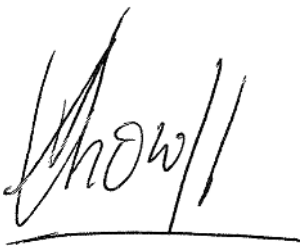
Dear GMAT Test-Taker,

Thank you for your interest in graduate management education. Today more than 7,000 graduate programs around the world use the GMAT™ exam to establish their MBA, business master's, and other graduate-level management degree programs as hallmarks of excellence. Nine of out 10 new MBA enrollments globally are made using a GMAT score.*

By using the *GMAT™ Official Guide* to prepare for the GMAT exam, you're taking a very important step toward achieving your goals and pursuing admission to the MBA or business master's program that is the best fit for you.



This book, *GMAT™ Official Guide 2020*, is designed to help you prepare for and build confidence to do your best on the GMAT exam. It's the only guide that features real questions from past exams published by the Graduate Management Admission Council (GMAC), the makers of the GMAT™ exam

For more than 60 years, the GMAT exam has helped candidates like you demonstrate their command of the skills needed for success in the classroom and showcase to schools their commitment to pursuing a graduate business degree. Schools use and trust the GMAT exam as part of their admissions process because it's a proven predictor of classroom success and your ability to excel in your chosen program.

The mission of GMAC is to ensure no talent goes undiscovered. We are driven to continue improving the GMAT exam as well as helping you find and connect with the best-fit schools and programs for you. I applaud your commitment to educational success. This guide and the other GMAT™ Official Prep products available at mba.com will give you the confidence to achieve your personal best on the GMAT exam and launch or reinvigorate a rewarding career.

I wish you the best success on all your future educational and professional endeavors.

Sincerely,

Sangeet Chowfla
President & CEO of the Graduate Management Admission Council

**Refers to the FT-100 Global MBA Programs, 2017*

GMAT™ Official Guide 2020

1.0 What Is the GMAT™ Exam?

1.0 What Is the GMAT™ Exam?

The Graduate Management Admission Test™ (GMAT™) exam is a standardized exam used in admissions decisions by more than 7,000 graduate management programs worldwide, at approximately 2,300 graduate business schools worldwide. It helps you gauge, and demonstrate to schools, your academic potential for success in graduate-level management studies.

The four-part exam measures your Analytical Writing, Integrated Reasoning, Verbal Reasoning, and Quantitative Reasoning skills—higher-order reasoning skills that management faculty, admissions professionals, and employers worldwide have identified as important for incoming students to have. "Higher-order" reasoning skills involve complex judgments, and include critical thinking, analysis, and problem solving. Unlike undergraduate grades and curricula, which vary in their meaning across regions and institutions, your GMAT scores provide a standardized, statistically valid and reliable measure of how you are likely to perform academically in the core curriculum of a graduate management program. The GMAT exam's validity, fairness, and value in admissions have been well-established through numerous academic studies.

The GMAT exam is delivered entirely in English and solely on a computer. It is not a test of business knowledge, subject-matter mastery, English vocabulary, or advanced computational skills. The GMAT exam also does not measure other factors related to success in graduate management study, such as job experience, leadership ability, motivation, and interpersonal skills. Your GMAT score is intended to be used as one admissions criterion among other, more subjective, criteria, such as admissions essays and interviews.

1.1 Why Take the GMAT™ Exam?

Launched in 1954 by a group of nine business schools to provide a uniform measure of the academic skills needed to succeed in their programs, the GMAT exam is now used by more than 7,000 graduate management programs at approximately 2,300 institutions worldwide.

Taking the GMAT exam helps you stand out in the admissions process and demonstrate your readiness and commitment to pursuing graduate management education. Schools use GMAT scores to help them select the most qualified applicants—because they know that candidates who take the GMAT exam are serious about earning a graduate business degree, and it's a proven predictor of a student's ability to succeed in his or her chosen program. When you consider which programs to apply to, you can look at a school's use of the GMAT exam as one indicator of quality. Schools that use the GMAT exam typically list score ranges or average scores in their class profiles, so you may also find these profiles helpful in gauging the academic competitiveness of a program you are considering and how well your performance on the exam compares with that of the students enrolled in the program.

Myth -vs- FACT

M – **If I don't achieve a high score on the GMAT, I won't get into my top choice schools.**

F – There are great schools available for candidates at any GMAT score range.

Fewer than 50 of the more than 250,000 people taking the GMAT exam each year get a perfect score of 800; and many more get into top business school programs around the world each year. Admissions Officers use GMAT scores as one component in their admissions decisions, in conjunction with undergraduate records, application essays, interviews, letters of recommendation, and other information when deciding whom to accept into their programs. Visit School Finder on mba.com to learn about schools that are the best fit for you.

No matter how you perform on the GMAT exam, you should contact the schools that interest you to learn more and to ask how they use GMAT scores and other criteria (such as your undergraduate

grades, essays, and letters of recommendation) in their admissions processes. School admissions offices, web sites, and materials published by schools are the key sources of information when you are doing research about where you might want to go to business school.

For more information on the GMAT exam, test preparation materials, registration, how to use and send your GMAT scores to schools, and applying to business school, please visit mba.com.

1.2 GMAT™ Exam Format

The GMAT exam consists of four separately timed sections (see the table on the next page). The Analytical Writing Assessment (AWA) section consists of one essay. The Integrated Reasoning section consists of graphical and data analysis questions in multiple response formats. The Quantitative and Verbal Reasoning sections consist of multiple-choice questions.

The Quantitative and Verbal Reasoning sections of the GMAT exam are computer adaptive, which means that the test draws from a large bank of questions to tailor itself to your ability level, and you won't get many questions that are too hard or too easy for you. The first question will be of medium difficulty. As you answer each question, the computer scores your answer and uses it—as well as your responses to all preceding questions—to select the next question.

Computer-adaptive tests become more difficult the more questions you answer correctly, but if you get a question that seems easier than the last one, it does not necessarily mean you answered the last question incorrectly. The test has to cover a range of content, both in the type of question asked and the subject matter presented.

Myth-vs- FACT

M – Getting an easier question means I answered the last one wrong.

F – You should not become distracted by the difficulty level of a question.

Many different factors contribute to the difficulty of a question, so don't worry when taking the test or waste valuable time trying to determine the difficulty of the question you are answering.

To ensure that everyone receives the same content, the test selects a specific number of questions of each type. The test may call for your next problem to be a relatively hard data sufficiency question involving arithmetic operations. But, if there are no more relatively difficult data sufficiency questions involving arithmetic, you might be given an easier question.

Because the computer uses your answers to select your next questions, you may not skip questions or go back and change your answer to a previous question. If you don't know the answer to a question, try to eliminate as many choices as possible, then select the answer you think is best.

Though the individual questions are different, the mix of question types is the same for every GMAT exam. Your score is determined by the difficulty and statistical characteristics of the questions you answer as well as the number of questions you answer correctly. By adapting to each test-taker, the GMAT exam is able to accurately and efficiently gauge skill levels over a full range of abilities, from very high to very low.

The test includes the types of questions found in this book and online at gmat.wiley.com, but the format and presentation of the questions are different on the computer. When you take the test:

- Only one question or question prompt at a time is presented on the computer screen.
- The answer choices for the multiple-choice questions will be preceded by radio buttons, rather than by letters.

- Different question types appear in random order in the multiple-choice and Integrated Reasoning sections.
- You must select your answer using the computer.
- You must choose an answer and confirm your choice before moving on to the next question.
- You may not go back to previous screens to change answers to previous questions.

Format of the GMAT™ Exam

	Questions	Timing
Analytical Writing Assessment	1	30 min.
Integrated Reasoning Multi-Source Reasoning Table Analysis Graphics Interpretation Two-Part Analysis	12	30 min.
Quantitative Reasoning Problem Solving Data Sufficiency	31	62 min.
Verbal Reasoning Reading Comprehension Critical Reasoning Sentence Correction	36	65 min.
	Total Time:	187 min.

Immediately prior to starting your exam, you will have the flexibility to select the order for the section of the GMAT exam from three options.

Order #1	Order #2	Order #3
Analytical Writing Assessment	Verbal Reasoning	Quantitative Reasoning
Integrated Reasoning		
Optional 8-minute break		
Quantitative Reasoning	Quantitative Reasoning	Verbal Reasoning
Optional 8-minute break		
Verbal Reasoning	Integrated Reasoning	Integrated Reasoning
	Analytical Writing Assessment	Analytical Writing Assessment

The section order selection will take place at the test center on exam date, immediately prior to the start of the GMAT exam.

1.3 What Is the Content of the Exam Like?

The GMAT exam measures higher-order analytical skills encompassing several types of reasoning. The Analytical Writing Assessment asks you to analyze the reasoning behind an argument and respond in writing; the Integrated Reasoning section asks you to interpret and synthesize information from multiple sources and in different formats to make reasoned conclusions; the Quantitative Reasoning section asks you to reason quantitatively using basic arithmetic, algebra, and geometry; and the Verbal Reasoning section asks you to read and comprehend written material and to reason and evaluate arguments.

Test questions may address a variety of subjects, but all of the information you need to answer the questions will be included on the exam, with no outside knowledge of the subject matter necessary. The GMAT exam is not a test of business knowledge, English vocabulary, or advanced computational skills. You will need to read and write in English and have basic math and English skills to perform well on the test, but its difficulty comes from analytical and critical thinking abilities.

The questions in this book are organized by question type and from easiest to most difficult, but keep in mind that when you take the test, you may see different types of questions in any order within each section.

1.4 Analytical Writing Assessment

The Analytical Writing Assessment (AWA) consists of one 30-minute writing task: Analysis of an Argument. The AWA measures your ability to think critically, communicate your ideas, and formulate an appropriate and constructive critique. You will type your essay on a computer keyboard.

For test-taking tips, sample essay responses, answer explanations, and sample Analysis of an Argument topics, see chapter 11.

1.5 Integrated Reasoning Section

The Integrated Reasoning section highlights the relevant skills that business managers in today's data-driven world need in order to analyze sophisticated streams of data and solve complex problems. It measures your ability to understand and evaluate multiple sources and types of information—graphic, numeric, and verbal—as they relate to one another. This section will require you to use both quantitative and verbal reasoning to solve complex problems and solve multiple problems in relation to one another.

Four types of questions are used in the Integrated Reasoning section:

- Multi-Source Reasoning
- Table Analysis
- Graphics Interpretation
- Two-Part Analysis

Integrated Reasoning questions may require quantitative or verbal reasoning skills, or a combination of both. You will have to interpret graphics and sort tables to extract meaning from data, but advanced statistical knowledge and spreadsheet manipulation skills are not necessary. You will have access to an on-screen calculator with basic functions for the Integrated Reasoning section, but note that the calculator is *not* available on the Quantitative Reasoning section.

To review the Integrated Reasoning question types and test-taking tips, see chapter 10. For practice questions of each format, with full answer explanations, visit gmat.wiley.com using your unique access code found in the inside front cover of the book.

1.6 Quantitative Reasoning Section

The GMAT Quantitative Reasoning section measures your ability to reason quantitatively, solve quantitative problems, and interpret graphic data.

Two types of multiple-choice questions are used in the Quantitative Reasoning section:

- Problem Solving
- Data Sufficiency

Both are intermingled throughout the Quantitative Reasoning section, and require basic knowledge of arithmetic, elementary algebra, and commonly known concepts of geometry.

To review the basic mathematical concepts that you will need to answer Quantitative questions, see the math review in chapter 4. For test-taking tips specific to the question types in the Quantitative Reasoning section, practice questions, and answer explanations, see chapters 5 and 6.

1.7 Verbal Reasoning Section

The GMAT Verbal Reasoning section measures your ability to read and comprehend written material and to reason and evaluate arguments. The Verbal Reasoning section includes reading sections from several different content areas. Although you may be generally familiar with some of the material, neither the reading passages nor the questions assume detailed knowledge of the topics discussed.

Three types of multiple-choice questions are intermingled throughout the Verbal Reasoning section:

- Reading Comprehension
- Critical Reasoning
- Sentence Correction

All three require basic knowledge of the English language, but the Verbal Reasoning section is not a test of advanced vocabulary.

For test-taking tips specific to each question type in the Verbal Reasoning section, practice questions, and answer explanations, see chapters 7 through 9.

1.8 What Are the Test Centers Like?

The GMAT exam is administered under standardized conditions at over 700 test centers worldwide. Each test center has a proctored testing room with individual computer workstations that allow you to sit for the exam under quiet conditions and with some privacy. You will be able to take two optional 8-minute breaks during the course of the exam. You may not take notes or scratch paper with you into the testing room, but an erasable notepad and marker will be provided for you to use during the test. For more information about exam day visit mba.com.

1.9 How Are Scores Calculated?

Verbal Reasoning and Quantitative Reasoning sections are scored on a scale of 6 to 51, in one-point increments. The Total GMAT score ranges from 200 to 800 and is based on your performance in these two sections. Your score is determined by:

- The number of questions you answer
- The number of questions you answer correctly or incorrectly
- The level of difficulty and other statistical characteristics of each question

Your Verbal, Quantitative, and Total GMAT scores are determined by an algorithm that takes into account the difficulty of the questions that were presented to you and how you answered them. When you answer the easier questions correctly, you get a chance to answer harder questions, making it possible to earn a higher score. After you have completed all the questions on the test, or when your time is expired, the computer will calculate your scores.

You will receive three scores: Total Score (which is based on your Quantitative Reasoning and Verbal Reasoning scores), Integrated Reasoning Score, and Analytical Writing Assessment Score. The following table summarizes the different types of scores, the scales, and the increments.

Type of Score	Scale	Increments
Total (based on Quantitative Reasoning and Verbal Reasoning)	200–800	10
Quantitative Reasoning	6–51	1
Verbal Reasoning	6–51	1
Integrated Reasoning	1–8	1
Analytical Writing Assessment	0–6	.5

The schools that you have designated to receive your scores may receive a copy of your Analytical Writing Assessment essay with your score report. Your own copy of your score report will not include your actual essay.

Your GMAT score includes a percentile ranking that compares your skill level with other test-takers from the past three years. The percentile rank of your score shows the percentage of tests taken with scores lower than your score. Every July, percentile ranking tables are updated. Visit mba.com to view the most recent percentile rankings tables.

2.0 How to Prepare

2.0 How to Prepare

2.1 How Should I Prepare to Take the Test?

The GMAT exam is designed specifically to measure reasoning skills needed for management education, and the test contains several question formats unique to the GMAT exam. At a minimum, you should be familiar with the test format and the question formats before you sit for the test. Because the GMAT exam is a timed exam, you should practice answering test questions, not only to better understand the question formats and the skills they require, but also to help you learn to pace yourself so you can finish each section when you sit for the exam.

Because the exam measures reasoning rather than subject-matter knowledge, you most likely will not find it helpful to memorize facts. You do not need to study advanced mathematical concepts, but you should be sure your grasp of basic arithmetic, algebra, and geometry is sound enough that you can use these skills in quantitative problem solving. Likewise, you do not need to study advanced vocabulary words, but you should have a firm understanding of basic English vocabulary and grammar for reading, writing, and reasoning.

Myth -vs- FACT

M – You need very advanced math skills to get a high GMAT score.

F – The GMAT measures your reasoning and critical thinking abilities, rather than your advanced math skills.

The GMAT exam only requires basic quantitative skills. You should review the math skills (algebra, geometry, basic arithmetic) presented in this guide (chapter 4) and the *GMAT™ Official Guide Quantitative Review 2020*. The difficulty of GMAT Quantitative questions stems from the logic and analysis used to solve the problems and not the underlying math skills.

This book and other study materials released by the Graduate Management Admission Council (GMAC) are the ONLY source of questions that have been retired from the GMAT exam. All questions that appear or have appeared on the GMAT exam are copyrighted and owned by GMAC, which does not license them to be reprinted elsewhere. Accessing live Integrated Reasoning, Quantitative, or Verbal test questions in advance or sharing test content during or after you take the test is a serious violation, which could cause your scores to be canceled and schools to be notified. In cases of a serious violation, you may be banned from future testing and other legal remedies may be pursued.

2.2 Using GMAT Official Prep Products

Because the GMAT exam is administered on a computer, we encourage you to practice the questions in the *GMAT™ Official Guide* online at gmat.wiley.com. All of the questions in this book are available there, and you'll be able to create practice sets and track progress more easily. The online version of the *GMAT™ Official Guide* also contains 74 Integrated Reasoning questions that are not available in this book.

In addition to the *Official Guide*, we recommend using some or all of our six GMAT Official Practice Exams in your preparation. Because the GMAT exam is computer adaptive, meaning that it adjusts to your ability as you answer questions on the exam, the best simulation of the GMAT exam experience is through GMAT Official Practice Exams. Like the real thing, the Official Practice Exams adjust to your ability and use the same scoring algorithm as the actual GMAT exam.

To maximize your studying efforts, we recommend starting by learning about the GMAT exam and the question types in the *GMAT™ Official Guide* and in the GMAT™ Official Starter Kit. Then, take GMAT Official Practice Exam 1 to familiarize yourself with the exam and to get a baseline score. Don't worry about your score on the first practice exam! The goal is to become familiar with the exam and set a baseline for measuring your progress. Following that, go to gmat.wiley.com and practice the questions in the *Official Guide*, focusing on areas that require your attention. As you continue to practice, take additional Official Practice Exams to gauge your progress. Before your real GMAT exam, take a final Official Practice Exam to see where you are and do a "dry run" of the true experience.

Remember: the first two GMAT Official Practice Exams are part of the free GMAT™ Official Starter Kit + Practice Exams 1 and 2, which also include 90 free practice questions, available to everyone with an mba.com account.

2.3 Where Can I Get Additional Practice?

If you would like additional practice, *GMAT™ Official Guide Quantitative Review 2020* and *GMAT™ Official Guide Verbal Review 2020* each offer over 300 additional questions that are not published in this guide. You can also find more Quantitative, Verbal, and Integrated Reasoning practice questions, full-length, computer-adaptive practice exams, Analytical Writing Assessment practice prompts, and other helpful study materials at mba.com.

2.4 General Test-Taking Suggestions

Specific test-taking strategies for individual question types are presented later in this book. The following are general suggestions to help you perform your best on the test.

1. **Use your time wisely.**
   Although the GMAT exam stresses accuracy more than speed, it is important to use your time wisely. On average, you will have about 1¾ minutes for each Verbal question, about 2 minutes for each Quantitative question, and about 2½ minutes for each Integrated Reasoning question, some of which have multiple questions. Once you start the test, an onscreen clock will show the time you have left. You can hide this display if you want, but it is a good idea to check the clock periodically to monitor your progress. The clock will automatically alert you when 5 minutes remain for the section you are working on.

2. **Determine your preferred section order before the actual exam.**
   The GMAT exam allows you to select the order in which to take the sections. Use the GMAT Official Practice Exams as an opportunity to practice and determine your preferred order. Remember: there is no "right" order in which to take the exam; you can practice each order and see which one works best for you.

3. **Answer practice questions ahead of time.**
   After you become generally familiar with all question types, use the practice questions in this book and online at gmat.wiley.com to prepare for the actual test (note that Integrated Reasoning questions are only available online). It may be useful to time yourself as you answer the practice questions to get an idea of how long you will have for each question when you sit for the actual test, as well as to determine whether you are answering quickly enough to finish the test in the allotted time.

4. **Read all test directions carefully.**
The directions explain exactly what is required to answer each question type. If you read hastily, you may miss important instructions and impact your ability to answer correctly. To review directions during the test, click on the Help icon. But be aware that the time you spend reviewing directions will count against your time allotment for that section of the test.

5. **Read each question carefully and thoroughly.**
Before you answer a question, determine exactly what is being asked and then select the best choice. Never skim a question or the possible answers; skimming may cause you to miss important information or nuances.

6. **Do not spend too much time on any one question.**
If you do not know the correct answer, or if the question is too time consuming, try to eliminate choices you know are wrong, select the best of the remaining answer choices, and move on to the next question.

   Not completing sections and randomly guessing answers to questions at the end of each test section can significantly lower your score. As long as you have worked on each section, you will receive a score even if you do not finish one or more sections in the allotted time. You will not earn points for questions you never get to see.

7. **Confirm your answers ONLY when you are ready to move on.**
On the Quantitative Reasoning and Verbal Reasoning sections, once you have selected your answer to a multiple-choice question, you will be asked to confirm it. Once you confirm your response, you cannot go back and change it. You may not skip questions. In the Integrated Reasoning section, there may be several questions based on information provided in the same question prompt. When there is more than one response on a single screen, you can change your response to any of the questions on the screen before moving on to the next screen. However, you may not navigate back to a previous screen to change any responses.

8. **Plan your essay answer before you begin to write.**
The best way to approach the Analysis of an Argument section is to read the directions carefully, take a few minutes to think about the question, and plan a response before you begin writing. Take time to organize your ideas and develop them fully, but leave time to reread your response and make any revisions that you think would improve it.

Myth -vs- FACT

M – It is more important to respond correctly to the test questions than it is to finish the test.

F – There is a significant penalty for not completing the GMAT exam.

Pacing is important. If you are stumped by a question, give it your best guess and move on. If you guess incorrectly, the computer program will likely give you an easier question, which you are likely to answer correctly, and the computer will rapidly return to giving you questions matched to your ability. If you don't finish the test, your score will be reduced. Failing to answer five verbal questions, for example, could reduce your score from the 91st percentile to the 77th percentile.

Myth -vs- FACT

M – The first 10 questions are critical and you should invest the most time on those.

F – All questions count.

The computer-adaptive testing algorithm uses each answered question to obtain an *initial* estimate. However, as you continue to answer questions, the algorithm self-corrects by computing an updated estimate on the basis of all the questions you have answered, and then administers questions that are closely matched to this new estimate of your ability. Your final score is based on all your responses and considers the difficulty of all the questions you answered. Taking additional time on the first 10 questions will not game the system and can hurt your ability to finish the test.

3.0 Diagnostic Test

3.0 Diagnostic Test

Like the practice sections later in the book, the Diagnostic Test uses questions from real GMAT™ exams. The purpose of the Diagnostic Test is to help you determine how skilled you are in answering each of the five types of questions on the GMAT exam: problem solving, data sufficiency, reading comprehension, critical reasoning, and sentence correction.

Scores on the Diagnostic Test are designed to help you answer the question, "If all the questions on the GMAT exam were like the questions in this section, how well would I do?" Your scores are classified as being *excellent, above average, average,* or *below average,* relative to the scores of other test-takers. You can use this information to focus your test-preparation activities.

Instructions

1. Take your time answering these questions. The Diagnostic Test is not timed.
2. If you are stumped by a question, you should guess and move on, just like you should do on the real GMAT exam.
3. You can take one segment at a time, if you want. It is better to finish an entire section (Quantitative or Verbal Reasoning) in one sitting, but this is not a requirement.
4. You can go back and change your answers in the Diagnostic Test.
5. After you take the test, check your answers using the answer key that follows the test. The number of correct answers is your raw score.
6. Convert your raw score, using the table provided.

Note: The Diagnostic Test is designed to give you guidance on how to prepare for the GMAT exam; however, a strong score on one type of question does not guarantee that you will perform as well on the real GMAT exam. The statistical reliability of scores on the Diagnostic Test ranges from 0.75 to 0.89, and the subscale classification is about 85%–90% accurate, meaning that your scores on the Diagnostic Test are a good, but not perfect, measure of how you are likely to perform on the real test. Use the tests on the free online software to obtain a good estimate of your expected GMAT Verbal, Quantitative, and Total scores.

You should not compare the number of questions you got right in each section. Instead, you should compare how your responses are rated in each section.

3.1 Quantitative Questions

Problem Solving

Solve the problem and indicate the best of the answer choices given.
Numbers: All numbers used are real numbers.
Figures: All figures accompanying problem solving questions are intended to provide information useful in solving the problems. Figures are drawn as accurately as possible. Exceptions will be clearly noted. Lines shown as straight are straight, and lines that appear jagged are also straight. The positions of points, angles, regions, etc., exist in the order shown, and angle measures are greater than zero. All figures lie in a plane unless otherwise indicated.

1. Last month a certain music club offered a discount to preferred customers. After the first compact disc purchased, preferred customers paid $3.99 for each additional compact disc purchased. If a preferred customer purchased a total of 6 compact discs and paid $15.95 for the first compact disc, then the dollar amount that the customer paid for the 6 compact discs is equivalent to which of the following?

(A) $5(4.00) + 15.90$
(B) $5(4.00) + 15.95$
(C) $5(4.00) + 16.00$
(D) $5(4.00 - 0.01) + 15.90$
(E) $5(4.00 - 0.05) + 15.95$

2. The average (arithmetic mean) of the integers from 200 to 400, inclusive, is how much greater than the average of the integers from 50 to 100, inclusive?

(A) 150
(B) 175
(C) 200
(D) 225
(E) 300

3. The sequence $a_1, a_2, a_3, \cdots, a_n, \cdots$ is such that $a_n = \frac{a_{n-1} + a_{n-2}}{2}$ for all $n \geq 3$. If $a_3 = 4$ and $a_5 = 20$ what is the value of a_6 ?

(A) 12
(B) 16
(C) 20
(D) 24
(E) 28

4. Among a group of 2,500 people, 35 percent invest in municipal bonds, 18 percent invest in oil stocks, and 7 percent invest in both municipal bonds and oil stocks. If 1 person is to be randomly selected from the 2,500 people, what is the probability that the person selected will be one who invests in municipal bonds but NOT in oil stocks?

(A) $\frac{9}{50}$
(B) $\frac{7}{25}$
(C) $\frac{7}{20}$
(D) $\frac{21}{50}$
(E) $\frac{27}{50}$

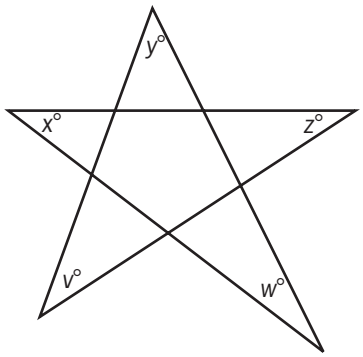
5. A closed cylindrical tank contains 36π cubic feet of water and is filled to half its capacity. When the tank is placed upright on its circular base on level ground, the height of the water in the tank is 4 feet. When the tank is placed on its side on level ground, what is the height, in feet, of the surface of the water above the ground?

(A) 2
(B) 3
(C) 4
(D) 6
(E) 9

6. A marketing firm determined that, of 200 households surveyed, 80 used neither Brand A nor Brand B soap, 60 used only Brand A soap, and for every household that used both brands of soap, 3 used only Brand B soap. How many of the 200 households surveyed used both brands of soap?

(A) 15
(B) 20
(C) 30
(D) 40
(E) 45

7. A certain club has 10 members, including Harry. One of the 10 members is to be chosen at random to be the president, one of the remaining 9 members is to be chosen at random to be the secretary, and one of the remaining 8 members is to be chosen at random to be the treasurer. What is the probability that Harry will be either the member chosen to be the secretary or the member chosen to be the treasurer?



(A) $\frac{1}{720}$
(B) $\frac{1}{80}$
(C) $\frac{1}{10}$
(D) $\frac{1}{9}$
(E) $\frac{1}{5}$

8. If a certain toy store's revenue in November was $\frac{2}{5}$ of its revenue in December and its revenue in January was $\frac{1}{4}$ of its revenue in November, then the store's revenue in December was how many times the average (arithmetic mean) of its revenues in November and January?

(A) $\frac{1}{4}$
(B) $\frac{1}{2}$
(C) $\frac{2}{3}$
(D) 2
(E) 4

9. A researcher computed the mean, the median, and the standard deviation for a set of performance scores. If 5 were to be added to each score, which of these three statistics would change?

(A) The mean only
(B) The median only
(C) The standard deviation only
(D) The mean and the median
(E) The mean and the standard deviation

10. In the figure shown, what is the value of $v + x + y + z + w$?

(A) 45
(B) 90
(C) 180
(D) 270
(E) 360

11. Of the three-digit integers greater than 700, how many have two digits that are equal to each other and the remaining digit different from the other two?

(A) 90
(B) 82
(C) 80
(D) 45
(E) 36

12. Positive integer y is 50 percent of 50 percent of positive integer x, and y percent of x equals 100. What is the value of x ?

(A) 50
(B) 100
(C) 200
(D) 1,000
(E) 2,000

13. If s and t are positive integers such that $\frac{s}{t} = 64.12$, which of the following could be the remainder when s is divided by t ?

(A) 2
(B) 4
(C) 8
(D) 20
(E) 45

14. Of the 84 parents who attended a meeting at a school, 35 volunteered to supervise children during the school picnic and 11 volunteered both to supervise children during the picnic and to bring refreshments to the picnic. If the number of parents who volunteered to bring refreshments was 1.5 times the number of parents who neither volunteered to supervise children during the picnic nor volunteered to bring refreshments, how many of the parents volunteered to bring refreshments?

(A) 25
(B) 36
(C) 38
(D) 42
(E) 45

15. The product of all the prime numbers less than 20 is closest to which of the following powers of 10 ?

(A) 10^9
(B) 10^8
(C) 10^7
(D) 10^6
(E) 10^5

16. If $\sqrt{3-2x} = \sqrt{2x} + 1$, then $4x^2 =$

(A) 1
(B) 4
(C) $2 - 2x$
(D) $4x - 2$
(E) $6x - 1$

17. If $n = \sqrt{\frac{16}{81}}$, what is the value of $\sqrt{n}$?

(A) $\frac{1}{9}$
(B) $\frac{1}{4}$
(C) $\frac{4}{9}$
(D) $\frac{2}{3}$
(E) $\frac{9}{2}$

18. If n is the product of the integers from 1 to 8, inclusive, how many different prime factors greater than 1 does n have?

(A) Four
(B) Five
(C) Six
(D) Seven
(E) Eight

19. If k is an integer and $2 < k < 7$, for how many different values of k is there a triangle with sides of lengths 2, 7, and k ?

(A) One
(B) Two
(C) Three
(D) Four
(E) Five

20. A right circular cone is inscribed in a hemisphere so that the base of the cone coincides with the base of the hemisphere. What is the ratio of the height of the cone to the radius of the hemisphere?

(A) $\sqrt{3}:1$
(B) 1:1
(C) $\frac{1}{2}:1$
(D) $\sqrt{2}:1$
(E) 2:1

21. John deposited $10,000 to open a new savings account that earned 4 percent annual interest, compounded quarterly. If there were no other transactions in the account, what was the amount of money in John's account 6 months after the account was opened?

(A) $10,100
(B) $10,101
(C) $10,200
(D) $10,201
(E) $10,400

22. A container in the shape of a right circular cylinder is $\frac{1}{2}$ full of water. If the volume of water in the container is 36 cubic inches and the height of the container is 9 inches, what is the diameter of the base of the cylinder, in inches?

(A) $\frac{16}{9\pi}$
(B) $\frac{4}{\sqrt{\pi}}$
(C) $\frac{12}{\sqrt{\pi}}$
(D) $\sqrt{\frac{2}{\pi}}$
(E) $4\sqrt{\frac{2}{\pi}}$

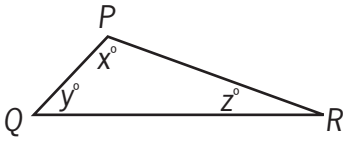
23. If the positive integer x is a multiple of 4 and the positive integer y is a multiple of 6, then xy must be a multiple of which of the following?

I. 8
II. 12
III. 18

(A) II only
(B) I and II only
(C) I and III only
(D) II and III only
(E) I, II, and III

24. Aaron will jog from home at x miles per hour and then walk back home by the same route at y miles per hour. How many miles from home can Aaron jog so that he spends a total of t hours jogging and walking?

(A) $\frac{xt}{y}$
(B) $\frac{x+t}{xy}$
(C) $\frac{xyt}{x+y}$
(D) $\frac{x+y+t}{xy}$
(E) $\frac{y+t}{x}-\frac{t}{y}$



Data Sufficiency

Each data sufficiency problem consists of a question and two statements, labeled (1) and (2), which contain certain data. Using these data and your knowledge of mathematics and everyday facts (such as the number of days in July or the meaning of the word *counterclockwise*), decide whether the data given are sufficient for answering the question and then indicate one of the following answer choices:

A Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C BOTH statements TOGETHER are sufficient, but NEITHER statement ALONE is sufficient.
D EACH statement ALONE is sufficient.
E Statements (1) and (2) TOGETHER are NOT sufficient.

Note: In data sufficiency problems that ask for the value of a quantity, the data given in the statements are sufficient only when it is possible to determine exactly one numerical value for the quantity.

Example:

In $\triangle PQR$, what is the value of x?

(1) $PQ = PR$

(2) $y = 40$

Explanation: According to statement (1) $PQ = PR$; therefore, $\triangle PQR$ is isosceles and $y = z$. Since $x + y + z = 180$, it follows that $x + 2y = 180$. Since statement (1) does not give a value for y, you cannot answer the question using statement (1) alone. According to statement (2), $y = 40$; therefore, $x + z = 140$. Since statement (2) does not give a value for z, you cannot answer the question using statement (2) alone. Using both statements together, since $x + 2y = 180$ and the value of y is given, you can find the value of x. Therefore, BOTH statements (1) and (2) TOGETHER are sufficient to answer the question, but NEITHER statement ALONE is sufficient.

Numbers: All numbers used are real numbers.

Figures:

- **Figures conform to the information given in the question, but will not necessarily conform to the additional information given in statements (1) and (2).**
- **Lines shown as straight are straight, and lines that appear jagged are also straight.**
- **The positions of points, angles, regions, etc., exist in the order shown, and angle measures are greater than zero.**
- **All figures lie in a plane unless otherwise indicated.**

25. If the units digit of integer n is greater than 2, what is the units digit of n ?

(1) The units digit of n is the same as the units digit of n^2.

(2) The units digit of n is the same as the units digit of n^3.

26. What is the value of the integer p ?

(1) Each of the integers 2, 3, and 5 is a factor of p.

(2) Each of the integers 2, 5, and 7 is a factor of p.

27. If the length of Wanda's telephone call was rounded up to the nearest whole minute by her telephone company, then Wanda was charged for how many minutes for her telephone call?

(1) The total charge for Wanda's telephone call was \$6.50.

(2) Wanda was charged \$0.50 more for the first minute of the telephone call than for each minute after the first.

28. What is the perimeter of isosceles triangle MNP ?

(1) $MN = 16$

(2) $NP = 20$

29. In a survey of retailers, what percent had purchased computers for business purposes?

(1) 85 percent of the retailers surveyed who owned their own store had purchased computers for business purposes.

(2) 40 percent of the retailers surveyed owned their own store.

30. The only gift certificates that a certain store sold yesterday were worth either \$100 each or \$10 each. If the store sold a total of 20 gift certificates yesterday, how many gift certificates worth \$10 each did the store sell yesterday?

(1) The gift certificates sold by the store yesterday were worth a total of between \$1,650 and \$1,800.

(2) Yesterday the store sold more than 15 gift certificates worth \$100 each.

31. Is the standard deviation of the set of measurements $x_1, x_2, x_3, x_4, \ldots, x_{20}$ less than 3 ?

(1) The variance for the set of measurements is 4.

(2) For each measurement, the difference between the mean and that measurement is 2.

32. Is the range of the integers 6, 3, y, 4, 5, and x greater than 9 ?

(1) $y > 3x$

(2) $y > x > 3$

33. Is $\dfrac{5^{x+2}}{25} < 1$?

(1) $5^x < 1$

(2) $x < 0$

34. Of the companies surveyed about the skills they required in prospective employees, 20 percent required both computer skills and writing skills. What percent of the companies surveyed required neither computer skills nor writing skills?

(1) Of those companies surveyed that required computer skills, half required writing skills.

(2) 45 percent of the companies surveyed required writing skills but not computer skills.

35. What is the value of $w + q$?

(1) $3w = 3 - 3q$

(2) $5w + 5q = 5$

36. If X and Y are points in a plane and X lies inside the circle C with center O and radius 2, does Y lie inside circle C ?

(1) The length of line segment XY is 3.

(2) The length of line segment OY is 1.5.

37. Is $x > y$?

(1) $x = y + 2$

(2) $\dfrac{x}{2} = y - 1$

38. If Paula drove the distance from her home to her college at an average speed that was greater than 70 kilometers per hour, did it take her less than 3 hours to drive this distance?

(1) The distance that Paula drove from her home to her college was greater than 200 kilometers.

(2) The distance that Paula drove from her home to her college was less than 205 kilometers.

39. In the *xy*-plane, if line *k* has negative slope and passes through the point (–5,*r*), is the *x*-intercept of line *k* positive?

(1) The slope of line *k* is –5.

(2) $r > 0$

40. If $5,000 invested for one year at *p* percent simple annual interest yields $500, what amount must be invested at *k* percent simple annual interest for one year to yield the same number of dollars?

(1) $k = 0.8p$

(2) $k = 8$

41. If $\frac{x+y}{z} > 0$, is $x < 0$?

(1) $x < y$

(2) $z < 0$

42. Does the integer *k* have at least three different positive prime factors?

(1) $\frac{k}{15}$ is an integer.

(2) $\frac{k}{10}$ is an integer.

43. In City X last April, was the average (arithmetic mean) daily high temperature greater than the median daily high temperature?

(1) In City X last April, the sum of the 30 daily high temperatures was 2,160°.

(2) In City X last April, 60 percent of the daily high temperatures were less than the average daily high temperature.

44. If *m* and *n* are positive integers, is $\left(\sqrt{m}\right)^n$ an integer?

(1) $\left(\sqrt{m}\right)$ is an integer.

(2) $\left(\sqrt{n}\right)$ is an integer.

45. Of the 66 people in a certain auditorium, at most 6 people have their birthdays in any one given month. Does at least one person in the auditorium have a birthday in January?

(1) More of the people in the auditorium have their birthday in February than in March.

(2) Five of the people in the auditorium have their birthday in March.

46. Last year the average (arithmetic mean) salary of the 10 employees of Company X was $42,800. What is the average salary of the same 10 employees this year?

(1) For 8 of the 10 employees, this year's salary is 15 percent greater than last year's salary.

(2) For 2 of the 10 employees, this year's salary is the same as last year's salary.

47. In a certain classroom, there are 80 books, of which 24 are fiction and 23 are written in Spanish. How many of the fiction books are written in Spanish?

(1) Of the fiction books, there are 6 more that are not written in Spanish than are written in Spanish.

(2) Of the books written in Spanish, there are 5 more nonfiction books than fiction books.

48. If *p* is the perimeter of rectangle *Q*, what is the value of *p*?

(1) Each diagonal of rectangle *Q* has length 10.

(2) The area of rectangle *Q* is 48.

3.2 Verbal Questions

Reading Comprehension

Each of the reading comprehension questions is based on the content of a passage. After reading the passage, answer all questions pertaining to it on the basis of what is stated or implied in the passage. For each question, select the best answer of the choices given.

Line According to economic signaling theory, consumers may perceive the frequency with which an unfamiliar brand is advertised as a cue that the brand is of high quality. The notion that
(5) highly advertised brands are associated with high-quality products does have some empirical support. Marquardt and McGann found that heavily advertised products did indeed rank high on certain measures of product quality. **Because**
(10) **large advertising expenditures represent a significant investment on the part of a manufacturer, only companies that expect to recoup these costs in the long run, through consumers' repeat purchases of the product,**
(15) **can afford to spend such amounts.**

However, two studies by Kirmani have found that although consumers initially perceive expensive advertising as a signal of high brand quality, at some level of spending the manufacturer's
(20) advertising effort may be perceived as unreasonably high, implying low manufacturer confidence in product quality. If consumers perceive excessive advertising effort as a sign of a manufacturer's desperation, the result may be less favorable
(25) brand perceptions. In addition, a third study by Kirmani, of print advertisements, found that the use of color affected consumer perception of brand quality. Because consumers recognize that color advertisements are more expensive than
(30) black and white, the point at which repetition of an advertisement is perceived as excessive comes sooner for a color advertisement than for a black-and-white advertisement.

49. Which of the following best describes the purpose of the sentence in lines 10–15 ?

(A) To show that economic signaling theory fails to explain a finding

(B) To introduce a distinction not accounted for by economic signaling theory

(C) To account for an exception to a generalization suggested by Marquardt and McGann

(D) To explain why Marquardt and McGann's research was conducted

(E) To offer an explanation for an observation reported by Marquardt and McGann

50. The primary purpose of the passage is to

(A) present findings that contradict one explanation for the effects of a particular advertising practice

(B) argue that theoretical explanations about the effects of a particular advertising practice are of limited value without empirical evidence

(C) discuss how and why particular advertising practices may affect consumers' perceptions

(D) contrast the research methods used in two different studies of a particular advertising practice

(E) explain why a finding about consumer responses to a particular advertising practice was unexpected

51. Kirmani's research, as described in the passage, suggests which of the following regarding consumers' expectations about the quality of advertised products?

(A) Those expectations are likely to be highest if a manufacturer runs both black-and-white and color advertisements for the same product.

(B) Those expectations can be shaped by the presence of color in an advertisement as well as by the frequency with which an advertisement appears.

(C) Those expectations are usually high for frequently advertised new brands but not for frequently advertised familiar brands.

(D) Those expectations are likely to be higher for products whose black-and-white advertisements are often repeated than for those whose color advertisements are less often repeated.

(E) Those expectations are less definitively shaped by the manufacturer's advertisements than by information that consumers gather from other sources.

52. Kirmani's third study, as described in the passage, suggests which of the following conclusions about a black-and-white advertisement?

(A) It can be repeated more frequently than a comparable color advertisement could before consumers begin to suspect low manufacturer confidence in the quality of the advertised product.

(B) It will have the greatest impact on consumers' perceptions of the quality of the advertised product if it appears during periods when a color version of the same advertisement is also being used.

(C) It will attract more attention from readers of the print publication in which it appears if it is used only a few times.

(D) It may be perceived by some consumers as more expensive than a comparable color advertisement.

(E) It is likely to be perceived by consumers as a sign of higher manufacturer confidence in the quality of the advertised product than a comparable color advertisement would be.

53. The passage suggests that Kirmani would be most likely to agree with which of the following statements about consumers' perceptions of the relationship between the frequency with which a product is advertised and the product's quality?

(A) Consumers' perceptions about the frequency with which an advertisement appears are their primary consideration when evaluating an advertisement's claims about product quality.

(B) Because most consumers do not notice the frequency of advertisement, it has little impact on most consumers' expectations regarding product quality.

(C) Consumers perceive frequency of advertisement as a signal about product quality only when the advertisement is for a product that is newly on the market.

(D) The frequency of advertisement is not always perceived by consumers to indicate that manufacturers are highly confident about their products' quality.

(E) Consumers who try a new product that has been frequently advertised are likely to perceive the advertisement's frequency as having been an accurate indicator of the product's quality.

Line The idea of the brain as an information processor—a machine manipulating blips of energy according to fathomable rules—has come to dominate neuroscience. However, one enemy of the brain-as-computer metaphor is John R. Searle, a philosopher who argues that since computers simply follow algorithms, they cannot deal with important aspects of human thought such as meaning and content. Computers are syntactic, rather than semantic, creatures. People, on the other hand, understand meaning because they have something Searle obscurely calls the causal powers of the brain.

Yet how would a brain work if not by reducing what it learns about the world to information—some kind of code that can be transmitted from neuron to neuron? What else could meaning and content be? If the code can be cracked, a computer should be able to simulate it, at least in principle. But even if a computer could simulate the workings of the mind, Searle would claim that the machine would not really be thinking; it would just be acting as if it were. His argument proceeds thus: if a computer were used to simulate a stomach, with the stomach's churnings faithfully reproduced on a video screen, the machine would not be digesting real food. It would just be blindly manipulating the symbols that generate the visual display.

Suppose, though, that a stomach were simulated using plastic tubes, a motor to do the churning, a supply of digestive juices, and a timing mechanism. If food went in one end of the device, what came out the other end would surely be digested food. Brains, unlike stomachs, are information processors, and if one information processor were made to simulate another information processor, it is hard to see how one and not the other could be said to think. Simulated thoughts and real thoughts are made of the same element: information. The representations of the world that humans carry around in their heads are already simulations. To accept Searle's argument, one would have to deny the most fundamental notion in psychology and neuroscience: that brains work by processing information.

54. The main purpose of the passage is to

(A) propose an experiment
(B) analyze a function
(C) refute an argument
(D) explain a contradiction
(E) simulate a process

55. Which of the following is most consistent with Searle's reasoning as presented in the passage?

(A) Meaning and content cannot be reduced to algorithms.
(B) The process of digestion can be simulated mechanically, but not on a computer.
(C) Simulated thoughts and real thoughts are essentially similar because they are composed primarily of information.
(D) A computer can use "causal powers" similar to those of the human brain when processing information.
(E) Computer simulations of the world can achieve the complexity of the brain's representations of the world.

56. The author of the passage would be most likely to agree with which of the following statements about the simulation of organ functions?

(A) An artificial device that achieves the functions of the stomach could be considered a valid model of the stomach.
(B) Computer simulations of the brain are best used to crack the brain's codes of meaning and content.
(C) Computer simulations of the brain challenge ideas that are fundamental to psychology and neuroscience.
(D) Because the brain and the stomach both act as processors, they can best be simulated by mechanical devices.
(E) The computer's limitations in simulating digestion suggest equal limitations in computer-simulated thinking.

57. It can be inferred that the author of the passage believes that Searle's argument is flawed by its failure to

(A) distinguish between syntactic and semantic operations

(B) explain adequately how people, unlike computers, are able to understand meaning

(C) provide concrete examples illustrating its claims about thinking

(D) understand how computers use algorithms to process information

(E) decipher the code that is transmitted from neuron to neuron in the brain

58. From the passage, it can be inferred that the author would agree with Searle on which of the following points?

(A) Computers operate by following algorithms.

(B) The human brain can never fully understand its own functions.

(C) The comparison of the brain to a machine is overly simplistic.

(D) The most accurate models of physical processes are computer simulations.

(E) Human thought and computer-simulated thought involve similar processes of representation.

59. Which of the following most accurately represents Searle's criticism of the brain-as-computer metaphor, as that criticism is described in the passage?

(A) The metaphor is not experimentally verifiable.

(B) The metaphor does not take into account the unique powers of the brain.

(C) The metaphor suggests that a brain's functions can be simulated as easily as those of a stomach.

(D) The metaphor suggests that a computer can simulate the workings of the mind by using the codes of neural transmission.

(E) The metaphor is unhelpful because both the brain and the computer process information.

Line Women's grassroots activism and their vision of a new civic consciousness lay at the heart of social reform in the United States throughout the Progressive Era, the period between the depression (5) of 1893 and America's entry into the Second World War. Though largely disenfranchised except for school elections, white middle-class women reformers won a variety of victories, notably in the improvement of working conditions, especially (10) for women and children. Ironically, though, child labor legislation pitted women of different classes against one another. To the reformers, child labor and industrial home work were equally inhumane practices that should be outlawed, but, (15) as a number of women historians have recently observed, working-class mothers did not always share this view. Given the precarious finances of working-class families and the necessity of pooling the wages of as many family members as possible, (20) working-class families viewed the passage and enforcement of stringent child labor statutes as a personal economic disaster and made strenuous efforts to circumvent child labor laws. Yet reformers rarely understood this resistance in terms (25) of the desperate economic situation of working-class families, interpreting it instead as evidence of poor parenting. This is not to dispute women reformers' perception of child labor as a terribly exploitative practice, but their understanding of (30) child labor and their legislative solutions for ending it failed to take account of the economic needs of working-class families.

60. The primary purpose of the passage is to

(A) explain why women reformers of the Progressive Era failed to achieve their goals

(B) discuss the origins of child labor laws in the late nineteenth and early twentieth centuries

(C) compare the living conditions of working-class and middle-class women in the Progressive Era

(D) discuss an oversight on the part of women reformers of the Progressive Era

(E) revise a traditional view of the role played by women reformers in enacting Progressive Era reforms

61. The view mentioned in line 17 of the passage refers to which of the following?

(A) Some working-class mothers' resistance to the enforcement of child labor laws

(B) Reformers' belief that child labor and industrial home work should be abolished

(C) Reformers' opinions about how working-class families raised their children

(D) Certain women historians' observation that there was a lack of consensus between women of different classes on the issue of child labor and industrial home work

(E) Working-class families' fears about the adverse consequences that child labor laws would have on their ability to earn an adequate living

62. The author of the passage mentions the observations of women historians (lines 15–17) most probably in order to

(A) provide support for an assertion made in the preceding sentence (lines 10–12)

(B) raise a question that is answered in the last sentence of the passage (lines 27–32)

(C) introduce an opinion that challenges a statement made in the first sentence of the passage

(D) offer an alternative view to the one attributed in the passage to working-class mothers

(E) point out a contradiction inherent in the traditional view of child labor reform as it is presented in the passage

63. The passage suggests that which of the following was a reason for the difference of opinion between working-class mothers and women reformers on the issue of child labor?

(A) Reformers' belief that industrial home work was preferable to child labor outside the home

(B) Reformers' belief that child labor laws should pertain to working conditions but not to pay

(C) Working-class mothers' resentment at reformers' attempts to interfere with their parenting

(D) Working-class mothers' belief that child labor was an inhumane practice

(E) Working-class families' need for every employable member of their families to earn money

64. The author of the passage asserts which of the following about women reformers who tried to abolish child labor?

(A) They alienated working-class mothers by attempting to enlist them in agitating for progressive causes.

(B) They underestimated the prevalence of child labor among the working classes.

(C) They were correct in their conviction that child labor was deplorable but shortsighted about the impact of child labor legislation on working-class families.

(D) They were aggressive in their attempts to enforce child labor legislation, but were unable to prevent working-class families from circumventing them.

(E) They were prevented by their nearly total disenfranchisement from making significant progress in child labor reform.

65. According to the passage, one of the most striking achievements of white middle-class women reformers during the Progressive Era was

(A) gaining the right to vote in school elections

(B) mobilizing working-class women in the fight against child labor

(C) uniting women of different classes in grassroots activism

(D) improving the economic conditions of working-class families

(E) improving women's and children's working conditions

Critical Reasoning

Each of the critical reasoning questions is based on a short argument, a set of statements, or a plan of action. For each question, select the best answer of the choices given.

66. Vasquez-Morrell Assurance specializes in insuring manufacturers. Whenever a policyholder makes a claim, a claims adjuster determines the amount that Vasquez-Morrell is obligated to pay. Vasquez-Morrell is cutting its staff of claims adjusters by 15 percent. To ensure that the company's ability to handle claims promptly is affected as little as possible by the staff cuts, consultants recommend that Vasquez-Morrell lay off those adjusters who now take longest, on average, to complete work on claims assigned to them.

Which of the following, if true, most seriously calls into question the consultants' criterion for selecting the staff to be laid off?

(A) If the time that Vasquez-Morrell takes to settle claims increases significantly, it could lose business to other insurers.

(B) Supervisors at Vasquez-Morrell tend to assign the most complex claims to the most capable adjusters.

(C) At Vasquez-Morrell, no insurance payments are made until a claims adjuster has reached a final determination on the claim.

(D) There are no positions at Vasquez-Morrell to which staff currently employed as claims adjusters could be reassigned.

(E) The premiums that Vasquez-Morrell currently charges are no higher than those charged for similar coverage by competitors.

67. Prolonged spells of hot, dry weather at the end of the grape-growing season typically reduce a vineyard's yield, because the grapes stay relatively small. In years with such weather, wine producers can make only a relatively small quantity of wine from a given area of vineyards. Nonetheless, in regions where wine producers generally grow their own grapes, analysts typically expect a long, hot, dry spell late in the growing season to result in increased revenues for local wine producers.

Which of the following, if true, does most to justify the analysts' expectation?

(A) The lower a vineyard's yield, the less labor is required to harvest the grapes.

(B) Long, hot, dry spells at the beginning of the grape-growing season are rare, but they can have a devastating effect on a vineyard's yield.

(C) Grapes grown for wine production are typically made into wine at or near the vineyard in which they were grown.

(D) When hot, dry spells are followed by heavy rains, the rains frequently destroy grape crops.

(E) Grapes that have matured in hot, dry weather make significantly better wine than ordinary grapes.

68. In the past, most children who went sledding in the winter snow in Verland used wooden sleds with runners and steering bars. Ten years ago, smooth plastic sleds became popular; they go faster than wooden sleds but are harder to steer and slow. The concern that plastic sleds are more dangerous is clearly borne out by the fact that the number of children injured while sledding was much higher last winter than it was 10 years ago.

Which of the following, if true in Verland, most seriously undermines the force of the evidence cited?

(A) A few children still use traditional wooden sleds.

(B) Very few children wear any kind of protective gear, such as helmets, while sledding.

(C) Plastic sleds can be used in a much wider variety of snow conditions than wooden sleds can.

(D) Most sledding injuries occur when a sled collides with a tree, a rock, or another sled.

(E) Because the traditional wooden sleds can carry more than one rider, an accident involving a wooden sled can result in several children being injured.

69. Metal rings recently excavated from seventh-century settlements in the western part of Mexico were made using the same metallurgical techniques as those used by Ecuadorian artisans before and during that period. These techniques are sufficiently complex to make their independent development in both areas unlikely. Since the people of these two areas were in cultural contact, archaeologists hypothesize that the metallurgical techniques used to make the rings found in Mexico were learned by Mexican artisans from Ecuadorian counterparts.

Which of the following would it be most useful to establish in order to evaluate the archaeologists' hypothesis?

(A) Whether metal objects were traded from Ecuador to western Mexico during the seventh century

(B) Whether travel between western Mexico and Ecuador in the seventh century would have been primarily by land or by sea

(C) Whether artisans from western Mexico could have learned complex metallurgical techniques from their Ecuadorian counterparts without actually leaving western Mexico

(D) Whether metal tools were used in the seventh-century settlements in western Mexico

(E) Whether any of the techniques used in the manufacture of the metal rings found in western Mexico are still practiced among artisans in Ecuador today

70. Following several years of declining advertising sales, the *Greenville Times* reorganized its advertising sales force. Before reorganization, the sales force was organized geographically, with some sales representatives concentrating on city-center businesses and others concentrating on different outlying regions. The reorganization attempted to increase the sales representatives' knowledge of clients' businesses by having each sales representative deal with only one type of industry or of retailing. After the reorganization, revenue from advertising sales increased.

In assessing whether the improvement in advertising sales can properly be attributed to the reorganization, it would be most helpful to find out which of the following?

(A) What proportion of the total revenue of the *Greenville Times* is generated by advertising sales?

(B) Has the circulation of the *Greenville Times* increased substantially in the last two years?

(C) Among all the types of industry and retailing that use the *Greenville Times* as an advertising vehicle, which type accounts for the largest proportion of the newspaper's advertising sales?

(D) Do any clients of the sales representatives of the *Greenville Times* have a standing order with the *Times* for a fixed amount of advertising per month?

(E) Among the advertisers in the *Greenville Times*, are there more types of retail business or more types of industrial business?

71. Motorists in a certain country frequently complain that traffic congestion is much worse now than it was 20 years ago. No real measure of how much traffic congestion there was 20 years ago exists, but the motorists' complaints are almost certainly unwarranted. The country's highway capacity has tripled in the last twenty years, thanks to a vigorous highway construction program, whereas the number of automobiles registered in the country has increased by only 75 percent.

Which of the following, if true, most seriously weakens the argument?

(A) Most automobile travel is local, and the networks of roads and streets in the country's settled areas have changed little over the last 20 years.

(B) Gasoline prices are high, and miles traveled per car per year have not changed much over the last 20 years.

(C) The country's urban centers have well-developed public transit systems that carry most of the people who commute into those centers.

(D) The average age of automobiles registered in the country is lower now than it was 20 years ago.

(E) Radio stations have long been broadcasting regular traffic reports that inform motorists about traffic congestion.

72. The percentage of households with an annual income of more than $40,000 is higher in Merton County than in any other county. However, the percentage of households with an annual income of $60,000 or more is higher in Sommer County.

If the statements above are true, which of the following must also be true?

(A) The percentage of households with an annual income of $80,000 is higher in Sommer County than in Merton County.

(B) Merton County has the second highest percentage of households with an annual income of $60,000 or more.

(C) Some households in Merton County have an annual income between $40,000 and $60,000.

(D) The number of households with an annual income of more than $40,000 is greater in Merton County than in Sommer County.

(E) Average annual household income is higher in Sommer County than in Merton County.

73. Tiger beetles are such fast runners that they can capture virtually any nonflying insect. However, when running toward an insect, a tiger beetle will intermittently stop and then, a moment later, resume its attack. Perhaps the beetles cannot maintain their pace and must pause for a moment's rest; but an alternative hypothesis is that while running, tiger beetles are unable to adequately process the resulting rapidly changing visual information and so quickly go blind and stop.

Which of the following, if discovered in experiments using artificially moved prey insects, would support one of the two hypotheses and undermine the other?

(A) When a prey insect is moved directly toward a beetle that has been chasing it, the beetle immediately stops and runs away without its usual intermittent stopping.

(B) In pursuing a swerving insect, a beetle alters its course while running and its pauses become more frequent as the chase progresses.

(C) In pursuing a moving insect, a beetle usually responds immediately to changes in the insect's direction, and it pauses equally frequently whether the chase is up or down an incline.

(D) If, when a beetle pauses, it has not gained on the insect it is pursuing, the beetle generally ends its pursuit.

(E) The faster a beetle pursues an insect fleeing directly away from it, the more frequently the beetle stops.

74. Guillemots are birds of Arctic regions. They feed on fish that gather beneath thin sheets of floating ice, and they nest on nearby land. Guillemots need 80 consecutive snow-free days in a year to raise their chicks, so until average temperatures in the Arctic began to rise recently, the guillemots' range was limited to the southernmost Arctic coast. Therefore, if the warming continues, the guillemots' range will probably be enlarged by being extended northward along the coast.

Which of the following, if true, most seriously weakens the argument?

(A) Even if the warming trend continues, there will still be years in which guillemot chicks are killed by an unusually early snow.

(B) If the Arctic warming continues, guillemots' current predators are likely to succeed in extending their own range farther north.

(C) Guillemots nest in coastal areas, where temperatures are generally higher than in inland areas.

(D) If the Arctic warming continues, much of the thin ice in the southern Arctic will disappear.

(E) The fish that guillemots eat are currently preyed on by a wider variety of predators in the southernmost Arctic regions than they are farther north.

75. Some batches of polio vaccine used around 1960 were contaminated with SV40, a virus that in monkeys causes various cancers. Some researchers now claim that this contamination caused some cases of a certain cancer in humans, mesothelioma. This claim is not undercut by the fact that a very careful survey made in the 1960s of people who had received the contaminated vaccine found no elevated incidence of any cancer, since _____.

(A) most cases of mesothelioma are caused by exposure to asbestos

(B) in some countries, there was no contamination of the vaccine

(C) SV40 is widely used in laboratories to produce cancers in animals

(D) mesotheliomas take several decades to develop

(E) mesothelioma was somewhat less common in 1960 than it is now

76. Gortland has long been narrowly self-sufficient in both grain and meat. However, as per capita income in Gortland has risen toward the world average, per capita consumption of meat has also risen toward the world average, and it takes several pounds of grain to produce one pound of meat. Therefore, since per capita income continues to rise, whereas domestic grain production will not increase, Gortland will soon have to import either grain or meat or both.

Which of the following is an assumption on which the argument depends?

(A) The total acreage devoted to grain production in Gortland will soon decrease.

(B) Importing either grain or meat will not result in a significantly higher percentage of Gortlanders' incomes being spent on food than is currently the case.

(C) The per capita consumption of meat in Gortland is increasing at roughly the same rate across all income levels.

(D) The per capita income of meat producers in Gortland is rising faster than the per capita income of grain producers.

(E) People in Gortland who increase their consumption of meat will not radically decrease their consumption of grain.

77. The Hazelton coal-processing plant is a major employer in the Hazelton area, but national environmental regulations will force it to close if it continues to use old, polluting processing methods. However, to update the plant to use newer, cleaner methods would be so expensive that the plant will close unless it receives the tax break it has requested. In order to prevent a major increase in local unemployment, the Hazelton government is considering granting the plant's request.

Which of the following would be most important for the Hazelton government to determine before deciding whether to grant the plant's request?

(A) Whether the company that owns the plant would open a new plant in another area if the present plant were closed

(B) Whether the plant would employ far fewer workers when updated than it does now

(C) Whether the level of pollutants presently being emitted by the plant is high enough to constitute a health hazard for local residents

(D) Whether the majority of the coal processed by the plant is sold outside the Hazelton area

(E) Whether the plant would be able to process more coal when updated than it does now

78. A physically active lifestyle has been shown to help increase longevity. In the Wistar region of Bellaria, the average age at death is considerably higher than in any other part of the country. Wistar is the only mountainous part of Bellaria. A mountainous terrain makes even such basic activities as walking relatively strenuous; it essentially imposes a physically active lifestyle on people. Clearly, this circumstance explains the long lives of people in Wistar.

Which of the following, if true, most seriously weakens the argument?

(A) In Bellaria all medical expenses are paid by the government, so that personal income does not affect the quality of health care a person receives.

(B) The Wistar region is one of Bellaria's least populated regions.

(C) Many people who live in the Wistar region have moved there in middle age or upon retirement.

(D) The many opportunities for hiking, skiing, and other outdoor activities that Wistar's mountains offer make it a favorite destination for vacationing Bellarians.

(E) Per capita spending on recreational activities is no higher in Wistar than it is in other regions of Bellaria.

79. Cheever College offers several online courses via remote computer connection, in addition to traditional classroom-based courses. A study of student performance at Cheever found that, overall, the average student grade for online courses matched that for classroom-based courses. In this calculation of the average grade, course withdrawals were weighted as equivalent to a course failure, and the rate of withdrawal was much lower for students enrolled in classroom-based courses than for students enrolled in online courses.

If the statements above are true, which of the following must also be true of Cheever College?

(A) Among students who did not withdraw, students enrolled in online courses got higher grades, on average, than students enrolled in classroom-based courses.

(B) The number of students enrolled per course at the start of the school term is much higher, on average, for the online courses than for the classroom-based courses.

(C) There are no students who take both an online and a classroom-based course in the same school term.

(D) Among Cheever College students with the best grades, a significant majority take online, rather than classroom-based, courses.

(E) Courses offered online tend to deal with subject matter that is less challenging than that of classroom-based courses.

80. For years the beautiful Renaissance buildings in Palitito have been damaged by exhaust from the many tour buses that come to the city. There has been little parking space, so most buses have idled at the curb during each stop on their tour, and idling produces as much exhaust as driving. The city has now provided parking that accommodates a third of the tour buses, so damage to Palitito's buildings from the buses' exhaust will diminish significantly.

Which of the following, if true, most strongly supports the argument?

(A) The exhaust from Palitito's few automobiles is not a significant threat to Palitito's buildings.

(B) Palitito's Renaissance buildings are not threatened by pollution other than engine exhaust.

(C) Tour buses typically spend less than one-quarter of the time they are in Palitito transporting passengers from one site to another.

(D) More tourists come to Palitito by tour bus than by any other single means of transportation.

(E) Some of the tour buses that are unable to find parking drive around Palitito while their passengers are visiting a site.

81. During the 1980s and 1990s, the annual number of people who visited the Sordellian Mountains increased continually, and many new ski resorts were built. Over the same period, however, the number of visitors to ski resorts who were caught in avalanches decreased, even though there was no reduction in the annual number of avalanches in the Sordellian Mountains.

Which of the following, if true in the Sordellian Mountains during the 1980s and 1990s, most helps to explain the decrease?

(A) Avalanches were most likely to happen when a large new snowfall covered an older layer of snow.

(B) Avalanches destroyed at least some buildings in the Sordellian Mountains in every year.

(C) People planning new ski slopes and other resort facilities used increasingly accurate information about which locations are likely to be in the path of avalanches.

(D) The average length of stay for people visiting the Sordellian Mountains increased slightly.

(E) Construction of new ski resorts often led to the clearing of wooded areas that had helped to prevent avalanches.

82. A year ago, Dietz Foods launched a yearlong advertising campaign for its canned tuna. Last year Dietz sold 12 million cans of tuna compared to the 10 million sold during the previous year, an increase directly attributable to new customers brought in by the campaign. Profits from the additional sales, however, were substantially less than the cost of the advertising campaign. Clearly, therefore, the campaign did nothing to further Dietz's economic interests.

Which of the following, if true, most seriously weakens the argument?

(A) Sales of canned tuna account for a relatively small percentage of Dietz Foods' profits.

(B) Most of the people who bought Dietz's canned tuna for the first time as a result of the campaign were already loyal customers of other Dietz products.

(C) A less expensive advertising campaign would have brought in significantly fewer new customers for Dietz's canned tuna than did the campaign Dietz Foods launched last year.

(D) Dietz made money on sales of canned tuna last year.

(E) In each of the past five years, there was a steep, industry-wide decline in sales of canned tuna.

Sentence Correction

Each of the sentence correction questions presents a sentence, part or all of which is underlined. Beneath the sentence you will find five ways of phrasing the underlined part. The first of these repeats the original; the other four are different. Follow the requirements of standard written English to choose your answer, paying attention to grammar, word choice, and sentence construction. Select the answer that produces the most effective sentence; your answer should make the sentence clear, exact, and free of grammatical error. It should also minimize awkwardness, ambiguity, and redundancy.

83. Unlike the buildings in Mesopotamian cities, which were arranged haphazardly, the same basic plan was followed for all cities of the Indus Valley: with houses laid out on a north-south, east-west grid, and houses and walls were built of standard-size bricks.

(A) the buildings in Mesopotamian cities, which were arranged haphazardly, the same basic plan was followed for all cities of the Indus Valley: with houses

(B) the buildings in Mesopotamian cities, which were haphazard in arrangement, the same basic plan was used in all cities of the Indus Valley: houses were

(C) the arrangement of buildings in Mesopotamian cities, which were haphazard, the cities of the Indus Valley all followed the same basic plan: houses

(D) Mesopotamian cities, in which buildings were arranged haphazardly, the cities of the Indus Valley all followed the same basic plan: houses were

(E) Mesopotamian cities, which had buildings that were arranged haphazardly, the same basic plan was used for all cities in the Indus Valley: houses that were

84. New data from United States Forest Service ecologists show that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, it saves seven dollars that would not be spent on having to extinguish big fires.

