshwater snails which become the hosts of the parasite during the parasite's life cycles

(E) parasite's hosts, freshwater snails which become their hosts during their life cycles

SC07754

293. Sor Juana Inés de la Cruz was making the case for women's equality long before the cause had a name: Born in the mid-seventeenth century in San Miguel Nepantla, Mexico, the convent was the perfect environment for Sor Juana to pursue intellectual pursuits, achieving renown as a mathematician, poet, philosopher, and playwright.

(A) the convent was the perfect environment for Sor Juana to pursue intellectual pursuits, achieving

(B) Sor Juana found the convent provided the perfect environment for intellectual pursuits, and she went on to achieve

(C) the convent provided the perfect environment for intellectual pursuits for Sor Juana; going on to achieve

(D) Sor Juana found the convent provided the perfect environment for intellectual pursuits; achieving

(E) the convent was, Sor Juana found, the perfect environment for intellectual pursuits, and she went on to achieve

SC14406

294. By devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, in 1797–1798 Henry Cavendish's apparatus enabled him to arrive at an astonishingly accurate figure for the weight of the earth.

(A) By devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, in 1797–1798 Henry Cavendish's apparatus enabled him

(B) In 1797–1798, by devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, Henry Cavendish's apparatus enabled him

(C) Henry Cavendish devised an instrument made from a rod, wire, and lead balls, and employed uncommonly precise measurements, and in 1797–1798 was able

(D) Having devised an instrument from a rod, wire, and lead balls, and employment of uncommonly precise measurements, Henry Cavendish in 1797–1798 was able

(E) By devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, Henry Cavendish was able in 1797–1798

SC08285

295. The growth projected for these storms in different computerized weather models varies widely.

(A) projected for these storms in different computerized weather models varies widely

(B) for these storms is projected in different computerized models of weather to vary widely

(C) of these storms, projected in different computerized weather models, vary widely

(D) projected for these storms, which vary widely in different computerized weather models

(E) that varies widely for these storms are projected in different computerized weather models

SC02131

296. By using a process called echolocation to analyze the echoes of the high-pitched sounds they produce, bats can determine not only the distance to an object, but they also can determine its shape and size and the direction in which it is moving.

(A) can determine not only the distance to an object, but they also can determine

(B) not only can determine the distance to an object but also

(C) can determine not only the distance to an object but also

(D) not only can determine its distance from an object but also

(E) can determine not only their distance from an object, but they can also determine

SC06205

297. Carbon dioxide, which traps heat in the atmosphere and helps regulate the planet's surface temperature, is constantly being exchanged between the atmosphere on the one hand and the oceans and terrestrial plants on the other.

(A) exchanged between the atmosphere on the one hand and the oceans and terrestrial plants on the other

(B) exchanged, on the one hand, between the atmosphere and the oceans and terrestrial plants, on the other

(C) exchanged between, on the one hand, the atmosphere, with the oceans and terrestrial plants, on the other

(D) exchanged, on the one hand, among the oceans and terrestrial plants, and the atmosphere, on the other

(E) exchanged among the oceans and terrestrial plants on the one hand and the atmosphere on the other

SC01990

298. Floating in the waters of the equatorial Pacific, an array of buoys collects and transmits data on long-term interactions between the ocean and the atmosphere, interactions that affect global climate.

(A) atmosphere, interactions that affect

(B) atmosphere, with interactions affecting

(C) atmosphere that affects

(D) atmosphere that is affecting

(E) atmosphere as affects

SC04344

299. Sixty-five million years ago, according to some scientists, an asteroid bigger than Mount Everest slammed into North America, which, causing plant and animal extinctions, marks the end of the geologic era known as the Cretaceous Period.

(A) which, causing plant and animal extinctions, marks

(B) which caused the plant and animal extinctions and marks

(C) and causing plant and animal extinctions that mark

(D) an event that caused plant and animal extinctions, which marks

(E) an event that caused the plant and animal extinctions that mark

SC02338

300. Although the first pulsar, or rapidly spinning collapsed star, to be sighted was in the summer of 1967 by graduate student Jocelyn Bell, it had not been announced until February 1968.

(A) Although the first pulsar, or rapidly spinning collapsed star, to be sighted was in the summer of 1967 by graduate student Jocelyn Bell, it had not been announced until February 1968.

(B) Although not announced until February 1968, in the summer of 1967 graduate student Jocelyn Bell observed the first pulsar, or rapidly spinning collapsed star, to be sighted.

(C) Although observed by graduate student Jocelyn Bell in the summer of 1967, the discovery of the first sighted pulsar, or rapidly spinning collapsed star, had not been announced before February 1968.

(D) The first pulsar, or rapidly spinning collapsed star, to be sighted was observed in the summer of 1967 by graduate student Jocelyn Bell, but the discovery was not announced until February 1968.

(E) The first sighted pulsar, or rapidly spinning collapsed star, was not announced until February 1968, while it was observed in the summer of 1967 by graduate student Jocelyn Bell.

SC02766

301. Sound can travel through water for enormous distances, prevented from dissipating its acoustic energy as a result of boundaries in the ocean created by water layers of different temperatures and densities.

(A) prevented from dissipating its acoustic energy as a result of

(B) prevented from having its acoustic energy dissipated by

(C) its acoustic energy prevented from dissipating by

(D) its acoustic energy prevented from being dissipated as a result of

(E) preventing its acoustic energy from dissipating by

SC10996

302. Last year, land values in most parts of the pinelands rose almost so fast, and in some parts even faster than what they did outside the pinelands.

(A) so fast, and in some parts even faster than what they did

(B) so fast, and in some parts even faster than, those

(C) as fast, and in some parts even faster than, those

(D) as fast as, and in some parts even faster than, those

(E) as fast as, and in some parts even faster than what they did

SC03010

303. The North American moose's long legs enable it to move quickly through the woods, stepping easily over downed trees, but predators pursuing it must leap or go around them.

(A) moose's long legs enable it to move quickly through the woods, stepping easily over downed trees, but predators pursuing it must leap or go around them

(B) moose's long legs enable it to move quickly through the woods, stepping easily over downed trees while predators pursuing them must leap or go around

(C) moose's long legs enable it to move quickly through the woods and to step easily over downed trees, but predators pursuing them must leap over or go around them

(D) moose has long legs, enabling it to move quickly through the woods and to step easily over downed trees while predators pursuing them must leap or go around

(E) moose has long legs that enable it to move quickly through the woods, stepping easily over downed trees while predators pursuing it must leap over or go around them

SC07885

304. Early administrative decisions in China's Ming Dynasty eventually caused a drastic fall in tax revenues, a reduction in military preparedness, the collapse of the currency system, and failed to make sufficient investment in vital transportation infrastructure.

(A) the collapse of the currency system, and failed

(B) the collapse of the currency system, and failing

(C) and the collapse of the currency system, also failed

(D) the collapse of the currency system, as well as failing

(E) and the collapse of the currency system, as well as a failure

SC11017

305. Seismologists studying the earthquake that struck northern California in October 1989 are still investigating some of its mysteries: the unexpected power of the seismic waves, the upward thrust that threw one man straight into the air, and the strange electromagnetic signals detected hours before the temblor.

(A) the upward thrust that threw one man straight into the air, and the strange electromagnetic signals detected hours before the temblor

(B) the upward thrust that threw one man straight into the air, and strange electromagnetic signals were detected hours before the temblor

(C) the upward thrust threw one man straight into the air, and hours before the temblor strange electromagnetic signals were detected

(D) one man was thrown straight into the air by the upward thrust, and hours before the temblor strange electromagnetic signals were detected

(E) one man who was thrown straight into the air by the upward thrust, and strange electromagnetic signals that were detected hours before the temblor

SC10878

306. The type of behavior exhibited when an animal recognizes itself in a mirror comes within the domain of "theory of mind," thus is best studied as part of the field of animal cognition.

(A) of "theory of mind," thus is best

(B) "theory of mind," and so is best to be

(C) of a "theory of mind," thus it is best

(D) of "theory of mind" and thus is best

(E) of the "theory of mind," and so it is best to be

SC11054

307. Unlike the United States, where farmers can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka are concentrated in the monsoon months, June to September, and the skies are generally clear for the rest of the year.

(A) Unlike the United States, where farmers can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka

(B) Unlike the United States farmers who can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka

(C) Unlike those of the United States, where farmers can usually depend on rain or snow all year long, most parts of Sri Lanka's rains

(D) In comparison with the United States, whose farmers can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka

(E) In the United States, farmers can usually depend on rain or snow all year long, but in most parts of Sri Lanka, the rains

SC01564

308. In preparation for the prediction of a major earthquake that will hit the state, a satellite-based computer network is being built by the California Office of Emergency Services for identifying earthquake damage and to pinpoint the most affected areas within two hours of the event.

(A) In preparation for the prediction of a major earthquake that will hit the state, a satellite-based computer network is being built by the California Office of Emergency Services for identifying

(B) In preparing for the prediction that a major earthquake will hit the state, the California Office of Emergency Services is building a satellite-based computer network that will identify

(C) In preparing for a major earthquake that is predicted to hit the state, the California Office of Emergency Services is building a satellite-based computer network to identify

(D) To prepare for the prediction of a major earthquake hitting the state, a satellite-based computer network is being built by the California Office of Emergency Services to identify

5.9 Answer Explanations

The following discussion of sentence correction is intended to familiarize you with the most efficient and effective approaches to these kinds of questions. The particular questions in this chapter are generally representative of the kinds of sentence correction questions you will encounter on the GMAT.

*SC01545

200. With respect to most species of animals, they are evenly divided in right- or left-handedness, unlike humans.

(A) With respect to most species of animals, they are evenly divided in right- or left-handedness, unlike humans.

(B) With respect to right- or left-handedness, most species of animals are evenly divided, unlike in humans.

(C) Unlike humans, most species of animals are evenly divided with respect to right- or left-handedness.

(D) Unlike in humans, most species of animals with respect to right- or left-handedness are evenly divided.

(E) Unlike humans, with respect to right- or left-handedness, in most species of animals it is evenly divided.

Rhetorical construction; Parallel construction

The sentence contrasts humans with other species with respect to the distribution of left-handedness and right-handedness. Issues include use of the correct prepositions and the correct placement of component phrases such as *unlike humans*.

A This is wordy because the phrase beginning *with respect to* is redundant, given the pronoun *they*, which refers to *most species of animals*. Placing the phrase *unlike humans* at the end of the sentence tends to blunt the force of the comparison between humans and other animals.

B The *in* preceding *humans* makes the sentence incorrect. Because the intended contrast is between humans and most species of animals, the reference to humans would be better placed closer to the phrase *most species of animals*.

C **Correct.** The start of the sentence immediately highlights the contrast between humans and most animal species. The adverbial phrase *with respect to right- or left-handedness* is placed adjacent to the verbal phrase that it modifies (*are evenly divided*).

D The *in* preceding *humans* makes the sentence incorrect. Placing the adverbial phrase *with respect to right- or left-handedness* immediately following *animals* is confusing; it would be better placed immediately following the verbal phrase that it modifies (*are evenly divided*).

E To make the intended contrast clear, the reference to humans should be adjacent to (and parallel to) the reference to most species of animals. But the use of *in* in one case but not in the other makes the references nonparallel. For clarity, the adverbial phrase *with respect to right- or left-handedness* should follow the verbal phrase that it modifies (*are evenly divided*).

The correct answer is C.

SC07435

201. Using digital enhancements of skull fragments from five prehistoric hominids dating to more than 350,000 years ago, anthropologists argue that these human ancestors probably had hearing similar to that of people today.

(A) anthropologists argue that these human ancestors

(B) anthropologists argue, so these human ancestors

(C) anthropologists argue, these human ancestors

(D) these human ancestors, anthropologists argue,

(E) these human ancestors are argued by anthropologists to have

*These numbers correlate with the online test bank question number. See the GMAT Verbal Review Online Index in the back of this book.

Logical predication; Diction

The verb *argue* here, because it expresses the idea of arguing for a position or theory, should be followed directly by a clause introduced by *that*, without a pause. Verb forms ending with *-ing* with understood subjects, like the one beginning this sentence, must have their subject supplied elsewhere—preferably by the subject of the main clause.

A **Correct.** *Argue* is followed immediately by a *that* clause, and the subject of *using* is supplied by *anthropologists*.

B *Argue* is not directly followed by a *that* clause; moreover, by continuing with *so . . .*, the sentence does not coherently express the intended idea.

C *Argue* is not directly followed by a *that* clause.

D The subject of the main clause, *these human ancestors*, will illogically be taken as the subject of *using*.

E The subject of the main clause, *these human ancestors*, will illogically be taken as the subject of *using*.

The correct answer is A.

SC14890

202. The interior minister explained that one of the village planning proposal's best characteristics was their not detracting from the project's overall benefit by being a burden on the development budget.

(A) one of the village planning proposal's best characteristics was their not detracting

(B) one of the village's planning proposal's best characteristics were its not taking

(C) one of the best characteristics of the village's planning proposal was that it did not detract

(D) a best characteristic of the village planning proposal was, it did not take

(E) among the village planning proposal's best characteristics, one was, it did not detract

Agreement; Rhetorical construction

The noun phrase beginning with *one* is singular, as is one of its constituent parts, *the village planning proposal*, so any pronouns for which it is the antecedent should be singular; furthermore, any verb for which the noun phrase beginning with *one . . .* is the subject should be in the singular. The verb *detract* is more appropriate to the thought being expressed than *take*.

A The plural pronoun *their* has a singular noun phrase as its antecedent, namely, *the village planning proposal*. (It is illogical to take the antecedent of *their* to be *best characteristics*.)

B The plural verb *were* does not agree with the singular subject. Also, the verb *taking* should be replaced by the verb *detracting*.

C **Correct.** The verb is correctly in the singular form.

D *A best characteristic* is awkward; the idea is better phrased as *one of the best characteristics*. Also the verb *take* should be replaced by the verb *detract*.

E Instead of the awkward sequence *one was, it did not,* a better choice would be *was that it did not.*

The correct answer is C.

SC02940

203. Like ants, termites have an elaborate social structure in which a few individuals reproduce and the rest are serving the colony by tending juveniles, gathering food, building the nest, or they battle intruders.

(A) are serving the colony by tending juveniles, gathering food, building the nest, or they battle

(B) are serving the colony in that they tend juveniles, gather food, build the nest, or battle

(C) serve the colony, tending juveniles, gathering food, building the nest, or by battling

(D) serve the colony by tending juveniles, gathering food, by building the nest, or by battling

(E) serve the colony by tending juveniles, gathering food, building the nest, or battling

Parallelism; Rhetorical construction

The sentence most effectively uses parallel structure to contrast two types of termites in the social structure of termite colonies: those who reproduce, and those who serve the colony in a number of ways. The progressive verb form *are serving* should be changed to simple present tense *serve* to parallel *reproduce*. In the final list of responsibilities, parallelism demands that all assume the gerund form as objects of the preposition: *by tending . . . gathering . . . building . . . or battling*.

A The progressive verb form *are serving* is inappropriate for this general claim about termite behavior. It should parallel the previous verb *reproduce*. It is unnecessary to introduce a new clause *or they battle intruders*, because *battling* is another way some termites serve the colony and should therefore be expressed as another object of the preposition *by*.

B *In that they* is an awkward and wordy construction—a poor substitute for *by* in this context.

C The preposition *by* clarifies *how* the termites serve their colony and should govern all of the task descriptions, not just the final one.

D There is no need to repeat the preposition *by*, because all tasks can be described in a series of parallel objects of the same preposition. To violate parallel structure by omitting the preposition before one gerund but repeating it for the rest confuses the reader.

E **Correct.** The sentence uses proper parallel structure and is clear and concise.

The correct answer is E.

SC01519

204. Global warming is said to be responsible for extreme weather changes, which, like the heavy rains that caused more than $2 billion in damages and led to flooding throughout the state of California, and the heat wave in the northeastern and midwestern United States, which was also the cause of a great amount of damage and destruction.

(A) which, like the heavy rains that caused more than $2 billion in damages and led to flooding throughout the state of California,

(B) which, like the heavy rains that throughout the state of California caused more than $2 billion in damages and led to flooding,

(C) like the heavy flooding that, because of rains throughout the state of California, caused more than $2 billion in damages,

(D) such as the heavy flooding that led to rains throughout the state of California causing more than $2 billion in damages,

(E) such as the heavy rains that led to flooding throughout the state of California, causing more than $2 billion in damages,

Grammatical construction: Logical predication

This sentence introduces the claim that global warming is considered to be the cause of extreme weather changes and then illustrates these changes with two examples introduced by the phrase *such as*. The correct causal sequence of events in the first example is heavy rain, which caused *significant damage and flooding*. The relative pronoun *which*, referring to *changes*, is lacking a verb to complete the relative clause.

A The relative pronoun, *which*, is without a verb. The phrase *which, like the heavy rains* incorrectly suggests that the *extreme weather* is something different from the *heavy rains* and the *heat wave*, and that each of these three phenomena separately caused damage and destruction.

B As in (A), the relative pronoun has no verb to complete the phrase, and the sequence of events in the first example positions costly destruction and flooding as two separate or unrelated results of the rain.

C The causal sequence in the first example is confusing, suggesting, somewhat implausibly, that heavy flooding occurred on its own but caused damage only because of the rain.

D The sequential logic of the first example is confused—indicating, implausibly, that flooding caused heavy rain and that the rain, but not the flooding, caused more than $2 billion in damages.

E **Correct.** This version of the sentence correctly uses the phrase *such as* to introduce the two examples of extreme weather changes, and it correctly identifies the sequence of events in the first example.

The correct answer is E.

SC02548

205. Hundreds of species of fish generate and discharge electric currents, in bursts or as steady electric fields around their bodies, using their power either to find and attack prey, to defend themselves, or also for communicating and navigating.

(A) either to find and attack prey, to defend themselves, or also for communicating and navigating

(B) either for finding and attacking prey, defend themselves, or for communication and navigation

(C) to find and attack prey, for defense, or communication and navigation

(D) for finding and attacking prey, to defend themselves, or also for communication and navigation

(E) to find and attack prey, to defend themselves, or to communicate and navigate

Idiom; Verb form

The sentence explains that fish discharge electric currents for several purposes, which are most efficiently and effectively described in a parallel structure: *to find and attack*, *to defend*, *or to communicate and navigate*. The use of *either* is inappropriate in this sentence because more than two uses of electric currents are listed; idiomatic usage requires *either* to be followed by *or* to identify alternatives, not by *also*.

A *Either* inappropriately introduces a list of more than two alternatives, and it should not be followed by *or also*; parallelism requires that *for communicating and navigating* be changed to *to communicate and navigate*.

B *Defend* is not parallel with the list of gerunds, leaving the reader to wonder how to make sense of *defend themselves*.

C The lack of parallelism obscures the relationships among the items in the series; it is especially confusing to list an infinitive phrase (*to find . . .*), an object of a preposition (*for defense*), and nouns with no grammatical connection to the verb phrase (*communication and navigation*).

D This answer choice also violates parallelism by mixing an infinitive with objects of the preposition *for*. *Or also* is an unidiomatic, contradictory expression.

E **Correct.** The different ways in which the various species of fish use their electric power are correctly expressed in a series of parallel infinitives.

The correct answer is E.

SC05367

206. Native to South America, when peanuts were introduced to Africa by Portuguese explorers early in the sixteenth century they were quickly adopted into Africa's agriculture, probably because of being so similar to the Bambarra groundnut, a popular indigenous plant.

(A) when peanuts were introduced to Africa by Portuguese explorers early in the sixteenth century they were quickly adopted into Africa's agriculture, probably because of being

(B) peanuts having been introduced to Africa by Portuguese explorers early in the sixteenth century and quickly adopted into Africa's agriculture, probably because of being

(C) peanuts were introduced to Africa by Portuguese explorers early in the sixteenth century and were quickly adopted into Africa's agriculture, probably because they were

(D) peanuts, introduced to Africa by Portuguese explorers early in the sixteenth century and quickly adopted into Africa's agriculture, probably because they were

(E) peanuts, introduced to Africa by Portuguese explorers early in the sixteenth century and having been quickly adopted into Africa's agriculture, probably because they were

Grammatical construction; Logical predication

The opening adjectival phrase *Native to South America* must be followed immediately by the noun it modifies: *peanuts*. The sentence makes two main points about peanuts—they were introduced to Africa and they were quickly adopted there. The most efficient way to make these points is to make *peanuts* the subject of two main verbs: *were introduced* and *were . . . adopted*.

A *When* incorrectly intervenes between the opening adjectival phrase and the noun it modifies, and it is also unnecessary because *early in the sixteenth century* explains when. *Because of being* is wordy and indirect.

B This version of the sentence has no main verb, since *having been introduced* and *quickly adopted* both introduce adjectival phrases.

C **Correct.** The sentence is properly structured and grammatically correct.

D This version of the sentence has no main verb because *introduced* and *adopted* both function as adjectives.

E This version of the sentence has no main verb because *introduced* and *having been . . . adopted* function as adjectives.

The correct answer is C.

SC03552

207. It stood twelve feet tall, weighed nine thousand pounds, and wielded seven-inch claws, and *Megatherium americanum*, a giant ground sloth, may have been the largest hunting mammal ever to walk the Earth.

(A) It stood twelve feet tall, weighed nine thousand pounds, and wielded seven-inch claws, and *Megatherium americanum*, a giant ground sloth,

(B) It stood twelve feet tall, weighing nine thousand pounds, and wielding seven-inch claws, *Megatherium americanum* was a giant ground sloth and

(C) The giant ground sloth *Megatherium americanum*, having stood twelve feet tall, weighing nine thousand pounds, and wielding seven-inch claws, it

(D) Standing twelve feet tall, weighing nine thousand pounds, and wielding seven-inch claws, *Megatherium americanum*, a giant ground sloth,

(E) Standing twelve feet tall, weighing nine thousand pounds, it wielded seven-inch claws, and the giant ground sloth *Megatherium americanum*

Grammatical construction; Parallelism

The point of the sentence is to describe several features of *Megatherium americanum*, to identify this creature as a giant ground sloth, and to speculate about its status as the largest hunting mammal in Earth's history. *Megatherium americanum* is therefore the sole subject of the sentence. When its features are presented as parallel adjective phrases and its common identification is presented as an appositive, a single main verb *may have been* is all that is required to complete the sentence. When the conjunction *and* constructs a compound sentence, the subjects *it* and *ground sloth* or *Megatherium americanum* appear to name separate entities.

A The compound sentence structure suggests that *it* and *Megatherium americanum* are two separate entities, making it unclear what, if anything, the pronoun refers to.

B As in (A), *it* and *Megatherium americanum* appear to name different entities. This a run-on sentence; the comma after *claws* is not sufficient to join the two main clauses in a single sentence. The series describing the sloth is also nonparallel.

C The present-perfect tense of the first participial phrase in the series (*having stood*) is not parallel with the (timeless) present tense of the other two participials. The introduction of the main subject *it* leaves *ground sloth* without a verb.

D **Correct.** The series of present-tense participial phrases describes the main subject, *Megatherium americanum*, which is clarified by the common name expressed as an appositive.

E The identity of *it* is ambiguous, and the second subject of the compound sentence *giant ground sloth* appears to name something other than *it*. This makes the sentence ungrammatical.

The correct answer is D.

SC04083

208. Studying skeletons unearthed near Rome, DNA evidence was recovered by scientists, who were able to deduce from this that an epidemic of malaria struck in the empire's waning days.

(A) Studying skeletons unearthed near Rome, DNA evidence was recovered by scientists, who were able to deduce from this

(B) In studying skeletons unearthed near Rome, DNA evidence was recovered by scientists, who were able to deduce from this

(C) Scientists recovered DNA evidence from studying skeletons unearthed near Rome, being able to deduce from this

(D) Skeletons unearthed near Rome allowed scientists to recover DNA evidence, and they were able to deduce from it

(E) Scientists studying skeletons unearthed near Rome recovered DNA evidence from which they were able to deduce

Logical predication; Rhetorical construction

The sentence explains that scientists recovered DNA evidence from skeletons, revealing evidence of malaria. As the sentence is written, the participial phrase *studying skeletons* is misplaced; grammatically it modifies the subject of the main clause, thus illogically indicating that the *evidence* studied the skeletons.

A The participial phrase *studying skeletons* illogically modifies *evidence*.

B The participial phrase *studying skeletons* illogically modifies *evidence*.

C The sentence incorrectly states that DNA evidence was recovered from *studying skeletons* rather than from the skeletons; the phrase *being able to deduce from this* is awkward and wordy.

D The construction *skeletons . . . allowed scientists* gives the action of the sentence to the skeletons rather than the scientists; the antecedent of the pronoun *they* is ambiguous, possibly referring either to *scientists* or to *skeletons*.

E **Correct.** *Scientists* is the subject of the main clause, and *studying skeletons* correctly modifies *scientists*.

The correct answer is E.

SC01594

209. Butterflies come in more than 17,000 species, displaying a wing pattern unique to each one.

(A) displaying a wing pattern unique to each one

(B) displaying a unique wing pattern in each

(C) each uniquely displaying a wing pattern

(D) each of which displays a unique wing pattern

(E) each of which uniquely displays a wing pattern

Diction; Logical predication

As well as noting the surprisingly large number of butterfly species, the sentence probably seeks to make the point that no two species have the same wing pattern. Which of the suggested ways of conveying this information is clearest and unambiguous?

A In a conversational context, the thought underlying this version would probably be successfully understood by most listeners. However, the participle *displaying* modifies *butterflies,* not *species*. Thus the sentence as written seems to say, illogically, that each butterfly displays a wing pattern unique to each one.

B The phrase *in each* is illogical: what cannot have been intended in the given sentence is that all 17,000 species display a single wing pattern.