(A) that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, it saves seven dollars that would not be spent on having to extinguish

(B) that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, seven dollars are saved that would have been spent on extinguishing

(C) that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel saves seven dollars on not having to extinguish

(D) for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, that it saves seven dollars on not having to extinguish

(E) for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, that seven dollars are saved that would not have been spent on extinguishing

85. Like the grassy fields and old pastures that the upland sandpiper needs for feeding and nesting when it returns in May after wintering in the Argentine Pampas, the sandpipers vanishing in the northeastern United States is a result of residential and industrial development and of changes in farming practices.

(A) the sandpipers vanishing in the northeastern United States is a result of residential and industrial development and of changes in

(B) the bird itself is vanishing in the northeastern United States as a result of residential and industrial development and of changes in

(C) that the birds themselves are vanishing in the northeastern United States is due to residential and industrial development and changes to

(D) in the northeastern United States, sandpipers' vanishing due to residential and industrial development and to changes in

(E) in the northeastern United States, the sandpipers' vanishing, a result of residential and industrial development and changing

86. The results of two recent unrelated studies support the idea that dolphins may share certain cognitive abilities with humans and great apes; the studies indicate dolphins as capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and to grasp spontaneously the mood or intention of humans.

(A) dolphins as capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and to grasp spontaneously

(B) dolphins' ability to recognize themselves in mirrors—an ability that is often considered as a sign of self-awareness—and of spontaneously grasping

(C) dolphins to be capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and to grasp spontaneously

(D) that dolphins have the ability of recognizing themselves in mirrors—an ability that is often considered as a sign of self-awareness—and spontaneously grasping

(E) that dolphins are capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and of spontaneously grasping

87. According to scholars, the earliest writing was probably not a direct rendering of speech, but was more likely to begin as a separate and distinct symbolic system of communication, and only later merged with spoken language.

(A) was more likely to begin as

(B) more than likely began as

(C) more than likely beginning from

(D) it was more than likely begun from

(E) it was more likely that it began

88. In 1995 Richard Stallman, a well-known critic of the patent system, testified in Patent Office hearings that, to test the system, a colleague of his had managed to win a patent for one of Kirchhoff's laws, an observation about electric current first made in 1845 and now included in virtually every textbook of elementary physics.

(A) laws, an observation about electric current first made in 1845 and

(B) laws, which was an observation about electric current first made in 1845 and it is

(C) laws, namely, it was an observation about electric current first made in 1845 and

(D) laws, an observation about electric current first made in 1845, it is

(E) laws that was an observation about electric current, first made in 1845, and is

89. Excavators at the Indus Valley site of Harappa in eastern Pakistan say the discovery of inscribed shards dating to circa 2800–2600 B.C. indicate their development of a Harappan writing system, the use of inscribed seals impressed into clay for marking ownership, and the standardization of weights for trade or taxation occurred many decades, if not centuries, earlier than was previously believed.

(A) indicate their development of a Harappan writing system, the use of

(B) indicate that the development of a Harappan writing system, using

(C) indicates that their development of a Harappan writing system, using

(D) indicates the development of a Harappan writing system, their use of

(E) indicates that the development of a Harappan writing system, the use of

90. The Supreme Court has ruled that public universities can collect student activity fees even with students' objections to particular activities, so long as the groups they give money to will be chosen without regard to their views.

(A) with students' objections to particular activities, so long as the groups they give money to will be

(B) if they have objections to particular activities and the groups that are given the money are

(C) if they object to particular activities, but the groups that the money is given to have to be

(D) from students who object to particular activities, so long as the groups given money are

(E) though students have an objection to particular activities, but the groups that are given the money be

91. Despite the increasing number of women graduating from law school and passing bar examinations, the proportion of judges and partners at major law firms who are women have not risen to a comparable extent.

(A) the proportion of judges and partners at major law firms who are women have not risen to a comparable extent

(B) the proportion of women judges and partners at major law firms have not risen comparably

(C) the proportion of judges and partners at major law firms who are women has not risen comparably

(D) yet the proportion of women judges and partners at major law firms has not risen to a comparable extent

(E) yet the proportion of judges and partners at major law firms who are women has not risen comparably

92. Seldom more than 40 feet wide and 12 feet deep, but it ran 363 miles across the rugged wilderness of upstate New York, the Erie Canal connected the Hudson River at Albany to the Great Lakes at Buffalo, providing the port of New York City with a direct water link to the heartland of the North American continent.

(A) Seldom more than 40 feet wide and 12 feet deep, but it ran 363 miles across the rugged wilderness of upstate New York, the Erie Canal connected

(B) Seldom more than 40 feet wide or 12 feet deep but running 363 miles across the rugged wilderness of upstate New York, the Erie Canal connected

(C) It was seldom more than 40 feet wide and 12 feet deep, and ran 363 miles across the rugged wilderness of upstate New York, but the Erie Canal, connecting

(D) The Erie Canal was seldom more than 40 feet wide or 12 feet deep and it ran 363 miles across the rugged wilderness of upstate New York, which connected

(E) The Erie Canal, seldom more than 40 feet wide and 12 feet deep, but running 363 miles across the rugged wilderness of upstate New York, connecting

93. In 1923, the Supreme Court declared a minimum wage for women and children in the District of Columbia as unconstitutional, and ruling that it was a form of price-fixing and, as such, an abridgment of the right of contract.

(A) the Supreme Court declared a minimum wage for women and children in the District of Columbia as unconstitutional, and

(B) the Supreme Court declared as unconstitutional a minimum wage for women and children in the District of Columbia, and

(C) the Supreme Court declared unconstitutional a minimum wage for women and children in the District of Columbia,

(D) a minimum wage for women and children in the District of Columbia was declared unconstitutional by the Supreme Court,

(E) when the Supreme Court declared a minimum wage for women and children in the District of Columbia as unconstitutional,

94. Researchers have found that individuals who have been blind from birth, and who thus have never seen anyone gesture, nevertheless make hand motions when speaking just as frequently and in virtually the same way as sighted people do, and that they will gesture even when conversing with another blind person.

(A) who thus have never seen anyone gesture, nevertheless make hand motions when speaking just as frequently and in virtually the same way as sighted people do, and that they will gesture

(B) who thus never saw anyone gesturing, nevertheless make hand motions when speaking just as frequent and in virtually the same way as sighted people did, and that they will gesture

(C) who thus have never seen anyone gesture, nevertheless made hand motions when speaking just as frequently and in virtually the same way as sighted people do, as well as gesturing

(D) thus never having seen anyone gesture, nevertheless made hand motions when speaking just as frequent and in virtually the same way as sighted people did, as well as gesturing

(E) thus never having seen anyone gesture, nevertheless to make hand motions when speaking just as frequently and in virtually the same way as sighted people do, and to gesture

95. Like embryonic germ cells, which are cells that develop early in the formation of the fetus and that later generate eggs or sperm, embryonic stem cells have the ability of developing themselves into different kinds of body tissue.

(A) embryonic stem cells have the ability of developing themselves into different kinds of body tissue

(B) embryonic stem cells have the ability to develop into different kinds of body tissue

(C) in embryonic stem cells there is the ability to develop into different kinds of body tissue

(D) the ability to develop themselves into different kinds of body tissue characterizes embryonic stem cells

(E) the ability of developing into different kinds of body tissue characterizes embryonic stem cells

96. Critics contend that the new missile is a weapon whose importance is largely symbolic, more a tool for manipulating people's perceptions than to fulfill a real military need.

(A) for manipulating people's perceptions than to fulfill

(B) for manipulating people's perceptions than for fulfilling

(C) to manipulate people's perceptions rather than that it fulfills

(D) to manipulate people's perceptions rather than fulfilling

(E) to manipulate people's perceptions than for fulfilling

97. As an actress and, more importantly, as a teacher of acting, Stella Adler was one of the most influential artists in the American theater, who trained several generations of actors including Marlon Brando and Robert De Niro.

(A) Stella Adler was one of the most influential artists in the American theater, who trained several generations of actors including

(B) Stella Adler, one of the most influential artists in the American theater, trained several generations of actors who include

(C) Stella Adler was one of the most influential artists in the American theater, training several generations of actors whose ranks included

(D) one of the most influential artists in the American theater was Stella Adler, who trained several generations of actors including

(E) one of the most influential artists in the American theater, Stella Adler, trained several generations of actors whose ranks included

98. By developing the Secure Digital Music Initiative, the recording industry associations of North America, Japan, and Europe hope to create a standardized way of distributing songs and full-length recordings on the Internet that will protect copyright holders and foil the many audio pirates who copy and distribute digital music illegally.

(A) of distributing songs and full-length recordings on the Internet that will protect copyright holders and foil the many audio pirates who copy and distribute

(B) of distributing songs and full-length recordings on the Internet and to protect copyright holders and foiling the many audio pirates copying and distributing

(C) for distributing songs and full-length recordings on the Internet while it protects copyright holders and foils the many audio pirates who copy and distribute

(D) to distribute songs and full-length recordings on the Internet while they will protect copyright holders and foil the many audio pirates copying and distributing

(E) to distribute songs and full-length recordings on the Internet and it will protect copyright holders and foiling the many audio pirates who copy and distribute

99. Whereas a ramjet generally cannot achieve high speeds without the initial assistance of a rocket, high speeds can be attained by scramjets, or supersonic combustion ramjets, in that they reduce airflow compression at the entrance of the engine and letting air pass through at supersonic speeds.

(A) high speeds can be attained by scramjets, or supersonic combustion ramjets, in that they reduce

(B) that high speeds can be attained by scramjets, or supersonic combustion ramjets, is a result of their reducing

(C) the ability of scramjets, or supersonic combustion ramjets, to achieve high speeds is because they reduce

(D) scramjets, or supersonic combustion ramjets, have the ability of attaining high speeds when reducing

(E) scramjets, or supersonic combustion ramjets, can attain high speeds by reducing

100. It will not be possible to implicate melting sea ice in the coastal flooding that many global warming models have projected: just like a glass of water that will not overflow due to melting ice cubes, so melting sea ice does not increase oceanic volume.

(A) like a glass of water that will not overflow due to melting ice cubes,

(B) like melting ice cubes that do not cause a glass of water to overflow,

(C) a glass of water will not overflow because of melting ice cubes,

(D) as melting ice cubes that do not cause a glass of water to overflow,

(E) as melting ice cubes do not cause a glass of water to overflow,

3.4 Interpretive Guide

The following table provides a guide for interpreting your score, on the basis of the number of questions you got right.

Interpretive Guide

	Excellent	Above Average	Average	Below Average
Problem Solving	19–24	16–18	10–15	0–9
Data Sufficiency	19–24	16–18	10–15	0–9
Reading Comprehension	16–17	14–15	9–13	0–8
Critical Reasoning	14–17	9–13	6–8	0–5
Sentence Correction	16–18	11–15	8–10	0–7

Remember, you should not compare the number of questions you got right in each section. Instead, you should compare how your response rated in each section.

3.5 Quantitative Answer Explanations

Problem Solving

The following discussion is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to problem solving questions. The particular questions in this chapter are generally representative of the kinds of quantitative questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

1. Last month a certain music club offered a discount to preferred customers. After the first compact disc purchased, preferred customers paid $3.99 for each additional compact disc purchased. If a preferred customer purchased a total of 6 compact discs and paid $15.95 for the first compact disc, then the dollar amount that the customer paid for the 6 compact discs is equivalent to which of the following?

(A) 5(4.00) + 15.90
(B) 5(4.00) + 15.95
(C) 5(4.00) + 16.00
(D) 5(4.00 – 0.01) + 15.90
(E) 5(4.00 – 0.05) + 15.95

Arithmetic Operations on rational numbers

The cost of the 6 compact discs, with $15.95 for the first one and $3.99 for the other 5 discs, can be expressed as 5(3.99) + 15.95. It is clear from looking at the answer choices that some regrouping of the values is needed because none of the answer choices uses $3.99 in the calculation.

If $4.00 is used instead of $3.99, each one of the 5 additional compact discs is calculated at $0.01 too much, and the total cost is 5(0.01) = $0.05 too high. There is an overage of $0.05 that must be subtracted from the $15.95, or thus $15.95 – $0.05 = $15.90. Therefore, the cost can be expressed as 5(4.00) + 15.90.

The correct answer is A.

2. The average (arithmetic mean) of the integers from 200 to 400, inclusive, is how much greater than the average of the integers from 50 to 100, inclusive?

(A) 150
(B) 175
(C) 200
(D) 225
(E) 300

Arithmetic Statistics

In the list of integers from 200 to 400 inclusive, the middle value is 300. For every integer above 300, there exists an integer below 300 that is the same distance away from 300; thus the average of the integers from 200 to 400, inclusive, will be kept at 300. In the same manner, the average of the integers from 50 to 100, inclusive, is 75.

The difference is 300 – 75 = 225.

The correct answer is D.

3. The sequence $a_1, a_2, a_3, \ldots, a_n, \ldots$ is such that $a_n = \frac{a_{n-1} + a_{n-2}}{2}$ for all $n \geq 3$. If $a_3 = 4$ and $a_5 = 20$, what is the value of a_6 ?

(A) 12
(B) 16
(C) 20
(D) 24
(E) 28

Algebra Applied problems

According to this formula, it is necessary to know the two prior terms in the sequence to determine the value of a term; that is, it is necessary to know both a_{n-1} and a_{n-2} to find a_n. Therefore, to find a_6, the values of a_5 and a_4 must be determined. To find a_4, let $a_n = a_5$, which makes $a_{n-1} = a_4$ and $a_{n-2} = a_3$. Then, by substituting the given values into the formula

$$a_n = \frac{a_{n-1} + a_{n-2}}{2}$$

$$a_5 = \frac{a_4 + a_3}{2}$$

$$20 = \frac{a_4 + 4}{2} \qquad \text{substitute known values}$$

$$40 = a_4 + 4 \qquad \text{multiply both sides}$$

$$36 = a_4 \qquad \text{subtract 4 from both sides}$$

Then, letting $a_n = a_6$, substitute the known values:

$$a_6 = \frac{a_5 + a_4}{2}$$

$$a_6 = \frac{20 + 36}{2} \qquad \text{substitute known values}$$

$$a_6 = \frac{56}{2} \qquad \text{simplify}$$

$$a_6 = 28$$

The correct answer is E.

4. Among a group of 2,500 people, 35 percent invest in municipal bonds, 18 percent invest in oil stocks, and 7 percent invest in both municipal bonds and oil stocks. If 1 person is to be randomly selected from the 2,500 people, what is the probability that the person selected will be one who invests in municipal bonds but NOT in oil stocks?

(A) $\frac{9}{50}$

(B) $\frac{7}{25}$

(C) $\frac{7}{20}$

(D) $\frac{21}{50}$

(E) $\frac{27}{50}$

Arithmetic Probability

Since there are 2,500 people, 2,500(0.35) = 875 people invest in municipal bonds, and 2,500(0.07) = 175 of those people invest in both municipal bonds and oil stocks. Therefore, there are 875 – 175 = 700 people who invest in municipal bonds but not in oil stocks. Probability of an event =

$$\frac{\text{Number of desired outcomes}}{\text{Total number of outcomes that can occur}}.$$

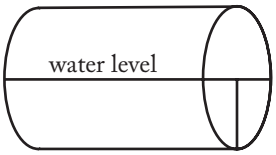
Probability of investing in municipal bonds but not in oil stocks $= \frac{700}{2,500} = \frac{7}{25}$

The correct answer is B.

5. A closed cylindrical tank contains 36π cubic feet of water and is filled to half its capacity. When the tank is placed upright on its circular base on level ground, the height of the water in the tank is 4 feet. When the tank is placed on its side on level ground, what is the height, in feet, of the surface of the water above the ground?

(A) 2

(B) 3



(C) 4

(D) 6

(E) 9

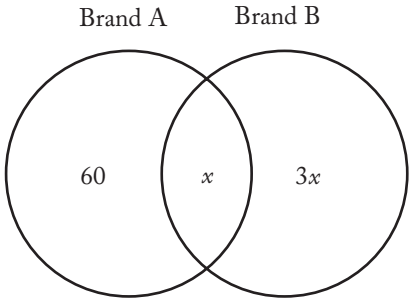
Geometry Volume

Since the cylinder is half full, it will be filled to half its height, whether it is upright or on its side. When the cylinder is on its side, half its height is equal to its radius.

radius = half the height

Using the information about the volume of water in the upright cylinder, solve for this radius to determine the height of the water when the cylinder is on its side.

$V = \pi r^2 h$	volume = (π)(radius^2)(height)
$36\pi = \pi r^2 h$	known volume of water is 36π
$36 = r^2(4)$	substitute 4 for h; divide both sides by π
$9 = r^2$	solve for r
$3 = r$	radius = height of the water in the cylinder on its side



The correct answer is B.

6. A marketing firm determined that, of 200 households surveyed, 80 used neither Brand A nor Brand B soap, 60 used only Brand A soap, and for every household that used both brands of soap, 3 used only Brand B soap. How many of the 200 households surveyed used both brands of soap?

(A) 15
(B) 20
(C) 30
(D) 40
(E) 45

Arithmetic Operations on rational numbers

Since it is given that 80 households use neither Brand A nor Brand B, then 200 – 80 = 120 must use Brand A, Brand B, or both. It is also given that 60 households use only Brand A and that three times as many households use Brand B exclusively as use both brands. If x is the number of households that use both Brand A and Brand B, then $3x$ use Brand B alone. A Venn diagram can be helpful for visualizing the logic of the given information for this item:

All the sections in the circles can be added up and set equal to 120, and then the equation can be solved for x:

$60 + x + 3x = 120$	
$60 + 4x = 120$	combine like terms
$4x = 60$	subtract 60 from both sides
$x = 15$	divide both sides by 4

The correct answer is A.

7. A certain club has 10 members, including Harry. One of the 10 members is to be chosen at random to be the president, one of the remaining 9 members is to be chosen at random to be the secretary, and one of the remaining 8 members is to be chosen at random to be the treasurer. What is the probability that Harry will be either the member chosen to be the secretary or the member chosen to be the treasurer?

(A) $\frac{1}{720}$
(B) $\frac{1}{80}$
(C) $\frac{1}{10}$
(D) $\frac{1}{9}$
(E) $\frac{1}{5}$

Arithmetic Probability

Two probabilities must be calculated here: (1) the probability of Harry's being chosen for secretary and (2) the probability of Harry's being chosen for treasurer. For any probability, the probability of an event's occurring

$$\frac{\text{number of desired outcomes}}{\text{total number of outcomes that can occur}}.$$

(1) If Harry is to be secretary, he first CANNOT have been chosen for president, and then he must be chosen for secretary. The probability that he will be chosen for president is $\frac{1}{10}$, so the probability of his NOT being chosen for president is $1-\frac{1}{10}=\frac{9}{10}$. Then, the probability of his being chosen for secretary is $\frac{1}{9}$.

Once he is chosen, the probability that he will be selected for treasurer is 0, so the probability that he will NOT be selected for treasurer is $1-0=1$. Thus, the probability that Harry will be chosen for secretary is $\left(\frac{9}{10}\right)\left(\frac{1}{9}\right)(1)=\frac{1}{10}$

(2) If Harry is to be treasurer, he needs to be NOT chosen for president, then NOT chosen for secretary, and then finally chosen for treasurer.

The probability that he will NOT be chosen for president is again $1-\frac{1}{10}=\frac{9}{10}$. The probability of his NOT being chosen for secretary is $1-\frac{1}{9}=\frac{8}{9}$. The probability of his being chosen for treasurer is $\frac{1}{8}$, so the probability that Harry will be chosen for treasurer is $\left(\frac{9}{10}\right)\left(\frac{8}{9}\right)\left(\frac{1}{8}\right)=\frac{1}{10}$.

(3) So, finally, the probability of Harry's being chosen as either secretary or treasurer is thus $\frac{1}{10}+\frac{1}{10}=\frac{2}{10}=\frac{1}{5}$.

The correct answer is E.

8. If a certain toy store's revenue in November was $\frac{2}{5}$ of its revenue in December and its revenue in January was $\frac{1}{4}$ of its revenue in November, then the store's revenue in December was how many times the average (arithmetic mean) of its revenues in November and January?

(A) $\frac{1}{4}$

(B) $\frac{1}{2}$

(C) $\frac{2}{3}$

(D) 2

(E) 4

Arithmetic Statistics

Let n be the store's revenue in November, d be the store's revenue in December, and j be the store's revenue in January. The information from the problem can be expressed as $n=\frac{2}{5}d$ and $j=\frac{1}{4}n$. Substituting $\frac{2}{5}d$ for n in the second equation gives $j=\frac{1}{4}\left(\frac{2}{5}d\right)=\frac{1}{10}d$. Then, the average of the revenues in November and January can be found by using these values in the formula

$$\text{average}=\frac{\text{sum of values}}{\text{number of values}},$$ as follows:

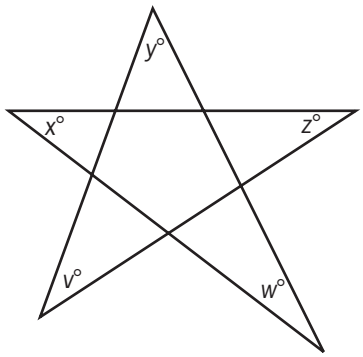
$$\text{average}=\frac{\frac{2}{5}d+\frac{1}{10}d}{2}=\frac{\frac{4}{10}d+\frac{1}{10}d}{2}=\frac{\frac{5}{10}d}{2}=\frac{1}{2}d\left(\frac{1}{2}\right)=\frac{1}{4}d$$

Solve for the store's revenue in December by multiplying both sides of this equation by 4:

$$\text{average}=\frac{1}{4}d$$
$$4(\text{average})=d$$

Thus, the store's revenue in December was 4 times its average revenue in November and January.

The correct answer is E.



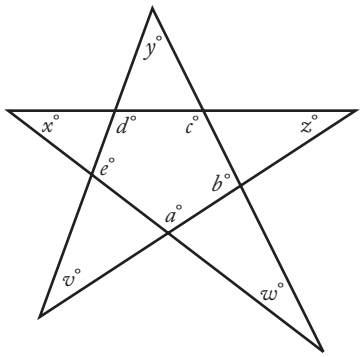
9. A researcher computed the mean, the median, and the standard deviation for a set of performance scores. If 5 were to be added to each score, which of these three statistics would change?

(A) The mean only
(B) The median only
(C) The standard deviation only
(D) The mean and the median
(E) The mean and the standard deviation

Arithmetic Statistics

If 5 were added to each score, the mean would go up by 5, as would the median. However, the spread of the values would remain the same, simply centered around a new value. So, the standard deviation would **NOT** change.

The correct answer is D.



10. In the figure shown, what is the value of $v + x + y + z + w$?

(A) 45
(B) 90
(C) 180
(D) 270
(E) 360

Geometry Angles and their measure

In the following figure, the center section of the star is a pentagon.

The sum of the interior angles of any polygon is $180(n-2)$, where n is the number of sides. Thus, $a+b+c+d+e = 180(5-2) = 180(3) = 540$.

Each of the interior angles of the pentagon defines a triangle with two of the angles at the points of the star. This gives the following five equations:

$a+x+z=180$
$b+v+y=180$
$c+x+w=180$
$d+v+z=180$
$e+y+w=180$

Summing these 5 equations gives:

$a+b+c+d+e+2v+2x+2y+2z+2w=900.$

Substituting 540 for $a+b+c+d+e$ gives:

$540+2v+2x+2y+2w=900.$

From this:

$2v+2x+2y+2z+2w=360$	subtract 540 from both sides
$2(v+x+y+z+w)=360$	factor out 2 on the left side
$v+x+y+z+w=180$	divide both sides by 2

The correct answer is C.

11. Of the three-digit integers greater than 700, how many have two digits that are equal to each other and the remaining digit different from the other two?

(A) 90
(B) 82
(C) 80
(D) 45
(E) 36

Arithmetic Properties of numbers

In three-digit integers, there are three pairs of digits that can be the same while the other digit is different: tens and ones, hundreds and tens, and hundreds and ones. In each of these pairs, there are 9 options for having the third digit be different from the other two. The single exception to this is in the 700–799 set, where the number 700 cannot be included because the problem calls for integers "greater than 700." So, in the 700–799 set, there are only 8 options for when the tens and ones are the same. This is shown in the table below.

Number of digits available for the third digit when two given digits are the same

Same	701–799	800–899	900–999
tens and ones	8	9	9
hundreds and tens	9	9	9
hundreds and ones	9	9	9

Thus, of the three-digit integers greater than 700, there are $9(9) - 1 = 80$ numbers that have two digits that are equal to each other when the remaining digit is different from these two.

The correct answer is C.

12. Positive integer y is 50 percent of 50 percent of positive integer x, and y percent of x equals 100. What is the value of x?

(A) 50
(B) 100
(C) 200
(D) 1,000
(E) 2,000

Arithmetic; Algebra Percents
Simultaneous equations

Because y is a positive integer, y percent is notated as $\frac{y}{100}$. According to the problem, $y = 0.50(0.50x)$ and $\left(\frac{y}{100}\right)x = 100$.

The first equation simplifies to $y = 0.25x$, and multiplying the second equation by 100 gives $xy = 10{,}000$.

Substituting the simplified first equation into this second equation gives:

$x(0.25x) = 10{,}000$

$0.25x^2 = 10{,}000$	simplify left side
$x^2 = 40{,}000$	divide both sides by 0.25
$x = 200$	solve for the value of x

The correct answer is C.

13. If s and t are positive integers such that $\frac{s}{t} = 64.12$, which of the following could be the remainder when s is divided by t?

(A) 2
(B) 4
(C) 8
(D) 20
(E) 45

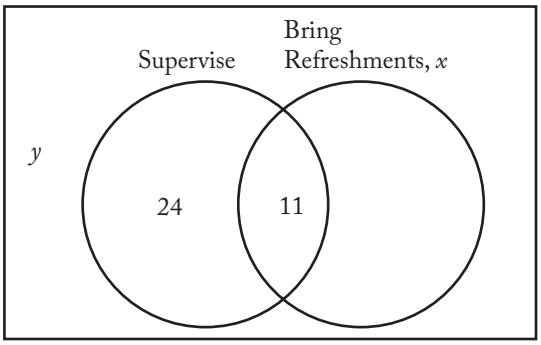
Arithmetic Operations on rational numbers

By using a long division model, it can be seen that the remainder after dividing s by t is $s - 64t$:

$$t\overline{)\,s}\;\;64$$
$$-64t$$
$$s - 64t$$

Then, the given equation can be written as $64.12t = s$. By splitting portions of t into its integer multiple and its decimal multiple, this becomes $64t + 0.12t = s$, or $0.12t = s - 64t$, which is the remainder. So, $0.12t$ = remainder. Test the answer choices to find the situation in which t is an integer.

A	$0.12t = 2$ or $t = 16.67$	NOT an integer
B	$0.12t = 4$ or $t = 33.33$	NOT an integer
C	$0.12t = 8$ or $t = 66.67$	NOT an integer
D	$0.12t = 20$ or $t = 166.67$	NOT an integer
E	$0.12t = 45$ or $t = 375$	INTEGER



The correct answer is E.

14. Of the 84 parents who attended a meeting at a school, 35 volunteered to supervise children during the school picnic and 11 volunteered both to supervise children during the picnic and to bring refreshments to the picnic. If the number of parents who volunteered to bring refreshments was 1.5 times the number of parents who neither volunteered to supervise children during the picnic nor volunteered to bring refreshments, how many of the parents volunteered to bring refreshments?

(A) 25
(B) 36
(C) 38
(D) 42
(E) 45

Arithmetic Operations on rational numbers

Out of the 35 parents who agreed to supervise children during the school picnic, 11 parents are also bringing refreshments, so $35 - 11 = 24$ parents are only supervising children. Let x be the number of parents who volunteered to bring refreshments, and let y be the number of parents who declined to supervise or to bring refreshments. The fact that the number of parents who volunteered to bring refreshments is 1.5 times the number who did not volunteer at all can then be expressed as $x = 1.5y$. A Venn diagram, such as the one below, can be helpful in answering problems of this kind.

Then, the sum of the sections can be set equal to the total number of parents at the picnic, and the equation can be solved for y:

$y + 24 + x = 84$	sum of sections = total parents at picnic
$y + x = 60$	subtract 24 from each side
$y = 60 - x$	subtract x from each side

Then, substituting the value $60 - x$ for y in the equation $x = 1.5y$ gives the following:

$x = 1.5(60 - x)$

$x = 90 - 1.5x$	distribute the 1.5
$2.5x = 90$	add $1.5x$ to both sides
$x = 36$	divide both sides by 2.5

The correct answer is B.

15. The product of all the prime numbers less than 20 is closest to which of the following powers of 10 ?

(A) 10^9
(B) 10^8
(C) 10^7
(D) 10^6
(E) 10^5

Arithmetic Properties of numbers

The prime numbers less than 20 are 2, 3, 5, 7, 11, 13, 17, and 19. Their product is 9,699,690 (arrived at as follows: $2 \times 3 \times 5 \times 7 \times 11 \times 13 \times 17 \times 19 = 9{,}699{,}690$). This is closest to $10{,}000{,}000 = 10^7$ ($10 \times 10 \times 10 \times 10 \times 10 \times 10 \times 10 = 10{,}000{,}000$).

The correct answer is C.

16. If $\sqrt{3-2x} = \sqrt{2x} + 1$ then, $4x^2 =$

(A) 1
(B) 4
(C) $2 - 2x$
(D) $4x - 2$
(E) $6x - 1$

Algebra Second-degree equations

Work with the equation to create $4x^2$ on one side.

$\sqrt{3-2x} = \sqrt{2x}+1$

$\left(\sqrt{3-2x}\right)^2 = \left(\sqrt{2x}+1\right)^2$ square both sides

$3-2x = 2x+2\sqrt{2x}+1$

$2-4x = 2\sqrt{2x}$ move all non-square-root terms to one side (i.e., subtract $2x$ and 1)

$1-2x = \sqrt{2x}$ divide both sides by 2

$(1-2x)^2 = \left(\sqrt{2x}\right)^2$ square both sides

$1-4x+4x^2 = 2x$

$4x^2 = 6x-1$ isolate the $4x^2$ (add $4x$ and subtract 1 from both sides)

The correct answer is E.

17. If $n = \sqrt{\frac{16}{81}}$, what is the value of $\sqrt{n}$?

(A) $\frac{1}{9}$

(B) $\frac{1}{4}$

(C) $\frac{4}{9}$

(D) $\frac{2}{3}$

(E) $\frac{9}{2}$

Arithmetic Operations on radical expressions

Work the problem.

Since $n = \sqrt{\frac{16}{81}} = \frac{4}{9}$, then $\sqrt{n} = \sqrt{\frac{4}{9}} = \frac{2}{3}$.

The correct answer is D.

18. If n is the product of the integers from 1 to 8, inclusive, how many different prime factors greater than 1 does n have?

(A) Four

(B) Five

(C) Six

(D) Seven

(E) Eight

Arithmetic Properties of numbers

If n is the product of the integers from 1 to 8, then its prime factors will be the prime numbers from 1 to 8. There are four prime numbers between 1 and 8: 2, 3, 5, and 7.

The correct answer is A.

19. If k is an integer and $2 < k < 7$, for how many different values of k is there a triangle with sides of lengths 2, 7, and k ?

(A) One

(B) Two

(C) Three

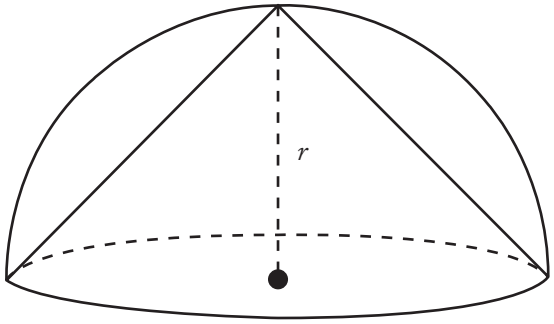
(D) Four

(E) Five

Geometry Triangles

In a triangle, the sum of the smaller two sides must be larger than the largest side.

For k values 3, 4, 5, and 6, the only triangle possible is 2, 7, and $k = 6$ because only $2 + 6 > 7$. For k values 3, 4, and 5, the sum of the smaller two sides is not larger than the third side; thus, 6 is the only possible value of k that satisfies the conditions.



The correct answer is A.

20. A right circular cone is inscribed in a hemisphere so that the base of the cone coincides with the base of the hemisphere. What is the ratio of the height of the cone to the radius of the hemisphere?

(A) $\sqrt{3}:1$
(B) 1:1
(C) $\frac{1}{2}:1$
(D) $\sqrt{2}:1$
(E) 2:1

Geometry Volume

As the diagram below shows, the height of the cone will be the radius of the hemisphere, so the ratio is 1:1.

The correct answer is B.

21. John deposited $10,000 to open a new savings account that earned 4 percent annual interest, compounded quarterly. If there were no other transactions in the account, what was the amount of money in John's account 6 months after the account was opened?

(A) $10,100
(B) $10,101
(C) $10,200
(D) $10,201
(E) $10,400

Arithmetic Operations on rational numbers

Since John's account is compounded quarterly, he receives $\frac{1}{4}$ of his annual interest, or 1%, every 3 months. This is added to the amount already in the account to accrue interest for the next quarter. After 6 months, this process will have occurred twice, so the amount in John's account will then be $(\$10{,}000)(1.01)(1.01) = \$10{,}000(1.01)^2 = \$10{,}201$.

The correct answer is D.

22. A container in the shape of a right circular cylinder is $\frac{1}{2}$ full of water. If the volume of water in the container is 36 cubic inches and the height of the container is 9 inches, what is the diameter of the base of the cylinder, in inches?

(A) $\frac{16}{9\pi}$
(B) $\frac{4}{\sqrt{\pi}}$
(C) $\frac{12}{\sqrt{\pi}}$
(D) $\sqrt{\frac{2}{\pi}}$
(E) $4\sqrt{\frac{2}{\pi}}$

Geometry Volume

For a right cylinder, volume = π(radius)^2(height). Since the volume of water is 36 cubic inches and since this represents $\frac{1}{2}$ the container, the water is occupying $\frac{1}{2}$ the container's height, or $9\left(\frac{1}{2}\right) = 4.5$ inches. Let r be the radius of the cylinder.

$36 = \pi r^2(4.5)$

$8 = \pi r^2$ divide both sides by 4.5

$\frac{8}{\pi} = r^2$ divide both sides by π

$\sqrt{\frac{8}{\pi}} = r$ take the square root of both sides

$\frac{2\sqrt{2}}{\sqrt{\pi}} = r$ simplify the $\sqrt{8}$ to get the radius

Then, since the diameter is twice the length of the radius, the diameter equals

$$2\left(\frac{2\sqrt{2}}{\sqrt{\pi}}\right) = 4\frac{\sqrt{2}}{\sqrt{\pi}} = 4\sqrt{\frac{2}{\pi}}.$$

The correct answer is E.

23. If the positive integer x is a multiple of 4 and the positive integer y is a multiple of 6, then xy must be a multiple of which of the following?

I. 8
II. 12
III. 18

(A) II only
(B) I and II only
(C) I and III only
(D) II and III only
(E) I, II, and III

Arithmetic Properties of numbers

The product xy must be a multiple of $4(6) = 24$ and any of its factors. Test each alternative.

I. $\frac{24}{8} = 3$ — 8 is a factor of 24 MUST be a multiple of 8

II. $\frac{24}{12} = 2$ — 12 is a factor of 24 MUST be a multiple of 12

III. $\frac{24}{18} = 1\frac{1}{3}$ — 18 is NOT a factor of 24 NEED NOT be a multiple of 18

The correct answer is B.

24. Aaron will jog from home at x miles per hour and then walk back home by the same route at y miles per hour. How many miles from home can Aaron jog so that he spends a total of t hours jogging and walking?

(A) $\frac{xt}{y}$
(B) $\frac{x+t}{xy}$
(C) $\frac{xyt}{x+y}$
(D) $\frac{x+y+t}{xy}$
(E) $\frac{y+t}{x} - \frac{t}{y}$

Algebra Simplifying algebraic expressions

Let j be the number of hours Aaron spends jogging; then let $t - j$ be the total number of hours he spends walking. It can be stated that Aaron jogs a distance of xj miles and walks a distance of $y(t - j)$ miles. Because Aaron travels the same route, the miles jogged must equal the miles walked, and they can be set equal.

$xj = y(t - j)$ — set number of miles equal to each other

$xj = yt - jy$ — distribute the y

$xj + jy = yt$ — add jy to both sides to get all terms with j to one side

$j(x + y) = yt$ — factor out the j

$j = \frac{yt}{x+y}$. — divide both sides by $x + y$

So, the number of hours Aaron spends jogging is $j = \frac{yt}{x+y}$.

The number of miles he can jog is xj or, by substitution of this value of j, $x\left(\frac{yt}{x+y}\right) = \frac{xyt}{x+y}$.

The correct answer is C.

Data Sufficiency

The following section on data sufficiency is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to data sufficiency. The particular questions in this chapter are generally representative of the kinds of data sufficiency questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

25. If the units digit of integer n is greater than 2, what is the units digit of n ?

(1) The units digit of n is the same as the units digit of n^2.

(2) The units digit of n is the same as the units digit of n^3.

Arithmetic Arithmetic operations

If the units digit of n is greater than 2, then it can only be the digits 3, 4, 5, 6, 7, 8, or 9.

(1) To solve this problem, it is necessary to find a digit that is the same as the units digit of its square. For example, both 43 squared (1,849) and 303 squared (91,809) have a units digit of 9, which is different from the units digit of 43 and 303. However, 25 squared (625) and 385 squared (148,225) both have a units digit of 5, and 16 and 226 both have a units digit of 6 and their squares (256 and 51,076, respectively) do, too. However, there is no further information to choose between 5 or 6; NOT sufficient.

(2) Once again, 5 and 6 are the only numbers which, when cubed, will both have a 5 or 6 respectively in their units digits. However, the information given does not distinguish between them; NOT sufficient.

Since (1) and (2) together yield the same information but with no direction as to which to choose, there is not enough information to determine the answer.

The correct answer is E;
both statements together are still not sufficient.

26. What is the value of the integer p ?

(1) Each of the integers 2, 3, and 5 is a factor of p.

(2) Each of the integers 2, 5, and 7 is a factor of p.

Arithmetic Properties of numbers

(1) These are factors of p, but it is not clear that they are the only factors of p; NOT sufficient.

(2) These are factors of p, but it is not clear that they are the only factors of p; NOT sufficient.

Taken together, (1) and (2) overlap, but again there is no clear indication that these are the only factors of p.

The correct answer is E;
both statements together are still not sufficient.

27. If the length of Wanda's telephone call was rounded up to the nearest whole minute by her telephone company, then Wanda was charged for how many minutes for her telephone call?

(1) The total charge for Wanda's telephone call was $6.50.

(2) Wanda was charged $0.50 more for the first minute of the telephone call than for each minute after the first.

Arithmetic Arithmetic operations

(1) This does not give any information as to the call's cost per minute; NOT sufficient.

(2) From this, it can be determined only that the call was longer than one minute and that the charge for the first minute was $0.50 more than the charge for each succeeding minute; NOT sufficient.

Taking (1) and (2) together, the number of minutes cannot be determined as long as the cost of each minute after the first is unknown. For example, if the cost of each minute after the first minute were \$0.40, then the cost of the first minute would be \$0.90. Then the total cost of the other minutes would be \$6.50 – \$0.90 = \$5.60, and \$5.60 ÷ \$0.40 would yield 14. In this case, the time of the call would be 1 + 14 = 15 minutes. If, however, the cost of each minute after the first minute were \$0.15, then the cost of the first minute would be \$0.65. Then \$6.50 – \$0.65 would be \$5.85, and this in turn, when divided by \$0.15, would yield 39 minutes, for a total call length of 40 minutes. More information on the cost of each minute after the first minute is still needed.

The correct answer is E;
both statements together are still not sufficient.

28. What is the perimeter of isosceles triangle *MNP*?

(1) $MN = 16$

(2) $NP = 20$

Geometry Triangles

The perimeter of a triangle is the sum of all three sides. In the case of an isosceles triangle, two of the sides are equal. To determine the perimeter of this triangle, it is necessary to know both the length of an equal side and the length of the base of the triangle.

(1) Only gives the length of one side; NOT sufficient.

(2) Only gives the length of one side; NOT sufficient.

Since it is unclear whether *MN* or *NP* is one of the equal sides, it is not possible to determine the length of the third side or the perimeter of the triangle. The perimeter could be either ((2)(16)) + 20 = 52 or ((2)(20)) + 16 = 56.

The correct answer is E;
both statements together are still not sufficient.

29. In a survey of retailers, what percent had purchased computers for business purposes?

(1) 85 percent of the retailers surveyed who owned their own store had purchased computers for business purposes.

(2) 40 percent of the retailers surveyed owned their own store.

Arithmetic Percents

(1) With only this, it cannot be known what percent of the retailers not owning their own store had purchased computers, and so it cannot be known how many retailers purchased computers overall; NOT sufficient.

(2) While this permits the percent of owners and nonowners in the survey to be deduced, the overall percent of retailers who had purchased computers cannot be determined; NOT sufficient.

Using the information from both (1) and (2), the percent of surveyed owner-retailers who had purchased computers can be deduced, and the percent of nonowner-retailers can also be deduced. However, the information that would permit a determination of either the percent of nonowner-retailers who had purchased computers or the overall percent of all retailers (both owners and nonowners) who had purchased computers is still not provided.

The correct answer is E;
both statements together are still not sufficient.

30. The only gift certificates that a certain store sold yesterday were worth either \$100 each or \$10 each. If the store sold a total of 20 gift certificates yesterday, how many gift certificates worth \$10 each did the store sell yesterday?

(1) The gift certificates sold by the store yesterday were worth a total of between \$1,650 and \$1,800.

(2) Yesterday the store sold more than 15 gift certificates worth \$100 each.

Algebra Applied problems; Simultaneous equations; Inequalities

Let x represent the number of \$100 certificates sold, and let y represent the number of \$10 certificates sold. Then the given information can be expressed as $x + y = 20$ or thus $y = 20 - x$. The

value of the \$100 certificates sold is $100x$, and the value of the \$10 certificates sold is $10y$.

(1) From this, it is known that $100x + 10y > 1{,}650$. Since $y = 20 - x$, this value can be substituted for y, and the inequality can be solved for x:

$$\begin{aligned} 100x + 10y &> 1{,}650 \\ 100x + 10(20 - x) &> 1{,}650 && \text{substitute for } y \\ 100x + 200 - 10x &> 1{,}650 && \text{distribute} \\ 90x + 200 &> 1{,}650 && \text{simplify} \\ 90x &> 1{,}450 && \text{subtract 200 from both sides} \\ x &> 16.1 \end{aligned}$$

Thus, more than 16 of the \$100 certificates were sold. If 17 \$100 certificates were sold, then it must be that 3 \$10 certificates were also sold for a total of \$1,730, which satisfies the condition of being between \$1,650 and \$1,800. If, however, 18 \$100 certificates were sold, then it must be that 2 \$10 certificates were sold, and this totals \$1,820, which is more than \$1,800 and fails to satisfy the condition. Therefore, 3 of the \$10 certificates were sold; SUFFICIENT.

(2) From this it can be known only that the number of \$10 certificates sold was 4 or fewer; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

31. Is the standard deviation of the set of measurements $x_1, x_2, x_3, x_4, \ldots, x_{20}$ less than 3 ?

(1) The variance for the set of measurements is 4.

(2) For each measurement, the difference between the mean and that measurement is 2.

Arithmetic Statistics

In determining the standard deviation, the difference between each measurement and the mean is squared, and then the squared differences are added and divided by the number of measurements. The quotient is the variance and the positive square root of the variance is the standard deviation.

(1) If the variance is 4, then the standard deviation $= \sqrt{4} = 2$, which is less than 3; SUFFICIENT.

(2) For each measurement, the difference between the mean and that measurement is 2. Therefore, the square of each difference is 4, and the sum of all the squares is $4 \times 20 = 80$. The standard deviation is $\sqrt{\frac{80}{20}} = \sqrt{4} = 2$, which is less than 3; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

32. Is the range of the integers 6, 3, y, 4, 5, and x greater than 9 ?

(1) $y > 3x$

(2) $y > x > 3$

Arithmetic Statistics

The range of a set of integers is equal to the difference between the largest integer and the smallest integer. The range of the set of integers 3, 4, 5, and 6 is 3, which is derived from $6 - 3$.

(1) Although it is known that $y > 3x$, the value of x is unknown. If, for example, $x = 1$, then the value of y would be greater than 3. However, if $x = 2$, then the value of y would be greater than 6, and, since 6 would no longer be the largest integer, the range would be affected. Because the actual values of x and y are unknown, the value of the range is also unknown; NOT sufficient.

(2) If $x > 3$ and $y > x$, then x could be 4 and y could be 5. Then the range of the 6 integers would still be $6 - 3$ or 3. However, if x were 4 and y were 15, then the range of the 6 integers would be $15 - 3$, or 12. There is no means to establish the values of x and y, beyond the fact that they both are greater than 3; NOT sufficient.

Taking (1) and (2) together, it is known that $x > 3$ and that $y > 3x$. Since the smallest integer that x could be is thus 4, then $y > 3(4)$ or $y > 12$. Therefore, the integer y must be 13 or larger. When y is equal to 13, the range of the 6 integers is $13 - 3 = 10$, which is larger than 9. As y increases in value, the value of the range will also increase.

The correct answer is C;
both statements together are sufficient.

33. Is $\frac{5^{x+2}}{25} < 1$?

(1) $5^x < 1$

(2) $x < 0$

Algebra Inequalities

Note that $x^{r+s} = (x^r)(x^s)$

(1) If $5^x < 1$, then $\frac{5^{x+2}}{25} < 1$ since $\frac{5^{x+2}}{25} = \frac{5^x \cdot 5^2}{25} = 5^x$; SUFFICIENT.

(2) If $x < 0$, then

$x + 2 < 2$	add 2 to both sides
$5^{x+2} < 5^2$	because $a < b$ implies $5^a < 5^b$
$\frac{5^{x+2}}{25} < 1$	divide both sides by $5^2 = 25$;

SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

34. Of the companies surveyed about the skills they required in prospective employees, 20 percent required both computer skills and writing skills. What percent of the companies surveyed required neither computer skills nor writing skills?

(1) Of those companies surveyed that required computer skills, half required writing skills.

(2) 45 percent of the companies surveyed required writing skills but not computer skills.

Arithmetic Percents

The surveyed companies could be placed into one of the following four categories:

1. Requiring computer skills and requiring writing skills
2. Requiring computer skills but not requiring writing skills
3. Not requiring computer skills but requiring writing skills
4. Not requiring either computer skills or writing skills

It is given that 20 percent of the surveyed companies fell into category 1. It is necessary to determine what percent of the surveyed companies fell into category 4.

(1) This helps identify the percentage in category 2. Since $\frac{1}{2}$ the companies that required computer skills also required writing skills (i.e., those in category 1), then the other $\frac{1}{2}$ of the companies that required computer skills did not require writing skills (thus category 2 = category 1). However, this information only establishes that 20 percent required computer skills, but not writing skills; NOT sufficient.

(2) While this establishes category 3, that is, that 45 percent required writing skills but not computer skills, no further information is available; NOT sufficient.

Taking (1) and (2) together, the first three categories add up to 85 percent (20 + 20 + 45). Therefore, category 4 would be equal to 100 – 85 = 15 percent of the surveyed companies required neither computer skills nor writing skills.

The correct answer is C;
both statements together are sufficient.

35. What is the value of $w + q$?

(1) $3w = 3 - 3q$

(2) $5w + 5q = 5$

Algebra First- and second-degree equations

(1) If $3q$ is added to both sides of this equation, it can be rewritten as $3w + 3q = 3$. When each term is then divided by 3, it yields $w + q = 1$; SUFFICIENT.

(2) When each term in this equation is divided by 5, it becomes $w + q = 1$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

36. If X and Y are points in a plane and X lies inside the circle C with center O and radius 2, does Y lie inside circle C?

(1) The length of line segment XY is 3.

(2) The length of line segment OY is 1.5.

Geometry Circles

(1) The maximum distance between two points that lie on a circle is equal to the diameter, or 2 times the radius. Since the radius of circle C is 2, the diameter in this case is 4. It cannot be assumed, however, that X and Y are points on the diameter; X can lie anywhere within the circle. When the distance between X and Y is 3, it is still possible either that Y is within the circle or that Y is outside the circle; NOT sufficient.

(2) If the length of the line segment OY is 1.5 and the circle has a radius of 2, then the distance from the center O to point Y is less than the radius, and point Y must therefore lie within the circle; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

37. Is $x > y$?

(1) $x = y + 2$

(2) $\frac{x}{2} = y - 1$

Algebra First- and second-degree equations

(1) Since 2 has to be added to y in order to make it equal to x, it can be reasoned that $x > y$; SUFFICIENT.

(2) Multiplying both sides of this equation by 2 results in $x = 2(y - 1)$ or $x = 2y - 2$. If y were 0, then x would be -2, and y would be greater than x. If y were a negative number like -2, then $x = 2(-2) - 2 - 6$, and again y would be greater than x. However, if y were a positive number such as 4, then $x = 2(4) - 2 = 6$, and $x > y$. Since there is no other information concerning the value of y, it cannot be determined if $x > y$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

38. If Paula drove the distance from her home to her college at an average speed that was greater than 70 kilometers per hour, did it take her less than 3 hours to drive this distance?

(1) The distance that Paula drove from her home to her college was greater than 200 kilometers.

(2) The distance that Paula drove from her home to her college was less than 205 kilometers.

Arithmetic Distance problem

A distance problem uses the formula distance = rate × time. To find the time, the formula would be rearranged as $\text{time} = \frac{\text{distance}}{\text{rate}}$. To solve this problem, it is necessary to know the rate (given here as 70 kilometers per hour) and the distance.

(1) If D is the distance Paula drove then $D > 200$ and $\frac{D}{70} > \frac{200}{70} = 2\frac{6}{7}$ so $t > 2\frac{6}{7}$ and t may or may not be less than 3; NOT sufficient.

(2) If D is the distance Paula drove then $D < 205$ and $\frac{D}{70} < \frac{205}{70} = 2\frac{13}{14}$ so $t < 2\frac{13}{14} < 3$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

39. In the xy-plane, if line k has negative slope and passes through the point $(-5,r)$, is the x-intercept of line k positive?

(1) The slope of line k is -5.

(2) $r > 0$

Geometry Coordinate geometry

The x-intercept is the x-coordinate of the point in which the line k crosses the x-axis and would have the coordinates $(x,0)$.

(1) Knowing the slope of the line does not help in determining the x-intercept, since from point $(-5,r)$ the line k extends in both directions. Without knowing the value of r, the x-intercept could be -5 if r were 0, or it could be other numbers, both positive and negative, depending on the value of r; NOT sufficient.

(2) Knowing that $r > 0$ suggests that the x-intercept is not -5; the point $(-5,r)$, where r is a positive number, does lie in quadrant II. It could, however, be any point with an x-coordinate of -5 in that quadrant and line k could have any negative slope, and so the line k would vary with the value of r. Therefore, the x-intercept of line k cannot be determined; NOT sufficient.

Using (1) and (2) together does not help in the determination of the x-intercept, since the point $(-5,r)$ could have any positive y-coordinate and thus line k could cross the x-axis at many different places.

The correct answer is E;
both statements together are still not sufficient.

40. If \$5,000 invested for one year at p percent simple annual interest yields \$500, what amount must be invested at k percent simple annual interest for one year to yield the same number of dollars?

(1) $k = 0.8p$

(2) $k = 8$

Arithmetic Interest problem

With simple annual interest, the formula to use is interest = principal × rate × time. It is given that $\$500 = \$5,000 \times \frac{p}{100} \times 1$ (year), so $p = 10$ percent interest.

(1) If p is 10 percent, then $k = 0.8\,p$ is 0.08. Using the same formula, the time is again 1 year; the interest is the same amount; and the rate is 0.08, or 8 percent. Thus, \$500 = principal × 0.08 × 1, or principal \$6,250; SUFFICIENT.

(2) If $k = 8$, then the rate is 8 percent, and the same formula and procedure as above are employed again; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

41. If $\frac{x+y}{z} > 0$, is $x < 0$?

(1) $x < y$

(2) $z < 0$

Algebra Inequalities

If $\frac{x+y}{z} > 0$, then either one of two cases holds true. Either $(x+y) > 0$ **and** $z > 0$, or $(x+y) < 0$ **and** $z < 0$. In other words, in order for the term to be greater than zero, it must be true that either 1) both the numerator and denominator are greater than 0 or 2) both the numerator and denominator are less than 0.

(1) Regardless of whether $(x+y)$ is positive or negative, the positive or negative value of z must be in agreement with the sign of $(x+y)$ in order for $\frac{x+y}{z} > 0$. However, there is no information about z here; NOT sufficient.

(2) If $z < 0$, then $(x+y)$ must be less than 0. However, this statement gives no information about $(x+y)$; NOT sufficient.

This can be solved using (1) and (2) together. From (2), it is known that $z < 0$, and, going back to the original analysis, for the term to be greater than zero, $(x+y)$ must also be less than 0. If $x + y < 0$ then $x < -y$. But $x < y$ from (1) so

$$x + x < -y + y$$
$$2x < 0$$
$$x < 0.$$

The correct answer is C;
both statements together are sufficient.

42. Does the integer k have at least three different positive prime factors?

(1) $\frac{k}{15}$ is an integer.

(2) $\frac{k}{10}$ is an integer.

Arithmetic Properties of numbers

(1) The prime factors of 15 are 3 and 5. So in this case, k has at least 2 different positive prime factors, but it is unknown if there are more positive prime factors; NOT sufficient.

(2) The prime factors of 10 are 2 and 5, showing that k has at least these 2 different positive prime factors, but k might or might not have more; NOT sufficient.

Taking (1) and (2) together, since k is divisible by both 10 and 15, it must be divisible by their different positive prime factors of 2, 3, and 5. Thus k has at least 3 different positive prime factors.

The correct answer is C;
both statements together are sufficient.

43. In City X last April, was the average (arithmetic mean) daily high temperature greater than the median daily high temperature?

(1) In City X last April, the sum of the 30 daily high temperatures was 2,160°.

(2) In City X last April, 60 percent of the daily high temperatures were less than the average daily high temperature.

Arithmetic Statistics

The formula for calculating the arithmetic mean, or the average, is as follows:

$$\text{Average} = \frac{\text{sum of } v \text{ values}}{v}$$

(1) These data will produce an average of $\frac{2160}{30} = 72°$ for last April in City X. However, there is no information regarding the median for comparison; NOT sufficient.

(2) The median is the middle temperature of the data. As such, 50 percent of the daily high temperatures will be at or above the median, and 50 percent will be at or below the median. If 60 percent of the daily high temperatures were less than the average daily high temperature, then the average of the daily highs must be greater than the median; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

44. If m and n are positive integers, is $\left(\sqrt{m}\right)^n$ an integer?

(1) $\left(\sqrt{m}\right)$ is an integer.

(2) $\left(\sqrt{n}\right)$ is an integer.

Arithmetic Properties of numbers

(1) If $\left(\sqrt{m}\right)$ is an integer and n is a positive integer, then $\left(\sqrt{m}\right)^n$ is an integer because an integer raised to a positive integer is an integer; SUFFICIENT.

(2) The information that $\left(\sqrt{n}\right)$ is an integer is not helpful in answering the question. For example, if $m = 2$ and $n = 9$, $\sqrt{9} = 3$, which is an integer, but $\left(\sqrt{2}\right)^9 = \left(16\sqrt{2}\right)$, which is not an integer. But if $m = 4$ and $n = 9$, then $\sqrt{9} = 3$, which is an integer, and $\left(\sqrt{4}\right)^9 = 2^9 = 512$ is an integer; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

45. Of the 66 people in a certain auditorium, at most 6 people have birthdays in any one given month. Does at least one person in the auditorium have a birthday in January?

(1) More of the people in the auditorium have birthdays in February than in March.

(2) Five of the people in the auditorium have birthdays in March.

Algebra Sets and functions

Because it is given that 6 is the greatest number of individuals who can have birthdays in any particular month, these 66 people could be evenly distributed across 11 of the 12 months of the year. That is to say, it could be possible for the distribution to be $11 \times 6 = 66$, and thus any given month, such as January, would not have a person with a birthday. Assume that January has no people with birthdays, and see if this assumption is disproved.

(1) The information that more people have February birthdays than March birthdays indicates that the distribution is not even. Therefore, March is underrepresented and must thus have fewer than 6 birthdays. Since no month can have more than 6 people with birthdays, and every month but January already has as many people with birthdays as it can have, January has to have at least 1 person with a birthday; SUFFICIENT.

(2) Again, March is underrepresented with only 5 birthdays, and none of the other months can have more than 6 birthdays. Therefore, the extra birthday (from March) must occur in January; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

46. Last year the average (arithmetic mean) salary of the 10 employees of Company X was $42,800. What is the average salary of the same 10 employees this year?

(1) For 8 of the 10 employees, this year's salary is 15 percent greater than last year's salary.

(2) For 2 of the 10 employees, this year's salary is the same as last year's salary.

Arithmetic Statistics

(1) Since all 10 employees did not receive the same 15 percent increase, it cannot be assumed that the mean this year is 15 percent higher than last year. It remains unknown whether these 8 salaries were the top 8 salaries, the bottom 8 salaries, or somewhere in-between. Without this type of information from last year, the mean for this year cannot be determined; NOT sufficient.

(2) If 2 salaries remained the same as last year, then 8 salaries changed. Without further information about the changes, the mean for this year cannot be determined; NOT sufficient.

Even taking (1) and (2) together, it remains impossible to tell the mean salary for this year without additional data.

The correct answer is E;
both statements together are still not sufficient.

47. In a certain classroom, there are 80 books, of which 24 are fiction and 23 are written in Spanish. How many of the fiction books are written in Spanish?

(1) Of the fiction books, there are 6 more that are not written in Spanish than are written in Spanish.

(2) Of the books written in Spanish, there are 5 more nonfiction books than fiction books.

Algebra Sets and functions

Let x represent the fiction books that are written in Spanish. A table could be set up like the one below, filling in the information that is known or able to be known:

	Spanish	Non-Spanish	Total
Fiction	x		24
Nonfiction			56
Total	23	57	80

(1) If x represents the fiction books written in Spanish, then $x + 6$ can now be used to represent the fiction books that are not written in Spanish. From the table above, it can be seen then that $x + x + 6 = 24$, or $2x = 18$. Therefore, x, or the number of fiction books written in Spanish, is 9; SUFFICIENT.

(2) If x represents the fiction books written in Spanish, then $x + 5$ can now be used to represent the nonfiction books written in Spanish. From the table, it can be said that $x + x + 5 = 23$, or $2x = 18$. Therefore, x, or the number of fiction books written in Spanish, is 9; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

48. If p is the perimeter of rectangle Q, what is the value of p?

(1) Each diagonal of rectangle Q has length 10.

(2) The area of rectangle Q is 48.

Geometry Rectangles; Perimeter; Area

The perimeter of a rectangle is equal to 2 times the rectangle's length plus 2 times the rectangle's width, or $p = 2l + 2w$. The diagonals of a rectangle are equal. In a rectangle, because a diagonal forms a right triangle, the length of a diagonal is equal to the square root of the length squared plus the width squared, or $d = \sqrt{l^2 + w^2}$.

(1) If a diagonal = 10, then $10 = \sqrt{l^2 + w^2}$, or, by squaring both sides, $100 = l^2 + w^2$. Without knowing the value or the relationship between the other two sides of the right triangle, it is impossible to solve for l or w, and thus for the perimeter of the rectangle; NOT sufficient.

(2) If the area of the rectangle is 48, then it can be stated that $lw = 48$. However, without further information, the perimeter cannot be determined. For example, l could be 6 and w could be 8, and the perimeter would then be 12 + 16 = 28. However, it could also be that l is 4 and w is 12, and in that case the perimeter would be 8 + 24 = 32; NOT sufficient.

Using (1) and (2) together, it is possible to solve this problem. Since from (2) $lw = 48$, then $w = \frac{48}{l}$. Substituting this into $100 = l^2 + w^2$ from (1) the equation can be solved as follows:

$100 = l^2 + \left(\frac{48}{l}\right)^2$	substitution
$100l^2 = l^4 + 2,304$	multiply both sides by l^2
$l^4 - 100l^2 + 2,304 = 0$	move all terms to one side
$\left(l^2 - 64\right)\left(l^2 - 36\right) = 0$	factor like a quadratic
$l^2 = 64,\ l^2 = 36$	solve for l^2

Since l is a length, it must be positive, so l is either 8 or 6. When $l = 8, w = \frac{48}{8} = 6$, and when $l = 6, w = \frac{48}{6} = 8$, both of which give the same perimeter.

The correct answer is C;
both statements together are sufficient.

3.6 Verbal Answer Explanations

Reading Comprehension

The following discussion is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to reading comprehension. The particular questions in this chapter are generally representative of the kinds of reading comprehension questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

Questions 1–5 refer to the passage on page 23.

49. Which of the following best describes the purpose of the sentence in lines 10–15 ?

(A) To show that economic signaling theory fails to explain a finding

(B) To introduce a distinction not accounted for by economic signaling theory

(C) To account for an exception to a generalization suggested by Marquardt and McGann

(D) To explain why Marquardt and McGann's research was conducted

(E) To offer an explanation for an observation reported by Marquardt and McGann

Logical structure

Marquardt and McGann found a correlation between highly advertised products and high-quality products. The connection can be explained by understanding that companies may invest heavily in such advertising, anticipating that recurring purchases of high-quality products will eventually recover these advertising costs. The consumers will continue to buy these products over time because of loyalty to their high quality. The statement in bold provides this explanation for the correlation noted by Marquardt and McGann.

A The sentence does not explain a failure of the economic signaling theory.

B Economic signaling theory is about perceptions of quality, but this explanation is about actual quality and its correlation with advertising.

C No exception is mentioned in Marquardt and McGann's work.

D The sentence does not examine why or how the research was undertaken.

E **Correct.** This statement provides an explanation of why highly advertised products *did indeed rank high on certain measures of product quality*.

The correct answer is E.

50. The primary purpose of the passage is to

(A) present findings that contradict one explanation for the effects of a particular advertising practice

(B) argue that theoretical explanations about the effects of a particular advertising practice are of limited value without empirical evidence

(C) discuss how and why particular advertising practices may affect consumers' perceptions

(D) contrast the research methods used in two different studies of a particular advertising practice

(E) explain why a finding about consumer responses to a particular advertising practice was unexpected

Main idea

The primary purpose can be determined only by evaluating the whole passage. The first paragraph discusses consumers' perceptions of quality based on frequency of advertising. The second paragraph discusses three studies that show how consumers base their evaluations of products on the kinds of advertising they see. Therefore, the purpose of the whole passage is to show how consumers' perceptions of products are shaped by certain advertising practices.

A The passage shows that expensive advertising works to a certain point, but not after it; this method examines a continuum, not a contradiction.

B Most of the passage is devoted to empirical evidence.

C **Correct.** The passage shows how the frequency and the kind of advertising influence consumers' perceptions about the quality of the products advertised.

D The passage reports the findings of four studies but does not mention research methods.

E The passage does not indicate that any of the findings were unexpected.

The correct answer is C.

51. Kirmani's research, as described in the passage, suggests which of the following regarding consumers' expectations about the quality of advertised products?

(A) Those expectations are likely to be highest if a manufacturer runs both black-and-white and color advertisements for the same product.

(B) Those expectations can be shaped by the presence of color in an advertisement as well as by the frequency with which an advertisement appears.

(C) Those expectations are usually high for frequently advertised new brands but not for frequently advertised familiar brands.

(D) Those expectations are likely to be higher for products whose black-and-white advertisements are often repeated than for those whose color advertisements are less often repeated.

(E) Those expectations are less definitively shaped by the manufacturer's advertisements than by information that consumers gather from other sources.

Inference

The question's use of the word *suggests* means that the answer depends on making an inference. This research is discussed in the second paragraph. Kirmani found that too much advertising tended to make the consumers believe that manufacturers were desperate. The use of color was also found to affect consumers' perceptions of brand quality. Realizing that color advertising is more expensive than black-and-white, consumers react more quickly to what they perceive to be its overuse than they do to a repetition of black-and-white advertisements.

A This situation is not discussed in the research, at least as it is reported in this passage.

B **Correct.** It can be inferred that consumers' perceptions of product quality are influenced by the use of color in an advertisement and by the frequency of the advertisement's appearance.

C The research does not make a distinction between new and familiar brands.

D The research indicates only that consumers can tolerate black-and-white advertisements for a longer time than color advertisements before dismissing them as excessive.

E There is no discussion of what consumers learn from other sources.

The correct answer is B.

52. Kirmani's third study, as described in the passage, suggests which of the following conclusions about a black-and-white advertisement?

(A) It can be repeated more frequently than a comparable color advertisement could before consumers begin to suspect low manufacturer confidence in the quality of the advertised product.

(B) It will have the greatest impact on consumers' perceptions of the quality of the advertised product if it appears during periods when a color version of the same advertisement is also being used.

(C) It will attract more attention from readers of the print publication in which it appears if it is used only a few times.

(D) It may be perceived by some consumers as more expensive than a comparable color advertisement.

(E) It is likely to be perceived by consumers as a sign of higher manufacturer confidence in the quality of the advertised product than a comparable color advertisement would be.

Inference

Kirmani's third study is discussed in the final two sentences. Consumers suspect expensive advertising results from a manufacturer's lack of confidence in the quality of the product. Consumers reach the point at which they find advertising *excessive* more quickly with color advertising than with black-and-white advertising because they understand that the addition of color increases advertising expenses. It is reasonable to infer that the reverse is also true and thus that consumers will tolerate lengthier repetitions of black-and-white advertising without becoming suspicious of product quality.

A **Correct.** Consumers find color advertising excessive more quickly and thus can be expected to find black-and-white advertising excessive less quickly.

B The study does not discuss concurrent appearances of color and black-and-white advertisements for the same product.

C The sole conclusion about frequency is that consumers can tolerate a greater frequency of black-and-white advertisements than color advertisements.

D It is stated that consumers understand that color advertisements are more expensive.

E The research certainly does not report this finding.

The correct answer is A.

53. The passage suggests that Kirmani would be most likely to agree with which of the following statements about consumers' perceptions of the relationship between the frequency with which a product is advertised and the product's quality?

(A) Consumers' perceptions about the frequency with which an advertisement appears are their primary consideration when evaluating an advertisement's claims about product quality.

(B) Because most consumers do not notice the frequency of advertisement, it has little impact on most consumers' expectations regarding product quality.

(C) Consumers perceive frequency of advertisement as a signal about product quality only when the advertisement is for a product that is newly on the market.

(D) The frequency of advertisement is not always perceived by consumers to indicate that manufacturers are highly confident about their products' quality.

(E) Consumers who try a new product that has been frequently advertised are likely to perceive the advertisement's frequency as having been an accurate indicator of the product's quality.

Inference

The first sentence of the second paragraph provides the answer to this question: *at some level of spending the manufacturer's advertising effort may be perceived as unreasonably high, implying low manufacturer confidence in product quality*. Thus, it is logical to assume that if a product is advertised too frequently, consumers may believe that the manufacturer is spending excessive amounts on advertising because that manufacturer is not confident of the product's quality.

A Kirmani's research, as reported here, does not support this claim.

B Kirmani's research examines how consumers respond to the frequency of advertising; the research does not indicate that consumers do not notice frequency.

C The research does not distinguish between new and familiar products.

D **Correct**. Excessive advertising may lead consumers to believe that the manufacturer lacks confidence in the quality of the product.

E Kirmani's research does not specifically address new products.

The correct answer is D.

Questions 6–11 refer to the passage on page 25.

54. The main purpose of the passage is to

(A) propose an experiment

(B) analyze a function

(C) refute an argument

(D) explain a contradiction

(E) simulate a process

Main idea

Determining the main purpose comes from considering the passage as a whole. The first paragraph begins by noting that *the idea of the brain as an information processor* is generally accepted by neuroscientists. The author then presents Searle as an *enemy* of this position and explains Searle's belief that human thought is more than information processing. The second paragraph questions Searle's position, and the third asserts that the brain is an information processor, refuting Searle's argument.

A The author uses the idea of a mechanical simulation of a stomach as a metaphor for a computer's simulation of thought; this is not a proposal for an experiment.

B The author analyzes Searle's position, but no function is analyzed.

C **Correct**. The author explains Searle's argument in order to refute it.

D The author points out a weakness in Searle's thinking, but not a contradiction.

E The simulation of a process is included as a metaphor, but it is not essential to the passage.

The correct answer is C.

55. Which of the following is most consistent with Searle's reasoning as presented in the passage?

(A) Meaning and content cannot be reduced to algorithms.

(B) The process of digestion can be simulated mechanically, but not on a computer.

(C) Simulated thoughts and real thoughts are essentially similar because they are composed primarily of information.

(D) A computer can use "causal powers" similar to those of the human brain when processing information.

(E) Computer simulations of the world can achieve the complexity of the brain's representations of the world.

Evaluation

Searle's position is stated in the first paragraph: because computers merely follow algorithms, *they cannot deal with important aspects of human thought such as meaning and content*. Thus, Searle believes that meaning and content cannot be reduced to algorithms.

A **Correct**. Searle believes that meaning and content cannot be reduced to algorithms.

B The author argues for the mechanical simulation, but offers no evidence that Searle would agree.

C This statement reflects the author's position, but it is the opposite of Searle's.

D Searle asserts that only people, not computers, have *the causal powers of the brain*.

E The passage does not discuss computer simulations of the world.

The correct answer is A.

56. The author of the passage would be most likely to agree with which of the following statements about the simulation of organ functions?

(A) An artificial device that achieves the functions of the stomach could be considered a valid model of the stomach.

(B) Computer simulations of the brain are best used to crack the brain's codes of meaning and content.

(C) Computer simulations of the brain challenge ideas that are fundamental to psychology and neuroscience.

(D) Because the brain and the stomach both act as processors, they can best be simulated by mechanical devices.

(E) The computer's limitations in simulating digestion suggest equal limitations in computer-simulated thinking.

Application

To answer this question, think about how the author would respond to each statement. Anticipating the author's response depends on understanding the author's point of view. In this passage, the author is arguing against Searle's view of the brain and in favor of the brain as information processor. The author believes that the computer can be a model of the brain and uses the example of the mechanical stomach to support his position on simulations.

A **Correct**. The first two sentences of the third paragraph imply that a mechanical device is a valid model.

B The author believes a computer can simulate the brain but does not comment on how these simulations should be used. There is no way to predict the author's reaction to this statement.

C The author would reject this statement since neuroscience and psychology do in fact see the brain as an information processor.

D The author agrees that both the brain and the stomach act as processors; believes that the computer, a nonmechanical device, can simulate the brain; and offers a way that a mechanical device could simulate the stomach. The author does not suggest that mechanical devices are the best way to simulate both their processes.

E This statement reflects Searle's viewpoint, which the author rejects.

The correct answer is A.

57. It can be inferred that the author of the passage believes that Searle's argument is flawed by its failure to

(A) distinguish between syntactic and semantic operations

(B) explain adequately how people, unlike computers, are able to understand meaning

(C) provide concrete examples illustrating its claims about thinking

(D) understand how computers use algorithms to process information

(E) decipher the code that is transmitted from neuron to neuron in the brain

Inference

The author's attitude toward Searle's argument is apparent in the first paragraph, which ends with the author's summary of what Searle is saying. Computers understand structures, Searle argues, but only people understand meaning. How do people understand meaning? The author notes that Searle is not able to answer this question and is able only to assert that people have *causal powers of the brain*.

A The author makes it clear in the first paragraph that Searle does distinguish between the two. In Searle's view computers are syntactic, interpreting structure or arrangement, rather than semantic, understanding meaning.

B **Correct.** The first paragraph ends with the contrast between people and computers: *People, on the other hand, understand meaning because they have something Searle obscurely calls the causal powers of the brain.* By calling Searle's explanation obscure, the author implies that Searle has not adequately clarified how people understand meaning.

C Nothing in the passage criticizes Searle for not providing concrete examples. Indeed, in the second paragraph, the author anticipates how Searle would react to one concrete example, the computer simulation of the stomach.

D In the first paragraph, the author says that Searle argues that *computers simply follow algorithms*; whether or not Searle understands how they use algorithms is irrelevant.

E Since, as the author suggests in the first paragraph, Searle does not believe information could be a code transmitted from neuron to neuron, he cannot be expected to decipher that code.

The correct answer is B.

58. From the passage, it can be inferred that the author would agree with Searle on which of the following points?

(A) Computers operate by following algorithms.
(B) The human brain can never fully understand its own functions.
(C) The comparison of the brain to a machine is overly simplistic.
(D) The most accurate models of physical processes are computer simulations.
(E) Human thought and computer-simulated thought involve similar processes of representation.

Inference

An inference requires going beyond the material explicitly stated in the passage to the author's ideas that underlie that material. The author and Searle take opposite points of view on the brain as information processor. Their area of agreement is narrow. However, they do both agree that computers work by following algorithms.

A **Correct**. The first paragraph explains that Searle dismisses computers because they *simply follow algorithms*; while the author disagrees with Searle on virtually every other point, no disagreement is voiced here.

B The first paragraph shows this to be Searle's position, but not the author's.

C The first paragraph shows this to be Searle's position, but not the author's.

D The second paragraph explains Searle's rejection of this position.

E The final paragraph establishes this as the author's position, but not Searle's.

The correct answer is A.

59. Which of the following most accurately represents Searle's criticism of the brain-as-computer metaphor, as that criticism is described in the passage?

(A) The metaphor is not experimentally verifiable.
(B) The metaphor does not take into account the unique powers of the brain.
(C) The metaphor suggests that a brain's functions can be simulated as easily as those of a stomach.
(D) The metaphor suggests that a computer can simulate the workings of the mind by using the codes of neural transmission.
(E) The metaphor is unhelpful because both the brain and the computer process information.

Inference

Searle's criticism of the brain-as-computer metaphor is discussed in the first paragraph. Computers are merely machines; only people are endowed with *causal powers of the brain* that allow them to understand meaning and content.

A Searle does not believe in the value of the metaphor, so its verification is beside the point.

B **Correct**. Searle believes that people have something computers do not, *causal powers of the brain* for understanding *important aspects of human thought*.

C Comparing the brain to a computer, the metaphor does not make this suggestion.

D In the second paragraph, the author says, *but even if a computer could simulate the workings of the mind,* making it clear that presently it cannot; this statement does not reflect why Searle rejects the metaphor.

E This is not the basis of Searle's objection since he does not accept the premise that the brain is an information processor.

The correct answer is B.

Questions 12–17 refer to the passage on page 27.

60. The primary purpose of the passage is to

(A) explain why women reformers of the Progressive Era failed to achieve their goals

(B) discuss the origins of child labor laws in the late nineteenth and early twentieth centuries

(C) compare the living conditions of working-class and middle-class women in the Progressive Era

(D) discuss an oversight on the part of women reformers of the Progressive Era

(E) revise a traditional view of the role played by women reformers in enacting Progressive Era reforms

Main idea

Understanding the author's purpose comes only from reflecting on the passage as a whole. The beginning of the passage notes the success of middle-class women reformers in improving working conditions for women and children. The middle discusses the position of working-class mothers, who were more concerned with the economic survival of their families than with labor reform and consequently tried to circumvent the laws. The close of the passage observes that, although middle-class reformers were right to point out exploitation of children, they failed to understand the economic plight of working-class families, who needed the income earned by every possible member. The purpose of this passage is to show the failure of middle-class reformers to understand the economic position of working-class families.

A Lines 6–10 emphasize the victories of the reformers.

B The passage discusses the effects, rather than the origins, of child labor laws.

C Living conditions of middle-class and working-class women are not compared.

D **Correct**. As is made clear, especially in the final sentence of the passage, women reformers failed to understand the economic needs of working-class families.

E A traditional view is not compared with a newer, revised view of the reformers.

The correct answer is D.

61. The *view* mentioned in line 17 of the passage refers to which of the following?

(A) Some working-class mothers' resistance to the enforcement of child labor laws

(B) Reformers' belief that child labor and industrial home work should be abolished

(C) Reformers' opinions about how working-class families raised their children

(D) Certain women historians' observation that there was a lack of consensus between women of different classes on the issue of child labor and industrial home work

(E) Working-class families' fears about the adverse consequences that child labor laws would have on their ability to earn an adequate living

Inference

To find what this appearance of *view* refers to, it is necessary to look back to the beginning of the sentence. *This view*, not shared by working-class mothers, refers to the reformers' conviction that *child labor and industrial home work were equally inhumane practices that should be outlawed*.

A *This view* must refer back to a point already stated; resistance to child labor laws is not discussed until the following sentence.

B **Correct**. *This view* refers to the position of reformers stated earlier in the same sentence: that *child labor and industrial home work…should be outlawed*.

C *This view* must refer back to a point already stated; the reformers' belief that resistance to child labor laws was due to poor parenting is discussed later in the passage.

D A number of women historians have said that working-class mothers did not always share the *view* of middle-class women reformers about child labor.

E *This view* must refer back to a point already stated; the fears of working-class families are examined in the following sentence.

The correct answer is B.

62. The author of the passage mentions the observations of women historians (lines 15–17) most probably in order to

(A) provide support for an assertion made in the preceding sentence (lines 10–12)

(B) raise a question that is answered in the last sentence of the passage (lines 27–32)

(C) introduce an opinion that challenges a statement made in the first sentence of the passage

(D) offer an alternative view to the one attributed in the passage to working-class mothers

(E) point out a contradiction inherent in the traditional view of child labor reform as it is presented in the passage

Evaluation

In lines 10–12, the author asserts that child labor laws *pitted women of different classes against one another*. The view of the middle-class women reformers is stated, and then, to show that working-class mothers did not hold the same opinion, the author turns to the recent work of women historians to support this statement.

A **Correct**. The author uses the recent work of women historians to support the statement that women of different social classes were pitted against one another.

B The women historians *have recently observed*; the verb *observed* introduces a statement rather than a question.

C The reference to women historians has to do with working-class mothers; it does not challenge women's activism and role in social reform.

D The passage supports what the women historians say about working-class mothers.

E The author does not define or present the *traditional* view of child labor reform, nor is any inherent contradiction pointed out.

The correct answer is A.

63. The passage suggests that which of the following was a reason for the difference of opinion between working-class mothers and women reformers on the issue of child labor?

(A) Reformers' belief that industrial home work was preferable to child labor outside the home

(B) Reformers' belief that child labor laws should pertain to working conditions but not to pay

(C) Working-class mothers' resentment at reformers' attempts to interfere with their parenting

(D) Working-class mothers' belief that child labor was an inhumane practice

(E) Working-class families' need for every employable member of their families to earn money

Inference

The question's use of the word *suggests* means that the answer depends on making an inference. Lines 12–23 examine the different views of middle-class reformers and working-class mothers on child labor laws. While the reformers saw child labor as an *inhumane* practice that should be *outlawed*, working class mothers understood *the necessity of pooling the wages of as many family members as possible* and viewed child labor legislation as *a personal economic disaster*.

A Lines 12–14 show that reformers regarded both kinds of work as *equally inhumane practices that should be outlawed*.

B Pay is not specifically discussed in the passage.

C Lines 24–27 indicate that the reformers believed working-class resistance to child labor laws was a sign of poor parenting, but nothing is said about the working-class response to this view.

D Lines 12–17 say that the reformers held this position, but *working class mothers did not always share this view*.

E **Correct**. Lines 17–23 explain that working-class families needed *the wages of as many family members as possible*.

The correct answer is E.

64. The author of the passage asserts which of the following about women reformers who tried to abolish child labor?

(A) They alienated working-class mothers by attempting to enlist them in agitating for progressive causes.

(B) They underestimated the prevalence of child labor among the working classes.

(C) They were correct in their conviction that child labor was deplorable but shortsighted about the impact of child labor legislation on working-class families.

(D) They were aggressive in their attempts to enforce child labor legislation, but were unable to prevent working-class families from circumventing them.

(E) They were prevented by their nearly total disenfranchisement from making significant progress in child labor reform.

Supporting ideas

This question is based on information explicitly stated in the final sentence of the passage. Women reformers viewed *child labor as a terribly exploitative practice* but they *failed to take account of the economic needs of working-class families*.

A The passage does not say that reformers tried to enlist working-class mothers in progressive causes.

B No evidence is offered to support such a statement.

C **Correct**. The final sentence makes clear that the reformers recognized child labor as *exploitative* but did not understand *the economic needs of working-class families*.

D The reformers' activities involved promoting legislation; there is no evidence in the passage that the reformers themselves attempted to enforce these laws.

E. Lines 6–10 show that the reformers improved working conditions for women and children, despite their disenfranchisement.

The correct answer is C.

65. According to the passage, one of the most striking achievements of white middle-class women reformers during the Progressive Era was

(A) gaining the right to vote in school elections
(B) mobilizing working-class women in the fight against child labor
(C) uniting women of different classes in grassroots activism
(D) improving the economic conditions of working-class families
(E) improving women's and children's working conditions

Supporting ideas

The question's use of the phrase *according to the passage* indicates that the answer can be found through careful reading of the passage. This question is based on information explicitly stated in lines 7–10, which state that *white middle-class women reformers won a variety of victories, notably in the improvement of working conditions, especially for women and children*.

A Lines 6–7 show that women already had the right to vote in school elections.

B Lines 20–24 show that working-class families tried to *circumvent child labor laws*.

C Lines 11–12 say that one product of grassroots activism, child labor legislation, *pitted women of different classes against one another*.

D Lines 31–32 say that the reformers *failed to take account of the economic needs of working-class families*.

E **Correct**. The passage states that reformers improved the working conditions of women and children.

The correct answer is E.

Critical Reasoning

The following discussion is intended to familiarize you with the most efficient and effective approaches to critical reasoning questions. The particular questions in this chapter are generally representative of the kinds of critical reasoning questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

66. Vasquez-Morrell Assurance specializes in insuring manufacturers. Whenever a policyholder makes a claim, a claims adjuster determines the amount that Vasquez-Morrell is obligated to pay. Vasquez-Morrell is cutting its staff of claims adjusters by 15 percent. To ensure that the company's ability to handle claims promptly is affected as little as possible by the staff cuts, consultants recommend that Vasquez-Morrell lay off those adjusters who now take longest, on average, to complete work on claims assigned to them.

Which of the following, if true, most seriously calls into question the consultants' criterion for selecting the staff to be laid off?

(A) If the time that Vasquez-Morrell takes to settle claims increases significantly, it could lose business to other insurers.
(B) Supervisors at Vasquez-Morrell tend to assign the most complex claims to the most capable adjusters.
(C) At Vasquez-Morrell, no insurance payments are made until a claims adjuster has reached a final determination on the claim.
(D) There are no positions at Vasquez-Morrell to which staff currently employed as claims adjusters could be reassigned.
(E) The premiums that Vasquez-Morrell currently charges are no higher than those charged for similar coverage by competitors.

Evaluation of a Plan

Situation An insurance company must reduce its staff of claims adjusters. To ensure continuing promptness in handling claims, consultants advise the company to lay off those adjusters who take the longest to complete claims.

Reasoning *What problem could there be with the criterion*? The consultants' criterion is the time an adjuster takes to settle a claim. However, some claims are naturally more complicated and require more time. If it is true that the company now assigns these time-consuming cases to its most capable adjusters, then these adjusters would be likely to be the ones who take longest to complete their cases. Laying off the adjusters who take the longest would thus mean laying off the company's most capable staff, which could very well decrease its ability to handle claims promptly.

A The consultants' advice makes sense if increased time to handle claims causes the company to lose business.

B **Correct.** This statement properly identifies the problem with the consultants' criterion.

C This statement merely describes the process of handling a claim; it does not provide any information about the criterion for layoffs.

D The consultants make no recommendations for reassigning staff, so indicating that there are no positions available does not call their advice into question.

E The consultants do not recommend a change in premiums; noting that they are similar to competitors' premiums does not undermine the plan that the consultants recommend.

The correct answer is B.

67. Prolonged spells of hot, dry weather at the end of the grape-growing season typically reduce a vineyard's yield, because the grapes stay relatively small. In years with such weather, wine producers can make only a relatively small quantity of wine from a given area of vineyards. Nonetheless, in regions where wine producers generally grow their own grapes, analysts typically expect a long, hot, dry spell late in the growing season to result in increased revenues for local wine producers.

Which of the following, if true, does most to justify the analysts' expectation?

(A) The lower a vineyard's yield, the less labor is required to harvest the grapes.

(B) Long, hot, dry spells at the beginning of the grape-growing season are rare, but they can have a devastating effect on a vineyard's yield.

(C) Grapes grown for wine production are typically made into wine at or near the vineyard in which they were grown.

(D) When hot, dry spells are followed by heavy rains, the rains frequently destroy grape crops.

(E) Grapes that have matured in hot, dry weather make significantly better wine than ordinary grapes.

Argument Construction

Situation Hot, dry weather at the end of the grape-growing season reduces yield, so winemakers can only produce a small quantity of wine. However, analysts expect that this weather will increase winemakers' revenues.

Reasoning *What additional piece of information explains the analysts' expectations?* The same conditions that lead to low quantity also lead to something that increases revenues. What could this be? If these weather conditions lead to higher-quality wine that will sell for higher prices, the analysts' expectations for increased revenues are justified.

A Lower labor costs mean less expenditure for the winemakers; this does not explain how revenues would increase.

B This statement about low yields does not explain an increase in revenues.

C The proximity of production to the vineyard is irrelevant to the question of how hot, dry weather can be responsible for decreased yield and increased revenues.

D This statement gives another example of weather's effect on grape crops, but it does not explain how revenues are increased.

E **Correct**. This statement properly provides the explanation that the weather conditions will lead to better wines. With better wines typically commanding higher prices, the winemakers will gain the increased revenues that the analysts anticipate.

The correct answer is E.

68. In the past, most children who went sledding in the winter snow in Verland used wooden sleds with runners and steering bars. Ten years ago, smooth plastic sleds became popular; they go faster than wooden sleds but are harder to steer and slow. The concern that plastic sleds are more dangerous is clearly borne out by the fact that the number of children injured while sledding was much higher last winter than it was 10 years ago.

Which of the following, if true in Verland, most seriously undermines the force of the evidence cited?

(A) A few children still use traditional wooden sleds.

(B) Very few children wear any kind of protective gear, such as helmets, while sledding.

(C) Plastic sleds can be used in a much wider variety of snow conditions than wooden sleds can.

(D) Most sledding injuries occur when a sled collides with a tree, a rock, or another sled.

(E) Because the traditional wooden sleds can carry more than one rider, an accident involving a wooden sled can result in several children being injured.

Argument Evaluation

Situation Ten years ago, wooden sleds began to be replaced by plastic sleds that go faster but are harder to control. Plastic sleds are more dangerous than wooden sleds because more children suffered injuries last year than they did 10 years ago.

Reasoning *What weakens this argument?* This argument depends on a comparison of two kinds of sleds. Any evidence that would either strengthen or weaken the argument must indicate a comparison. Evidence that applies only to one kind of sled or to both kinds of sleds equally cannot weaken this argument. Consider the implications of the evidence presented in the answer choices. If plastic sleds can be used in a wider variety of conditions than wooden sleds can, then plastic sleds can be used more frequently. It is possible that more frequent use, rather than the sleds themselves, has led to more accidents.

A The limited use of some wooden sleds does not weaken the argument.

B The absence of protective gear would affect accidents with both kinds of sleds.

C **Correct.** This statement weakens the argument by providing an alternate explanation for the increased accidents.

D This statement is true of accidents with both kinds of sleds.

E This explains why wooden sleds may be dangerous but does not weaken the argument that plastic sleds are even more dangerous.

The correct answer is C.

69. Metal rings recently excavated from seventh-century settlements in the western part of Mexico were made using the same metallurgical techniques as those used by Ecuadorian artisans before and during that period. These techniques are sufficiently complex to make their independent development in both areas unlikely. Since the people of these two areas were in cultural contact, archaeologists hypothesize that the metallurgical techniques used to make the rings found in Mexico were learned by Mexican artisans from Ecuadorian counterparts.

Which of the following would it be most useful to establish in order to evaluate the archaeologists' hypothesis?

(A) Whether metal objects were traded from Ecuador to western Mexico during the seventh century

(B) Whether travel between western Mexico and Ecuador in the seventh century would have been primarily by land or by sea

(C) Whether artisans from western Mexico could have learned complex metallurgical techniques from their Ecuadorian counterparts without actually leaving western Mexico

(D) Whether metal tools were used in the seventh-century settlements in western Mexico

(E) Whether any of the techniques used in the manufacture of the metal rings found in western Mexico are still practiced among artisans in Ecuador today

Argument Evaluation

Situation Metal rings excavated from seventh-century settlements in western Mexico were made with the same complex techniques used in Ecuador before and during a period when the two cultures were known to be in contact. Mexican artisans are thought to have learned the techniques from Ecuadorian artisans.

Reasoning *What point could best be applied in evaluating this hypothesis?* Consider what specific information would help to assess the archaeologists' theory. It is given that the two areas had some cultural contact. If it were determined that metal objects were traded from one culture to the other, it could be possible that the metalworking techniques were passed along as well. Such evidence would be relevant to the hypothesis that Mexican artisans saw the work of their Ecuadorian counterparts and, from this exchange, learned the techniques to make the metal rings.

A **Correct**. This statement properly identifies information that would be useful in the evaluation of the archaeologists' hypothesis.

B The means of travel is irrelevant to the hypothesis about the source of the techniques.

C The hypothesis is not about where Mexican artisans learned the techniques, but whether they learned them from the Ecuadorians.

D The existence of metal tools provides no helpful information in establishing whether the Ecuadorians were the source of the metallurgical techniques.

E The comparison to the present day is irrelevant to the hypothesis.

The correct answer is A.

70. Following several years of declining advertising sales, the *Greenville Times* reorganized its advertising sales force. Before reorganization, the sales force was organized geographically, with some sales representatives concentrating on city-center businesses and others concentrating on different outlying regions. The reorganization attempted to increase the sales representatives' knowledge of clients' businesses by having each sales representative deal with only one type of industry or of retailing. After the reorganization, revenue from advertising sales increased.

In assessing whether the improvement in advertising sales can properly be attributed to the reorganization, it would be most helpful to find out which of the following?

(A) What proportion of the total revenue of the *Greenville Times* is generated by advertising sales?

(B) Has the circulation of the *Greenville Times* increased substantially in the last two years?

(C) Among all the types of industry and retailing that use the *Greenville Times* as an advertising vehicle, which type accounts for the largest proportion of the newspaper's advertising sales?

(D) Do any clients of the sales representatives of the *Greenville Times* have a standing order with the *Times* for a fixed amount of advertising per month?

(E) Among the advertisers in the *Greenville Times*, are there more types of retail business or more types of industrial business?

Evaluation of a Plan

Situation In the face of declining advertising sales, a newspaper reorganizes its sales force so that sales representatives have a better understanding of businesses. Revenue from advertising sales increased after the reorganization.

Reasoning *What additional evidence would help determine the source of the increased revenue?* In order to attribute the increased revenue to the reorganization of the sales force, other possible causes must be eliminated. Newspaper advertising rates are linked to circulation; when circulation increases, higher rates can be charged and revenues will increase. An alternate explanation might be a significant rise in circulation, so it would be particularly helpful to know if circulation had increased.

A The question concerns only increased revenue from advertising sales; the proportion of advertising revenue to total revenue is outside the scope of the question.

B **Correct.** This statement provides another possible explanation for increased revenue of advertising sales, and so the answer to this question would help to clarify the reason for the increased revenue.

C Knowing how the advertising sales break down by type of business might be useful for other purposes, but it does not help to show the cause of the increase.

D A fixed amount of advertising would not explain increased revenue, so the answer to this question would be irrelevant.

E Distinguishing between the types of businesses will not contribute to determining whether the reorganization was responsible for the increased revenue.

The correct answer is B.

71. Motorists in a certain country frequently complain that traffic congestion is much worse now than it was 20 years ago. No real measure of how much traffic congestion there was 20 years ago exists, but the motorists' complaints are almost certainly unwarranted. The country's highway capacity has tripled in the last twenty years, thanks to a vigorous highway construction program, whereas the number of automobiles registered in the country has increased by only 75 percent.

Which of the following, if true, most seriously weakens the argument?

(A) Most automobile travel is local, and the networks of roads and streets in the country's settled areas have changed little over the last twenty years.

(B) Gasoline prices are high, and miles traveled per car per year have not changed much over the last 20 years.

(C) The country's urban centers have well-developed public transit systems that carry most of the people who commute into those centers.

(D) The average age of automobiles registered in the country is lower now than it was 20 years ago.

(E) Radio stations have long been broadcasting regular traffic reports that inform motorists about traffic congestion.

Argument Evaluation

Situation Motorists complain that traffic congestion in their country is much worse than it was twenty years ago. But these complaints have no basis since the highway capacity in this country has tripled in the same period, whereas the number of cars registered has risen by only 75 percent.

Reasoning *Which point most undermines the argument that the complaints are unwarranted?* Consider that the response to the generalized complaints about congestion discusses only the topic of highway capacity. What if the congestion that motorists are complaining about is not on highways but on local roads? Discovering that travel tends to be local in this country and that the local roads have not been improved in the last twenty years would seriously weaken the argument.

A **Correct**. This statement properly identifies a weakness in the argument: the response to the broad complaint addresses a different subject, highway capacity, not the issue of traffic congestion encountered by most motorists.

B If high gas prices actually prevented motorists from driving, and if motorists' driving habits were the same as they were twenty years ago, then these points should strengthen the argument that there is no basis for their complaints.

C The number of commuters who use public transit does not affect the argument that the motorists' complaints have no basis.

D The age of registered cars is irrelevant to the argument.

E The radio broadcasts attest to the existence of traffic, but not to its increase, so they do not affect the argument.

The correct answer is A.

72. The percentage of households with an annual income of more than $40,000 is higher in Merton County than in any other county. However, the percentage of households with an annual income of $60,000 or more is higher in Sommer County.

If the statements above are true, which of the following must also be true?

(A) The percentage of households with an annual income of $80,000 is higher in Sommer County than in Merton County.

(B) Merton County has the second highest percentage of households with an annual income of $60,000 or more.

(C) Some households in Merton County have an annual income between $40,000 and $60,000.

(D) The number of households with an annual income of more than $40,000 is greater in Merton County than in Sommer County.

(E) Average annual household income is higher in Sommer County than in Merton County.

Argument Construction

Situation The percentage of households with annual incomes of more than $40,000 is higher in Merton County than in any other county; the percentage of households with annual incomes of $60,000 or more is higher in Sommer County.

Reasoning *On the basis of this information, what point must be true?* The given information makes clear that Merton County has some households that exceed $40,000 in annual income. Sommer County has a higher percentage of households with annual incomes at or above $60,000. A higher percentage of the Merton County households must in turn have annual incomes of $60,000 or less. Thus, the annual income of some households in Merton County is between $40,000 and $60,000.

A Since it is possible that there are no households with an annual income of $80,000 in Sommer County, this statement does not follow from the situation.

B It is not possible to make this determination on the basis of the available evidence; Merton County may have no households at all with an income of more than $60,000.

C **Correct.** This statement properly identifies a conclusion that can be drawn from the given information: in order for the percentage of $40,000-plus incomes to be higher in Merton county than any other county while Sommer has the highest percentage of $60,000-plus incomes, there must be some households in Merton County that bring in between $40,000 and $60,000 annually.

D On the basis of information about the *percentages* of households, it is not possible to arrive at this conclusion about the *number* of households.

E From the given information, it is not possible to determine where the average income is greater. It is entirely possible that the number of $60,000-plus incomes in Sommer County is quite small and that the number of $40,000-plus incomes in Merton County is substantial.

The correct answer is C.

73. Tiger beetles are such fast runners that they can capture virtually any nonflying insect. However, when running toward an insect, a tiger beetle will intermittently stop and then, a moment later, resume its attack. Perhaps the beetles cannot maintain their pace and must pause for a moment's rest; but an alternative hypothesis is that while running, tiger beetles are unable to adequately process the resulting rapidly changing visual information and so quickly go blind and stop.

Which of the following, if discovered in experiments using artificially moved prey insects, would support one of the two hypotheses and undermine the other?

(A) When a prey insect is moved directly toward a beetle that has been chasing it, the beetle immediately stops and runs away without its usual intermittent stopping.

(B) In pursuing a swerving insect, a beetle alters its course while running and its pauses become more frequent as the chase progresses.

(C) In pursuing a moving insect, a beetle usually responds immediately to changes in the insect's direction, and it pauses equally frequently whether the chase is up or down an incline.

(D) If, when a beetle pauses, it has not gained on the insect it is pursuing, the beetle generally ends its pursuit.

(E) The faster a beetle pursues an insect fleeing directly away from it, the more frequently the beetle stops.

Argument Evaluation

Situation Two hypotheses are offered to explain the sudden stop that tiger beetles make while pursuing their prey: (1) they cannot maintain the rapid pace and must rest, and (2) they run too quickly to process visual information and so temporarily go blind.

Reasoning *What point would strengthen one of the two hypotheses and weaken the other?* Consider the information provided in each answer choice, remembering that information that supports one hypothesis must necessarily detract from the other. Any information that is not about pursuit or that affects the two hypotheses equally may be dismissed from consideration. If the frequency of stopping increases when the beetle follows a swerving insect and must constantly change its course, then the second hypothesis is strengthened; the beetle's pauses increase as the variety of visual information that it needs to deal with increases.

A The hypotheses concern ongoing pursuit; since this information is not about the beetle's continuing pursuit of prey, it neither strengthens nor weakens either hypothesis.

B **Correct**. This statement provides information that strengthens the second hypothesis: the swerving pursuit and the resulting continual course adjustments appear to be forcing the beetle to stop with increasing frequency to sort out the erratic visual information.

C In this experiment, since neither vision nor tiredness appears to be problematic, the beetle could be stopping for either reason; this information neither strengthens nor weakens either hypothesis.

D This information is irrelevant since both the hypotheses are about mid-pursuit behaviors.

E The correlation of frequency of stops with speed affects both hypotheses equally; the pauses could be equally due to an inability to maintain the pace or due to a need to process the visual information.

The correct answer is B.

74. Guillemots are birds of Arctic regions. They feed on fish that gather beneath thin sheets of floating ice, and they nest on nearby land. Guillemots need 80 consecutive snow-free days in a year to raise their chicks, so until average temperatures in the Arctic began to rise recently, the guillemots' range was limited to the southernmost Arctic coast. Therefore, if the warming continues, the guillemots' range will probably be enlarged by being extended northward along the coast.

Which of the following, if true, most seriously weakens the argument?

(A) Even if the warming trend continues, there will still be years in which guillemot chicks are killed by an unusually early snow.

(B) If the Arctic warming continues, guillemots' current predators are likely to succeed in extending their own range farther north.

(C) Guillemots nest in coastal areas, where temperatures are generally higher than in inland areas.

(D) If the Arctic warming continues, much of the thin ice in the southern Arctic will disappear.

(E) The fish that guillemots eat are currently preyed on by a wider variety of predators in the southernmost Arctic regions than they are farther north.

Argument Evaluation

Situation In the southern Arctic, guillemots find their prey beneath thin sheets of ice, nest nearby, and require 80 snow-free days to raise their young. A warming trend means that their range may be enlarged by extending northward along the coast.

Reasoning *Which point weakens the argument about the enlargement of the guillemots' range?* How could the birds move northward and simultaneously not enlarge their range? Consider the assumption implied by the idea of *enlargement*. If the guillemots lost their southern habitat, then their northward move would be a displacement rather than an enlargement. If their source of food was no longer available to them in the southern Arctic, then they would abandon that area as part of their range.

A An exceptional year is not an argument against an enlarged range because *an unusually early snow* could happen in the southern Arctic as well.

B If their current predators also migrate northward, then the guillemots' situation has not changed, so this is not an argument against their enlarged range.

C The argument suggests that they will move not inland, but *northward along the coast*.

D **Correct**. This statement properly identifies a factor that weakens the argument: the guillemots' move northward would not enlarge their range if they lost their food source, fish found under thin ice, in the southern Arctic.

E The possibility that they may find prey more easily in the north does not mean that they would abandon the southern Arctic, and so this point does not weaken the argument.

The correct answer is D.

75. Some batches of polio vaccine used around 1960 were contaminated with SV40, a virus that in monkeys causes various cancers. Some researchers now claim that this contamination caused some cases of a certain cancer in humans, mesothelioma. This claim is not undercut by the fact that a very careful survey made in the 1960s of people who had received the contaminated vaccine found no elevated incidence of any cancer, since _____.

(A) most cases of mesothelioma are caused by exposure to asbestos
(B) in some countries, there was no contamination of the vaccine
(C) SV40 is widely used in laboratories to produce cancers in animals
(D) mesotheliomas take several decades to develop
(E) mesothelioma was somewhat less common in 1960 than it is now

Argument Construction

Situation Researchers claim that contaminated polio vaccine administered in 1960 caused some cases of mesothelioma, a type of cancer. Their claim is not undermined by the results of a 1960s survey showing that those who received the contaminated vaccine had no elevated incidence of cancer.

Reasoning *Why did the survey results not challenge the researchers' claim?* The survey did not reveal a higher incidence of mesothelioma. This question then requires completing a sentence that establishes cause. What could be the reason that the people surveyed in the 1960s showed no signs of the disease? If the disease takes decades to develop, then those people surveyed would not yet have shown any signs of it; less than a decade had passed between their exposure to the vaccine and the survey.

A The contaminated vaccine is said to have caused *some* cases, not *most*; the question remains why the survey results pose no obstacle to the researchers' claim.

B The claim is only about contaminated vaccine, not uncontaminated vaccine.

C That the virus can cause cancers in laboratory animals had already been provided as a given; this additional information is irrelevant to the survey of people who received contaminated vaccine.

D **Correct**. This statement properly identifies the reason that the survey does not call into question the researchers' claim: the people surveyed in the 1960s showed no signs of disease because the cancer takes decades to develop.

E The frequency of mesothelioma in the general population is not related to the claim that contaminated vaccine caused the disease in a specific population.

The correct answer is D.

76. Gortland has long been narrowly self-sufficient in both grain and meat. However, as per capita income in Gortland has risen toward the world average, per capita consumption of meat has also risen toward the world average, and it takes several pounds of grain to produce one pound of meat. Therefore, since per capita income continues to rise, whereas domestic grain production will not increase, Gortland will soon have to import either grain or meat or both.

Which of the following is an assumption on which the argument depends?

(A) The total acreage devoted to grain production in Gortland will soon decrease.

(B) Importing either grain or meat will not result in a significantly higher percentage of Gortlanders' incomes being spent on food than is currently the case.

(C) The per capita consumption of meat in Gortland is increasing at roughly the same rate across all income levels.

(D) The per capita income of meat producers in Gortland is rising faster than the per capita income of grain producers.

(E) People in Gortland who increase their consumption of meat will not radically decrease their consumption of grain.

Argument Construction

Situation A country previously self-sufficient in grain and meat will soon have to import one or the other or both. Consumption of meat has risen as per capita income has risen, and it takes several pounds of grain to produce one pound of meat.

Reasoning *What conditions must be true for the conclusion to be true?* Meat consumption is rising. What about grain consumption? A sharp reduction in the amount of grain consumed could compensate for increased meat consumption, making the conclusion false. If people did radically decrease their grain consumption, it might not be necessary to import grain or meat or both. Since the argument concludes that the imports are necessary, it assumes grain consumption will not plunge.

A The argument makes no assumptions about the acreage devoted to grain; it assumes only that the demand for grain will rise.

B The argument does not discuss the percentage of their income that Gortlanders spend on food, so an assumption about this topic is not needed.

C The argument involves only meat consumption in general, not its distribution by income level.

D Since the argument does not refer to the incomes of meat producers and grain producers, it cannot depend on an assumption about them.

E **Correct**. This statement properly identifies the assumption that there will be no great decrease in grain consumption.

The correct answer is E.

77. The Hazelton coal-processing plant is a major employer in the Hazelton area, but national environmental regulations will force it to close if it continues to use old, polluting processing methods. However, to update the plant to use newer, cleaner methods would be so expensive that the plant will close unless it receives the tax break it has requested. In order to prevent a major increase in local unemployment, the Hazelton government is considering granting the plant's request.

Which of the following would be most important for the Hazelton government to determine before deciding whether to grant the plant's request?

(A) Whether the company that owns the plant would open a new plant in another area if the present plant were closed

(B) Whether the plant would employ far fewer workers when updated than it does now

(C) Whether the level of pollutants presently being emitted by the plant is high enough to constitute a health hazard for local residents

(D) Whether the majority of the coal processed by the plant is sold outside the Hazelton area

(E) Whether the plant would be able to process more coal when updated than it does now

Evaluation of a Plan

Situation Because of the expenses of mandatory updating, a plant that is a major employer in the local area will close unless it receives the tax break it has requested from the local government.

Reasoning *What point is most critical to the evaluation of the request?* Consider the information provided in the answer choices. The plant is important to the local government primarily because it is a major employer of local residents. What if updating the plant significantly reduced the number of employees needed? It is crucial for the local government to determine whether the plant will continue to employ the same number of people once it has updated.

A The local government is concerned only with the local area, so a new site outside that area is irrelevant.

B **Correct**. This statement properly identifies a factor that is critical to the plant's argument and the local government's decision.

C Updating is mandatory under national environmental regulations, whether the local residents are affected by the plant's pollutants or not.

D At issue is the plant's role as a major employer; where its product is sold is irrelevant.

E The amount of coal processed by the updated plant is irrelevant to the critical issue of the number of people employed to process that coal.

The correct answer is B.

78. A physically active lifestyle has been shown to help increase longevity. In the Wistar region of Bellaria, the average age at death is considerably higher than in any other part of the country. Wistar is the only mountainous part of Bellaria. A mountainous terrain makes even such basic activities as walking relatively strenuous; it essentially imposes a physically active lifestyle on people. Clearly, this circumstance explains the long lives of people in Wistar.

Which of the following, if true, most seriously weakens the argument?

(A) In Bellaria all medical expenses are paid by the government, so that personal income does not affect the quality of health care a person receives.

(B) The Wistar region is one of Bellaria's least populated regions.

(C) Many people who live in the Wistar region have moved there in middle age or upon retirement.

(D) The many opportunities for hiking, skiing, and other outdoor activities that Wistar's mountains offer make it a favorite destination for vacationing Bellarians.

(E) Per capita spending on recreational activities is no higher in Wistar than it is in other regions of Bellaria.

Argument Evaluation

Situation People in one region of a country live longer than people in other areas. The higher average age at time of death is attributed to the healthy lifestyle of the people in this region, where the mountainous terrain demands a physically active life.

Reasoning *What point weakens the argument?* Consider what assumption underlies the argument that the physically active lifestyle required of living in Wistar is responsible for its residents' relative longevity. The mountainous environment necessitates lifelong levels of rigorous physical activity that build a more robust population. What if a significant portion of the population has not been conditioned since childhood to the demands of the terrain? It is assumed here that the healthy lifestyle imposed by the terrain has shaped residents from birth and accounts for their longer life span. If many residents only moved there later in life, the argument is weakened.

A The argument is not about the quality of health care throughout the country, but the length of the residents' lives in a particular region.

B The rate of population density does not affect the argument.

C **Correct**. This statement properly identifies a point that weakens the argument.

D The area's popularity as a vacation destination does not affect the longevity of the local residents.

E The argument establishes that merely living in the region is strenuous; the spending on recreational activities is irrelevant.

The correct answer is C.

79. Cheever College offers several online courses via remote computer connection, in addition to traditional classroom-based courses. A study of student performance at Cheever found that, overall, the average student grade for online courses matched that for classroom-based courses. In this calculation of the average grade, course withdrawals were weighted as equivalent to a course failure, and the rate of withdrawal was much lower for students enrolled in classroom-based courses than for students enrolled in online courses.

If the statements above are true, which of the following must also be true of Cheever College?

(A) Among students who did not withdraw, students enrolled in online courses got higher grades, on average, than students enrolled in classroom-based courses.

(B) The number of students enrolled per course at the start of the school term is much higher, on average, for the online courses than for the classroom-based courses.

(C) There are no students who take both an online and a classroom-based course in the same school term.

(D) Among Cheever College students with the best grades, a significant majority take online, rather than classroom-based, courses.

(E) Courses offered online tend to deal with subject matter that is less challenging than that of classroom-based courses.

Argument Construction

Situation A comparison of online and classroom courses showed similar average grades. In determining average grades, a course withdrawal was weighted as a course failure. The rate of withdrawal was higher from online than from classroom courses.

Reasoning *What conclusion about the courses can be derived from this comparison?* Consider the ramifications of the methodology used to calculate the grade averages for the two types of courses. Because of course withdrawals, the online courses experienced a higher rate of failure, but the average grade for these courses still matched the average grade for classroom courses. From this it is logical to conclude that, for the two averages to match, the students who remained in the online courses must have had higher initial average grades than those in classroom courses.

A **Correct**. This statement properly identifies the logical conclusion that the higher percentage of withdrawals from online classes requires higher grades, on average, to compensate for the higher rate of failure.

B A number of students cannot be derived from a discussion of average grades and rates of withdrawal.

C This conclusion cannot be determined on the basis of the information provided.

D The information is about average grades; the argument does not provide any basis for a conclusion about best grades.

E It is impossible to determine the difficulty of subject matter from this information.

The correct answer is A.

80. For years the beautiful Renaissance buildings in Palitito have been damaged by exhaust from the many tour buses that come to the city. There has been little parking space, so most buses have idled at the curb during each stop on their tour, and idling produces as much exhaust as driving. The city has now provided parking that accommodates a third of the tour buses, so damage to Palitito's buildings from the buses' exhaust will diminish significantly.

Which of the following, if true, most strongly supports the argument?

(A) The exhaust from Palitito's few automobiles is not a significant threat to Palitito's buildings.

(B) Palitito's Renaissance buildings are not threatened by pollution other than engine exhaust.

(C) Tour buses typically spend less than one-quarter of the time they are in Palitito transporting passengers from one site to another.

(D) More tourists come to Palitito by tour bus than by any other single means of transportation.

(E) Some of the tour buses that are unable to find parking drive around Palitito while their passengers are visiting a site.

Argument Evaluation

Situation Tour buses have damaged Renaissance buildings with their exhaust fumes because lack of parking has kept the buses idling at curbs. Providing new parking for a third of the buses should significantly reduce the damage caused by the exhaust.

Reasoning *What point strengthens the argument?* The argument for reduced damage relies on the reduction of the vehicles' exhaust fumes. Any additional evidence regarding the extent to which the vehicular emissions are likely to be reduced also supports the argument for the benefits of the new parking spaces. Learning that tour buses spend not just a few minutes but most of their time idling at the curb strengthens the argument. The new parking spaces will allow a third of the tour buses to spend 75 percent of their time with their engines off, causing no damage at all.

A If automobile exhaust is not a threat, the argument is not affected.

B This statement does not address the question of whether the new parking will reduce the damage caused by engine exhaust from the buses.

C **Correct.** This statement properly cites a factor that supports the argument: since most of the buses' time has been spent producing damaging exhaust, the new parking should reduce the damage significantly.

D This statement about tourists' chosen means of transportation is irrelevant to the issue of what the buses do while in the city.

E It is given that the new parking will only provide space for a third of the buses, and thus some buses will continue to idle and some to drive around, continuing to contribute equally to the building damage. This statement does not strengthen the argument.

The correct answer is C.

81. During the 1980s and 1990s, the annual number of people who visited the Sordellian Mountains increased continually, and many new ski resorts were built. Over the same period, however, the number of visitors to ski resorts who were caught in avalanches decreased, even though there was no reduction in the annual number of avalanches in the Sordellian Mountains.

Which of the following, if true in the Sordellian Mountains during the 1980s and 1990s, most helps to explain the decrease?

(A) Avalanches were most likely to happen when a large new snowfall covered an older layer of snow.

(B) Avalanches destroyed at least some buildings in the Sordellian Mountains in every year.

(C) People planning new ski slopes and other resort facilities used increasingly accurate information about which locations are likely to be in the path of avalanches.

(D) The average length of stay for people visiting the Sordellian Mountains increased slightly.

(E) Construction of new ski resorts often led to the clearing of wooded areas that had helped prevent avalanches.

Argument Construction

Situation Over a certain period, new ski resorts accommodated an increasing number of visitors at the same time that fewer visitors were caught in avalanches. Yet there were no fewer avalanches than usual during this period.

Reasoning *What explains the apparent contradiction of increased visitors but fewer visitors caught in avalanches*? More resort visitors would imply more avalanche-related accidents, but the average has shifted so that fewer visitors are being caught in the avalanches. It must be that fewer visitors are exposed to this danger; consider the answer choices to identify a logical reason for this improvement in their exposure. If the likely paths of avalanches had become better understood, that information would have been applied to identify safer locations for new ski slopes and ski resorts. The facilities would thus have been built well out of the way of avalanches, resulting in fewer visitors trapped in avalanches.

A This likelihood would remain true from year to year; it does not explain the decrease.

B This point does not explain why fewer visitors were caught in these avalanches.

C **Correct**. This statement properly identifies a factor that explains the decreased number of accidents.

D The greater length of stay would seem to expose visitors to greater danger.

E This information points to an expected increase, rather than decrease, in visitors who might be caught by avalanches.

The correct answer is C.

82. A year ago, Dietz Foods launched a yearlong advertising campaign for its canned tuna. Last year Dietz sold 12 million cans of tuna compared to the 10 million sold during the previous year, an increase directly attributable to new customers brought in by the campaign. Profits from the additional sales, however, were substantially less than the cost of the advertising campaign. Clearly, therefore, the campaign did nothing to further Dietz's economic interests.

Which of the following, if true, most seriously weakens the argument?

(A) Sales of canned tuna account for a relatively small percentage of Dietz Foods' profits.

(B) Most of the people who bought Dietz's canned tuna for the first time as a result of the campaign were already loyal customers of other Dietz products.

(C) A less expensive advertising campaign would have brought in significantly fewer new customers for Dietz's canned tuna than did the campaign Dietz Foods launched last year.

(D) Dietz made money on sales of canned tuna last year.

(E) In each of the past five years, there was a steep, industry-wide decline in sales of canned tuna.

Argument Evaluation

Situation An advertising campaign was responsible for increased sales of canned tuna. Since the profits from the increased sales were less than the costs of the campaign, the campaign did not contribute to the company's economic interests.

Reasoning *Which point weakens the argument?* Consider the basis of the argument: if profits are lower than costs, the campaign made no contribution to the company's financial well-being. In what case might this be untrue? What if the advertising campaign reversed an industry-wide trend of declining sales? If Dietz experienced increasing sales, while other companies experienced decreased sales, then the campaign did contribute to the economic interests of the company, and the argument is considerably weakened.

A The issue is not the percentage of profits that canned tuna contributes, but the success of the advertising campaign.

B If the customers bought the tuna because of the campaign, it is irrelevant to the argument that they also bought other Dietz products.

C This information neither strengthens nor weakens the argument.

D The argument is not about profits only, but about whether the advertising campaign contributed to the economic interests of the company.

E **Correct**. This statement properly identifies a factor that weakens the argument: the campaign secured the benefits of increased sales at a time when the entire industry was experiencing a decline in sales.

The correct answer is E.

Sentence Correction

The following discussion is intended to familiarize you with the most efficient and effective approaches to sentence correction questions. The particular questions in this chapter are generally representative of the kinds of sentence correction questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

83. Unlike the buildings in Mesopotamian cities, which were arranged haphazardly, the same basic plan was followed for all cities of the Indus Valley: with houses laid out on a north-south, east-west grid, and houses and walls were built of standard-size bricks.

(A) the buildings in Mesopotamian cities, which were arranged haphazardly, the same basic plan was followed for all cities of the Indus Valley: with houses

(B) the buildings in Mesopotamian cities, which were haphazard in arrangement, the same basic plan was used in all cities of the Indus Valley: houses were

(C) the arrangement of buildings in Mesopotamian cities, which were haphazard, the cities of the Indus Valley all followed the same basic plan: houses

(D) Mesopotamian cities, in which buildings were arranged haphazardly, the cities of the Indus Valley all followed the same basic plan: houses were

(E) Mesopotamian cities, which had buildings that were arranged haphazardly, the same basic plan was used for all cities in the Indus Valley: houses that were

Comparison-contrast; Modifying clause

The contrast introduced by *unlike* must be logical and clear. Contrasting *the buildings in Mesopotamian cities* with *the same basic plan* does not make sense; *Mesopotamian cities* should be contrasted with *the cities of the Indus Valley*. Also, it needs to be clear that it was the *buildings* in the cities that were *arranged haphazardly* rather than the *cities*. The second half of the sentence needs *houses were laid out* to be parallel in structure to *and houses and walls were built*.

A Illogically contrasts *the buildings in Mesopotamian cities* with *the same basic plan*; not clear whether *which were arranged haphazardly* modifies *cities or buildings; with houses* lacks parallelism and is confusing.

B Illogically contrasts *the buildings in Mesopotamian cities* with *the same basic plan*; does not clarify what *which were haphazard in arrangement* modifies.

C Illogically contrasts *the arrangement of buildings* with *the cities of the Indus Valley*; not clear whether *which were haphazard* modifies *buildings* or *cities; houses* not followed by a verb.

D **Correct**. In this sentence, *Mesopotamian cities* are properly contrasted with *the cities of the Indus Valley; in which buildings were arranged haphazardly* expresses the idea clearly; and *houses* is followed by *were* as required.

E Illogically contrasts *Mesopotamian cities* with *the same basic plan; houses that were* lacks parallelism and is confusing.

The correct answer is D.

84. New data from United States Forest Service ecologists show that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, it saves seven dollars that would not be spent on having to extinguish big fires.

(A) that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, it saves seven dollars that would not be spent on having to extinguish

(B) that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, seven dollars are saved that would have been spent on extinguishing

(C) that for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel saves seven dollars on not having to extinguish

(D) for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, that it saves seven dollars on not having to extinguish

(E) for every dollar spent on controlled small-scale burning, forest thinning, and the training of fire-management personnel, that seven dollars are saved that would not have been spent on extinguishing

Logical predication; Rhetorical construction

The pronoun *it* (*it saves seven dollars*) has no referent. Making *seven dollars* the subject of the clause eliminates this problem, and it also fulfills a reader's expectation that after the phrase beginning *for every dollar* another specific amount will be given to balance it. This change in structure also allows the awkward and wordy clause *that would not be spent on having to extinguish* to be rewritten so that *spent* balances *saved: seven dollars are saved that would have been spent on extinguishing*, and the unnecessary *having to* is omitted.

A *It* has no referent; *not be spent* is awkward; *on having to extinguish* is wordy.

B **Correct**. This sentence properly uses *seven dollars* as the subject of the clause to balance *every dollar* in the introductory phrase; the phrasing is concise and parallel.

C *Saves* does not have a subject; construction is not a complete sentence; *not having to extinguish* is wordy and awkward.

D *That* introduces a subordinate rather than main clause, making a sentence fragment; *it* has no referent; *not having to extinguish* is wordy and awkward.

E Introductory *that* makes a sentence fragment; *that would not have been spent on extinguishing* is awkward and illogical.

The correct answer is B.

85. Like the grassy fields and old pastures that the upland sandpiper needs for feeding and nesting when it returns in May after wintering in the Argentine Pampas, the sandpipers vanishing in the northeastern United States is a result of residential and industrial development and of changes in farming practices.

(A) the sandpipers vanishing in the northeastern United States is a result of residential and industrial development and of changes in

(B) the bird itself is vanishing in the northeastern United States as a result of residential and industrial development and of changes in

(C) that the birds themselves are vanishing in the northeastern United States is due to residential and industrial development and changes to

(D) in the northeastern United States, sandpipers' vanishing due to residential and industrial development and to changes in

(E) in the northeastern United States, the sandpipers' vanishing, a result of residential and industrial development and changing

Comparison; Sentence structure

The comparison introduced by *like* must be logical and clear; the point of this comparison is that both the habitat and the bird are disappearing for similar reasons. The comparison must use comparable grammatical components; *the bird itself* is a noun phrase and matches the noun phrases *grassy fields* and *old pastures*.

A Illogically compares *the sandpipers vanishing* to *grassy fields and old pastures*; omits apostrophe in *sandpipers' vanishing*; wordy.

B **Correct**. This sentence properly compares *the bird itself* to *grassy fields and old pastures; is vanishing* as the verb strengthens the sentence by making the comparison clearer.

C Does not finish the comparison begun with *like* but instead substitutes a clause (*that the birds themselves are vanishing*).

D Illogically compares *the sandpipers' vanishing* to *grassy fields and old pastures*; creates a sentence fragment.

E Illogically compares *the sandpipers' vanishing* to *grassy fields and old pastures*; creates a sentence fragment.

The correct answer is B.

86. The results of two recent unrelated studies support the idea that dolphins may share certain cognitive abilities with humans and great apes; the studies indicate dolphins as capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and to grasp spontaneously the mood or intention of humans.

(A) dolphins as capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and to grasp spontaneously

(B) dolphins' ability to recognize themselves in mirrors—an ability that is often considered as a sign of self-awareness—and of spontaneously grasping

(C) dolphins to be capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and to grasp spontaneously

(D) that dolphins have the ability of recognizing themselves in mirrors—an ability that is often considered as a sign of self-awareness—and spontaneously grasping

(E) that dolphins are capable of recognizing themselves in mirrors—an ability that is often considered a sign of self-awareness—and of spontaneously grasping

Grammatical construction; Parallelism

In the context of this sentence, *the studies indicate* must introduce a clause; the clause must begin with *that* and have a subject, *dolphins*, and a verb, *are* (the complete verb phrase would be *are capable of*). The two capabilities should be parallel: *capable of recognizing…and of spontaneously grasping*.

A Context requires a clause, but this construction is not a clause; *capable of recognizing* is not parallel to *to grasp spontaneously*.

B Construction is not a clause, and a clause is required; *dolphins' ability to recognize* is not parallel to *of spontaneously grasping*.

C A clause is required following *the studies indicate; to be capable of recognizing* is not parallel to *to grasp spontaneously*.

D *Have the ability of* is wordy and unidiomatic; *of recognizing* and *spontaneously grasping* are not parallel.

E **Correct**. *That* introduces the subordinate clause necessary to complete this sentence properly; *of recognizing* and *of spontaneously grasping* are parallel.

The correct answer is E.

87. According to scholars, the earliest writing was probably not a direct rendering of speech, but was more likely to begin as a separate and distinct symbolic system of communication, and only later merged with spoken language.

(A) was more likely to begin as
(B) more than likely began as
(C) more than likely beginning from
(D) it was more than likely begun from
(E) it was more likely that it began

Idiom; Verb form

This sentence is a comparison in which *probably not x* is balanced by *but more than likely y*. When *more* is used in the comparative form of an adjective (*more difficult*) or adverb (*more likely*), it is followed by *than*. The words used to show the comparison between *x* and *y*, *but more than likely*, must also introduce the correct verb form, allowing *y* to fit grammatically into the rest of the sentence. The subject of the sentence has three verbs, all of which should be parallel: *the earliest writing was…began…merged. Was…to begin* is not parallel and results in a construction that is not grammatically correct.

A In this context, *more likely* is not a complete idiomatic expression; *was…to begin* is not parallel to *was* and *merged*.

B **Correct**. In this sentence, *more than likely* is the correct comparative construction; the simple past tense *began*, parallel to *was* and *merged*, fits grammatically into the sentence.

C Subject should be followed by three verbs; *beginning from* is not a verb.

D Use of the pronoun *it* makes this construction a main clause, in which case the comma after *communication* must be omitted and *began* must be used to be parallel to *merged; was…begun* is not the correct tense.

E In this awkward, unclear, and wordy construction, the first *it* must be followed by *is*, not *was*, because the theory is current; the second *it* acts as the subject of the subordinate clause, and this usage requires the omission of the comma after *communication*.

The correct answer is B.

88. In 1995 Richard Stallman, a well-known critic of the patent system, testified in Patent Office hearings that, to test the system, a colleague of his had managed to win a patent for one of Kirchhoff's laws, an observation about electric current first made in 1845 and now included in virtually every textbook of elementary physics.

(A) laws, an observation about electric current first made in 1845 and
(B) laws, which was an observation about electric current first made in 1845 and it is
(C) laws, namely, it was an observation about electric current first made in 1845 and
(D) laws, an observation about electric current first made in 1845, it is
(E) laws that was an observation about electric current, first made in 1845, and is

Logical predication; Parallelism

The function of the entire long phrase (*observation…physics*) that follows *one of Kirchhoff's laws* is to describe that law. It is a noun phrase in apposition, which means that it has the same syntactic relation to all the other parts of the sentence that the noun phrase *one of Kirchhoff's laws* does. Within the long modifying phrase, parallelism is maintained by balancing *an observation…first made* with *and now included*.

A **Correct**. In this sentence, the noun phrase in apposition properly identifies and explains the law, using parallel structure and concise expression.

B *Which* is ambiguous because it could refer to *one* or to *laws; it is* violates the parallelism of *first made* and *now included*.

C *It* is ambiguous; the introduction of *it was* does not allow this construction to fit grammatically into the sentence.

D The referent of *it* is unclear; *it is* creates a run-on sentence and violates the parallelism of *first made* and *now included*.

E *That* appears to refer to *laws* rather than *one*, but the verb is singular; setting off the phrase *first made in 1845* in commas distorts meaning; *is* violates parallelism.

The correct answer is A.

89. Excavators at the Indus Valley site of Harappa in eastern Pakistan say the discovery of inscribed shards dating to circa 2800–2600 B.C. indicate their development of a Harappan writing system, the use of inscribed seals impressed into clay for marking ownership, and the standardization of weights for trade or taxation occurred many decades, if not centuries, earlier than was previously believed.

(A) indicate their development of a Harappan writing system, the use of

(B) indicate that the development of a Harappan writing system, using

(C) indicates that their development of a Harappan writing system, using

(D) indicates the development of a Harappan writing system, their use of

(E) indicates that the development of a Harappan writing system, the use of

Agreement; Idiom; Parallelism

In long sentences such as this one, the relationship between parts of the sentence may be difficult to see. Here, the main clause of the sentence is *excavators…say* and the logical sequence that follows is *the discovery…indicates that*. The subject of this first subordinate clause is the singular noun *discovery*, which should be followed by the singular verb *indicates* rather than by the plural *indicate*, as is done in the original sentence. *Their*, used with either *development* or *use*, has no clear or logical referent in any of the alternatives. The subject of the following subordinate (*that*) clause, which has *occurred* as its verb, is a series of three phrases, which must be parallel, especially in a sentence of this length and complexity: *the development of…, the use of…, and the standardization of….*

A *Indicate* does not agree with *discovery*; the pronoun *their* has no logical referent, and *their development* is not parallel to *the use* and *the standardization*.

B *Indicate* does not agree with *discovery; using* is not parallel to *the development* and *the standardization*.

C *Their* has no logical referent; the series of three elements should be parallel, but here all are different.

D The pronoun *their* has no logical referent, and *their use* is not parallel to *the development* and *the standardization*; the preferred sentence structure would have *indicates* followed by *that* when introducing a clause.

E **Correct**. In this sentence, *indicates* agrees with *discovery* and is followed by *that* to introduce a clause; the three parallel phrases begin with an article (*the*), a noun, and the preposition *of*.

The correct answer is E.

90. The Supreme Court has ruled that public universities can collect student activity fees even with students' objections to particular activities, so long as the groups they give money to will be chosen without regard to their views.

(A) with students' objections to particular activities, so long as the groups they give money to will be

(B) if they have objections to particular activities and the groups that are given the money are

(C) if they object to particular activities, but the groups that the money is given to have to be

(D) from students who object to particular activities, so long as the groups given money are

(E) though students have an objection to particular activities, but the groups that are given the money be

Logical predication; Rhetorical construction

The underlined portion of the sentence fails to establish a clear relationship among *universities*, *students*, and *groups*. To which of these three does *they* refer? It would appear that the *universities* must give the money, but *they* does not have a referent. Furthermore, *they* is followed by *their views*, and in this case *their* must refer to *groups*. Wordy and awkward phrasing as well as an unnecessary shift in verb tense (*will be chosen*) compound the difficulty of understanding this sentence in its original form.

A *With students' objections*…is awkward and dense; *they* does not have a referent; the future *will be* is incorrect since the Supreme Court *has* already *ruled*.

B Referent for *they* is *student activity fees*, which cannot possibly *have objections*…; the use of *and* is illogical.

C *They* refers to student *activity fees* rather than *students*; *but* does not have the requisite sense of *with the provision that; have to be* is wordy.

D **Correct**. In this sentence, *from students who object* is clear and idiomatic; *so long as* is used appropriately; *groups given money* eliminates the problem of a pronoun without a referent; *are* is the proper tense.

E *Have an objection* is an unnecessarily wordy way to say *object*; the verb *be* does not complete the latter part of the sentence.

The correct answer is D.

91. Despite the increasing number of women graduating from law school and passing bar examinations, the proportion of judges and partners at major law firms who are women have not risen to a comparable extent.

(A) the proportion of judges and partners at major law firms who are women have not risen to a comparable extent

(B) the proportion of women judges and partners at major law firms have not risen comparably

(C) the proportion of judges and partners at major law firms who are women has not risen comparably

(D) yet the proportion of women judges and partners at major law firms has not risen to a comparable extent

(E) yet the proportion of judges and partners at major law firms who are women has not risen comparably

Agreement; Rhetorical construction

When a number of plural nouns appear in phrases between a singular subject and the verb, it can be easy to overlook the true subject of the verb. Here, *judges, partners, firms*, and *women* all occur between the singular subject, *proportion*, and the verb, which should also be singular, *has risen*. Concise expression is particularly important in a long construction; *to a comparable extent* may be more concisely expressed as *comparably*.

A Plural verb, *have risen*, does not agree with the singular subject, *proportion*.

B *Have risen* does not agree with *proportion*; here, *women* applies only to *judges*, not to *partners at major law firms*.

C **Correct**. In this sentence, *has risen* agrees with *proportion*, and *comparably* is more concise than *to a comparable extent*. The modifying clause *who are women* follows (1) *judges* and (2) *partners at major law firms* as closely as is possible given the content of the sentence; this positioning has the virtue of being clear in its meaning.

D The contrast has already been introduced by *despite*, so the addition of *yet* is illogical and ungrammatical; *to a comparable extent* is wordy.

E *Despite* introduces the contrast; adding *yet* is illogical and results in an ungrammatical construction.

The correct answer is C.

92. Seldom more than 40 feet wide and 12 feet deep, but it ran 363 miles across the rugged wilderness of upstate New York, the Erie Canal connected the Hudson River at Albany to the Great Lakes at Buffalo, providing the port of New York City with a direct water link to the heartland of the North American continent.