C This produces nonsense: all butterflies presumably display some wing pattern; it is not clear, however, what it could mean to "uniquely" display a wing pattern.

D **Correct.** In the given phrase, the *which* refers to *17,000 species;* it conveys exactly the same information as the following sentence: *Each of 17,000 species displays a unique wing pattern.* Both convey the information that no two of the species have the same wing pattern.

E It is not clear what it could mean to "uniquely" display a wing pattern.

The correct answer is D.

SC04652

210. A March 2000 Census Bureau survey showed that Mexico accounted for more than a quarter of all foreign-born residents of the United States, the largest share for any country to contribute since 1890, when about 30 percent of the country's foreign-born population was from Germany.

(A) the largest share for any country to contribute
(B) the largest share that any country has contributed
(C) which makes it the largest share for any country to contribute
(D) having the largest share to be contributed by any country
(E) having the largest share to have been contributed by any country

Logical predication; Rhetorical construction

This sentence claims that the 2000 Census showed that at the time Mexico's contribution to the foreign-born population of United States residents exceeded that of any other country since 1890. It makes the comparison in an appositive that modifies *more than a quarter of all foreign-born residents of the United States*.

A The phrase *for any country to contribute* makes the sentence wordy and indirect.

B **Correct.** This form of the appositive is the most efficient way to express the comparison. Depending on when the sentence was written and what the writer intended to express, the verb form could be either *had contributed* or *has contributed*. The use of *has contributed* implies that, from the perspective of the sentence, the comparison between German-born U.S. residents and those from other countries still holds true.

C The antecedents of the relative pronoun *which* and the pronoun *it* are ambiguous. Along with the prepositional phrase, the pronouns contribute wordiness and indirection.

D This construction is awkward, wordy, and indirect, and the use of the present tense of the infinitive is inappropriate.

E This construction is awkward, wordy, and indirect.

The correct answer is B.

SC01579

211. Recently declassified information from military satellites in orbit thousands of miles above the Earth show the planet continually bombarded by large meteoroids that explode with the power of atomic bomb blasts.

(A) show the planet continually bombarded by
(B) show continual bombarding of the planet by
(C) show a continual bombardment of the planet from
(D) shows continually that the planet is bombarded from
(E) shows that the planet is continually bombarded by

Agreement; Idiom

The sentence indicates that information shows the planet to be continually bombarded by meteors. However, the plural verb *show* incorrectly corresponds to the word *satellites* in the prepositional phrase *from military satellites*, rather than to the singular subject *information*. The correct combination of subject and verb is *information shows*.

A The singular subject *information* does not agree with the plural verb *show*.

B The singular subject *information* does not agree with the plural verb *show*. The verbal noun *bombarding* (rather than *bombardment*) is awkward and unnecessary.

C The singular subject *information* does not agree with the plural verb *show*. *Bombardment from* is an unidiomatic way of expressing the intended relationship. This construction appears to indicate, illogically, that someone or something located on the large, exploding meteoroids is sending the bombardment to Earth.

D *Continually* should modify *bombarded*, not *shows*. *Bombardment from* is an unidiomatic way of expressing the intended relationship. This construction appears to indicate, illogically, that someone or something located on the large, exploding meteoroids is sending the bombardment to Earth.

E **Correct**. The singular subject *information* agrees with the singular verb *shows*.

The correct answer is E.

SC04026

212. Child development specialists believe that, in confining babies much of the time to strollers, high chairs, playpens, and walkers, muscle development can be inhibited.

(A) that, in confining babies much of the time to strollers, high chairs, playpens, and walkers, muscle development can be inhibited

(B) that, in their confinement much of the time to strollers, high chairs, playpens, and walkers, muscle development can be inhibited in babies

(C) that confining babies much of the time to strollers, high chairs, playpens, and walkers can inhibit muscle development

(D) that babies, if confined much of the time to strollers, high chairs, playpens, and walkers can inhibit muscle development

(E) that strollers, high chairs, playpens, and walkers can, if babies are confined to them much of the time, result in muscle development being inhibited

Logical predication; Rhetorical construction

The point of the sentence is that confining babies can inhibit muscle development. As it is written, however, *muscle development* is the subject of the sentence, and the sentence appears to be saying that muscle development confines babies much of the time. Furthermore, the passive construction *can be inhibited* could even be seen as illogically suggesting that inhibiting development is the purpose of confinement. The sentence can be expressed more clearly and concisely by making *confining* the subject of the verb *can inhibit*: *confining babies . . . can inhibit muscle development.*

A The intended meaning of the sentence is obscured. The sentence appears to indicate that muscle development confines babies much of the time, which surely is not what is intended.

B The antecedent of *their* should be *babies*, but given that *babies* comes far after the pronoun, the reader is liable to take the antecedent of *their* to be *child development specialists*.

C **Correct**. The sentence clearly and concisely indicates that *confining babies . . . can inhibit muscle development*.

D The word *babies* is the subject of the verb *can inhibit*, suggesting incorrectly that babies inhibit their own or someone else's muscle development.

E This sentence uses an awkward and wordy construction to indicate that the sites of confinement *can result in muscle development being inhibited*, when in fact the confinement itself is the cause.

The correct answer is C.

SC01482

213. Together with Key Largo National Marine Sanctuary, the John Pennekamp Coral Reef State Park, the first underwater park in the United States, provide 165 square nautical miles of marine life for underwater explorers, which includes more than 500 species of fish and 55 varieties of coral.

(A) provide 165 square nautical miles of marine life for underwater explorers, which includes

(B) provide for underwater explorers 165 square nautical miles of marine life, which include

(C) provide 165 square nautical miles of marine life for underwater explorers and includes

(D) provides 165 square nautical miles of marine life for underwater explorers and including

(E) provides underwater explorers with 165 square nautical miles of marine life, including

Agreement; Grammatical construction

The sentence mentions two marine sites, but the grammatical subject of the sentence refers to only one of them, so the use of the plural verb *provide* is incorrect. The antecedent of *which* is unclear; for example, it cannot be *explorers,* since the singular verb *includes* indicates that its subject *which* must also be singular. Thus, the antecedent must be the singular noun phrase *marine life.* However, the sentence would be clearer and less awkward if this antecedent were placed closer to *which.*

A This cannot be correct, given the problems described.

B The plural *provide* is incorrect. The plural verb *include* indicates that one of the preceding noun phrases, e.g., *165 square nautical miles*, or *underwater explorers,* should be the antecedent, but neither of these readings would convey a coherent meaning.

C The plural *provide* is incorrect, as the subject is singular (*Key Largo Marine Sanctuary* is not part of the subject). Stating that the park (as opposed to the marine life) "includes" 500 species does not seem to capture the intended meaning.

D The portion that precedes *and* here is correct; however, *and including* creates a grammatically incorrect sentence fragment.

E **Correct.** The use of a participial phrase introduced by *including* avoids the need to use a relative clause introduced by *which*, but serves the same function as would a relative clause with antecedent *marine life*.

The correct answer is E.

SC01481

214. While Hollywood makes films primarily for entertainment, the motion picture was not first developed to entertain, but it was to allow detailed analysis of animal motion.

(A) was not first developed to entertain, but it was
(B) was developed not first to entertain, but it was
(C) was first developed not to entertain, but
(D) did not first develop for entertainment, but
(E) did not first develop for entertainment, but it was

Grammatical construction; Parallelism

The sentence expresses, in an awkward and unclear manner, the thought that the initial development of the motion picture was for science rather than for entertainment. One flaw in the given sentence concerns the placement of *not*; another flaw is that the pronoun *it* has no clear antecedent (its antecedent does not seem to be *the motion picture*, for example).

A The placement of *not* suggests that it is intended to negate a verbal phrase *was first developed*, but this makes no sense in context. As noted, the pronoun *it* lacks a clear antecedent.

B As noted, the pronoun *it* lacks a clear antecedent. Only if *first* meant "primarily" could the phrase *not first to entertain* make some sense in context.

C **Correct.** This accurately conveys the claim that the intended purpose of the motion picture when it was first developed was not entertainment but something else, i.e., scientific observation. The parallelism between *to entertain* and *to allow* removes unnecessary wordiness.

D The placement of *not* is inappropriate, given the intended meaning. The parallelism noted earlier is missing here.

E The word *not* seems, misleadingly, to negate the verb *first developed,* which would fail to convey the intended sense of the given sentence. The antecedent of *it* is unclear. The parallelism noted earlier is missing here.

The correct answer is C.

SC01069

215. The personal income tax did not become permanent in the United States until the First World War; before that time the federal government was dependent on tariffs to be their main source of revenue.

(A) the federal government was dependent on tariffs to be their main source of revenue
(B) the federal government had depended on tariffs as its main source of revenue
(C) tariffs were what the federal government was dependent on to be its main source of revenue
(D) the main source of revenue for the federal government was dependent on tariffs
(E) for their main source of revenue, tariffs were depended on by the federal government

Agreement; Logical predication

The First World War is designated as past tense in the opening clause of this sentence. The relationship between that time and whatever happened earlier can be most clearly indicated by using the past-perfect tense for the earlier events.

[*T*]*he federal government* is a singular subject of the second clause, so a singular pronoun, *its* rather than *their*, must refer to it. The phrase *was dependent on* causes unnecessary wordiness, as does the passive construction in E.

A The plural pronoun *their* inappropriately refers to the singular noun *government*.

B **Correct.** The pronoun *its* agrees with the singular subject *government*, and the past perfect, active verb *had depended* refers clearly to government activity prior to the First World War.

C This version of the sentence is wordy because of the inverted word order that makes the subject of the second clause an object of the preposition *on*.

D This version of the sentence nonsensically makes *source* the subject of the verb *was* [dependent on].

E The plural possessive pronoun *their* does not agree with its singular antecedent *government*. In fact, because of the placement of *tariffs* immediately after the opening prepositional phrase, *their* seems at first to refer to *tariffs*, which is illogical. The passive verb form *were depended on* is wordy and indirect.

The correct answer is B.

SC02628

216. In 1776 Adam Smith wrote that it is young people who have "the contempt of risk and the presumptuous hope of success" needed to found new businesses.

(A) who have
(B) with
(C) having
(D) who are those with
(E) who are the ones to have

Grammatical construction; Rhetorical construction

This sentence identifies which people have the attitudes needed to be successful entrepreneurs, according to the economist Adam Smith. The main clause *it is young people* is followed by a relative clause that modifies *young people* and defines the attributes important to their ability to found businesses: caring little about risk and being extremely optimistic about succeeding. The use of the idiomatic construction *it is . . . who* is a way of placing primary emphasis on the question that Smith addressed with the quoted words.

A **Correct**. The relative clause beginning *who have* grammatically and concisely identifies the relevant attitudes that *young people* have.

B In this version, the relative clause modifying *young people* is replaced with a prepositional phrase, introduced by *with*. This clause appears to modify *young people* restrictively. Thus, the sentence simply identifies a subcategory of young people (those with *the contempt of risk . . .*) and does not clearly explain which *people* have the attitudes that Smith identifies.

C Replacing the relative clause with a participial phrase introduced by *having* makes the sentence incomplete, since the point of the sentence is to explain which people *have* the attitudes that Smith identifies.

D Inserting the phrase *are those with* makes the sentence awkward and wordy.

E The word group *are the ones to have* is less concise than the simple verb *have* and fails to convey the meaning that is clearly intended.

The correct answer is A.

SC04198

217. Palladium prices have soared, with Russia restricting exports and because automakers have started using it to make the huge engines in sport utility vehicles and other light trucks.

(A) Palladium prices have soared, with Russia restricting exports and because automakers have started using
(B) Palladium prices have soared, with Russia restricting exports, in addition to automakers that have started to use
(C) Prices for palladium have soared as Russia has restricted exports and automakers have started using

(D) Prices for palladium have soared as Russia has been restricting exports, in addition to automakers starting to use

(E) Prices for palladium have soared because Russia is restricting exports, as well as automakers that have started using

Parallelism; Rhetorical construction

The sentence indicates that a rapid increase in palladium prices is related to a restriction in Russian exports and to the fact that automakers have started using palladium to make engines. It makes sense to see the increase in palladium prices as being a result of the other two factors, and the sentence should clearly suggest this link. Furthermore, the grammatical construction of the sentence should display parallelism. For instance, if the phrase *Russia restricting exports* is used, then the parallel phrase *automakers having started* should be used so as to create a parallel construction. On the other hand, if the clause *Russia has restricted exports* is used, then the clause *automakers have started* should be paired with it to create a parallel structure.

A The use of the word *with* before *Russia restricting exports* does not clearly indicate the causal link between this restriction and the price increases. Furthermore, *with Russia restricting exports* is not appropriately parallel with *because automakers have started using*.

B The use of the word *with* before *Russia restricting exports* does not clearly indicate the causal link between this restriction and the price increases. Also, *with Russia restricting exports* is not appropriately grammatically parallel with *automakers that have started to use*.

C **Correct.** The use of the word *as* suggests a possible causal link between the price increases and the combination of Russia's restriction of exports and automakers' use of palladium in the manufacture of engines. The sentence also displays an appropriate grammatical parallelism among *Prices for palladium have soared*, *Russia has restricted exports*, and *automakers have started using*.

D There is not an appropriate grammatical parallelism between *Russia has been restricting exports* and *automakers starting to use*.

E There is not an appropriate grammatical parallelism between *Russia is restricting exports* and *automakers that have started using*.

The correct answer is C.

SC01543

218. Variability in individual physical traits both are determined through genetic factors, environmental factors, and interaction between these factors.

(A) both are determined through genetic factors, environmental factors, and interaction between

(B) are both determined by genetic factors, environmental factors, as well as interaction among

(C) both is determined by genetic factors, environmental factors, and interaction between

(D) is determined through genetic factors, environmental factors, as well as interaction among

(E) is determined by genetic factors, environmental factors, and interaction between

Agreement; Grammatical construction

In discussing the factors that produce variations in individuals' physical traits, the sentence uses the structure *both . . . and . . .* unnecessarily and incorrectly: this structure can coordinate exactly two elements of a sentence, whereas here, three elements (genetic factors, environmental factors, and interaction between them) are named. The preposition *by* is more idiomatic than *through* with *determined*. The subject of the sentence is the noun phrase *variability in . . . traits*, so the verb of which it is subject must be singular, whereas *are* is plural. The preposition *among* (unlike *between*) is normally used to indicate some relationship involving more than two elements.

A This has multiple problems, as indicated. Replacing *both are determined through* with the phrase *is determined by* would greatly improve the overall structure of the given sentence.

B The verb *are* is plural but should be singular, since its subject is singular. The word *both* should be omitted. Introducing *as well as* into the sentence without certain other changes is not an improvement; the phrase is not substitutable for *and* without further changes elsewhere in the sentence.

C The word *both* in this case raises the expectation that exactly two elements would be coordinated, but this does not occur here.

D The preposition *through* is unidiomatic with *determined*. The phrase *as well as* cannot be used in the same way as *and* can (in this case, to coordinate three elements in a series).

E **Correct.** The singular verb *is* has *variability* as its subject. Three elements in a series are coordinated, using two commas plus *and*. The preposition *between* is correctly used to refer to a relationship involving two sets of factors.

The correct answer is E.

SC06613

219. In his *Uses of Enchantment* (1976), it was psychologist Bruno Bettelheim's assertion that the apparently cruel and arbitrary nature of many fairy tales actually are an instructive reflection of a child's natural and necessary "killing off" of successive phases in his or her own development.

(A) it was psychologist Bruno Bettelheim's assertion that the apparently cruel and arbitrary nature of many fairy tales actually are

(B) it was the assertion of psychologist Bruno Bettelheim that what is apparently the cruel and arbitrary nature of many fairy tales actually is

(C) psychologist Bruno Bettelheim's assertion that what is apparently the cruel and arbitrary nature of many fairy tales actually is

(D) psychologist Bruno Bettelheim asserted that the apparently cruel and arbitrary nature of many fairy tales actually are

(E) psychologist Bruno Bettelheim asserted that the apparently cruel and arbitrary nature of many fairy tales is actually

Agreement; Rhetorical construction

The sentence attributes to psychologist Bruno Bettelheim a particular view regarding the nature of fairy tales. The construction *it was psychologist Bruno Bettelheim's assertion that* lacks the clarity and directness of the more active construction *Bruno Bettelheim asserted that*. The subject of the subordinate clause containing *nature of many fairy tales actually are* is the singular noun *nature*, not the plural noun in the prepositional phrase *of fairy tales*. Thus, the verb of that clause should be *is*, not *are*.

A *It was psychologist Bruno Bettelheim's assertion that* is wordy and awkward. Presumably this phrase is intended to be equivalent to *Bettelheim asserted that* (just as *it is my opinion that* is another way of saying *I believe that*). However, given the surrounding structure of the sentence, *it* appears to refer to some unnamed entity or condition that occurs in Bettelheim's book, and the entire sequence *was . . . development* appears to be predicated of the subject *it*. The plural verb *are* does not agree with the singular subject *nature*.

B *It was psychologist Bruno Bettelheim's assertion that* is wordy and awkward. Presumably this phrase is intended to be equivalent to *Bettelheim asserted that* (just as *it is my opinion that* is another way of saying *I believe that*). However, given the surrounding structure of the sentence, *it* appears to refer to some unnamed entity or condition that occurs in Bettelheim's book, and the entire sequence *was . . . development* appears to be predicated of the subject *it*. The plural verb *are* does not agree with the singular subject *nature*.

C According to the most plausible parsing of the sentence, everything that follows *asserted that* is intended to express Bettelheim's assertion. On that interpretation, though, the sentence is ungrammatical; the subject of the main clause, *assertion*, is not paired with a verb. If the verb *is* were paired with the subject *assertion*, the sentence would be nonsensical.

D The plural verb *are* does not agree with the singular subject *nature*.

E **Correct**. The construction *Bruno Bettelheim asserted* gives vigor to the main clause, and the singular verb *is* agrees with the subject *nature* in the subordinate clause.

The correct answer is E.

SC06012

220. After weeks of uncertainty about the course the country would pursue to stabilize its troubled economy, officials reached a revised agreement with the International Monetary Fund, pledging the enforcement of substantially greater budget discipline as that which was originally promised and to keep inflation below ten percent.

(A) the enforcement of substantially greater budget discipline as that which was originally promised and to keep inflation below ten percent

(B) the enforcement of substantially greater budget discipline than originally promised and keeping inflation below the ten percent figure

(C) to enforce substantially greater budget discipline than originally promised and to keep inflation below ten percent

(D) to enforce substantially greater budget discipline than that which was originally promised and keeping inflation less than the ten percent figure

(E) to enforce substantially greater budget discipline as that which was originally promised and to keep inflation less than ten percent

Logical predication; Parallelism

This sentence explains the two-part strategy an unnamed country agreed to pursue in order to stabilize its economy. Nominalization (*the enforcement of* . . .) and an incorrect form of comparison (*as that which was* . . .) in the account of the first strategy causes excessive wordiness and indirection and makes the account of the first strategy nonparallel with the account of the second strategy. To reduce wordiness and achieve parallelism, both strategies pledged by the country should be presented in infinitive form (*to enforce . . . and to keep* . . .). The sentence also needs to employ the correct comparative form *greater discipline than*. . . .

A The two strategies (*the enforcement of* and *keeping*) are not presented in parallel form; the nominalized presentation of the first strategy is wordy and indirect, and the comparative form is incorrect.

B The two strategies (*the enforcement of* and *keeping*) are not presented in parallel form.

C **Correct.** The comparative form is correct, and the two strategies are presented in parallel form, as infinitives completing the verb *pledged*.

D The two strategies are not presented in parallel form, and the comparative form is unnecessarily wordy.

E The comparative form is incorrect and wordy.

The correct answer is C.

SC01596

221. A new satellite sweeping over the poles at altitudes of up to 32,000 miles is called POLAR, giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field.

(A) A new satellite sweeping over the poles at altitudes of up to 32,000 miles is called POLAR, giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field.

(B) A new satellite called POLAR that is giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field, sweeping over the poles at altitudes of up to 32,000 miles.

(C) Scientists are getting their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field, from a new satellite sweeping over the poles at altitudes of up to 32,000 miles called POLAR.

(D) Sweeping over the poles at altitudes of up to 32,000 miles, a new satellite called POLAR is giving scientists their best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field.

(E) Sweeping over the poles at altitudes of up to 32,000 miles, scientists' best look yet at the magnetosphere, the region of space under the invisible influence of Earth's magnetic field, is coming from a new satellite called POLAR.

Logical predication; Grammatical construction

The point of the sentence is that a *new satellite* is *giving scientists their best look yet at the magnetosphere*. As the sentence is written, the participial phrase *giving scientists . . . magnetosphere* illogically modifies the preceding clause *A new . . . is called POLAR*, suggesting illogically that the naming of the satellite is what provides scientists with a look at the magnetosphere. The sentence can be constructed more clearly with *satellite* as the subject of the main clause and *is giving* as its verb.

A The participial phrase *giving scientists . . . magnetosphere* illogically modifies the whole preceding clause, rather than *satellite*.

B The subject *satellite* has no corresponding verb that would create an independent clause; the word *that* introduces a subordinate clause, and the overall result is merely a sentence fragment.

C The modifier *called POLAR* is awkwardly placed too far away from the word *satellite*, which it is intended to modify; in its current incorrect position, it appears to modify *altitudes*.

D **Correct**. The sentence is constructed clearly with *satellite* and *is giving* as the subject and verb of the main clause, and the modifiers are placed appropriately near the words they are meant to modify.

E *Sweeping* incorrectly modifies *look*, and the main subject *look* is awkwardly paired with the verb *is coming from*.

The correct answer is D.

SC05787

222. The treasury market dropped in response to a decrease in the value of the dollar and to continued concern that the economy might be growing as fast as to accelerate inflation and drive interest rates higher.

(A) that the economy might be growing as fast as
(B) that the economy might be growing fast enough
(C) with the economy's possibly growing so fast as
(D) with the possibility of the economy growing fast enough so as
(E) with the possibility of the economy possibly growing fast enough

Idiom; Rhetorical construction

This sentence expresses a possible condition related to the relative speed of the economy's growth. The possible condition is expressed succinctly through the modal verb *might* in the subordinate clause *that the economy might be growing*. However, the correct idiom for expressing the relative speed is *fast enough to* precipitate negative economic consequences—not *as fast as*.

A *As fast as* is not the correct idiom.

B **Correct.** The possible condition is expressed succinctly using the modal verb *might,* and idioms are used correctly.

C *Concern with* is not the correct idiom; the phrases *economy's possibly growing* and *so fast as to* are wordy and awkward.

D *Concern with* is not the correct idiom; the phrase *possibility of the economy growing fast enough so as to* is wordy and awkward.

E *Concern with* is not the correct idiom; *possibility* and *possibly* are unnecessarily and awkwardly repetitive.

The correct answer is B.

SC03724

223. Despite a growing population, in 1998 the United States used 38 billion fewer gallons of water a day when comparing it to the period of all-time highest consumption almost 20 years earlier.

(A) day when comparing it to the period of all-time highest consumption almost 20 years earlier
(B) day than it did during the period of all-time highest consumption almost 20 years earlier
(C) day than were used almost 20 years earlier, which had been the all-time high consumption
(D) day, compared to almost 20 years earlier, that having been the all-time high consumption
(E) day, which is in comparison to the period of all-time highest consumption almost 20 years earlier

Rhetorical construction; Logical predication

When making a direct comparison (in this case, with *fewer*), the standard way to express the object of comparison is with *than*. Here, the sentence uses *fewer . . . when comparing it to*, which not only is unidiomatic, but also creates an illogical predication: *United States* is the only possible subject for the verb *comparing* (surely the sentence doesn't mean to say the United States used 38 billion fewer gallons at the time it was making some comparison!). Also, what is the antecedent of *it* here? Grammatically, there is no clear candidate.

A Instead of using *fewer . . . than*, this version uses the unidiomatic *fewer . . . when comparing it to*, which also introduces a logical predication problem.

B **Correct.** *Fewer than* is correct, and this version of the sentence has no logical predication problems.

C This has a logical predication problem: because the relative clause beginning with *which* immediately follows *almost 20 years earlier*, it seems that the time period is being described as having been *the all-time high consumption*.

D *Fewer than* is preferable to *fewer . . . compared to*; also, there is a logical predication problem: because the phrase beginning with *that* immediately follows *almost 20 years earlier*, it seems that the time period is being described as having been *the all-time high consumption*.

E This is awkwardly and confusingly worded. Rather than comparing the United States' water usage in 1998 to its water usage nearly 20 years earlier, this appears illogically to compare the United States' water usage in 1998 to a period of time, namely *the period of all-time highest consumption almost 20 years earlier*.

The correct answer is B.

SC01600

224. A federal advisory panel proposes expanding a national computerized file to permit law-enforcement agencies to track people under criminal investigation but have not yet been charged.

(A) under criminal investigation but
(B) under criminal investigation, but who
(C) under criminal investigation, but they
(D) who are under criminal investigation, but they
(E) who are under criminal investigation but

Parallelism; Grammatical construction

The sentence describes a proposal to allow law-enforcement agencies to track people who have not been charged with a crime but are under investigation. However, the description of the group is flawed, in that the two defining properties—not having been charged; being under investigation—are not expressed in a parallel form: the verb *have been charged* lacks a grammatically correct subject.

A The adjectival phrase *under criminal investigation*, modifying *people*, is nonparallel to *have not yet been charged*; the latter is a mere sentence fragment.

B The required parallelism is lacking here. The word *but* introduces a sentence fragment.

C The required parallelism is lacking here: we have an adjectival phrase, and the coordinate conjunction *but* introducing what appears to be an independent clause. It is unclear what the antecedent of the pronoun *they* is.

D The required parallelism is lacking here: we have a relative clause, followed by the coordinate conjunction *but* introducing what appears to be an independent clause. It is structurally unclear what the antecedent of the pronoun *they* is.