(A) Seldom more than 40 feet wide and 12 feet deep, but it ran 363 miles across the rugged wilderness of upstate New York, the Erie Canal connected

(B) Seldom more than 40 feet wide or 12 feet deep but running 363 miles across the rugged wilderness of upstate New York, the Erie Canal connected

(C) It was seldom more than 40 feet wide and 12 feet deep, and ran 363 miles across the rugged wilderness of upstate New York, but the Erie Canal, connecting

(D) The Erie Canal was seldom more than 40 feet wide or 12 feet deep and it ran 363 miles across the rugged wilderness of upstate New York, which connected

(E) The Erie Canal, seldom more than 40 feet wide and 12 feet deep, but running 363 miles across the rugged wilderness of upstate New York, connecting

Logical predication; Grammatical construction

The phrase *seldom…deep* is the first half of a modifier that describes *the Erie Canal*. However, because a comma incorrectly follows *deep*, this phrase appears to be the entire modifier, which must agree with the noun or pronoun that immediately follows it. This phrase cannot modify the conjunction *but*, and *it* has no referent; *but it ran* is not a logical or grammatical construction following the modifying phrase. Substituting *running* for *it ran* creates an adjective phrase parallel to the first adjective phrase (*seldom…deep*).To contrast the small size reported in the first phrase with the great distance reported in the second, the two phrases may be joined with *but*; together they create a single modifier correctly modifying *the Erie Canal. The Erie Canal* is then the subject of the sentence and requires the verb *connected* to provide a logical statement.

A *But it ran* cannot logically or grammatically follow the modifying phrase.

B **Correct**. This sentence properly has the single modifier consisting of two contrasting parts.

C Neither *and* nor *but* acts as a logical connector; the use of *connecting* results in a sentence fragment.

D The paired concepts of width and depth should be joined by *and*, not *or*; this construction calls for two main clauses to be separated by a comma after *deep*; *which* is ambiguous.

E The two halves of the modifier should not be separated by a comma after *deep*; the subject is awkwardly and confusingly placed at a great distance from the predicate; the use of *connecting* rather than *connected* creates a sentence fragment.

The correct answer is B.

93. In 1923, the Supreme Court declared a minimum wage for women and children in the District of Columbia as unconstitutional, and ruling that it was a form of price-fixing and, as such, an abridgment of the right of contract.

(A) the Supreme Court declared a minimum wage for women and children in the District of Columbia as unconstitutional, and

(B) the Supreme Court declared as unconstitutional a minimum wage for women and children in the District of Columbia, and

(C) the Supreme Court declared unconstitutional a minimum wage for women and children in the District of Columbia,

(D) a minimum wage for women and children in the District of Columbia was declared unconstitutional by the Supreme Court,

(E) when the Supreme Court declared a minimum wage for women and children in the District of Columbia as unconstitutional,

Idiom; Grammatical construction

This sentence depends on the correct use of an idiom: *the court declares x unconstitutional*. The inverted form should be used here because of the long phrases involved: *the court declares unconstitutional x. The Supreme Court* is the subject of the sentence; *declared* is the verb. *Ruling… contract* acts as a modifier describing the action of the main clause; because the modifier is subordinate to the main clause, the conjunction *and* must be omitted. *And* is used to join two independent clauses, not a clause and its modifier.

A *Declared…as unconstitutional* is not the correct idiom; the use of *and* creates an ungrammatical construction.

B *Declared as unconstitutional* is not the correct idiom; the use of *and* creates an ungrammatical construction.

C **Correct**. In this sentence, the correct idiom is used, and the modifier is grammatically and logically attached to the main clause.

D Passive voice construction is weak and wordy; its use causes the modifier to be misplaced and ambiguous.

E *Declared…as unconstitutional* is not the correct idiom; *when* transforms the main clause into a subordinate clause, resulting in a sentence fragment.

The correct answer is C.

94. Researchers have found that individuals who have been blind from birth, and who thus have never seen anyone gesture, nevertheless make hand motions when speaking just as frequently and in virtually the same way as sighted people do, and that they will gesture even when conversing with another blind person.

(A) who thus have never seen anyone gesture, nevertheless make hand motions when speaking just as frequently and in virtually the same way as sighted people do, and that they will gesture

(B) who thus never saw anyone gesturing, nevertheless make hand motions when speaking just as frequent and in virtually the same way as sighted people did, and that they will gesture

(C) who thus have never seen anyone gesture, nevertheless made hand motions when speaking just as frequently and in virtually the same way as sighted people do, as well as gesturing

(D) thus never having seen anyone gesture, nevertheless made hand motions when speaking just as frequent and in virtually the same way as sighted people did, as well as gesturing

(E) thus never having seen anyone gesture, nevertheless to make hand motions when speaking just as frequently and in virtually the same way as sighted people do, and to gesture

Parallelism; Verb form; Diction

The researchers have found (1) *that individuals…make hand motions…as sighted people do* and (2) *that they will gesture…with another blind person*. In the original sentence, the two findings are reported in two parallel subordinate clauses introduced by *that*. The verb tenses are logical and parallel: *who have been blind* and *who have never seen* indicate a condition that began in the past and continues in the present; *make* and *do* refer to present actions. The verb *make* (*hand motions*) is correctly modified by the adverb *frequently* to show how the action of the verb is carried out. The emphatic future *will gesture* is properly used here with *even* to emphasize the extreme or the unexpected.

A **Correct**. Although the original sentence is complicated, the parallelism of its structure and phrasing allows its meaning to be clear and its expression effective.

B Verbs *saw* and *did* indicate action completed in the past; the simple past tense is not appropriate in either case; the adjective *frequent* cannot modify the verb; awkward and muddy.

C *Made* indicates past action, but the present tense is logically required; *as well as gesturing* violates the parallelism of the two subordinate (*that*) clauses; choppy and unclear.

D *Having seen* is not parallel to *have been; made* and *did* do not show ongoing action; *frequent* incorrectly modifies the verb; *as well as gesturing* destroys the parallelism of the two subordinate (*that*) clauses; awkward and unclear.

E Replacing the verb *make* with the infinitive *to make* results in an ungrammatical construction that fails to complete the sentence.

The correct answer is A.

95. Like embryonic germ cells, which are cells that develop early in the formation of the fetus and that later generate eggs or sperm, embryonic stem cells have the ability of developing themselves into different kinds of body tissue.

(A) embryonic stem cells have the ability of developing themselves into different kinds of body tissue

(B) embryonic stem cells have the ability to develop into different kinds of body tissue

(C) in embryonic stem cells there is the ability to develop into different kinds of body tissue

(D) the ability to develop themselves into different kinds of body tissue characterizes embryonic stem cells

(E) the ability of developing into different kinds of body tissue characterizes embryonic stem cells

Idiom; Grammatical construction

Two constructions create problems in the original sentence. The first is the unidiomatic construction *have the ability of developing; ability* must be followed by an infinitive, *to develop*, not a phrase. The second problematic construction is *to develop themselves into*. In this biological context, the verb *develop* means to progress from an earlier to a later stage; it is used intransitively, which means that it cannot take an object. The pronoun *themselves* acts as an object, creating a construction that is not grammatical or logical. Omitting the pronoun removes the problem.

A *Ability* is incorrectly followed by *of developing*; a pronoun cannot follow *develop*, when it is used, as it is here, in its intransitive sense.

B **Correct**. *Ability* is properly followed by the infinitive in this sentence, and the pronoun *themselves* is omitted.

C This awkward and wordy construction violates the parallelism of *like embryonic germ cells…embryonic stem cells….*

D The two parts of the comparison must be parallel; *like embryonic germ cells* must be followed by *embryonic stem cells*, not *the ability to develop*.

E *Ability* is followed by the unidiomatic *of developing* rather than *to develop*; the main clause must begin with *embryonic stem cells* to balance and complete *like embryonic germ cells*.

The correct answer is B.

96. Critics contend that the new missile is a weapon whose importance is largely symbolic, more a tool for manipulating people's perceptions than to fulfill a real military need.

(A) for manipulating people's perceptions than to fulfill

(B) for manipulating people's perceptions than for fulfilling

(C) to manipulate people's perceptions rather than that it fulfills

(D) to manipulate people's perceptions rather than fulfilling

(E) to manipulate people's perceptions than for fulfilling

Parallelism

This sentence uses the comparative construction *more x than y* where *x* and *y* must be parallel. Here, *x* is *a tool for manipulating people's perceptions*, and *y* is *to fulfill a real military need*. *A tool* does not need to be repeated in the second half of the comparison because it is understood, but the wording of the two phrases does need to match. There are two acceptable solutions: (1) *for manipulating* can be followed by *for fulfilling* or (2) *to manipulate* can be followed by *to fulfill*.

A *For manipulating* is not parallel to *to fulfill*.

B **Correct**. *For manipulating* and *for fulfilling* are parallel in this sentence.

C *To manipulate* is not parallel to *that it fulfills*.

D *To manipulate* is not parallel to *fulfilling*.

E *To manipulate* is not parallel to *for fulfilling*.

The correct answer is B.

97. As an actress and, more importantly, as a teacher of acting, Stella Adler was one of the most influential artists in the American theater, who trained several generations of actors including Marlon Brando and Robert De Niro.

(A) Stella Adler was one of the most influential artists in the American theater, who trained several generations of actors including

(B) Stella Adler, one of the most influential artists in the American theater, trained several generations of actors who include

(C) Stella Adler was one of the most influential artists in the American theater, training several generations of actors whose ranks included

(D) one of the most influential artists in the American theater was Stella Adler, who trained several generations of actors including

(E) one of the most influential artists in the American theater, Stella Adler, trained several generations of actors whose ranks included

Logical predication

The original sentence contains a number of modifiers, but not all of them are correctly expressed. The clause *who trained*… describes *Stella Adler*, yet a relative clause such as this one must be placed immediately after the noun or pronoun it modifies, and this clause follows *theater* rather than *Adler*. Replacing *who trained* with *training* corrects the error because the phrase *training*… modifies the whole preceding clause rather than the single preceding noun. *Several generations of actors including* shows the same error in reverse; *including* modifies the whole phrase, but the two actors named are not *generations of actors*. The more limiting clause *whose ranks included* (referring to *actors*) is appropriate here.

A Relative (*who*) clause follows *theater* rather than *Adler*; *including* refers to *generations of actors*, when the reference should be to *actors* only.

B This construction, in which the subject is both preceded and followed by modifiers, is awkward; the verbs should be consistently in the past tense, but *include* is present tense.

C **Correct**. In this sentence, substituting *training* for *who trained* and *whose ranks included* for *including* eliminates the modification errors.

D Introductory modifier must be immediately followed by *Stella Adler*, not *one…; including* refers to *generations of actors* rather than to *actors* only.

E Introductory modifier must be immediately followed by *Stella Adler*, not one.

The correct answer is C.

98. By developing the Secure Digital Music Initiative, the recording industry associations of North America, Japan, and Europe hope to create a standardized way of distributing songs and full-length recordings on the Internet that will protect copyright holders and foil the many audio pirates who copy and distribute digital music illegally.

(A) of distributing songs and full-length recordings on the Internet that will protect copyright holders and foil the many audio pirates who copy and distribute

(B) of distributing songs and full-length recordings on the Internet and to protect copyright holders and foiling the many audio pirates copying and distributing

(C) for distributing songs and full-length recordings on the Internet while it protects copyright holders and foils the many audio pirates who copy and distribute

(D) to distribute songs and full-length recordings on the Internet while they will protect copyright holders and foil the many audio pirates copying and distributing

(E) to distribute songs and full-length recordings on the Internet and it will protect copyright holders and foiling the many audio pirates who copy and distribute

Parallelism

The original sentence depends on the parallelism of its verbs to make its point clearly and effectively. *A standardized way…will protect* and (*will* understood) *foil; pirates…copy and distribute*. In the first pair of parallel verbs, *will* does not need to be repeated because it is understood.

A **Correct**. The verbs *will protect* and (*will*) *foil* are parallel in this sentence, as are the verbs *copy* and *distribute*.

B *And to protect* distorts meaning, suggesting that protection comes in addition to *the standardized way; foiling* is not parallel to *to protect*.

C *Way for* should instead be *way of*; the pronoun reference in *while it protects* is ambiguous; construction suggests that protection comes from something other than the *standardized way*.

D Pronoun *they* has no referent; use of *while* suggests that protection comes from something other than the *standardized way* of distribution.

E *And it will protect* distorts meaning, suggesting that protection comes in addition to *the standardized way*; *will protect* and *foiling* are not parallel.

The correct answer is A.

99. Whereas a ramjet generally cannot achieve high speeds without the initial assistance of a rocket, high speeds can be attained by scramjets, or supersonic combustion ramjets, in that they reduce airflow compression at the entrance of the engine and letting air pass through at supersonic speeds.

(A) high speeds can be attained by scramjets, or supersonic combustion ramjets, in that they reduce

(B) that high speeds can be attained by scramjets, or supersonic combustion ramjets, is a result of their reducing

(C) the ability of scramjets, or supersonic combustion ramjets, to achieve high speeds is because they reduce

(D) scramjets, or supersonic combustion ramjets, have the ability of attaining high speeds when reducing

(E) scramjets, or supersonic combustion ramjets, can attain high speeds by reducing

Rhetorical construction

The underlined portion of the original sentence is wordy and ineffective. Transforming it from passive (*high speeds can be attained by scramjets*) to active voice (*scramjets can attain high speeds*) eliminates much of the problem. As the subject of the main clause, *scramjets* correctly parallels *a ramjet*, the subject of the subordinate clause; the contrast is thus clearly and effectively drawn. *In that they reduce* is wordy and awkward; it can be replaced by the more concise phrase *by reducing*.

A Passive voice contributes to a wordy, awkward, and ineffective construction; *in that they reduce* is also wordy and awkward.

B Passive voice and subordinate (*that*) clause constructions are wordy, awkward, and ineffective.

C *The ability…is because* is not a grammatical construction; *scramjets*, not *the ability*, should be parallel to *a ramjet*.

D *Have the ability of attaining* is wordy; *when* does not indicate the cause-and-effect relationship.

E **Correct**. *Scramjets* parallels *a ramjet* for an effective contrast in this sentence; the active voice is clear and concise; *by reducing* shows how scramjets attain high speeds.

The correct answer is E.

100. It will not be possible to implicate melting sea ice in the coastal flooding that many global warming models have projected: just like a glass of water that will not overflow due to melting ice cubes, so melting sea ice does not increase oceanic volume.

(A) like a glass of water that will not overflow due to melting ice cubes,

(B) like melting ice cubes that do not cause a glass of water to overflow,

(C) a glass of water will not overflow because of melting ice cubes,

(D) as melting ice cubes that do not cause a glass of water to overflow,

(E) as melting ice cubes do not cause a glass of water to overflow,

Diction; Parallelism

The preposition *like* introduces nouns and noun phrases; the conjunction *as* introduces verbs or clauses, so *as* is required here. The comparative construction used here is *just as x so y; x* and *y* must be parallel. The *y* clause is written in effective subject-verb-object order: *melting sea ice does not increase oceanic volume*. The original wordy, awkward *x* clause is not parallel. To make it parallel, *melting ice cubes* should be the subject of the clause, *do not cause…to overflow* the verb phrase, and a *glass of water* the object.

A *Like* is used in place of *as*; the two elements of comparison are not parallel.

B *Like* is used in place of *as; that* violates parallelism.

C *As* or *just as* is needed to introduce the clause; the two clauses are not parallel.

D *That* violates the parallelism of the two clauses and creates an ungrammatical construction.

E **Correct**. This sentence has *just as* properly introducing the first clause, and the two clauses are parallel.

The correct answer is E.

4.0 Math Review

4.0 Math Review

To answer Quantitative Reasoning questions on the GMAT exam, you will need to be familiar with basic mathematical concepts and formulas. This chapter contains a list of the basic mathematical concepts, terms, and formulas that may appear or can be useful for answering Quantitative Reasoning questions on the GMAT exam. This chapter offers only a high-level overview, so if you find unfamiliar terms or concepts, you should consult other resources for a more detailed discussion and explanation.

Keep in mind that this knowledge of basic math, while necessary, is seldom sufficient in answering GMAT questions. Unlike traditional math problems that you may have encountered in school, GMAT Quantitative Reasoning questions require you to *apply* your knowledge of math. For example, rather than asking you to demonstrate your knowledge of prime factorization by listing the prime factors of a number, a GMAT question may require you to apply your knowledge of prime factorization and properties of exponents to simplify an algebraic expression with a radical.

To prepare for the GMAT Quantitative Reasoning section, we recommend starting with a review of the basic mathematical concepts and formulas to ensure that you have the foundational knowledge necessary for answering the questions, before moving on to practicing the application of this knowledge on real GMAT questions from past exams.

Section 4.1, "Arithmetic," includes the following topics:

1. Properties of Integers
2. Fractions
3. Decimals
4. Real Numbers
5. Ratio and Proportion
6. Percents
7. Powers and Roots of Numbers
8. Descriptive Statistics
9. Sets
10. Counting Methods
11. Discrete Probability

Section 4.2, "Algebra," does not extend beyond what is usually covered in a first-year high school algebra course. The topics included are as follows:

1. Simplifying Algebraic Expressions
2. Equations
3. Solving Linear Equations with One Unknown
4. Solving Two Linear Equations with Two Unknowns
5. Solving Equations by Factoring
6. Solving Quadratic Equations
7. Exponents
8. Inequalities
9. Absolute Value
10. Functions

Section 4.3, "Geometry," is limited primarily to measurement and intuitive geometry or spatial visualization. Extensive knowledge of theorems and the ability to construct proofs, skills that are usually developed in a formal geometry course, are not tested. The topics included in this section are the following:

1. Lines
2. Intersecting Lines and Angles
3. Perpendicular Lines
4. Parallel Lines
5. Polygons (Convex)
6. Triangles
7. Quadrilaterals
8. Circles
9. Rectangular Solids and Cylinders
10. Coordinate Geometry

Section 4.4, "Word Problems," presents examples of and solutions to the following types of word problems:

1. Rate Problems
2. Work Problems
3. Mixture Problems
4. Interest Problems
5. Discount
6. Profit
7. Sets
8. Geometry Problems
9. Measurement Problems
10. Data Interpretation

4.1 Arithmetic

1. Properties of Integers

An *integer* is any number in the set $\{\ldots -3, -2, -1, 0, 1, 2, 3, \ldots\}$. If x and y are integers and $x \neq 0$, then x is a *divisor* (*factor*) of y provided that $y = xn$ for some integer n. In this case, y is also said to be *divisible* by x or to be a *multiple* of x. For example, 7 is a divisor or factor of 28 since $28 = (7)(4)$, but 8 is not a divisor of 28 since there is no integer n such that $28 = 8n$.

If x and y are positive integers, there exist unique integers q and r, called the *quotient* and *remainder,* respectively, such that $y = xq + r$ and $0 \leq r < x$. For example, when 28 is divided by 8, the quotient is 3 and the remainder is 4 since $28 = (8)(3) + 4$. Note that y is divisible by x if and only if the remainder r is 0; for example, 32 has a remainder of 0 when divided by 8 because 32 is divisible by 8. Also, note that when a smaller integer is divided by a larger integer, the quotient is 0 and the remainder is the smaller integer. For example, 5 divided by 7 has the quotient 0 and the remainder 5 since $5 = (7)(0) + 5$.

Any integer that is divisible by 2 is an *even integer*; the set of even integers is $\{\ldots -4, -2, 0, 2, 4, 6, 8, \ldots\}$. Integers that are not divisible by 2 are *odd integers*; $\{\ldots -3, -1, 1, 3, 5, \ldots\}$ is the set of odd integers.

If at least one factor of a product of integers is even, then the product is even; otherwise the product is odd. If two integers are both even or both odd, then their sum and their difference are even. Otherwise, their sum and their difference are odd.

A *prime* number is a positive integer that has exactly two different positive divisors, 1 and itself. For example, 2, 3, 5, 7, 11, and 13 are prime numbers, but 15 is not, since 15 has four different positive divisors, 1, 3, 5, and 15. The number 1 is not a prime number since it has only one positive divisor. Every integer greater than 1 either is prime or can be uniquely expressed as a product of prime factors. For example, $14 = (2)(7)$, $81 = (3)(3)(3)(3)$, and $484 = (2)(2)(11)(11)$.

The numbers $-2, -1, 0, 1, 2, 3, 4, 5$ are *consecutive integers.* Consecutive integers can be represented by $n, n + 1, n + 2, n + 3, \ldots$, where n is an integer. The numbers 0, 2, 4, 6, 8 are *consecutive even integers,* and 1, 3, 5, 7, 9 are *consecutive odd integers.* Consecutive even integers can be represented by $2n, 2n + 2, 2n + 4, \ldots$, and consecutive odd integers can be represented by $2n + 1, 2n + 3, 2n + 5, \ldots$, where n is an integer.

Properties of the integer 1. If n is any number, then $1 \cdot n = n$, and for any number $n \neq 0$, $n \cdot \frac{1}{n} = 1$.

The number 1 can be expressed in many ways; for example, $\frac{n}{n} = 1$ for any number $n \neq 0$.

Multiplying or dividing an expression by 1, in any form, does not change the value of that expression.

Properties of the integer 0. The integer 0 is neither positive nor negative. If n is any number, then $n + 0 = n$ and $n \cdot 0 = 0$. Division by 0 is not defined.

2. Fractions

In a fraction $\frac{n}{d}$, n is the *numerator* and d is the *denominator*. The denominator of a fraction can never be 0, because division by 0 is not defined.

Two fractions are said to be *equivalent* if they represent the same number. For example, $\frac{8}{36}$ and $\frac{14}{63}$ are equivalent since they both represent the number $\frac{2}{9}$. In each case, the fraction is reduced to lowest terms by dividing both numerator and denominator by their *greatest common divisor* (gcd). The gcd of 8 and 36 is 4 and the gcd of 14 and 63 is 7.

Addition and subtraction of fractions.

Two fractions with the same denominator can be added or subtracted by performing the required operation with the numerators, leaving the denominators the same. For example, $\frac{3}{5}+\frac{4}{5}=\frac{3+4}{5}=\frac{7}{5}$ and $\frac{5}{7}-\frac{2}{7}=\frac{5-2}{7}=\frac{3}{7}$. If two fractions do not have the same denominator, express them as equivalent fractions with the same denominator. For example, to add $\frac{3}{5}$ and $\frac{4}{7}$, multiply the numerator and denominator of the first fraction by 7 and the numerator and denominator of the second fraction by 5, obtaining $\frac{21}{35}$ and $\frac{20}{35}$, respectively; $\frac{21}{35}+\frac{20}{35}=\frac{41}{35}$.

For the new denominator, choosing the *least common multiple* (lcm) of the denominators usually lessens the work. For $\frac{2}{3}+\frac{1}{6}$, the lcm of 3 and 6 is 6 (not $3\times 6=18$), so $\frac{2}{3}+\frac{1}{6}=\frac{2}{3}\times\frac{2}{2}+\frac{1}{6}=\frac{4}{6}+\frac{1}{6}=\frac{5}{6}$.

Multiplication and division of fractions.

To multiply two fractions, simply multiply the two numerators and multiply the two denominators.

For example, $\frac{2}{3}\times\frac{4}{7}=\frac{2\times 4}{3\times 7}=\frac{8}{21}$.

To divide by a fraction, invert the divisor (that is, find its *reciprocal*) and multiply. For example, $\frac{2}{3}\div\frac{4}{7}=\frac{2}{3}\times\frac{7}{4}=\frac{14}{12}=\frac{7}{6}$.

In the problem above, the reciprocal of $\frac{4}{7}$ is $\frac{7}{4}$. In general, the reciprocal of a fraction $\frac{n}{d}$ is $\frac{d}{n}$, where n and d are not zero.

Mixed numbers.

A number that consists of a whole number and a fraction, for example, $7\frac{2}{3}$, is a mixed number: $7\frac{2}{3}$ means $7+\frac{2}{3}$.

To change a mixed number into a fraction, multiply the whole number by the denominator of the fraction and add this number to the numerator of the fraction; then put the result over the denominator of the fraction. For example, $7\frac{2}{3}=\frac{(3\times 7)+2}{3}=\frac{23}{3}$.

3. Decimals

In the decimal system, the position of the period or *decimal point* determines the place value of the digits. For example, the digits in the number 7,654.321 have the following place values:

Thousands		Hundreds	Tens	Ones or units		Tenths	Hundredths	Thousandths
7	,	6	5	4	.	3	2	1

Some examples of decimals follow.

$$0.321 = \frac{3}{10} + \frac{2}{100} + \frac{1}{1,000} = \frac{321}{1,000}$$

$$0.0321 = \frac{0}{10} + \frac{3}{100} + \frac{2}{1,000} + \frac{1}{10,000} = \frac{321}{10,000}$$

$$1.56 = 1 + \frac{5}{10} + \frac{6}{100} = \frac{156}{100}$$

Sometimes decimals are expressed as the product of a number with only one digit to the left of the decimal point and a power of 10. This is called *scientific notation.* For example, 231 can be written as 2.31×10^2 and 0.0231 can be written as 2.31×10^{-2}. When a number is expressed in scientific notation, the exponent of the 10 indicates the number of places that the decimal point is to be moved in the number that is to be multiplied by a power of 10 in order to obtain the product. The decimal point is moved to the right if the exponent is positive and to the left if the exponent is negative. For example, 2.013×10^4 is equal to 20,130 and 1.91×10^{-4} is equal to 0.000191.

Addition and subtraction of decimals.

To add or subtract two decimals, the decimal points of both numbers should be lined up. If one of the numbers has fewer digits to the right of the decimal point than the other, zeros may be inserted to the right of the last digit. For example, to add 17.6512 and 653.27, set up the numbers in a column and add:

$$\begin{array}{r} 17.6512 \\ +\,653.2700 \\ \hline 670.9212 \end{array}$$

Likewise for 653.27 minus 17.6512:

$$\begin{array}{r} 653.2700 \\ -17.6512 \\ \hline 635.6188 \end{array}$$

Multiplication of decimals.

To multiply decimals, multiply the numbers as if they were whole numbers and then insert the decimal point in the product so that the number of digits to the right of the decimal point is equal to the sum of the numbers of digits to the right of the decimal points in the numbers being multiplied. For example:

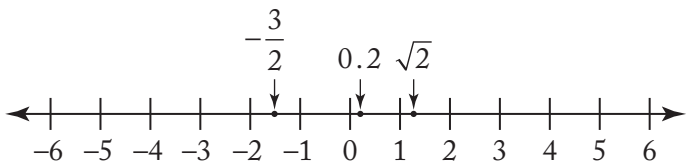
$$\begin{array}{rl} 2.09 & (2 \text{ digits to the right}) \\ \times 1.3 & (1 \text{ digit to the right}) \\ \hline 627 & \\ \\ \underline{2090} & \\ 2.717 & (2+1=3 \text{ digits to the right}) \end{array}$$

Division of decimals.

To divide a number (the dividend) by a decimal (the divisor), move the decimal point of the divisor to the right until the divisor is a whole number. Then move the decimal point of the dividend the same number of places to the right, and divide as you would by a whole number. The decimal point in the quotient will be directly above the decimal point in the new dividend. For example, to divide 698.12 by 12.4:

$$12.4\overline{)698.12}$$

will be replaced by:



$$124\overline{)6981.2}$$

and the division would proceed as follows:

$$\begin{array}{r} 56.3 \\ 124\overline{)6981.2} \\ \underline{620} \\ 781 \\ \underline{744} \\ 372 \\ \underline{372} \\ 0 \end{array}$$

4. Real Numbers

All *real* numbers correspond to points on the number line and all points on the number line correspond to real numbers. All real numbers except zero are either positive or negative.

On a number line, numbers corresponding to points to the left of zero are negative and numbers corresponding to points to the right of zero are positive. For any two numbers on the number line, the number to the left is less than the number to the right; for example, $-4 < -3 < -\frac{3}{2} < -1$, and $1 < \sqrt{2} < 2$.

To say that the number n is between 1 and 4 on the number line means that $n > 1$ and $n < 4$, that is, $1 < n < 4$. If n is "between 1 and 4, inclusive," then $1 \le n \le 4$.

The distance between a number and zero on the number line is called the *absolute value* of the number. Thus 3 and –3 have the same absolute value, 3, since they are both three units from zero. The absolute value of 3 is denoted $|3|$. Examples of absolute values of numbers are

$$|-5| = |5| = 5, \left|-\frac{7}{2}\right| = \frac{7}{2}, \text{ and } |0| = 0.$$

Note that the absolute value of any nonzero number is positive.

Here are some properties of real numbers that are used frequently. If x, y, and z are real numbers, then

(1) $x + y = y + x$ and $xy = yx$.
For example, $8 + 3 = 3 + 8 = 11$, and $(17)(5) = (5)(17) = 85$.

(2) $(x + y) + z = x + (y + z)$ and $(xy)z = x(yz)$.
For example, $(7 + 5) + 2 = 7 + (5 + 2) = 7 + (7) = 14$, and $\left(5\sqrt{3}\right)\left(\sqrt{3}\right) = (5)\left(\sqrt{3}\sqrt{3}\right) = (5)(3) = 15$.

(3) $xy + xz = x(y + z)$.
For example, $718(36) + 718(64) = 718(36 + 64) = 718(100) = 71{,}800$.

(4) If x and y are both positive, then $x + y$ and xy are positive.

(5) If x and y are both negative, then $x + y$ is negative and xy is positive.

(6) If x is positive and y is negative, then xy is negative.

(7) If $xy = 0$, then $x = 0$ or $y = 0$. For example, $3y = 0$ implies $y = 0$.

(8) $|x + y| \le |x| + |y|$. For example, if $x = 10$ and $y = 2$, then $|x + y| = |12| = 12 = |x| + |y|$; and if $x = 10$ and $y = -2$, then $|x + y| = |8| = 8 < 12 = |x| + |y|$.

5. Ratio and Proportion

The *ratio* of the number a to the number b ($b \neq 0$) is $\frac{a}{b}$.

A ratio may be expressed or represented in several ways. For example, the ratio of 2 to 3 can be written as 2 to 3, 2:3, or $\frac{2}{3}$. The order of the terms of a ratio is important. For example, the ratio of the number of months with exactly 30 days to the number with exactly 31 days is $\frac{4}{7}$, not $\frac{7}{4}$.

A *proportion* is a statement that two ratios are equal; for example, $\frac{2}{3} = \frac{8}{12}$ is a proportion. One way to solve a proportion involving an unknown is to cross multiply, obtaining a new equality. For example, to solve for n in the proportion $\frac{2}{3} = \frac{n}{12}$, cross multiply, obtaining $24 = 3n$; then divide both sides by 3, to get $n = 8$.

6. Percents

Percent means *per hundred* or *number out of 100.* A percent can be represented as a fraction with a denominator of 100, or as a decimal. For example:

$$37\% = \frac{37}{100} = 0.37.$$

To find a certain percent of a number, multiply the number by the percent expressed as a decimal or fraction. For example:

$$20\% \text{ of } 90 = 0.2 \times 90 = 18$$

or

$$20\% \text{ of } 90 = \frac{20}{100} \times 90 = \frac{1}{5} \times 90 = 18.$$

Percents greater than 100%.

Percents greater than 100% are represented by numbers greater than 1. For example:

$$300\% = \frac{300}{100} = 3$$

$$250\% \text{ of } 80 = 2.5 \times 80 = 200.$$

Percents less than 1%.

The percent 0.5% means $\frac{1}{2}$ of 1 percent. For example, 0.5% of 12 is equal to $0.005 \times 12 = 0.06$.

Percent change.

Often a problem will ask for the percent increase or decrease from one quantity to another quantity. For example, "If the price of an item increases from \$24 to \$30, what is the percent increase in price?" To find the percent increase, first find the amount of the increase; then divide this increase by the original amount, and express this quotient as a percent. In the example above, the percent increase would be found in the following way: the amount of the increase is $(30 - 24) = 6$. Therefore, the percent increase is $\frac{6}{24} = 0.25 = 25\%$.

Likewise, to find the percent decrease (for example, the price of an item is reduced from \$30 to \$24), first find the amount of the decrease; then divide this decrease by the original amount, and express this quotient as a percent. In the example above, the amount of decrease is $(30 - 24) = 6$.

Therefore, the percent decrease is $\frac{6}{30} = 0.20 = 20\%$.

Note that the percent increase from 24 to 30 is not the same as the percent decrease from 30 to 24.

In the following example, the increase is greater than 100 percent: If the cost of a certain house in 1983 was 300 percent of its cost in 1970, by what percent did the cost increase?

If n is the cost in 1970, then the percent increase is equal to $\frac{3n-n}{n}=\frac{2n}{n}=2$, or 200%.

7. Powers and Roots of Numbers

When a number k is to be used n times as a factor in a product, it can be expressed as k^n, which means the nth power of k. For example, $2^2=2\times2=4$ and $2^3=2\times2\times2=8$ are powers of 2.

Squaring a number that is greater than 1, or raising it to a higher power, results in a larger number; squaring a number between 0 and 1 results in a smaller number. For example:

$$\begin{array}{ll} 3^2=9 & (9>3) \\ \left(\frac{1}{3}\right)^2=\frac{1}{9} & \left(\frac{1}{9}<\frac{1}{3}\right) \\ (0.1)^2=0.01 & (0.01<0.1) \end{array}$$

A *square root* of a number n is a number that, when squared, is equal to n. The square root of a negative number is not a real number. Every positive number n has two square roots, one positive and the other negative, but $\sqrt{n}$ denotes the positive number whose square is n. For example, $\sqrt{9}$ denotes 3. The two square roots of 9 are $\sqrt{9}=3$ and $-\sqrt{9}=-3$.

Every real number r has exactly one real *cube root,* which is the number s such that $s^3=r$. The real cube root of r is denoted by $\sqrt[3]{r}$. Since $2^3=8$, $\sqrt[3]{8}=2$. Similarly, $\sqrt[3]{-8}=-2$, because $(-2)^3=-8$.

8. Descriptive Statistics

A list of numbers, or numerical data, can be described by various statistical measures. One of the most common of these measures is the *average,* or *(arithmetic) mean,* which locates a type of "center" for the data. The average of n numbers is defined as the sum of the n numbers divided by n. For example, the average of 6, 4, 7, 10, and 4 is $\frac{6+4+7+10+4}{5}=\frac{31}{5}=6.2$.

The *median* is another type of center for a list of numbers. To calculate the median of n numbers, first order the numbers from least to greatest; if n is odd, the median is defined as the middle number, whereas if n is even, the median is defined as the average of the two middle numbers. In the example above, the numbers, in order, are 4, 4, 6, 7, 10, and the median is 6, the middle number.

For the numbers 4, 6, 6, 8, 9, 12, the median is $\frac{6+8}{2}=7$. Note that the mean of these numbers is 7.5.

The median of a set of data can be less than, equal to, or greater than the mean. Note that for a large set of data (for example, the salaries of 800 company employees), it is often true that about half of the data is less than the median and about half of the data is greater than the median; but this is not always the case, as the following data show.

3, 5, 7, 7, 7, 7, 7, 7, 8, 9, 9, 9, 9, 9, 10, 10

Here the median is 7, but only $\frac{2}{15}$ of the data is less than the median.

The *mode* of a list of numbers is the number that occurs most frequently in the list. For example, the mode of 1, 3, 6, 4, 3, 5 is 3. A list of numbers may have more than one mode. For example, the list 1, 2, 3, 3, 3, 5, 7, 10, 10, 10, 20 has two modes, 3 and 10.

The degree to which numerical data are spread out or dispersed can be measured in many ways. The simplest measure of dispersion is the *range,* which is defined as the greatest value in the numerical data minus the least value. For example, the range of 11, 10, 5, 13, 21 is 21 – 5 = 16. Note how the range depends on only two values in the data.

One of the most common measures of dispersion is the *standard deviation.* Generally speaking, the more the data are spread away from the mean, the greater the standard deviation. The standard deviation of n numbers can be calculated as follows: (1) find the arithmetic mean, (2) find the differences between the mean and each of the n numbers, (3) square each of the differences, (4) find the average of the squared differences, and (5) take the nonnegative square root of this average. Shown below is this calculation for the data 0, 7, 8, 10, 10, which have arithmetic mean 7.

x	$x - 7$	$(x - 7)^2$
0	–7	49
7	0	0
8	1	1
10	3	9
10	3	9
	Total	68

Standard deviation $\sqrt{\frac{68}{5}} \approx 3.7$

Notice that the standard deviation depends on every data value, although it depends most on values that are farthest from the mean. This is why a distribution with data grouped closely around the mean will have a smaller standard deviation than will data spread far from the mean. To illustrate this, compare the data 6, 6, 6.5, 7.5, 9, which also have mean 7. Note that the numbers in the second set of data seem to be grouped more closely around the mean of 7 than the numbers in the first set. This is reflected in the standard deviation, which is less for the second set (approximately 1.1) than for the first set (approximately 3.7).

There are many ways to display numerical data that show how the data are distributed. One simple way is with a *frequency distribution,* which is useful for data that have values occurring with varying frequencies. For example, the 20 numbers

–4	0	0	–3	–2	–1	–1	0	–1	–4
–1	–5	0	–2	0	–5	–2	0	0	–1

are displayed on the next page in a frequency distribution by listing each different value x and the frequency f with which x occurs.

Data Value x	Frequency f
–5	2
–4	2
–3	1
–2	3
–1	5
0	7
Total	20

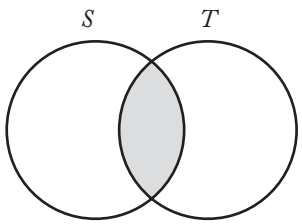
From the frequency distribution, one can readily compute descriptive statistics:

$$\text{Mean:} = \frac{(-5)(2)+(-4)(2)+(-3)(1)+(-2)(3)+(-1)(5)+(0)(7)}{20} = -1.6$$

Median: –1 (the average of the 10th and 11th numbers)

Mode: 0 (the number that occurs most frequently)

Range: 0 – (–5) = 5



$$\text{Standard deviation: } \sqrt{\frac{(-5+1.6)^2(2)+(-4+1.6)^2(2)+\ldots+(0+1.6)^2(7)}{20}} \approx 1.7$$

9. Sets

In mathematics a *set* is a collection of numbers or other objects. The objects are called the *elements* of the set. If S is a set having a finite number of elements, then the number of elements is denoted by $|S|$. Such a set is often defined by listing its elements; for example, $S = \{-5, 0, 1\}$ is a set with $|S| = 3$.
The order in which the elements are listed in a set does not matter; thus $\{-5, 0, 1\} = \{0, 1, -5\}$.
If all the elements of a set S are also elements of a set T, then S is a *subset* of T; for example, $S = \{-5, 0, 1\}$ is a subset of $T = \{-5, 0, 1, 4, 10\}$.

For any two sets A and B, the *union* of A and B is the set of all elements that are in A *or* in B *or* in both. The *intersection* of A and B is the set of all elements that are both in A *and* in B. The union is denoted by $A \cup B$ and the intersection is denoted by $A \cap B$. As an example, if $A = \{3, 4\}$ and $B = \{4, 5, 6\}$, then $A \cup B = \{3, 4, 5, 6\}$ and $A \cap B = \{4\}$. Two sets that have no elements in common are said to be *disjoint* or *mutually exclusive*.

The relationship between sets is often illustrated with a *Venn diagram* in which sets are represented by regions in a plane. For two sets S and T that are not disjoint and neither is a subset of the other, the intersection $S \cap T$ is represented by the shaded region of the diagram below.

This diagram illustrates a fact about any two finite sets S and T: the number of elements in their union equals the sum of their individual numbers of elements minus the number of elements in their intersection (because the latter are counted twice in the sum); more concisely,

$$|S \cup T| = |S| + |T| - |S \cap T|.$$

This counting method is called the general addition rule for two sets. As a special case, if S and T are disjoint, then

$$|S \cup T| = |S| + |T|$$

since $|S \cap T| = 0$.

10. Counting Methods

There are some useful methods for counting objects and sets of objects without actually listing the elements to be counted. The following principle of multiplication is fundamental to these methods.

If an object is to be chosen from a set of m objects and a second object is to be chosen from a different set of n objects, then there are mn ways of choosing both objects simultaneously.

As an example, suppose the objects are items on a menu. If a meal consists of one entree and one dessert and there are 5 entrees and 3 desserts on the menu, then there are $5 \times 3 = 15$ different meals that can be ordered from the menu. As another example, each time a coin is flipped, there are two possible outcomes, heads and tails. If an experiment consists of 8 consecutive coin flips, then the experiment has 2^8 possible outcomes, where each of these outcomes is a list of heads and tails in some order.

A symbol that is often used with the multiplication principle is the *factorial*. If n is an integer greater than 1, then n factorial, denoted by the symbol $n!$, is defined as the product of all the integers from 1 to n. Therefore,

$$2! = (1)(2) = 2,$$
$$3! = (1)(2)(3) = 6,$$
$$4! = (1)(2)(3)(4) = 24, \text{ etc.}$$

Also, by definition, $0! = 1! = 1$.

The factorial is useful for counting the number of ways that a set of objects can be ordered. If a set of n objects is to be ordered from 1st to nth, then there are n choices for the 1st object, $n - 1$ choices for the 2nd object, $n - 2$ choices for the 3rd object, and so on, until there is only 1 choice for the nth object.

Thus, by the multiplication principle, the number of ways of ordering the n objects is

$n(n-1)(n-2)\cdots(3)(2)(1) = n!$.

For example, the number of ways of ordering the letters A, B, and C is 3!, or 6:

ABC, ACB, BAC, BCA, CAB, and CBA.

These orderings are called the *permutations* of the letters A, B, and C.

A permutation can be thought of as a selection process in which objects are selected one by one in a certain order. If the order of selection is not relevant and only k objects are to be selected from a larger set of n objects, a different counting method is employed.

Specifically, consider a set of n objects from which a complete selection of k objects is to be made without regard to order, where $0 \le k \le n$. Then the number of possible complete selections of k objects is called the number of *combinations* of n objects taken k at a time and is denoted by $\binom{n}{k}$.

The value of $\binom{n}{k}$ is given by $\binom{n}{k} = \frac{n!}{k!(n-k)!}$.

Note that $\binom{n}{k}$ is the number of k-element subsets of a set with n elements. For example, if S = {A, B, C, D, E}, then the number of 2-element subsets of S, or the number of combinations of 5 letters taken 2 at a time, is $\binom{5}{2} = \frac{5!}{2!3!} = \frac{120}{(2)(6)} = 10$.

The subsets are {A, B}, {A, C}, {A, D}, {A, E}, {B, C}, {B, D}, {B, E}, {C, D}, {C, E}, and {D, E}. Note that $\binom{5}{2} = 10 = \binom{5}{3}$ because every 2-element subset chosen from a set of 5 elements corresponds to a unique 3-element subset consisting of the elements *not* chosen.

In general, $\binom{n}{k} = \binom{n}{n-k}$.

11. Discrete Probability

Many of the ideas discussed in the preceding three topics are important to the study of discrete probability. Discrete probability is concerned with *experiments* that have a finite number of *outcomes*. Given such an experiment, an *event* is a particular set of outcomes. For example, rolling a number cube with faces numbered 1 to 6 (similar to a 6-sided die) is an experiment with 6 possible outcomes: 1, 2, 3, 4, 5, or 6. One event in this experiment is that the outcome is 4, denoted {4}; another event is that the outcome is an odd number: {1, 3, 5}.

The probability that an event E occurs, denoted by $P(E)$, is a number between 0 and 1, inclusive. If E has no outcomes, then E is *impossible* and $P(E) = 0$; if E is the set of all possible outcomes of the experiment, then E is *certain* to occur and $P(E) = 1$. Otherwise, E is possible but uncertain, and $0 < P(E) < 1$. If F is a subset of E, then $P(F) \le P(E)$. In the example above, if the probability of each of the 6 outcomes is the same, then the probability of each outcome is $\frac{1}{6}$, and the outcomes are said to be

equally likely. For experiments in which all the individual outcomes are equally likely, the probability of an event E is

$$P(E) = \frac{\text{The number of outcomes in } E}{\text{The total number of possible outcomes}}.$$

In the example, the probability that the outcome is an odd number is

$$P(\{1,3,5\}) = \frac{|\{1,3,5\}|}{6} = \frac{3}{6} = \frac{1}{2}.$$

Given an experiment with events E and F, the following events are defined:
"not E" is the set of outcomes that are not outcomes in E;
"E or F" is the set of outcomes in E or F or both, that is, $E \cup F$;
"E and F" is the set of outcomes in both E and F, that is, $E \cap F$.

The probability that E does not occur is $P(\text{not } E) = 1 - P(E)$. The probability that "$E$ or F" occurs is $P(E \text{ or } F) = P(E) + P(F) - P(E \text{ and } F)$, using the general addition rule at the end of section 4.1.9 ("Sets"). For the number cube, if E is the event that the outcome is an odd number, {1, 3, 5}, and F is the event that the outcome is a prime number, {2, 3, 5}, then $P(E \text{ and } F) = P(\{3,5\}) = \frac{2}{6} = \frac{1}{3}$ and so $P(E \text{ or } F) = P(E) + P(F) - P(E \text{ and } F) = \frac{3}{6} + \frac{3}{6} - \frac{2}{6} = \frac{4}{6} = \frac{2}{3}$.
Note that the event *"E or F"* is $E \cup F = \{1, 2, 3, 5\}$, and hence $P(E \text{ or } F) = \frac{|\{1,2,3,5\}|}{6} = \frac{4}{6} = \frac{2}{3}$.

If the event *"E and F"* is impossible (that is, $E \cap F$ has no outcomes), then E and F are said to be *mutually exclusive* events, and $P(E \text{ and } F) = 0$. Then the general addition rule is reduced to $P(E \text{ or } F) = P(E) + P(F)$.

This is the special addition rule for the probability of two mutually exclusive events.

Two events A and B are said to be *independent* if the occurrence of either event does not alter the probability that the other event occurs. For one roll of the number cube, let $A = \{2, 4, 6\}$ and let $B = \{5, 6\}$. Then the probability that A occurs is $P(A) = \frac{|A|}{6} = \frac{3}{6} = \frac{1}{2}$, while, *presuming B occurs,* the probability that A occurs is

$$\frac{|A \cap B|}{|B|} = \frac{|\{6\}|}{|\{5,6\}|} = \frac{1}{2}.$$

Similarly, the probability that B occurs is $P(B) = \frac{|B|}{6} = \frac{2}{6} = \frac{1}{3}$, while, *presuming A occurs,* the probability that B occurs is

$$\frac{|B \cap A|}{|A|} = \frac{|\{6\}|}{|\{2,4,6\}|} = \frac{1}{3}.$$

Thus, the occurrence of either event does not affect the probability that the other event occurs. Therefore, A and B are independent.

The following multiplication rule holds for any independent events E and F: $P(E \text{ and } F) = P(E)P(F)$.

For the independent events A and B above, $P(A \text{ and } B) = P(A)P(B) = \left(\frac{1}{2}\right)\left(\frac{1}{3}\right) = \left(\frac{1}{6}\right)$.

Note that the event "A and B" is $A \cap B = \{6\}$, and hence $P(A \text{ and } B) = P(\{6\}) = \frac{1}{6}$. It follows from the general addition rule and the multiplication rule above that if E and F are independent, then

$$P(E \text{ or } F) = P(E) + P(F) - P(E)P(F).$$

For a final example of some of these rules, consider an experiment with events A, B, and C for which $P(A) = 0.23$, $P(B) = 0.40$, and $P(C) = 0.85$. Also, suppose that events A and B are mutually exclusive and events B and C are independent. Then

$$\begin{aligned} P(A \text{ or } B) &= P(A) + P(B) \text{ (since } A \text{ or } B \text{ are mutually exclusive)} \\ &= 0.23 + 0.40 \\ &= 0.63 \\ P(B \text{ or } C) &= P(B) + P(C) - P(B)P(C) \text{ (by independence)} \\ &= 0.40 + 0.85 - (0.40)(0.85) \\ &= 0.91 \end{aligned}$$

Note that $P(A \text{ or } C)$ and $P(A \text{ and } C)$ cannot be determined using the information given. But it can be determined that A and C are *not* mutually exclusive since $P(A) + P(C) = 1.08$, which is greater than 1, and therefore cannot equal $P(A \text{ or } C)$; from this it follows that $P(A \text{ and } C) \geq 0.08$. One can also deduce that $P(A \text{ and } C) \leq P(A) = 0.23$, since $A \cap C$ is a subset of A, and that $P(A \text{ or } C) \geq P(C) = 0.85$ since C is a subset of $A \cup C$. Thus, one can conclude that $0.85 \leq P(A \text{ or } C) \leq 1$ and $0.08 \leq P(A \text{ and } C) \leq 0.23$.

4.2 Algebra

Algebra is based on the operations of arithmetic and on the concept of an *unknown quantity,* or *variable.* Letters such as x or n are used to represent unknown quantities. For example, suppose Pam has 5 more pencils than Fred. If F represents the number of pencils that Fred has, then the number of pencils that Pam has is $F + 5$. As another example, if Jim's present salary S is increased by 7%, then his new salary is $1.07S$. A combination of letters and arithmetic operations, such as $F + 5, \frac{3x^2}{2x - 5}$, and $19x^2 - 6x + 3$, is called an *algebraic expression.*

The expression $19x^2 - 6x + 3$ consists of the *terms* $19x^2$, $-6x$, and 3, where 19 is the *coefficient* of x^2, -6 is the coefficient of x^1, and 3 is a *constant term* (or coefficient of $x^0 = 1$). Such an expression is called a *second degree* (or *quadratic*) *polynomial in x* since the highest power of x is 2. The expression $F + 5$ is a *first degree* (or *linear*) *polynomial in F* since the highest power of F is 1. The expression $\frac{3x^2}{2x - 5}$ is not a polynomial because it is not a sum of terms that are each powers of x multiplied by coefficients.

1. Simplifying Algebraic Expressions

Often when working with algebraic expressions, it is necessary to simplify them by factoring or combining *like* terms. For example, the expression $6x + 5x$ is equivalent to $(6 + 5)x$, or $11x$. In the expression $9x - 3y$, 3 is a factor common to both terms: $9x - 3y = 3(3x - y)$. In the expression $5x^2 + 6y$, there are no like terms and no common factors.

If there are common factors in the numerator and denominator of an expression, they can be divided out, provided that they are not equal to zero.

For example, if $x \neq 3$, then $\frac{x-3}{x-3}$ is equal to 1; therefore,

$$\begin{aligned}\frac{3xy-9y}{x-3} &= \frac{3y(x-3)}{x-3}\\ &= (3y)(1)\\ &= 3y\end{aligned}$$

To multiply two algebraic expressions, each term of one expression is multiplied by each term of the other expression. For example:

$$\begin{aligned}(3x-4)(9y+x) &= 3x(9y+x)-4(9y+x)\\ &= (3x)(9y)+(3x)(x)+(-4)(9y)+(-4)(x)\\ &= 27xy+3x^2-36y-4x\end{aligned}$$

An algebraic expression can be evaluated by substituting values of the unknowns in the expression. For example, if $x = 3$ and $y = -2$, then $3xy - x^2 + y$ can be evaluated as

$$3(3)(-2)-(3)^2+(-2) = -18-9-2 = -29$$

2. Equations

A major focus of algebra is to solve equations involving algebraic expressions. Some examples of such equations are

$$5x-2=9-x \quad \text{(a linear equation with one unknown)}$$

$$3x+1=y-2 \quad \text{(a linear equation with two unknowns)}$$

$$5x^2+3x-2=7x \quad \text{(a quadratic equation with one unknown)}$$

$$\frac{x(x-3)(x^2+5)}{x-4}=0 \quad \text{(an equation that is factored on one side with 0 on the other)}$$

The *solutions* of an equation with one or more unknowns are those values that make the equation true, or "satisfy the equation," when they are substituted for the unknowns of the equation. An equation may have no solution or one or more solutions. If two or more equations are to be solved together, the solutions must satisfy all the equations simultaneously.

Two equations having the same solution(s) are *equivalent equations.* For example, the equations

$$2 + x = 3$$
$$4 + 2x = 6$$

each have the unique solution $x = 1$. Note that the second equation is the first equation multiplied by 2. Similarly, the equations

$$3x - y = 6$$
$$6x - 2y = 12$$

have the same solutions, although in this case each equation has infinitely many solutions. If any value is assigned to x, then $3x - 6$ is a corresponding value for y that will satisfy both equations; for example, $x = 2$ and $y = 0$ is a solution to both equations, as is $x = 5$ and $y = 9$.

3. Solving Linear Equations with One Unknown

To solve a linear equation with one unknown (that is, to find the value of the unknown that satisfies the equation), the unknown should be isolated on one side of the equation. This can be done by performing the same mathematical operations on both sides of the equation. Remember that if the same number is added to or subtracted from both sides of the equation, this does not change the equality; likewise, multiplying or dividing both sides by the same nonzero number does not change the equality. For example, to solve the equation $\frac{5x-6}{3} = 4$ for x, the variable x can be isolated using the following steps:

$$5x - 6 = 12 \quad \text{(multiplying by 3)}$$
$$5x = 18 \quad \text{(adding 6)}$$
$$x = \frac{18}{5} \quad \text{(dividing by 5)}$$

The solution, $\frac{18}{5}$, can be checked by substituting it for x in the original equation to determine whether it satisfies that equation:

$$\frac{5\left(\frac{18}{5}\right) - 6}{3} = \frac{18-6}{3} = \frac{12}{3} = 4$$

Therefore, $x = \frac{18}{5}$ is the solution.

4. Solving Two Linear Equations with Two Unknowns

For two linear equations with two unknowns, if the equations are equivalent, then there are infinitely many solutions to the equations, as illustrated at the end of section 4.2.2 ("Equations"). If the equations are not equivalent, then they have either one unique solution or no solution. The latter case is illustrated by the two equations:

$$3x + 4y = 17$$
$$6x + 8y = 35$$

Note that $3x + 4y = 17$ implies $6x + 8y = 34$, which contradicts the second equation. Thus, no values of x and y can simultaneously satisfy both equations.

There are several methods of solving two linear equations with two unknowns. With any method, if a contradiction is reached, then the equations have no solution; if a trivial equation such as $0 = 0$ is reached, then the equations are equivalent and have infinitely many solutions. Otherwise, a unique solution can be found.

One way to solve for the two unknowns is to express one of the unknowns in terms of the other using one of the equations, and then substitute the expression into the remaining equation to obtain an equation with one unknown. This equation can be solved and the value of the unknown substituted into either of the original equations to find the value of the other unknown. For example, the following two equations can be solved for x and y.

$$\begin{aligned} (1) \quad & 3x + 2y = 11 \\ (2) \quad & x - y = 2 \end{aligned}$$

In equation (2), $x = 2 + y$. Substitute $2 + y$ in equation (1) for x:

$$\begin{aligned} 3(2 + y) + 2y &= 11 \\ 6 + 3y + 2y &= 11 \\ 6 + 5y &= 11 \\ 5y &= 5 \\ y &= 1 \end{aligned}$$

If $y = 1$, then $x - 1 = 2$ and $x = 2 + 1 = 3$.

There is another way to solve for x and y by eliminating one of the unknowns. This can be done by making the coefficients of one of the unknowns the same (disregarding the sign) in both equations and either adding the equations or subtracting one equation from the other. For example, to solve the equations

$$\begin{aligned} (1) \quad & 6x + 5y = 29 \\ (2) \quad & 4x - 3y = -6 \end{aligned}$$

by this method, multiply equation (1) by 3 and equation (2) by 5 to get

$$\begin{aligned} 18x + 15y &= 87 \\ 20x - 15y &= -30 \end{aligned}$$

Adding the two equations eliminates y, yielding $38x = 57$, or $x = \frac{3}{2}$. Finally, substituting $\frac{3}{2}$ for x in one of the equations gives $y = 4$. These answers can be checked by substituting both values into both of the original equations.

5. Solving Equations by Factoring

Some equations can be solved by factoring. To do this, first add or subtract expressions to bring all the expressions to one side of the equation, with 0 on the other side. Then try to factor the nonzero side into a product of expressions. If this is possible, then using property (7) in section 4.1.4 ("Real Numbers") each of the factors can be set equal to 0, yielding several simpler equations that possibly can be solved. The solutions of the simpler equations will be solutions of the factored equation. As an example, consider the equation $x^3 - 2x^2 + x = -5(x-1)^2$:

$$\begin{aligned} x^3 - 2x^2 + x + 5(x-1)^2 &= 0 \\ x(x^2 - 2x + 1) + 5(x-1)^2 &= 0 \\ x(x-1)^2 + 5(x-1)^2 &= 0 \\ (x+5)(x-1)^2 &= 0 \\ x + 5 = 0 \text{ or } (x-1)^2 &= 0 \\ x = -5 \text{ or } x &= 1. \end{aligned}$$

For another example, consider $\dfrac{x(x-3)(x^2+5)}{x-4} = 0$. A fraction equals 0 if and only if its numerator equals 0. Thus, $x(x-3)(x^2+5) = 0$:

$$\begin{aligned} x = 0 \text{ or } x - 3 = 0 \text{ or } x^2 + 5 &= 0 \\ x = 0 \text{ or } x = 3 \text{ or } x^2 + 5 &= 0. \end{aligned}$$

But $x^2 + 5 = 0$ has no real solution because $x^2 + 5 > 0$ for every real number. Thus, the solutions are 0 and 3.

The solutions of an equation are also called the *roots* of the equation. These roots can be checked by substituting them into the original equation to determine whether they satisfy the equation.

6. Solving Quadratic Equations

The standard form for a *quadratic equation* is

$$ax^2 + bx + c = 0,$$

where a, b, and c are real numbers and $a \neq 0$; for example:

$$\begin{aligned} x^2 + 6x + 5 &= 0 \\ 3x^2 - 2x &= 0, \text{ and} \\ x^2 + 4 &= 0 \end{aligned}$$

Some quadratic equations can easily be solved by factoring. For example:

(1)
$$\begin{aligned} x^2 + 6x + 5 &= 0 \\ (x+5)(x+1) &= 0 \\ x + 5 = 0 \text{ or } x + 1 &= 0 \\ x = -5 \text{ or } x &= -1 \end{aligned}$$

(2)
$$3x^2 - 3 = 8x$$
$$3x^2 - 8x - 3 = 0$$
$$(3x + 1)(x - 3) = 0$$
$$3x + 1 = 0 \text{ or } x - 3 = 0$$
$$x = -\frac{1}{3} \text{ or } x = 3$$

A quadratic equation has at most two real roots and may have just one or even no real root. For example, the equation $x^2 - 6x + 9 = 0$ can be expressed as $(x - 3)^2 = 0$, or $(x - 3)(x - 3) = 0$; thus the only root is 3. The equation $x^2 + 4 = 0$ has no real root; since the square of any real number is greater than or equal to zero, $x^2 + 4$ must be greater than zero.

An expression of the form $a^2 - b^2$ can be factored as $(a - b)(a + b)$.

For example, the quadratic equation $9x^2 - 25 = 0$ can be solved as follows.

$$(3x - 5)(3x + 5) = 0$$
$$3x - 5 = 0 \text{ or } 3x + 5 = 0$$
$$x = \frac{5}{3} \text{ or } x = -\frac{5}{3}$$

If a quadratic expression is not easily factored, then its roots can always be found using the *quadratic formula:* If $ax^2 + bx + c = 0$ $(a \neq 0)$, then the roots are

$$x = \frac{-b + \sqrt{b^2 - 4ac}}{2a} \text{ and } x = \frac{-b - \sqrt{b^2 - 4ac}}{2a}$$

These are two distinct real numbers unless $b^2 - 4ac \leq 0$. If $b^2 - 4ac = 0$, then these two expressions for x are equal to $-\frac{b}{2a}$, and the equation has only one root. If $b^2 - 4ac < 0$, then $\sqrt{b^2 - 4ac}$ is not a real number and the equation has no real roots.

7. Exponents

A positive integer exponent of a number or a variable indicates a product, and the positive integer is the number of times that the number or variable is a factor in the product. For example, x^5 means $(x)(x)(x)(x)(x)$; that is, x is a factor in the product 5 times.

Some rules about exponents follow.

Let x and y be any positive numbers, and let r and s be any positive integers.

(1) $(x^r)(x^s) = x^{(r+s)}$; for example, $(2^2)(2^3) = 2^{(2+3)} = 2^5 = 32$.

(2) $\frac{x^r}{x^s} = x^{(r-s)}$; for example, $\frac{4^5}{4^2} = 4^{5-2} = 4^3 = 64$.

(3) $(x^r)(y^r) = (xy)^r$; for example, $(3^3)(4^3) = 12^3 = 1{,}728$.

(4) $\left(\frac{x}{y}\right)^r = \frac{x^r}{y^r}$; for example, $\left(\frac{2}{3}\right)^3 = \frac{2^3}{3^3} = \frac{8}{27}$.

(5) $(x^r)^s = x^{rs} = (x^s)^r$; for example, $(x^3)^4 = x^{12} = (x^4)^3$.

(6) $x^{-r} = \frac{1}{x^r}$; for example, $3^{-2} = \frac{1}{3^2} = \frac{1}{9}$.

(7) $x^0 = 1$; for example, $6^0 = 1$.

(8) $x^{\frac{r}{s}} = \left(x^{\frac{1}{s}}\right)^r = \left(x^r\right)^{\frac{1}{s}} = \sqrt[s]{x^r}$; for example, $8^{\frac{2}{3}} = \left(8^{\frac{1}{3}}\right)^2 = \left(8^2\right)^{\frac{1}{3}} = \sqrt[3]{8^2} = \sqrt[3]{64} = 4$ and $9^{\frac{1}{2}} = \sqrt{9} = 3$.

It can be shown that rules 1 – 6 also apply when r and s are not integers and are not positive, that is, when r and s are any real numbers.

8. Inequalities

An *inequality* is a statement that uses one of the following symbols:

$\neq$ not equal to

$>$ greater than

$\geq$ greater than or equal to

$<$ less than

$\leq$ less than or equal to

Some examples of inequalities are $5x - 3 < 9$, $6x \geq y$, and $\frac{1}{2} < \frac{3}{4}$. Solving a linear inequality with one unknown is similar to solving an equation; the unknown is isolated on one side of the inequality. As in solving an equation, the same number can be added to or subtracted from both sides of the inequality, or both sides of an inequality can be multiplied or divided by a positive number without changing the truth of the inequality. However, multiplying or dividing an inequality by a negative number reverses the order of the inequality. For example, $6 > 2$, but $(-1)(6) < (-1)(2)$.

To solve the inequality $3x - 2 > 5$ for x, isolate x by using the following steps:

$$\begin{aligned} 3x - 2 &> 5 \\ 3x &> 7 \quad \text{(adding 2 to both sides)} \\ x &> \frac{7}{3} \quad \text{(dividing both sides by 3)} \end{aligned}$$

To solve the inequality $\frac{5x-1}{-2} < 3$ for x, isolate x by using the following steps:

$$\begin{aligned} &\frac{5x-1}{-2} < 3 \\ &5x - 1 > -6 \quad \text{(multiplying both sides by } -2) \\ &5x > -5 \quad \text{(adding 1 to both sides)} \\ &x > -1 \quad \text{(dividing both sides by 5)} \end{aligned}$$

9. Absolute Value

The absolute value of x, denoted $|x|$, is defined to be x if $x \geq 0$ and $-x$ if $x < 0$. Note that $\sqrt{x^2}$ denotes the nonnegative square root of x^2, and so $\sqrt{x^2} = |x|$.

10. Functions

An algebraic expression in one variable can be used to define a *function* of that variable. A function is denoted by a letter such as f or g along with the variable in the expression. For example, the expression $x^3 - 5x^2 + 2$ defines a function f that can be denoted by

$$f(x) = x^3 - 5x^2 + 2.$$

The expression $\frac{2z+7}{\sqrt{z+1}}$ defines a function g that can be denoted by

$$g(z) = \frac{2z+7}{\sqrt{z+1}}.$$

The symbols "$f(x)$" or "$g(z)$" do not represent products; each is merely the symbol for an expression, and is read "f of x" or "g of z."

Function notation provides a short way of writing the result of substituting a value for a variable. If $x = 1$ is substituted in the first expression, the result can be written $f(1) = -2$, and $f(1)$ is called the "value of f at $x = 1$." Similarly, if $z = 0$ is substituted in the second expression, then the value of g at $z = 0$ is $g(0) = 7$.

Once a function $f(x)$ is defined, it is useful to think of the variable x as an input and $f(x)$ as the corresponding output. In any function there can be no more than one output for any given input. However, more than one input can give the same output; for example, if $h(x) = |x + 3|$, then $h(-4) = 1 = h(-2)$.

The set of all allowable inputs for a function is called the *domain* of the function. For f and g defined above, the domain of f is the set of all real numbers and the domain of g is the set of all numbers greater than -1. The domain of any function can be arbitrarily specified, as in the function defined by "$h(x) = 9x - 5$ for $0 \leq x \leq 10$." Without such a restriction, the domain is assumed to be all values of x that result in a real number when substituted into the function.

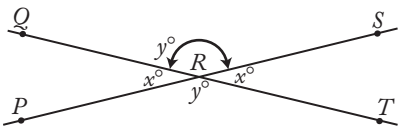
The domain of a function can consist of only the positive integers and possibly 0. For example, $a(n) = n^2 + \frac{n}{5}$ for $n = 0, 1, 2, 3, \ldots$.

Such a function is called a *sequence* and $a(n)$ is denoted by a_n. The value of the sequence a_n at $n = 3$ is $a_3 = 3^2 + \frac{3}{5} = 9.60$. As another example, consider the sequence defined by $b_n = (-1)^n (n!)$ for $n = 1, 2, 3, \ldots$. A sequence like this is often indicated by listing its values in the order $b_1, b_2, b_3, \ldots, b_n, \ldots$ as follows:

$-1, 2, -6, \ldots, (-1)^n(n!), \ldots,$ and $(-1)^n(n!)$ is called the nth term of the sequence.

4.3 Geometry

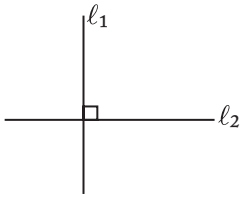
1. Lines



In geometry, the word "line" refers to a straight line that extends without end in both directions.