E **Correct.** The relative pronoun *who* has *people* as its antecedent and introduces a complex relative clause containing two parallel verbal phrases correctly coordinated with the conjunction *but*.

The correct answer is E.

SC03779

225. Analysts believe that whereas bad decisions by elected leaders can certainly hurt the economy, no administration can really be said to control or manage all of the complex and interrelated forces that determine the nation's economic strength.

(A) no administration can really be said to control
(B) no administration can be said that it really controls
(C) that no administration can really be said to control
(D) that no administration can really be said that it controls
(E) that it cannot be said that any administration really controls

Grammatical construction; Verb form

The point of this sentence is to explain analysts' common two-part belief about the limited power of elected officials to control a national economy. It presents this belief as the direct object in the main clause, [*a*]*nalysts believe*, and introduces it with the subordinating conjunction *that*, which governs both the positive dependent clause (*decisions . . . can hurt*) introduced by *whereas*, and the subsequent negative independent clause (*no administration can . . . be said to control . . .*). The additional appearances of *that* in some of the versions of the sentence are ungrammatical.

A **Correct.** Introduced by the subordinating conjunction *that*, the complex clause succinctly contrasts leaders' powers to hurt the economy with their inability to control all economic forces.

B The idiom *can be said to* would be appropriate, but *no administration can be said that it* is ungrammatical.

C The repetition of *that* is ungrammatical, since both clauses are governed by the initial appearance of *that* after [*a*]*nalysts believe*.

D This version of the sentence combines the mistakes described in (B) with those described in (C).

E The repetition of *that* is ungrammatical, since both clauses are governed by the first appearance of *that*. The appearance of *it* makes the sentence unnecessarily wordy and convoluted.

The correct answer is A.

SC03146

226. Nearly unrivaled in their biological diversity, coral reefs provide a host of benefits that includes the supply of protein for people, protecting shorelines, and they contain biochemical sources for new life-saving medicines.

(A) coral reefs provide a host of benefits that includes the supply of protein for people, protecting shorelines,
(B) coral reefs provide a host of benefits: they supply people with protein, they protect the shorelines,
(C) coral reefs provide a host of benefits that include supplying protein for people, as well as shoreline protection,
(D) a coral reef provides a host of benefits; they supply protein for people, the protecting of shorelines,
(E) a coral reef provides a host of benefits, including protein for people, protecting shorelines,

Parallelism; Agreement

When listing several items (here, benefits of coral reefs), they should be expressed in a parallel way, such as by using all noun phrases or all full clauses. Also, pronoun subjects in one clause that refer to the subject of a preceding clause should agree in number.

A The three items after *includes* are not parallel *(the supply; protecting shorelines; they contain)*.

B **Correct.** The three items after *benefits* are parallel *(they supply; they protect; they contain)*. The subject of the next clause *(they)* is correctly plural given that its antecedent is *coral reefs*.

C The three items after *include* are not parallel: *supplying, shoreline protection, they contain*.

D The three items after *benefits* are not parallel *(they supply; the protecting of; they contain)*, and in the next clause they is the incorrect

pronoun given that the antecedent here is the singular *a coral reef*.

E The three items after *benefits* are not parallel *(protein; protecting; they contain),* and in the next clause *they* is the incorrect pronoun given that the antecedent here is the singular *a coral reef*.

The correct answer is B.

SC12367

227. Literacy opened up entire realms of verifiable knowledge to ordinary men and women having been previously considered incapable of discerning truth for themselves.

(A) having been previously considered incapable of discerning truth for themselves

(B) who had previously been considered incapable of discerning truth for themselves

(C) previously considered incapable of discerning truth for himself or herself

(D) of whom it had previously been considered they were incapable of discerning truth for themselves

(E) who had previously been considered incapable of discerning truth for himself or herself

Rhetorical construction; Agreement

The phrase beginning with *having been* modifies the noun phrase *ordinary men and women*. In cases like this, it is best to use a full relative clause, starting with *that* or a relative pronoun such as *which* or *who*, instead of a clause with the *-ing* form of the verb. Also, *themselves* is the correct form of a reflexive pronoun to refer back to the plural noun phrase *ordinary men and women*.

A A phrase starting with the *-ing* verb form, instead of with *that* or *who*, is awkward in this context.

B **Correct.** A relative clause correctly beginning with *who* is used, and *themselves* is the correct form for the reflexive pronoun.

C *Himself or herself* is not the correct form for the plural reflexive pronoun.

D Though the relative and reflexive pronouns are grammatically correct, the relative clause (the clause that starts with *of whom*) is unnecessarily long and complex.

E *Himself or herself* is not the correct form for the plural reflexive pronoun.

The correct answer is B.

SC01915

228. In early Mesopotamian civilization, castor oil served not only as a laxative, but also a skin-softening lotion and it was a construction lubricant for sliding giant stone blocks over wooden rollers.

(A) not only as a laxative, but also a skin-softening lotion and it was a construction

(B) as not only a laxative, but also a skin-softening lotion, and it was a construction

(C) not only as a laxative but also as a skin-softening lotion and as a construction

(D) as not only a laxative but as a skin-softening lotion and in construction, as a

(E) not only as a laxative, but a skin-softening lotion and in construction, a

Parallelism; Rhetorical construction

The sentence indicates three uses for castor oil. The first two are correctly joined using the correlative conjunction *not only, but also.* However, the three uses are not listed in parallel grammatical form. The sentence would be better with three adverb phrases beginning with *as*: *as a laxative*, *as a skin-softening lotion*, and *as a construction lubricant*.

A The three uses for castor oil are not listed in parallel grammatical form since the first is an adverb phrase, the second is a noun phrase, and the third is an independent clause, which is ungrammatically conjoined to the preceding part of the sentence without an intervening comma.

B The three uses for castor oil are not listed in parallel grammatical form since the first two are noun phrases and the third is an independent clause.

C **Correct**. The three uses for castor oil are listed as parallel adverb phrases, and the correlative conjunction *not only, but also* is constructed correctly.

D The three uses for castor oil are not listed in parallel grammatical form. The placing of *not only* after *as* is incorrect; the phrase *in construction* is also incorrectly placed.

E The word *as* is missing from the second and third elements of the correlative conjunction, so the three uses for castor oil are not listed correctly in parallel grammatical form.

The correct answer is C.

SC06935

229. An analysis of tree bark all over the globe shows that chemical insecticides have often spread thousands of miles from where they were originally used.

(A) that chemical insecticides have often spread thousands of miles from where they were originally used

(B) that chemical insecticides have spread, often thousands of miles from their original use

(C) chemical insecticides, having often spread thousands of miles from where they were used originally

(D) chemical insecticides, often spreading thousands of miles from where their original use

(E) chemical insecticides, often spreading thousands of miles from where they were originally used

Grammatical construction; Diction

To express the intended meaning, *shows* can be followed by a clause beginning with *that*. Another option would be to use the special clause type *show* + noun phrase + *ing* verb form, such as *show chemical insecticides spreading many miles*—but there should be no pause in the middle of a construction of this latter type. If there is such a pause, then *chemical insecticides* becomes the direct object of *show*, and the following verb-*ing* phrase is an awkward attempt at a modifier of this object. Note also that if something spreads, it spreads from a place or an entity; other ways of expressing this idea in the answer choices are awkward or illogical. Verbs without overt subjects (such as *spreading* here) normally are to be understood as having the same subject as the main clause.

A **Correct.** *Show* is correctly followed by a *that* clause, and a place is correctly identified (*from where*) as the source of the spread.

B *Show* is followed by a *that* clause, but insecticides are illogically said to have spread from a use, rather than from a place.

C *Show* can sometimes take a direct object (here, *chemical insecticides*). However, the construction used here makes *analysis* the subject of *having*. Thus it appears to say, illogically, that the analysis shows that the analysis itself has spread from where the insecticides were used.

D *Show* can sometimes take a direct object (here, *chemical insecticides*). However, the construction used here makes *analysis* the subject of *spreading*. Thus, it appears to say, illogically, that the analysis shows that the analysis itself often spreads from where the insecticides were used. Also, *where their original use* is grammatically incorrect (*where they were originally used* is a correct alternative).

E *Show* can sometimes take a direct object (here, *chemical insecticides*). However, the construction used here makes *analysis* the subject of *spreading*. Thus, it appears to say, illogically, that the analysis shows that the analysis itself often spreads from where the insecticides were used.

The correct answer is A.

SC02241

230. According to the Economic Development Corporation of Los Angeles County, if one were to count the Los Angeles metropolitan area as a separate nation, it would have the world's eleventh largest gross national product, that is bigger than that of Australia, Mexico, or the Netherlands.

(A) if one were to count the Los Angeles metropolitan area as a separate nation, it would have the world's eleventh largest gross national product, that is

(B) if the Los Angeles metropolitan area is counted as a separate nation, it has the world's eleventh largest gross national product, that being

(C) if the Los Angeles metropolitan area were a separate nation, it would have the world's eleventh largest gross national product,

(D) were the Los Angeles metropolitan area a separate nation, it will have the world's eleventh largest gross national product, which is

(E) when the Los Angeles metropolitan area is counted as a separate nation, it has the world's eleventh largest gross national product, thus

Diction; Verb form

The point of this sentence is to explain the implications of a contrary-to-fact state of affairs (Los Angeles metropolitan area as a nation). The subjunctive verb form is needed (*were . . . would have*). To attribute this proposed state of affairs to the calculations of an anonymous agent (*one*) causes unnecessary wordiness. The implication of the hypothetical situation is that the Los Angeles area would have the eleventh-largest gross national product (GNP) in the world, a GNP that is further described as larger than the GNP of any of three nations named. This descriptive information is most efficiently presented as a terminal adjective phrase.

A By introducing the subject *one*, the opening clause becomes unnecessarily wordy and indirect. The relative clause at the end of the sentence causes additional wordiness. The present indicative verb form *is* in the phrase *that is bigger than . . .* is inconsistent with the conditional context established earlier in the sentence (*were . . . would*). Since Los Angeles is not a nation, its *national* product is purely hypothetical and contrary to fact.

B Because the *if* clause introduces a situation that is contrary to fact, the verbs *is counted* and *has* should be subjunctive and conditional, respectively (*were counted* and *would have*). The relative pronoun phrase *that being* is awkward, wordy, and repetitive.

C **Correct.** The subjunctive mood of the verbs is appropriate to the contrary-to-fact situation being described, and the terminal adjective phrase without an introductory relative pronoun is an appropriate way of making the comparison among GNPs.

D Although the opening subjunctive verb is appropriate, it must be followed by a conditional verb in the main clause; the relative clause at the end of the sentence, beginning with *which is*, is indirect and wordy. As in (A), *is* is not the most appropriate verb form to express a counterfactual condition.

E The verbs *is counted . . . has* are incorrect for describing a contrary-to-fact situation. Beginning the final adjective phrase with the word *thus* makes the relationship of the phrase to the rest of the sentence unclear.

The correct answer is C.

SC51661.01

231. Some sociologists claim to have found a direct link from the appearance of news stories about violence to the rate of homicide.

(A) from the appearance of news stories about violence to

(B) between the appearance of news stories about violence to

(C) between the appearance of news stories about violence and

(D) with the appearance of news stories about violence to

(E) with the appearance of news stories about violence and

Idiom; Logical predication

The sentence's use of the form *a direct link from X to Y* is unidiomatic; the correct idiom would be of the form *a direct link between X and Y*. Because of the inappropriate use of *from*, the sentence initially sets up the expectation that the claim the sociologists make is that they became aware of a direct link from the appearance of news stories about violence.

A The sentence uses the unidiomatic form *a direct link from X to Y*.

B The sentence uses the unidiomatic form *a direct link between X to Y*.

C **Correct.** The sentence uses the correct idiomatic form *direct link between X and Y*.

D The sentence uses the unidiomatic form *a direct link with X to Y*.

E The sentence uses the unidiomatic form *a direct link with X and Y*.

The correct answer is C.

SC61661.01

232. Government statistics on the size of foreign investment in real estate are inconclusive because neither federal nor state laws require disclosure of foreign ownership, and the Commerce Department, in its public tallies, does not categorize the owners.

(A) are inconclusive because neither federal nor state laws require
(B) are inconclusive because neither the federal nor state laws requires
(C) are inconclusive because neither federal laws or state laws require
(D) is inconclusive because neither the federal or state laws requires
(E) is inconclusive because neither federal laws nor state laws require

Idiom; Agreement

The sentence uses the correct idiomatic form *neither X nor Y*. Also, *statistics* is plural, so *are* is correct; similarly, *laws* is plural so *require* is correct.

A **Correct.** The sentence uses the correct idiomatic form *neither X nor Y*; *are* and *require* correctly match their subjects in number, *statistics* and *laws*, respectively.

B The sentence uses the idiomatic form *neither X nor Y*, but lacks parallelism in that it matches *the federal* and *state*; it should either match *federal* with *state* or *the federal* with *the state*. Also, because *laws* is plural, the verb should be *require*, not *requires*.

C The sentence uses the unidiomatic form *neither X or Y*.

D The sentence uses the unidiomatic form *neither X or Y*; it also lacks parallelism in that it matches *the federal* and *state*; it should either match *federal* with *state* or *the federal* with *the state*. Also, because *statistics* is plural, the verb should be *are*, not *is*, and because *laws* is plural, the verb should be *require*, not *requires*.

E Because *statistics* is plural, the verb should be *are*, not *is*.

The correct answer is A.

SC81661.01

233. In the United States one of the earliest challengers of the economic principle of free trade was Alexander Hamilton, who in 1791 advocated government policies that would encourage indigenous manufacturing and to protect it from competition from British exports.

(A) and to protect it
(B) but protecting it
(C) while protecting it
(D) for protecting them
(E) to protect them

Verb form; Agreement; Parallelism

The point of the sentence is that Alexander Hamilton challenged free trade by advocating government policies that would encourage indigenous manufacturing and, at the same time, protect this manufacturing from competition from British exports. Some of the answer choices use the plural pronoun *them*, but the antecedent of the pronoun is *manufacturing*, which is singular, so the singular pronoun *it* should be used. As given, the sentence correctly uses the singular pronoun *it*, but, because the sentence's predicate is a compound predicate, in which two verb phrases are conjoined by the word *and*, the same verb form should be used, which is not the case here.

A Because the predicate is compound, with verb phrases conjoined by *and*, the verb forms should be the same; thus, *to protect* is incorrect. The pronoun *it* is correct, however, as its antecedent is *manufacturing*.

B Because the predicate is compound, with verb phrases conjoined by *but*, the verb forms should be the same; thus, *to protect* is incorrect. The pronoun *it* is correct, however, as its antecedent is *manufacturing*.

C **Correct.** The sentence is well expressed. The pronoun *it* is correct as its antecedent is *manufacturing*, and the use of the participle phrase *while protecting it from competition from British imports* (the subject, *indigenous manufacturing*, is given earlier and need not be repeated) appropriately conveys the idea that Hamilton advocated policies that protected the manufacturing at the same time as they encouraged its development.

D The use of *them* is incorrect. Since it is plural the antecedent cannot be the singular *indigenous manufacturing*, though that would appear to be the intended antecedent (the idea underlying the sentence is that Hamilton, in a challenge to the principle of free trade, sought both to encourage and protect indigenous manufacturing). To take either of the plural nouns *government policies* or *earliest challengers* as the antecedent renders the sentence illogical, as does the use of the preposition *for*. Although it might make sense to think that encouraging indigenous manufacturing would protect the United States, *United States*, like *manufacturing*, is singular, and so cannot serve as the antecedent of *them*.

E As with answer choice D, there is no plural noun that is a logically plausible antecedent for the plural pronoun *them*.

The correct answer is C.

SC71661.01

234. Desertification, a process in which the biological productivity of the land is sharply degraded by human abuse and natural phenomena, helped cause the famines that have killed hundreds of thousands in recent years.

(A) a process in which the biological productivity of the land is sharply degraded by human abuse and natural phenomena

(B) a process of the biological productivity of the land being sharply degraded by human abuse and natural phenomena

(C) a process of human abuse and natural phenomena that sharply degrade the biological productivity of the land

(D) which is the process of human abuse and natural phenomena sharply degrading the land's biological productivity

(E) which is the process of human abuse and natural phenomena that sharply degrade the land's biological productivity

Rhetorical construction; Agreement; Logical predication

The purpose of the underlined phrase is to clarify what *desertification* is. The sentence's description of it as *a process in which the biological diversity of the land is sharply degraded by human abuse and natural phenomena* clearly expresses the intended meaning.

A **Correct.** The sentence as worded is clear and to the point.

B By saying that *desertification* is *a process of the biological productivity of the land . . .* , this version is potentially ambiguous because it is unclear which noun (*process, productivity, land*) the participial phrase *being . . . phenomena* modifies.

C As is the case in answer choice B, this does not clearly indicate that *desertification* simply is a process that consists in the sharp degradation of the biological productivity of the land by human abuse and natural phenomena. Furthermore, because *natural phenomena* is plural, there is an ambiguity: it is unclear whether the subject of the verb *degrade* is both *human abuse* and *natural phenomena*, or simply *natural phenomena*. Also, *process* at least arguably should be the antecedent of the relative pronoun *that,* in which case the verb should be *degrades*.

D It is unclear whether *degrading* modifies both *human abuse* and *natural phenomena* or only *natural phenomena*.

E Because *natural phenomena* is plural, there is an ambiguity: it is unclear whether the subject *that* of the verb *degrade* has *human abuse and natural phenomena* as antecedent, or simply *natural phenomena*. Also, *process* arguably should be the antecedent, in which case the verb should be *degrades*.

The correct answer is A.

SC42661.01

235. Open to the public and operated like conventional hotels, condominium hotels permit buyers to acquire a specific room or suite, as well as a proportionate interest in the rest of the establishment.

(A) condominium hotels permit buyers to acquire a specific room or suite, as well as

(B) buyers are permitted to acquire a specific room or suite in a condominium hotel, as well as

(C) a specific room or suite in condominium hotels may be acquired by buyers, as well as acquiring

(D) condominium hotels permit buyers to acquire a specific room or suite, as well as acquiring

(E) it is permitted for buyers to acquire a specific room or suite in a condominium hotel, as well as the acquisition of

Logical predication; Verb form

The sentence as worded is the best choice. Clearly, the sentence is intended to characterize *condominium hotels* as being *open to the public and operated like conventional hotels*, yet some of the incorrect answer choices illogically predicate the opening description of *buyers* or *a specific room or suite*. Furthermore, some of the incorrect answer choices are either ungrammatical or awkwardly worded (in some cases through unnecessary use of a passive-voice verb form), or they illogically indicate that *a specific room or suite*, rather than *buyers*, may be acquiring *a proportional interest in the rest of the establishment* of *a specific room or suite*.

A **Correct.** The opening description correctly modifies *condominium hotels,* and the rest of the sentence is well formed.

B The opening description should modify *condominium hotels*, not *buyers*, as it does here.

C The opening description should modify *condominium hotels*, not *a specific room or suite in condominium hotels*, as it does here. Also, clearly it is the *buyers* who may acquire *a proportionate interest in the rest of the establishment*. As worded here, the sentence seems to say that a specific room or suite in a condominium hotel may be acquiring a proportional interest in the rest of the establishment, which is absurd.

D The use of the present participle, *acquiring*, is ungrammatical; the infinitive, *to acquire,* should have been used.

E The opening description should modify *condominium hotel*; here it modifies *it*. Also, as worded, the sentence says *it is permitted for buyers to acquire . . . the acquisition of a proportionate interest in the rest of the establishment*, which is awkward and redundant.

The correct answer is A.

SC52661.01

236. The methods proposed for reducing the amount of interest to be paid <u>are not able to be used successfully without creating a problem of insufficient cash flow in the future</u>.

(A) are not able to be used successfully without creating a problem of insufficient cash flow in the future

(B) are not able successfully to be used without creating a problem in the future of insufficient cash flow

(C) cannot successfully be used without creating a future problem of insufficient cash flow

(D) cannot be used without succeeding in creating a problem in the future of insufficient cash flow

(E) cannot be used without succeeding in creating a future problem of insufficient cash flow

Diction; Rhetorical construction

The wording is unnecessarily awkward. Also, "able" suggests agency, which is not appropriate with the subject *methods*. The phrase *cannot be used* would be preferable to *are not able to be used*.

A The wording is awkward for the reason given above.

B The wording is awkward, both for the reason given above and because of the phrase *in the future of insufficient cash flow*.

C **Correct.** This version uses the preferable *cannot successfully be used* and is otherwise clearly and concisely worded.

D *Cannot be used without succeeding in creating a problem* is badly worded. Surely the point of the sentence is that the methods cannot be used successfully without creating a future problem of insufficient cash flow; as worded, this version seems to suggest that successfully creating a cash flow problem is a prerequisite for being able to use the methods. Also, *in the future of insufficient cash flow* is awkward.

E As already indicated, this version seems to suggest that successfully creating a cash flow problem is a prerequisite for being able to use the methods.

The correct answer is C.

SC62661.01

237. Despite the Puritan sumptuary laws prohibiting the wearing of bright or elaborate clothing, if you had either a liberal education or an annual income of two hundred pounds one was permitted to display their material prosperity in public.

(A) if you had either a liberal education or an annual income of two hundred pounds one was permitted to display their material prosperity in public

(B) if one had either a liberal education or annual income of two hundred pounds one was permitted the public display of their material prosperity

(C) having either a liberal education or annual income of two hundred pounds would allow one to publicly display their material prosperity

(D) those with either a liberal education or an annual income of two hundred pounds were allowed to display their material prosperity in public

(E) those having either a liberal education or annual income of two hundred pounds were permitted their public display of material prosperity

Diction; Agreement; Rhetorical construction

The use of *you* is strange, because the sentence is discussing a set of laws that were in place long before the time of the reader. Also, the sentence shifts from *you* to *one*. *One* would be preferable throughout, given that the sentence concerns laws in place long ago. Finally, the use of *their* does not agree in number with *one*. Although in some contexts it is acceptable to use *their* as a singular possessive adjective, it should not be used along with *one* (*one's* would be preferable), and its use in this sentence creates an ambiguity: is its antecedent intended to be *one* or is its antecedent intended to be the plural noun *laws*?

A This version fails for the reasons discussed above.

B The use of *their* is incorrect; in this instance, it can simply be deleted.

C The use of *their* is incorrect.

D **Correct.** The use of *those* is preferable to *you*. *Their* is acceptable here because *those* is plural.

E The force of *their* is unclear. It could, for example, convey a presumption that the people designated by the subject *those . . . pounds* would all actually display material prosperity, rather than merely be permitted to do so.

The correct answer is D.

SC72661.01

238. Like Darwin and his fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped his remarkable career in natural science.

(A) Like Darwin and his fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped his remarkable career in natural science.

(B) Just as Darwin had a fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped a remarkable career as a natural scientist.

(C) Like Darwin's fruitful voyage on the *Beagle*, Banks's trip with Captain Cook on the *Endeavour* inspired and shaped a remarkable career in natural science.

(D) Just as Darwin's fruitful voyage on the *Beagle*, Banks sailed with Captain Cook on the *Endeavour*, inspiring and shaping his remarkable career as a natural scientist.

(E) Like Darwin's fruitful voyage on the *Beagle*, Banks sailed with Captain Cook on the *Endeavour*, which inspired and shaped a remarkable career in natural science.

Parallelism; Diction; Rhetorical construction; Logical predication

Absent relevant context or detailed knowledge about the relevant history, the given sentence seems open to more than one interpretation. Such ambiguity indicates a rhetorical-construction failure. On one interpretation, the given sentence seems aimed at comparing Banks's sea voyage and Darwin's with respect to the influence those voyages had on scientific careers—but the given sentence and its alternatives vary in how successfully this comparison is executed. For example, the comparison in the given sentence is presented loosely and somewhat illogically:

Bank's trip is compared with "Darwin and his fruitful voyage." In some variants, *just as* is used instead of *like.* These uses of *just as* fail to make clear the comparison intended. The word *like* is a preposition that is normally followed by a noun, noun phrase, or pronoun that it governs; *just as* is normally used as a conjunction, introducing a subordinate clause. Failure to take this distinction into account is a diction error.

A This is ambiguous and for that reason fails rhetorically. The comparison between Banks's trip and "Darwin and his fruitful voyage" is drawn loosely and somewhat illogically.

B The comparison articulated here is between two disparate facts: Darwin had a fruitful voyage, and Banks's trip inspired and shaped a scientific career. The expected parallelism between two sea voyages is absent. The conjunction *just as* is used idiomatically, however.

C **Correct.** This version articulates the comparison more clearly than any of the other versions. It conveys that Banks's voyage resembled Darwin's voyage in one respect: each inspired and shaped a scientific career. The preposition *like* is used to indicate the resemblance.

D The phrase *just as* is normally used as a conjunction, introducing a subordinate clause; here the clause, made explicit, is: *Just as Darwin's fruitful voyage on the* Beagle *[did].* The verb *did* is implicit. However, this reading creates a nonsensical parallelism that, taken strictly, represents Darwin's fruitful voyage as having sailed with Captain Cook—a logical-predication issue. A separate point is that the participial phrase *inspiring . . . scientist,* which modifies *Banks*, represents Banks as inspiring his own scientific career—probably not the intended meaning.

E The phrase *like . . .* Beagle is a prepositional phrase and is nonparallel with the main clause *Banks sailed . . .* Endeavor. This failure of parallelism impairs the expression of the intended comparison, which is between Darwin's voyage and Banks's. The structure of the sentence also involves a logical-predication error in that it indicates (absurdly) a similarity between a person (Banks) and Darwin's voyage.

The correct answer is C.

SC82661.01

239. When more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, have become fewer and fewer.

(A) When more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, have become fewer and fewer.

(B) At the time that more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, become less and less.

(C) When more and more factories move out of the cities each year, then manufacturing jobs, historically the first step into the urban poor's job market, become less and less.

(D) Since more and more factories have moved out of the cities each year, manufacturing jobs, historically the first step into the urban poor's job market, have become less and less.

(E) As more and more factories move out of the cities each year, manufacturing jobs, historically the first step into the job market for the urban poor, become fewer and fewer.

Verb form; Diction

The verb tenses of the sentence should match. *When more and more factories move out* dictates that the verb predicated of *manufacturing jobs* should be *become*, not *have become*. For *have become* to be correct, the sentence would need to begin with *When more and more factories have moved out*. Some of the answer choices incorrectly have *less and less*; because manufacturing jobs are countable, *fewer and fewer* is correct (as it is in the underlined portion of the sentence).

A *Have become* is incorrect. The tense should match that in *when more and more factories move out*; thus, *become* would be correct.

B This version of the sentence is unnecessarily wordy (e.g., *at the time that*) and incorrectly uses *less and less* rather than *fewer and fewer*.

C This version of the sentence incorrectly uses *less and less* rather than *fewer and fewer*. The use of *then* after the first comma is unnecessary and unidiomatic.

D This version of the sentence incorrectly uses *less and less* rather than *fewer and fewer*.

E **Correct.** The verb *become* has the same tense as the phrasal verb *move out* and *fewer and fewer* is correct.

The correct answer is E.

SC92661.01

240. The thousands of volcanic islands and coral atolls of the South Seas have a total population of about four million, but the paucity of natural resources does not permit such economic development that would be needed by them to support more population.

(A) does not permit such economic development that would be needed by them to support more population

(B) does not permit economic development such as is needed for supporting a larger number

(C) does not permit the economic development needed to support a larger population

(D) do not permit the economic development needed to support a larger population

(E) do not permit needed economic development for supporting a larger number of people

Diction; Agreement; Rhetorical construction

The use of *that* in *does not permit such economic development that would be needed* is incorrect. *That* should be replaced with *as*. However, even if this correction were made, the sentence would still be poorly worded. The antecedent of *them* (*volcanic islands and coral atolls*) is too far separated from the pronoun, and the use of the passive voice (*would be needed by them*) lacks the clarity and rhetorical force the active voice would have provided (*they would need*). That said, it would be preferable to avoid the *such . . . as* form entirely. *Does not permit the economic development needed to support a larger population* conveys the same idea more succinctly.

A The sentence has the problems discussed above.

B *Such as is needed* is awkward; *a larger number* is unclear.

C **Correct.** This version clearly and concisely conveys the intended idea.

D The subject of the verb is *paucity*, which is singular; thus, *do* is incorrect and should be replaced with *does*.

E The subject of the verb is *paucity*, which is singular; thus, *do* is incorrect and should be replaced with *does*; also, *needed economic development for supporting a larger number of people* is awkward.

The correct answer is C.

SC03661.01

241. In contrast with a dark surface and its tendency toward heat absorption, a large expanse of snow and ice reflects incoming radiation into space.

(A) In contrast with a dark surface and its tendency toward heat absorption

(B) Contrasted with a dark surface's tendency to absorb heat

(C) Since it is in contrast to a dark surface and its tendency to absorb heat

(D) Contrasted to the tendency of a dark surface to absorb heat

(E) In contrast to a dark surface, which tends to absorb heat

Idiom; Parallelism

When *contrast* follows *in*, *contrast* functions as a noun; the appropriate preposition to use after *contrast* when it functions as a noun is *to*; *with* is the preferred preposition to use after *contrast* only when *contrast* functions as a verb. Thus, the sentence's use of *in contrast with* is incorrect. Also, the logical contrast would be between *a dark surface* and *a large expanse of snow and ice*, not between both *a dark surface and its tendency toward heat absorption* and *a large expanse of snow*.

A *In contrast with* is not idiomatic; the correct preposition to use when *contrast* functions as a noun is *to*. Also, the logical contrast to make would be between *a dark surface* and

a large expanse of snow and ice, not between both *a dark surface and its tendency toward heat absorption* and *a large expanse of snow*.

B The appropriate contrast is between *a dark surface* and *a large expanse of snow and ice*, not, as it is here, between *a dark surface's tendency to absorb heat* and *a large expanse of snow and ice*.

C Because of its use of *since*, this version illogically states that the reason a large expanse of snow and ice reflects incoming radiation into space is that it is in contrast to a dark surface and its tendency to absorb heat.

D The preferred preposition to use with *contrasted* (and with *contrast* whenever it is used as a verb rather than as a noun) is *with*, not *to*, which is used here. Also, *a large expanse of snow and ice* is illogically contrasted with *the tendency of a dark surface to absorb heat*.

E **Correct.** *In contrast to* is the correct idiom; *a large expanse of snow and ice* is logically contrasted with *a dark surface*.

The correct answer is E.

SC37620.01

242. The greatest road system built in the Americas prior to the arrival of Christopher Columbus was the Incan highway, which, over 2,500 miles long and extending from northern Ecuador through Peru to southern Chile.

(A) Columbus was the Incan highway, which, over 2,500 miles long and extending

(B) Columbus was the Incan highway, over 2,500 miles in length, which had extended

(C) Columbus, the Incan highway, which was over 2,500 miles in length and extended

(D) Columbus, the Incan highway, being over 2,500 miles in length, was extended

(E) Columbus, the Incan highway was over 2,500 miles long, extending

Grammatical construction; Verb form

The sentence begins with a long noun phrase *the greatest . . . Columbus*, a description that we are told refers to the Incan highway. The sentence also aims to tell us the length of this highway and what regions it passed through. One issue in the sentence concerns correct sentence formation. A related issue concerns the appropriate verb form to be used.

A The formation of the relative clause introduced by *which* is faulty, mainly because of its present-participle verb form *extending*. A relative clause giving a correct completion of the sentence would have been *which was over 2,500 miles long and extended . . . Chile.*

B This has two flaws present in the phrase *which had extended.* The relative pronoun *which* could be read as having the immediately preceding noun *length,* rather than *highway,* as its antecedent. Also, the complex verb form *had extended*, which normally refers to a time preceding a past time mentioned in the sentence, is incorrect here; the simple past *extended* is needed.

C The passage, if completed with this wording, would lack a main verb and therefore would not be a sentence, as opposed to a very long noun phrase followed by a relative clause.

D A glaring flaw here is use of the passive verb form *was extended* instead of the active and intransitive verb form *extended.* This conveys an unintended meaning, i.e., that the highway was initially 2,500 miles long but was later made even longer. Another flaw is the unnecessary and awkward use of the participle *being*.

E **Correct.** Completing the passage with this wording gives a sentence with *the Incan highway* as its subject. The noun phrase *the greatest . . . Columbus* provides a description of the Incan highway. The participial phrase beginning with *extending* modifies the sentence subject, thereby providing a further description of the highway.

The correct answer is E.

SC99250.01

243. Due to poaching and increased cultivation in their native habitats, researchers have determined that there are fewer than 100 Arabian leopards left in the wild, and thus the leopards are many times as rare as China's giant pandas.

(A) Due to poaching and increased cultivation in their native habitats, researchers have determined

that there are fewer than 100 Arabian leopards left in the wild, and thus the leopards are many times as rare as

(B) Due to poaching and increased cultivation in their native habitats, there are fewer than 100 Arabian leopards left in the wild, researchers have determined, making them many times more rare than

(C) There are fewer than 100 Arabian leopards left in the wild due to poaching and increased cultivation in their native habitats, researchers have determined, which makes the leopards many times more rare compared to

(D) Researchers have determined that, because of poaching and increased cultivation in their native habitats, there are fewer than 100 Arabian leopards left in the wild, thus making them many more times as rare as

(E) Researchers have determined that, because of poaching and increased cultivation in their native habitats, there are fewer than 100 Arabian leopards left in the wild, and thus the leopards are many times more rare than

Grammatical construction; Diction

The sentence contains three errors. The adverbial phrase *due to . . . habitats* is so positioned as to appear to modify the verb *have determined*—thus making the possessive adjective *their* seem, incorrectly, to refer to *researchers*. The comparison indicated by *many times as rare as* is intended to indicate that one group is rarer than another, a meaning properly conveyed by a comparative adjective—either *rarer* or *more rare*—plus *than*.

A This fails to give a correct sentence, for the reasons explained.

B This wording is awkward in part because of the placement of *researchers have determined*. It also contains a subtle error in failing to indicate clearly that the researchers ascertained not only the reduction in the number of leopards but also the causes of this reduction.

C The phrasing is ambiguous and awkward. The reason the remaining leopards are "left in the wild" is surely not due to poaching or increased cultivation; the determinations made by the researchers have surely not made the leopards rarer—and one can assume that the writer of the passage did not intend to state otherwise. Another point: the comparison indicated by *more rare* would normally be completed by use of *than*, not *compared to*.

D The phrase *many more times as rare as* is not the correct way to indicate that the Arabian leopards are much more rare than giant pandas. Also, the participial phrase *making them* can be read as an awkwardly placed modifier of the sentence subject *researchers*, which would convey the nonsensical idea that the researchers made the leopards rarer.

E **Correct.** This version is the only one that avoids all the errors already described.

The correct answer is E.

SC04215

244. Developed by Pennsylvania's Palatine Germans about 1750, Conestoga wagons, with high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie and they had a floor curved upward on either end so as to prevent cargo from shifting on steep grades.

(A) wagons, with high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie and they had a floor curved upward on either end so as to prevent

(B) wagons, with high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie, and with a floor that was curved upward at both ends to prevent

(C) wagons, which had high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie, and floors curved upward on their ends so that they prevented

(D) wagons had high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie, and a floor that was curved upward at both ends to prevent

(E) wagons had high wheels capable of crossing rutted roads, muddy flats, and the nonroads of the prairie and floors curving upward at their ends so that it prevented

Logical predication; Parallelism; Grammatical construction

The main subject of this sentence is *Conestoga wagons* and the main verb is *had*. The opening participial phrase describes the origin of the wagons, and the rest of the sentence describes the features they possessed. These features must be presented in parallel form as objects of the verb *had*. The sentence first presented is a fragment; the prepositional phrase *with* . . . leaves the subject *Conestoga wagons* without a verb. When the verb *had* finally appears, a new subject *they* has been unnecessarily introduced.

A The subject *wagons* is without a verb. The introduction of a new subject *they* is unnecessary. Given the absence of *had* after *wagons* and of a comma after *prairie*, it is also ungrammatical.

B This version of the sentence has no main verb for the subject *wagons*.

C As in (A) and (B), this version of the sentence fails to provide a main verb for the subject *wagons*.

D **Correct.** The main verb *had* completes the subject *wagons* and accommodates the two direct objects, *wheels* and *a floor*. The comma after *prairie* helps to clarify that *floors* is a direct object of *had*, parallel with *high wheels*.

E The referent for *it* is ambiguous.

The correct answer is D.

SC60440.01

245. The current economic downturn has significantly reduced advertising income both for business journals as well as general consumer magazines, especially if focusing on technology.

(A) has significantly reduced advertising income both for business journals as well as general consumer magazines, especially if focusing

(B) has significantly reduced advertising income both for business journals and for general consumer magazines, especially those focusing

(C) significantly reduced advertising income for both business journals and for general consumer magazines, especially when focused

(D) reduced both business journals' and general consumer magazines' advertising income significantly, especially if focused

(E) reduced advertising income significantly for both business journals, as well as for general consumer magazines, especially those focusing

Idiom; Grammatical construction; Parallelism

The sentence contains errors related to the use of *both* to signal coordination of two elements of the sentence. The correct idiom is *both* . . . *and*; the phrase *as well as* is not interchangeable with *and*. Moreover, the elements meant to be coordinated are prepositional phrases, the first one being *for business journals*—but the preposition *for* is incorrectly omitted in the second element to be coordinated, a failure of required parallelism. The structure of the sentence suggests that the phrase *especially if focusing on technology* modifies the subject of the sentence, *the current economic downturn*. However, this is not the intended meaning. What is intended is a reference to a subclass of magazines (those that focus on technology).

A This contains multiple errors: incorrect coordination using *both*; omission of *for* in the second coordinated element; and a misplaced modifier *especially if focusing on technology*.

B **Correct.** This sentence correctly uses the idiom *both* . . . *and* to coordinate two prepositional phrases and uses a well-structured participial phrase to identify a subclass of the class of general consumer magazines.

C The position of *for*, preceding rather than following *both*, is incorrect. This misleadingly suggests that just two business journals are being referred to and fails by incorrectly coordinating two structurally dissimilar elements, i.e., a noun phrase (*both business journals*) and a prepositional phrase (*for general consumer magazines*). The phrase *especially when focused* . . . seems to modify the sentence subject, but in context that reading fails to capture the intended meaning.

D The phrase *especially if focused* . . . seems to modify the sentence subject, but in context that reading fails to capture the intended meaning. The simple-past verb *reduced* instead of the past-perfect form *has reduced* does not go well with the reference to a "current" economic downturn. The past-perfect form indicates a past action that is carrying over to the present, and this meaning would be more appropriate.

E This variant makes it appear that just two unnamed business journals are being referred to, contrary to the clearly intended meaning of the sentence. The simple-past verb *reduced* instead of the past-perfect form *has reduced* does not go well with the reference to a "current" economic downturn.

The correct answer is B.

SC01002

246. The reason many people consider the Mediterranean island to be ungovernable is because that the inhabitants long ago learned to distrust and neutralize all written laws.

(A) is because that the inhabitants long ago learned to distrust and neutralize

(B) is the inhabitants long ago learned distrusting and neutralizing

(C) was because of the inhabitants long ago learning to distrust and to be neutralizing

(D) is that the inhabitants long ago learned to distrust and to neutralize

(E) was on account of the inhabitants long ago learning to distrust and neutralize

Verb form; Grammatical construction

The sentence provides a reason for why "many people" consider a certain Mediterranean island to be "ungovernable." It has the form *X is Y*, with *X* a noun phrase that refers to the reason in terms of what is being explained. *Y* provides the explanation.

A This sentence has two words next to one another that would each, by itself, have the same function. Each of *because* and *that* could serve alone to introduce the explanation and is provided by portion *Y*. Furthermore, in addition to introducing a redundancy, the two words together make the sentence ungrammatical. Removing any one of these words would resolve this issue.

B If the word *that* were inserted between *is* and *the*, then it would be more immediately clear, when reading this sentence, where the explanation begins (immediately after the word *that*). Furthermore, *learned distrusting and neutralizing all written laws* should be *learned to distrust and to neutralize all written laws*.

C In this sentence, the verb *consider* needs to agree with *was*. As it stands, *consider* pertains to the present while *was* pertains to the past.

D **Correct.** This sentence follows recommendations made in connection with sentence A.

E As in sentence C, the verb *consider* needs to agree with *was*.

The correct answer is D.

SC28801.01

247. Though there is some overlap with the two concepts *market economy* and *laissez faire*, several important differences between them must be borne in mind.

(A) with the two concepts *market economy* and *laissez faire*, several important differences between them must be borne in mind

(B) between the two concepts *market economy* and *laissez faire*, several important differences must be borne in mind

(C) spanning the two concepts *market economy* and *laissez faire*, one must bear several important differences between them in mind

(D) among the two concepts of *market economy* and *laissez faire*, there are several important differences among them that must be borne in mind

(E) with the two concepts of *market economy* and *laissez faire*, one must bear in mind several important differences

Idiom; Rhetorical construction

The sentence's unidiomatic use of *there is some overlap with the two concepts* misleadingly sets up the expectation that there is some third thing that overlaps with the concepts *market economy* and *laissez faire*, whereas the sentence is merely intending to say that those two concepts overlap with one another. The sentence would be clearer and more idiomatic if it instead said *there is some overlap between the two concepts*. Because the sentence uses *with* rather than *between* in the first clause, the sentence must indicate that the differences in question are between these two concepts by using the awkward locution *several important differences between them*.

A The sentence should use *between* rather than *with*, allowing it to avoid having to use the awkward phrase *several important differences between them*.

B **Correct.** The sentence uses the idiomatic phrase *overlap between the two*; the second clause is well expressed.

C The use of *overlap spanning the two* is unidiomatic; *one must bear several important differences between them in mind* is awkward.

D When talking of just two things, *between* rather than *among* should be used; *there are several important differences among them that must be borne in mind* is awkward and wordy.

E *Between* rather than *with* should be used; the use of *with* improperly sets up an expectation that the sentence is discussing an overlap between the two concepts *market economy* and *laissez faire* and some third thing.

The correct answer is B.

SC71061.01

248. Because of the erratic pattern of sales increases this year, retailers and analysts hesitate to predict five-year trends in retail sales during the months that have historically been the most profitable.

(A) Because of the erratic pattern of sales increases this year, retailers and analysts hesitate to predict

(B) With the erratic pattern of this year's sales increases, retailers and analysts are hesitant in predicting

(C) This year, due to the erratic pattern of increasing sales, there is some hesitation among retailers and analysts in predicting

(D) The erratic pattern of sales increases have made retailers and analysts hesitate this year to predict

(E) This year's erratic pattern of increasing sales have made retailers and analysts hesitate to predict

Diction; Idiom; Agreement

The intended idea of the sentence is that this year's erratic pattern of sales increases has made retailers and analysts hesitant to make any prediction regarding a particular trend. This idea is well expressed by using *because of*. Furthermore, the correct answer, unlike some of the other answer choices, uses the appropriate idiom *hesitant to* rather than *hesitant in* and has no agreement error between subject and verb.

A **Correct.** The sentence's use of *Because of* appropriately conveys the idea that the erratic pattern of sales increases explains why the retailers and analysts are hesitant to make a prediction. The sentence uses the correct idiom *hesitate to* and has no agreement errors.

B The use of *with* is less effective than *because of* in the correct answer; the meaning is conveyed less clearly than in A. Also, *hesitant in predicting* is awkward and unidiomatic.

C *Due to* effectively communicates that the erratic pattern of increasing sales helps explain the retailers' and analysts' hesitation to make a prediction, but the sentence employs the awkward, wordy, and unidiomatic *hesitation . . . in predicting*.

D *The erratic pattern . . .* is singular, so the verb should be *has*. The placement of the adverbial phrase *this year* would be more appropriate immediately following *increases*.

E *The erratic pattern . . .* is singular, so the verb should be *has*.

The correct answer is A.

SC89941.01

249. Proceeding without a definite plan for upcoming labor negotiations, like the firm had agreed to last year, it would surely have proven to be a disaster in the face of the skilled and resolute opposition involved this time.

(A) Proceeding without a definite plan for upcoming labor negotiations, like the firm had agreed to last year, it would surely have proven to be a disaster

(B) Proceeding without a definite plan for upcoming labor negotiations, as the firm agreed last year to do, would surely have proven to be a disaster

(C) Going ahead without the presence of a definite plan for upcoming labor negotiations, like the firm had agreed last year to do, would surely have proven disastrous

(D) To proceed without the presence of a definite plan for upcoming labor negotiations, as the firm had agreed to last year, would surely have proven disastrous

(E) Going ahead without their having a definite plan for upcoming labor negotiations, as they agreed to last year, it would surely have proven to be a disaster for the firm

Diction; Rhetorical construction; Logical predication

Although in informal speech and writing, *like* is sometimes used as a conjunction as it is here, this use in more formal writing is controversial and is generally frowned on; using *as* instead of *like* would be preferable in this sentence. The phrase *proceeding without a definite plan for the upcoming labor negotiations* can function either as a gerund phrase, in which case it functions as a noun, or as a participle phrase, in which case it functions as an adjective. As worded here, the phrase may seem to function as an adjective, modifying *it*. However, what is meant by the sentence is that the act of proceeding without a definite plan would have proven to be a disaster, in which case the word *it* should be removed and the phrase in question should be taken to be a gerund phrase that acts as the subject for the verb *would have proven*.

A The sentence is flawed in the ways discussed above.

B **Correct.** This version correctly uses *as* rather than *like*, and concisely uses the phrase beginning with *proceeding* as the subject of the sentence.

C *Without the presence of a definite plan* is wordier than necessary; *without a definite plan* would be preferable. *As* would be preferable to *like*.

D *Without the presence of a definite plan* is wordier than necessary; *without a definite plan* would be preferable.

E *Without their having a definite plan* is wordy; *without a definite plan* would be preferable. The word *it* should be removed as described in connection with A.

The correct answer is B.

SC03916

250. Because the collagen fibers in skin line up in the direction of tension, surgical cuts made along these so-called Langer's lines sever fewer fibers and is less likely to leave an unsightly scar.

(A) Because the collagen fibers in skin line up in the direction of tension, surgical cuts made along these so-called Langer's lines sever fewer

(B) Because the collagen fibers in skin line up in the direction of tension, a surgical cut having been made along these so-called Langer's lines severs less

(C) Because the collagen fibers in skin line up in the direction of tension, a surgical cut made along these so-called Langer's lines severs fewer

(D) With the collagen fibers in skin lining up in the direction of tension, surgical cuts made along these so-called Langer's lines sever less

(E) With the collagen fibers in skin lining up in the direction of tension, a surgical cut made along these so-called Langer's lines sever fewer

Agreement; Diction

This sentence explains a causal connection between the alignment of collagen fibers and the impact of a particular type of surgical cut. *Because* is appropriate to express that causal relationship. The singular verb in the phrase *is less likely to leave* requires a singular subject (*cut*) and must be coordinated with another singular verb (*severs*). Because *fibers* are countable, the correct modifier is *fewer* rather than *less*.

A The plural subject *cuts* does not agree with the singular verb *is*.

B The verb form *having been made* is inconsistent with the present tense verb *severs*; *less* inappropriately modifies countable *fibers*.

C **Correct.** The adverbial conjunction *because* accurately captures the causal relationship expressed by the sentence. The singular subject *cut* agrees with the singular verbs *severs* and *is*, and *fewer* appropriately modifies countable *fibers*.

D The preposition *with* does not capture the causal relationship expressed by the sentence; the plural subject *cuts* does not agree with the singular verbs (*severs* and *is*); and *less* is an inappropriate modifier for countable *fibers*.

E As in (D), the preposition *with* fails to capture the causal relationship between alignment of fibers and scarring. The plural verb *sever* does not agree with the singular subject *cut* and the subsequent singular verb *is*.

The correct answer is C.

SC01639

251. The completion in 1925 of the Holland Tunnel, linking Manhattan with New Jersey's highways, which permitted 2,000 cars to pass through each tube every hour and was hailed as the decade's $48 million engineering masterpiece.

(A) Tunnel, linking Manhattan with New Jersey's highways, which permitted 2,000 cars to pass through each tube every hour and

(B) Tunnel, linking Manhattan with New Jersey's highways and permitting 2,000 cars to pass through each tube every hour, it

(C) Tunnel, linking Manhattan with New Jersey's highways and permitting 2,000 cars to pass through each tube every hour,

(D) Tunnel linked Manhattan with New Jersey's highways, which permitted 2,000 cars to pass through each tube every hour and

(E) Tunnel linked Manhattan with New Jersey's highways, permitting 2,000 cars to pass through each tube every hour,

Grammatical construction; Parallelism

The sentence (not a properly grammatical sentence as it stands) reports that the completion of the Holland Tunnel was hailed as an engineering masterpiece. Parenthetically, it seeks to describe characteristics of the tunnel that made it useful and perhaps help explain its enthusiastic reception. Questions to consider include: what is the proper antecedent of the relative pronoun *which?* And how would the tunnel's two major characteristics be best described?

A The relative pronoun *which* is adjacent to *New Jersey's highways*, but contextually, *the completion of the Holland Tunnel* (or perhaps *the Holland Tunnel*) seems to be the pronoun's antecedent. The relative clause has two verbal phrases *permitted . . .* and *was hailed . . .* coordinated with *and*. However, there is no properly grammatical sentence here, since there is no independent clause.

B The participial phrases *linking . . . highways* and *permitting . . . hour* are parallel and coordinated by *and*. This portion is correct and describes two characteristics of the tunnel. However, the addition of the pronoun *it* makes what precedes it into a mere sentence fragment, so there is no properly grammatical sentence here.

C **Correct.** The complex phrase *linking . . . hour* correctly exhibits parallelism between two participial phrases and modifies *the Holland Tunnel*. The phrase functions parenthetically, and the sentence as a whole has a coherent grammatical structure.

D The antecedent of the relative pronoun *which* is unclear and makes this version fail. Is it *New Jersey's highways*, the whole preceding clause, or *the completion of the Holland Tunnel?* The relative pronoun is the subject both of *permitted* and of *was hailed* in the complex relative clause and must have the same antecedent in both cases. As the subject of *was hailed*, the pronoun's antecedent is *the completion of the Holland Tunnel*. As the subject of *permitted*, the pronoun cannot grammatically have that as its antecedent. Thus the complex relative clause *which permitted . . . masterpiece* is grammatically incoherent.

E This version makes *was hailed . . . masterpiece* into a mere sentence fragment, not properly coordinated with the remainder of the sentence.

The correct answer is C.

SC03315

252. The World Wildlife Fund has declared that global warming, a phenomenon that most scientists agree is caused by human beings' burning of fossil fuels, will create havoc among migratory birds by harming their habitats as a result of altering the environment.

(A) by harming their habitats as a result of altering the environment

(B) by altering the environment to the extent of it harming their habitats

(C) by altering the environment in ways harmful to their habitats

(D) from the fact that their habitats will be harmed by the environment being altered

(E) from the fact that the environment will be altered and this will harm their habitats

Logical predication; Rhetorical construction

The sentence describes a declaration by the World Wildlife Fund that global warming will "create havoc" among migratory birds in certain respects, which are specified in the underlined portion. The underlined portion thus needs to specify, in a clear and focused fashion, how, according to the World Wildlife Fund, global warming will create havoc for the birds.