The line above can be referred to as line PQ or line ℓ. The part of the line from P to Q is called a *line segment*. P and Q are the *endpoints* of the segment. The notation $\overline{PQ}$ is used to denote line segment PQ and PQ is used to denote the length of the segment.

2. Intersecting Lines and Angles

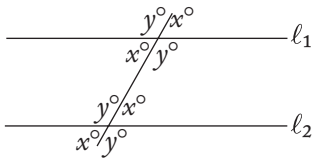


If two lines intersect, the opposite angles are called *vertical angles* and have the same measure. In the figure

$\angle PRQ$ and $\angle SRT$ are vertical angles and $\angle QRS$ and $\angle PRT$ are vertical angles. Also, $x + y = 180°$ since PRS is a straight line.

3. Perpendicular Lines

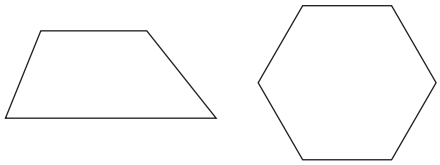
An angle that has a measure of 90° is a *right angle.* If two lines intersect at right angles, the lines are *perpendicular.* For example:



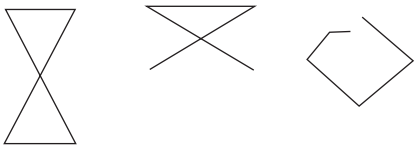
ℓ_1 and ℓ_2 above are perpendicular, denoted by $\ell_1 \perp \ell_2$. A right angle symbol in an angle of intersection indicates that the lines are perpendicular.

4. Parallel Lines

If two lines that are in the same plane do not intersect, the two lines are *parallel.* In the figure



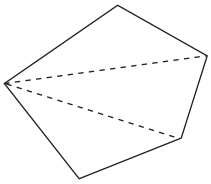
lines ℓ_1 and ℓ_2 are parallel, denoted by $\ell_1 \parallel \ell_2$. If two parallel lines are intersected by a third line, as shown below, then the angle measures are related as indicated, where $x + y = 180°$.



5. Polygons (Convex)

A *polygon* is a closed plane figure formed by three or more line segments, called the *sides* of the polygon. Each side intersects exactly two other sides at their endpoints. The points of intersection of the sides are *vertices*. The term "polygon" will be used to mean a convex polygon, that is, a polygon in which each interior angle has a measure of less than 180°.

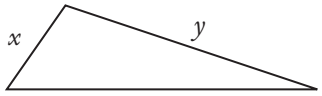
The following figures are polygons:



The following figures are not polygons:

A polygon with three sides is a *triangle*; with four sides, a *quadrilateral*; with five sides, a *pentagon*; and with six sides, a *hexagon*.

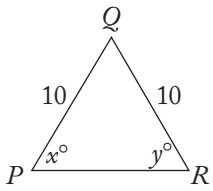
The sum of the interior angle measures of a triangle is 180°. In general, the sum of the interior angle measures of a polygon with n sides is equal to $(n - 2)180°$. For example, this sum for a pentagon is $(5 - 2)180° = (3)180° = 540°$.



Note that a pentagon can be partitioned into three triangles and therefore the sum of the angle measures can be found by adding the sum of the angle measures of three triangles.

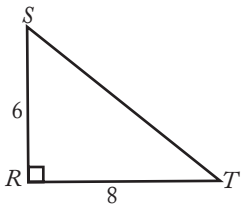
The *perimeter* of a polygon is the sum of the lengths of its sides.

The commonly used phrase "area of a triangle" (or any other plane figure) is used to mean the area of the region enclosed by that figure.

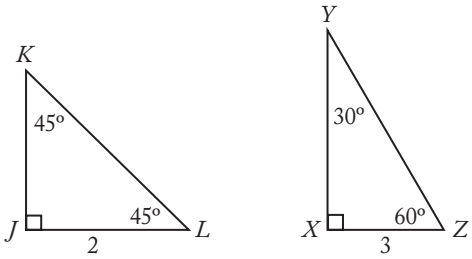


6. Triangles

There are several special types of triangles with important properties. But one property that all triangles share is that the sum of the lengths of any two of the sides is greater than the length of the third side, as illustrated below.



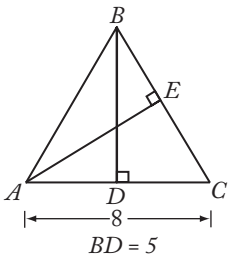
$x + y > z$, $x + z > y$, and $y + z > x$



An *equilateral* triangle has all sides of equal length. All angles of an equilateral triangle have equal measure. An *isosceles* triangle has at least two sides of the same length. If two sides of a triangle have the same length, then the two angles opposite those sides have the same measure. Conversely, if two angles of a triangle have the same measure, then the sides opposite those angles have the same length. In isosceles triangle PQR below, $x = y$ since $PQ = QR$.

A triangle that has a right angle is a *right* triangle. In a right triangle, the side opposite the right angle is the *hypotenuse,* and the other two sides are the *legs.* An important theorem concerning right triangles is the *Pythagorean theorem,* which states: In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs.

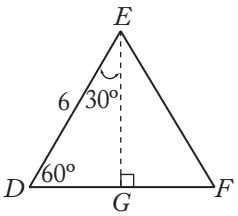
In the figure above, ΔRST is a right triangle, so $(RS)^2 + (RT)^2 = (ST)^2$. Here, $RS = 6$ and $RT = 8$, so $ST = 10$, since $6^2 + 8^2 = 36 + 64 = 100 = (ST)^2$ and $ST = \sqrt{100}$. Any triangle in which the lengths of the sides are in the ratio 3:4:5 is a right triangle. In general, if a, b, and c are the lengths of the sides of a triangle and $a^2 + b^2 = c^2$, then the triangle is a right triangle.



In 45°– 45°– 90° triangles, the lengths of the sides are in the ratio $1:1:\sqrt{2}$. For example, in ΔJKL, if $JL = 2$, then $JK = 2$ and $KL = 2\sqrt{2}$. In 30°– 60°– 90° triangles, the lengths of the sides are in the ratio $1:\sqrt{3}:2$. For example, in ΔXYZ, if $XZ = 3$, then $XY = 3\sqrt{3}$ and $YZ = 6$.

The *altitude* of a triangle is the segment drawn from a vertex perpendicular to the side opposite that vertex. Relative to that vertex and altitude, the opposite side is called the *base*.

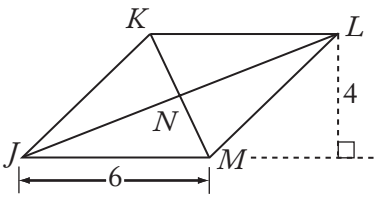
The area of a triangle is equal to:



$$\frac{(\text{the length of the altitude}) \times (\text{the length of the base})}{2}$$

In ΔABC, $\overline{BD}$ is the altitude to base $\overline{AC}$ and $\overline{AE}$ is the altitude to base $\overline{BC}$. The area of ΔABC is equal to

$$\frac{BD \times AC}{2} = \frac{5 \times 8}{2} = 20.$$



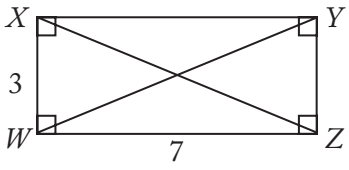
The area is also equal to $\frac{AE \times BC}{2}$. If ΔABC above is isosceles and $AB = BC$, then altitude $\overline{BD}$ bisects the base; that is, $AD = DC = 4$. Similarly, any altitude of an equilateral triangle bisects the side to which it is drawn.

In equilateral triangle DEF, if $DE = 6$, then $DG = 3$ and $EG = 3\sqrt{3}$. The area of ΔDEF is equal to $\frac{3\sqrt{3} \times 6}{2} = 9\sqrt{3}$.

7. Quadrilaterals

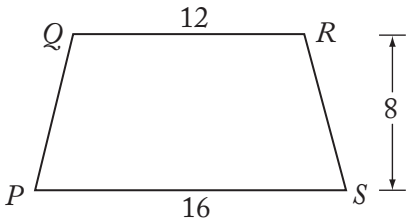
A polygon with four sides is a *quadrilateral.* A quadrilateral in which both pairs of opposite sides are parallel is a *parallelogram*. The opposite sides of a parallelogram also have equal length.

In parallelogram *JKLM*, $\overline{JK} \parallel \overline{LM}$ and $JK = LM$; $\overline{KL} \parallel \overline{JM}$ and $KL = JM$.



The diagonals of a parallelogram bisect each other (that is, $KN = NM$ and $JN = NL$).

The area of a parallelogram is equal to



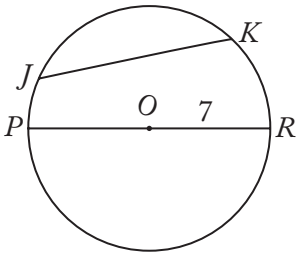
(the length of the altitude) × (the length of the base).

The area of *JKLM* is equal to $4 \times 6 = 24$.

A parallelogram with right angles is a *rectangle,* and a rectangle with all sides of equal length is a *square.*

The perimeter of *WXYZ* = 2(3) + 2(7) = 20 and the area of *WXYZ* is equal to $3 \times 7 = 21$. The diagonals of a rectangle are equal; therefore $WY = XZ = \sqrt{9+49} = \sqrt{58}$.

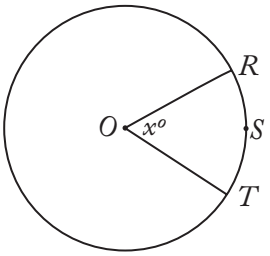
A quadrilateral with two sides that are parallel, as shown above, is a *trapezoid.* The area of trapezoid *PQRS* may be calculated as follows:



$$\frac{1}{2}(\text{the sum of the lengths of the bases})(\text{the height}) = \frac{1}{2}(QR + PS)(8) = \frac{1}{2}(28 \times 8) = 112.$$

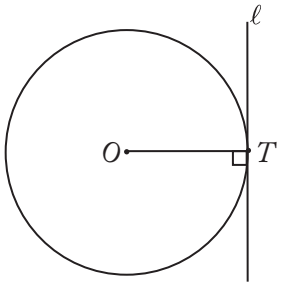
8. Circles

A *circle* is a set of points in a plane that are all located the same distance from a fixed point (the *center* of the circle).



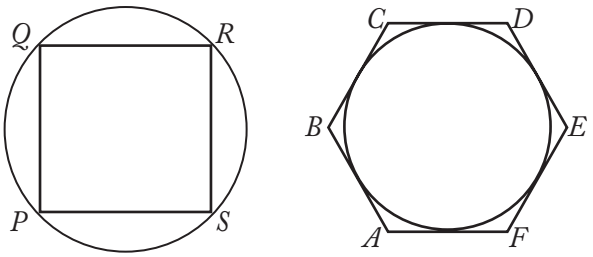
A *chord* of a circle is a line segment that has its endpoints on the circle. A chord that passes through the center of the circle is a *diameter* of the circle. A *radius* of a circle is a segment from the center of the circle to a point on the circle. The words "diameter" and "radius" are also used to refer to the lengths of these segments.

The *circumference* of a circle is the distance around the circle. If r is the radius of the circle, then the circumference is equal to $2\pi r$, where π is approximately $\frac{22}{7}$ or 3.14. The *area* of a circle of radius r is equal to πr^2.



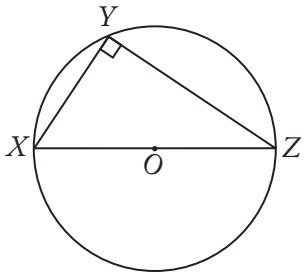
In the circle above, O is the center of the circle and $\overline{JK}$ and $\overline{PR}$ are chords. $\overline{PR}$ is a diameter and $\overline{OR}$ is a radius. If $OR = 7$, then the circumference of the circle is $2\pi(7) = 14\pi$ and the area of the circle is $\pi(7)^2 = 49\pi$.

The number of degrees of arc in a circle (or the number of degrees in a complete revolution) is 360.



In the circle with center O above, the length of arc RST is $\frac{x}{360}$ of the circumference of the circle; for example, if $x = 60$, then arc RST has length $\frac{1}{6}$ of the circumference of the circle.

A line that has exactly one point in common with a circle is said to be *tangent* to the circle, and that common point is called the *point of tangency*. A radius or diameter with an endpoint at the point of tangency is perpendicular to the tangent line, and, conversely, a line that is perpendicular to a radius or diameter at one of its endpoints is tangent to the circle at that endpoint.



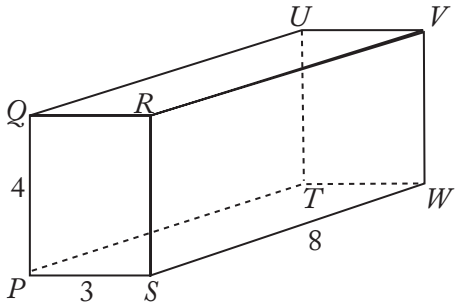
The line ℓ above is tangent to the circle and radius $\overline{OT}$ is perpendicular to ℓ.

If each vertex of a polygon lies on a circle, then the polygon is *inscribed* in the circle and the circle is *circumscribed* about the polygon. If each side of a polygon is tangent to a circle, then the polygon is *circumscribed* about the circle and the circle is *inscribed* in the polygon.

In the figure above, quadrilateral *PQRS* is inscribed in a circle and hexagon *ABCDEF* is circumscribed about a circle.

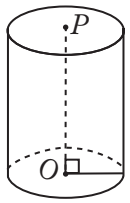
If a triangle is inscribed in a circle so that one of its sides is a diameter of the circle, then the triangle is a right triangle.

In the circle above, $\overline{XZ}$ is a diameter and the measure of $\angle XYZ$ is 90°.



9. Rectangular Solids and Cylinders

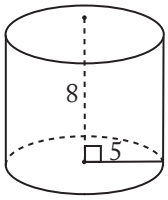
A *rectangular solid* is a three-dimensional figure formed by 6 rectangular surfaces, as shown below. Each rectangular surface is a *face*. Each solid or dotted line segment is an *edge,* and each point at which the edges meet is a *vertex.* A rectangular solid has 6 faces, 12 edges, and 8 vertices. Opposite faces are parallel rectangles that have the same dimensions. A rectangular solid in which all edges are of equal length is a *cube.*



The *surface area* of a rectangular solid is equal to the sum of the areas of all the faces. The *volume* is equal to

(length) × (width) × (height);

in other words, (area of base) × (height).

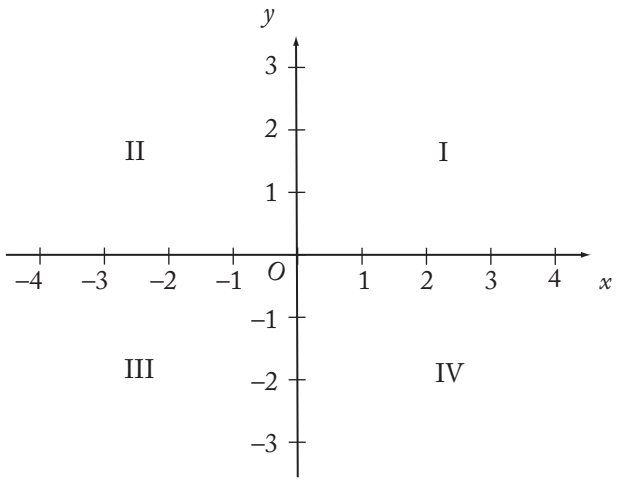


In the rectangular solid above, the dimensions are 3, 4, and 8. The surface area is equal to $2(3 \times 4) + 2(3 \times 8) + 2(4 \times 8) = 136$. The volume is equal to $3 \times 4 \times 8 = 96$.

The figure above is a right circular *cylinder*. The two bases are circles of the same size with centers O and P, respectively, and altitude (height) $\overline{OP}$ is perpendicular to the bases. The surface area of a right circular cylinder with a base of radius r and height h is equal to $2(\pi r^2) + 2\pi rh$ (the sum of the areas of the two bases plus the area of the curved surface).

The volume of a cylinder is equal to $\pi r^2 h$, that is,

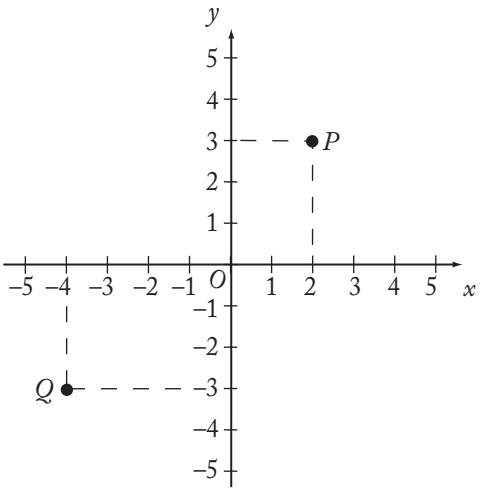
(area of base) × (height).



In the cylinder above, the surface area is equal to

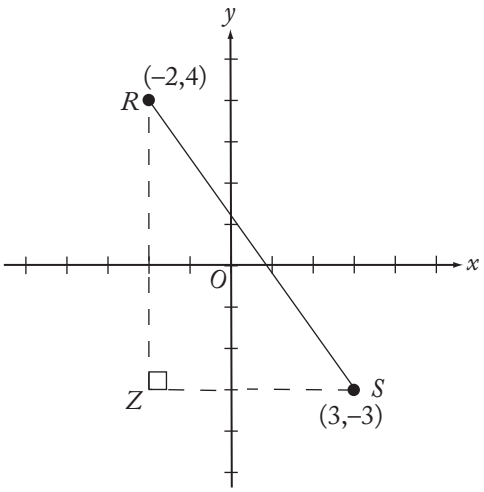
$$2(25\pi) + 2\pi(5)(8) = 130\pi,$$

and the volume is equal to



$$25\pi(8) = 200\pi.$$

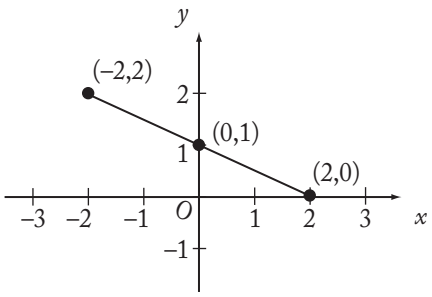
10. Coordinate Geometry



The figure above shows the (rectangular) *coordinate plane*. The horizontal line is called the *x-axis* and the perpendicular vertical line is called the *y-axis*. The point at which these two axes intersect, designated O, is called the *origin*. The axes divide the plane into four quadrants, I, II, III, and IV, as shown.

Each point in the plane has an *x-coordinate* and a *y-coordinate*. A point is identified by an ordered pair (x,y) of numbers in which the x-coordinate is the first number and the y-coordinate is the second number.

In the graph above, the (x,y) coordinates of point P are (2,3) since P is 2 units to the right of the y-axis (that is, $x = 2$) and 3 units above the x-axis (that is, $y = 3$). Similarly, the (x,y) coordinates of point Q are (–4,–3). The origin O has coordinates (0,0).



One way to find the distance between two points in the coordinate plane is to use the Pythagorean theorem.

To find the distance between points R and S using the Pythagorean theorem, draw the triangle as shown. Note that Z has (x,y) coordinates (–2,–3), $RZ = 7$, and $ZS = 5$. Therefore, the distance between R and S is equal to

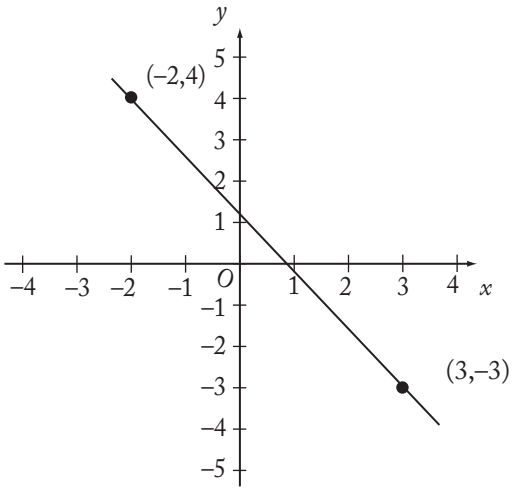
$$\sqrt{7^2 + 5^2} = \sqrt{74}.$$

For a line in the coordinate plane, the coordinates of each point on the line satisfy a linear equation of the form $y = mx + b$ (or the form $x = a$ if the line is vertical). For example, each point on the line on the next page satisfies the equation $y = -\frac{1}{2}x + 1$. One can verify this for the points (–2,2), (2,0), and (0,1) by substituting the respective coordinates for x and y in the equation.

In the equation $y = mx + b$ of a line, the coefficient m is the *slope* of the line and the constant term b is the *y-intercept* of the line. For any two points on the line, the slope is defined to be the ratio of the difference in the y-coordinates to the difference in the x-coordinates. Using $(-2, 2)$ and $(2, 0)$ above, the slope is

$$\frac{\text{The difference in the } y\text{-coordinates}}{\text{The difference in the } x\text{-coordinates}} = \frac{0-2}{2-(-2)} = \frac{-2}{4} = -\frac{1}{2}.$$

The y-intercept is the y-coordinate of the point at which the line intersects the y-axis. For the line above, the y-intercept is 1, and this is the resulting value of y when x is set equal to 0 in the equation $y = -\frac{1}{2}x + 1$. The *x-intercept* is the x-coordinate of the point at which the line intersects the x-axis. The x-intercept can be found by setting $y = 0$ and solving for x. For the line $y = -\frac{1}{2}x + 1$, this gives



$$-\frac{1}{2}x + 1 = 0$$

$$-\frac{1}{2}x = -1$$

$$x = 2.$$

Thus, the x-intercept is 2.

Given any two points (x_1,y_1) and (x_2,y_2) with $x_1 \neq x_2$, the equation of the line passing through these points can be found by applying the definition of slope. Since the slope is $m = \frac{y_2 - y_1}{x_2 - x_1}$, then using a point known to be on the line, say (x_1,y_1), any point (x,y) on the line must satisfy $\frac{y - y_1}{x - x_1} = m$, or $y - y_1 = m(x - x_1)$. (Using (x_2,y_2) as the known point would yield an equivalent equation.) For example, consider the points $(-2,4)$ and $(3,-3)$ on the line below.

The slope of this line is $\frac{-3-4}{3-(-2)}=\frac{-7}{5}$, so an equation of this line can be found using the point (3,–3) as follows:

$$y-(-3)=-\frac{7}{5}(x-3)$$
$$y+3=-\frac{7}{5}x+\frac{21}{5}$$
$$y=-\frac{7}{5}x+\frac{6}{5}$$

The y-intercept is $\frac{6}{5}$. The *x-intercept* can be found as follows:

$$0=-\frac{7}{5}x+\frac{6}{5}$$
$$\frac{7}{5}x=\frac{6}{5}$$
$$x=\frac{6}{7}$$

Both of these intercepts can be seen on the graph.

If the slope of a line is negative, the line slants downward from left to right; if the slope is positive, the line slants upward. If the slope is 0, the line is horizontal; the equation of such a line is of the form $y = b$ since $m = 0$. For a vertical line, slope is not defined, and the equation is of the form $x = a$, where a is the x-intercept.

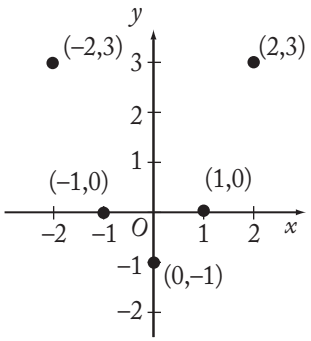
There is a connection between graphs of lines in the coordinate plane and solutions of two linear equations with two unknowns. If two linear equations with unknowns x and y have a unique solution, then the graphs of the equations are two lines that intersect in one point, which is the solution. If the equations are equivalent, then they represent the same line with infinitely many points or solutions. If the equations have no solution, then they represent parallel lines, which do not intersect.

There is also a connection between functions (see section 4.2.10) and the coordinate plane. If a function is graphed in the coordinate plane, the function can be understood in different and useful ways. Consider the function defined by

$$f(x) = -\frac{7}{5}x + \frac{6}{5}.$$

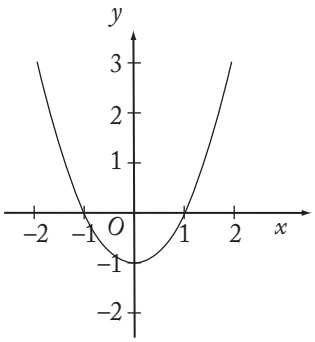
If the value of the function, $f(x)$, is equated with the variable y, then the graph of the function in the xy-coordinate plane is simply the graph of the equation

$$y = -\frac{7}{5}x + \frac{6}{5}$$



shown above. Similarly, any function $f(x)$ can be graphed by equating y with the value of the function:

$$y = f(x).$$



So for any x in the domain of the function f, the point with coordinates $(x, f(x))$ is on the graph of f, and the graph consists entirely of these points.

As another example, consider a quadratic polynomial function defined by $f(x) = x^2 - 1$. One can plot several points $(x, f(x))$ on the graph to understand the connection between a function and its graph:

x	$f(x)$
–2	3
–1	0
0	–1
1	0
2	3

If all the points were graphed for $-2 \le x \le 2$, then the graph would appear as follows.

The graph of a quadratic function is called a *parabola* and always has the shape of the curve above, although it may be upside down or have a greater or lesser width. Note that the roots of the equation $f(x) = x^2 - 1 = 0$ are $x = 1$ and $x = -1$; these coincide with the x-intercepts since x-intercepts are found by setting $y = 0$ and solving for x. Also, the y-intercept is $f(0) = -1$ because this is the value of y corresponding to $x = 0$. For any function f, the x-intercepts are the solutions of the equation $f(x) = 0$ and the y-intercept is the value $f(0)$.

4.4 Word Problems

Many of the principles discussed in this chapter are used to solve word problems. The following discussion of word problems illustrates some of the techniques and concepts used in solving such problems.

1. Rate Problems

The distance that an object travels is equal to the product of the average speed at which it travels and the amount of time it takes to travel that distance, that is,

$$\text{Rate} \times \text{Time} = \text{Distance}.$$

Example 1: If a car travels at an average speed of 70 kilometers per hour for 4 hours, how many kilometers does it travel?

Solution: Since rate × time = distance, simply multiply 70 km/hour × 4 hours. Thus, the car travels 280 kilometers in 4 hours.

To determine the average rate at which an object travels, divide the total distance traveled by the total amount of traveling time.

Example 2: On a 400-mile trip, Car X traveled half the distance at 40 miles per hour (mph) and the other half at 50 mph. What was the average speed of Car X ?

Solution: First it is necessary to determine the amount of traveling time. During the first 200 miles, the car traveled at 40 mph; therefore, it took $\frac{200}{40} = 5$ hours to travel the first 200 miles.

During the second 200 miles, the car traveled at 50 mph; therefore, it took $\frac{200}{50} = 4$ hours to travel the second 200 miles. Thus, the average speed of Car X was $\frac{400}{9} = 44\frac{4}{9}$ mph. Note that the average speed is *not* $\frac{40+50}{2} = 45$.

Some rate problems can be solved by using ratios.

Example 3: If 5 shirts cost \$44, then, at this rate, what is the cost of 8 shirts?

Solution: If c is the cost of the 8 shirts, then $\frac{5}{44} = \frac{8}{c}$. Cross multiplication results in the equation

$$5c = 8 \times 44 = 352$$

$$c = \frac{352}{5} = 70.40$$

The 8 shirts cost \$70.40.

2. Work Problems

In a work problem, the rates at which certain persons or machines work alone are usually given, and it is necessary to compute the rate at which they work together (or vice versa).

The basic formula for solving work problems is $\frac{1}{r} + \frac{1}{s} = \frac{1}{h}$, where r and s are, for example, the number of hours it takes Rae and Sam, respectively, to complete a job when working alone, and h is the number of hours it takes Rae and Sam to do the job when working together. The reasoning is that in 1 hour Rae does $\frac{1}{r}$ of the job, Sam does $\frac{1}{s}$ of the job, and Rae and Sam together do $\frac{1}{h}$ of the job.

Example 1: If Machine X can produce 1,000 bolts in 4 hours and Machine Y can produce 1,000 bolts in 5 hours, in how many hours can Machines X and Y, working together at these constant rates, produce 1,000 bolts?

Solution:

$$\frac{1}{4} + \frac{1}{5} = \frac{1}{h}$$

$$\frac{5}{20} + \frac{4}{20} = \frac{1}{h}$$

$$\frac{9}{20} = \frac{1}{h}$$

$$9h = 20$$

$$h = \frac{20}{9} = 2\frac{2}{9}$$

Working together, Machines X and Y can produce 1,000 bolts in $2\frac{2}{9}$ hours.

Example 2: If Art and Rita can do a job in 4 hours when working together at their respective constant rates and Art can do the job alone in 6 hours, in how many hours can Rita do the job alone?

Solution:

$$\frac{1}{6}+\frac{1}{R}=\frac{1}{4}$$
$$\frac{R+6}{6R}=\frac{1}{4}$$
$$4R+24=6R$$
$$24=2R$$
$$12=R$$

Working alone, Rita can do the job in 12 hours.

3. Mixture Problems

In mixture problems, substances with different characteristics are combined, and it is necessary to determine the characteristics of the resulting mixture.

Example 1: If 6 pounds of nuts that cost \$1.20 per pound are mixed with 2 pounds of nuts that cost \$1.60 per pound, what is the cost per pound of the mixture?

Solution: The total cost of the 8 pounds of nuts is

$$6(\$1.20)+2(\$1.60)=\$10.40.$$

The cost per pound is $\frac{\$10.40}{8}=\$1.30.$

Example 2: How many liters of a solution that is 15 percent salt must be added to 5 liters of a solution that is 8 percent salt so that the resulting solution is 10 percent salt?

Solution: Let n represent the number of liters of the 15% solution. The amount of salt in the 15% solution $[0.15n]$ plus the amount of salt in the 8% solution $[(0.08)(5)]$ must be equal to the amount of salt in the 10% mixture $[0.10(n+5)]$. Therefore,

$$0.15n+0.08(5)=0.10(n+5)$$
$$15n+40=10n+50$$
$$5n=10$$
$$n=2 \text{ liters}$$

Two liters of the 15% salt solution must be added to the 8% solution to obtain the 10% solution.

4. Interest Problems

Interest can be computed in two basic ways. With simple annual interest, the interest is computed on the principal only and is equal to (principal) × (interest rate) × (time). If interest is compounded, then interest is computed on the principal as well as on any interest already earned.

Example 1: If $8,000 is invested at 6 percent simple annual interest, how much interest is earned after 3 months?

Solution: Since the annual interest rate is 6%, the interest for 1 year is

$$(0.06)(\$8,000) = \$480.$$

The interest earned in 3 months is $\frac{3}{12}(\$480) = \$120.$

Example 2: If $10,000 is invested at 10 percent annual interest, compounded semiannually, what is the balance after 1 year?

Solution: The balance after the first 6 months would be

$$10,000 + (10,000)(0.05) = \$10,500.$$

The balance after one year would be $10,500 + (10,500)(0.05) = \$11,025.$

Note that the interest rate for each 6-month period is 5%, which is half of the 10% annual rate. The balance after one year can also be expressed as

$$10,000\left(1 + \frac{0.10}{2}\right)^2 \text{ dollars.}$$

5. Discount

If a price is discounted by n percent, then the price becomes $(100 - n)$ percent of the original price.

Example 1: A certain customer paid $24 for a dress. If that price represented a 25 percent discount on the original price of the dress, what was the original price of the dress?

Solution: If p is the original price of the dress, then $0.75p$ is the discounted price and $0.75p = \$24$, or $p = \$32$. The original price of the dress was $32.

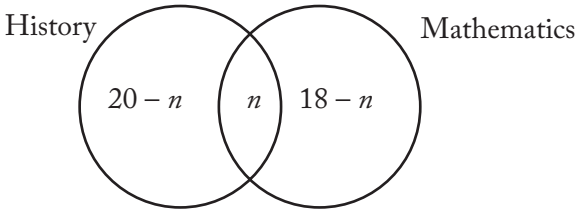
Example 2: The price of an item is discounted by 20 percent and then this reduced price is discounted by an additional 30 percent. These two discounts are equal to an overall discount of what percent?

Solution: If p is the original price of the item, then $0.8p$ is the price after the first discount. The price after the second discount is $(0.7)(0.8)\ p = 0.56p$. This represents an overall discount of 44 percent (100% – 56%).

6. Profit

Gross profit is equal to revenues minus expenses, or selling price minus cost.

Example: A certain appliance costs a merchant $30. At what price should the merchant sell the appliance in order to make a gross profit of 50 percent of the cost of the appliance?



Solution: If s is the selling price of the appliance, then $s - 30 = (0.5)(30)$, or $s = \$45$. The merchant should sell the appliance for $45.

7. Sets

If S is the set of numbers 1, 2, 3, and 4, you can write $S = \{1, 2, 3, 4\}$. Sets can also be represented by Venn diagrams. That is, the relationship among the members of sets can be represented by circles.

Example 1: Each of 25 people is enrolled in history, mathematics, or both. If 20 are enrolled in history and 18 are enrolled in mathematics, how many are enrolled in both history and mathematics?

Solution: The 25 people can be divided into three sets: those who study history only, those who study mathematics only, and those who study history and mathematics. Thus a Venn diagram may be drawn as follows, where n is the number of people enrolled in both courses, $20 - n$ is the number enrolled in history only, and $18 - n$ is the number enrolled in mathematics only.

Since there is a total of 25 people, $(20 - n) + n + (18 - n) = 25$, or $n = 13$. Thirteen people are enrolled in both history and mathematics. Note that $20 + 18 - 13 = 25$, which is the general addition rule for two sets (see section 4.1.9).

Example 2: In a certain production lot, 40 percent of the toys are red and the remaining toys are green. Half of the toys are small and half are large. If 10 percent of the toys are red and small, and 40 toys are green and large, how many of the toys are red and large?

Solution: For this kind of problem, it is helpful to organize the information in a table:

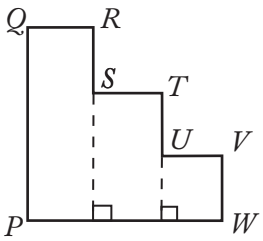
	Red	Green	Total
Small	10%		50%
Large			50%
Total	40%	60%	100%

The numbers in the table are the percentages given. The following percentages can be computed on the basis of what is given:

	Red	Green	Total
Small	10%	40%	50%
Large	30%	20%	50%
Total	40%	60%	100%

Since 20% of the number of toys (n) are green and large, $0.20n = 40$ (40 toys are green and large), or $n = 200$. Therefore, 30% of the 200 toys, or $(0.3)(200) = 60$, are red and large.

8. Geometry Problems



The following is an example of a word problem involving geometry.

Example:

The figure above shows an aerial view of a piece of land. If all angles shown are right angles, what is the perimeter of the piece of land?

Solution: For reference, label the figure as

If all the angles are right angles, then $QR + ST + UV = PW$, and $RS + TU + VW = PQ$. Hence, the perimeter of the land is $2PW + 2PQ = 2 \times 200 + 2 \times 200 = 800$ meters.

9. Measurement Problems

Some questions on the GMAT involve metric units of measure, whereas others involve English units of measure. However, except for units of time, if a question requires conversion from one unit of measure to another, the relationship between those units will be given.

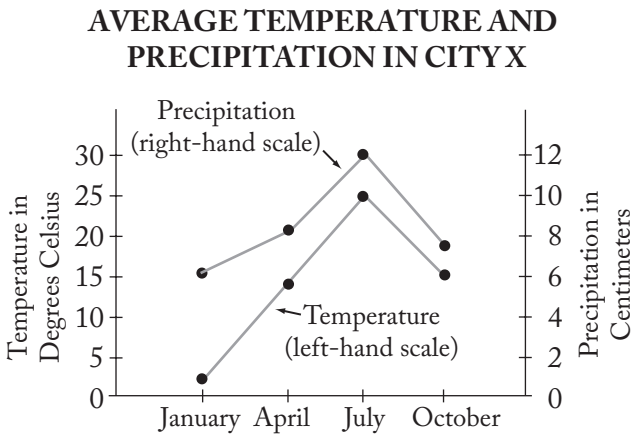
Example: A train travels at a constant rate of 25 meters per second. How many kilometers does it travel in 5 minutes? (1 kilometer = 1,000 meters)

Solution: In 1 minute the train travels (25)(60) = 1,500 meters, so in 5 minutes it travels 7,500 meters. Since 1 kilometer = 1,000 meters, it follows that 7,500 meters equals $\frac{7,500}{1,000}$, or 7.5 kilometers.

10. Data Interpretation

Occasionally a question or set of questions will be based on data provided in a table or graph. Some examples of tables and graphs are given below.

Example 1:



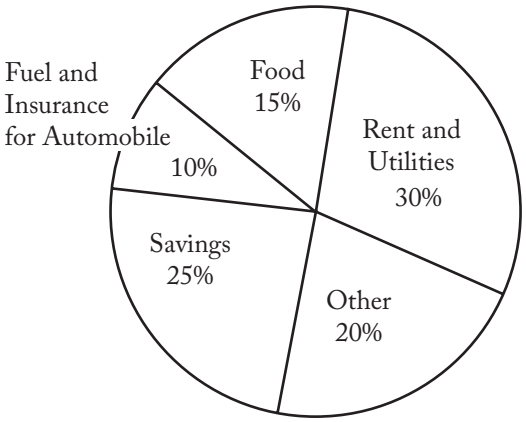
Population by Age Group
(in thousands)

Age	Population
17 years and under	63,376
18–44 years	86,738
45–64 years	43,845
65 years and over	24,054

How many people are 44 years old or younger?

Solution: The figures in the table are given in thousands. The answer in thousands can be obtained by adding 63,376 thousand and 86,738 thousand. The result is 150,114 thousand, which is 150,114,000.

Example 2:



What are the average temperature and precipitation in City X during April?

Solution: Note that the scale on the left applies to the temperature line graph and the one on the right applies to the precipitation line graph. According to the graph, during April the average temperature is approximately 14° Celsius and the average precipitation is approximately 8 centimeters.

Example 3:

DISTRIBUTION OF AL'S WEEKLY NET SALARY

Al's weekly net salary is $350. To how many of the categories listed was at least $80 of Al's weekly net salary allocated?

Solution: In the circle graph, the relative sizes of the sectors are proportional to their corresponding values and the sum of the percents given is 100%. Note that $\frac{80}{350}$ is approximately 23%, so at least $80 was allocated to each of 2 categories—Rent and Utilities, and Savings—since their allocations are each greater than 23%.

5.0 Problem Solving

5.0 Problem Solving

The Quantitative Reasoning section of the GMAT™ exam uses problem solving and data sufficiency questions to gauge your skill level. This chapter focuses on problem solving questions. Remember that quantitative questions require knowledge of the following:

- Arithmetic
- Elementary algebra
- Commonly known concepts of geometry

Problem solving questions are designed to test your basic mathematical skills and understanding of elementary mathematical concepts, as well as your ability to reason quantitatively, solve quantitative problems, and interpret graphic data. The mathematics knowledge required to answer the questions is no more advanced than what is generally taught in secondary school (or high school) mathematics classes.

In these questions, you are asked to solve each problem and select the best of the five answer choices given. Begin by reading the question thoroughly to determine exactly what information is given and to make sure you understand what is being asked. Scan the answer choices to understand your options. If the problem seems simple, take a few moments to see whether you can determine the answer. Then, check your answer against the choices provided.

If you do not see your answer among the choices, or if the problem is complicated, take a closer look at the answer choices and think again about what the problem is asking. See whether you can eliminate some of the answer choices and narrow down your options. If you are still unable to narrow the answer down to a single choice, reread the question. Keep in mind that the answer will be based solely on the information provided in the question—don't allow your own experience and assumptions to interfere with your ability to find the correct answer to the question.

If you find yourself stuck on a question or unable to select the single correct answer, keep in mind that you have about two minutes to answer each quantitative question. You may run out of time if you take too long to answer any one question; you may simply need to pick the answer that seems to make the most sense. Although guessing is generally not the best way to achieve a high GMAT score, making an educated guess is a good strategy for answering questions you are unsure of. Even if your answer to a particular question is incorrect, your answers to other questions will allow the test to accurately gauge your ability level.

The following pages include test-taking strategies, directions that will apply to questions of this type, sample questions, an answer key, and explanations for all the problems. These explanations present problem solving strategies that could be helpful in answering the questions.

5.1 Test-Taking Strategies

1. **Pace yourself.**

   Consult the on-screen timer periodically. Work as carefully as possible, but do not spend valuable time checking answers or pondering problems that you find difficult.

2. **Use the erasable notepad provided at the test center.**

   Working a problem out may help you avoid errors in solving the problem. If diagrams or figures are not presented, it may help to draw your own.

3. **Read each question carefully to determine what is being asked.**

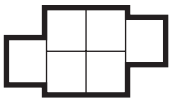
   For word problems, take one step at a time, reading each sentence carefully and translating the information into equations or other useful mathematical representations.

4. **Scan the answer choices before attempting to answer a question.**

   Scanning the answers can prevent you from putting answers in a form that is not given (e.g., finding the answer in decimal form, such as 0.25, when the choices are given in fractional form, such as $\frac{1}{4}$). Also, if the question requires approximations, a shortcut could serve well (e.g., you may be able to approximate 48 percent of a number by using half).

5. **Don't waste time trying to solve a problem that is too difficult for you.**

   Make your best guess and then move on to the next question.



5.2 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

To register for the GMAT exam go to www.mba.com

5.3 Practice Questions

Solve the problem and indicate the best of the answer choices given.
Numbers: All numbers used are real numbers.
Figures: A figure accompanying a problem solving question is intended to provide information useful in solving the problem. Figures are drawn as accurately as possible. Exceptions will be clearly noted. Lines shown as straight are straight, and lines that appear jagged are also straight. The positions of points, angles, regions, etc., exist in the order shown, and angle measures are greater than zero. All figures lie in a plane unless otherwise indicated.

*PS02991

1. In the figure, the 6 small squares are identical, each with sides of length 1. What is the outer perimeter (shown in bold) of the entire figure?

(A) 8
(B) 12
(C) 16
(D) 20
(E) 24

Performance Time	Ticket Price	Number of Tickets Sold
Thursday night	$40	200
Friday night	$50	240
Saturday afternoon	$40	220
Saturday night	$50	300

PS09868

2. The table shows a summary of the ticket sales from four performances of a certain play. What is the difference between the maximum and the minimum ticket-sale revenue from a single performance?

(A) $4,000
(B) $5,100
(C) $6,200
(D) $7,000
(E) $9,600

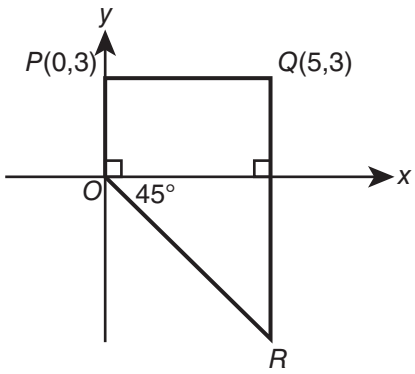
PS10002

3. During a trip that they took together, Carmen, Juan, Maria, and Rafael drove an average (arithmetic mean) of 80 miles each. Carmen drove 72 miles, Juan drove 78 miles, and Maria drove 83 miles. How many miles did Rafael drive?

(A) 80
(B) 82
(C) 85
(D) 87
(E) 89

PS07308

4. Each week, a clothing salesperson receives a commission equal to 15 percent of the first $500 in sales and 20 percent of all additional sales that week. What commission would the salesperson receive on total sales for the week of $1,300 ?



(A) $195
(B) $227
(C) $235
(D) $260
(E) $335

PS07799

5. A certain restaurant that regularly advertises through the mail has 1,040 cover letters and 3,000 coupons in stock. In its next mailing, each envelope will contain 1 cover letter and 2 coupons. If all of the cover letters in stock are used, how many coupons will remain in stock after this mailing?

(A) 920
(B) 1,040
(C) 1,500
(D) 1,960
(E) 2,080

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

PS02599

6. In the figure above, what are the coordinates of point R?

(A) (3,–5)
(B) (3,–3)
(C) (5,5)
(D) (5,–3)
(E) (5,–5)

PS08877

7. The price of a coat in a certain store is $500. If the price of the coat is to be reduced by $150, by what percent is the price to be reduced?

(A) 10%
(B) 15%
(C) 20%
(D) 25%
(E) 30%

PS05410

8. $\left(\frac{1}{2}-\frac{1}{3}\right)+\left(\frac{1}{3}-\frac{1}{4}\right)+\left(\frac{1}{4}-\frac{1}{5}\right)+\left(\frac{1}{5}-\frac{1}{6}\right)=$

(A) $-\frac{1}{6}$
(B) 0
(C) $\frac{1}{3}$
(D) $\frac{1}{2}$
(E) $\frac{2}{3}$

PS05001

9. While a family was away on vacation, they paid a neighborhood boy $11 per week to mow their lawn and $4 per day to feed and walk their dog. If the family was away for exactly 3 weeks, how much did they pay the boy for his services?

(A) $45
(B) $54
(C) $71
(D) $95
(E) $117

PS17812

10. Last year $48,000 of a certain store's profit was shared by its 2 owners and their 10 employees. Each of the 2 owners received 3 times as much as each of their 10 employees. How much did each owner receive from the $48,000 ?

(A) $12,000
(B) $9,000
(C) $6,000
(D) $4,000
(E) $3,000

PS02295

11. On a vacation, Rose exchanged $500.00 for euros at an exchange rate of 0.80 euro per dollar and spent $\frac{3}{4}$ of the euros she received. If she exchanged the remaining euros for dollars at an exchange rate of $1.20 per euro, what was the dollar amount she received?

(A) $60.00
(B) $80.00
(C) $100.00
(D) $120.00
(E) $140.00

x	*x*	*x*	*y*	*y*	*v*
v	*x*	*x*	*y*	*w*	*w*

PS08461

12. Each of the 12 squares shown is labeled *x*, *y*, *v*, or *w*. What is the ratio of the number of these squares labeled *x* or *y* to the number of these squares labeled *v* or *w*?

(A) 1:2
(B) 2:3
(C) 4:3
(D) 3:2
(E) 2:1

PS02382

13. In the *xy*-coordinate plane, if the point (0,2) lies on the graph of the line $2x + ky = 4$, what is the value of the constant *k*?

(A) 2
(B) 1
(C) 0
(D) –1
(E) –2

PS01248

14. Bouquets are to be made using white tulips and red tulips, and the ratio of the number of white tulips to the number of red tulips is to be the same in each bouquet. If there are 15 white tulips and 85 red tulips available for the bouquets, what is the greatest number of bouquets that can be made using all the tulips available?

(A) 3
(B) 5
(C) 8
(D) 10
(E) 13

PS07369

15. Over the past 7 weeks, the Smith family had weekly grocery bills of \$74, \$69, \$64, \$79, \$64, \$84, and \$77. What was the Smiths' average (arithmetic mean) weekly grocery bill over the 7-week period?

(A) \$64
(B) \$70
(C) \$73
(D) \$74
(E) \$85

PS14861

16. 125% of 5 =

(A) 5.125
(B) 5.25
(C) 6
(D) 6.125
(E) 6.25

PS02764

17. During a recent storm, 9 neighborhoods experienced power failures of durations 34, 29, 27, 46, 18, 25, 12, 35, and 16 minutes, respectively. For these 9 neighborhoods, what was the median duration, in minutes, of the power failures?

(A) 34
(B) 29
(C) 27
(D) 25
(E) 18

PS02286

18. When traveling at a constant speed of 32 miles per hour, a certain motorboat consumes 24 gallons of fuel per hour. What is the fuel consumption of this boat at this speed measured in miles traveled per gallon of fuel?

(A) $\frac{2}{3}$
(B) $\frac{3}{4}$
(C) $\frac{4}{5}$
(D) $\frac{4}{3}$
(E) $\frac{3}{2}$

PS11906

19. A technician makes a round-trip to and from a certain service center by the same route. If the technician completes the drive to the center and then completes 10 percent of the drive from the center, what percent of the round-trip has the technician completed?

(A) 5%
(B) 10%
(C) 25%
(D) 40%
(E) 55%

PS15957

20. From 2000 to 2003, the number of employees at a certain company increased by a factor of $\frac{1}{4}$. From 2003 to 2006, the number of employees at this company decreased by a factor of $\frac{1}{3}$. If there were 100 employees at the company in 2006, how many employees were there at the company in 2000 ?

(A) 200
(B) 120
(C) 100
(D) 75
(E) 60

PS00984

21. Which of the following statements must be true about the average (arithmetic mean) and the median of 5 consecutive integers?

I. The average is one of the integers.
II. The median is one of the integers.
III. The median equals the average.

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

PS15358

22. A collection of 16 coins, each with a face value of either 10 cents or 25 cents, has a total face value of \$2.35. How many of the coins have a face value of 25 cents?

(A) 3
(B) 5
(C) 7
(D) 9
(E) 11

PS09707

23. A retailer purchased eggs at \$2.80 per dozen and sold the eggs at 3 eggs for \$0.90. What was the retailer's gross profit from purchasing and selling 5 dozen eggs? (1 dozen eggs = 12 eggs)

(A) \$0.90
(B) \$2.40
(C) \$4.00
(D) \$11.30
(E) \$12.00

PS02127

24. In a set of 24 cards, each card is numbered with a different positive integer from 1 to 24. One card will be drawn at random from the set. What is the probability that the card drawn will have either a number that is divisible by both 2 and 3 or a number that is divisible by 7 ?

(A) $\frac{3}{24}$
(B) $\frac{4}{24}$
(C) $\frac{7}{24}$
(D) $\frac{8}{24}$
(E) $\frac{17}{24}$

PS12542

25. If the circumference of a circle inscribed in a square is 25π, what is the perimeter of the square?

(A) 20
(B) 25
(C) 40
(D) 50
(E) 100

PS03972

26. If $1 < x < y < z$, which of the following has the greatest value?

(A) $z(x + 1)$
(B) $z(y + 1)$
(C) $x(y + z)$
(D) $y(x + z)$
(E) $z(x + y)$

PS00087

27. Set X consists of eight consecutive integers. Set Y consists of all the integers that result from adding 4 to each of the integers in set X and all the integers that result from subtracting 4 from each of the integers in set X. How many more integers are there in set Y than in set X?

(A) 0
(B) 4
(C) 8
(D) 12
(E) 16

PS05239

28. Of the following, which is the closest to $\frac{60.2}{1.03 \times 4.86}$?

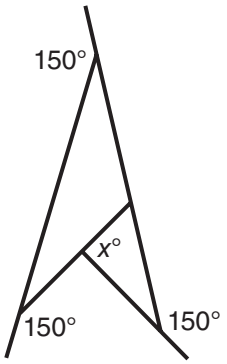
(A) 10
(B) 12
(C) 13
(D) 14
(E) 15

PS15402

29. Thabo owns exactly 140 books, and each book is either paperback fiction, paperback nonfiction, or hardcover nonfiction. If he owns 20 more paperback nonfiction books than hardcover nonfiction books, and twice as many paperback fiction books as paperback nonfiction books, how many hardcover nonfiction books does Thabo own?

(A) 10
(B) 20
(C) 30
(D) 40
(E) 50

PS04571



30. If the average (arithmetic mean) of the four numbers 3, 15, 32, and $(N + 1)$ is 18, then $N =$

(A) 19
(B) 20
(C) 21
(D) 22
(E) 29

PS13801

31. Abdul, Barb, and Carlos all live on the same straight road, on which their school is also located. The school is halfway between Abdul's house and Barb's house. Barb's house is halfway between the school and Carlos's house. If the school is 4 miles from Carlos's house, how many miles is Abdul's house from Carlos's house?

(A) $1\frac{1}{3}$
(B) 2
(C) 4
(D) 6
(E) 8

PS00534

32. In the figure shown, what is the value of x?

(A) 60
(B) 80
(C) 85
(D) 90
(E) 95

PS17479

33. During a certain time period, Car X traveled north along a straight road at a constant rate of 1 mile per minute and used fuel at a constant rate of 5 gallons every 2 hours. During this time period, if Car X used exactly 3.75 gallons of fuel, how many miles did Car X travel?

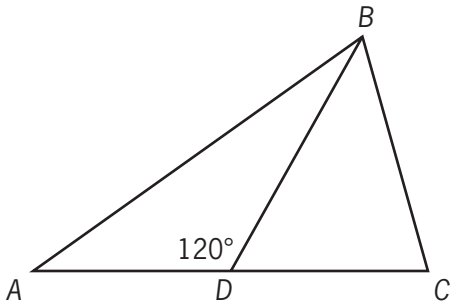
(A) 36
(B) 37.5
(C) 40
(D) 80
(E) 90

PS13707

34. Cheryl purchased 5 identical hollow pine doors and 6 identical solid oak doors for the house she is building. The regular price of each solid oak door was twice the regular price of each hollow pine door. However, Cheryl was given a discount of 25% off the regular price of each solid oak door. If the regular price of each hollow pine door was $40, what was the total price of all 11 doors?

(A) $320
(B) $540
(C) $560
(D) $620
(E) $680

PS01233



35. A certain store will order 25 crates of apples. The apples will be of three different varieties—McIntosh, Rome, and Winesap—and each crate will contain apples of only one variety. If the store is to order more crates of Winesap than crates of McIntosh and more crates of Winesap than crates of Rome, what is the least possible number of crates of Winesap that the store will order?

(A) 7
(B) 8
(C) 9
(D) 10
(E) 11

PS02007

36. A bicycle store purchased two bicycles, one for $250 and the other for $375, and sold both bicycles at a total gross profit of $250. If the store sold one of the bicycles for $450, which of the following could be the store's gross profit from the sale of the other bicycle?

(A) $75
(B) $100
(C) $125
(D) $150
(E) $175

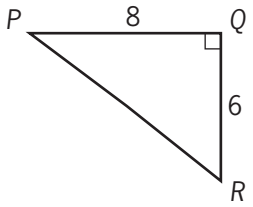
Note: Not drawn to scale.

PS10628

37. In the figure shown, $AC = 2$ and $BD = DC = 1$. What is the measure of angle ABD?

(A) 15°
(B) 20°
(C) 30°
(D) 40°
(E) 45°

PS12786



38. If $k^2 = m^2$, which of the following must be true?

(A) $k = m$
(B) $k = -m$
(C) $k = |m|$
(D) $k = -|m|$
(E) $|k| = |m|$

PS13831

39. Makoto, Nishi, and Ozuro were paid a total of $780 for waxing the floors at their school. Each was paid in proportion to the number of hours he or she worked. If Makoto worked 15 hours, Nishi worked 20 hours, and Ozuro worked 30 hours, how much was Makoto paid?

(A) $52
(B) $117
(C) $130
(D) $180
(E) $234

PS05680

40. The figure above shows a path around a triangular piece of land. Mary walked the distance of 8 miles from P to Q and then walked the distance of 6 miles from Q to R. If Ted walked directly from P to R, by what percent did the distance that Mary walked exceed the distance that Ted walked?

(A) 30%
(B) 40%
(C) 50%
(D) 60%
(E) 80%

PS04797

41. If x is a positive integer and $4^x - 3 = y$, which of the following CANNOT be a value of y?

(A) 1
(B) 7
(C) 13
(D) 61
(E) 253

PS05747

42. If $(1 - 1.25)N = 1$, then $N =$

(A) –400
(B) –140
(C) –4
(D) 4
(E) 400

PS14972

43. The quotient when a certain number is divided by $\frac{2}{3}$ is $\frac{9}{2}$. What is the number?

(A) $\frac{4}{27}$
(B) $\frac{1}{3}$
(C) 3
(D) 6
(E) $\frac{27}{4}$

PS06592

44. If a sphere with radius r is inscribed in a cube with edges of length e, which of the following expresses the relationship between r and e?

(A) $r = \frac{1}{2}e$
(B) $r = e$
(C) $r = 2e$
(D) $r = \sqrt{e}$
(E) $r = \frac{1}{4}e^2$

PS13159

45. The price of gasoline at a service station increased from \$1.65 per gallon last week to \$1.82 per gallon this week. Sally paid \$26.40 for gasoline last week at the station. How much more will Sally pay this week at the station for the same amount of gasoline?

(A) \$1.70
(B) \$2.55
(C) \$2.64
(D) \$2.72
(E) \$2.90

Monthly Charge for Low-Use Telephone Contract Offered by Company X

Monthly rate (up to 75 message units)	20% less than standard rate of \$10.00
Per unit in excess of 75 message units	\$0.065

PS02534

46. Based on the rates above, how much would Company X charge a customer with a low-use contract for using 95 message units in a month?

(A) \$9.30
(B) \$11.30
(C) \$12.88
(D) \$14.88
(E) \$16.18

PS02338

47. If $2x + y = 7$ and $x + 2y = 5$, then $\frac{x+y}{3} =$

(A) 1

(B) $\frac{4}{3}$

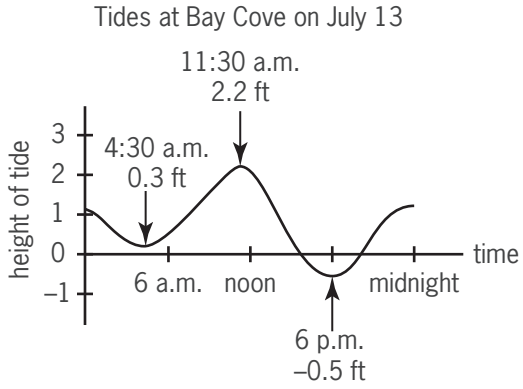
(C) $\frac{17}{5}$

(D) $\frac{18}{5}$

(E) 4

PS14250

48. City X has a population 4 times as great as the population of City Y, which has a population twice as great as the population of City Z. What is the ratio of the population of City X to the population of City Z ?



(A) 1:8

(B) 1:4

(C) 2:1

(D) 4:1

(E) 8:1

PS05100

49. The graph above shows the height of the tide, in feet, above or below a baseline. Which of the following is closest to the difference, in feet, between the heights of the highest and lowest tides on July 13 at Bay Cove?

(A) 1.7

(B) 1.9

(C) 2.2

(D) 2.5

(E) 2.7

PS06243

50. If $S = 1 + \frac{1}{2^2} + \frac{1}{3^2} + \frac{1}{4^2} + \frac{1}{5^2} + \frac{1}{6^2} + \frac{1}{7^2} + \frac{1}{8^2} + \frac{1}{9^2} + \frac{1}{10^2}$, which of the following is true?

(A) $S > 3$

(B) $S = 3$

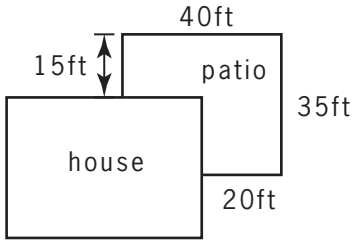
(C) $2 < S < 3$

(D) $S = 2$

(E) $S < 2$

PS05308

51. A manufacturer of a certain product can expect that between 0.3 percent and 0.5 percent of the units manufactured will be defective. If the retail price is $2,500 per unit and the manufacturer offers a full refund for defective units, how much money can the manufacturer expect to need to cover the refunds on 20,000 units?



(A) Between $15,000 and $25,000

(B) Between $30,000 and $50,000

(C) Between $60,000 and $100,000

(D) Between $150,000 and $250,000

(E) Between $300,000 and $500,000

PS05544

52. A flat patio was built alongside a house as shown in the figure above. If all angles are right angles, what is the area of the patio in square feet?

(A) 800

(B) 875

(C) 1,000

(D) 1,100

(E) 1,125

PS10470

53. Which of the following is closest to $\sqrt{\frac{4.2(1{,}590)}{15.7}}$?

(A) 20

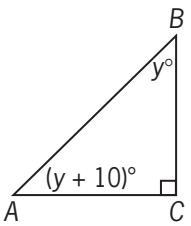
(B) 40

(C) 60

(D) 80

(E) 100

PS12114



54. The sum of the weekly salaries of 5 employees is $3,250. If each of the 5 salaries is to increase by 10 percent, then the average (arithmetic mean) weekly salary per employee will increase by

(A) $52.50
(B) $55.00
(C) $57.50
(D) $62.50
(E) $65.00

PS08173

55. Last week Chris earned x dollars per hour for the first 40 hours worked plus 22 dollars per hour for each hour worked beyond 40 hours. If last week Chris earned a total of 816 dollars by working 48 hours, what is the value of x?

(A) 13
(B) 14
(C) 15
(D) 16
(E) 17

PS07408

56. In the figure above, what is the ratio of the measure of angle B to the measure of angle A?

(A) 2 to 3
(B) 3 to 4
(C) 3 to 5
(D) 4 to 5
(E) 5 to 6

PS08768

57. The value of $\dfrac{\frac{7}{8}+\frac{1}{9}}{\frac{1}{2}}$ is closest to which of the following?

(A) 2
(B) $\frac{3}{2}$
(C) 1
(D) $\frac{1}{2}$
(E) 0

PS08025

58. The positive two-digit integers x and y have the same digits, but in reverse order. Which of the following must be a factor of $x + y$?

(A) 6
(B) 9
(C) 10
(D) 11
(E) 14

PS00015

59. In a certain sequence of 8 numbers, each number after the first is 1 more than the previous number. If the first number is –5, how many of the numbers in the sequence are positive?

(A) None
(B) One
(C) Two
(D) Three
(E) Four

PS08385

60. A total of s oranges are to be packaged in boxes that will hold r oranges each, with no oranges left over. When n of these boxes have been completely filled, what is the number of boxes that remain to be filled?

(A) $s - nr$
(B) $s - \frac{n}{r}$
(C) $rs - n$
(D) $\frac{s}{n} - r$
(E) $\frac{s}{r} - n$

PS03371

61. If $0 < a < b < c$, which of the following statements must be true?

I. $2a > b + c$

II. $c - a > b - a$

III. $\frac{c}{a} < \frac{b}{a}$

(A) I only

(B) II only

(C) III only

(D) I and II

(E) II and III

PS00096

62. In the xy-plane, the origin O is the midpoint of line segment PQ. If the coordinates of P are (r,s), what are the coordinates of Q ?

(A) (r,s)

(B) $(s,-r)$

(C) $(-s,-r)$

(D) $(-r,s)$

(E) $(-r,-s)$

	Monday	Tuesday	Wednesday	Thursday
Company *A*	45	55	50	50
Company *B*	10	30	30	10
Company *C*	34	28	28	30
Company *D*	39	42	41	38
Company *E*	50	60	60	70

PS10568

63. The table shows the numbers of packages shipped daily by each of five companies during a 4-day period. The standard deviation of the numbers of packages shipped daily during the period was greatest for which of the five companies?

(A) *A*

(B) *B*

(C) *C*

(D) *D*

(E) *E*

PS15523

64. Company Q plans to make a new product next year and sell each unit of this new product at a selling price of $2. The variable costs per unit in each production run are estimated to be 40% of the selling price, and the fixed costs for each production run are estimated to be $5,040. Based on these estimated costs, how many units of the new product will Company Q need to make and sell in order for their revenue to equal their total costs for each production run?

(A) 4,200

(B) 3,150

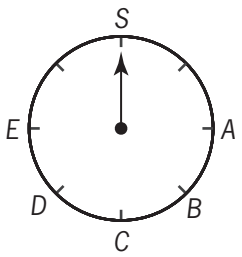
(C) 2,520

(D) 2,100

(E) 1,800

PS07197

65. A small business invests $9,900 in equipment to produce a product. Each unit of the product costs $0.65 to produce and is sold for $1.20. How many units of the product must be sold before the revenue received equals the total expense of production, including the initial investment in equipment?



(A) 12,000

(B) 14,500

(C) 15,230

(D) 18,000

(E) 20,000

PS05682

66. The dial shown above is divided into equal-sized intervals. At which of the following letters will the pointer stop if it is rotated clockwise from S through 1,174 intervals?

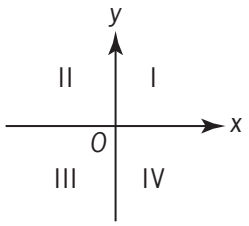
(A) *A*

(B) *B*

(C) *C*

(D) *D*

(E) *E*



Estimated Number of Home-Schooled Students by State, January 2001

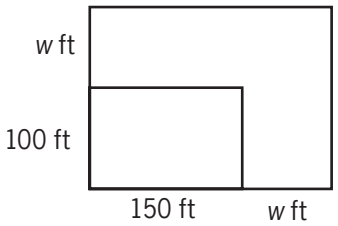
State	Number (in thousands)
A	181
B	125
C	103
D	79
E	72

PS12287

67. According to the table shown, the estimated number of home-schooled students in State A is approximately what percent greater than the number in State D ?

(A) 25%
(B) 55%
(C) 100%
(D) 125%
(E) 155%

PS02695



68. The graph of the equation $xy = k$, where $k < 0$, lies in which two of the quadrants shown above?

(A) I and II
(B) I and III
(C) II and III
(D) II and IV
(E) III and IV

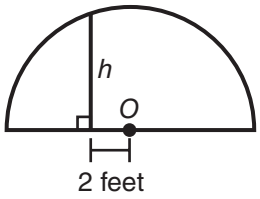
PS00526

69. When n liters of fuel were added to a tank that was already $\frac{1}{3}$ full, the tank was filled to $\frac{7}{9}$ of its capacity. In terms of n, what is the capacity of the tank, in liters?

(A) $\frac{10}{9}n$
(B) $\frac{4}{3}n$
(C) $\frac{3}{2}n$
(D) $\frac{9}{4}n$
(E) $\frac{7}{3}n$

Note: Not drawn to scale.

PS06601



70. The smaller rectangle in the figure above represents the original size of a parking lot before its length and width were each extended by w feet to make the larger rectangular lot shown. If the area of the enlarged lot is twice the area of the original lot, what is the value of w ?

(A) 25
(B) 50
(C) 75
(D) 100
(E) 200

PS02209

71. Kevin invested $8,000 for one year at a simple annual interest rate of 6 percent and invested $10,000 for one year at an annual interest rate of 8 percent compounded semiannually. What is the total amount of interest that Kevin earned on the two investments?