A The description in this option of the effects of global warming among migratory birds is convoluted and confusing. First, the sentence as written does not specify who or what is altering the environment. Second, given the reasonable guess that it is global warming that is or will harm the environment, the order of the listing of the causal elements is confusing. According to the sentence, global warming will alter the environment and then this altering will harm the habitat of birds. However, although this sentence accurately describes what causes what, the elements are listed in an order that does not correspond to the order of causation ("global warming" is followed by "harming the habitats," which is followed by "altering the environment").

B This sentence uses the word *extent*, followed by a condition, *it harming their habitats*, intended to imply a certain level of *extent*. The extent is great enough to harm the habitat of the birds. However, as worded, the sentence does not provide a clear condition on the level of extent. For example, in *it harming their habitat*, it is not clear what *it* refers to. The word *it* could refer to the environment or to the extent of change to the environment.

C **Correct.** This sentence clearly specifies how global warming will "create havoc" for the birds.

D This sentence, like sentence A, is convoluted and confusing, in part because, when reading the sentence, it is unnecessarily difficult to understand what is supposed to be causing what. Note that, although the meaning of this option is more or less the same as that of sentence C, this sentence, sentence D, is much more difficult to process.

E This sentence is unnecessarily wordy and difficult to process. Sentence C is a much better choice.

The correct answer is C.

SC05244

253. Tropical bats play an important role in the rain forest ecosystem, aiding in the dispersal of cashew, date, and fig seeds; pollinating banana, breadfruit, and mango trees; and indirectly help the producing of tequila by pollinating agave plants.

(A) pollinating banana, breadfruit, and mango trees; and indirectly help the producing of

(B) pollinating banana, breadfruit, and mango trees; and indirectly helping to produce

(C) pollinating banana, breadfruit, and mango trees; and they indirectly help to produce

(D) they pollinate banana, breadfruit, and mango trees; and indirectly help producing

(E) they pollinate banana, breadfruit, and mango trees; indirectly helping the producing of

Parallelism; Diction

The sentence indicates three ways in which tropical bats play an important role in the rainforest ecosystem, but it does not express these three ways by using appropriately parallel grammatical constructions. The first two ways mentioned—*aiding in the dispersal of cashew, date, and fig seeds* and *pollinating banana, breadfruit, and mango trees*—are expressed using participial phrases (which function as adjectives), whereas the third is expressed as part of a compound predicate—*and indirectly help the producing of tequila by pollinating agave plants* (also note that *the producing of* involves a poor choice of words, and would be better expressed by writing *to produce* or perhaps *with the production of*).

A The phrases beginning with *aiding*, *pollinating*, and *help* are not appropriately parallel grammatical constructions. Also *the producing of* is awkward and would be better worded as *to produce* or *with the production of*.

B **Correct.** This sentence has an appropriate grammatical parallelism and involves no questionable word choices.

C The construction of the sentence is not appropriately parallel.

D The construction of the sentence is not appropriately parallel and *producing* is a questionable choice of words (*to produce* would be better).

E The construction of the sentence is not appropriately parallel and *the producing of* is a questionable choice of words (*to produce* or perhaps *with the production of* would be better).

The correct answer is B.

SC04346

254. A recent court decision has qualified a 1998 ruling that workers cannot be laid off if they have been given reason to believe that their jobs will be safe, provided that their performance remains satisfactory.

(A) if they have been given reason to believe that their jobs will

(B) if they are given reason for believing that their jobs would still

(C) having been given reason for believing that their jobs would

(D) having been given reason to believe their jobs to

(E) given reason to believe that their jobs will still

Verb form; Idiom

This sentence asserts that a court decision has qualified a 1998 ruling. It then goes on to explain the series of conditions stipulated by that ruling: workers cannot be laid off if they have been given (prior) reason to believe that continued satisfactory job performance will (always) ensure that their jobs are safe. To express these complicated temporal relationships, the present tense passive verb *cannot be laid off* describes the assurance provided by the ruling; the present-perfect, passive verb describes the prior condition *have been given* . . . , and the future tense verb *will be* describes the outcome the workers can expect. The idiom *reason to believe* succinctly describes the assurance given to workers.

A **Correct.** The sequence of conditions makes sense, and the idiom is correct.

B The present tense *are given* fails to clarify that the assurance of job security must precede the workers' confidence that they cannot be laid off. The phrase *reason for believing* (singular, with no article) is unidiomatic and in this context is inappropriate.

C This version appears to be presenting *having been given reason* . . . as a restrictive modifier of *laid off*. This makes the sentence very awkward and hard to make sense of, and it obscures the requisite nature of the condition (that workers had been given prior reason to think their jobs were safe). *Reason for believing* is unidiomatic.

D Without a comma after *off*, it is unclear what *having been given reason* . . . modifies; the string of infinitive phrases is awkward and confusing.

E As in (D), it is unclear what the participial phrase (in this case, *given reason to believe*) is supposed to modify.

The correct answer is A.

SC04874

255. Of all the record companies involved in early jazz, the three most prominent were Columbia, Victor, and OKeh.

(A) Of all the record companies involved in early jazz, the three most prominent were Columbia, Victor, and OKeh.

(B) Three most prominent record companies of all the ones that were involved in early jazz were Columbia, Victor, and OKeh.

(C) Columbia, Victor, and OKeh were, of all the record companies involved in early jazz, the three of them that were most prominent.

(D) Columbia, Victor, and OKeh were three most prominent of all the record companies involved in early jazz.

(E) Out of all the record companies that were involved in early jazz, three of them that were the most prominent were Columbia, Victor, and OKeh.

Diction; Rhetorical construction

This sentence aims to emphasize the special prominence of just three specific companies, as opposed to all other companies. Where *three most prominent companies* is not preceded by a definite article, it is unidiomatic. To indicate that these three were more prominent than any others, it should say *the three most prominent companies*. If the intention were, instead, to indicate that these companies were merely among a number of highly prominent ones, it should say *three of the most prominent companies*. Also, in general, one should avoid relative clause constructions when simple adjectives can express the same idea more simply.

A **Correct.** *The three . . .* is used, and *prominent* modifies the understood *companies* in a concise way.

B *The* is omitted before *three*, and *of all the ones that were involved* is inferior to a simpler expression such as *of all the ones involved*.

C *The three of them that were most prominent* is long and awkward; *the three most prominent* is shorter and simpler.

D *The* is omitted before *three*.

E Not only is *the* omitted, but *three of them that were the most prominent* is too long and complex, compared to *the three most prominent*.

The correct answer is A.

SC01451

256. Since 1992, in an attempt to build up the Atlantic salmon population in each of the seven rivers in which salmon still spawn, state officials in Maine have stocked them with fry raised in hatcheries from eggs produced by wild fish found in that particular river.

(A) them

(B) the river

(C) the rivers

(D) each river

(E) that river

Rhetorical construction; Diction

The meaning that the sentence was intended to convey is clear, but because the plural *them* is discordant with the singulars *each* and *that particular river,* the sentence fails to express its intended meaning coherently.

A The earlier part of the sentence uses the phrase *each of the seven rivers*, so the plural *them* is inappropriate.

B The phrase *the river* is singular but can refer only to a particular river, whereas *each* refers to the individual rivers in the group of seven.

C The plural *the rivers* does not match the singular *each* in the earlier part of the sentence.

D **Correct.** The phrase *each river* is consistent with the earlier reference to "each of the seven rivers."

E Although *that river* is singular, it can only refer to a particular river, but no particular river is referred to in the earlier part of the sentence.

The correct answer is D.

SC02382

257. On the tournament roster are listed several tennis students, most all of which play as good as their instructors.

(A) most all of which play as good
(B) most all of whom play as good
(C) almost all of which play as well
(D) almost all of whom play as good
(E) almost all of whom play as well

Idiom; Diction

The standard formal, written word to express a quantity just short of everything is *almost*, not *most*. With animate entities such as people, *who(m)* is preferred over *which*. For all but a few exceptional verbs, adverbial modifiers (*well*) are correct as opposed to adjectival ones (*good*).

A None of *most*, *which*, or *good* are the preferred forms.
B *Most* and *good* are not the correct standard forms.
C Although *almost* and *well* are fine, *which* is not.
D Although *almost* and *whom* are fine, *good* is not.
E **Correct.** All of *almost, whom*, and *well* are correct.

The correct answer is E.

SC07143

258. In 1974 a large area of the surface of Mercury was photographed from varying distances, which revealed a degree of cratering similar to that of the Moon's.

(A) which revealed a degree of cratering similar to that of the Moon's
(B) to reveal a degree of cratering similar to the Moon
(C) revealing a degree of cratering similar to that of the Moon
(D) and revealed cratering similar in degree to the Moon
(E) that revealed cratering similar in degree to that of the Moon

Logical predication; Parallelism

This sentence's second clause, expressing what the imaging of Mercury showed, must be linked to the first clause in a grammatically correct way. This is best done either by an appositive relative clause (requiring the relative marker *which*), or by a clause starting with a nonfinite verb (*to reveal* or *revealing*). Also, whatever is said to be similar to a degree of cratering (on Mercury) should also be a degree of cratering (on the Moon); this must be expressed clearly.

A The use of *which* is correct, but *that of the Moon's* is inferior to *that of the Moon*, because the possessive *'s* and *that of the* redundantly express the same idea. *That of the Moon's* appears to refer, illogically, to cratering of some unspecified thing that belongs to the Moon, not cratering of the Moon itself.
B *To reveal* is acceptable, but *to the Moon* incorrectly compares a physical entity (the Moon) to a degree of cratering.
C **Correct.** *Revealing* is a good way to start the second clause, and *to that of the Moon* properly contrasts two degrees of cratering.
D *And* is incorrect as a way to introduce the second clause; *to the Moon* makes the wrong sort of comparison.
E *That* is not the correct way to introduce an appositive relative clause. *That* is typically used restrictively, whereas the comma preceding it makes the ensuing clause nonrestrictive. This leaves the meaning unclear.

The correct answer is C.

SC05894

259. The computer company reported strong second-quarter earnings that surpassed Wall Street's estimates and announced the first in a series of price cuts intended to increase sales further.

(A) The computer company reported strong second-quarter earnings that surpassed Wall Street's estimates and announced the first in a series of price cuts intended to increase sales further.
(B) The report of the computer company showed strong second-quarter earnings, surpassing Wall Street's estimates, and they announced the first in a series of price cuts that they intend to increase sales further.
(C) Surpassing Wall Street's estimates, the report of the computer company showed strong second-quarter earnings, and, for the purpose of

increasing sales further, they announced the first in a series of price cuts.

(D) The computer company reported strong second-quarter earnings, surpassing Wall Street's estimates, and announcing the first in a series of price cuts for the purpose of further increasing sales.

(E) The computer company, surpassing Wall Street's estimates, reported strong second-quarter earnings, while announcing that to increase sales further there would be the first in a series of price cuts.

Logical predication; Idiom

The point of the sentence is to describe two actions of the computer company: its earnings report and its announcement of a price cut. To present this information most efficiently, the sentence requires a singular subject "the computer company" and compound verbs (*reported* and *announced*). To indicate that it is the company's earnings and not the report that surpassed Wall Street's estimates, the relative clause *that surpassed* . . . must immediately follow *earnings*.

A **Correct.** The sentence makes clear that the company is responsible for reporting its earnings and announcing its sales plan; the placement of the relative clause *that surpassed* . . . makes it clear that the company's earnings, not the report, surpassed Wall Street's estimate.

B Because this compound sentence opens the first clause with the subject *the report*, and relegates the computer company to the position of object of a preposition, the referent of the subject of the second clause *they* is obscured—particularly since *they* is plural and the intended referent *company* is singular. The function of *that* in the final clause is ambiguous and confusing.

C The placement of the opening modifier *surpassing* . . . makes it modify *report* rather than *estimate*. The plural pronoun *they* does not agree with its intended antecedent, *company*.

D *Surpassing* . . . and the parallel phrase *announcing* . . . both appear to modify the entire opening clause, representing parallel functions of the company's report of its earnings.

E The placement of *surpassing* . . . makes that phrase modify *reported*. . . . The conjunction *while* indicates that the announcement and the report occurred simultaneously. The phrase *there would be* . . . introduces unnecessary wordiness and indirection.

The correct answer is A.

SC01562

260. Long overshadowed by the Maya and Aztec civilizations, historians are now exploring the more ancient Olmec culture for the legacy it had for succeeding Mesoamerican societies.

(A) historians are now exploring the more ancient Olmec culture for the legacy it had for succeeding Mesoamerican societies

(B) historians' exploration is now of the more ancient Olmec culture's legacy to the Mesoamerican societies succeeding them

(C) the legacy of the more ancient Olmec culture to the Mesoamerican societies that succeeded them is what historians are now exploring

(D) the more ancient Olmec culture is now being explored by historians for its legacy to succeeding Mesoamerican societies

(E) the Olmec culture is more ancient and had a legacy to succeeding Mesoamerican societies that historians are now exploring

Logical predication; Idiom

The sentence notes that historians are exploring the contributions of the ancient Olmec culture to societies that came after it. The sentence structure is flawed, however.

A The sentence's initial phrase is, nonsensically, predicated of *historians* rather than of *Olmec culture*. The wording *for the legacy it had for* is verbose, the repetition of *for* is awkward, and the second *for* is unidiomatic with *legacy*.

B The sentence's initial phrase *long* . . . *civilizations* is, nonsensically, predicated of *exploration*. The wording *is now of* is unnecessarily awkward (for example, the phrase *now focuses on* would not be so).

C The context suggests that the sentence's initial phrase *long . . . civilizations* is more likely meant to be predicated of a noun phrase referring to another civilization (or culture), thus making *the legacy* be the subject of the sentence (as opposed to *the more ancient Olmec culture*). The relative *what* and its antecedent are too widely separated from each other; also, the construction *is what . . .* is unnecessarily awkward.

D **Correct.** This version is logically and structurally correct. Making *the more ancient Olmec culture* the subject of the main clause—the most logical subject, given the initial modifying phrase referring to civilizations—has required a change in the verb form, from active to passive. The preposition *to* following *legacy* is idiomatic.

E This shifts the emphasis, compared with the given sentence, to how far back in time the Olmec culture existed. Unlike the given sentence, it makes the historians' current preoccupation with the Olmec culture seem secondary. The wording *had a legacy to* is unnecessarily awkward.

The correct answer is D.

SC01981

261. The bank holds $3 billion in loans that are seriously delinquent or in such trouble that they do not expect payments when due.

(A) they do not expect payments when

(B) it does not expect payments when it is

(C) it does not expect payments to be made when they are

(D) payments are not to be expected to be paid when

(E) payments are not expected to be paid when they will be

Agreement; Logical predication; Verb form

The plural pronoun *they* cannot be used to refer to the singular noun *bank*. The structure of *they do not expect payments when due* is awkward and unclear.

A *Bank* requires the singular pronoun *it*, not the plural pronoun *they*. The structure of *when due* creates ambiguity in meaning.

B *Payments* is a plural noun, so the singular *it is* is incorrect.

C **Correct.** In this correct sentence, pronouns and their referents agree, as do subjects and their verbs. The addition of the modifying phrase *to be made* clarifies the meaning of the sentence.

D The active voice is preferable here, since the passive voice leaves it unclear who does not expect the payments to be made. *Payments . . . to be paid* is redundant. *Are not to be* incorrectly suggests that the writer is prescribing that the payments not be expected.

E The active voice is preferable here, since the passive voice leaves it unclear who does not expect the payments to be made. *Payments . . . to be paid* is redundant. *Will be* is not the correct verb form.

The correct answer is C.

SC01435

262. A researcher claims that a tornado of a given size and strength is likely to cause more deaths, both proportionately and in absolute numbers, in the southeastern region of the United States than in the northeastern.

(A) A researcher claims that a tornado of a given size and strength is likely to cause more deaths, both proportionately and in absolute numbers, in the southeastern region of the United States than in the northeastern.

(B) A researcher claims that a tornado, if of a given size and strength, is likely both proportionately and in absolute numbers to cause more deaths in the southeastern region of the United States than in the northeastern.

(C) A researcher claims that, with a tornado of a given size and strength, it is likely to cause more death, both proportionately and in absolute numbers, in the southeastern rather than in the northeastern region of the United States.

(D) If a tornado is of a given size and strength, a researcher claims, it is more likely, both proportionately and in absolute numbers, to

cause death if it is in the southeastern region of the United States rather than in the northeastern region.

(E) Both proportionately and in absolute numbers, a researcher claims that a tornado of a given size and strength is likely to cause more deaths in the southeastern region of the United States rather than in the northeastern.

Grammatical construction; Diction

The sentence clearly and correctly reports a researcher's claim about the relative incidence of fatalities from a tornado of any given size in two different regions of the United States. It states that the incidence of fatalities in the southeastern region would be greater both in number and as a percentage of the affected population than would the incidence in the northeastern region. Some issues to note about the erroneous sentences are: use of *rather than* instead of simply *than*; use of the singular *death* instead of the plural; the placement of the adverbial phrase *both proportionately . . . numbers*; and the use of *if*-statements.

A **Correct.** The sentence, though expressing a complex thought, does so clearly and coherently and avoids errors related to the issues mentioned.

B The researcher's claim is not that a tornado of a certain magnitude is likely to cause more fatalities in the southeastern than in the northeastern region; rather the claim is that a tornado of any given magnitude will cause more deaths in the southeastern region than in the northeastern.

C This sentence is unnecessarily awkward because of the adverbial phrase beginning *with* and the use of *it* to refer to *a tornado*. The singular *death* does not go well with the mention of numbers, which indicates the counting of individual deaths. The number of deaths in one region is being compared with the number in another; for that purpose, *rather than* is unidiomatic, as opposed to *than*.

D Beginning the sentence with this *if*-clause suggests that the claimed likelihood of variation in regional incidence of fatalities is conditional on the tornado being of a certain minimum size and strength. Nothing suggests that this is the claim that the given sentence meant to attribute to the researcher. Also, the matter at issue is not whether there would be any death (singular) but rather what the incidence of fatalities (plural) would be in each of two different regions. Another error is that the placement of the adverbial phrase *both proportionately . . . numbers* makes it function as a modifier of the verbal phrase *is more likely*.

E The placement of the adverbial phrase *both proportionately . . . numbers* seems nonsensically to make it modify the verb *claims*, and does not reflect the intended meaning of the given sentence. The use of *rather than* instead of *than* is an incorrect usage for the comparison intended.

The correct answer is A.

SC04603

263. Heirloom tomatoes, grown from seeds saved from the previous year, only look less appetizing than their round and red supermarket cousins, often green and striped, or have plenty of bumps and bruises, but are more flavorful.

(A) cousins, often green and striped, or have plenty of bumps and bruises, but are

(B) cousins, often green and striped, or with plenty of bumps and bruises, although

(C) cousins, often green and striped, or they have plenty of bumps and bruises, although they are

(D) cousins; they are often green and striped, or with plenty of bumps and bruises, although

(E) cousins; they are often green and striped, or have plenty of bumps and bruises, but they are

Logical predication; Grammatical construction

The sentence is intended to say that, although heirloom tomatoes may appear to be less appetizing than the round, red supermarket variety, the often green and striped or bumpy and bruised heirloom tomatoes actually are more flavorful. Any version of the sentence in which *green and striped*, *have bumps and bruises*, or *are*

more flavorful appear to modify *round and red supermarket cousins* is ill-formed.

A In this version of the sentence, *often green and striped*, *have plenty of bumps and bruises*, and *are more flavorful* all illogically appear to modify *round and red supermarket cousins* rather than *heirloom tomatoes*.

B In this version of the sentence as well, *often green and striped*, *with plenty of bumps and bruises*, and *although more flavorful* all illogically appear to modify *round and red supermarket cousins* rather than *heirloom tomatoes*.

C In this version of the sentence, *often green and striped* illogically appears to modify *round and red supermarket cousins* rather than *heirloom tomatoes*.

D Although in this version *green and striped* and *with plenty of bumps and bruises* clearly, and correctly, modify *heirloom tomatoes*, the *or* in *they are often green and striped, or with plenty of bumps and bruises* is unnecessary and awkward. Furthermore, the final clause is ungrammatical and should say *although they are more flavorful*.

E **Correct.** In this version of the sentence, *green and striped*, *with plenty of bumps and bruises*, and *are more flavorful* clearly, and correctly, modify *heirloom tomatoes*, and the phrases in the sentence are appropriately parallel with one another.

The correct answer is E.

SC05381

264. In the textbook publishing business, the second quarter is historically weak, because revenues are low and marketing expenses are high as companies prepare for the coming school year.

(A) low and marketing expenses are high as companies prepare

(B) low and their marketing expenses are high as they prepare

(C) low with higher marketing expenses in preparation

(D) low, while marketing expenses are higher to prepare

(E) low, while their marketing expenses are higher in preparation

Parallelism; Logical predication

This sentence is correctly written. It uses parallel structure to give two reasons why textbook publishers have weak second quarters: *revenues are low* and *expenses are high*. The construction *as companies prepare for the coming school year* is clear, as opposed to the awkward constructions using the ambiguous plural pronouns *they* and *their*.

A **Correct.** This sentence uses the parallel forms *are low . . . are high* and employs the unambiguous *companies* as the subject of *prepare*.

B *Their* seems illogically to refer to *revenues*. The subject of *prepare* is the ambiguous *they*.

C *Higher* is not parallel to *low*, and it gives no indication of what the comparison is supposed to be (Higher than what?). This construction makes it appear, illogically, that the low revenues have higher marketing expenses.

D *Higher* is not parallel to *low* and is illogical. The infinitive construction *to prepare . . .* is awkward.

E *Higher* is not parallel to *low* and is illogical since no comparison is being made; *their* has no clear referent.

The correct answer is A.

SC01485

265. Because of the sharp increases in the price of gold and silver, the value of Monica Taylor's portfolio rose as her daughter-in-law's dropped.

(A) as her daughter-in-law's dropped

(B) while her daughter-in-law's has dropped

(C) as there was a drop in her daughter-in-law's

(D) while that of her daughter-in-law's dropped

(E) as it dropped for her daughter-in-law's

Parallelism; Rhetorical construction

The sentence attempts to explain two opposing trends in portfolio value: the value of one person's portfolio rose as the value of another person's portfolio dropped. Note, however, that the sentence as given here refers to a rise in value and a drop in a portfolio: this indicates a failure in required parallelism. The comparison, properly expressed,

would mention *the value of Monica Taylor's portfolio* and *the value of her daughter-in-law's portfolio*.

A This is incorrect because it refers to the daughter-in-law's portfolio, not to the value of her portfolio.

B The conjunction *while* is appropriate here, but the sentence lacks the parallelism needed to clearly compare the opposing trends in portfolio value.

C This is wordy and lacks the required parallelism already mentioned.

D **Correct.** The phrase *that of her daughter-in-law's* is a way of referring to the value of her daughter-in-law's portfolio. The antecedent of *that* is *the value*. The phrase *Monica Taylor's portfolio* is parallel to *her daughter-in-law's portfolio*; each involves a noun with a possessive that functions adjectivally. The word *portfolio* is understood, not explicit.

E Lacking the parallelism noted, this is unnecessarily awkward. Structurally, the pronoun *it* can logically have as antecedent either *the value of Monica Taylor's portfolio* or *Monica Taylor's portfolio*, but neither of these readings yields a correct sentence.

The correct answer is D.

SC02791

266. Ms. Chambers is among the forecasters who predict that the rate of addition to arable lands will drop while those of loss rise.

(A) those of loss rise
(B) it rises for loss
(C) those of losses rise
(D) the rate of loss rises
(E) there are rises for the rate of loss

Logical predication; Parallelism

The forecaster is making predictions about two different rates. The forecast changes in the rates can be compared using the construction *the rate of x will drop while the rate of y rises*; *x* and *y* should be parallel.

A There is no referent for *those*.

B *It* refers *to the rate of addition*, creating a nonsensical statement.

C There is no referent for *those*. *Of losses* should be singular to parallel *of addition*.

D **Correct.** This sentence uses a construction that clearly states the predicted changes in the rates; the rates are expressed in parallel ways.

E *There are rises for* is wordy and unidiomatic.

The correct answer is D.

SC00987

267. In keeping with her commitment to her Christian faith, Sojourner Truth demonstrated as a public speaker a dedication both to the nonviolent abolition of slavery as well as for women to be emancipated.

(A) a dedication both to the nonviolent abolition of slavery as well as for women to be emancipated
(B) her being dedicated to both the nonviolent abolishing of slavery as well as for women's emancipation
(C) a dedication to both the nonviolent abolition of slavery and the emancipation of women
(D) that she was dedicated both to abolishing slavery nonviolently and to emancipate women
(E) her dedication both to the nonviolent abolition of slavery and emancipation of women

Parallelism; Rhetorical construction

The sentence describes Sojourner Truth's dedication, as a public speaker, to the nonviolent abolition of slavery and to the emancipation of women. It thus provides a list of two things that Sojourner Truth was dedicated to: the nonviolent abolition of slavery and the emancipation of women. Although there are various ways of describing this list, the two elements need to be described in a parallel fashion.

A This sentence begins the description of the list with the beginning of the construction *both to . . . and to*. If implemented properly, this construction will describe the elements of the list in parallel. However, as the sentence is written, the second element of the list, *as for women to be emancipated*, is not parallel to the first element, *to the nonviolent abolition of slavery*.

B This sentence, with *to* before *both*, begins the description of the list with a somewhat different construction than Sentence A does. In this case, *the nonviolent abolishing of slavery* needs to be made parallel with *for women's emancipation*. As written, the sentence presents a severe case of lack of parallelism.

C **Correct.** This sentence correctly implements the construction *to both . . . and. . . .* In particular, *the nonviolent abolition of slavery* is parallel to *the emancipation of women*.

D This sentence begins the description of the list with the same construction as in sentence A, *both to . . . and to. . . .* In this case, *abolishing slavery nonviolently* is not parallel to *emancipate women*.

E This sentence uses the same construction as in sentences A and D: *both to . . . and to. . . .* In this case, *to the nonviolent abolition of slavery* is not parallel to *emancipation of women*. If *to the* were inserted immediately before *emancipation of women*, then the parallelism issue would be resolved.

The correct answer is C.

SC01972

268. Less than 400 Sumatran rhinos survive on the Malay peninsula and on the islands of Sumatra and Borneo, and they occupy a small fraction of the species' former range.

(A) Less than 400 Sumatran rhinos survive on the Malay peninsula and on the islands of Sumatra and Borneo, and they occupy a small fraction of the species' former range.

(B) Less than 400 Sumatran rhinos, surviving on the Malay peninsula and on the islands of Sumatra and Borneo, occupy a small fraction of the species' former range.

(C) Occupying a small fraction of the species' former range, the Malay peninsula and the islands of Sumatra and Borneo are where fewer than 400 Sumatran rhinos survive.

(D) Occupying a small fraction of the species' former range, fewer than 400 Sumatran rhinos survive on the Malay peninsula and on the islands of Sumatra and Borneo.

(E) Surviving on the Malay peninsula and on the islands of Sumatra and Borneo, less than 400 Sumatran rhinos occupy a small fraction of the species' former range.

Diction; Logical Predication

Because the number of Sumatran rhinos has been given, the comparative term *fewer* rather than *less* should be used to account for their numbers. In order to clarify that habitat currently occupied by the rhinos is but a small fraction of their former range, the information about their dwindling habitat is most efficiently presented in an opening participial phrase describing the rhinos, followed by a main clause in which the number of surviving rhinos is the subject, with the predicate explaining where the rhinos currently live. By presenting the information about the population and range of rhinos in two separate independent clauses, the sentence as written does not clarify that the former range of the rhinos once extended beyond the peninsula and the islands.

A *Less* is inappropriate for describing the specific number of surviving Sumatran rhinos. The separate independent clauses obscure the fact that the rhinos' range used to extend beyond the peninsula and the two islands. The referent of *they* is unclear.

B *Less* is inappropriate for describing the specific number of surviving Sumatran rhinos. By using a nonrestrictive phrase *surviving . . .* , the sentence suggests that fewer than 400 rhinos—perhaps only a portion of the total number—occupy a small fraction of the species' former range.

C The opening participial phrase somewhat illogically modifies *peninsula and . . . islands* rather than the rhinos.

D **Correct.** The opening participial phrase correctly modifies *fewer than 400 . . . rhinos*, a phrase that uses the correct comparative term.

E The comparative term *less* is inappropriate for describing the number of rhinos.

The correct answer is D.

SC11068

269. Certain pesticides can become ineffective if used repeatedly in the same place; one reason is suggested by the finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals.

(A) Certain pesticides can become ineffective if used repeatedly in the same place; one reason is suggested by the finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals.

(B) If used repeatedly in the same place, one reason that certain pesticides can become ineffective is suggested by the finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals.

(C) If used repeatedly in the same place, one reason certain pesticides can become ineffective is suggested by the finding that much larger populations of pesticide-degrading microbes are found in soils with a relatively long history of pesticide use than those that are free of such chemicals.

(D) The finding that there are much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in soils that are free of such chemicals is suggestive of one reason, if used repeatedly in the same place, certain pesticides can become ineffective.

(E) The finding of much larger populations of pesticide-degrading microbes in soils with a relatively long history of pesticide use than in those that are free of such chemicals suggests one reason certain pesticides can become ineffective if used repeatedly in the same place.

Logical predication; Rhetorical construction

The sentence is correctly constructed; it has two independent clauses connected by a semicolon. *If used repeatedly in the same place* clearly and correctly modifies *certain pesticides*.

A **Correct.** The sentence is correctly constructed; the modifier *if used repeatedly in the same place* is correctly placed.

B *If used repeatedly in the same place* modifies *one reason* when it should modify *certain pesticides*.

C *If used repeatedly in the same place* modifies *one reason* when it should modify *certain pesticides*. The absence of *in* in the phrase *than those* . . . makes the comparison unclear.

D *If used repeatedly in the same place* ambiguously modifies *one reason* when it should clearly modify *certain pesticides*.

E The comparison *the finding of much larger populations* . . . *than in those that* . . . is improperly constructed in a way that makes *the finding* appear to refer awkwardly to a discovery of larger populations rather than to a research conclusion about the presence of such populations.

The correct answer is A.

SC11854

270. While some academicians believe that business ethics should be integrated into every business course, others say that students will take ethics seriously only if it would be taught as a separately required course.

(A) only if it would be taught as a separately required course

(B) only if it is taught as a separate, required course

(C) if it is taught only as a course required separately

(D) if it was taught only as a separate and required course

(E) if it would only be taught as a required course, separately

Rhetorical construction; Verb form; Diction

Conditional constructions require specific verb tenses. For a present condition, like this debate between academicians, the subordinate clause introduced by *if* uses the present indicative, and the main clause uses the future tense: *y will happen* (main clause) *only if x happens* (subordinate clause). Logically, the *course* is to be both *separate* and *required*, so the two adjectives should equally modify the noun and thus be separated by a comma: *separate, required course*.

A The verb tense in the *if* clause is incorrect. The adverb *separately* should be the adjective *separate*.

B **Correct.** This sentence has the correct verb tense, and the two adjectives equally modify the noun.

C The placement of *only* distorts the meaning; it should precede *if*. *A course required separately* is unclear.

D The verb tense in the *if* clause is incorrect. The placement of *only* distorts the meaning.

E The verb tense in the *if* clause is incorrect. The placement of *only* distorts the meaning. The adjective *separate* should be used instead of the adverb *separately* and should precede the noun.

The correct answer is B.

SC08272

271. Whether they will scale back their orders to pre-2003 levels or stop doing business with us altogether depends on whether the changes that their management has proposed will be fully implemented.

(A) Whether they will scale back their orders to pre-2003 levels or stop doing business with us altogether depends on whether the changes that their management has proposed will be fully implemented.

(B) Whether they scale back their orders to pre-2003 levels or whether they discontinue their business with us altogether depends on the changes their management has proposed, if fully implemented or not.

(C) Their either scaling back their orders in the future to pre-2003 levels, or their outright termination of business with us, depends on their management's proposed changes being fully implemented or not.

(D) Whether they will scale back their orders to pre-2003 levels or stop doing business with us altogether depends if the changes that their management has proposed become fully implemented.

(E) They will either scale back their orders to pre-2003 levels, or they will stop doing business with us altogether dependent on whether the changes their management has proposed will be fully implemented, or not.

Rhetorical construction; Diction

This sentence expresses a dependency between two sets of options: the first is scaling back orders versus stopping all business, and the second is fully implementing changes versus not fully implementing changes. In each case, the most succinct way to express the two options is the *whether X* (*or Y*) construction, which immediately and clearly signals the presence of two opposed options. In linking the two sets of options, *depend* or *dependent* requires the preposition *on*.

A **Correct.** Each set of options is expressed concisely with a single *whether*, and *depend* is followed by *on*.

B The first set of options is expressed by means of a second, redundant and illogical *whether*; the second set is expressed in an unclear way, unnecessarily delaying the identification of the two options until the very end. *Depends on the changes . . . if fully implemented or not* makes the meaning unclear. This could be an awkward way of trying to say that the outcome depends on whether the changes will be made, but it could just as plausibly be an attempt to say that the outcome depends on the changes, regardless of whether the changes will be fully implemented.

C Both sets of options are expressed without *whether*, and the first set does not even explicitly say that there is such an option. As a result, the existence of two dependent sets of options is unclear until the end of the sentence.

D The first set of options is correctly expressed with *whether*, but the second is not; also, *depend* lacks a following preposition *on*.

E Both sets of options are expressed without *whether*, and the first set does not even explicitly signal the existence of options, so the existence of two dependent sets of options is unclear until the end of the sentence.

The correct answer is A.

SC00975

272. Until 1868 and Disraeli, Great Britain had no prime ministers not coming from a landed family.

(A) Until 1868 and Disraeli, Great Britain had no prime ministers not coming

(B) Until 1868 and Disraeli, Great Britain had had no prime ministers who have not come

(C) Until Disraeli in 1868, there were no prime ministers in Great Britain who have not come

(D) It was not until 1868 that Great Britain had a prime minister—Disraeli—who did not come

(E) It was only in 1868 and Disraeli that Great Britain had one of its prime ministers not coming

Verb form; Idiom

This sentence explains how Disraeli marked a turning point in British history: he was the first prime minister who did not come from the landed gentry. The placement of the double negative is crucial. While *no prime ministers not coming from . . .* is hard to untangle, [*n*]*ot until . . . that Great Britain had a prime minister who did not come . . .* separates the negatives into separate clauses, making them easier to decode. An appropriate way to express the temporal relationship is to use the idiomatic phrase *not until . . . that*.

A The phrase *no prime ministers not coming* is unnecessarily confusing. It is also confusing to follow the preposition *until* with two very different types of objects—a date and a person.

B As in (A), the double negative and unlike objects of the prepositional phrase starting with *until* are confusing. Additionally, the verb form *have not come*, which is the present-perfect tense, is inappropriate following the past perfect *had had* in this context.

C The present-perfect tense (*have not come*) is inappropriate after the past tense *were* in this context. *Until Disraeli* is imprecise and incomplete. *Before Disraeli's term in 1868 . . .* or *Until Disraeli became prime minster in 1868* would work.

D **Correct.** This version correctly uses the idiomatic construction *not until . . . that*, and it correctly uses past tense throughout.

E While it makes sense to say that a historical change occurred *in 1868*, it does not make sense to say that it occurred *in Disraeli*. It is unidiomatic to say *had one of its prime ministers not coming*.

The correct answer is D.

SC02011

273. Around 1900, fishermen in the Chesapeake Bay area landed more than seventeen million pounds of shad in a single year, but by 1920, overfishing and the proliferation of milldams and culverts that have blocked shad migrations up their spawning streams had reduced landings to less than four million pounds.

(A) that have blocked shad migrations up their spawning streams had reduced landings to less

(B) that blocked shad from migrating up their spawning streams had reduced landings to less

(C) that blocked shad from migrating up their spawning streams reduced landings to a lower amount

(D) having blocked shad from migrating up their spawning streams reduced landings to less

(E) having blocked shad migrations up their spawning streams had reduced landings to an amount lower

Diction; Verb form

The point of this sentence is to explain how overfishing and interference with shad spawning streams affected the size of shad landings. The sentence makes this point by comparing the sizes of annual landings before and after 1920. The sentence most efficiently compares the poundage of pre- and post-1920 landings with the comparative form [*from*] *more than . . . to less than. . . .*

A The present-perfect tense of *have blocked* inappropriately describes an event that caused something to happen before 1920. In addition, *migrations up their spawning streams* is incorrect.

B **Correct.** The comparison of poundage is efficiently explained, and the sequence of tenses makes sense. Despite a possible superficial appearance of a comparison between countable things (pounds), *less* is more appropriate than *fewer* for the comparison. The fishermen landed different

amounts of fish; they did not land the number of pounds in terms of which those amounts are measured.

C The comparative expression *to a lower amount* is unnecessarily wordy. The past-perfect form *had reduced* would make the temporal relationships somewhat clearer than does the past tense *reduced*.

D The present-perfect participial phrase, *having blocked . . . streams*, should be set off in commas; as it stands, it does not make sense. The past-perfect form *had reduced* would make the temporal relationships somewhat clearer than does the past tense *reduced*.

E The present-perfect participial phrase must be set off with commas; the pronoun *their*, which is also in (A), nonsensically refers to *migrations*, and the comparative expression *to an amount lower* is unnecessarily wordy.

The correct answer is B.

SC04492

274. By offering lower prices and a menu of personal communications options, such as caller identification and voice mail, the new telecommunications company has not only captured customers from other phone companies but also forced them to offer competitive prices.

(A) has not only captured customers from other phone companies but also forced them

(B) has not only captured customers from other phone companies, but it also forced them

(C) has not only captured customers from other phone companies but also forced these companies

(D) not only has captured customers from other phone companies but also these companies have been forced

(E) not only captured customers from other phone companies, but it also has forced them

Parallelism; Verb form

The sentence intends to show the effect of the new telecommunications company on the other phone companies. In the original sentence, however, the antecedent of the pronoun *them* is unclear; it may refer to *companies* or to *customers*. If it refers to *customers*, the sentence structure illogically has the new company forcing customers to offer competitive prices.

A The referent of *them* is unclear.

B The referent of *them* is unclear, and the use of *it* is redundant.

C **Correct.** The verbs are parallel in this sentence, and *these companies* is clearly the object of the verb *forced*.

D The sentence does not maintain parallelism, unnecessarily changing from active voice (*has captured*) to passive voice (*have been forced*).

E The referent of *them* is unclear. *Captured* and *has forced* are not parallel in verb tense, and the use of *it* is redundant.

The correct answer is C.

SC06132

275. After suffering $2 billion in losses and 25,000 layoffs, the nation's semiconductor industry, which makes chips that run everything from computers and spy satellites to dishwashers, appears to have made a long-awaited recovery.

(A) computers and spy satellites to dishwashers, appears to have

(B) computers, spy satellites, and dishwashers, appears having

(C) computers, spy satellites, and dishwashers, appears that it has

(D) computers and spy satellites to dishwashers, appears that it has

(E) computers and spy satellites as well as dishwashers, appears to have

Idiom; Grammatical construction; Verb form

This sentence correctly makes use of the idiomatic expression *from . . . to . . .* to describe the range of products made by the semiconductor industry. The main verb *appears* is intransitive and is most efficiently followed by the infinitive form *to have made*, which introduces a description of the subject, *the semiconductor industry*.

A **Correct.** The sentence is grammatically correct and uses the idiomatic expression correctly.

B The phrase *everything from* anticipates idiomatic completion with the second preposition *to*; without the *to* it could refer to components coming from the listed items, but this reading is unlikely; *appears having* is an incorrect verb form and makes the clause ungrammatical.

C This version is unidiomatic because *from* is not completed by *to*; *appears that it has* is an awkward and incorrect verb form.

D *Appears that it has* is an incorrect verb form.

E *As well as* is awkward and imprecise here; it is the wrong completion for the idiomatic expression *from . . . to. . . .*

The correct answer is A.

SC04588

276. Over a range of frequencies from 100 to 5,000 hertz, monkeys and marmosets have a hearing sensitivity remarkably similar to humans, above which the sensitivity begins to differ.

(A) Over a range of frequencies from 100 to 5,000 hertz, monkeys and marmosets have a hearing sensitivity remarkably similar to humans

(B) Compared to humans, the hearing sensitivity of monkeys and marmosets are remarkably similar over a range of frequencies from 100 to 5,000 hertz

(C) Compared to humans over a range of frequencies from 100 to 5,000 hertz, the hearing sensitivity of monkeys and marmosets is remarkably similar

(D) The hearing sensitivity of monkeys and marmosets, when compared to humans over a range of frequencies from 100 to 5,000 hertz, is remarkably similar

(E) The hearing sensitivity of monkeys, marmosets, and humans is remarkably similar over a range of frequencies from 100 to 5,000 hertz

Logical predication; Agreement

This sentence expresses two ideas: the similarity in monkey, marmoset, and human hearing in the stated frequency range, and the divergence in hearing sensitivity above that range. The second idea is introduced by *above which*. *Above which* should be immediately preceded by the antecedent of *which*, that is, the 100–5,000 Hz range. Also, the subject and verb must agree in number.

A In this construction, *above which . . .* illogically modifies either *humans* or *a hearing sensitivity remarkably similar to humans*, rather than the frequency range.

B The singular subject in this version, *the hearing sensitivity . . .* , is not accompanied by the correct singular verb form (*is*).

C *Above which* is incorrectly preceded by *similar*, rather than by the expression of the frequency range. The sentence appears, illogically, to compare *humans over a range of frequencies* with monkeys' and marmosets' hearing sensitivity.

D *Above which* is incorrectly preceded by *similar*, rather than by the expression of the frequency range. The sentence appears, illogically, to compare *humans over a range of frequencies* with monkeys' and marmosets' hearing sensitivity.

E **Correct.** *Above which* is correctly preceded by *a range of frequencies . . .* , and the verb *is* is in its proper singular form.

The correct answer is E.

SC03998

277. The computer company has announced that it will purchase the color-printing division of a rival company for $950 million, which is part of a deal that will make it the largest manufacturer in the office color-printing market.

(A) million, which is part of a deal that will make

(B) million, a part of a deal that makes

(C) million, a part of a deal making

(D) million as a part of a deal to make

(E) million as part of a deal that will make

Rhetorical construction; Verb form

The relative pronoun *which* requires a clear antecedent, but none appears in the original version of the sentence. The company's announcement is entirely geared to the future—it *will* purchase the division as part of a deal that *will* make it the largest manufacturer.

A There is no antecedent for the relative pronoun *which*.

B Like a relative pronoun, the appositive phrase (*a part . . .*) must have a noun or noun phrase as a clear antecedent; the verb *makes* should be future tense.

C The appositive phrase requires a clear antecedent; *making* does not indicate future tense.

D This sentence is a little awkward (the article *a* in *a part* is unnecessary) and says something rather different; *as a part of a deal to make* suggests that the deal itself includes making the company the *largest manufacturer* rather than its being the outcome of the deal.

E **Correct.** The future tense is used throughout and the sentence structure is clear.

The correct answer is E.

SC03289

278. Kudzu, an Asian vine that has grown rampantly in the southern United States since introducing it in the 1920s to thwart soil erosion, has overrun many houses and countless acres of roadside.

(A) that has grown rampantly in the southern United States since introducing it in the 1920s to thwart

(B) that has grown rampantly in the southern United States, since it was introduced in the 1920s for thwarting

(C) that has grown rampant in the southern United States since it was introduced in the 1920s to thwart

(D) growing rampant in the southern United States since introducing it in the 1920s for thwarting

(E) growing rampantly in the southern United States, since it was introduced in the 1920s to thwart

Idiom; Logical predication

The sentence describes the destructive, out-of-control growth of the invasive vine kudzu in the southern United States. Because the sentence does not indicate who introduced the vine to that region, the passive construction *it was introduced* should be used instead of *introducing it*.

A There is no clear subject for the verb *introducing*. This construction appears to indicate that kudzu introduced itself or some other, unspecified thing.

B The adverbial clause *since it was introduced in the 1920s* should not be set off from *has grown rampantly*, which it modifies. Also, *introduced . . . for thwarting* is not idiomatic. *Introduced . . . to thwart* is the correct idiom.

C **Correct**. The sentence correctly uses the passive construction *it was introduced* and the idiom *was introduced . . . to thwart*.

D *Since introducing it* illogically indicates that the vine introduced itself. *Introducing . . . for thwarting* is unidiomatic.

E The adverbial clause *since it was introduced in the 1920s* should not be set off from *has grown rampantly*, which it modifies.

The correct answer is C.

SC01712

279. Unable to build nests or care for their young, a female cowbird lays up to 40 eggs a year in the nests of other birds, including warblers, vireos, flycatchers, and thrushes.

(A) a female cowbird lays up to 40 eggs a year in the nests of other birds, including

(B) a female cowbird will use the nests of other birds to lay up to 40 eggs a year, including those of

(C) female cowbirds use the nests of other birds to lay up to 40 eggs a year, including those of

(D) female cowbirds lay up to 40 eggs a year in the nests of other birds, including

(E) up to 40 eggs a year are laid by female cowbirds in the nests of other birds, including

Agreement; Logical predication

This sentence describes the behavior of female cowbirds, but it begins by referring to the birds in plural (*their young*) and then shifts unexpectedly to singular (*a female cowbird*). The best construction refers to the birds consistently in plural and places modifiers near the words they modify.

A The sentence shifts unexpectedly from the plural *their young* to the singular *a female cowbird*.

B The sentence shifts unexpectedly from the plural *their young* to the singular *a female cowbird*. The participial phrase *including those of* incorrectly modifies *eggs*, illogically

indicating that cowbirds lay the eggs of other birds.

C The participial phrase *including those of* incorrectly modifies *eggs*, illogically indicating that cowbirds lay the eggs of other birds.

D **Correct.** The sentence consistently refers to *cowbirds* in the plural and places modifiers in the correct location.

E The modifier *Unable . . . young* incorrectly modifies *eggs*.

The correct answer is D.

SC01954

280. Bluegrass musician Bill Monroe, whose repertory, views on musical collaboration, and vocal style were influential on generations of bluegrass artists, was also an inspiration to many musicians, that included Elvis Presley and Jerry Garcia, whose music differed significantly from his own.

(A) were influential on generations of bluegrass artists, was also an inspiration to many musicians, that included Elvis Presley and Jerry Garcia, whose music differed significantly from

(B) influenced generations of bluegrass artists, also inspired many musicians, including Elvis Presley and Jerry Garcia, whose music differed significantly from

(C) was influential to generations of bluegrass artists, was also inspirational to many musicians, that included Elvis Presley and Jerry Garcia, whose music was different significantly in comparison to

(D) was influential to generations of bluegrass artists, also inspired many musicians, who included Elvis Presley and Jerry Garcia, the music of whom differed significantly when compared to

(E) were an influence on generations of bluegrass artists, was also an inspiration to many musicians, including Elvis Presley and Jerry Garcia, whose music was significantly different from that of

Agreement; Rhetorical construction; Grammatical construction

The original sentence logically intends to explain that Monroe's work influenced generations of artists in his own musical field and that he inspired many musicians in other musical fields. Who or what influenced or inspired whom must be more clearly stated. Additionally, the original sentence lacks precision, being overly wordy and using phrases that are not idiomatic. Concise and consistent verb forms, as well as the use of subordinate phrases rather than clauses, improve the precision of the sentence.

A The phrase *were influential on* is wordy and is not idiomatic; the use of verb forms *were* (the predicate of *repertory*, *views*, and *style*) and *was* (the predicate of *Monroe*) is confusing.

B **Correct.** The use of the concise verb forms of *influenced* and *inspired* simplifies and clarifies the sentence. The concise use of *including* avoids the pronoun error and unnecessary wordiness.

C The subject and verb do not agree in *repertory*, *views*, and *style . . . was* (compound subject with singular verb). *Was influential to* and *different . . . in comparison to* are unnecessarily wordy.

D There is incorrect subject-verb agreement in *repertory*, *views*, and *style . . . was* (compound subject with singular verb). *Was influential to* and in *when compared to* are unnecessarily wordy. *The music of whom* is cumbersome and stilted.

E The phrase *were an influence on* is wordy and not idiomatic. The phrases *was also an inspiration to* and *was significantly different* are unnecessarily wordy. The phrase *from that of* is unclear and confusing.

The correct answer is B.

SC12645

281. In many of the world's regions, increasing pressure on water resources has resulted both from expanding development, changes in climate, and from pollution, so that the future supply in some of the more arid areas is a concern going forward.

(A) both from expanding development, changes in climate, and from pollution, so that the future supply in some of the more arid areas is a concern going forward

(B) both from expanding development or changes in climate, and pollution, so that future supplies in some of the more arid areas are a concern

(C) from expanding development, changes in climate, and also from pollution, so that the future supply in some of the more arid areas is a matter of concern going forward

(D) from expanding development, changes in climate, and pollution, so that future supplies in some of the more arid areas are a concern

(E) from expansion of development, changes in climate, and from pollution, so that supplies in some of the more arid areas are a future concern

Parallelism; Rhetorical construction

The sentence lists three factors that have increased pressure on water resources and expresses concern for future water supplies in arid regions. The preposition *both* creates confusion since it indicates two factors, when the sentence actually lists three. If *expanding development* and *changes in climate* are supposed to be grouped together—implausibly—as a single factor, they should be conjoined by *and*, not separated by commas. The sentence could be constructed most clearly by listing all three factors in parallel form as objects of the preposition *from*: *from expanding development, changes in climate, and pollution.*

A The preposition *both* creates confusion since it indicates two factors, when the sentence actually lists three.

B *Both* indicates that there are two factors. If the entire disjunction *expanding development or changes in climate* is intended—somewhat implausibly—to be the first of the two factors, the comma before *and pollution* makes its relationship to the preceding portion of the sentence unclear.

C Repetition of the preposition *from* disrupts the parallelism of the list and makes the meaning unclear.

D **Correct**. The three factors are listed in parallel form as objects of the preposition *from.*

E Repetition of the preposition *from* disrupts the parallelism of the list and makes the meaning unclear. *Future* somewhat implausibly modifies *concern* rather than *supplies.*

The correct answer is D.

SC01747

282. The computer company's present troubles are a result of technological stagnation, marketing missteps, and managerial blunders so that several attempts to revise corporate strategies have failed to correct it.

(A) so that several attempts to revise corporate strategies have failed to correct it

(B) so that several attempts at revising corporate strategies have failed to correct

(C) in that several attempts at revising corporate strategies have failed to correct them

(D) that several attempts to revise corporate strategies have failed to correct

(E) that several attempts at revising corporate strategies have failed to correct them

Agreement; Rhetorical construction

This sentence lists three causes of the company's troubles and asserts that strategies to correct the causes of the problems have failed. The clearest, most efficient way to explain this is to refer to the causes with the relative pronoun *that*, positioning it as an object of the verb *failed to correct*.

A The singular pronoun *it* has no clear antecedent; the conjunction *so* typically indicates that a consequence will follow, but this is not the case.

B The conjunction *so* is inappropriate because no consequences are given; the verb *correct* has no object.

C *In that* is an inappropriate connector because it is not followed by an indication of how the company's troubles result from the three problems listed in the first part of the sentence.

D **Correct.** The sentence is clearly and efficiently worded, and the referent of the pronoun *that* is clear.

E Because *attempts* is the subject of the final clause, and *that* is the object of its verb (*have failed to correct*), the pronoun *them* has no function.