(A) $880
(B) $1,088
(C) $1,253
(D) $1,280
(E) $1,296

PS05957

72. The figure above represents a semicircular archway over a flat street. The semicircle has a center at O and a radius of 6 feet. What is the height h, in feet, of the archway 2 feet from its center?

(A) $\sqrt{2}$
(B) 2
(C) 3
(D) $4\sqrt{2}$
(E) 6

PS01315

73. The harvest yield from a certain apple orchard was 350 bushels of apples. If x of the trees in the orchard each yielded 10 bushels of apples, what fraction of the harvest yield was from these x trees?

(A) $\frac{x}{35}$
(B) $1-\frac{x}{35}$
(C) $10x$
(D) $35 - x$
(E) $350 - 10x$

PS00907

74. In a certain fraction, the denominator is 16 greater than the numerator. If the fraction is equivalent to 80 percent, what is the denominator of the fraction?

(A) 32
(B) 64
(C) 72
(D) 80
(E) 120

PS02102

75. Greg assembles units of a certain product at a factory. Each day he is paid \$2.00 per unit for the first 40 units that he assembles and \$2.50 for each additional unit that he assembles that day. If Greg assembled at least 30 units on each of two days and was paid a total of \$180.00 for assembling units on the two days, what is the greatest possible number of units that he could have assembled on one of the two days?

(A) 48
(B) 52
(C) 56
(D) 60
(E) 64

PS00419

76. Which of the following is greatest?

(A) $10\sqrt{3}$
(B) $9\sqrt{4}$
(C) $8\sqrt{5}$
(D) $7\sqrt{6}$
(E) $6\sqrt{7}$

PS14236

77. Al and Ben are drivers for SD Trucking Company. One snowy day, Ben left SD at 8:00 a.m. heading east and Al left SD at 11:00 a.m. heading west. At a particular time later that day, the dispatcher retrieved data from SD's vehicle tracking system. The data showed that, up to that time, Al had averaged 40 miles per hour and Ben had averaged 20 miles per hour. It also showed that Al and Ben had driven a combined total of 240 miles. At what time did the dispatcher retrieve data from the vehicle tracking system?

(A) 1:00 p.m.
(B) 2:00 p.m.
(C) 3:00 p.m.
(D) 5:00 p.m.
(E) 6:00 p.m.

PS02996

78. Of the land owned by a farmer, 90 percent was cleared for planting. Of the cleared land, 40 percent was planted with soybeans and 50 percent of the cleared land was planted with wheat. If the remaining 720 acres of cleared land was planted with corn, how many acres did the farmer own?

(A) 5,832
(B) 6,480
(C) 7,200
(D) 8,000
(E) 8,889

PS00307

79. At the start of an experiment, a certain population consisted of 3 animals. At the end of each month after the start of the experiment, the population size was double its size at the beginning of that month. Which of the following represents the population size at the end of 10 months?

(A) 2^3
(B) 3^2
(C) $2(3^{10})$
(D) $3(2^{10})$
(E) $3(10^2)$

PS03635

80. If $\left(\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6}\right)=r\left(\frac{1}{9}+\frac{1}{12}+\frac{1}{15}+\frac{1}{18}\right)$, then $r =$

(A) $\frac{1}{3}$
(B) $\frac{4}{3}$
(C) 3
(D) 4
(E) 12

PS03214

81. If x and y are positive integers such that y is a multiple of 5 and $3x + 4y = 200$, then x must be a multiple of which of the following?

(A) 3
(B) 6
(C) 7
(D) 8
(E) 10

PS12764

82. Which of the following expressions can be written as an integer?

I. $\left(\sqrt{82}+\sqrt{82}\right)^2$
II. $(82)\left(\sqrt{82}\right)$
III. $\frac{\left(\sqrt{82}\right)\left(\sqrt{82}\right)}{82}$

(A) None
(B) I only
(C) III only
(D) I and II
(E) I and III

PS13101

83. Pumping alone at their respective constant rates, one inlet pipe fills an empty tank to $\frac{1}{2}$ of capacity in 3 hours and a second inlet pipe fills the same empty tank to $\frac{2}{3}$ of capacity in 6 hours. How many hours will it take both pipes, pumping simultaneously at their respective constant rates, to fill the empty tank to capacity?

(A) 3.25
(B) 3.6
(C) 4.2
(D) 4.4
(E) 5.5

PS02947

84. In the xy-coordinate plane, which of the following points must lie on the line $kx + 3y = 6$ for every possible value of k?

(A) (1,1)
(B) (0,2)
(C) (2,0)
(D) (3,6)
(E) (6,3)

PS11091

85. If $x^2 - 2 < 0$, which of the following specifies all the possible values of x ?

(A) $0 < x < 2$
(B) $0 < x < \sqrt{2}$
(C) $-\sqrt{2} < x < \sqrt{2}$
(D) $-2 < x < 0$
(E) $-2 < x < 2$

Book number	Pages in book	Total pages read
1	253	253
2	110	363
3	117	480
4	170	650
5	155	805
6	50	855
7	205	1,060
8	70	1,130
9	165	1,295
10	105	1,400
11	143	1,543
12	207	1,750

PS14467

86. Shawana made a schedule for reading books during 4 weeks (28 days) of her summer vacation. She has checked out 12 books from the library. The number of pages in each book and the order in which she plans to read the books are shown in the table above. She will read exactly 50 pages each day. The only exception will be that she will never begin the next book on the same day that she finishes the previous one, and therefore on some days she may read fewer than 50 pages. At the end of the 28th day, how many books will Shawana have finished?

(A) 7
(B) 8
(C) 9
(D) 10
(E) 11

PS07465

87. In Western Europe, x bicycles were sold in each of the years 1990 and 1993. The bicycle producers of Western Europe had a 42 percent share of this market in 1990 and a 33 percent share in 1993. Which of the following represents the decrease in the annual number of bicycles produced and sold in Western Europe from 1990 to 1993 ?

(A) 9% of $\frac{x}{100}$
(B) 14% of $\frac{x}{100}$
(C) 75% of $\frac{x}{100}$
(D) 9% of x
(E) 14% of x

PS06946

88. If k is a positive integer, what is the remainder when $(k + 2)(k^3 - k)$ is divided by 6 ?

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

PS14989

89. Which of the following fractions is closest to $\frac{1}{2}$?

(A) $\frac{4}{7}$
(B) $\frac{5}{9}$
(C) $\frac{6}{11}$
(D) $\frac{7}{13}$
(E) $\frac{9}{16}$

PS12949

90. If $p \neq 0$ and $p - \frac{1-p^2}{p} = \frac{r}{p}$, then $r =$

(A) $p + 1$
(B) $2p - 1$
(C) $p^2 + 1$
(D) $2p^2 - 1$
(E) $p^2 + p - 1$

PS12760

91. If the range of the six numbers 4, 3, 14, 7, 10, and x is 12, what is the difference between the greatest possible value of x and the least possible value of x?

(A) 0
(B) 2
(C) 12
(D) 13
(E) 15

PS04734

92. What number is 108 more than two-thirds of itself?

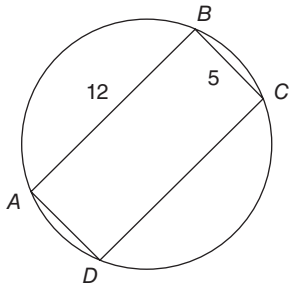
(A) 72
(B) 144
(C) 162
(D) 216
(E) 324

PS11396

93. Company P had 15 percent more employees in December than it had in January. If Company P had 460 employees in December, how many employees did it have in January?

(A) 391
(B) 400
(C) 410
(D) 423
(E) 445

PS07672

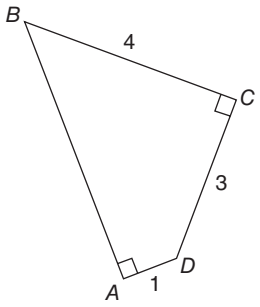


94. A doctor prescribed 18 cubic centimeters of a certain drug to a patient whose body weight was 120 pounds. If the typical dosage is 2 cubic centimeters per 15 pounds of body weight, by what percent was the prescribed dosage greater than the typical dosage?

(A) 8%
(B) 9%
(C) 11%
(D) 12.5%
(E) 14.8%

PS09899

95. The function f is defined by $f(x) = \sqrt{x} - 10$ for all positive numbers x. If $u = f(t)$ for some positive numbers t and u, what is t in terms of u?



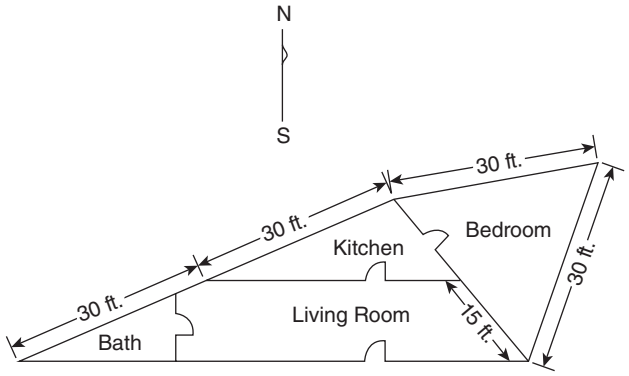
(A) $\sqrt{\sqrt{u} + 10}$
(B) $\left(\sqrt{u} + 10\right)^2$
(C) $\sqrt{u^2 + 10}$
(D) $(u + 10)^2$
(E) $(u^2 + 10)^2$

PS77502.01

96. If rectangle $ABCD$ is inscribed in the circle above, what is the area of the circular region?

(A) 36.00π
(B) 42.25π
(C) 64.00π
(D) 84.50π
(E) 169.00π

PS58502.01



97. In quadrilateral *ABCD* above, what is the length of *AB*?

(A) $\sqrt{26}$
(B) $2\sqrt{5}$
(C) $2\sqrt{6}$
(D) $3\sqrt{2}$
(E) $3\sqrt{3}$

PS98502.01

98. Three-fourths of the area of a rectangular lawn 30 feet wide by 40 feet long is to be enclosed by a rectangular fence. If the enclosure has full width and reduced length rather than full length and reduced width, how much less fence will be needed?

(A) $2\frac{1}{2}$
(B) 5
(C) 10
(D) 15
(E) 20

PS19502.01

99. In the floor plan of an executive's beach house above, the north and south walls of the living room are parallel. What is the floor area, in square feet, of the bedroom?

(A) $450\sqrt{3}$
(B) 450
(C) $225\sqrt{3}$
(D) 225
(E) It cannot be determined from the information given.

PS40602.01

100. On a scale drawing, a rectangle 1 inch by $1\frac{1}{3}$ inches represents the floor of a room and the indicated scale is 1 inch equals 15 feet. How many square tiles 6 inches on a side will be needed to cover this floor? (1 foot = 12 inches)

(A) 40
(B) 70
(C) 120
(D) 700
(E) 1,200

PS01761

101. If m and p are positive integers and $m^2 + p^2 < 100$, what is the greatest possible value of mp?

(A) 36
(B) 42
(C) 48
(D) 49
(E) 51

PS04482

102. If $\frac{x}{y}=\frac{c}{d}$ and $\frac{d}{c}=\frac{b}{a}$, which of the following must be true?

I. $\frac{y}{x}=\frac{b}{a}$

II. $\frac{x}{a}=\frac{y}{b}$

III. $\frac{y}{a}=\frac{x}{b}$

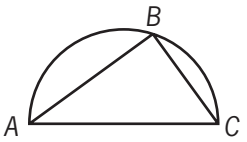
(A) I only
(B) II only
(C) I and II only
(D) I and III only
(E) I, II, and III

PS10391

103. If k is an integer and $(0.0025)(0.025)(0.00025)\times 10^k$ is an integer, what is the least possible value of k ?

(A) –12
(B) –6
(C) 0
(D) 6
(E) 12

PS07325



104. If $a(a+2)=24$ and $b(b+2)=24$, where $a\neq b$, then $a+b=$

(A) –48
(B) –2
(C) 2
(D) 46
(E) 48

PS05560

105. In a recent election, Ms. Robbins received 8,000 votes cast by independent voters, that is, voters not registered with a specific political party. She also received 10 percent of the votes cast by those voters registered with a political party. If N is the total number of votes cast in the election and 40 percent of the votes cast were cast by independent voters, which of the following represents the number of votes that Ms. Robbins received?

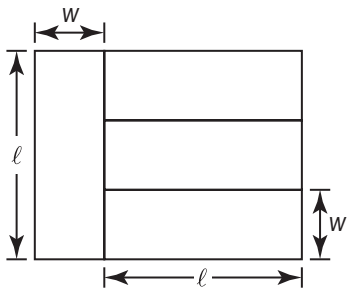
(A) $0.06N+3{,}200$
(B) $0.1N+7{,}200$
(C) $0.4N+7{,}200$
(D) $0.1N+8{,}000$
(E) $0.06N+8{,}000$

PS11308

106. In the figure shown, the triangle is inscribed in the semicircle. If the length of line segment AB is 8 and the length of line segment BC is 6, what is the length of arc ABC ?

(A) 15π
(B) 12π
(C) 10π
(D) 7π
(E) 5π

PS15517



107. A manufacturer makes and sells 2 products, P and Q. The revenue from the sale of each unit of P is \$20.00 and the revenue from the sale of each unit of Q is \$17.00. Last year the manufacturer sold twice as many units of Q as P. What was the manufacturer's average (arithmetic mean) revenue per unit sold of these 2 products last year?

(A) \$28.50
(B) \$27.00
(C) \$19.00
(D) \$18.50
(E) \$18.00

PS11756

108. A worker carries jugs of liquid soap from a production line to a packing area, carrying 4 jugs per trip. If the jugs are packed into cartons that hold 7 jugs each, how many jugs are needed to fill the last partially filled carton after the worker has made 17 trips?

(A) 1
(B) 2
(C) 4
(D) 5
(E) 6

PS02820

109. The figure shown above represents a modern painting that consists of four differently colored rectangles, each of which has length ℓ and width w. If the area of the painting is 4,800 square inches, what is the width, in inches, of each of the four rectangles?

(A) 15
(B) 20
(C) 25
(D) 30
(E) 40

PS09737

110. Working simultaneously and independently at an identical constant rate, four machines of a certain type can produce a total of x units of product P in 6 days. How many of these machines, working simultaneously and independently at this constant rate, can produce a total of $3x$ units of product P in 4 days?

(A) 24
(B) 18
(C) 16
(D) 12
(E) 8

PS01622

111. The symbol Δ denotes one of the four arithmetic operations: addition, subtraction, multiplication, or division. If $6 \Delta 3 \leq 3$, which of the following must be true?

I. $2 \Delta 2 = 0$
II. $2 \Delta 2 = 1$
III. $4 \Delta 2 = 2$

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

PS04448

112. If $mn \neq 0$ and 25 percent of n equals $37\frac{1}{2}$ percent of m, what is the value of $\frac{12n}{m}$?

(A) 18
(B) $\frac{32}{3}$
(C) 8
(D) 3
(E) $\frac{9}{8}$

PS02555

113. Last year Joe grew 1 inch and Sally grew 200 percent more than Joe grew. How many inches did Sally grow last year?

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

Technique	Percent of Consumers
Television ads	35%
Coupons	22%
Store displays	18%
Samples	15%

PS10307

114. The table shows partial results of a survey in which consumers were asked to indicate which one of six promotional techniques most influenced their decision to buy a new food product. Of those consumers who indicated one of the four techniques listed, what fraction indicated either coupons or store displays?

(A) $\frac{2}{7}$
(B) $\frac{1}{3}$
(C) $\frac{2}{5}$
(D) $\frac{4}{9}$
(E) $\frac{1}{2}$

PS09708

115. The cost C, in dollars, to remove p percent of a certain pollutant from a pond is estimated by using the formula $C = \frac{100{,}000p}{100 - p}$. According to this estimate, how much more would it cost to remove 90 percent of the pollutant from the pond than it would cost to remove 80 percent of the pollutant?

(A) $500,000
(B) $100,000
(C) $50,000
(D) $10,000
(E) $5,000

PS11121

116. If $xy \neq 0$ and $x^2y^2 - xy = 6$, which of the following could be y in terms of x?

I. $\frac{1}{2x}$
II. $-\frac{2}{x}$
III. $\frac{3}{x}$

(A) I only
(B) II only
(C) I and II
(D) I and III
(E) II and III

PS00633

117. $\sqrt{4.8 \times 10^9}$ is closest in value to

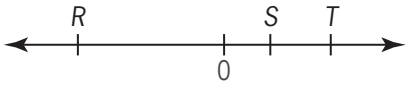
(A) 2,200
(B) 70,000
(C) 220,000
(D) 7,000,000
(E) 22,000,000

PS08865

118. Three printing presses, R, S, and T, working together at their respective constant rates, can do a certain printing job in 4 hours. S and T, working together at their respective constant rates, can do the same job in 5 hours. How many hours would it take R, working alone at its constant rate, to do the same job?

(A) 8
(B) 10
(C) 12
(D) 15
(E) 20

PS07112



119. For a party, three solid cheese balls with diameters of 2 inches, 4 inches, and 6 inches, respectively, were combined to form a single cheese ball. What was the approximate diameter, in inches, of the new cheese ball? (The volume of a sphere is $\frac{4}{3}\pi r^3$, where r is the radius.)

(A) 12
(B) 16
(C) $\sqrt[3]{16}$
(D) $3\sqrt[3]{8}$
(E) $2\sqrt[3]{36}$

PS02325

120. The sum of all the integers k such that $-26 < k < 24$ is

(A) 0
(B) –2
(C) –25
(D) –49
(E) –51

PS08399

121. The number line shown contains three points R, S, and T, whose coordinates have absolute values r, s, and t, respectively. Which of the following equals the average (arithmetic mean) of the coordinates of the points R, S, and T?

(A) s
(B) $s + t - r$
(C) $\frac{r - s - t}{3}$
(D) $\frac{r + s + t}{3}$
(E) $\frac{s + t - r}{3}$

PS05962

122. Mark and Ann together were allocated n boxes of cookies to sell for a club project. Mark sold 10 boxes less than n and Ann sold 2 boxes less than n. If Mark and Ann have each sold at least one box of cookies, but together they have sold less than n boxes, what is the value of n?

(A) 11
(B) 12
(C) 13
(D) 14
(E) 15

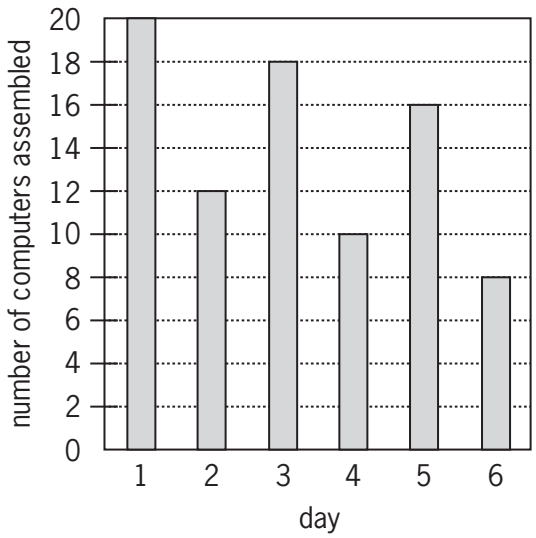
PS04089

123. A certain high school has 5,000 students. Of these students, x are taking music, y are taking art, and z are taking both music and art. How many students are taking neither music nor art?

(A) $5{,}000 - z$
(B) $5{,}000 - x - y$
(C) $5{,}000 - x + z$
(D) $5{,}000 - x - y - z$
(E) $5{,}000 - x - y + z$

PS06133

124. Each person who attended a company meeting was either a stockholder in the company, an employee of the company, or both. If 62 percent of those who attended the meeting were stockholders and 47 percent were employees, what percent were stockholders who were not employees?



(A) 34%
(B) 38%
(C) 45%
(D) 53%
(E) 62%

Accounts	Amount Budgeted	Amount Spent
Payroll	$110,000	$117,000
Taxes	40,000	42,000
Insurance	2,500	2,340

PS08441

125. The table shows the amount budgeted and the amount spent for each of three accounts in a certain company. For which of these accounts did the amount spent differ from the amount budgeted by more than 6 percent of the amount budgeted?

(A) Payroll only
(B) Taxes only
(C) Insurance only
(D) Payroll and Insurance
(E) Taxes and Insurance

PS15111

126. The graph shows the number of computers assembled during each of 6 consecutive days. From what day to the next day was the percent change in the number of computers assembled the greatest in magnitude?

(A) From Day 1 to Day 2
(B) From Day 2 to Day 3
(C) From Day 3 to Day 4
(D) From Day 4 to Day 5
(E) From Day 5 to Day 6

PS02704

127. If $n = 20! + 17$, then n is divisible by which of the following?

I. 15
II. 17
III. 19

(A) None
(B) I only
(C) II only
(D) I and II
(E) II and III

PS02600

128. The product of two negative numbers is 160. If the lesser of the two numbers is 4 less than twice the greater, what is the greater number?

(A) –20
(B) –16
(C) –10
(D) –8
(E) –4

PS10546

129. According to a certain estimate, the depth $N(t)$, in centimeters, of the water in a certain tank at t hours past 2:00 in the morning is given by $N(t) = -20(t - 5)^2 + 500$ for $0 \le t \le 10$. According to this estimate, at what time in the morning does the depth of the water in the tank reach its maximum?

(A) 5:30
(B) 7:00
(C) 7:30
(D) 8:00
(E) 9:00

PS04617

130. After driving to a riverfront parking lot, Bob plans to run south along the river, turn around, and return to the parking lot, running north along the same path. After running 3.25 miles south, he decides to run for only 50 minutes more. If Bob runs at a constant rate of 8 minutes per mile, how many miles farther south can he run and still be able to return to the parking lot in 50 minutes?

(A) 1.5
(B) 2.25
(C) 3.0
(D) 3.25
(E) 4.75

PS12577

131. Alex deposited x dollars into a new account that earned 8 percent annual interest, compounded annually. One year later Alex deposited an additional x dollars into the account. If there were no other transactions and if the account contained w dollars at the end of two years, which of the following expresses x in terms of w?

(A) $\frac{w}{1+1.08}$
(B) $\frac{w}{1.08+1.16}$
(C) $\frac{w}{1.16+1.24}$
(D) $\frac{w}{1.08+(1.08)^2}$
(E) $\frac{w}{(1.08)^2+(1.08)^3}$

PS05973

132. M is the sum of the reciprocals of the consecutive integers from 201 to 300, inclusive. Which of the following is true?

(A) $\frac{1}{3} < M < \frac{1}{2}$
(B) $\frac{1}{5} < M < \frac{1}{3}$
(C) $\frac{1}{7} < M < \frac{1}{5}$
(D) $\frac{1}{9} < M < \frac{1}{7}$
(E) $\frac{1}{12} < M < \frac{1}{9}$

PS00428

133. Working simultaneously at their respective constant rates, Machines A and B produce 800 nails in x hours. Working alone at its constant rate, Machine A produces 800 nails in y hours. In terms of x and y, how many hours does it take Machine B, working alone at its constant rate, to produce 800 nails?

(A) $\frac{x}{x+y}$

(B) $\frac{y}{x+y}$

(C) $\frac{xy}{x+y}$

(D) $\frac{xy}{x-y}$

(E) $\frac{xy}{y-x}$

10, 4, 26, 16

PS08966

134. What is the median of the numbers shown?

(A) 10

(B) 13

(C) 14

(D) 15

(E) 16

	Number of Marbles in Each of Three Bags	Percent of Marbles in Each Bag That Are Blue (to the nearest tenth)
Bag P	37	10.8%
Bag Q	x	66.7%
Bag R	32	50.0%

PS03823

135. If $\frac{1}{3}$ of the total number of marbles in the three bags listed in the table above are blue, how many marbles are there in bag Q?

(A) 5

(B) 9

(C) 12

(D) 23

(E) 46

Age Category (in years)	Number of Employees
Less than 20	29
20–29	58
30–39	36
40–49	21
50–59	10
60–69	5
70 and over	2

PS11600

136. The table above gives the age categories of the 161 employees at Company X and the number of employees in each category. According to the table, if m is the median age, in years, of the employees at Company X, then m must satisfy which of the following?

(A) $20 \le m \le 29$

(B) $25 \le m \le 34$

(C) $30 \le m \le 39$

(D) $35 \le m \le 44$

(E) $40 \le m \le 49$

PS02749

137. Ron is 4 inches taller than Amy, and Barbara is 1 inch taller than Ron. If Barbara's height is 65 inches, what is the median height, in inches, of these three people?

(A) 60

(B) 61

(C) 62

(D) 63

(E) 64

PS02777

138. If x and y are positive numbers such that $x + y = 1$, which of the following could be the value of $100x + 200y$?

I. 80

II. 140

III. 199

(A) II only

(B) III only

(C) I and II

(D) I and III

(E) II and III

PS02017

139. If X is the hundredths digit in the decimal $0.1X$ and if Y is the thousandths digit in the decimal $0.02Y$, where X and Y are nonzero digits, which of the following is closest to the greatest possible value of $\frac{0.1X}{0.02Y}$?

(A) 4
(B) 5
(C) 6
(D) 9
(E) 10

PS13724

140. Clarissa will create her summer reading list by randomly choosing 4 books from the 10 books approved for summer reading. She will list the books in the order in which they are chosen. How many different lists are possible?

(A) 6
(B) 40
(C) 210
(D) 5,040
(E) 151,200

PS10982

141. If n is a positive integer and the product of all the integers from 1 to n, inclusive, is divisible by 990, what is the least possible value of n ?

(A) 8
(B) 9
(C) 10
(D) 11
(E) 12

PS02111

142. The probability that event M will not occur is 0.8 and the probability that event R will not occur is 0.6. If events M and R cannot both occur, which of the following is the probability that either event M or event R will occur?

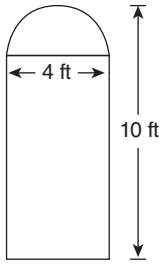
(A) $\frac{1}{5}$
(B) $\frac{2}{5}$
(C) $\frac{3}{5}$
(D) $\frac{4}{5}$
(E) $\frac{12}{25}$

PS16410

143. The total cost for Company X to produce a batch of tools is \$10,000 plus \$3 per tool. Each tool sells for \$8. The gross profit earned from producing and selling these tools is the total income from sales minus the total production cost. If a batch of 20,000 tools is produced and sold, then Company X's gross profit per tool is

(A) \$3.00
(B) \$3.75
(C) \$4.50
(D) \$5.00
(E) \$5.50

PS07357



144. If Q is an odd number and the median of Q consecutive integers is 120, what is the largest of these integers?

(A) $\frac{Q-1}{2}+120$
(B) $\frac{Q}{2}+119$
(C) $\frac{Q}{2}+120$
(D) $\frac{Q+119}{2}$
(E) $\frac{Q+120}{2}$

PS02649

145. A ladder of a fire truck is elevated to an angle of 60° and extended to a length of 70 feet. If the base of the ladder is 7 feet above the ground, how many feet above the ground does the ladder reach?

(A) 35
(B) 42
(C) $35\sqrt{3}$
(D) $7+35\sqrt{3}$
(E) $7+42\sqrt{3}$

PS13827

146. The window in the figure above consists of a rectangle and a semicircle with dimensions as shown. What is the area, in square feet, of the window?

(A) $40 + 8\pi$
(B) $40 + 2\pi$
(C) $32 + 8\pi$
(D) $32 + 4\pi$
(E) $32 + 2\pi$

PS00562

147. If there are fewer than 8 zeros between the decimal point and the first nonzero digit in the decimal expansion of $\left(\frac{t}{1{,}000}\right)^4$, which of the following numbers could be the value of t?

I. 3
II. 5
III. 9

(A) None
(B) I only
(C) II only
(D) III only
(E) II and III

PS08280

148. A three-digit code for certain locks uses the digits 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 according to the following constraints. The first digit cannot be 0 or 1, the second digit must be 0 or 1, and the second and third digits cannot both be 0 in the same code. How many different codes are possible?

(A) 144
(B) 152
(C) 160
(D) 168
(E) 176

PS02903

149. Jackie has two solutions that are 2 percent sulfuric acid and 12 percent sulfuric acid by volume, respectively. If these solutions are mixed in appropriate quantities to produce 60 liters of a solution that is 5 percent sulfuric acid, approximately how many liters of the 2 percent solution will be required?

(A) 18
(B) 20
(C) 24
(D) 36
(E) 42

PS16259

150. If Jake loses 8 pounds, he will weigh twice as much as his sister. Together they now weigh 278 pounds. What is Jake's present weight, in pounds?

(A) 131
(B) 135
(C) 139
(D) 147
(E) 188

PS03768

151. For each student in a certain class, a teacher adjusted the student's test score using the formula $y = 0.8x + 20$, where x is the student's original test score and y is the student's adjusted test score. If the standard deviation of the original test scores of the students in the class was 20, what was the standard deviation of the adjusted test scores of the students in the class?

(A) 12
(B) 16
(C) 28
(D) 36
(E) 40

PS01987

152. Last year 26 members of a certain club traveled to England, 26 members traveled to France, and 32 members traveled to Italy. Last year no members of the club traveled to both England and France, 6 members traveled to both England and Italy, and 11 members traveled to both France and Italy. How many members of the club traveled to at least one of these three countries last year?

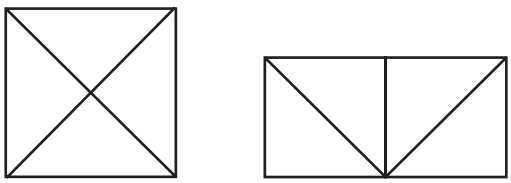
(A) 52
(B) 67
(C) 71
(D) 73
(E) 79

PS16088

153. A store reported total sales of $385 million for February of this year. If the total sales for the same month last year was $320 million, approximately what was the percent increase in sales?

(A) 2%
(B) 17%
(C) 20%
(D) 65%
(E) 83%

PS11065



154. When positive integer x is divided by positive integer y, the remainder is 9. If $\frac{x}{y} = 96.12$, what is the value of y?

(A) 96
(B) 75
(C) 48
(D) 25
(E) 12

PS16802

155. If $x(2x + 1) = 0$ and $\left(x + \frac{1}{2}\right)(2x - 3) = 0$, then $x =$

(A) -3
(B) $-\frac{1}{2}$
(C) 0
(D) $\frac{1}{2}$
(E) $\frac{3}{2}$

X *Y*

PS08219

156. Figures *X* and *Y* above show how eight identical triangular pieces of cardboard were used to form a square and a rectangle, respectively. What is the ratio of the perimeter of *X* to the perimeter of *Y*?

(A) $2:3$
(B) $\sqrt{2}:2$
(C) $2\sqrt{2}:3$
(D) $1:1$
(E) $\sqrt{2}:1$

PS04711

157. A certain experimental mathematics program was tried out in 2 classes in each of 32 elementary schools and involved 37 teachers. Each of the classes had 1 teacher and each of the teachers taught at least 1, but not more than 3, of the classes. If the number of teachers who taught 3 classes is n, then the least and greatest possible values of n, respectively, are

(A) 0 and 13
(B) 0 and 14
(C) 1 and 10
(D) 1 and 9
(E) 2 and 8

PS16214

158. For the positive numbers, n, $n + 1$, $n + 2$, $n + 4$, and $n + 8$, the mean is how much greater than the median?

(A) 0
(B) 1
(C) $n + 1$
(D) $n + 2$
(E) $n + 3$

PS08313

159. The interior of a rectangular carton is designed by a certain manufacturer to have a volume of x cubic feet and a ratio of length to width to height of 3:2:2. In terms of x, which of the following equals the height of the carton, in feet?

(A) $\sqrt[3]{x}$
(B) $\sqrt[3]{\frac{2x}{3}}$
(C) $\sqrt[3]{\frac{3x}{2}}$
(D) $\frac{2}{3}\sqrt[3]{x}$
(E) $\frac{3}{2}\sqrt[3]{x}$

PS16810

160. The present ratio of students to teachers at a certain school is 30 to 1. If the student enrollment were to increase by 50 students and the number of teachers were to increase by 5, the ratio of students to teachers would then be 25 to 1. What is the present number of teachers?

(A) 5
(B) 8
(C) 10
(D) 12
(E) 15

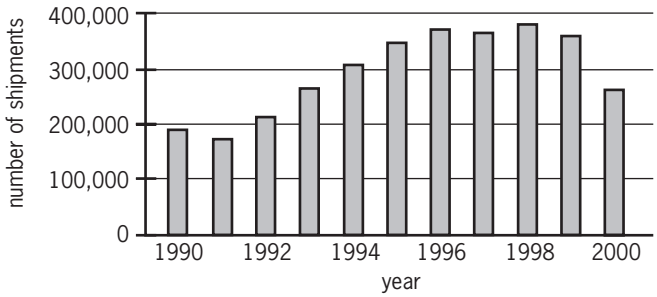
PS16811

161. What is the smallest integer n for which $25^n > 5^{12}$?

(A) 6
(B) 7
(C) 8
(D) 9
(E) 10

PS16122

162. Sixty percent of the members of a study group are women, and 45 percent of those women are lawyers. If one member of the study group is to be selected at random, what is the probability that the member selected is a woman lawyer?



(A) 0.10
(B) 0.15
(C) 0.27
(D) 0.33
(E) 0.45

PS06570

163. Each year for 4 years, a farmer increased the number of trees in a certain orchard by $\frac{1}{4}$ of the number of trees in the orchard the preceding year. If all of the trees thrived and there were 6,250 trees in the orchard at the end of the 4-year period, how many trees were in the orchard at the beginning of the 4-year period?

(A) 1,250
(B) 1,563
(C) 2,250
(D) 2,560
(E) 2,752

Number of Shipments of Manufactured Homes in the United States, 1990–2000

PS00422

164. According to the chart shown, which of the following is closest to the median annual number of shipments of manufactured homes in the United States for the years from 1990 to 2000, inclusive?

(A) 250,000
(B) 280,000
(C) 310,000
(D) 325,000
(E) 340,000

PS08209

165. For the positive integers a, b, and k, $a^k \| b$ means that a^k is a divisor of b, but a^{k+1} is not a divisor of b. If k is a positive integer and $2^k \| 72$, then k is equal to

(A) 2
(B) 3
(C) 4
(D) 8
(E) 18

PS06674

166. A certain characteristic in a large population has a distribution that is symmetric about the mean m. If 68 percent of the distribution lies within one standard deviation d of the mean, what percent of the distribution is less than $m + d$?

(A) 16%
(B) 32%
(C) 48%
(D) 84%
(E) 92%

PS07459

167. Four extra-large sandwiches of exactly the same size were ordered for m students, where $m > 4$. Three of the sandwiches were evenly divided among the students. Since 4 students did not want any of the fourth sandwich, it was evenly divided among the remaining students. If Carol ate one piece from each of the four sandwiches, the amount of sandwich that she ate would be what fraction of a whole extra-large sandwich?

(A) $\frac{m+4}{m(m-4)}$

(B) $\frac{2m-4}{m(m-4)}$

(C) $\frac{4m-4}{m(m-4)}$

(D) $\frac{4m-8}{m(m-4)}$

(E) $\frac{4m-12}{m(m-4)}$

PS05888

168. Which of the following equations has $1+\sqrt{2}$ as one of its roots?

(A) $x^2+2x-1=0$

(B) $x^2-2x+1=0$

(C) $x^2+2x+1=0$

(D) $x^2-2x-1=0$

(E) $x^2-x-1=0$

PS07730

169. In Country C, the unemployment rate among construction workers dropped from 16 percent on September 1, 1992, to 9 percent on September 1, 1996. If the number of construction workers was 20 percent greater on September 1, 1996, than on September 1, 1992, what was the approximate percent change in the number of unemployed construction workers over this period?

(A) 50% decrease

(B) 30% decrease

(C) 15% decrease

(D) 30% increase

(E) 55% increase

PS06215

170. In a box of 12 pens, a total of 3 are defective. If a customer buys 2 pens selected at random from the box, what is the probability that neither pen will be defective?

(A) $\frac{1}{6}$

(B) $\frac{2}{9}$

(C) $\frac{6}{11}$

(D) $\frac{9}{16}$

(E) $\frac{3}{4}$

PS13244

171. At a certain fruit stand, the price of each apple is 40 cents and the price of each orange is 60 cents. Mary selects a total of 10 apples and oranges from the fruit stand, and the average (arithmetic mean) price of the 10 pieces of fruit is 56 cents. How many oranges must Mary put back so that the average price of the pieces of fruit that she keeps is 52 cents?

(A) 1

(B) 2

(C) 3

(D) 4

(E) 5

PS04688

172. A pharmaceutical company received $3 million in royalties on the first $20 million in sales of the generic equivalent of one of its products and then $9 million in royalties on the next $108 million in sales. By approximately what percent did the ratio of royalties to sales decrease from the first $20 million in sales to the next $108 million in sales?

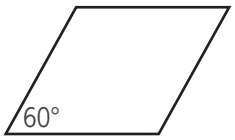
(A) 8%

(B) 15%

(C) 45%

(D) 52%

(E) 56%



Times at Which the Door Opened from 8:00 to 10:00

8:00	8:06	8:30	9:05
8:03	8:10	8:31	9:11
8:04	8:18	8:54	9:29
8:04	8:19	8:57	9:31

PS06497

173. The light in a restroom operates with a 15-minute timer that is reset every time the door opens as a person goes in or out of the room. Thus, after someone enters or exits the room, the light remains on for only 15 minutes unless the door opens again and resets the timer for another 15 minutes. If the times listed above are the times at which the door opened from 8:00 to 10:00, approximately how many minutes during this two-hour period was the light off?

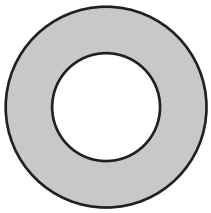
(A) 10
(B) 25
(C) 35
(D) 40
(E) 70

PS07536

174. The parallelogram shown has four sides of equal length. What is the ratio of the length of the shorter diagonal to the length of the longer diagonal?

(A) $\frac{1}{2}$
(B) $\frac{1}{\sqrt{2}}$
(C) $\frac{1}{2\sqrt{2}}$
(D) $\frac{1}{\sqrt{3}}$
(E) $\frac{1}{2\sqrt{3}}$

PS00041



175. If p is the product of the integers from 1 to 30, inclusive, what is the greatest integer k for which 3^k is a factor of p?

(A) 10
(B) 12
(C) 14
(D) 16
(E) 18

PS04651

176. If $n = 3^8 - 2^8$, which of the following is NOT a factor of n?

(A) 97
(B) 65
(C) 35
(D) 13
(E) 5

PS12078

177. In the figure shown, if the area of the shaded region is 3 times the area of the smaller circular region, then the circumference of the larger circle is how many times the circumference of the smaller circle?

(A) 4
(B) 3
(C) 2
(D) $\sqrt{3}$
(E) $\sqrt{2}$

PS12177

178. Club X has more than 10 but fewer than 40 members. Sometimes the members sit at tables with 3 members at one table and 4 members at each of the other tables, and sometimes they sit at tables with 3 members at one table and 5 members at each of the other tables. If they sit at tables with 6 members at each table except one and fewer than 6 members at that one table, how many members will be at the table that has fewer than 6 members?

(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

PS07081

179. In order to complete a reading assignment on time, Terry planned to read 90 pages per day. However, she read only 75 pages per day at first, leaving 690 pages to be read during the last 6 days before the assignment was to be completed. How many days in all did Terry have to complete the assignment on time?

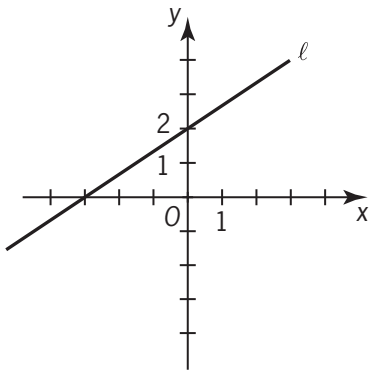
(A) 15
(B) 16
(C) 25
(D) 40
(E) 46

PS13996

180. If $s > 0$ and $\sqrt{\frac{r}{s}} = s$, what is r in terms of s?

(A) $\frac{1}{s}$
(B) $\sqrt{s}$
(C) $s\sqrt{s}$
(D) s^3
(E) $s^2 - s$

PS12536



181. If $3 < x < 100$, for how many values of x is $\frac{x}{3}$ the square of a prime number?

(A) Two
(B) Three
(C) Four
(D) Five
(E) Nine

PS07547

182. A researcher plans to identify each participant in a certain medical experiment with a code consisting of either a single letter or a pair of distinct letters written in alphabetical order. What is the least number of letters that can be used if there are 12 participants, and each participant is to receive a different code?

(A) 4
(B) 5
(C) 6
(D) 7
(E) 8

PS06948

183. The graph of which of the following equations is a straight line that is parallel to line ℓ in the figure above?

(A) $3y - 2x = 0$
(B) $3y + 2x = 0$
(C) $3y + 2x = 6$
(D) $2y - 3x = 6$
(E) $2y + 3x = -6$

PS06562

184. An object thrown directly upward is at a height of h feet after t seconds, where $h = -16(t - 3)^2 + 150$. At what height, in feet, is the object 2 seconds after it reaches its maximum height?

(A) 6
(B) 86
(C) 134
(D) 150
(E) 166

PS16107

185. Which of the following is equivalent to the pair of inequalities $x + 6 > 10$ and $x - 3 \leq 5$?

(A) $2 \leq x < 16$
(B) $2 \leq x < 4$
(C) $2 < x \leq 8$
(D) $4 < x \leq 8$
(E) $4 \leq x < 16$

PS16823

186. David has d books, which is 3 times as many as Jeff and $\frac{1}{2}$ as many as Paula. How many books do the three of them have altogether, in terms of d ?

(A) $\frac{5}{6}d$
(B) $\frac{7}{3}d$
(C) $\frac{10}{3}d$
(D) $\frac{7}{2}d$
(E) $\frac{9}{2}d$

PS16824

187. There are 8 teams in a certain league and each team plays each of the other teams exactly once. If each game is played by 2 teams, what is the total number of games played?

(A) 15
(B) 16
(C) 28
(D) 56
(E) 64

PS07491

188. At his regular hourly rate, Don had estimated the labor cost of a repair job as \$336 and he was paid that amount. However, the job took 4 hours longer than he had estimated and, consequently, he earned \$2 per hour less than his regular hourly rate. What was the time Don had estimated for the job, in hours?

(A) 28
(B) 24
(C) 16
(D) 14
(E) 12

PS16828

189. If $\frac{p}{q} < 1$, and p and q are positive integers, which of the following must be greater than 1 ?

(A) $\sqrt{\frac{p}{q}}$
(B) $\frac{p}{q^2}$
(C) $\frac{p}{2q}$
(D) $\frac{q}{p^2}$
(E) $\frac{q}{p}$

PS16830

190. To mail a package, the rate is x cents for the first pound and y cents for each additional pound, where $x > y$. Two packages weighing 3 pounds and 5 pounds, respectively, can be mailed separately or combined as one package. Which method is cheaper, and how much money is saved?

(A) Combined, with a savings of $x - y$ cents
(B) Combined, with a savings of $y - x$ cents
(C) Combined, with a savings of x cents
(D) Separately, with a savings of $x - y$ cents
(E) Separately, with a savings of y cents

PS16831

191. If money is invested at r percent interest, compounded annually, the amount of the investment will double in approximately $\frac{70}{r}$ years. If Pat's parents invested \$5,000 in a long-term bond that pays 8 percent interest, compounded annually, what will be the approximate total amount of the investment 18 years later, when Pat is ready for college?

(A) \$20,000
(B) \$15,000
(C) \$12,000
(D) \$10,000
(E) \$9,000

PS16832

192. On a recent trip, Cindy drove her car 290 miles, rounded to the nearest 10 miles, and used 12 gallons of gasoline, rounded to the nearest gallon. The actual number of miles per gallon that Cindy's car got on this trip must have been between

(A) $\frac{290}{12.5}$ and $\frac{290}{11.5}$

(B) $\frac{295}{12}$ and $\frac{285}{11.5}$

(C) $\frac{285}{12}$ and $\frac{295}{12}$

(D) $\frac{285}{12.5}$ and $\frac{295}{11.5}$

(E) $\frac{295}{12.5}$ and $\frac{285}{11.5}$

PS16833

193. Which of the following inequalities is an algebraic expression for the shaded part of the number line above?

(A) $|x| \leq 3$

(B) $|x| \leq 5$

(C) $|x - 2| \leq 3$

(D) $|x - 1| \leq 4$

(E) $|x + 1| \leq 4$

PS16835

194. In a small snack shop, the average (arithmetic mean) revenue was \$400 per day over a 10-day period. During this period, if the average daily revenue was \$360 for the first 6 days, what was the average daily revenue for the last 4 days?

(A) \$420

(B) \$440

(C) \$450

(D) \$460

(E) \$480

PS05882

195. If y is the smallest positive integer such that 3,150 multiplied by y is the square of an integer, then y must be

(A) 2

(B) 5

(C) 6

(D) 7

(E) 14

PS16116

196. If $[x]$ is the greatest integer less than or equal to x, what is the value of $[-1.6] + [3.4] + [2.7]$?

(A) 3

(B) 4

(C) 5

(D) 6

(E) 7

PS06558

197. In the first week of the year, Nancy saved \$1. In each of the next 51 weeks, she saved \$1 more than she had saved in the previous week. What was the total amount that Nancy saved during the 52 weeks?

(A) \$1,326

(B) \$1,352

(C) \$1,378

(D) \$2,652

(E) \$2,756

PS16100

198. In a certain sequence, the term x_n is given by the formula $x_n = 2x_{n-1} - \frac{1}{2}(x_{n-2})$ for all $n \geq 2$. If $x_0 = 3$ and $x_1 = 2$, what is the value of x_3 ?

(A) 2.5

(B) 3.125

(C) 4

(D) 5

(E) 6.75

PS08570

199. During a trip, Francine traveled x percent of the total distance at an average speed of 40 miles per hour and the rest of the distance at an average speed of 60 miles per hour. In terms of x, what was Francine's average speed for the entire trip?

(A) $\frac{180 - x}{2}$

(B) $\frac{x + 60}{4}$

(C) $\frac{300 - x}{5}$

(D) $\frac{600}{115 - x}$

(E) $\frac{12{,}000}{x + 200}$

PS00564

200. If $n = (33)^{43} + (43)^{33}$, what is the units digit of n ?

(A) 0

(B) 2

(C) 4

(D) 6

(E) 8

PS13691

201. Team A and Team B are competing against each other in a game of tug-of-war. Team A, consisting of 3 males and 3 females, decides to line up male, female, male, female, male, female. The lineup that Team A chooses will be one of how many different possible lineups?

(A) 9

(B) 12

(C) 15

(D) 36

(E) 720

PS08480

202. A border of uniform width is placed around a rectangular photograph that measures 8 inches by 10 inches. If the area of the border is 144 square inches, what is the width of the border, in inches?

(A) 3

(B) 4

(C) 6

(D) 8

(E) 9

PS09403

203. If $d = \frac{1}{2^3 \times 5^7}$ is expressed as a terminating decimal, how many nonzero digits will d have?

(A) One

(B) Two

(C) Three

(D) Seven

(E) Ten

PS03513

204. For any positive integer n, the sum of the first n positive integers equals $\frac{n(n+1)}{2}$. What is the sum of all the even integers between 99 and 301 ?

(A) 10,100

(B) 20,200

(C) 22,650

(D) 40,200

(E) 45,150

PS06498

205. How many prime numbers between 1 and 100 are factors of 7,150 ?

(A) One

(B) Two

(C) Three

(D) Four

(E) Five

PS08732

206. A sequence of numbers a_1, a_2, a_3, . . . is defined as follows: $a_1 = 3$, $a_2 = 5$, and every term in the sequence after a_2 is the product of all terms in the sequence preceding it, e.g., $a_3 = (a_1)(a_2)$ and $a_4 = (a_1)(a_2)(a_3)$. If $a_n = t$ and $n > 2$, what is the value of a_{n+2} in terms of t ?

(A) $4t$

(B) t^2

(C) t^3

(D) t^4

(E) t^8

PS08552

207. Last year the price per share of Stock X increased by k percent and the earnings per share of Stock X increased by m percent, where k is greater than m. By what percent did the ratio of price per share to earnings per share increase, in terms of k and m?

(A) $\frac{k}{m}\%$

(B) $(k-m)\%$

(C) $\frac{100(k-m)}{100+k}\%$

(D) $\frac{100(k-m)}{100+m}\%$

(E) $\frac{100(k-m)}{100+k+m}\%$

PS04677

208. Of the 300 subjects who participated in an experiment using virtual-reality therapy to reduce their fear of heights, 40 percent experienced sweaty palms, 30 percent experienced vomiting, and 75 percent experienced dizziness. If all of the subjects experienced at least one of these effects and 35 percent of the subjects experienced exactly two of these effects, how many of the subjects experienced only one of these effects?

(A) 105

(B) 125

(C) 130

(D) 180

(E) 195

PS03686

209. If $m^{-1} = -\frac{1}{3}$, then m^{-2} is equal to

(A) –9

(B) –3

(C) $-\frac{1}{9}$

(D) $\frac{1}{9}$

(E) 9

PS07555

210. A photography dealer ordered 60 Model X cameras to be sold for $250 each, which represents a 20 percent markup over the dealer's initial cost for each camera. Of the cameras ordered, 6 were never sold and were returned to the manufacturer for a refund of 50 percent of the dealer's initial cost. What was the dealer's approximate profit or loss as a percent of the dealer's initial cost for the 60 cameras?

(A) 7% loss

(B) 13% loss

(C) 7% profit

(D) 13% profit

(E) 15% profit

PS04305

211. Seven pieces of rope have an average (arithmetic mean) length of 68 centimeters and a median length of 84 centimeters. If the length of the longest piece of rope is 14 centimeters more than 4 times the length of the shortest piece of rope, what is the maximum possible length, in centimeters, of the longest piece of rope?

(A) 82

(B) 118

(C) 120

(D) 134

(E) 152

PS16146

212. What is the difference between the sixth and the fifth terms of the sequence 2, 4, 7, … whose nth term is $n + 2^{n-1}$?

(A) 2

(B) 3

(C) 6

(D) 16

(E) 17

PS02405

213. From the consecutive integers –10 to 10, inclusive, 20 integers are randomly chosen with repetitions allowed. What is the least possible value of the product of the 20 integers?

(A) $(-10)^{20}$

(B) $(-10)^{10}$

(C) 0

(D) $-(10)^{19}$

(E) $-(10)^{20}$

PS05140

214. The letters D, G, I, I, and T can be used to form 5-letter strings such as DIGIT or DGIIT. Using these letters, how many 5-letter strings can be formed in which the two occurrences of the letter I are separated by at least one other letter?

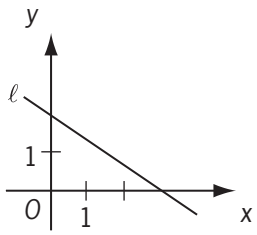
(A) 12
(B) 18
(C) 24
(D) 36
(E) 48

PS00574

215. $\dfrac{0.99999999}{1.0001} - \dfrac{0.99999991}{1.0003} =$

(A) 10^{-8}
(B) $3(10^{-8})$
(C) $3(10^{-4})$
(D) $2(10^{-4})$
(E) 10^{-4}

PS03144



216. Last Sunday a certain store sold copies of Newspaper A for \$1.00 each and copies of Newspaper B for \$1.25 each, and the store sold no other newspapers that day. If r percent of the store's revenue from newspaper sales was from Newspaper A and if p percent of the newspapers that the store sold were copies of Newspaper A, which of the following expresses r in terms of p ?

(A) $\dfrac{100p}{125-p}$
(B) $\dfrac{150p}{250-p}$
(C) $\dfrac{300p}{375-p}$
(D) $\dfrac{400p}{500-p}$
(E) $\dfrac{500p}{625-p}$

PS16890

217. For the past n days, the average (arithmetic mean) daily production at a company was 50 units. If today's production of 90 units raises the average to 55 units per day, what is the value of n ?

(A) 30
(B) 18
(C) 10
(D) 9
(E) 7

PS16893

218. In the coordinate system above, which of the following is the equation of line ℓ ?

(A) $2x - 3y = 6$
(B) $2x + 3y = 6$
(C) $3x + 2y = 6$
(D) $2x - 3y = -6$
(E) $3x - 2y = -6$

PS16894

219. If a two-digit positive integer has its digits reversed, the resulting integer differs from the original by 27. By how much do the two digits differ?

(A) 3
(B) 4
(C) 5
(D) 6
(E) 7

PS16896

220. In an electric circuit, two resistors with resistances x and y are connected in parallel. In this case, if r is the combined resistance of these two resistors, then the reciprocal of r is equal to the sum of the reciprocals of x and y. What is r in terms of x and y?

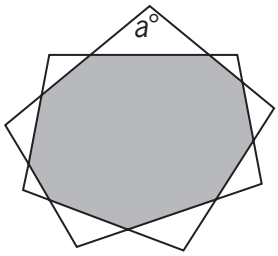
(A) xy
(B) $x+y$
(C) $\frac{1}{x+y}$
(D) $\frac{xy}{x+y}$
(E) $\frac{x+y}{xy}$

PS16897

221. Xavier, Yvonne, and Zelda each try independently to solve a problem. If their individual probabilities for success are $\frac{1}{4}$, $\frac{1}{2}$, and $\frac{5}{8}$, respectively, what is the probability that Xavier and Yvonne, but not Zelda, will solve the problem?

(A) $\frac{11}{8}$
(B) $\frac{7}{8}$
(C) $\frac{9}{64}$
(D) $\frac{5}{64}$
(E) $\frac{3}{64}$

PS16898



222. If $\frac{1}{x}-\frac{1}{x+1}=\frac{1}{x+4}$, then x could be

(A) 0
(B) –1
(C) –2
(D) –3
(E) –4

PS16899

223. $\left(\frac{1}{2}\right)^{-3}\left(\frac{1}{4}\right)^{-2}\left(\frac{1}{16}\right)^{-1}$

(A) $\left(\frac{1}{2}\right)^{-48}$
(B) $\left(\frac{1}{2}\right)^{-11}$
(C) $\left(\frac{1}{2}\right)^{-6}$
(D) $\left(\frac{1}{8}\right)^{-11}$
(E) $\left(\frac{1}{8}\right)^{-6}$

PS00947

224. The figure shown above consists of a shaded 9-sided polygon and 9 unshaded isosceles triangles. For each isosceles triangle, the longest side is a side of the shaded polygon and the two sides of equal length are extensions of the two adjacent sides of the shaded polygon. What is the value of a?

(A) 100
(B) 105
(C) 110
(D) 115
(E) 120

PS01648

225. List T consists of 30 positive decimals, none of which is an integer, and the sum of the 30 decimals is S. The estimated sum of the 30 decimals, E, is defined as follows. Each decimal in T whose tenths digit is even is rounded up to the nearest integer, and each decimal in T whose tenths digit is odd is rounded down to the nearest integer; E is the sum of the resulting integers.

If $\frac{1}{3}$ of the decimals in T have a tenths digit that is even, which of the following is a possible value of $E - S$?

I. -16
II. 6
III. 10

(A) I only
(B) I and II only
(C) I and III only
(D) II and III only
(E) I, II, and III

PS16115

226. If $5 - \frac{6}{x} = x$, then x has how many possible values?

(A) None
(B) One
(C) Two
(D) A finite number greater than two
(E) An infinite number

PS16904

227. Seed mixture X is 40 percent ryegrass and 60 percent bluegrass by weight; seed mixture Y is 25 percent ryegrass and 75 percent fescue. If a mixture of X and Y contains 30 percent ryegrass, what percent of the weight of the mixture is X?

(A) 10%
(B) $33\frac{1}{3}\%$
(C) 40%
(D) 50%
(E) $66\frac{2}{3}\%$

PS14203

228. How many of the integers that satisfy the inequality $\frac{(x+2)(x+3)}{x-2} \geq 0$ are less than 5?

(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

PS07712

229. Of the 150 houses in a certain development, 60 percent have air-conditioning, 50 percent have a sunporch, and 30 percent have a swimming pool. If 5 of the houses have all three of these amenities and 5 have none of them, how many of the houses have exactly two of these amenities?

(A) 10
(B) 45
(C) 50
(D) 55
(E) 65

PS08886

230. The value of $\frac{2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}}{5}$ is how many times the value of $2^{(-17)}$?

(A) $\frac{3}{2}$
(B) $\frac{5}{2}$
(C) 3
(D) 4
(E) 5

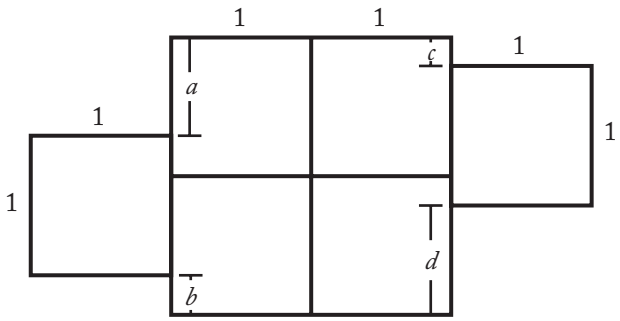
5.5 Answer Explanations

The following discussion is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to problem solving questions. The particular questions in this chapter are generally representative of the kinds of problem solving questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.



*PS02991

1. In the figure, the 6 small squares are identical, each with sides of length 1. What is the outer perimeter (shown in bold) of the entire figure?

(A) 8
(B) 12
(C) 16
(D) 20
(E) 24

Geometry Perimeter

The labeled figure shows the 6 horizontal sides of the boundary, 4 sides of length 1 and 2 sides of length 2, and the 6 vertical sides of the boundary, 2 sides of length 1 and 1 side each of lengths a, b, c, and d. The perimeter is the sum of the lengths of these 12 sides, or $4(1) + 2(2) + 2(1) + a + b + c + d$, or $10 + a + b + c + d$. To determine the value of $a + b + c + d$, note that the vertical width of the squares is 2. On the left side, this vertical width is the sum of the lengths of 3 vertical sides of the boundary, 1 side of length 1 and 1 side each of lengths a and b, and thus $2 = 1 + a + b$, or $a + b = 1$. On the right side, this vertical width is the sum of the lengths of 3 vertical sides of the boundary, 1 side of length 1 and 1 side each of lengths c and d, and thus $2 = 1 + c + d$, or $c + d = 1$. Therefore, the perimeter is $10 + (a + b) + (c + d) = 10 + 1 + 1 = 12$.

The correct answer is B.

Performance Time	Ticket Price	Number of Tickets Sold
Thursday night	$40	200
Friday night	$50	240
Saturday afternoon	$40	220
Saturday night	$50	300

PS09868

2. The table shows a summary of the ticket sales from four performances of a certain play. What is the difference between the maximum and the minimum ticket-sale revenue from a single performance?

(A) $4,000
(B) $5,100
(C) $6,200
(D) $7,000
(E) $9,600

Arithmetic Interpretation of tables

For each performance, the product of the ticket price and the number of tickets sold is the ticket-sale revenue. The following table shows these values.

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

Performance Time	Ticket-sale Revenue
Thursday night	200($40) = $8,000
Friday night	240($50) = $12,000
Saturday afternoon	220($40) = $8,800
Saturday night	300($50) = $15,000

From these values it follows that for a single performance, the maximum ticket-sale revenue is $15,000 and the minimum ticket-sale revenue is $8,000, and therefore the difference between these two revenues is $15,000 – $8,000 = $7,000.

The correct answer is D.

PS10002

3. During a trip that they took together, Carmen, Juan, Maria, and Rafael drove an average (arithmetic mean) of 80 miles each. Carmen drove 72 miles, Juan drove 78 miles, and Maria drove 83 miles. How many miles did Rafael drive?

(A) 80
(B) 82
(C) 85
(D) 87
(E) 89

Arithmetic Statistics

Let C, J, M, and R be the numbers of miles, respectively, that Carmen, Juan, Maria, and Rafael drove. Since the average of the numbers of miles they drove is 80, it follows that $\frac{C+J+M+R}{4} = 80$, or $C+J+M+R = 4(80) = 320$. It is given that $C = 72$, $J = 78$, and $M = 83$. Therefore, $72 + 78 + 83 + R = 320$, or $R = 87$.

The correct answer is D.

PS07308

4. Each week, a clothing salesperson receives a commission equal to 15 percent of the first $500 in sales and 20 percent of all additional sales that week. What commission would the salesperson receive on total sales for the week of $1,300 ?

(A) $195
(B) $227
(C) $235
(D) $260
(E) $335

Arithmetic Applied problems

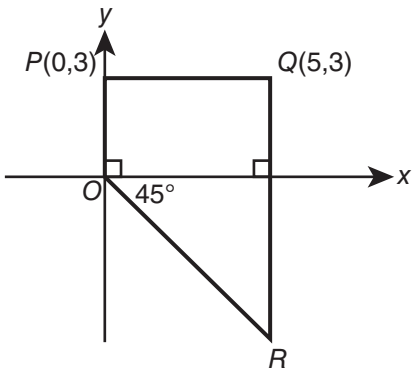
The commission on the total sales can be calculated as follows:

$$\begin{aligned} &\text{commission on first \$500} + \text{commission on amount over \$500} \\ = \;& (0.15)(\$500) + (0.20)(\$1{,}300 - \$500) \\ = \;& \$75 + \$160 \end{aligned}$$

Therefore, the commission on the total sales is $75 + $160 = $235.

The correct answer is C.

PS07799



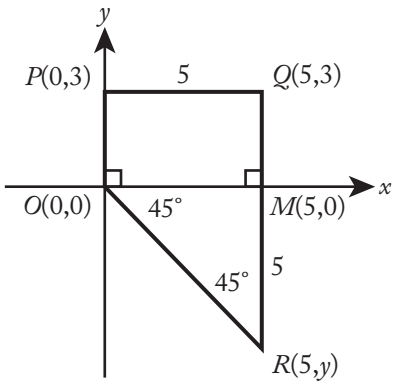
5. A certain restaurant that regularly advertises through the mail has 1,040 cover letters and 3,000 coupons in stock. In its next mailing, each envelope will contain 1 cover letter and 2 coupons. If all of the cover letters in stock are used, how many coupons will remain in stock after this mailing?

(A) 920
(B) 1,040
(C) 1,500
(D) 1,960
(E) 2,080

Arithmetic Applied problems

In the next mailing there will be 1,040 cover letters and 2(1,040) = 2,080 coupons. Therefore, after the next mailing the number of coupons remaining in stock will be 3,000 – 2,080 = 920.

The correct answer is A.



PS02599

6. In the figure above, what are the coordinates of point R?

(A) (3,–5)
(B) (3,–3)
(C) (5,5)
(D) (5,–3)
(E) (5,–5)

Geometry Simple coordinate geometry; Triangles

In the figure, each of the points M and R has x-coordinate 5 because these two points lie on a vertical line that contains Q and it is given that the x-coordinate of Q is 5. Also, the measure of $\angle MRO$ is 45°, and hence $OM = MR$, because ΔOMR is a right triangle and it is given that the measure of $\angle ROM$ is 45°. Since it is given that $OM = 5$, it follows that $MR = 5$ and the coordinates of R are $(5,y) = (5,–5)$.

The correct answer is E.

PS08877

7. The price of a coat in a certain store is $500. If the price of the coat is to be reduced by $150, by what percent is the price to be reduced?

(A) 10%
(B) 15%
(C) 20%
(D) 25%
(E) 30%

Arithmetic Percents

A reduction of $150 from $500 represents a percent decrease of $\left(\frac{150}{500}\times 100\right)\% = 30\%$. Therefore, the price of the coat was reduced by 30%.

The correct answer is E.

PS05410

8. $\left(\frac{1}{2}-\frac{1}{3}\right)+\left(\frac{1}{3}-\frac{1}{4}\right)+\left(\frac{1}{4}-\frac{1}{5}\right)+\left(\frac{1}{5}-\frac{1}{6}\right)=$

(A) $-\frac{1}{6}$
(B) 0
(C) $\frac{1}{3}$
(D) $\frac{1}{2}$
(E) $\frac{2}{3}$

Arithmetic Operations on rational numbers

The parentheses can be removed without any change of signs, and after doing this most of the terms can be additively cancelled as shown below.

$$\frac{1}{2}-\cancel{\frac{1}{3}}+\cancel{\frac{1}{3}}-\cancel{\frac{1}{4}}+\cancel{\frac{1}{4}}-\cancel{\frac{1}{5}}+\cancel{\frac{1}{5}}-\frac{1}{6}=\frac{1}{2}-\frac{1}{6}$$
$$=\frac{1}{3}$$

The correct answer is C.

PS05001

9. While a family was away on vacation, they paid a neighborhood boy $11 per week to mow their lawn and $4 per day to feed and walk their dog. If the family was away for exactly 3 weeks, how much did they pay the boy for his services?

(A) $45
(B) $54
(C) $71
(D) $95
(E) $117

Arithmetic Applied problems

A period of exactly 3 weeks consists of exactly $3(7) = 21$ days. Therefore, the boy was paid for 3 weeks of mowing the lawn and for 21 days of feeding and walking the dog, for a total pay of $3(\$11) + 21(\$4) = \$33 + \$84 = \$117$.

The correct answer is E.

PS17812

10. Last year $48,000 of a certain store's profit was shared by its 2 owners and their 10 employees. Each of the 2 owners received 3 times as much as each of their 10 employees. How much did each owner receive from the $48,000 ?

(A) $12,000
(B) $9,000
(C) $6,000
(D) $4,000
(E) $3,000

Algebra First-degree equations

Let A be the amount received by each owner and let B be the amount received by each employee. From the given information it follows that $A = 3B$ and $2A + 10B = 48{,}000$. Thus, $2(3B) + 10B = 48{,}000$, or $16B = 48{,}000$, or $B = 3{,}000$. Therefore, the amount received by each owner was $A = 3B = 3(\$3{,}000) = \$9{,}000$.