The correct answer is D.

SC11880

283. The root systems of most flowering perennials either become too crowded, which results in loss in vigor, and spread too far outward, producing a bare center.

(A) which results in loss in vigor, and spread
(B) resulting in loss in vigor, or spreading
(C) with the result of loss of vigor, or spreading
(D) resulting in loss of vigor, or spread
(E) with a resulting loss of vigor, and spread

Idiom; Parallelism

This sentence uses the construction *either x or y*; *x* and *y* must be grammatically parallel. In this case, *and spread* must be *or spread*. The antecedent of *which* is unclear; replacing *which results* with *resulting* clarifies the meaning.

A *Either* is incorrectly followed by *and*; *which* has no clear referent.
B *Or spreading* is not parallel to *either become*.
C *With the result of* is wordy and awkward. *Or spreading* is not parallel to *either become*.
D **Correct.** The phrase *resulting in loss of vigor* concisely modifies the first clause; the either/or construction is correct and parallel in this sentence.
E *Either* is incorrectly followed by *and*; *with a resulting loss* is wordy.

The correct answer is D.

SC11910

284. In theory, international civil servants at the United Nations are prohibited from continuing to draw salaries from their own governments; in practice, however, some governments merely substitute living allowances for their employees' paychecks, assigned by them to the United Nations.

(A) for their employees' paychecks, assigned by them
(B) for the paychecks of their employees who have been assigned
(C) for the paychecks of their employees, having been assigned
(D) in place of their employees' paychecks, for those of them assigned
(E) in place of the paychecks of their employees to have been assigned by them

Logical predication; Rhetorical construction

It is difficult to tell which parts of this sentence go together because of errors and confusion in the underlined portion. *Living allowances* is the counterpart of *paychecks*, so it is better to say *governments . . . substitute living allowances for the paychecks of their employees* because it makes the substitution clearer. This change also makes it easier to correct the modification error that appears in the phrase *assigned by them*, which incorrectly modifies *paychecks* rather than *employees*. The modifying clause *who have been assigned* clearly describes *employees* and fits into the remaining part of the sentence, *to the United Nations*.

A *Assigned by them* incorrectly and illogically modifies *paychecks*.
B **Correct.** In this sentence, the meaning is clearer, because *paychecks* is separated from *employees*. The relative clause clearly modifies *employees*.
C *Having been assigned* illogically modifies *governments*.
D The correct construction is *substitutes x for y*, not *substitutes x in place of y*. The construction following *paychecks* is wordy and awkward.
E The correct construction is *substitutes x for y*, not *substitutes x in place of y*. The construction following *employees* is wordy and awkward.

The correct answer is B.

SC05216

285. Industry analysts said that the recent rise in fuel prices may be an early signal of the possibility of gasoline and heating oil prices staying higher than usually through the end of the year.

(A) of the possibility of gasoline and heating oil prices staying higher than usually through
(B) of the possibility that gasoline and heating oil prices could stay higher than usual throughout
(C) of prices of gasoline and heating oil possibly staying higher than usually through
(D) that prices of gasoline and heating oil could stay higher than they usually are throughout
(E) that prices of gasoline and heating oil will stay higher than usual through

Verb form; Idiom

This sentence describes analysts' prediction about prices for gasoline and heating oil. The speculative nature of the analysts' comments is communicated through the modal verb *may be*, so there is no need to reiterate that idea with the wordy phrase *of the possibility of*. The correct idiom to contrast prices with the norm is *higher than usual*—not *usually*, as written. The correct idiom to indicate the span of time from the present to the end of the year is *through the end of the year*. A simple future tense verb would concisely communicate the analysts' prediction: prices *will stay higher than usual through the end of the year*.

A The unnecessary phrase *of the possibility of* makes the sentence wordy; *higher than usually* is not a proper idiom.

B The unnecessary phrase *of the possibility that* makes the sentence wordy; *throughout the end of the year* is not a proper idiom.

C *Possibly* is redundant with *may* and is not needed to indicate the speculative nature of the prediction; *higher than usually* is not a proper idiom.

D The conditional verb tense *could stay* is incorrect since the modal verb *may* has already introduced the concept of possibility; *throughout the end of the year* is not a proper idiom.

E **Correct**. The simple future tense verb *will stay* expresses the analysts' prediction, and idioms are used correctly.

The correct answer is E.

SC07141

286. The Anasazi settlements at Chaco Canyon were built on a spectacular scale, with more than 75 carefully engineered structures, of up to 600 rooms each, were connected by a complex regional system of roads.

(A) scale, with more than 75 carefully engineered structures, of up to 600 rooms each, were

(B) scale, with more than 75 carefully engineered structures, of up to 600 rooms each,

(C) scale of more than 75 carefully engineered structures of up to 600 rooms, each that had been

(D) scale of more than 75 carefully engineered structures of up to 600 rooms and with each

(E) scale of more than 75 carefully engineered structures of up to 600 rooms, each had been

Logical predication; Grammatical construction

This sentence makes a claim about the scale (size, extent) of the Anasazi settlements and then illustrates that claim with a description of the settlements' structures. The second part of the sentence, introduced by the preposition *with*, describes the structures first in terms of their rooms and then in terms of the roads that connect them together. To describe the noun *structures*, the participial form *connected* should be used, turning the verb into an adjective.

A The verb *were connected* has no subject, since *structures* is the object of the preposition *with*.

B **Correct.** The sentence is logically coherent and grammatically correct.

C The comma preceding *each* makes *each* a subject, but it has no verb, since *that* is the subject of *had been connected*.

D This sentence suggests that the scale or size of the settlements is made up of structures, rather than uses the structures as an example of the settlements' grand scale; it also nonsensically indicates that each room is connected by a complex system of roads.

E This run-on sentence suffers from a comma splice, as the phrase following the comma is a main clause; the referent of the pronoun *each* is ambiguous.

The correct answer is B.

SC07066

287. Even though the overall consumer price index did not change in April, indicating the absence of any general inflation or deflation, prices in several categories of merchandise have fallen over the last several months.

(A) April, indicating the absence of any general inflation or deflation, prices in several categories of merchandise have fallen

(B) April, indicating that any general inflation or deflation were absent, prices in several categories of merchandise fell

(C) April and indicated that absence of any general inflation or deflation, prices in several categories of merchandise fell

(D) April, having indicated the absence of any general inflation or deflation, prices in several categories of merchandise fell

(E) April, which indicated that any general inflation or deflation were absent, prices in several categories of merchandise have fallen

Rhetorical construction; Agreement

Coordinated noun phrases in which singular nouns are linked by *or* are considered singular, so when the phrase *any general inflation or deflation* is a subject, it requires a singular verb. One of the answer choices incorrectly uses the word *that*. Another phrasing problem is with *indicating/indicated*. *Indicating* works well as a verb form in the options where it occurs.

A **Correct.** *Any general inflation or deflation* is not a subject (it functions as the object of the preposition *of*), so there is no potential agreement problem.

B *Were* is incorrect as the agreeing form of *be*; it should be *is*.

C If *that* is taken as a demonstrative adjective modifying *absence*, it is inappropriate (the word *the* is required); if it is meant as a subordinating conjunction, it is incorrect because it is not followed by a clause.

D *Having indicated* is unclear and unnecessarily long. It appears to say, somewhat illogically, that the indication occurred at some unspecified time prior to the lack of change in April. *Indicating* works well alone and would be a preferable verb form here.

E *Were* here could only be meant either as a plural past-tense verb or as a singular subjunctive-mood verb (appropriate only in certain conditional contexts); in either case it is incorrect. Also, *indicating* works well, and the *which*-clause is unnecessary.

The correct answer is A.

SC12460

288. Despite Japan's relative isolation from world trade at the time, the prolonged peace during the Tokugawa shogunate produced an almost explosive expansion of commerce.

(A) Japan's relative isolation from world trade at the time, the prolonged peace during the Tokugawa shogunate

(B) the relative isolation of Japan from world trade at the time and the Tokugawa shogunate's prolonged peace, it

(C) being relatively isolated from world trade at the time, the prolonged peace during Japan's Tokugawa shogunate

(D) Japan's relative isolation from world trade at the time during the Tokugawa shogunate, prolonged peace

(E) its relative isolation from world trade then, prolonged peace in Japan during the Tokugawa shogunate

Logical predication; Rhetorical construction

All predicates must have a clear subject; in this sentence, the logical subject of the verb *produced* is *the prolonged peace*. *During* is a concise way to introduce the relevant time period of this peace (the period of the Tokugawa shogunate); the phrase *at the time* clearly refers to the same time period.

A **Correct.** The subject of *produced* is clearly and logically identified; *during* succinctly provides the time frame.

B The phrase *at the time* leaves it uncertain what time is being referred to. The subject *it* of *produced* does not clearly identify this verb's logical subject, since it is singular yet seems to be intended to refer to two situations previously mentioned, *isolation* and *prolonged peace*.

C *Being relatively isolated* is most likely meant to refer to Japan's isolation, but since grammatically it must modify *the prolonged peace* (the subject of the main clause), the sentence would have an illogical and unintended meaning.

D If *at the time* is to be used instead of *during*, it should be followed by *of*; the better choice is to simply use *during* by itself.

E The use of *then* after *world trade* is awkward and redundant, because *during* later in the sentence supplies the time frame for both Japan's isolation and the period of peace. The structure of the sentence leaves *it(s)* without a clear referent.

The correct answer is A.

SC02333

289. Government officials announced that restrictions on the use of water would continue because no appreciative increase in the level of the river resulted from the intermittent showers that had fallen throughout the area the day before.

(A) restrictions on the use of water would continue because no appreciative increase in the level of the river

(B) restricting the use of water would continue because there had not been any appreciative increase in the river's level that

(C) the use of water would continue to be restricted because not any appreciable increase in the river's level had

(D) restrictions on the use of water would continue because no appreciable increase in the level of the river had

(E) using water would continue being restricted because not any appreciable increase in the level of the river

Rhetorical construction; Logical predication; Verb form

This sentence explains the rationale behind a governmental announcement made at some point in the past. The most efficient way to express the meaning of the announcement is to use *restrictions* as the subject of the clause introduced by *that* and to use a negative subject (*no appreciable increase*) and a positive verb in the subordinate clause that follows.

A It makes no sense to say that a hypothetical increase in river level is *appreciative*. The past tense of the verb *resulted* in this context does not as clearly express the temporal relationships between the announcement and the other events as would the past perfect *had resulted*.

B The use of *there* and the negative verb make the dependent clause unnecessarily wordy and indirect; the relative pronoun *that* appears to refer nonsensically to *level*. It makes no sense to say that a hypothetical increase in river level is *appreciative*.

C By making *use of water* instead of *restrictions* the subject of the *that* clause, this version of the sentence necessitates the use of a wordy and indirect passive infinitive phrase *to be restricted*. The sentence becomes even more wordy and convoluted with the introduction of an awkward, unidiomatic negative subject (*not any appreciable increase*) of the dependent clause.

D **Correct.** The sentence is direct and efficient, and the past-perfect verb *had resulted* appropriately expresses the sequence of events.

E The phrase *using water . . . being restricted* is wordy and imprecise, and the unidiomatic negative subject (*not any appreciable increase*) of the dependent clause introduces further indirection and wordiness. The past tense of the verb *resulted* in this context does not as clearly express the temporal relationships between the announcement and the other events as would the past perfect *had resulted*.

The correct answer is D.

SC04732

290. According to United States census data, while there was about one-third of mothers with young children working outside the home in 1975, in 2000, almost two-thirds of those mothers were employed outside the home.

(A) while there was about one-third of mothers with young children working outside the home in 1975, in 2000, almost two-thirds of those mothers were employed outside the home

(B) there were about one-third of mothers with young children who worked outside the home in 1975; in 2000, almost two-thirds of those mothers were employed outside the home

(C) in 1975 about one-third of mothers with young children worked outside the home; in

2000, almost two-thirds of such mothers were employed outside the home

(D) even though in 1975 there were about one-third of mothers with young children who worked outside the home, almost two-thirds of such mothers were employed outside the home in 2000

(E) with about one-third of mothers with young children working outside the home in 1975, almost two-thirds of such mothers were employed outside the home in 2000

Idiom; Logical predication

The sentence presents two pieces of data, one from the 1975 census and one from the 2000 census. It does not attempt to explain a logical relationship beyond the numerical difference. The incorrect versions of the sentence attempt but fail to make a logical connection between the two data (*while* . . . , *even though* . . . , and *with* . . .) and/or introduce unnecessary wordiness with the phrase *there was* or *there were*. The most efficient way to present the two data for reader comparison is in two parallel independent clauses joined by a semicolon. To avoid the confusion of misplaced or *squinting* modifiers, these clauses are best structured with subjects designating percentage of mothers with children, followed by participial phrases that indicate that these mothers *worked* or *were employed* outside the home.

A The phrase *there was* introduces unnecessary wordiness, and the singular verb *was* does not agree with the plural predicate nominative *one-third of mothers with children*. The placement of the modifier *working outside the home* immediately after children suggests that the children rather than the mothers were externally employed.

B *There were* introduces unnecessary wordiness; because of its placement, the relative clause *who worked outside the home* appears to describe children rather than mothers.

C **Correct.** The two pieces of data are presented in parallel independent clauses, joined by a semicolon, allowing the reader to note the numerical difference.

D The introductory phrase *even though* suggests a relationship between the two pieces of data that the sentence does not support; *there were* introduces unnecessary wordiness; *who worked outside the home* appears to describe *young children*.

E The introductory word *with* nonsensically suggests the simultaneity of the two pieces of data; the placement of the modifier *working outside the home* attaches it to *young children* rather than *mothers*.

The correct answer is C.

SC04672

291. Clouds are formed from the evaporation of the oceans' water that is warmed by the sun and rises high into the atmosphere, condensing in tiny droplets on minute particles of dust.

(A) Clouds are formed from the evaporation of the oceans' water that is warmed by the sun and rises high into the atmosphere, condensing in tiny droplets on minute particles of dust.

(B) Clouds form by the sun's warmth evaporating the water in the oceans, which rises high into the atmosphere, condensing in tiny droplets on minute particles of dust.

(C) Warmed by the sun, ocean water evaporates, rises high into the atmosphere, and condenses in tiny droplets on minute particles of dust to form clouds.

(D) The water in the oceans evaporates, warmed by the sun, rises high into the atmosphere, and condenses in tiny droplets on minute particles of dust, which forms clouds.

(E) Ocean water, warmed by the sun, evaporates and rises high into the atmosphere, which then condenses in tiny droplets on minute particles of dust to form as clouds.

Rhetorical construction; Logical predication

This sentence describes a multistep process by which ocean water is transformed into clouds. These steps are most clearly presented in chronological order, with *ocean water* as the main subject of the sentence.

A This sentence provides no sense of steps and illogically suggests that the oceans' water evaporates after it rises high into the atmosphere.

B The antecedent for the relative pronoun *which* is ambiguous, again suggesting that oceans rise high.

C **Correct.** The sequence of steps in a cloud's formation is clear.

D The nonchronological order of the steps by which clouds are produced is confusing, suggesting that dust forms clouds.

E The relative pronoun *which* grammatically refers to *atmosphere*, creating a nonsensical claim that the atmosphere, rather than the water, condenses.

The correct answer is C.

SC02664

292. Schistosomiasis, a disease caused by a parasitic worm, is prevalent in hot, humid climates, and it has become more widespread as irrigation projects have enlarged the habitat of the freshwater snails that are the parasite's hosts for part of its life cycle.

(A) the freshwater snails that are the parasite's hosts for part of its life cycle

(B) the freshwater snails that are the parasite's hosts in part of their life cycle

(C) freshwater snails which become the parasite's hosts for part of its life cycles

(D) freshwater snails which become the hosts of the parasite during the parasite's life cycles

(E) parasite's hosts, freshwater snails which become their hosts during their life cycles

Rhetorical construction; Agreement

This sentence explains the increased incidence of schistosomiasis as a consequence of the enlarged habitat of the kind of freshwater snails that host the parasitic worm responsible for the disease. The definite article is necessary before *freshwater snails* because the sentence identifies a particular type of snail, namely, those that host the parasite. The correct preposition to express duration in combination with *host* is *for*, not *in*. As the parasite is referred to as singular, the possessive pronoun in the final phrase must also be singular.

A **Correct.** The sentence is clear with all pronouns and verbs in agreement.

B The preposition *in* is inappropriate for expressing duration; the plural possessive pronoun *their* does not agree with the singular antecedent *parasite*.

C A definite article should precede *freshwater snails* to identify a particular type of snail; the plural *cycles* is inappropriate because *its* refers to a singular parasite, which only has one life cycle.

D A definite article is needed before *freshwater snails*; repetition of the word *parasite* makes the final phrase unnecessarily wordy; *cycles* should be singular.

E The repetition of *hosts* makes the final phrase unnecessarily wordy; *cycles* should be singular; *their hosts* should be *its hosts*; the referent for the second appearance of *their* is unclear—does it refer to *snails* or the *parasite*?

The correct answer is A.

SC07754

293. Sor Juana Inés de la Cruz was making the case for women's equality long before the cause had a name: Born in the mid-seventeenth century in San Miguel Nepantla, Mexico, the convent was the perfect environment for Sor Juana to pursue intellectual pursuits, achieving renown as a mathematician, poet, philosopher, and playwright.

(A) the convent was the perfect environment for Sor Juana to pursue intellectual pursuits, achieving

(B) Sor Juana found the convent provided the perfect environment for intellectual pursuits, and she went on to achieve

(C) the convent provided the perfect environment for intellectual pursuits for Sor Juana; going on to achieve

(D) Sor Juana found the convent provided the perfect environment for intellectual pursuits; achieving

(E) the convent was, Sor Juana found, the perfect environment for intellectual pursuits, and she went on to achieve

Logical predication; Grammatical construction

This sentence focuses on Sor Juana Inés de la Cruz, but the subject of its second clause is *the convent*. This causes a problem because the predicates *born* and *achieving*, which have only

understood subjects, are grammatically paired with *the convent*, an illogical subject. Also, normally where a semicolon is used to mark the end of an independent clause (as in some of the options), it should be followed by another independent clause.

A *The convent* is the subject of the second clause, so both *born* and *achieving* are illogically forced to take it as their subject.

B **Correct.** *Sor Juana* provides the correct logical subject for *born* and *went on to achieve*; the second clause is correctly introduced by *and*, and is constructed as a full clause with a subject and tensed verb.

C As *the convent* is the subject of the second clause, *born* is illogically forced to take that phrase as its subject. Also, the clause after the semicolon is not an independent full clause with a subject and a tensed verb; *she went on* is required instead of *going on*.

D The clause after the semicolon is not an independent full clause with a subject and a tensed verb: *she achieved* is required instead of *achieving*.

E Since *the convent* is the subject of the second clause, *born* must illogically take that phrase as its subject.

The correct answer is B.

SC14406

294. By devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, in 1797–1798 Henry Cavendish's apparatus enabled him to arrive at an astonishingly accurate figure for the weight of the earth.

(A) By devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, in 1797–1798 Henry Cavendish's apparatus enabled him

(B) In 1797–1798, by devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, Henry Cavendish's apparatus enabled him

(C) Henry Cavendish devised an instrument made from a rod, wire, and lead balls, and employed uncommonly precise measurements, and in 1797–1798 was able

(D) Having devised an instrument from a rod, wire, and lead balls, and employment of uncommonly precise measurements, Henry Cavendish in 1797–1798 was able

(E) By devising an instrument made from a rod, wire, and lead balls, and employing uncommonly precise measurements, Henry Cavendish was able in 1797–1798

Logical predication; Rhetorical construction

The core of this sentence's idea is either the verb *enable*, which must have its logically correct subject *Henry Cavendish's apparatus*, or *be able*, with the subject *Henry Cavendish*; these subjects must also be able to supply the correct subjects for any other verbs that have understood subjects. The sentence should also clearly express the two things that enabled Cavendish's accomplishment (devising the instrument and employing precise measurement).

A *Devising* needs a subject supplied from elsewhere in the sentence, but the only available subject is the illogical *Henry Cavendish's apparatus* (an apparatus does not "devise" anything).

B *Devising* needs a subject supplied from elsewhere in the sentence, but the only option is the illogical *Henry Cavendish's apparatus*.

C Connecting the three parts of the sentence with two occurrences of *and* is awkward; the first two parts are best connected by *and*, but the final portion expressing what Cavendish achieved would be better expressed, for example, as a new sentence beginning, *In 1797–1798, he employed*.

D This variant seems to suggest, illogically, that Cavendish devised an instrument from several objects plus employment; using *employed* instead of *employment of* would be one way of correctly pairing his two actions.

E **Correct.** The verbs *devising*, *employing*, and *was able* have their correct logical subject (*Henry Cavendish*), and the actions of devising and employing are paired clearly, with *by* understood before *employing*.

The correct answer is E.

SC08285

295. The growth projected for these storms in different computerized weather models varies widely.

(A) projected for these storms in different computerized weather models varies widely

(B) for these storms is projected in different computerized models of weather to vary widely

(C) of these storms, projected in different computerized weather models, vary widely

(D) projected for these storms, which vary widely in different computerized weather models

(E) that varies widely for these storms are projected in different computerized weather models

Logical predication; Agreement

The point of the sentence is that there is great variation in projections of how the storms that it refers to will grow. The structure of the sentence makes it clear that the variation is in the computer models' projections.

A **Correct.** The sentence explains concisely that *growth projected* in different weather models *varies widely*.

B *Growth for these storms* is unidiomatic and unclear. The construction *growth . . . is projected . . . to vary* makes it unclear whether the models project widely varying growth or vary in how much growth they project.

C The construction *growth . . . vary widely* places the variation in the growth of the storms rather than in the projections. The plural verb *vary* does not agree with the singular subject *growth*.

D If *growth projected for these storms* is taken as the subject of the sentence, the subject is not paired with a verb and the sentence is grammatically incomplete.

E The phrase *growth that varies widely* indicates that the variation is in the growth of the storms rather than in the projections. The plural verb *are projected* does not agree with the singular subject *growth*.

The correct answer is A.

SC02131

296. By using a process called echolocation to analyze the echoes of the high-pitched sounds they produce, bats can determine not only the distance to an object, but they also can determine its shape and size and the direction in which it is moving.

(A) can determine not only the distance to an object, but they also can determine

(B) not only can determine the distance to an object but also

(C) can determine not only the distance to an object but also

(D) not only can determine its distance from an object but also

(E) can determine not only their distance from an object, but they can also determine

Parallelism; Logical predication

This sentence explains that bats' echolocation allows them to determine both the distance to an object and other pieces of information. The correct way to construct this sentence using a correlative conjunction is to follow *not only* and *but also* with the same parts of speech. Using nouns to indicate all the kinds of information bats gain through echolocation provides parallel grammatical structure and concise wording: *not only distance, but also shape, size, and direction*.

A Introducing the second main clause *they also can determine* makes the sentence wordy and disrupts the correct formation of the correlative conjunction *not only, but also*.

B The correlative conjunction is used incorrectly because *not only* is followed by a verb, while *but also* is followed by a list of nouns.

C **Correct**. This sentence concisely uses *not only, but also* to connect a series of nouns.

D The correlative conjunction is used incorrectly because *not only* is followed by a verb, while *but also* is followed by a list of nouns. *Its* most plausibly refers to bats, but on that interpretation the singular pronoun does not agree with its plural antecedent, and the sentence indicates, somewhat implausibly, that the bats use echolocation to determine their own shape, size, and direction of movement. Alternatively, *its*

could refer to some other thing that is not named in the sentence, but it is implausible and confusing to say that the bats determine the distance of that unnamed thing from an unspecified object.

E Introducing the second main clause *they also can determine* makes the sentence wordy and disrupts the correct construction to be used with the correlative conjunction: *not only* is followed by a noun, while *but also* is followed by a verb.

The correct answer is C.

SC06205

297. Carbon dioxide, which traps heat in the atmosphere and helps regulate the planet's surface temperature, is constantly being exchanged between the atmosphere on the one hand and the oceans and terrestrial plants on the other.

(A) exchanged between the atmosphere on the one hand and the oceans and terrestrial plants on the other

(B) exchanged, on the one hand, between the atmosphere and the oceans and terrestrial plants, on the other

(C) exchanged between, on the one hand, the atmosphere, with the oceans and terrestrial plants, on the other

(D) exchanged, on the one hand, among the oceans and terrestrial plants, and the atmosphere, on the other

(E) exchanged among the oceans and terrestrial plants on the one hand and the atmosphere on the other

Parallelism; Idiom

This sentence describes an exchange between the atmosphere and the Earth's surface using the paired phrases *on the one hand* and *on the other*. Preceding both phrases with nouns creates a parallel grammatical structure: *the atmosphere on the one hand and the oceans and terrestrial plants on the other*. Although three locations are mentioned, *between* is the correct preposition to describe the exchange since *the oceans and terrestrial plants* are treated as a set, both members of which are located on the Earth's surface.

A **Correct.** The exchange between the atmosphere and the Earth's surface is expressed using parallel nouns and the paired phrases *on the one hand* and *on the other*.

B The placement of all three nouns between the paired phrases *on the one hand* and *on the other* obscures the nature of the exchange and makes it unclear whether the exchange is among all three of the locations, between the first one and the last two, or between the first two and the last one. *On the one hand* appears to encompass all three of the locations, leaving *on the other* dangling.

C The preposition *with* disrupts the expression of an exchange *between* two locations; the construction *on the one hand* and *on the other* is not in parallel form.

D The preposition *among*, the placement of *and the atmosphere* between commas, and the lack of parallelism make the meaning of this sentence unclear.