The correct answer is B.

PS02295

11. On a vacation, Rose exchanged $500.00 for euros at an exchange rate of 0.80 euro per dollar and spent $\frac{3}{4}$ of the euros she received. If she exchanged the remaining euros for dollars at an exchange rate of $1.20 per euro, what was the dollar amount she received?

(A) $60.00
(B) $80.00
(C) $100.00
(D) $120.00
(E) $140.00

Arithmetic Operations with rational numbers

At the exchange rate of 0.80 euro per dollar, Rose exchanged $500.00 for $(0.80)(500) =$ 400 euros. She spent $\frac{3}{4}(400) = 300$ euros, had $400 - 300 = 100$ euros left, and exchanged them for dollars at the exchange rate of $1.20 per euro. Therefore, the dollar amount she received was $(1.20)(100) = \$120.00$.

The correct answer is D.

x	x	x	y	y	v
v	x	x	y	w	w

PS08461

12. Each of the 12 squares shown is labeled x, y, v, or w. What is the ratio of the number of these squares labeled x or y to the number of these squares labeled v or w ?

(A) 1:2
(B) 2:3
(C) 4:3
(D) 3:2
(E) 2:1

Arithmetic Ratio and proportion

By a direct count, there are 8 squares labeled x or y (5 labeled x, 3 labeled y) and there are 4 squares labeled v or w (2 labeled v, 2 labeled w). Therefore, the ratio of the number of squares labeled x or y to the number of squares labeled v or w is 8:4, which reduces to 2:1.

The correct answer is E.

PS02382

13. In the *xy*-coordinate plane, if the point (0,2) lies on the graph of the line $2x + ky = 4$, what is the value of the constant k?

(A) 2
(B) 1
(C) 0
(D) –1
(E) –2

Algebra First-degree equations

It is given that the point (0,2) lies on the graph of $2x + ky = 4$. Therefore, $2(0) + k(2) = 4$, or $0 + 2k = 4$, or $k = 2$.

The correct answer is A.

PS01248

14. Bouquets are to be made using white tulips and red tulips, and the ratio of the number of white tulips to the number of red tulips is to be the same in each bouquet. If there are 15 white tulips and 85 red tulips available for the bouquets, what is the greatest number of bouquets that can be made using all the tulips available?

(A) 3
(B) 5
(C) 8
(D) 10
(E) 13

Arithmetic Applied problems; Properties of numbers

Because all the tulips are to be used and the same number of white tulips will be in each bouquet, the number of white tulips in each bouquet times the number of bouquets must equal the total number of white tulips, or 15. Thus, the number of bouquets must be a factor of 15, and so the number must be 1, 3, 5, or 15. Also, the number of red tulips in each bouquet times the number of bouquets must equal the total number of red tulips, or 85. Thus, the number of bouquets must be a factor of 85, and so the number must be 1, 5, 17, or 85. Since the number of bouquets must be 1, 3, 5, or 15, and the number of bouquets must be 1, 5, 17, or 85, it follows that the number of bouquets must be 1 or 5, and thus the greatest number of bouquets that can be made is 5. Note that each of the 5 bouquets will have 3 white tulips, because $(5)(3) = 15$, and each of the 5 bouquets will have 17 red tulips, because $(5)(17) = 85$.

The correct answer is B.

PS07369

15. Over the past 7 weeks, the Smith family had weekly grocery bills of \$74, \$69, \$64, \$79, \$64, \$84, and \$77. What was the Smiths' average (arithmetic mean) weekly grocery bill over the 7-week period?

(A) \$64
(B) \$70
(C) \$73
(D) \$74
(E) \$85

Arithmetic Statistics

The average weekly grocery bill over the 7-week period can be calculated by dividing the total of the 7 weekly grocery bills by 7.

$$\frac{\$74+\$69+\$64+\$79+\$64+\$84+\$77}{7} = \frac{\$511}{7} = \$73$$

An alternate method that involves less computation by hand is to calculate the average by dividing the total of the differences of the weekly bills from a fixed value (chosen so that these differences can be calculated easily), dividing this total by 7, and then adding the result to the fixed value chosen. The computations below illustrate and justify this method when the fixed value is 70. In using this method when the fixed value is 70 (and not also justifying the method, as is done below), the numbers 4, –1, –6, 9, –6, 14, and 7 would be obtained by inspection and added together, then divided by 7 with the result added to 70.

$$\frac{(70+4)+(70-1)+(70-6)+(70+9)+(70-6)+(70+14)+(70+7)}{7}$$
$$= \frac{7(70)}{7} + \frac{4-1-6+9-6+14+7}{7}$$
$$= 70 + \frac{21}{7}$$
$$= 70 + 3$$
$$= 73$$

The correct answer is C.

PS14861

16. 125% of 5 =

(A) 5.125
(B) 5.25
(C) 6
(D) 6.125
(E) 6.25

Arithmetic Percents

125% of 5 represents $\frac{125}{100} \times 5$, or $1.25 \times 5 = 6.25$.

The correct answer is E.

PS02764

17. During a recent storm, 9 neighborhoods experienced power failures of durations 34, 29, 27, 46, 18, 25, 12, 35, and 16 minutes, respectively. For these 9 neighborhoods, what was the median duration, in minutes, of the power failures?

(A) 34
(B) 29
(C) 27
(D) 25
(E) 18

Arithmetic Statistics

To determine the median of these 9 numbers, put the numbers in numerical order in a list and determine the middle value in the list:

12, 16, 18, 25, **27**, 29, 34, 35, 46

From this list it follows that the median is 27.

The correct answer is C.

PS02286

18. When traveling at a constant speed of 32 miles per hour, a certain motorboat consumes 24 gallons of fuel per hour. What is the fuel consumption of this boat at this speed measured in miles traveled per gallon of fuel?

(A) $\frac{2}{3}$
(B) $\frac{3}{4}$
(C) $\frac{4}{5}$
(D) $\frac{4}{3}$
(E) $\frac{3}{2}$

Arithmetic Operations with rational numbers

If the motorboat consumes 24 gallons of fuel in 1 hour, then it consumes 1 gallon of fuel in $\frac{1}{24}$ hour. If the motorboat travels 32 miles in 1 hour, then it travels $\frac{32}{24} = \frac{4}{3}$ miles in $\frac{1}{24}$ hour, which is the length of time it takes to consume 1 gallon of fuel. Thus, the motorboat travels $\frac{4}{3}$ miles per gallon of fuel.

The correct answer is D.

PS11906

19. A technician makes a round-trip to and from a certain service center by the same route. If the technician completes the drive to the center and then completes 10 percent of the drive from the center, what percent of the round-trip has the technician completed?

(A) 5%
(B) 10%
(C) 25%
(D) 40%
(E) 55%

Arithmetic Percents

In completing the drive to the service center, the technician has completed 50% of the round-trip. The drive from the center is the other 50% of the round-trip. In completing 10% of the drive from the center, the technician has completed an additional 10% of 50%, or 5% of the

round-trip. Thus, the technician has completed 50% + 5% = 55% of the round-trip.

The correct answer is E.

PS15957

20. From 2000 to 2003, the number of employees at a certain company increased by a factor of $\frac{1}{4}$. From 2003 to 2006, the number of employees at this company decreased by a factor of $\frac{1}{3}$. If there were 100 employees at the company in 2006, how many employees were there at the company in 2000 ?

(A) 200
(B) 120
(C) 100
(D) 75
(E) 60

Algebra First-degree equations

Let N be the number of employees in 2000. In 2003 there were $\frac{1}{4}(\text{number in } 2000) = \frac{1}{4}N$ more employees than in 2000, for a total of $N + \frac{1}{4}N = \frac{5}{4}N$ employees. In 2006 there were $\frac{1}{3}(\text{number in } 2003) = \frac{1}{3}\left(\frac{5}{4}\right)N$ fewer employees than in 2003, for a total of $\frac{5}{4}N - \frac{1}{3}\left(\frac{5}{4}N\right) = \frac{5}{6}N$ employees. It is given that there were 100 employees in 2006, so $\frac{5}{6}N = 100$, or $N = \frac{6}{5}(100) = 120$.

The correct answer is B.

PS00984

21. Which of the following statements must be true about the average (arithmetic mean) and the median of 5 consecutive integers?

I. The average is one of the integers.
II. The median is one of the integers.
III. The median equals the average.

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

Algebra Statistics

If n is the least of the 5 consecutive integers then, in increasing order, the integers are

$n,\ n+1,\ n+2,\ n+3,\ n+4.$

Statement I must be true because the average of the integers is $\frac{n+(n+1)+(n+2)+(n+3)+(n+4)}{5}$, or $\frac{5n+10}{5} = n+2$, and $n+2$ is one of the integers.

Statement II must be true because the median is the middle number in the list, which is $n+2$, and $n+2$ is one of the integers.

Statement III must be true because $n+2$ is both the average and the median.

The correct answer is E.

PS15358

22. A collection of 16 coins, each with a face value of either 10 cents or 25 cents, has a total face value of $2.35. How many of the coins have a face value of 25 cents?

(A) 3
(B) 5
(C) 7
(D) 9
(E) 11

Algebra First-degree equations

Let x represent the number of coins each with a face value of 25 cents. Then, since there are 16 coins in all, $16 - x$ represents the number of coins each with a face value of 10 cents. The total face value of the coins is $2.35 or 235 cents so,

$25x + 10(16 - x) = 235$ given
$25x + 160 - 10x = 235$ distributive property
$15x + 160 = 235$ combine like terms
$15x = 75$ subtract 160 from both sides
$x = 5$ divide both sides by 15

Therefore, 5 of the coins have a face value of 25 cents.

The correct answer is B.

PS09707

23. A retailer purchased eggs at $2.80 per dozen and sold the eggs at 3 eggs for $0.90. What was the retailer's gross profit from purchasing and selling 5 dozen eggs? (1 dozen eggs = 12 eggs)

(A) $0.90
(B) $2.40
(C) $4.00
(D) $11.30
(E) $12.00

Arithmetic Applied problems

The retailer's cost was $2.80 per dozen eggs and the retailer's revenue was $0.90 per 3 eggs, or 4($0.90) = $3.60 per dozen eggs. Therefore, the retailer's profit for 5 dozen eggs—revenue minus cost for 5 dozen eggs—was 5($3.60 – $2.80) = 5($0.80) = $4.00.

The correct answer is C.

PS02127

24. In a set of 24 cards, each card is numbered with a different positive integer from 1 to 24. One card will be drawn at random from the set. What is the probability that the card drawn will have either a number that is divisible by both 2 and 3 or a number that is divisible by 7 ?

(A) $\frac{3}{24}$
(B) $\frac{4}{24}$
(C) $\frac{7}{24}$
(D) $\frac{8}{24}$
(E) $\frac{17}{24}$

Arithmetic Probability

The desired probability is N divided by 24, where N is the number of positive integers from 1 through 24 that are either divisible by both 2 and 3, or divisible by 7. Since an integer is divisible by both 2 and 3 if and only if the integer is divisible by 6, it follows that N is the number of positive integers from 1 through 24 that are either divisible by 6 or divisible by 7. There are 4 numbers from 1 through 24 that are divisible by 6, namely 6, 12, 18, and 24. There are 3 numbers from 1 through 24 that are divisible by 7, namely 7, 14, and 21. Since these numbers are all different from each other, it follows that $N = 4 + 3 = 7$ and the desired probability is $\frac{N}{24} = \frac{7}{24}$.

The correct answer is C.

PS12542

25. If the circumference of a circle inscribed in a square is 25π, what is the perimeter of the square?

(A) 20
(B) 25
(C) 40
(D) 50
(E) 100

Geometry Circles; Circumference; Perimeter

For any circle inscribed in a square, the length of the diameter of the circle is equal to the length of a side of the square. Let d be the length of the diameter of the circle. Then πd is the circumference of the circle. Also, d is the length of each of the 4 sides of the square, and so $4d$ is the perimeter of the square. From the information given, $\pi d = 25\pi$, or $d = 25$, and therefore the perimeter of the square is $4d = 4(25) = 100$.

The correct answer is E.

PS03972

26. If $1 < x < y < z$, which of the following has the greatest value?

(A) $z(x + 1)$
(B) $z(y + 1)$
(C) $x(y + z)$
(D) $y(x + z)$
(E) $z(x + y)$

Algebra Inequalities

This problem can be solved by calculating each of the options for a fixed and appropriate choice of values for each of the variables. For example, if

$x = 2$, $y = 3$, and $z = 4$, then $1 < x < y < z$ and the values of the options are as follows:

A $z(x + 1) = 4(2 + 1) = 12$

B $z(y + 1) = 4(3 + 1) = 16$

C $x(y + z) = 2(3 + 4) = 14$

D $y(x + z) = 3(2 + 4) = 18$

E $z(x + y) = 4(2 + 3) = 20$

This problem can also be solved by the use of algebraic ordering principles in a way that does not assume the same answer option is true for each choice of values of x, y, and z such that $1 < x < y < z$. First, note that neither the value of the expression in A nor the value of the expression in B can ever have the greatest value, since the value of the expression in E is greater than the value of the expression in A (because $y > 1$) and the value of the expression in E is greater than the value of the expression in B (because $x > 1$). Also, the value of the expression in D is greater than the value of the expression in C, since $y > x$ implies $yz > xz$, which implies $xy + yz > xy + xz$, which implies $y(x + z) > x(y + z)$, and so the value of the expression in C cannot be the greatest. Finally, the value of the expression in E is greater than the value of the expression in D, since $z > y$ implies $xz > xy$, which implies $xz + yz > xy + yz$, which implies $z(x + y) > y(x + z)$, and so the value of the expression in D cannot be the greatest. Since none of the values of the expressions in A, B, C, or D can be the greatest, it follows that the value of the expression in E is the greatest.

The correct answer is E.

PS00087

27. Set X consists of eight consecutive integers. Set Y consists of all the integers that result from adding 4 to each of the integers in set X and all the integers that result from subtracting 4 from each of the integers in set X. How many more integers are there in set Y than in set X?

(A) 0
(B) 4
(C) 8
(D) 12
(E) 16

Arithmetic Operations with integers

Let n be the least integer in Set X. Then the 8 integers in Set X are

n,	$n + 1$,	. . .,	$n + 6$,	$n + 7$.

Adding 4 to each of the integers in Set X gives

$n + 4$,	$n + 5$,	. . .,	$n + 10$,	$n + 11$.

Subtracting 4 from each of the integers in Set X gives

$n - 4$,	$n - 3$,	. . .,	$n + 2$,	$n + 3$.

Combining the last two lists gives the integers in Set Y:

$n - 4$,	$n - 3$,	. . .,	$n + 10$,	$n + 11$.

Therefore, the integers in Set Y consist of the 4 integers $n - 4$, $n - 3$, $n - 2$, $n - 1$ along with the integers in Set X along with the 4 integers $n + 8$, $n + 9$, $n + 10$, $n + 11$. It follows that Set Y contains a total of $4 + 4 = 8$ more integers than Set X.

The correct answer is C.

PS05239

28. Of the following, which is the closest to $\dfrac{60.2}{1.03 \times 4.86}$?

(A) 10
(B) 12
(C) 13
(D) 14
(E) 15

Arithmetic Estimation

Replace the three numbers appearing in the expression with three nearby integers that allow the arithmetic operations to be carried out easily to get an approximation.

$$\frac{60.2}{1.03 \times 4.86} \approx \frac{\cancel{60}^{\,12}}{1 \times \cancel{5}^{\,1}} = \frac{12}{1 \times 1} = 12$$

The correct answer is B.

PS15402

29. Thabo owns exactly 140 books, and each book is either paperback fiction, paperback nonfiction, or hardcover nonfiction. If he owns 20 more paperback nonfiction books than hardcover nonfiction books, and twice as many paperback fiction books as paperback nonfiction books, how many hardcover nonfiction books does Thabo own?

(A) 10
(B) 20
(C) 30
(D) 40
(E) 50

Algebra Simultaneous first-degree equations

Let F represent the number of paperback fiction books that Thabo owns; N_p, the number of paperback nonfiction books; and N_h, the number of hardcover nonfiction books. It is given that $F + N_p + N_h = 140$, $N_p = N_h + 20$, and $F = 2N_p = 2(N_h + 20)$. It follows that

$$\begin{aligned} F + N_p + N_h &= 140 && \text{given} \\ 2(N_h + 20) + (N_h + 20) + N_h &= 140 && \text{by substitution} \\ 4N_h + 60 &= 140 && \text{combine like terms} \\ 4N_h &= 80 && \text{subtract 60 from both sides} \\ N_h &= 20 && \text{divide both sides by 4} \end{aligned}$$

The correct answer is B.

PS04571

30. If the average (arithmetic mean) of the four numbers 3, 15, 32, and $(N + 1)$ is 18, then $N =$

(A) 19
(B) 20
(C) 21
(D) 22
(E) 29

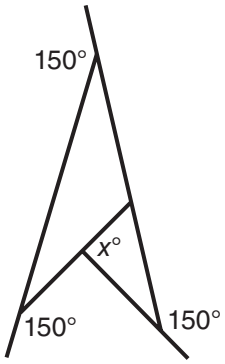
Arithmetic Statistics

From the given information and the definition of average, it follows that $\frac{3+15+32+(N+1)}{4} = 18$, or $\frac{51+N}{4} = 18$. Multiplying both sides of the last equation by 4 gives $51 + N = 72$. Therefore, $N = 72 - 51 = 21$.

The correct answer is C.

PS13801

31. Abdul, Barb, and Carlos all live on the same straight road, on which their school is also located. The school is halfway between Abdul's house and Barb's house. Barb's house is halfway between the school and Carlos's house. If the school is 4 miles from Carlos's house, how many miles is Abdul's house from Carlos's house?

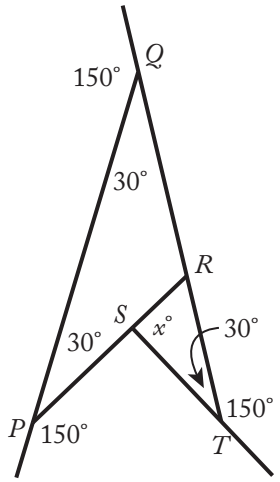


(A) $1\frac{1}{3}$
(B) 2
(C) 4
(D) 6
(E) 8

Geometry Applied problems

In the diagram, A represents the location of Abdul's house, S represents the location of the school, B represents the location of Barb's house, and C represents the location of Carlos's house. Because the school is halfway between Abdul's house and Barb's house, S is the midpoint of $\overline{AB}$, and because Barb's house is halfway between the school and Carlos's house, B is the midpoint of $\overline{SC}$. Therefore, $AS = SB = BC$. Finally, since $SC = 4$, it follows that $AS = SB = BC = 2$ and hence $AC = 2 + 2 + 2 = 6$.

The correct answer is D.



PS00534

32. In the figure shown, what is the value of x?

(A) 60
(B) 80
(C) 85
(D) 90
(E) 95

Geometry Angles and their measure

The revised figure shows three angles, each with measure 150°, and their three corresponding supplementary angles, each with measure 30°. Since the sum of the measures of the angles in ΔPQR is 180°, it follows that the measure of $\angle PRQ$ is $180° - (30° + 30°) = 120°$, and hence the measure of $\angle SRT$ is $180° - 120° = 60°$. Finally, since the sum of the measures of the angles in ΔRST is 180°, it follows that $x° = 180° - (30° + 60°) = 90°$.

The correct answer is D.

PS17479

33. During a certain time period, Car X traveled north along a straight road at a constant rate of 1 mile per minute and used fuel at a constant rate of 5 gallons every 2 hours. During this time period, if Car X used exactly 3.75 gallons of fuel, how many miles did Car X travel?

(A) 36
(B) 37.5
(C) 40
(D) 80
(E) 90

Arithmetic Applied problems

The car traveled at a rate of $1\frac{\text{mi}}{\text{min}} = \left(1\frac{\text{mi}}{\cancel{\text{min}}}\right)\left(60\frac{\cancel{\text{min}}}{\text{hr}}\right) = 60\frac{\text{mi}}{\text{hr}}$ using fuel at a rate of 5 gallons every 2 hours, or $\frac{5}{2}\frac{\text{gal}}{\text{hr}}$. If the usage rate in miles per gallon was known, then that usage rate times 3.75 gallons would give the number of miles.

One approach to finding this usage rate is to consider whether multiplying or dividing the known rates $60\frac{\text{mi}}{\text{hr}}$ and $\frac{5}{2}\frac{\text{gal}}{\text{hr}}$ will lead to unit cancellations that result in miles per gallon. The following calculation shows that dividing these two known rates leads to the appropriate unit cancellations:

$$60\frac{\text{mi}}{\text{hr}} \div \frac{5}{2}\frac{\text{gal}}{\text{hr}} = 60\frac{\text{mi}}{\cancel{\text{hr}}} \times \frac{2}{5}\frac{\cancel{\text{hr}}}{\text{gal}} = 24\frac{\text{mi}}{\text{gal}}.$$

Therefore, after using 3.75 gal of fuel, the car has traveled $24\frac{\text{mi}}{\text{gal}} \times 3.75 \text{ gal} = 90$ miles.

The correct answer is E.

PS13707

34. Cheryl purchased 5 identical hollow pine doors and 6 identical solid oak doors for the house she is building. The regular price of each solid oak door was twice the regular price of each hollow pine door. However, Cheryl was given a discount of 25% off the regular price of each solid oak door. If the regular price of each hollow pine door was $40, what was the total price of all 11 doors?

(A) $320
(B) $540
(C) $560
(D) $620
(E) $680

Algebra Applied problems; Percents

The price of each pine door is \$40, so the price of 5 pine doors is 5(\$40) = \$200. The price of each oak door is twice that of a pine door, and thus \$80, which becomes (0.75)(\$80) = \$60 when the 25% discount is applied. Therefore, the price of 6 oak doors at the 25% discount is 6(\$60) = \$360, and hence the total price of all 11 doors is \$200 + \$360 = \$560.

The correct answer is C.

PS01233

35. A certain store will order 25 crates of apples. The apples will be of three different varieties—McIntosh, Rome, and Winesap—and each crate will contain apples of only one variety. If the store is to order more crates of Winesap than crates of McIntosh and more crates of Winesap than crates of Rome, what is the least possible number of crates of Winesap that the store will order?

(A) 7
(B) 8
(C) 9
(D) 10
(E) 11

Arithmetic Applied problems

Let M, R, and W be the numbers of crates, respectively, of McIntosh, Rome, and Winesap apples. From the given information it follows that $M + R + W = 25$ and $M \leq R < W$. Find the least possible value of W such that positive integer values of M, R, and W satisfy these two conditions.

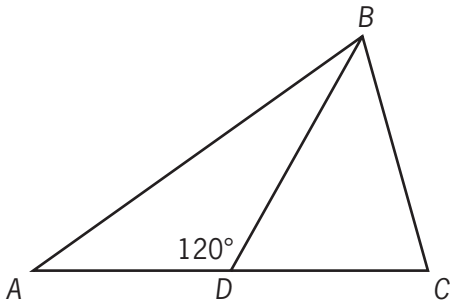
Since the values 8, 8, and 9 for M, R, and W satisfy these two conditions, $W = 9$ is possible. Thus, the least possible value of W is less than or equal to 9. It is not possible for the value of W to be less than 9, since if the value of W were less than 9, then $M + R + W < 25$. This is because in this case, the greatest possible values of M, R, and W would be 7, 7, and 8, which have a sum less than 25. Therefore, the least possible value of W is 9.

The correct answer is C.

PS02007

36. A bicycle store purchased two bicycles, one for \$250 and the other for \$375, and sold both bicycles at a total gross profit of \$250. If the store sold one of the bicycles for \$450, which of the following could be the store's gross profit from the sale of the other bicycle?

(A) \$75
(B) \$100
(C) \$125
(D) \$150
(E) \$175



Arithmetic Profit and loss

Let \$450 and \$$R$ be the individual revenues from selling the two bicycles. Then the unknown profit from selling one of the bicycles is either \$$R$ – \$250 or \$$R$ – \$375.

total profit = (total revenue) – (total cost)
\$250 = (\$450 + \$$R$) – (\$250 + \$375)
\$250 = \$$R$ – \$175
\$425 = \$$R$

From this it follows that the unknown profit is either \$425 – \$250 = \$175 or \$425 – \$375 = \$50.

The correct answer is E.

Note: Not drawn to scale.

PS10628

37. In the figure shown, $AC = 2$ and $BD = DC = 1$. What is the measure of angle ABD?

(A) 15°
(B) 20°
(C) 30°
(D) 40°
(E) 45°

Geometry Triangles

Since $AC = AD + DC$, and it is given that $AC = 2$ and $DC = 1$, it follows that $AD = 1$. Therefore, $AD = BD = 1$ and ΔABD is an isosceles triangle where the measure of $\angle ABD$ is equal to the measure of $\angle BAD$. Letting $x°$ be the common degree measure of these two angles, it follows that $x° + x° + 120° = 180°$, or $2x° = 60°$, or $x° = 30°$.

The correct answer is C.

PS12786

38. If $k^2 = m^2$, which of the following must be true?

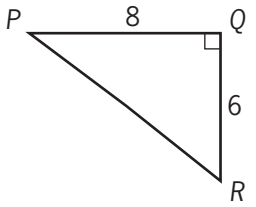
(A) $k = m$
(B) $k = -m$
(C) $k = |m|$
(D) $k = -|m|$
(E) $|k| = |m|$

Algebra Simplifying algebraic expressions

One method of solving this is to first take the nonnegative square root of both sides of the equation $k^2 = m^2$ and then make use of the fact that $\sqrt{u^2} = |u|$. Doing this gives $|k| = |m|$. Alternatively, if (k, m) is equal to either of the pairs (1,1) or (–1,1), then $k^2 = m^2$ is true. However, each of the answer choices except $|k| = |m|$ is false for at least one of these two pairs.

The correct answer is E.

PS13831



39. Makoto, Nishi, and Ozuro were paid a total of $780 for waxing the floors at their school. Each was paid in proportion to the number of hours he or she worked. If Makoto worked 15 hours, Nishi worked 20 hours, and Ozuro worked 30 hours, how much was Makoto paid?

(A) $52
(B) $117
(C) $130
(D) $180
(E) $234

Arithmetic Ratio and proportion

Makoto, Nishi, and Ozuro worked a total of $15 + 20 + 30 = 65$ hours and were paid a total of $780. Each was paid in proportion to the number of hours he or she worked. Therefore, Makoto was paid $\frac{15}{65}(\$780) = \$180$.

The correct answer is D.

PS05680

40. The figure above shows a path around a triangular piece of land. Mary walked the distance of 8 miles from P to Q and then walked the distance of 6 miles from Q to R. If Ted walked directly from P to R, by what percent did the distance that Mary walked exceed the distance that Ted walked?

(A) 30%
(B) 40%
(C) 50%
(D) 60%
(E) 80%

Geometry Pythagorean theorem

Mary walked a distance of $6 + 8 = 14$ miles. The distance that Ted walked, PR, can be found by using the Pythagorean theorem $6^2 + 8^2 = (PR)^2$, or $(PR)^2 = 100$. Taking square roots, it follows that Ted walked 10 miles. Therefore, the distance Mary walked exceeded the distance Ted walked by $14 - 10 = 4$ miles and 4 is 40% of 10.

The correct answer is B.

PS04797

41. If x is a positive integer and $4^x - 3 = y$, which of the following CANNOT be a value of y?

(A) 1
(B) 7
(C) 13
(D) 61
(E) 253

Arithmetic Exponents

This can be solved by calculating the value of $4^x - 3$ for the first few positive integer values of x.

x	4^x	$4^x - 3$	answer choice
1	4	1	A
2	16	13	C
3	64	61	D
4	256	253	E

Alternatively, this can be solved by observing that 4^x always has units digit 4 or 6—the product of two integers with units digit 4 has units digit 6, the product of two integers with units digit 6 has units digit 4, etc.—and therefore any integer that does not have units digit $4 - 3 = 1$ or $6 - 3 = 3$ cannot be the value of $4^x - 3$ for some positive integer value of x.

The correct answer is B.

PS05747

42. If $(1 - 1.25)N = 1$, then $N =$

(A) –400
(B) –140
(C) –4
(D) 4
(E) 400

Algebra Operations with rational numbers

Since $(1 - 1.25)N = -0.25N = -\frac{1}{4}N$, the equation becomes $-\frac{1}{4}N = 1$, which has solution $N = -4$.

The correct answer is C.

PS14972

43. The quotient when a certain number is divided by $\frac{2}{3}$ is $\frac{9}{2}$. What is the number?

(A) $\frac{4}{27}$
(B) $\frac{1}{3}$
(C) 3
(D) 6
(E) $\frac{27}{4}$

Arithmetic Operations with rational numbers

Recall the definition of division: $a \div b = c$ means $a = bc$. For example, if a certain number divided by 2 equals 3, then the number is $2 \times 3 = 6$. For this problem, a certain number divided by $\frac{2}{3}$ equals $\frac{9}{2}$, so the number is $\frac{2}{3} \times \frac{9}{2} = 3$.

This problem can also be solved by algebra. Let N be the number. Then $\frac{N}{\frac{2}{3}} = \frac{9}{2}$, or $N = \frac{2}{3} \times \frac{9}{2} = 3$.

The correct answer is C.

PS06592

44. If a sphere with radius r is inscribed in a cube with edges of length e, which of the following expresses the relationship between r and e ?

(A) $r = \frac{1}{2}e$
(B) $r = e$
(C) $r = 2e$
(D) $r = \sqrt{e}$
(E) $r = \frac{1}{4}e^2$

Geometry Volume

A sphere inscribed in a cube touches, but does not extend beyond, each of the 6 sides of the cube, and thus the diameter of the sphere is equal to the distance between a pair of opposite sides of the cube, which is equal to the edge length of the cube. Therefore, the radius of the sphere is equal to half the edge length of the cube, or $r = \frac{1}{2}e$.

The correct answer is A.

PS13159

45. The price of gasoline at a service station increased from \$1.65 per gallon last week to \$1.82 per gallon this week. Sally paid \$26.40 for gasoline last week at the station. How much more will Sally pay this week at the station for the same amount of gasoline?

(A) \$1.70
(B) \$2.55
(C) \$2.64
(D) \$2.72
(E) \$2.90

Arithmetic Applied problems

The amount that Sally purchased last week is equal to the total price that Sally paid last week divided by the price per gallon last week, or $\frac{26.4}{1.65}$ gallons. Since $\frac{26.4}{1.65}$ gallons is the amount that Sally purchased this week at a price of \$1.82 per gallon, the amount that Sally paid this week is $\$1.82\left(\frac{26.4}{1.65}\right)$, which is $(\$1.82 - \$1.65)\left(\frac{26.4}{1.65}\right) = \$0.17\left(\frac{26.4}{1.65}\right)$ more than Sally paid last week.

One way to lessen the arithmetic computations is to work with integers and factor:

$$0.17\left(\frac{26.4}{1.65}\right)=\frac{(17)(264)}{1{,}650}=\frac{(17)\left(\cancel{3}\times 8\times \cancel{11}\right)}{\cancel{3}\times 5\times \cancel{11}\times 10}$$
$$=\frac{17\times 8}{50}=\frac{136}{50}=\frac{13.6}{5}.$$

Now divide 5 into 13.6 to get 2.72.

Another way to lessen the arithmetic computations is to estimate and keep track of the error:

$$0.17\left(\frac{26.4}{1.65}\right)=26.4\left(\frac{17}{165}\right)=26.4\left(\frac{16.5}{165}+\frac{0.5}{165}\right)$$
$$=26.4\left(\frac{1}{10}+\frac{1}{330}\right)=2.64+\frac{26.4}{330}.$$

It follows that the desired value is greater than 2.64, and hence none of the first three answer choices is correct. Moreover, since $\frac{26.4}{330}<\frac{27}{330}=\frac{9}{110}<0.09$, it follows that the desired value is less than 2.64 + 0.09 = 2.73 and hence the last answer choice is not correct.

The correct answer is D.

Monthly Charge for Low-Use Telephone Contract Offered by Company *X*

Monthly rate (up to 75 message units)	20% less than standard rate of \$10.00
Per unit in excess of 75 message units	\$0.065

PS02534

46. Based on the rates above, how much would Company *X* charge a customer with a low-use contract for using 95 message units in a month?

(A) \$9.30
(B) \$11.30
(C) \$12.88
(D) \$14.88
(E) \$16.18

Arithmetic Interpretation of tables

The low-use contract charge for using 95 message units in a month can be calculated by (100% – 20%)(\$10.00) + (95 – 75)(\$0.065), which equals \$8.00 + \$1.30 = \$9.30.

The correct answer is A.

PS02338

47. If $2x + y = 7$ and $x + 2y = 5$, then $\frac{x+y}{3}$ =

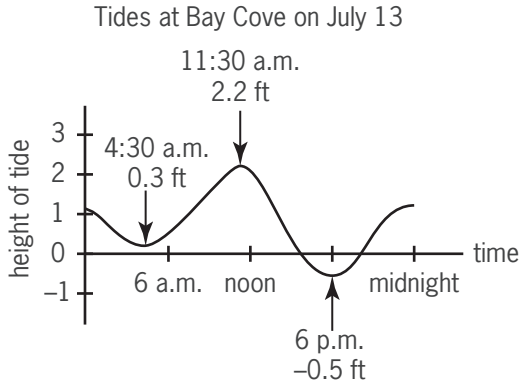
(A) 1
(B) $\frac{4}{3}$
(C) $\frac{17}{5}$
(D) $\frac{18}{5}$
(E) 4

Algebra Simultaneous equations

Adding the equations $2x + y = 7$ and $x + 2y = 5$ gives $3x + 3y = 12$, or $x + y = 4$. Dividing both sides of the last equation by 3 gives $\frac{x+y}{3}=\frac{4}{3}$.

The correct answer is B.

PS14250



48. City X has a population 4 times as great as the population of City Y, which has a population twice as great as the population of City Z. What is the ratio of the population of City X to the population of City Z ?

(A) 1:8
(B) 1:4
(C) 2:1
(D) 4:1
(E) 8:1

Arithmetic Ratio and Proportion

Let X, Y, and Z be the populations of Cities X, Y, and Z, respectively. It is given that $X = 4Y$, and $Y = 2Z$ or $Z=\frac{Y}{2}$. Then, $\frac{X}{Z}=\frac{4Y}{\frac{Y}{2}}=(4Y)\left(\frac{2}{Y}\right)=\frac{8}{1}$.

The correct answer is E.

PS05100

49. The graph above shows the height of the tide, in feet, above or below a baseline. Which of the following is closest to the difference, in feet, between the heights of the highest and lowest tides on July 13 at Bay Cove?

(A) 1.7
(B) 1.9
(C) 2.2
(D) 2.5
(E) 2.7

Arithmetic Interpretation of graphs and tables

From the graph, the highest tide is 2.2 ft above the baseline and the lowest tide is 0.5 ft below the baseline. Therefore, the difference between the heights of the highest tide and the lowest tide is $[2.2 - (-0.5)]$ ft $= (2.2 + 0.5)$ ft $= 2.7$ ft.

The correct answer is E.

PS06243

50. If $S = 1 + \frac{1}{2^2} + \frac{1}{3^2} + \frac{1}{4^2} + \frac{1}{5^2} + \frac{1}{6^2} + \frac{1}{7^2} + \frac{1}{8^2} + \frac{1}{9^2} + \frac{1}{10^2}$, which of the following is true?

(A) $S > 3$
(B) $S = 3$
(C) $2 < S < 3$
(D) $S = 2$
(E) $S < 2$

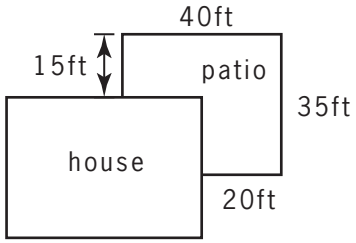
Arithmetic Estimation

By appropriately grouping the fractions being added and then replacing each fraction within a group by the greatest fraction in that group, the value of S can be shown to be less than 2 without extensive calculation.

$$S = 1 + \left(\frac{1}{2^2} + \frac{1}{3^2}\right) + \left(\frac{1}{4^2} + \frac{1}{5^2} + \frac{1}{6^2} + \frac{1}{7^2}\right) + \left(\frac{1}{8^2} + \frac{1}{9^2} + \frac{1}{10^2}\right)$$
$$< 1 + \left(\frac{1}{2^2} + \frac{1}{2^2}\right) + \left(\frac{1}{4^2} + \frac{1}{4^2} + \frac{1}{4^2} + \frac{1}{4^2}\right) + \left(\frac{1}{8^2} + \frac{1}{8^2} + \frac{1}{8^2}\right)$$
$$= 1 + \left(\frac{2}{4}\right) + \left(\frac{4}{16}\right) + \left(\frac{3}{64}\right)$$
$$= 1 + \frac{1}{2} + \frac{1}{4} + \frac{3}{64}$$
$$< 2$$

The correct answer is E.

PS05308



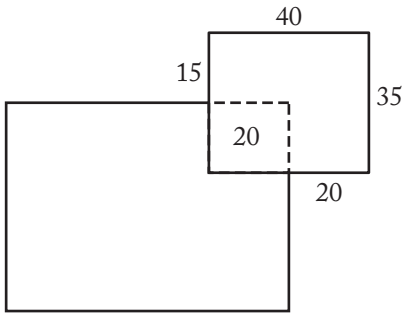
51. A manufacturer of a certain product can expect that between 0.3 percent and 0.5 percent of the units manufactured will be defective. If the retail price is $2,500 per unit and the manufacturer offers a full refund for defective units, how much money can the manufacturer expect to need to cover the refunds on 20,000 units?

(A) Between $15,000 and $25,000
(B) Between $30,000 and $50,000
(C) Between $60,000 and $100,000
(D) Between $150,000 and $250,000
(E) Between $300,000 and $500,000

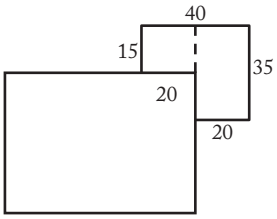
Arithmetic Applied problems

The expected number of defective units is between 0.3% and 0.5% of 20,000, or between $(0.003)(20{,}000) = 60$ and $(0.005)(20{,}000) = 100$. Since each unit has a retail price of $2,500, the amount of money needed to cover the refunds for the expected number of defective units is between 60($2,500) and 100($2,500), or between $150,000 and $250,000.

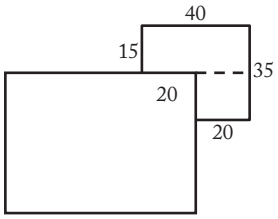
The correct answer is D.



PS05544



52. A flat patio was built alongside a house as shown in the figure above. If all angles shown are right angles, what is the area of the patio in square feet?



(A) 800
(B) 875
(C) 1,000
(D) 1,100
(E) 1,125

Geometry Area

The area of the patio can be calculated by imagining the patio to be a rectangle of dimensions 40 ft by 35 ft that has a lower-left square corner of dimensions 20 ft by 20 ft covered up, as shown in the figure above. The area of the patio will be the area of the uncovered part of the rectangle, and therefore the area of the patio, in square feet, is $(40)(35) - (20)(20) = 1{,}400 - 400 = 1{,}000$.

Alternatively, the area of the patio can be calculated by dividing the patio into two rectangles and adding the areas of the two rectangles. This can be done in two ways: by using rectangles of dimensions 20 ft by 35 ft and 20 ft by 15 ft, as shown in the figure above on the left (for a total area of $700\ \text{ft}^2 + 300\ \text{ft}^2 = 1{,}000\ \text{ft}^2$), or by using rectangles of dimensions 40 ft by 15 ft and 20 ft by 20 ft, as shown in the figure above on the right (for a total area of $600\ \text{ft}^2 + 400\ \text{ft}^2 = 1{,}000\ \text{ft}^2$).

The correct answer is C.

PS10470

53. Which of the following is closest to $\sqrt{\frac{4.2(1{,}590)}{15.7}}$?

(A) 20
(B) 40
(C) 60
(D) 80
(E) 100

Arithmetic Estimation

Replace the numbers that appear with nearly equal values that are perfect squares and then evaluate the resulting expression:

$$\sqrt{\frac{4(1{,}600)}{16}} = \sqrt{\frac{4\times \cancel{16}\times 100}{\cancel{16}}} = \sqrt{4\times 100}$$
$$= \sqrt{4}\times\sqrt{100} = 2\times 10 = 20.$$

The correct answer is A.

PS12114

54. The sum of the weekly salaries of 5 employees is \$3,250. If each of the 5 salaries is to increase by 10 percent, then the average (arithmetic mean) weekly salary per employee will increase by

(A) \$52.50
(B) \$55.00
(C) \$57.50
(D) \$62.50
(E) \$65.00

Arithmetic Applied problems; Percents

Let S_1, S_2, S_3, S_4, and S_5 be the salaries, in dollars, of the 5 employees. Since the sum of the 5 salaries is 3,250, then $S_1 + S_2 + S_3 + S_4 + S_5 = 3{,}250$ and the average salary is $\frac{S_1 + S_2 + S_3 + S_4 + S_5}{5} = \frac{3{,}250}{5} = 650$.

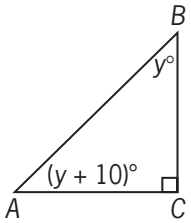
After each salary is increased by 10%, the salaries will be $(1.1)S_1$, $(1.1)S_2$, $(1.1)S_3$, $(1.1)S_4$, and

$(1.1)S_5$ and the average salary, in dollars, will be $\frac{(1.1)S_1 + (1.1)S_2 + (1.1)S_3 + (1.1)S_4 + (1.1)S_5}{5} = 1.1 \times \left(\frac{S_1 + S_2 + S_3 + S_4 + S_5}{5}\right) = 1.1 \times 650 = 715$. Therefore, the increase in the average salary is $\$715 - \$650 = \$65$.

The correct answer is E.

PS08173

55. Last week Chris earned x dollars per hour for the first 40 hours worked plus 22 dollars per hour for each hour worked beyond 40 hours. If last week Chris earned a total of 816 dollars by working 48 hours, what is the value of x?



(A) 13
(B) 14
(C) 15
(D) 16
(E) 17

Algebra Applied problems

Chris worked 40 hours at a rate of $\$x$ per hour, $48 - 40 = 8$ hours at a rate of \$22 per hour, and earned a total of \$816.

$40x + 8(22) = 816$	given information
$40x + 176 = 816$	multiply 8 and 22
$40x = 640$	subtract 176 from both sides
$x = 16$	divide both sides by 40

The correct answer is D.

PS07408

56. In the figure above, what is the ratio of the measure of angle B to the measure of angle A?

(A) 2 to 3
(B) 3 to 4
(C) 3 to 5
(D) 4 to 5
(E) 5 to 6

Geometry Angles

Because the sum of the degree measures of the three interior angles of a triangle is 180, it follows that $y + (y + 10) + 90 = 180$. Therefore, $2y = 80$, and hence $y = 40$. The ratio of the measure of angle B to the measure of angle A can now be determined: $\frac{y}{y+10} = \frac{40}{50} = \frac{4}{5}$.

The correct answer is D.

PS08768

57. The value of $\frac{\frac{7}{8} + \frac{1}{9}}{\frac{1}{2}}$ is closest to which of the following?

(A) 2
(B) $\frac{3}{2}$
(C) 1
(D) $\frac{1}{2}$
(E) 0

Arithmetic Estimation

First, note that $\left(\frac{7}{8} + \frac{1}{9}\right) \div \frac{1}{2} = \left(\frac{7}{8} + \frac{1}{9}\right) \times 2$.

One approach is to calculate and then estimate:

$$2\left(\frac{7}{8} + \frac{1}{9}\right) = 2\left(\frac{63+8}{72}\right) = 2\left(\frac{71}{72}\right) \approx 2\left(\frac{72}{72}\right) = 2(1) = 2.$$

Another approach is to estimate and then calculate:

$$2\left(\frac{7}{8} + \frac{1}{9}\right) \approx 2\left(\frac{7}{8} + \frac{1}{8}\right) = 2\left(\frac{8}{8}\right) = 2(1) = 2.$$

The correct answer is A.

PS08025

58. The positive two-digit integers x and y have the same digits, but in reverse order. Which of the following must be a factor of $x + y$?

(A) 6
(B) 9
(C) 10
(D) 11
(E) 14

Arithmetic Properties of numbers

Let m and n be digits. If $x = 10m + n$, then $y = 10n + m$. Adding x and y gives $x + y = (10m + n) + (10n + m) = 11m + 11n = 11(m + n)$, and therefore 11 is a factor of $x + y$.

The correct answer is D.

PS00015

59. In a certain sequence of 8 numbers, each number after the first is 1 more than the previous number. If the first number is –5, how many of the numbers in the sequence are positive?

(A) None
(B) One
(C) Two
(D) Three
(E) Four

Arithmetic Sequences

The sequence consists of eight consecutive integers beginning with –5:

$$-5,\ -4,\ -3,\ -2,\ -1,\ 0,\ 1,\ 2$$

In this sequence exactly two of the numbers are positive.

The correct answer is C.

PS08385

60. A total of s oranges are to be packaged in boxes that will hold r oranges each, with no oranges left over. When n of these boxes have been completely filled, what is the number of boxes that remain to be filled?

(A) $s - nr$
(B) $s - \frac{n}{r}$
(C) $rs - n$
(D) $\frac{s}{n} - r$
(E) $\frac{s}{r} - n$

Algebra Algebraic expressions

If s oranges are packed r oranges to a box with no oranges left over, then the number of boxes that will be filled is $\frac{s}{r}$. If n of these boxes are already filled, then $\frac{s}{r} - n$ boxes remain to be filled.

The correct answer is E.

PS03371

61. If $0 < a < b < c$, which of the following statements must be true?

I. $2a > b + c$
II. $c - a > b - a$
III. $\frac{c}{a} < \frac{b}{a}$

(A) I only
(B) II only
(C) III only
(D) I and II
(E) II and III

Algebra Inequalities

Given $0 < a < b < c$, Statement I is not necessarily true. If, for example, $a = 1$, $b = 2$, and $c = 3$, then $0 < a < b < c$, but $2a = 2(1) < 2 + 3 = b + c$.

Given $0 < a < b < c$, then $c > b$, and subtracting a from both sides gives $c - a > b - a$. Therefore, Statement II is true.

Given $0 < a < b < c$, Statement III is not necessarily true. If, for example, $a = 1$, $b = 2$, and $c = 3$, then $0 < a < b < c$, but $\frac{c}{a} = \frac{3}{1} > \frac{2}{1} = \frac{b}{a}$.

The correct answer is B.

PS00096

62. In the xy-plane, the origin O is the midpoint of line segment PQ. If the coordinates of P are (r,s), what are the coordinates of Q?

(A) (r,s)
(B) $(s,-r)$
(C) $(-s,-r)$
(D) $(-r,s)$
(E) $(-r,-s)$

Algebra Coordinate geometry

Let (x,y) be the coordinates of Q. The midpoint of (r,s) and (x,y) is $\left(\frac{r+x}{2}, \frac{s+y}{2}\right)$. Since the midpoint is $(0,0)$, it follows that $\frac{r+x}{2} = 0$ and $\frac{s+y}{2} = 0$. Therefore, $r + x = 0$ and $s + y = 0$, or $x = -r$ and $y = -s$, or $(x,y) = (-r,-s)$.

This problem can also be solved by observing that Q is the reflection of P about the origin, and so $Q = (-r,-s)$ (i.e., change the sign of each of the coordinates of P to obtain the coordinates of Q).

The correct answer is E.

	Monday	Tuesday	Wednesday	Thursday
Company *A*	45	55	50	50
Company *B*	10	30	30	10
Company *C*	34	28	28	30
Company *D*	39	42	41	38
Company *E*	50	60	60	70

PS10568

63. The table shows the numbers of packages shipped daily by each of five companies during a 4-day period. The standard deviation of the numbers of packages shipped daily during the period was greatest for which of the five companies?

(A) *A*
(B) *B*
(C) *C*
(D) *D*
(E) *E*

Arithmetic Statistics

Since the standard deviation of a data set is a measure of how widely the data are scattered about their mean, find the mean number of packages shipped by each company and then determine the company for which the data is most widely scattered about its mean.

For Company A, the mean number of packages shipped is $\frac{45 + 55 + 2(50)}{4} = 50$. Two of the data points are each 50 and the other two each differ from 50 by 5.

For Company B, the mean number of packages shipped is $\frac{2(10) + 2(30)}{4} = 20$. Each of the data points differs from 20 by 10. Thus, the data for Company B is more widely scattered about its mean of 20 than the data for Company A is about its mean of 50.

For Company C, the mean number of packages shipped is $\frac{34 + 2(28) + 30}{4} = 30$. One data point is 30, two others each differ from 30 by only 2, and the fourth data point differs from 30 by only 4. Therefore, the data for Company C is not as widely scattered about its mean of 30 as the data for Company B is about its mean of 20.

For Company D, the mean number of packages shipped is $\frac{39 + 42 + 41 + 38}{4} = 40$. Two of the data points each differ from 40 by only 1 and the other two each differ from 40 by only 2. Therefore, the data for Company D is not as widely scattered about its mean of 40 as the data for Company B is about its mean of 20.

For Company E, the mean number of packages shipped is $\frac{50 + 2(60) + 70}{4} = 60$. Two of the data points are each 60 and the other two each differ from 60 by 10. Therefore, the data for Company E is not as widely scattered about its mean of 60 as the data for Company B is about its mean of 20.

Thus, the data for Company B is most widely scattered about its mean and, therefore, the standard deviation of the number of packages shipped daily by the five companies is greatest for Company B.

For those interested, the standard deviations for the five companies can be calculated as follows:

For A: $\sqrt{\frac{(45-50)^2 + (55-50)^2 + 2(50-50)^2}{4}}$

$= \sqrt{\frac{2(25)}{4}} = \sqrt{\frac{25}{2}} = \sqrt{12.5}$.

For B: $\sqrt{\frac{2(10-20)^2+2(30-20)^2}{4}}=\sqrt{\frac{4(100)}{4}}$

$=\sqrt{100}$.

For C: $\sqrt{\frac{(34-30)^2+2(28-30)^2+(30-30)^2}{4}}$

$=\sqrt{\frac{24}{4}}=\sqrt{6}$.

For D:

$\sqrt{\frac{(39-40)^2+(42-40)^2+(41-40)^2+(38-40)^2}{4}}$

$=\sqrt{\frac{10}{4}}=\sqrt{2.5}$.

For E: $\sqrt{\frac{(50-60)^2+2(60-60)^2+(70-60)^2}{4}}$

$=\sqrt{\frac{200}{4}}=\sqrt{50}$.

The correct answer is B.

PS15523

64. Company Q plans to make a new product next year and sell each unit of this new product at a selling price of $2. The variable costs per unit in each production run are estimated to be 40% of the selling price, and the fixed costs for each production run are estimated to be $5,040. Based on these estimated costs, how many units of the new product will Company Q need to make and sell in order for their revenue to equal their total costs for each production run?

(A) 4,200
(B) 3,150
(C) 2,520
(D) 2,100
(E) 1,800

Algebra Applied problems

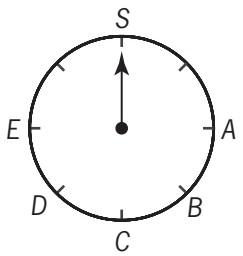
Let x be the desired number of units to be sold at a price of $2 each. Then the revenue for selling these units is $\$2x$, and the total cost for selling these units is $(40\%)(\$2.00)x = \$0.80x$ plus a fixed cost of $5,040.

revenue = total cost	given requirement
$2x = 0.8x + 5{,}040$	given information
$1.2x = 5{,}040$	subtract $0.8x$ from both sides
$x = 4{,}200$	divide both sides by 1.2

The correct answer is A.

PS07197

65. A small business invests $9,900 in equipment to produce a product. Each unit of the product costs $0.65 to produce and is sold for $1.20. How many units of the product must be sold before the revenue received equals the total expense of production, including the initial investment in equipment?



(A) 12,000
(B) 14,500
(C) 15,230
(D) 18,000
(E) 20,000

Arithmetic Rate

Let n be the number of units desired. Then, in dollars, the revenue received is $1.2n$ and the total expense is $9{,}900 + 0.65n$. These two amounts are equal when $1.2n = 9{,}900 + 0.65n$, or $0.55n = 9{,}900$. Therefore,

$n=\frac{9{,}900}{0.55}=\frac{990{,}000}{55}=\frac{90{,}000}{5}=18{,}000.$

The correct answer is D.

PS05682

66. The dial shown above is divided into equal-sized intervals. At which of the following letters will the pointer stop if it is rotated clockwise from *S* through 1,174 intervals?

(A) *A*
(B) *B*
(C) *C*
(D) *D*
(E) *E*

Arithmetic Properties of numbers

There are 8 intervals in each complete revolution. Dividing 8 into 1,174 gives 146 with remainder 6. Therefore, 1,174 intervals is equivalent to 146 complete revolutions followed by an additional 6 intervals measured clockwise from S, which places the pointer at E.

The correct answer is E.

Estimated Number of Home-Schooled Students by State, January 2001

State	Number (in thousands)
A	181
B	125
C	103
D	79
E	72

PS12287

67. According to the table shown, the estimated number of home-schooled students in State A is approximately what percent greater than the number in State D ?

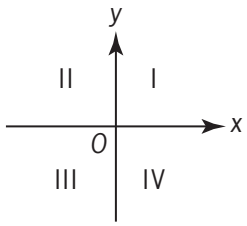
(A) 25%
(B) 55%
(C) 100%
(D) 125%
(E) 155%

Arithmetic Percents

The percent increase from the number in State D to the number in State A is

$$= \left(\frac{181{,}000 - 79{,}000}{79{,}000} \times 100\right)\% \quad \text{expression for percent increase}$$

$$= \left(\frac{181 - 79}{79} \times 100\right)\% \quad \text{reduce fraction}$$



$$= \left(\frac{102}{79} \times 100\right)\% \quad \text{subtract}$$

$$\approx \left(\frac{100}{80} \times 100\right)\% \quad \text{approximate}$$

$$= (1.25 \times 100)\% \quad \text{divide}$$

$$= 125\% \quad \text{multiply}$$

The correct answer is D.

PS02695

68. The graph of the equation $xy = k$, where $k < 0$, lies in which two of the quadrants shown above?

(A) I and II
(B) I and III
(C) II and III
(D) II and IV
(E) III and IV

Algebra Coordinate geometry

If a point lies on the graph of $xy = k$, then the product of the point's x- and y-coordinates is k. Since k is negative, it follows that for any such point, the product of the point's x- and y-coordinates is negative. Therefore, for any such point, the point's x- and y-coordinates have opposite signs, and hence the point must be in quadrant II or in quadrant IV.

The correct answer is D.

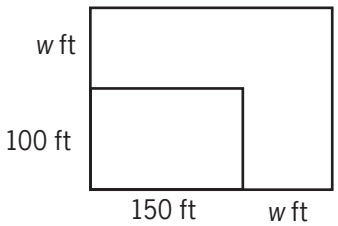
PS00526

69. When n liters of fuel were added to a tank that was already $\frac{1}{3}$ full, the tank was filled to $\frac{7}{9}$ of its capacity. In terms of n, what is the capacity of the tank, in liters?

(A) $\frac{10}{9}n$
(B) $\frac{4}{3}n$
(C) $\frac{3}{2}n$
(D) $\frac{9}{4}n$
(E) $\frac{7}{3}n$

Algebra Applied problems

Let C represent the capacity of the tank, in liters. It follows that



$$\frac{1}{3}C + n = \frac{7}{9}C \quad \text{given}$$

$$n = \frac{7}{9}C - \frac{1}{3}C \quad \text{subtract } \frac{1}{3}C \text{ from both sides}$$

$$n = \frac{4}{9}C \quad \text{combine like terms}$$

$$\frac{9}{4}n = C \quad \text{divide both sides by } \frac{4}{9}$$

The correct answer is D.

Note: Not drawn to scale.

PS06601

70. The smaller rectangle in the figure above represents the original size of a parking lot before its length and width were each extended by w feet to make the larger rectangular lot shown. If the area of the enlarged lot is twice the area of the original lot, what is the value of w?

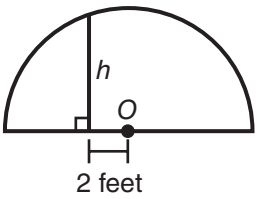
(A) 25
(B) 50
(C) 75
(D) 100
(E) 200

Geometry Area

From the given information it follows that $(100 + w)(150 + w) = 2(100)(150)$, or $(100 + w)(150 + w) = (200)(150)$. This is a quadratic equation that can be solved by several methods. One method is by inspection. The left side is clearly equal to the right side when $w = 50$. Another method is by factoring. Expanding the left side gives $(100)(150) + 250w + w^2 = (200)(150)$, or $w^2 + 250w - (100)(150) = 0$. Factoring the left side gives $(w - 50)(w + 300) = 0$, which has $w = 50$ as its only positive solution.

The correct answer is B.

PS02209



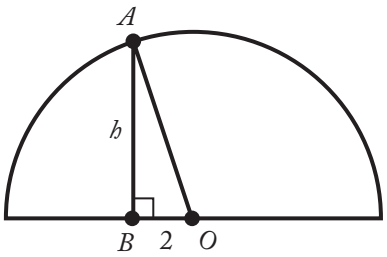
71. Kevin invested $8,000 for one year at a simple annual interest rate of 6 percent and invested $10,000 for one year at an annual interest rate of 8 percent compounded semiannually. What is the total amount of interest that Kevin earned on the two investments?

(A) $880
(B) $1,088
(C) $1,253
(D) $1,280
(E) $1,296

Arithmetic Applied problems

The amount of interest after one year is the total value of the investment after one year minus the total initial value of the investment. The total value of the investment after one year is $\$8{,}000(1.06) + \$10{,}000(1.04)^2 = \$8{,}480 + \$10{,}816$, so the amount of interest is $(\$8{,}480 + \$10{,}816) - (\$8{,}000 + \$10{,}000) = \$480 + \$816 = \$1{,}296$.

The correct answer is E.



PS05957

72. The figure above represents a semicircular archway over a flat street. The semicircle has a center at O and a radius of 6 feet. What is the height h, in feet, of the archway 2 feet from its center?

(A) $\sqrt{2}$
(B) 2
(C) 3
(D) $4\sqrt{2}$
(E) 6

Geometry Circles; Pythagorean theorem

In the figure, ΔABO is a right triangle with legs of lengths 2 and h. From the Pythagorean theorem, it follows that $(AO)^2 = 2^2 + h^2 = 4 + h^2$. Also, $AO = 6$ since the radius of the semicircle is 6. Thus, $6^2 = 4 + h^2$, or $36 = 4 + h^2$, or $h^2 = 32$. Therefore, $h = \sqrt{32} = \sqrt{16 \cdot 2} = 4\sqrt{2}$.

The correct answer is D.

PS01315

73. The harvest yield from a certain apple orchard was 350 bushels of apples. If x of the trees in the orchard each yielded 10 bushels of apples, what fraction of the harvest yield was from these x trees?

(A) $\frac{x}{35}$

(B) $1-\frac{x}{35}$

(C) $10x$

(D) $35 - x$

(E) $350 - 10x$

Algebra Algebraic expressions

Since each of the x trees yielded 10 bushels, the total number of bushels yielded by these trees was $10x$. Since the yield of the entire orchard was 350 bushels, $\frac{10x}{350} = \frac{x}{35}$ was the fraction of the total yield from these x trees.

The correct answer is A.

PS00907

74. In a certain fraction, the denominator is 16 greater than the numerator. If the fraction is equivalent to 80 percent, what is the denominator of the fraction?

(A) 32

(B) 64

(C) 72

(D) 80

(E) 120

Algebra First-degree equations

Let n be the numerator of the fraction. Then $n + 16$ is the denominator of the fraction. From the given information it follows that $\frac{n}{n+16} = 80\%$, which is solved below.

$$\frac{n}{n+16} = \frac{4}{5} \qquad \text{convert 80\% to a fraction}$$

$$5n = 4(n + 16) \qquad \text{clear fractions}$$

$$5n = 4n + 64 \qquad \text{simplify}$$

$$n = 64 \qquad \text{subtract } 4n \text{ from both sides}$$

Therefore, the denominator of the fraction is $n + 16 = 64 + 16 = 80$.

The correct answer is D.

PS02102

75. Greg assembles units of a certain product at a factory. Each day he is paid \$2.00 per unit for the first 40 units that he assembles and \$2.50 for each additional unit that he assembles that day. If Greg assembled at least 30 units on each of two days and was paid a total of \$180.00 for assembling units on the two days, what is the greatest possible number of units that he could have assembled on one of the two days?

(A) 48

(B) 52

(C) 56

(D) 60

(E) 64

Arithmetic Applied problems

The day that Greg assembled the greatest possible number of units, Day D, is the day for which the other day, Day E, is the day that Greg assembled the least possible number of units. Determine the number of units that Greg assembled on Day D.

From the given information, on Day E Greg assembled 30 units, for which he was paid (\$2)(30) = \$60. Thus, Greg was paid \$180 – \$60 = \$120 for work done on Day D. Of this \$120, Greg was paid (\$2)(40) = \$80 for assembling 40 units at the rate of \$2 per unit. From this it follows that on Day D Greg was paid \$120 – \$80 = \$40 for assembling units at the rate of \$2.5 per unit. Hence, on Day D Greg assembled $\frac{40}{2.5} = 16$ units at the rate of \$2.5 per unit. Therefore, on Day D Greg assembled a total of 40 + 16 = 56 units.

The correct answer is C.

PS00419

76. Which of the following is greatest?

(A) $10\sqrt{3}$
(B) $9\sqrt{4}$
(C) $8\sqrt{5}$
(D) $7\sqrt{6}$
(E) $6\sqrt{7}$

Arithmetic Operations on radical expressions

Since all the expressions represent positive numbers, the expression that has the greatest squared value will be the expression that has the greatest value.

$\left(10\sqrt{3}\right)^2 = 100 \times 3 = 300$ (not greatest)

$\left(9\sqrt{4}\right)^2 = 81 \times 4 = 324$ (greatest)

$\left(8\sqrt{5}\right)^2 = 64 \times 5 = 320$ (not greatest)

$\left(7\sqrt{6}\right)^2 = 49 \times 6 = 294$ (not greatest)

$\left(6\sqrt{7}\right)^2 = 36 \times 7 = 252$ (not greatest)

The correct answer is B.

PS14236

77. Al and Ben are drivers for SD Trucking Company. One snowy day, Ben left SD at 8:00 a.m. heading east and Al left SD at 11:00 a.m. heading west. At a particular time later that day, the dispatcher retrieved data from SD's vehicle tracking system. The data showed that, up to that time, Al had averaged 40 miles per hour and Ben had averaged 20 miles per hour. It also showed that Al and Ben had driven a combined total of 240 miles. At what time did the dispatcher retrieve data from the vehicle tracking system?

(A) 1:00 p.m.
(B) 2:00 p.m.
(C) 3:00 p.m.
(D) 5:00 p.m.
(E) 6:00 p.m.

Algebra Applied problems

Let t be the number of hours after 8:00 a.m. that Ben drove. Then, in t hours, Ben drove $20t$ miles and Al, who began driving 3 hours after Ben began driving, drove $40(t-3)$ miles. Therefore, their combined total distance at that time can be expressed as $(20t + 40t - 120)$ miles $= (60t - 120)$ miles. It follows that $60t - 120 = 240$, or $60t = 360$, or $t = 6$, which corresponds to 6 hours after 8:00 a.m. or 2:00 p.m.

The correct answer is B.

PS02996

78. Of the land owned by a farmer, 90 percent was cleared for planting. Of the cleared land, 40 percent was planted with soybeans and 50 percent of the cleared land was planted with wheat. If the remaining 720 acres of cleared land was planted with corn, how many acres did the farmer own?

(A) 5,832
(B) 6,480
(C) 7,200
(D) 8,000
(E) 8,889

Arithmetic Applied problems; Percents

Corn was planted on $100\% - (40\% + 50\%) = 10\%$ of the cleared land, and the cleared land represents 90% of the farmer's land. Therefore, corn was planted on 10% of 90%, or $(0.10)(0.90) = 0.09 = 9\%$, of the farmer's land. It is given that corn was planted on 720 acres, so if x is the number of acres the farmer owns, then $0.09x = 720$ and $x = \dfrac{720}{0.09} = 8,000$.

The correct answer is D.

PS00307

79. At the start of an experiment, a certain population consisted of 3 animals. At the end of each month after the start of the experiment, the population size was double its size at the beginning of that month. Which of the following represents the population size at the end of 10 months?

(A) 2^3
(B) 3^2
(C) $2(3^{10})$
(D) $3(2^{10})$
(E) $3(10^2)$

Arithmetic Applied problems; Sequences

The population doubles each month, so multiply the previous month's population by 2 to get the next month's population. Thus, at the end

of the 1st month the population will be (3)(2), at the end of the 2nd month the population will be (3)(2)(2), at the end of the 3rd month the population will be (3)(2)(2)(2), and so on. Therefore, at the end of the 10th month the population will be the product of 3 and ten factors of 2, which equals $3(2^{10})$.

The correct answer is D.