E If the relationship is supposed to be among all three of the locations mentioned, the binary relationship indicator (*on the one hand . . . on the other*) makes no sense. Alternatively, *among* could appear to distribute, implicitly, to both sides of the comparison (*among the oceans and terrestrial plants on the one hand and* (among) *the atmosphere on the other*). On that interpretation, *among the atmosphere* makes no sense, because *among* signals a relationship involving multiple entities, but *atmosphere* is a singular noun and is not normally construed as either plural or collective.

The correct answer is A.

SC01990

298. Floating in the waters of the equatorial Pacific, an array of buoys collects and transmits data on long-term interactions between the ocean and the atmosphere, interactions that affect global climate.

(A) atmosphere, interactions that affect
(B) atmosphere, with interactions affecting
(C) atmosphere that affects
(D) atmosphere that is affecting
(E) atmosphere as affects

Grammatical construction; Agreement

The underlined portion of the sentence is an appositive, a terminal noun phrase restating the kind of data being collected and providing additional information about it. This is a clear and economical way to provide the extra information.

A **Correct.** The sentence is grammatically correct and logically coherent.

B The prepositional phrase *with* . . . has no clear noun or noun phrase to attach to and is therefore ungrammatical.

C Using the restrictive *that* after *atmosphere* illogically suggests that there are many atmospheres to differentiate from and the one in question in this sentence is the one affecting global climate.

D The restrictive *that* also follows *atmosphere* as in answer C.

E The phrase *as affects global climate* functions as an adverb, but there is no verb for it to modify.

The correct answer is A.

SC04344

299. Sixty-five million years ago, according to some scientists, an asteroid bigger than Mount Everest slammed into North America, which, causing plant and animal extinctions, marks the end of the geologic era known as the Cretaceous Period.

(A) which, causing plant and animal extinctions, marks
(B) which caused the plant and animal extinctions and marks
(C) and causing plant and animal extinctions that mark
(D) an event that caused plant and animal extinctions, which marks
(E) an event that caused the plant and animal extinctions that mark

Logical predication; Agreement

This sentence describes a two-part sequence of events, the second of which has led to a particular categorization of geological time. In order to clarify that it is not the first event (asteroid strike) that produced the time division (end of the Cretaceous Period), but the first event's consequences (biological extinctions), the sentence needs an appositive form to restate the content of the main clause (*an event*), followed by a two-part chain of relative clauses (*that caused* . . . *that mark* . . .).

A The antecedent for the relative pronoun *which* is ambiguous; it is therefore unclear what *marks* the end of the Cretaceous Period.

B The antecedent of *which* is unclear; the compound verbs *caused* and *marks* fail to indicate that the extinctions, not the asteroid strike, are significant markers of geological time.

C Following the conjunction *and* with a participial rather than a main verb is grammatically incorrect because it violates parallelism and produces a fragment at the end of the sentence.

D *Which*, referring to *extinctions*, should be followed by a plural verb.

E **Correct.** The sentence is unambiguous, and the verbs agree with their subjects.

The correct answer is E.

SC02338

300. Although the first pulsar, or rapidly spinning collapsed star, to be sighted was in the summer of 1967 by graduate student Jocelyn Bell, it had not been announced until February 1968.

(A) Although the first pulsar, or rapidly spinning collapsed star, to be sighted was in the summer of 1967 by graduate student Jocelyn Bell, it had not been announced until February 1968.

(B) Although not announced until February 1968, in the summer of 1967 graduate student Jocelyn Bell observed the first pulsar, or rapidly spinning collapsed star, to be sighted.

(C) Although observed by graduate student Jocelyn Bell in the summer of 1967, the discovery of the first sighted pulsar, or rapidly spinning collapsed star, had not been announced before February 1968.

(D) The first pulsar, or rapidly spinning collapsed star, to be sighted was observed in the summer of 1967 by graduate student Jocelyn Bell, but the discovery was not announced until February 1968.

(E) The first sighted pulsar, or rapidly spinning collapsed star, was not announced until February 1968, while it was observed in the summer of 1967 by graduate student Jocelyn Bell.

Verb form; Logical predication; Rhetorical construction

This sentence presents conditions that are followed by an unexpected outcome: a delayed announcement of the discovery of a pulsar. A compound sentence using a coordinating conjunction *but* is an effective way to present the conditions of the first pulsar sighting and then information about the subsequent announcement of the discovery. The sentence must clarify that it is not about *the first pulsar,* but *the first pulsar . . . to be sighted.* The verbs in the sentence must all be in past tense; using a past-perfect verb to present information about the announcement of the discovery indicates that this announcement illogically took place before the pulsar was first sighted.

A The subject of the opening dependent clause is *pulsar*, and the verb is *was*. The clause needs to indicate not just that the pulsar existed but that it was observed by Bell; the past-perfect verb tense is inappropriate in the concluding clause.

B The opening participial phrase functions as an adjective, but it has no logical noun or noun phrase to attach to; Bell herself was not announced in 1968.

C Grammatically, the opening participial phrase describes the first noun that follows, but it makes no sense to say that *the discovery* of the pulsar was *observed*; *discovery of the first sighted pulsar* is also imprecise; one does not discover a first sighting.

D **Correct.** The sentence presents the sequence of events clearly and in the past tense.

E This sentence presents events in a way that is confusing; as a conjunction, *while* indicates simultaneous events, but this sentence is about events that occurred in a sequence.

The correct answer is D.

SC02766

301. Sound can travel through water for enormous distances, prevented from dissipating its acoustic energy as a result of boundaries in the ocean created by water layers of different temperatures and densities.

(A) prevented from dissipating its acoustic energy as a result of

(B) prevented from having its acoustic energy dissipated by

(C) its acoustic energy prevented from dissipating by

(D) its acoustic energy prevented from being dissipated as a result of

(E) preventing its acoustic energy from dissipating by

Logical predication; Rhetorical construction

This sentence opens with a statement that sound can travel long distances through water and then explains why that is so: water layers in the ocean prevent acoustic energy from dissipating. Because *dissipating* is an intransitive verb, *acoustic energy* cannot be its object.

A *Dissipating* is not a transitive verb, so *acoustic energy* cannot function as its object.

B This version of the sentence is wordy, awkward, and indirect; *from having . . . by* erroneously suggests that the boundaries in the ocean are attempting to dissipate sound energy.

C **Correct.** Here, *acoustic energy* is effectively modified by the participial *prevented from dissipating. . . .*

D This version of the sentence is wordy, awkward, and indirect; *being dissipated as a result of* makes it unclear whether the boundaries contribute to energy loss or prevent it.

E This version of the sentence nonsensically explains that sound prevents the dissipation of its own energy.

The correct answer is C.

SC10996

302. Last year, land values in most parts of the pinelands rose almost so fast, and in some parts even faster than what they did outside the pinelands.

(A) so fast, and in some parts even faster than what they did

(B) so fast, and in some parts even faster than, those

(C) as fast, and in some parts even faster than, those

(D) as fast as, and in some parts even faster than, those

(E) as fast as, and in some parts even faster than what they did

Idiom; Parallelism

This sentence says *x* rose *almost so fast y*, which is not a correct idiomatic construction; *x* rose *almost as fast as y* is the correct idiom for this comparison. The two elements being compared, *x* and *y*, must be parallel, but the noun *land values* (*x*) is not parallel to *what they did* (*y*). *Land values* in the pinelands (*x*) must be compared with *those* (the pronoun correctly replacing *land values*) outside the pinelands (*y*).

A *So fast* is used instead of *as fast*. *What they did* is not parallel to *land values*.

B *So fast* is not the correct idiom for comparison.

C *As fast* must be followed by *as* in this comparison.

D **Correct.** *As fast as* is the correct comparative conjunction used in this sentence; *those* is parallel to *land values*.

E *What they did* is not parallel to *land values*.

The correct answer is D.

SC03010

303. The North American moose's long legs enable it to move quickly through the woods, stepping easily over downed trees, but predators pursuing it must leap or go around them.

(A) moose's long legs enable it to move quickly through the woods, stepping easily over downed trees, but predators pursuing it must leap or go around them

(B) moose's long legs enable it to move quickly through the woods, stepping easily over downed trees while predators pursuing them must leap or go around

(C) moose's long legs enable it to move quickly through the woods and to step easily over downed trees, but predators pursuing them must leap over or go around them

(D) moose has long legs, enabling it to move quickly through the woods and to step easily over downed trees while predators pursuing them must leap or go around

(E) moose has long legs that enable it to move quickly through the woods, stepping easily over downed trees while predators pursuing it must leap over or go around them

Logical predication; Agreement

This sentence explains the advantages of long legs to the North American moose. Since the sentence contains multiple relationships among pronouns, nouns, and modifiers, it is important that the various elements be clearly connected. The structure of the sentence makes it unclear whether *stepping easily over downed trees* is intended to modify the main subject, *the North American moose's long legs*, or the pronoun *it*. Although *it* presumably refers to *the North American moose*, it does so only obliquely, because *moose* does not appear in noun form in the sentence. The best way to construct this sentence is to make *moose* the subject of the main clause so that both occurrences of *it* have a clear antecedent. Because *stepping easily over them* is set off by commas from the preceding and ensuing clauses and because the apparently intransitive verb *leap* intervenes between *downed trees* and *them*, it is unclear whether *them* refers to the moose's legs or the downed trees. The phrase *leap or go around them* should say *leap over*, because the

point is that the predators must either leap over the downed trees (or go around them), not merely that the predators leap in the air or else go around the trees.

A The function of s*tepping easily over downed trees* is unclear in relation to the rest of the sentence. The pronoun *it* refers only obliquely and unclearly to *moose*, because only the possessive form *moose's* appears in the sentence. Furthermore, the final phrase should say *leap over*, not merely *leap*.

B The function of s*tepping easily over downed trees* is unclear in relation to the rest of the sentence. The pronoun *it* refers only obliquely and unclearly to *moose*, because only the possessive form *moose's* appears in the sentence. The plural pronoun *them* has no logical plural antecedent (surely the predators are not pursuing the moose's legs, but the moose itself; nor are the predators pursuing the downed trees). Furthermore, the final phrase should say *leap over*, not merely *leap*.

C The plural pronoun *them* in *pursuing them* has no logical plural antecedent.

D The plural pronoun *them* has no logical plural antecedent (*moose* can be used as a plural, but because in this sentence the singular verb *has* is used, *moose* must be construed as being singular here). Furthermore, the final phrase should say *leap over*, not merely *leap*.

E **Correct.** The pronoun *it* refers to *moose*, and the pronoun *them* refers to *trees*. Also, the final phrase correctly says *leap over or go around them*.

The correct answer is E.

SC07885

304. Early administrative decisions in China's Ming Dynasty eventually caused a drastic fall in tax revenues, a reduction in military preparedness, the collapse of the currency system, and failed to make sufficient investment in vital transportation infrastructure.

(A) the collapse of the currency system, and failed

(B) the collapse of the currency system, and failing

(C) and the collapse of the currency system, also failed

(D) the collapse of the currency system, as well as failing

(E) and the collapse of the currency system, as well as a failure

Parallelism; Grammatical construction; Rhetorical construction

The sentence provides a list of effects stemming from administrative decisions in the Ming Dynasty. To make the meaning clear, all items in the list should be in parallel grammatical form. The first three are noun phrases—*a drastic fall*, *a reduction*, and *the collapse*—but the final item, *failed,* is a verb. To preserve parallel structure, the fourth item should also be a noun phrase: *a failure*. An alternative interpretation might take *failed* as parallel with *caused*, so that *decisions* is the subject of both verbs, but it is illogical to say that the *decisions* failed to make sufficient investments.

A The list of effects is not parallel since the first three items are noun phrases but the fourth is the verb *failed*. An alternative interpretation might take *failed* as parallel with *caused*, so that *decisions* is the subject of both verbs, but it is illogical to say that the *decisions* failed to make sufficient investments.

B The list of effects is not parallel since the first three items are noun phrases but the fourth is the participle *failing*.

C The list of three effects is followed by the verb *failed,* which lacks a subject, thus making the sentence ungrammatical.

D The list of effects is not parallel since the first three items are noun phrases but the fourth is the participle *failing*.

E **Correct**. The list of four effects is expressed in parallel grammatical form using noun phrases, including *a failure*.

The correct answer is E.

SC11017

305. Seismologists studying the earthquake that struck northern California in October 1989 are still investigating some of its mysteries: the unexpected power of the seismic waves, the upward thrust that threw one man straight into the air, and the strange electromagnetic signals detected hours before the temblor.

(A) the upward thrust that threw one man straight into the air, and the strange electromagnetic signals detected hours before the temblor

(B) the upward thrust that threw one man straight into the air, and strange electromagnetic signals were detected hours before the temblor

(C) the upward thrust threw one man straight into the air, and hours before the temblor strange electromagnetic signals were detected

(D) one man was thrown straight into the air by the upward thrust, and hours before the temblor strange electromagnetic signals were detected

(E) one man who was thrown straight into the air by the upward thrust, and strange electromagnetic signals that were detected hours before the temblor

Parallelism; Grammatical construction

Some of the earthquake's *mysteries* are described in a series of three correctly parallel elements: (1) *the unexpected power* . . . , (2) *the upward thrust* . . . , and (3) *the strange electromagnetic signals*. . . . Each of the three elements begins with an article (*the*), a modifier, and a noun. This parallelism is crucial, but each mystery is allowed the further modification most appropriate to it, whether a prepositional phrase (1), a clause (2), or a participial phrase (3).

A **Correct.** This sentence correctly provides a parallel series of three mysteries.

B *The* is omitted before *strange*. The verb *were detected* makes the last element not parallel to the previous two.

C Because they use complete independent clauses, the last two elements are not parallel to the first, and the sentence is ungrammatical.

D The constructions beginning *one man* and *hours before* are not parallel to the construction beginning *the unexpected power*.

E The grammatical constructions describing the mysteries are not parallel.

The correct answer is A.

SC10878

306. The type of behavior exhibited when an animal recognizes itself in a mirror comes within the domain of "theory of mind," thus is best studied as part of the field of animal cognition.

(A) of "theory of mind," thus is best

(B) "theory of mind," and so is best to be

(C) of a "theory of mind," thus it is best

(D) of "theory of mind" and thus is best

(E) of the "theory of mind," and so it is best to be

Grammatical construction; Idiom

This sentence links two independent clauses; in such sentences, the clauses must normally be set off from each other (by a semicolon, for example), or else the second clause must be introduced by *and* or some other conjunction, not merely an adverb like *thus*. Also, a noun like *domain* normally is followed by the preposition *of* immediately preceding the noun phrase describing the domain.

A The second clause incorrectly lacks an introducing conjunction.

B The phrasing *is best to be studied* is awkwardly unusual and unidiomatic; *is best studied* is a better choice.

C The second clause incorrectly lacks an introducing conjunction. The phrase *a "theory of mind"* would refer to one particular theory rather than (as intended) to a theoretical domain.

D **Correct.** *And* introduces the second clause, which uses the concise wording *best studied*.

E The beginning of the second clause is redundant and wordy: the word *and* is unnecessary because the conjunction *so* is used, and *best to be studied* is unidiomatic.

The correct answer is D.

SC11054

307. Unlike the United States, where farmers can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka are concentrated in the monsoon months, June to September, and the skies are generally clear for the rest of the year.

(A) Unlike the United States, where farmers can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka

(B) Unlike the United States farmers who can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka

(C) Unlike those of the United States, where farmers can usually depend on rain or snow all year long, most parts of Sri Lanka's rains

(D) In comparison with the United States, whose farmers can usually depend on rain or snow all year long, the rains in most parts of Sri Lanka

(E) In the United States, farmers can usually depend on rain or snow all year long, but in most parts of Sri Lanka, the rains

Logical predication; Rhetorical construction

The intent of the sentence is to compare seasonal rainfall patterns in the United States and Sri Lanka. There are many ways to set up such comparisons: *unlike x, y*; *in comparison with x, y*; *compared to x, y*; and so on. The *x* and *y* being compared must be grammatically and logically parallel. An alternative way of stating the comparison is the use of two independent clauses connected by *but*. The original sentence compares *the United States* to *the rains in most parts of Sri Lanka*; this illogical comparison cannot convey the writer's intention.

A This sentence illogically compares *the United States* to *the rains in most parts of Sri Lanka.*

B Comparing *United States farmers* to *the rains in most parts of Sri Lanka* is not logical.

C The sentence awkwardly and illogically seems to be comparing most parts of the United States with *most parts of Sri Lanka's rains.*

D This sentence compares *the United States* and *the rains in most parts of Sri Lanka.*

E **Correct.** This sentence uses two independent clauses to make the comparison. The first clause describes conditions in the United States, and the second clause describes conditions in Sri Lanka. The comparison is clear and logical.

The correct answer is E.

SC01564

308. In preparation for the prediction of a major earthquake that will hit the state, a satellite-based computer network is being built by the California Office of Emergency Services for identifying earthquake damage and to pinpoint the most affected areas within two hours of the event.

(A) In preparation for the prediction of a major earthquake that will hit the state, a satellite-based computer network is being built by the California Office of Emergency Services for identifying

(B) In preparing for the prediction that a major earthquake will hit the state, the California Office of Emergency Services is building a satellite-based computer network that will identify

(C) In preparing for a major earthquake that is predicted to hit the state, the California Office of Emergency Services is building a satellite-based computer network to identify

(D) To prepare for the prediction of a major earthquake hitting the state, a satellite-based computer network is being built by the California Office of Emergency Services to identify

(E) To prepare for a major earthquake that is predicted to hit the state, the California Office of Emergency Services is building a satellite-based computer network that will identify

Logical predication; Parallelism

This sentence explains what the California Office of Emergency Services is doing to prepare for an earthquake that has been predicted for the state, but the sentence appears to claim that the California Office is doing these things to prepare for the prediction. The two purposes of these preparations should be presented in parallel form, but the sentence as written presents one as a prepositional phrase (*for identifying*) and the other as an infinitive (*to pinpoint*).

A In this version of the sentence, the opening phrase illogically claims that the California Office is preparing for a prediction, but later in the sentence it becomes clear that the preparations are targeted to the aftermath of a possible earthquake, not its prediction. The two purposes of the preparations are not presented in parallel form.

B Like (A), this version of the sentence identifies preparations for a prediction rather than an earthquake; the two purposes of the preparations are not presented in parallel form.

C **Correct.** The preparations are correctly presented as being for an earthquake, and the two purposes of the preparations are presented in parallel form (*to identify* and *to pinpoint*).

D As in (A) and (B), the beginning of this sentence is inconsistent with the rest of it. The opening phrase claims to describe preparations for a prediction, whereas the latter part of the sentence indicates that the preparations are for a predicted earthquake.

E Like (A) and (B), this sentence does not present the two purposes of the preparations in parallel form.

The correct answer is C.

SC06727

309. Once numbering in the millions worldwide, it is estimated that the wolf has declined to 200,000 in 57 countries, some 11,000 of them to be found in the lower 48 United States and Alaska.

(A) it is estimated that the wolf has declined to 200,000 in 57 countries, some

(B) the wolf is estimated to have declined to 200,000 in 57 countries, with approximately

(C) the wolf has declined to an estimate of 200,000 in 57 countries, some

(D) wolves have declined to an estimate of 200,000 in 57 countries, with approximately

(E) wolves have declined to an estimated 200,000 in 57 countries, some

Logical predication; Idiom

The predicate *numbered* must have its logically correct subject, which is *wolves.* Although *the wolf* can be used to refer collectively to wolves as a category, the noun should be plural in this case since the sentence refers to numbers of them and since agreement is needed between the noun and the plural pronoun *them*. Given the plural subject, the verb in the independent clause should be *have declined*. The object of *decline to* should be a word or phrase naming a number or estimated number (e.g., a phrase such as *an estimated 200,000*), not the phrase *an estimate*.

A The subject of the main clause (*it*) seems to supply the subject of *numbering*, so the latter does not have its correct logical subject, which should be a word or phrase referring to wolves.

B *The wolf* cannot correctly be taken as the subject of *numbering*, as it is singular and in disagreement with *them* occurring later in the sentence.

C *The wolf* cannot correctly be taken as the subject of *numbering*, as it is singular and disagrees with the later *them*; also, a decline is strictly speaking to a number, not to *an estimate*.

D Although *wolves* is a correct subject for *numbering*, a decline should be to a number, not to *an estimate*.

E **Correct.** *Wolves* is a proper subject for *numbering* and agrees with the later *them*. The decline is correctly said to be to a number, *an estimated 200,000*.

The correct answer is E.

SC11926

310. As business grows more complex, students majoring in specialized areas like those of finance and marketing have been becoming increasingly successful in the job market.

(A) majoring in specialized areas like those of finance and marketing have been becoming increasingly

(B) who major in such specialized areas as finance and marketing are becoming more and more

(C) who majored in specialized areas such as those of finance and marketing are being increasingly

(D) who major in specialized areas like those of finance and marketing have been becoming more and more

(E) having majored in such specialized areas as finance and marketing are being increasingly

Verb form; Diction

The subordinate clause *as business grows more complex* uses the present-tense verb *grows* to describe an ongoing situation. The main clause describes an effect of this growing complexity; the verbs in the main clause should also use present-tense verbs. The present perfect progressive *have been becoming* is incorrect. The preferred way to introduce examples is with the phrase *such as*, rather than with the word *like*, which suggests a comparison.

A *Like* should be replaced by *such as*. *Have been becoming* is an incorrect verb tense.

B **Correct.** In this sentence, *major* and *are becoming* are present-tense verbs; *such . . . as* is the preferred form for introducing examples.

C *Majored* is a past-tense verb; *those of* is unnecessary and awkward. *Becoming* is preferable to *being* for describing an unfolding pattern of events.

D *Like* should be replaced by *such as*. *Those of* is unnecessary and awkward. *Have been becoming* is an incorrect verb tense.

E *Having majored* is an awkward past participle. *Becoming* is preferable to *being* for describing an unfolding pattern of events.

The correct answer is B.

SC04682

311. Created in 1945 to reduce poverty and stabilize foreign currency markets, the World Bank and the International Monetary Fund have, according to some critics, continually struggled to meet the expectations of their major shareholders—a group comprising many of the world's rich nations—but neglected their intended beneficiaries in the developing world.

(A) continually struggled to meet the expectations of their major shareholders—a group comprising many of the world's rich nations—but neglected

(B) continually struggled as they try to meet the expectations of their major shareholders—a group comprising many of the world's rich nations—while neglecting that of

(C) continually struggled to meet their major shareholders' expectations—a group comprising many of the world's rich nations—but neglected that of

(D) had to struggle continually in trying to meet the expectations of their major shareholders—a group comprising many of the world's rich nations—while neglecting that of

(E) struggled continually in trying to meet their major shareholders' expectations—a group comprising many of the world's rich nations—and neglecting

Idiom; Verb form

This sentence describes a contradiction some critics have ascribed to the actions and policies of both the World Bank and the International Monetary Fund: although they were created to address poverty in the developing world, they struggled to meet their major shareholders' expectations and neglected their intended beneficiaries. The contradiction is best expressed by joining the two past-tense verbs *struggled to meet . . .* and *neglected . . .* with the contrasting conjunction *but*. The appositive phrase set off with dashes must immediately follow the noun it defines (*shareholders*).

A **Correct.** The conjunction *but* accurately describes the contradiction between what the organizations did for their major shareholders and what they did not do for their intended beneficiaries, and the appositive clearly defines the immediately preceding noun, *shareholders*.

B The present tense of *as they try to meet* is inconsistent with the rest of the verbs in the sentence. The pronoun *that* seems to have no referent in the phrase *while neglecting that of . . .* since the only likely antecedent *expectations* is plural.

C The appositive grammatically but nonsensically describes expectations rather than shareholders; as in (B), the pronoun *that* does not agree in number with its likely antecedent *expectations*.

D Like (B), this version is unnecessarily wordy, and like (C), it introduces the pronoun *that*, which disagrees in number with the antecedent *expectations*.

E As in (C), the appositive seems to define *expectations* rather than *shareholders*, and the conjunction *and* fails to capture the contradictory relationship between the organizations' actions toward their shareholders and their intended beneficiaries.

The correct answer is A.

SC01911

312. Unlike auto insurance, the frequency of claims does not affect the premiums for personal property coverage, but if the insurance company is able to prove excessive loss due to owner negligence, it may decline to renew the policy.

(A) Unlike auto insurance, the frequency of claims does not affect the premiums for personal property coverage,

(B) Unlike with auto insurance, the frequency of claims do not affect the premiums for personal property coverage,

(C) Unlike the frequency of claims for auto insurance, the premiums for personal property coverage are not affected by the frequency of claims,

(D) Unlike the premiums for auto insurance, the premiums for personal property coverage are not affected by the frequency of claims,

(E) Unlike with the premiums for auto insurance, the premiums for personal property coverage is not affected by the frequency of claims,

Logical predication; Agreement

The sentence has been written so that *auto insurance* is contrasted with *the frequency of claims*. The correct contrast is between *the premiums for auto insurance and the premiums for personal property coverage*.

A *Auto insurance* is illogically contrasted with *the frequency of claims*.

B *Unlike with* is an incorrect idiom; *auto insurance* is contrasted with *the frequency of claims;* the singular subject *frequency* does not agree with the plural verb *do*.

C *The frequency of claims* is contrasted with *the premiums for personal property coverage*.

D **Correct.** The contrast between *the premiums for auto insurance* and *the premiums for personal property coverage* is clearly and correctly stated in this sentence.

E *Unlike with* is an incorrect idiom; the plural subject *premiums* does not agree with the singular verb *is not affected*.

The correct answer is D.

Graduate Management Admission Council™

Caution!

The penalties for cheating on the GMAT™ Exam are severe.

The following is considered cheating:

- Hiring someone to take the test
- Taking the test for someone else
- Memorizing test questions
- Sharing answers with others

The penalties for cheating are:

- Cancellation of your scores
- Ban on future testing
- School notification
- Possible legal prosecution

Has someone been trying to get you to cheat?