PS03635

80. If $\left(\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6}\right)=r\left(\frac{1}{9}+\frac{1}{12}+\frac{1}{15}+\frac{1}{18}\right)$, then $r =$

(A) $\frac{1}{3}$

(B) $\frac{4}{3}$

(C) 3

(D) 4

(E) 12

Arithmetic Operations with rational numbers

$$\left(\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6}\right)=r\left(\frac{1}{9}+\frac{1}{12}+\frac{1}{15}+\frac{1}{18}\right)$$

$$\left(\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6}\right)=r\left(\frac{1}{3}\right)\left(\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6}\right)$$

$$1=r\left(\frac{1}{3}\right)$$

$$3=r$$

Alternatively,

$$\left(\frac{1}{3}+\frac{1}{4}+\frac{1}{5}+\frac{1}{6}\right)=r\left(\frac{1}{9}+\frac{1}{12}+\frac{1}{15}+\frac{1}{18}\right)$$

$$\left(\frac{20}{60}+\frac{15}{60}+\frac{12}{60}+\frac{10}{60}\right)=r\left(\frac{20}{180}+\frac{15}{180}+\frac{12}{180}+\frac{10}{180}\right)$$

$$\left(\frac{20+15+12+10}{60}\right)=r\left(\frac{20+15+12+10}{180}\right)$$

$$\left(\frac{20+15+12+10}{60}\right)\left(\frac{180}{20+15+12+10}\right)=r$$

$$\frac{180}{60}=r$$

$$3=r$$

The correct answer is C.

PS03214

81. If x and y are positive integers such that y is a multiple of 5 and $3x + 4y = 200$, then x must be a multiple of which of the following?

(A) 3

(B) 6

(C) 7

(D) 8

(E) 10

Arithmetic Properties of numbers

Since it is given that y is a multiple of 5, let $y = 5q$, where q is a positive integer. It is given that $3x + 4y = 200$, so $3x + 4(5q) = 200$ or $3x + 20q = 200$. It follows that $3x = 200 - 20q = 20(10 - q)$. Since 3 is prime and is not a factor of 20, then 3 must be a factor of $10 - q$, which means the only possible values of q are 1, 4, and 7. This is summarized in the following table.

q	$10 - q$	$20(10 - q)$	$3x$	x
1	9	180	180	60
4	6	120	120	40
7	3	60	60	20

In each case, the value of x is a multiple of 10.

Alternatively, since $3x = 20(10 - q)$, the factors of the product of 3 and x must correspond to the factors of the product of 20 and $(10 - q)$. Since the factors of 20 include 10, then x must have a factor of 10, which means that x is a multiple of 10.

The correct answer is E.

PS12764

82. Which of the following expressions can be written as an integer?

I. $\left(\sqrt{82}+\sqrt{82}\right)^2$

II. $(82)\left(\sqrt{82}\right)$

III. $\frac{\left(\sqrt{82}\right)\left(\sqrt{82}\right)}{82}$

(A) None

(B) I only

(C) III only

(D) I and II

(E) I and III

Arithmetic Operations with radical expressions

Expression I represents an integer because $\left(\sqrt{82}+\sqrt{82}\right)^2=\left(2\sqrt{82}\right)^2=(4)(82)$.

Expression II does not represent an integer because $(82)\sqrt{82}=\sqrt{82^3}$ and $82^3=2^3\times41^3$ is not a perfect square. Regarding this last assertion, note that the square of any integer has the property that each of its distinct prime factors is repeated an even number of times. For example, $24^2=(2^3\times3)^2=2^6\times3^2$ has the prime factor 2 repeated 6 times and the prime factor 3 repeated twice. Expression III represents an integer, because $\frac{\left(\sqrt{82}\right)\left(\sqrt{82}\right)}{82}=\frac{82}{82}=1$.

The correct answer is E.

PS13101

83. Pumping alone at their respective constant rates, one inlet pipe fills an empty tank to $\frac{1}{2}$ of capacity in 3 hours and a second inlet pipe fills the same empty tank to $\frac{2}{3}$ of capacity in 6 hours. How many hours will it take both pipes, pumping simultaneously at their respective constant rates, to fill the empty tank to capacity?

(A) 3.25
(B) 3.6
(C) 4.2
(D) 4.4
(E) 5.5

Arithmetic Applied problems

The first pipe can fill $\frac{1}{2}$ of the tank in 3 hours, which is equivalent to the rate of filling $\frac{1}{2}\div3=\frac{1}{6}$ of the tank per hour. The second pipe can fill $\frac{2}{3}$ of the tank in 6 hours, which is equivalent to the rate of filling $\frac{2}{3}\div6=\frac{1}{9}$ of the tank per hour. Together, they can fill the tank at a rate of $\frac{1}{6}+\frac{1}{9}=\frac{5}{18}$ of the tank per hour. Thus, when both pipes are used at the same time, they will fill the tank in $\frac{18}{5}=3.6$ hours.

The correct answer is B.

PS02947

84. In the xy-coordinate plane, which of the following points must lie on the line $kx+3y=6$ for every possible value of k?

(A) (1,1)
(B) (0,2)
(C) (2,0)
(D) (3,6)
(E) (6,3)

Algebra Coordinate geometry

Substituting the various answer choices for (x,y) into $kx+3y=6$ gives the following equations:

A $k+3=6$
B $0+3(2)=6$
C $2k+3(0)=6$
D $3k+3(6)=6$
E $6k+3(3)=6$

Each of these, except for the equation in B, holds for only one value of k. The equation in B does not include k and therefore holds for every value of k.

The correct answer is B.

PS11091

85. If $x^2-2<0$, which of the following specifies all the possible values of x?

(A) $0<x<2$
(B) $0<x<\sqrt{2}$
(C) $-\sqrt{2}<x<\sqrt{2}$
(D) $-2<x<0$
(E) $-2<x<2$

Algebra Inequalities

The corresponding equality $x^2-2=0$ has two solutions, $x=\sqrt{2}$ and $x=-\sqrt{2}$, and thus there are three intervals to test for inclusion in the solution of the inequality: $x<-\sqrt{2}$, $-\sqrt{2}<x<\sqrt{2}$, and $x>\sqrt{2}$. Choose $x=-2$, $x=0$, and $x=2$ from these intervals, respectively, to test whether the inequality holds. Then for these choices, the inequality becomes $(-2)^2-2<0$ (False), $(0)^2-2<0$ (True), and $(2)^2-2<0$ (False). Therefore, the solution consists of only the interval $-\sqrt{2}<x<\sqrt{2}$. Alternatively, the graph

of $y = x^2 - 2$ is easily seen to be a parabola that opens upward with vertex at $(0, -2)$ and x-intercepts at $x = \sqrt{2}$ and $x = -\sqrt{2}$. The solution to the inequality is the set of the x-coordinates of the portion of this parabola that lies below the x-axis, which is $-\sqrt{2} < x < \sqrt{2}$.

The correct answer is C.

Book number	Pages in book	Total pages read
1	253	253
2	110	363
3	117	480
4	170	650
5	155	805
6	50	855
7	205	1,060
8	70	1,130
9	165	1,295
10	105	1,400
11	143	1,543
12	207	1,750

PS14467

86. Shawana made a schedule for reading books during 4 weeks (28 days) of her summer vacation. She has checked out 12 books from the library. The number of pages in each book and the order in which she plans to read the books are shown in the table above. She will read exactly 50 pages each day. The only exception will be that she will never begin the next book on the same day that she finishes the previous one, and therefore on some days she may read fewer than 50 pages. At the end of the 28th day, how many books will Shawana have finished?

(A) 7
(B) 8
(C) 9
(D) 10
(E) 11

Arithmetic Operations with integers

Book 1: 6 days—50 pages on each of Days 1–5, 3 pages on Day 6 [5(50) + 3 = 253]

Book 2: 3 days—50 pages on each of Days 7 and 8, 10 pages on Day 9 [2(50) + 10 = 110]

Book 3: 3 days—50 pages on each of Days 10 and 11, 17 pages on Day 12 [2(50) + 17 = 117]

Book 4: 4 days—50 pages on each of Days 13–15, 20 pages on Day 16 [3(50) + 20 = 170]

Book 5: 4 days—50 pages on each of Days 17–19, 5 pages on Day 20 [3(50) + 5 = 155]

Book 6: 1 day—50 pages on Day 21 [1(50) = 50]

Book 7: 5 days—50 pages on each of Days 22–25, 5 pages on Day 26 [4(50) + 5 = 205]

Book 8: 2 days—50 pages on Day 27, 20 pages on Day 28 [50 + 20 = 70]

At this point, Shawana has read on a total of 28 days and has finished 8 books.

The correct answer is B.

PS07465

87. In Western Europe, x bicycles were sold in each of the years 1990 and 1993. The bicycle producers of Western Europe had a 42 percent share of this market in 1990 and a 33 percent share in 1993. Which of the following represents the decrease in the annual number of bicycles produced and sold in Western Europe from 1990 to 1993?

(A) 9% of $\frac{x}{100}$
(B) 14% of $\frac{x}{100}$
(C) 75% of $\frac{x}{100}$
(D) 9% of x
(E) 14% of x

Arithmetic Percents

Of the x bicycles sold in Western Europe in 1990, 42% of them were produced in Western Europe. It follows that the number of bicycles produced and sold in Western Europe in 1990 was $0.42x$. Similarly, of the x bicycles sold in Western Europe in 1993, 33% were produced in

Western Europe. It follows that the number of bicycles produced and sold in Western Europe in 1993 was $0.33x$. Therefore, the decrease in the annual number of bicycles produced and sold in Western Europe from 1990 to 1993 was $0.42x - 0.33x = 0.09x$, which is 9% of x.

The correct answer is D.

PS06946

88. If k is a positive integer, what is the remainder when $(k + 2)(k^3 - k)$ is divided by 6 ?

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

Algebra Properties of numbers

Since k can be any positive integer, the remainder must be the same regardless of the value of k. If $k = 2$, for example, then $(k + 2)(k^3 - k) = (2 + 2)(2^3 - 2) = (4)(6)$, which is a multiple of 6, and therefore, the remainder when divided by 6 is 0.

Alternatively, factor the given expression:

$$(k + 2)(k^3 - k) = (k + 2)(k)(k^2 - 1)$$
$$= (k + 2)(k)(k + 1)(k - 1)$$

Now, rearrange the factors in ascending order $(k - 1)(k)(k + 1)(k + 2)$, and observe that for any positive integer k, the factors are 4 consecutive integers, two of which are even and one of which is divisible by 3. Therefore, $(k + 2)(k^3 - k)$ is divisible by both 2 and 3. Thus, $(k + 2)(k^3 - k)$ is divisible by 6 with 0 remainder.

The correct answer is A.

PS14989

89. Which of the following fractions is closest to $\frac{1}{2}$?

(A) $\frac{4}{7}$
(B) $\frac{5}{9}$
(C) $\frac{6}{11}$
(D) $\frac{7}{13}$
(E) $\frac{9}{16}$

Arithmetic Fractions

Find the distance between each fraction and $\frac{1}{2}$:

$$\left|\frac{4}{7} - \frac{1}{2}\right| = \left|\frac{8}{14} - \frac{7}{14}\right| = \frac{1}{14}$$

$$\left|\frac{5}{9} - \frac{1}{2}\right| = \left|\frac{10}{18} - \frac{9}{18}\right| = \frac{1}{18}$$

$$\left|\frac{6}{11} - \frac{1}{2}\right| = \left|\frac{12}{22} - \frac{11}{22}\right| = \frac{1}{22}$$

$$\left|\frac{7}{13} - \frac{1}{2}\right| = \left|\frac{14}{26} - \frac{13}{26}\right| = \frac{1}{26}$$

$$\left|\frac{9}{16} - \frac{1}{2}\right| = \left|\frac{9}{16} - \frac{8}{16}\right| = \frac{1}{16}$$

Each distance is the reciprocal of a positive integer, the greatest of which is 26. Therefore, $\frac{1}{26}$ is the least of the distances and $\frac{7}{13}$ is the fraction closest to $\frac{1}{2}$.

Alternatively, asking which fraction is closest to $\frac{1}{2}$ is equivalent to asking which of the fractions, when doubled, is closest to 1. The fractions after doubling are $\frac{8}{7}, \frac{10}{9}, \frac{12}{11}, \frac{14}{13}$, and $\frac{18}{16} = \frac{9}{8}$. Each of these fractions can be expressed as $\frac{n+1}{n} = 1 + \frac{1}{n}$ for some integer n. Of these fractions, the one closest to 1 is the one for which $\frac{1}{n}$ is least, or in other words, the one for which n is greatest. That fraction is $\frac{14}{13}$, and therefore the closest of the original fractions to $\frac{1}{2}$ is $\left(\frac{1}{2}\right)\left(\frac{14}{13}\right) = \frac{7}{13}$.

The correct answer is D.

PS12949

90. If $p \neq 0$ and $p - \frac{1 - p^2}{p} = \frac{r}{p}$, then $r =$

(A) $p + 1$
(B) $2p - 1$
(C) $p^2 + 1$
(D) $2p^2 - 1$
(E) $p^2 + p - 1$

Algebra Simplifying algebraic expressions

$$p - \frac{1-p^2}{p} = \frac{r}{p} \qquad \text{given}$$

$$p^2 - (1-p^2) = r \qquad \text{multiply both sides by } p$$

$$2p^2 - 1 = r \qquad \text{combine like terms}$$

The correct answer is D.

PS12760

91. If the range of the six numbers 4, 3, 14, 7, 10, and x is 12, what is the difference between the greatest possible value of x and the least possible value of x ?

(A) 0
(B) 2
(C) 12
(D) 13
(E) 15

Arithmetic Statistics

The range of the six numbers 3, 4, 7, 10, 14, and x is 12. If x were neither the greatest nor the least of the six numbers, then the greatest and least of the six numbers would be 14 and 3. But, this cannot be possible because the range of the six numbers would be $14 - 3 = 11$ and not 12 as stated. Therefore, x must be either the greatest or the least of the six numbers. If x is the greatest of the six numbers, then 3 is the least, and $x - 3 = 12$. It follows that $x = 15$. On the other hand, if x is the least of the six numbers, then 14 is the greatest, and $14 - x = 12$. It follows that $x = 2$. Thus, there are only two possible values of x, namely 15 and 2, and so the difference between the greatest and least possible values of x is $15 - 2 = 13$.

The correct answer is D.

PS04734

92. What number is 108 more than two-thirds of itself?

(A) 72
(B) 144
(C) 162
(D) 216
(E) 324

Algebra First-degree equations

Let x be the number that is 108 more than two-thirds of itself. Then, $108 + \frac{2}{3}x = x$. Solve for x as follows:

$$108 + \frac{2}{3}x = x$$

$$108 = \frac{1}{3}x$$

$$324 = x$$

The correct answer is E.

PS11396

93. Company P had 15 percent more employees in December than it had in January. If Company P had 460 employees in December, how many employees did it have in January?

(A) 391
(B) 400
(C) 410
(D) 423
(E) 445

Arithmetic Percents

It is given that 460 is 115% of the number of employees in January. Therefore, the number of employees in January was

$$\frac{460}{1.15} = \frac{460}{1.15}\left(\frac{100}{100}\right) = \left(\frac{460}{115}\right)(100) = (4)(100) = 400.$$

The correct answer is B.

PS07672

94. A doctor prescribed 18 cubic centimeters of a certain drug to a patient whose body weight was 120 pounds. If the typical dosage is 2 cubic centimeters per 15 pounds of body weight, by what percent was the prescribed dosage greater than the typical dosage?

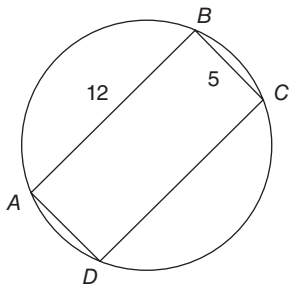
(A) 8%
(B) 9%
(C) 11%
(D) 12.5%
(E) 14.8%

Arithmetic Percents

If the typical dosage is 2 cubic centimeters per 15 pounds of body weight, then the typical dosage for a person who weighs 120 pounds is $2\left(\frac{120}{15}\right) = 2(8) = 16$ cubic centimeters. The prescribed dosage of 18 cubic centimeters is, therefore, $\left(\left(\frac{18-16}{16}\right)\times 100\right)\%$ or 12.5% greater than the typical dosage.

The correct answer is D.

PS09899



95. The function f is defined by $f(x) = \sqrt{x} - 10$ for all positive numbers x. If $u = f(t)$ for some positive numbers t and u, what is t in terms of u?

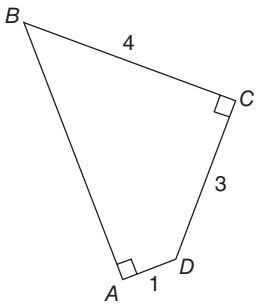
(A) $\sqrt{\sqrt{u}+10}$
(B) $\left(\sqrt{u}+10\right)^2$
(C) $\sqrt{u^2+10}$
(D) $(u+10)^2$
(E) $(u^2+10)^2$

Algebra Functions

The question can be answered by solving $u = \sqrt{t} - 10$ for t in terms of u. Adding 10 to both sides of this equation gives $u + 10 = \sqrt{t}$. Squaring both sides of the last equation gives $(u+10)^2 = t$, which gives t in terms of u.

The correct answer is D.

PS77502.01



96. If rectangle $ABCD$ is inscribed in the circle above, what is the area of the circular region?

(A) 36.00π
(B) 42.25π
(C) 64.00π
(D) 84.50π
(E) 169.00π

Geometry Circles; Rectangles

The diagonal $\overline{AC}$ is the hypotenuse of a right triangle, ΔABC, that is inscribed in the circle, and thus $\overline{AC}$ is a diameter of the circle. Applying the Pythagorean theorem gives $(AC)^2 = 12^2 + 5^2 = 144 + 25 = 169$, or $AC = 13$. Therefore, the radius of the circle is $\frac{13}{2}$ and the area of the circle is $\pi\left(\frac{13}{2}\right)^2 = 42.25\pi$.

The correct answer is B.

PS58502.01

97. In quadrilateral $ABCD$ above, what is the length of AB?

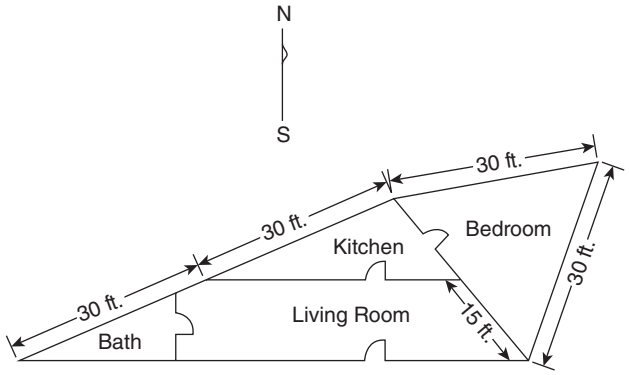
(A) $\sqrt{26}$
(B) $2\sqrt{5}$
(C) $2\sqrt{6}$
(D) $3\sqrt{2}$
(E) $3\sqrt{3}$

Geometry Quadrilaterals; Pythagorean theorem

First, apply the Pythagorean theorem to ΔBCD to get $(BD)^2 = 3^2 + 4^2 = 25$, or $BD = 5$. Next, apply the Pythagorean theorem to ΔDAB to get $1^2 + (AB)^2 = 5^2$, or $(AB)^2 = 24$. Therefore, $AB = \sqrt{24} = 2\sqrt{6}$.

The correct answer is C.

PS98502.01



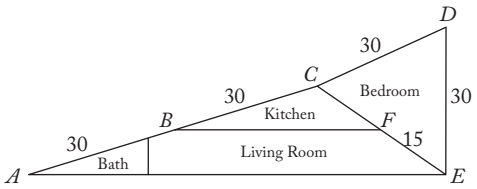
98. Three-fourths of the area of a rectangular lawn 30 feet wide by 40 feet long is to be enclosed by a rectangular fence. If the enclosure has full width and reduced length rather than full length and reduced width, how much less fence will be needed?

(A) $2\frac{1}{2}$
(B) 5
(C) 10
(D) 15
(E) 20

Geometry Rectangles

Let L ft be the reduced length. Then from $(30 \text{ ft})(L \text{ ft}) = \frac{3}{4}(30 \text{ ft})(40 \text{ ft})$ it follows that $L = 30$, and hence in this case the amount of fence needed is $2(30 \text{ ft} + 30 \text{ ft}) = 120$ ft. Let W ft be the reduced width. Then from $(W \text{ ft})(40 \text{ ft}) = \frac{3}{4}(30 \text{ ft})(40 \text{ ft})$ it follows that $W = 22.5$, and hence in this case the amount of fence needed is $2(22.5 \text{ ft} + 40 \text{ ft}) = 125$ ft. Therefore, the former case requires 5 ft less fence than the latter case.

The correct answer is B.



PS19502.01

99. In the floor plan of an executive's beach house above, the north and south walls of the living room are parallel. What is the floor area, in square feet, of the bedroom?

(A) $450\sqrt{3}$
(B) 450
(C) $225\sqrt{3}$
(D) 225
(E) It cannot be determined from the information given.

Geometry Triangles; Area

Using the labels in the figure above, it is given that $\overline{BF}$ is parallel to $\overline{AE}$ and so $\frac{BC}{AC} = \frac{CF}{CE}$ because, if a line parallel to one side of a triangle intersects the other two sides, it cuts off segments that are proportional to these sides. Therefore, $\frac{30}{30+30} = \frac{CF}{CF+15}$ or $\frac{1}{2} = \frac{CF}{CF+15}$. Solving for CF gives $CF + 15 = 2CF$ and so $CF = 15$. It follows that $CE = 15 + 15 = 30$, ΔCDE is equilateral, and each of its angles measures 60°. Then, ΔCDF is a 30° – 60° – 90° triangle with its sides in the ratio $1:\sqrt{3}:2$, from which it follows that $DF = 15\sqrt{3}$. Thus, the area, in square feet, of ΔCDE, which is the bedroom, is $\frac{1}{2}(30)(15\sqrt{3}) = 225\sqrt{3}$.

The correct answer is C.

PS40602.01

100. On a scale drawing, a rectangle 1 inch by $1\frac{1}{3}$ inches represents the floor of a room and the indicated scale is 1 inch equals 15 feet. How many square tiles 6 inches on a side will be needed to cover this floor? (1 foot = 12 inches)

(A) 40
(B) 70
(C) 120
(D) 700
(E) 1,200

Geometry Quadrilaterals; Area

In feet, the floor is (1)(15) feet = 15 feet by $\left(1\frac{1}{3}\right)(15) = 20$ feet with an area of (15)(20) = 300 square feet and each tile is $\frac{1}{2}$ foot by $\frac{1}{2}$ foot with an area of $\left(\frac{1}{2}\right)\left(\frac{1}{2}\right) = \frac{1}{4}$ square feet. The number of tiles needed to cover the floor is then $\frac{300}{\frac{1}{4}} = 1{,}200$.

Alternatively, in inches, the floor is (1)(15)(12) inches = 180 inches by $\left(1\frac{1}{3}\right)(15)(12) = 240$ inches with an area of (180)(240) square inches and each tile is 6 inches by 6 inches with an area of (6)(6) square inches. The number of tiles needed to cover the floor is then $\frac{(180)(240)}{(6)(6)} = \left(\frac{180}{6}\right)\left(\frac{240}{6}\right) = (30)(40) = 1{,}200$.

The correct answer is E.

PS01761

101. If m and p are positive integers and $m^2 + p^2 < 100$, what is the greatest possible value of mp ?

(A) 36
(B) 42
(C) 48
(D) 49
(E) 51

Arithmetic Operations with integers

Trying various integer values for m and corresponding values of p that satisfy $m^2 + p^2 < 100$ might be the quickest way to solve this problem. First, $m < 10$ and $p < 10$; otherwise, $m^2 + p^2 < 100$ is not true.

If $m = 9$, then for $m^2 + p^2 < 100$ to be true, $p < \sqrt{100 - 81} = \sqrt{19}$, so $p \le 4$, and the greatest possible value for mp is (9)(4) = 36.

Similarly, if $m = 8$, then $p < \sqrt{100 - 64} = \sqrt{36}$, so $p \le 5$, and the greatest possible value for mp is (8)(5) = 40.

If $m = 7$, then $p < \sqrt{100 - 49} = \sqrt{51}$, so $p \le 7$, and the greatest possible value for mp is (7)(7) = 49.

If $m = 6$, then $p < \sqrt{100 - 36} = \sqrt{64}$, so $p \le 7$, and the greatest possible value for mp is (6)(7) = 42.

If $m \le 5$ and $p \le 9$, it follows that $mp \le 45$.

Thus, the greatest possible value for mp is 49.

The correct answer is D.

PS04482

102. If $\frac{x}{y} = \frac{c}{d}$ and $\frac{d}{c} = \frac{b}{a}$, which of the following must be true?

I. $\frac{y}{x} = \frac{b}{a}$
II. $\frac{x}{a} = \frac{y}{b}$
III. $\frac{y}{a} = \frac{x}{b}$

(A) I only
(B) II only
(C) I and II only
(D) I and III only
(E) I, II, and III

Algebra Ratio and proportion

Equation I is true:

$\frac{x}{y} = \frac{c}{d}$ given

$\frac{y}{x} = \frac{d}{c}$ take reciprocals

$\frac{d}{c} = \frac{b}{a}$ given

$\frac{y}{x} = \frac{b}{a}$ use last two equations

Equation II is true:

$\frac{y}{x} = \frac{b}{a}$ Equation I (shown true)

$y = \frac{bx}{a}$ multiply both sides by x

$\frac{y}{b} = \frac{x}{a}$ divide both sides by b

Equation III is false, since otherwise it would follow that:

$y = \frac{bx}{a}$ from above

$\frac{y}{a} = \frac{bx}{a^2}$ divide both sides by a

$\frac{x}{b} = \frac{bx}{a^2}$ use Equation III (assumed true)

$x = \frac{b^2x}{a^2}$ multiply both sides by b

From this it follows that Equation III will hold only if $\frac{b^2}{a^2} = 1$, which can be false. For example, if $x = a = c = 1$ and $y = b = d = 2$ (a choice of values for which $\frac{x}{y} = \frac{c}{d}$ and $\frac{d}{c} = \frac{b}{a}$ are true), then $\frac{b^2}{a^2} \neq 1$ and Equation III is $\frac{2}{1} = \frac{1}{2}$, which is false.

The correct answer is C.

PS10391

103. If k is an integer and $(0.0025)(0.025)(0.00025) \times 10^k$ is an integer, what is the least possible value of k?

(A) –12
(B) –6
(C) 0
(D) 6
(E) 12

Arithmetic Properties of numbers

Let $N = (0.0025)(0.025)(0.00025) \times 10^k$. Rewriting each of the decimals as an integer times a power of 10 gives $N = (25 \times 10^{-4})(25 \times 10^{-3})(25 \times 10^{-5}) \times 10^k = (25)^3 \times 10^{k-12}$. Since the units digit of $(25)^3$ is 5, it follows that if $k = 11$, then the tenths digit of N would be 5, and thus N would not be an integer; and if $k = 12$, then N would be $(25)^3 \times 10^0 = (25)^3$, which is an integer. Therefore, the least value of k such that N is an integer is 12.

The correct answer is E.

PS07325

104. If $a(a + 2) = 24$ and $b(b + 2) = 24$, where $a \neq b$, then $a + b =$

(A) –48
(B) –2
(C) 2
(D) 46
(E) 48

Algebra Second-degree equations

$a(a + 2) = 24$ given

$a^2 + 2a = 24$ use distributive property

$a^2 + 2a - 24 = 0$ subtract 24 from both sides

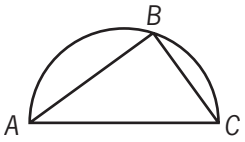
$(a + 6)(a - 4) = 0$ factor

So, $a + 6 = 0$, which means that $a = -6$, or $a - 4 = 0$, which means $a = 4$. The equation with the variable b has the same solutions, and so $b = -6$ or $b = 4$.

Since $a \neq b$, then $a = -6$ and $b = 4$, which means $a + b = -6 + 4 = -2$, or $a = 4$ and $b = -6$, which means that $a + b = 4 + (-6) = -2$

The correct answer is B.

PS05560



105. In a recent election, Ms. Robbins received 8,000 votes cast by independent voters, that is, voters not registered with a specific political party. She also received 10 percent of the votes cast by those voters registered with a political party. If N is the total number of votes cast in the election and 40 percent of the votes cast were cast by independent voters, which of the following represents the number of votes that Ms. Robbins received?

(A) $0.06N + 3{,}200$
(B) $0.1N + 7{,}200$
(C) $0.4N + 7{,}200$
(D) $0.1N + 8{,}000$
(E) $0.06N + 8{,}000$

Algebra Percents

If N represents the total number of votes cast and 40% of the votes cast were cast by independent voters, then 60% of the votes cast, or $0.6N$ votes, were cast by voters registered with a political party. Ms. Robbins received 10% of these, and so Ms. Robbins received $(0.10)(0.6N) = 0.06N$ votes cast by voters registered with a political party. Thus, Ms. Robbins received $0.06N$ votes cast by voters registered with a political party and 8,000 votes cast by independent voters, so she received $0.06N + 8{,}000$ votes in all.

The correct answer is E.

PS11308

106. In the figure shown, the triangle is inscribed in the semicircle. If the length of line segment AB is 8 and the length of line segment BC is 6, what is the length of arc ABC?

(A) 15π
(B) 12π
(C) 10π
(D) 7π
(E) 5π

Geometry Circles, triangles

Because ΔABC is inscribed in a semicircle, $\angle ABC$ is a right angle. Applying the Pythagorean theorem gives $(AB)^2 + (BC)^2 = (AC)^2$. Then substituting the given lengths, $8^2 + 6^2 = (AC)^2$, and so $(AC)^2 = 100$ and $AC = 10$. Thus, the diameter of the circle is 10, the circumference of the entire circle is 10π, and the length of arc ABC is half the circumference of the circle, or 5π.

The correct answer is E.

PS15517

107. A manufacturer makes and sells 2 products, P and Q. The revenue from the sale of each unit of P is \$20.00 and the revenue from the sale of each unit of Q is \$17.00. Last year the manufacturer sold twice as many units of Q as P. What was the manufacturer's average (arithmetic mean) revenue per unit sold of these 2 products last year?

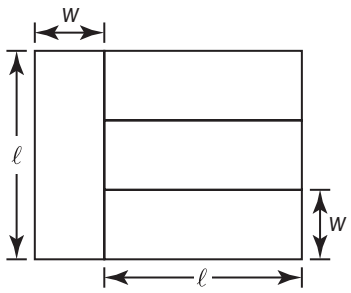
(A) \$28.50
(B) \$27.00
(C) \$19.00
(D) \$18.50
(E) \$18.00

Arithmetic Statistics

Let x represent the number of units of Product P the manufacturer sold last year. Then $2x$ represents the number of units of Product Q the manufacturer sold last year, and $x + 2x = 3x$ represents the total number of units of Products P and Q the manufacturer sold last year. The total revenue from the sale of Products P and Q was $\$(20x) + \$(17(2x)) = \$(54x)$, so the average revenue per unit sold was $\frac{\$(54x)}{3x} = \$18$.

The correct answer is E.

PS11756



108. A worker carries jugs of liquid soap from a production line to a packing area, carrying 4 jugs per trip. If the jugs are packed into cartons that hold 7 jugs each, how many jugs are needed to fill the last partially filled carton after the worker has made 17 trips?

(A) 1
(B) 2
(C) 4
(D) 5
(E) 6

Arithmetic Remainders

Carrying 4 jugs per trip, the worker carries a total of $4(17) = 68$ jugs in 17 trips. At 7 jugs per carton, these jugs will completely fill 9 cartons with 5 jugs left over since $(9)(7) + 5 = 68$. To fill the 10th carton, $7 - 5 = 2$ jugs are needed.

The correct answer is B.

PS02820

109. The figure shown above represents a modern painting that consists of four differently colored rectangles, each of which has length ℓ and width w. If the area of the painting is 4,800 square inches, what is the width, in inches, of each of the four rectangles?

(A) 15
(B) 20
(C) 25
(D) 30
(E) 40

Geometry Area

From the figure, $\ell = 3w$, and the area of the painting is $\ell(w + \ell)$. Substituting $3w$ for ℓ gives $3w(w + 3w) = 3w(4w) = 12w^2$. It is given that the area is 4,800 square inches, so $12w^2 = 4{,}800$, $w^2 = 400$, and $w = 20$.

The correct answer is B.

PS09737

110. Working simultaneously and independently at an identical constant rate, 4 machines of a certain type can produce a total of x units of product P in 6 days. How many of these machines, working simultaneously and independently at this constant rate, can produce a total of $3x$ units of product P in 4 days?

(A) 24
(B) 18
(C) 16
(D) 12
(E) 8

Algebra Applied problems

Define a *machine day* as 1 machine working for 1 day. Then, 4 machines each working 6 days is equivalent to (4)(6) = 24 machine days. Thus, x units of product P were produced in 24 machine days, and $3x$ units of product P will require (3)(24) = 72 machine days, which is equivalent to $\frac{72}{4} = 18$ machines working independently and simultaneously for 4 days.

The correct answer is B.

PS01622

111. The symbol Δ denotes one of the four arithmetic operations: addition, subtraction, multiplication, or division. If $6 \Delta 3 \leq 3$, which of the following must be true?

I. $2 \Delta 2 = 0$
II. $2 \Delta 2 = 1$
III. $4 \Delta 2 = 2$

(A) I only
(B) II only
(C) III only
(D) I and II only
(E) I, II, and III

Arithmetic Operations with integers

If Δ represents addition, subtraction, multiplication, or division, then $6 \Delta 3$ is equal to either $6 + 3 = 9$, or $6 - 3 = 3$, or $6 \times 3 = 18$, or $6 \div 3 = 2$. Since it is given that $6 \Delta 3 \leq 3$, Δ represents either subtraction or division.

Statement I is true for subtraction since $2 - 2 = 0$ but not true for division since $2 \div 2 = 1$.

Statement II is not true for subtraction since $2 - 2 = 0$ but is true for division since $2 \div 2 = 1$.

Statement III is true for subtraction since $4 - 2 = 2$ and is true for division since $4 \div 2 = 2$. Therefore, only Statement III must be true.

The correct answer is C.

PS04448

112. If $mn \neq 0$ and 25 percent of n equals $37\frac{1}{2}$ percent of m, what is the value of $\frac{12n}{m}$?

(A) 18
(B) $\frac{32}{3}$
(C) 8
(D) 3
(E) $\frac{9}{8}$

Algebra Percents; First-degree equations

It is given that $(25\%)n = (37.5\%)m$, or $0.25n = 0.375m$. The value of $\frac{12n}{m}$ can be found by first finding the value of $\frac{n}{m}$ and then multiplying the result by 12. Doing this gives $\frac{12n}{m} = \left(\frac{0.375}{0.25}\right)(12) = 18$. Alternatively, the numbers involved allow for a series of simple equation transformations to be carried out, such as the following:

$0.25n = 0.375m$	given
$25n = 37.5m$	multiply both sides by 100
$50n = 75m$	multiply both sides by 2
$2n = 3m$	divide both sides by 25
$12n = 18m$	multiply both sides by 6
$\frac{12n}{m} = 18$	divide both sides by m

The correct answer is A.

PS02555

113. Last year Joe grew 1 inch and Sally grew 200 percent more than Joe grew. How many inches did Sally grow last year?

(A) 0
(B) 1
(C) 2
(D) 3
(E) 4

Arithmetic Percents

Joe grew 1 inch last year and Sally grew 200 percent more than Joe grew, so Sally grew 1 inch plus 200 percent of 1 inch or $1 + 2(1) = 3$ inches.

The correct answer is D.

Technique	Percent of Consumers
Television ads	35%
Coupons	22%
Store displays	18%
Samples	15%

PS10307

114. The table shows partial results of a survey in which consumers were asked to indicate which one of six promotional techniques most influenced their decision to buy a new food product. Of those consumers who indicated one of the four techniques listed, what fraction indicated either coupons or store displays?

(A) $\frac{2}{7}$
(B) $\frac{1}{3}$
(C) $\frac{2}{5}$
(D) $\frac{4}{9}$
(E) $\frac{1}{2}$

Arithmetic Percents; Ratio and proportion

Let T be the total number of consumers who were asked. Then the table shows $35\% + 22\% + 18\% + 15\% = 90\%$ of this total, or $0.9T$ consumers. Also, the number of consumers who indicated either coupons or store displays was $0.22T + 0.18T = 0.4T$. Therefore, the number of consumers who indicated either coupons or store displays divided by the number of consumers shown in the table is $\frac{0.4T}{0.9T} = \frac{4}{9}$.

The correct answer is D.

PS09708

115. The cost C, in dollars, to remove p percent of a certain pollutant from a pond is estimated by using the formula $C = \frac{100{,}000p}{100 - p}$. According to this estimate, how much more would it cost to remove 90 percent of the pollutant from the pond than it would cost to remove 80 percent of the pollutant?

(A) $500,000
(B) $100,000
(C) $50,000
(D) $10,000
(E) $5,000

Algebra; Arithmetic Simplifying algebraic expressions; Operations on rational numbers

Removing 90% of the pollutant from the pond would cost $\frac{(100{,}000)(90)}{100-90} = \frac{9{,}000{,}000}{10} =$ 900,000 dollars, and removing 80% of the pollutant would cost $\frac{(100{,}000)(80)}{100-80} = \frac{8{,}000{,}000}{20} = 400{,}000$ dollars. The difference is, then, $900,000 – $400,000 = $500,000.

The correct answer is A.

PS11121

116. If $xy \neq 0$ and $x^2y^2 - xy = 6$, which of the following could be y in terms of x?

I. $\frac{1}{2x}$
II. $-\frac{2}{x}$
III. $\frac{3}{x}$

(A) I only
(B) II only
(C) I and II
(D) I and III
(E) II and III

Algebra Second-degree equations

$x^2y^2 - xy = 6$ given
$x^2y^2 - xy - 6 = 0$ subtract 6 from both sides
$(xy + 2)(xy - 3) = 0$ factor

So, $xy + 2 = 0$, which means $xy = -2$ and $y = -\frac{2}{x}$, or $xy - 3 = 0$, which means that $xy = 3$ and $y = \frac{3}{x}$. Thus, y in terms of x could be given by the expressions in II or III.

The correct answer is E.

PS00633

117. $\sqrt{4.8 \times 10^9}$ is closest in value to

(A) 2,200
(B) 70,000
(C) 220,000
(D) 7,000,000
(E) 22,000,000

Arithmetic Operations on radical expressions

$\sqrt{4.8} \times \sqrt{10^9} = \sqrt{48 \times 10^8}$ substitute 48×10^8 for 4.8×10^9
$= \sqrt{48} \times \sqrt{10^8}$ $\sqrt{ab} = \sqrt{a} \times \sqrt{b}$
$\approx \sqrt{49} \times \sqrt{10^8}$ $49 \approx 48$

and then

$\sqrt{49} \times \sqrt{10^8} = 7 \times 10^4$ $\sqrt{49} = 7$, $\sqrt{10^8} = \sqrt{(10^4)^2} = 10^4$
$= 70{,}000$

The correct answer is B.

PS08865

118. Three printing presses, R, S, and T, working together at their respective constant rates, can do a certain printing job in 4 hours. S and T, working together at their respective constant rates, can do the same job in 5 hours. How many hours would it take R, working alone at its constant rate, to do the same job?

(A) 8
(B) 10
(C) 12
(D) 15
(E) 20

Algebra Applied problems

Let r be the portion of the job that printing press R, working alone, completes in 1 hour; and let s and t be the corresponding portions, respectively, for printing press S and printing press T. From the given information, it follows that $r+s+t=\frac{1}{4}$ and $s+t=\frac{1}{5}$. Subtracting these two equations gives $r=\frac{1}{4}-\frac{1}{5}=\frac{1}{20}$. It follows that printing press R, working alone, will complete $\frac{1}{20}$ of the job in 1 hour, and therefore printing press R, working alone, will complete the job in 20 hours.

The correct answer is E.

PS07112

119. For a party, three solid cheese balls with diameters of 2 inches, 4 inches, and 6 inches, respectively, were combined to form a single cheese ball. What was the approximate diameter, in inches, of the new cheese ball? (The volume of a sphere is $\frac{4}{3}\pi r^3$, where r is the radius.)

(A) 12
(B) 16
(C) $\sqrt[3]{16}$
(D) $3\sqrt[3]{8}$
(E) $2\sqrt[3]{36}$

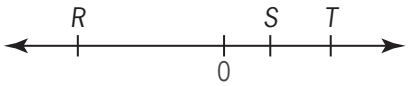
Geometry Volume

Since the diameters of the cheese balls are given as 2 inches, 4 inches, and 6 inches, the radii of the cheese balls are 1 inch, 2 inches, and 3 inches, respectively. Using $V=\frac{4}{3}\pi r^3$, the combined volume of the 3 cheese balls is $\frac{4}{3}\pi\left(1^3+2^3+3^3\right)$ or $\frac{4}{3}\pi(36)$ cubic inches.

Thus, if R represents the radius of the new cheese ball, then the volume of the new cheese ball is $\frac{4}{3}\pi R^3=\frac{4}{3}\pi(36)$ and $R^3=36$, from which it follows that $R=\sqrt[3]{36}$ inches. Therefore, the diameter of the new cheese ball is $2R=2\sqrt[3]{36}$ inches.

The correct answer is E.

PS02325



120. The sum of all the integers k such that $-26<k<24$ is

(A) 0
(B) −2
(C) −25
(D) −49
(E) −51

Arithmetic Operations on integers

In the sum of all integers k such that $-26<k<24$, the positive integers from 1 through 23 can be paired with the negative integers from −1 through −23. The sum of these pairs is 0 because $a+(-a)=0$ for all integers a. Therefore, the sum of all integers k such that $-26<k<24$ is $-25+(-24)+(23)(0)=-49$.

The correct answer is D.

PS08399

121. The number line shown contains three points R, S, and T, whose coordinates have absolute values r, s, and t, respectively. Which of the following equals the average (arithmetic mean) of the coordinates of the points R, S, and T?

(A) s
(B) $s+t-r$
(C) $\frac{r-s-t}{3}$
(D) $\frac{r+s+t}{3}$
(E) $\frac{s+t-r}{3}$

Arithmetic Absolute value; Number line

Because point R is to the left of 0 on the number line, the coordinate of R is negative. It is given that r is the absolute value of the coordinate of R and so the coordinate of R is $-r$. Because points S and T are to the right of 0 on the number line, their coordinates are positive. It is given that s and t are the absolute values of the coordinates of S and T, and so the coordinates of S and T are s and t. The arithmetic mean of the coordinates of R, S, and T is $\frac{s+t-r}{3}$.

The correct answer is E.

PS05962

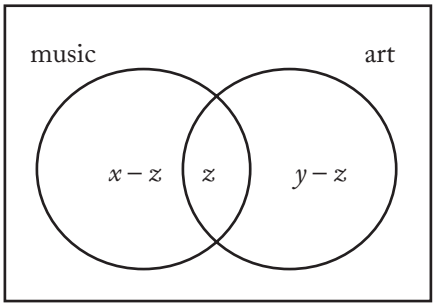
122. Mark and Ann together were allocated n boxes of cookies to sell for a club project. Mark sold 10 boxes less than n and Ann sold 2 boxes less than n. If Mark and Ann have each sold at least one box of cookies, but together they have sold less than n boxes, what is the value of n?

(A) 11
(B) 12
(C) 13
(D) 14
(E) 15

Algebra Inequalities

Mark sold $n - 10$ boxes and Ann sold $n - 2$ boxes. Because each person sold at least one box, it follows that $n - 10 \geq 1$ and $n - 2 \geq 1$, which implies that $n \geq 11$. On the other hand, together they sold less than n boxes, so $(n - 10) + (n - 2) < n$, which implies that $n < 12$. Therefore, n is an integer such that $n \geq 11$ and $n < 12$, which implies that $n = 11$.

The correct answer is A.



PS04089

123. A certain high school has 5,000 students. Of these students, x are taking music, y are taking art, and z are taking both music and art. How many students are taking neither music nor art?

(A) $5{,}000 - z$
(B) $5{,}000 - x - y$
(C) $5{,}000 - x + z$
(D) $5{,}000 - x - y - z$
(E) $5{,}000 - x - y + z$

Algebra Sets

Since x students are taking music, y students are taking art, and z students are taking both music and art, the number of students taking only music is $x - z$, and the number of students taking only art is $y - z$, as illustrated by the following Venn diagram.

Therefore, the number of students taking neither music nor art is $5{,}000 - [(x - z) + z + (y - z)] = 5{,}000 - x - y + z$.

The correct answer is E.

PS06133

124. Each person who attended a company meeting was either a stockholder in the company, an employee of the company, or both. If 62 percent of those who attended the meeting were stockholders and 47 percent were employees, what percent were stockholders who were not employees?

(A) 34%
(B) 38%
(C) 45%
(D) 53%
(E) 62%

Arithmetic Sets

Let M represent the number of meeting attendees. Then, since 62% of M or $0.62M$ were stockholders and 47% of M or $0.47M$ were employees, it follows that $0.62M + 0.47M = 1.09M$ were either stockholders, employees, or both. Since $1.09M$ exceeds M, the excess $1.09M - M = 0.09M$ must be the number of attendees who were both stockholders and employees, leaving the rest $0.62M - 0.09M = 0.53M$, or 53%, of the meeting attendees to be stockholders but not employees.

The correct answer is D.

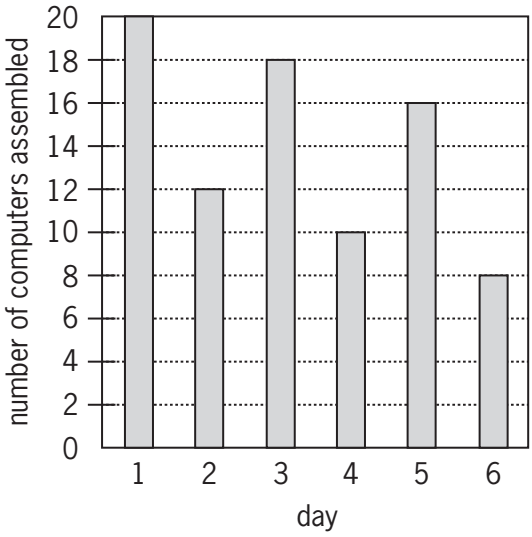
Accounts	Amount Budgeted	Amount Spent
Payroll	$110,000	$117,000
Taxes	40,000	42,000
Insurance	2,500	2,340

PS08441

125. The table shows the amount budgeted and the amount spent for each of three accounts in a certain company. For which of these accounts did the amount spent differ from the amount budgeted by more than 6 percent of the amount budgeted?

(A) Payroll only
(B) Taxes only
(C) Insurance only
(D) Payroll and Insurance
(E) Taxes and Insurance

Arithmetic Percents



For Payroll, 6% of the budgeted amount is (0.06)($110,000) = $6,600. Since $117,000 – $110,000 = $7,000 > $6,600, the amount spent differed from the amount budgeted by more than 6%.

For Taxes, 6% of the budgeted amount is (0.06)($40,000) = $2,400. Since $42,000 – $40,000 = $2,000 < $2,400, the amount spent did not differ from the amount budgeted by more than 6%.

For Insurance, 6% of the budgeted amount is (0.06)($2,500) = $150. Since $2,500 – $2,340 = $160 > $150, the amount spent differed from the amount budgeted by more than 6%.

Thus, the amount spent differed from the amount budgeted by more than 6% for Payroll and Insurance.

The correct answer is D.

PS15111

126. The graph shows the number of computers assembled during each of 6 consecutive days. From what day to the next day was the percent change in the number of computers assembled the greatest in magnitude?

(A) From Day 1 to Day 2
(B) From Day 2 to Day 3
(C) From Day 3 to Day 4
(D) From Day 4 to Day 5
(E) From Day 5 to Day 6

Arithmetic Percents

The following table shows the percent change from each day to the next and the magnitude of the percent change.

Time period	Percent change	Magnitude of percent change
From Day 1 to Day 2	$\left(\frac{12-20}{20}\times 100\right)\% = \left(-\frac{8}{20}\times 100\right)\% = -40\%$	40
From Day 2 to Day 3	$\left(\frac{18-12}{12}\times 100\right)\% = \left(\frac{6}{12}\times 100\right)\% = 50\%$	50
From Day 3 to Day 4	$\left(\frac{10-18}{18}\times 100\right)\% = \left(-\frac{8}{18}\times 100\right)\% \approx -44\%$	44
From Day 4 to Day 5	$\left(\frac{16-10}{10}\times 100\right)\% = \left(\frac{6}{10}\times 100\right)\% = 60\%$	60
From Day 5 to Day 6	$\left(\frac{8-16}{16}\times 100\right)\% = \left(-\frac{8}{16}\times 100\right)\% = -50\%$	50

The correct answer is D.

PS02704

127. If $n = 20! + 17$, then n is divisible by which of the following?

I. 15
II. 17
III. 19

(A) None
(B) I only
(C) II only
(D) I and II
(E) II and III

Arithmetic Properties of numbers

Because 20! is the product of all integers from 1 through 20, it follows that 20! is divisible by each integer from 1 through 20. In particular, 20! is divisible by each of the integers 15, 17, and 19. Since 20! and 17 are both divisible by 17, their sum is divisible by 17, and hence the correct answer will include II. If n were divisible by 15, then $n - 20!$ would be divisible by 15. But, $n - 20! = 17$ and 17 is not divisible by 15. Therefore, the correct answer does not include I. If n were divisible by 19, then $n - 20!$ would be divisible by 19. But, $n - 20! = 17$ and 17 is not divisible by 19. Therefore, the correct answer does not include III.

The correct answer is C.

PS02600

128. The product of two negative numbers is 160. If the lesser of the two numbers is 4 less than twice the greater, what is the greater number?

(A) –20
(B) –16
(C) –10
(D) –8
(E) –4

Algebra Second-degree equations

Let x and y be the two numbers, where x is the lesser of the two numbers and y is the number desired. From the given information it follows that $xy = 160$ and $x = 2y - 4$, from which it follows that $(2y - 4)y = 160$. Dividing both sides of the last equation by 2 gives $(y - 2)y = 80$. Thus, 80 is to be written as a product of two negative numbers, one that is 2 less than the other. Trying simple factorizations of 80 quickly leads to the value of y: $(-40)(-2) = 80$, $(-20)(-4) = 80$, $(-10)(-8) = 80$. Therefore, $y = -8$. Note that because -8 is one of the answer choices, it is not necessary to ensure there are no other negative solutions to the equation $(y - 2)y = 80$.

Alternatively, $(y - 2)y = 80$ can be written as $y^2 - 2y - 80 = 0$. Factoring the left side gives $(y + 8)(y - 10) = 0$, and $y = -8$ is the only negative solution.

The correct answer is D.

PS10546

129. According to a certain estimate, the depth $N(t)$, in centimeters, of the water in a certain tank at t hours past 2:00 in the morning is given by $N(t) = -20(t - 5)^2 + 500$ for $0 \le t \le 10$. According to this estimate, at what time in the morning does the depth of the water in the tank reach its maximum?

(A) 5:30
(B) 7:00
(C) 7:30
(D) 8:00
(E) 9:00

Algebra Functions

When $t = 5$, the value of $-20(t - 5)^2 + 500$ is 500. For all values of t between 0 and 10, inclusive, except $t = 5$, the value of $-20(t - 5)^2$ is negative and $-20(t - 5)^2 + 500 < 500$. Therefore, the tank reaches its maximum depth 5 hours after 2:00 in the morning, which is 7:00 in the morning.

The correct answer is B.

PS04617

130. After driving to a riverfront parking lot, Bob plans to run south along the river, turn around, and return to the parking lot, running north along the same path. After running 3.25 miles south, he decides to run for only 50 minutes more. If Bob runs at a constant rate of 8 minutes per mile, how many miles farther south can he run and still be able to return to the parking lot in 50 minutes?

(A) 1.5
(B) 2.25
(C) 3.0
(D) 3.25
(E) 4.75

Algebra Applied problems

After running 3.25 miles south, Bob has been running for $(3.25 \text{ miles})\left(8\frac{\text{minutes}}{\text{mile}}\right) = 26$ minutes. Thus, if t is the number of additional minutes that Bob can run south before turning around, then the number of minutes that Bob will run north, after turning around, will be $t + 26$. Since Bob will be running a total of 50 minutes after the initial 26 minutes of running, it follows that $t + (t + 26) = 50$, or $t = 12$. Therefore, Bob can run south an additional $\frac{12 \text{ minutes}}{8\frac{\text{minutes}}{\text{mile}}} = 1.5$ miles before turning around.

The correct answer is A.

PS12577

131. Alex deposited x dollars into a new account that earned 8 percent annual interest, compounded annually. One year later Alex deposited an additional x dollars into the account. If there were no other transactions and if the account contained w dollars at the end of two years, which of the following expresses x in terms of w?

(A) $\frac{w}{1+1.08}$

(B) $\frac{w}{1.08+1.16}$

(C) $\frac{w}{1.16+1.24}$

(D) $\frac{w}{1.08+(1.08)^2}$

(E) $\frac{w}{(1.08)^2+(1.08)^3}$

Algebra Applied problems

At the end of the first year, the value of Alex's initial investment was $x(1.08)$ dollars, and after he deposited an additional x dollars into the account, its value was $[x(1.08) + x]$ dollars. At the end of the second year, the value was w dollars, where $w = [x(1.08) + x](1.08) = x(1.08)^2 + x(1.08) = x[(1.08)^2 + 1.08]$. Thus, $x = \frac{w}{1.08+(1.08)^2}$.

The correct answer is D.

PS05973

132. M is the sum of the reciprocals of the consecutive integers from 201 to 300, inclusive. Which of the following is true?

(A) $\frac{1}{3} < M < \frac{1}{2}$

(B) $\frac{1}{5} < M < \frac{1}{3}$

(C) $\frac{1}{7} < M < \frac{1}{5}$

(D) $\frac{1}{9} < M < \frac{1}{7}$

(E) $\frac{1}{12} < M < \frac{1}{9}$

Arithmetic Estimation

Because $\frac{1}{300}$ is less than each of the 99 numbers $\frac{1}{201}, \frac{1}{202}, \ldots, \frac{1}{299}$, it follows that $\frac{1}{300}+\frac{1}{300}+\cdots+\frac{1}{300}$ (the sum of 99 identical values) is less than $\frac{1}{201}+\frac{1}{202}+\cdots+\frac{1}{299}$. Therefore, adding $\frac{1}{300}$ to both sides of this last inequality, it follows that $\frac{1}{300}+\frac{1}{300}+\cdots+\frac{1}{300}$ (the sum of 100 identical values) is less than $\frac{1}{201}+\frac{1}{202}+\cdots+\frac{1}{299}+\frac{1}{300} = M$. Hence, $(100)\left(\frac{1}{300}\right) < M$ or $\frac{1}{3} < M$. Also, because $\frac{1}{200}$ is greater than each of the 100 numbers $\frac{1}{201}, \frac{1}{202}, \ldots, \frac{1}{300}$, it follows that $\frac{1}{200}+\frac{1}{200}+\cdots+\frac{1}{200}$ (the sum of 100 identical values) is greater than $\frac{1}{201}+\frac{1}{202}+\cdots+\frac{1}{300}$. Hence, $(100)\left(\frac{1}{200}\right) > M$ or $\frac{1}{2} > M$. From $\frac{1}{3} < M$ and $\frac{1}{2} > M$, it follows that $\frac{1}{3} < M < \frac{1}{2}$.

The correct answer is A.

PS00428

133. Working simultaneously at their respective constant rates, Machines *A* and *B* produce 800 nails in *x* hours. Working alone at its constant rate, Machine *A* produces 800 nails in *y* hours. In terms of *x* and *y*, how many hours does it take Machine *B*, working alone at its constant rate, to produce 800 nails?

(A) $\frac{x}{x+y}$

(B) $\frac{y}{x+y}$

(C) $\frac{xy}{x+y}$

(D) $\frac{xy}{x-y}$

(E) $\frac{xy}{y-x}$

Algebra Applied problems

Let R_A and R_B be the constant rates, in nails per hour, at which Machines A and B work, respectively. Then it follows from the given information that $R_A + R_B = \frac{800}{x}$ and $R_A = \frac{800}{y}$. Hence, $\frac{800}{y} + R_B = \frac{800}{x}$, or

$$R_B = \frac{800}{x} - \frac{800}{y} = 800\left(\frac{1}{x} - \frac{1}{y}\right) = 800\left(\frac{y-x}{xy}\right).$$

Therefore, the time, in hours, it would take Machine *B* to produce 800 nails is given by

$$\frac{800}{800\left(\frac{y-x}{xy}\right)} = \frac{xy}{y-x}.$$

The correct answer is E.

10, 4, 26, 16

PS08966

134. What is the median of the numbers shown?

(A) 10

(B) 13

(C) 14

(D) 15

(E) 16

Arithmetic Statistics

To determine the median of these 4 numbers, put the numbers in numerical order in a list and determine the average of the two middle values in the list:

4, **10**, **16**, 26

From this list it follows that the median is the average of 10 and 16, which is $\frac{10+16}{2} = 13$.

The correct answer is B.

	Number of Marbles in Each of Three Bags	Percent of Marbles in Each Bag That Are Blue (to the nearest tenth)
Bag *P*	37	10.8%
Bag *Q*	×	66.7%
Bag *R*	32	50.0%

PS03823

135. If $\frac{1}{3}$ of the total number of marbles in the three bags listed in the table above are blue, how many marbles are there in bag *Q*?

(A) 5

(B) 9

(C) 12

(D) 23

(E) 46

Algebra Percents

What is the value of *x*, the number of marbles in bag *Q*? From the given information and rounded to the nearest integer, bag *P* has (37)(0.108) = 4 blue marbles, bag *Q* has $(x)(0.667) = \frac{2}{3}x$ blue marbles, and bag *R* has (32)(0.5) = 16 blue marbles. Therefore, the total number of blue marbles is equal to $4 + \frac{2}{3}x + 16 = 20 + \frac{2}{3}x$. It is given that $\frac{1}{3}$ of the total number of marbles are blue, so the total number of blue marbles is also equal to $\frac{1}{3}(37 + x + 32) = \frac{1}{3}x + 23$. It follows that $20 + \frac{2}{3}x = \frac{1}{3}x + 23$, or $\frac{1}{3}x = 3$, or $x = 9$.

The correct answer is B.

Age Category (in years)	Number of Employees
Less than 20	29
20–29	58
30–39	36
40–49	21
50–59	10
60–69	5
70 and over	2

PS11600

136. The table above gives the age categories of the 161 employees at Company X and the number of employees in each category. According to the table, if m is the median age, in years, of the employees at Company X, then m must satisfy which of the following?

(A) $20 \le m \le 29$
(B) $25 \le m \le 34$
(C) $30 \le m \le 39$
(D) $35 \le m \le 44$
(E) $40 \le m \le 49$

Arithmetic Statistics

The median of 161 ages is the 81st age when the ages are listed in order. Since 29 of the ages are less than 20, the median age must be greater than or equal to 20. Since 58 of the ages are between 20 and 29, a total of $29 + 58 = 87$ of the ages are less than or equal to 29, and thus the median age is less than or equal to 29. Therefore, the median age is greater than or equal to 20 and less than or equal to 29.

The correct answer is A.

PS02749

137. Ron is 4 inches taller than Amy, and Barbara is 1 inch taller than Ron. If Barbara's height is 65 inches, what is the median height, in inches, of these three people?

(A) 60
(B) 61
(C) 62
(D) 63
(E) 64

Arithmetic Operations with integers

Let R, A, and B be the heights, respectively and in inches, of Ron, Amy, and Barbara. It is given that $R = 4 + A$, $B = 1 + R$, and $B = 65$. Therefore, $R = B - 1 = 65 - 1 = 64$ and $A = R - 4 = 64 - 4 = 60$. From this it follows that the three heights, in inches, are 60, 64, and 65. The median of these three heights is 64.

The correct answer is E.

PS02777

138. If x and y are positive numbers such that $x + y = 1$, which of the following could be the value of $100x + 200y$?

I. 80
II. 140
III. 199

(A) II only
(B) III only
(C) I and II
(D) I and III
(E) II and III

Algebra Simultaneous equations; Inequalities

Since $x + y = 1$, then $y = 1 - x$ and $100x + 200y$ can be expressed as $100x + 200(1 - x) = 200 - 100x$. Test each value.

I. If $200 - 100x = 80$, then $x = \dfrac{200 - 80}{100} = 1.2$ and $y = 1 - 1.2 = -0.2$.
Since y must be positive, 80 cannot be a value of $100x + 200y$.

II. If $200 - 100x = 140$, then $x = \dfrac{200 - 140}{100} = 0.6$ and $y = 1 - 0.6 = 0.4$, so 140 can be a value of $100x + 200y$.

III. If $200 - 100x = 199$, then $x = \dfrac{200 - 199}{100} = 0.01$ and $y = 1 - 0.01 = 0.99$, so 199 can be a value of $100x + 200y$.

The correct answer is E.

PS02017

139. If X is the hundredths digit in the decimal $0.1X$ and if Y is the thousandths digit in the decimal $0.02Y$, where X and Y are nonzero digits, which of the following is closest to the greatest possible value of $\dfrac{0.1X}{0.02Y}$?

(A) 4
(B) 5
(C) 6
(D) 9
(E) 10

Arithmetic Operations with decimals; Place value

The greatest possible value of $\frac{0.1X}{0.02Y}$ will occur when $0.1X$ has the greatest possible value and $0.02Y$ has the least possible value. Since X and Y are nonzero digits, this means than X must be 9 and Y must be 1. The greatest possible value of $\frac{0.1X}{0.02Y}$ is then $\frac{0.19}{0.021} \approx 9.05$, which is closest to 9.

The correct answer is D.

PS13724

140. Clarissa will create her summer reading list by randomly choosing 4 books from the 10 books approved for summer reading. She will list the books in the order in which they are chosen. How many different lists are possible?

(A) 6
(B) 40
(C) 210
(D) 5,040
(E) 151,200

Arithmetic Elementary combinatorics

Any of the 10 books can be listed first. Any of the 9 books remaining after the first book is listed can be listed second. Any of the 8 books remaining after the first and second books are listed can be listed third. Any of the 7 books remaining after the first, second, and third books are listed can be listed fourth. By the multiplication principle, there are (10)(9)(8)(7) = 5,040 different lists possible.

The correct answer is D.

PS10982

141. If n is a positive integer and the product of all the integers from 1 to n, inclusive, is divisible by 990, what is the least possible value of n?

(A) 8
(B) 9
(C) 10
(D) 11
(E) 12

Arithmetic Properties of numbers

For convenience, let N represent the product of all integers from 1 through n. Then, since N is divisible by 990, every prime factor of 990 must also be a factor of N. The prime factorization of 990 is $2 \times 3^2 \times 5 \times 11$, and therefore, 11 must be a factor of N. Then, the least possible value of N with factors of 2, 5, 3^2, and 11 is $1 \times 2 \times 3 \times \cdots \times 11$, and the least possible value of n is 11.

The correct answer is D.

PS02111

142. The probability that event M will not occur is 0.8 and the probability that event R will not occur is 0.6. If events M and R cannot both occur, which of the following is the probability that either event M or event R will occur?

(A) $\frac{1}{5}$
(B) $\frac{2}{5}$
(C) $\frac{3}{5}$
(D) $\frac{4}{5}$
(E) $\frac{12}{25}$

Arithmetic Probability

Let $P(M)$ be the probability that event M will occur, let $P(R)$ be the probability that event R will occur, and let $P(M \text{ and } R)$ be the probability that events M and R both occur. Then the probability that either event M or event R will occur is $P(M) + P(R) - P(M \text{ and } R)$. From the given information, it follows that $P(M) = 1.0 - 0.8 = 0.2$, $P(R) = 1.0 - 0.6 = 0.4$, and $P(M \text{ and } R) = 0$. Therefore, the probability that either event M or event R will occur is $0.2 + 0.4 - 0 = 0.6 = \frac{3}{5}$.

The correct answer is C.

PS16410

143. The total cost for Company X to produce a batch of tools is $10,000 plus $3 per tool. Each tool sells for $8. The gross profit earned from producing and selling these tools is the total income from sales minus the total production cost. If a batch of 20,000 tools is produced and sold, then Company X's gross profit per tool is

(A) $3.00
(B) $3.75
(C) $4.50
(D) $5.00
(E) $5.50

Arithmetic Applied problems

The total cost to produce 20,000 tools is $\$10{,}000 + \$3(20{,}000) = \$70{,}000$. The revenue resulting from the sale of 20,000 tools is $\$8(20{,}000) = \$160{,}000$. The gross profit is $\$160{,}000 - \$70{,}000 = \$90{,}000$, and the gross profit per tool is $\frac{\$90{,}000}{20{,}000} = \$4.50$.

The correct answer is C.

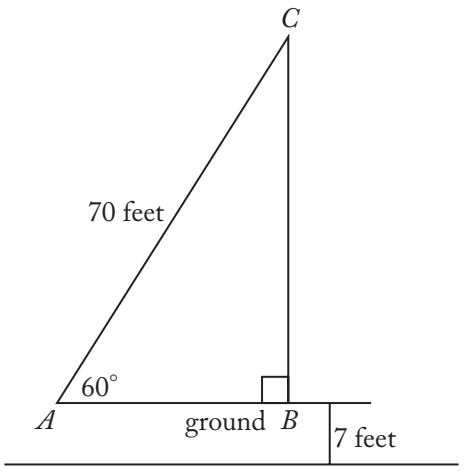
PS07357

144. If Q is an odd number and the median of Q consecutive integers is 120, what is the largest of these integers?

(A) $\frac{Q-1}{2} + 120$
(B) $\frac{Q}{2} + 119$
(C) $\frac{Q}{2} + 120$
(D) $\frac{Q+119}{2}$
(E) $\frac{Q+120}{2}$

Arithmetic Statistics

For an odd number of data values, the median is the middle number. Thus, 120 is the middle number, and so half of the $Q - 1$ remaining values are at most 120 and the other half of the $Q - 1$ remaining values are at least 120. In particular, $\frac{Q-1}{2}$ data values lie to the right of 120 when the data values are listed in increasing order from left to right, and so the largest data value is $120 + \frac{Q-1}{2}$. Alternatively, it is evident that (B), (C), or (E) cannot be correct since these expressions do not have an integer value when Q is odd. For the list consisting of the single number 120 (i.e., if $Q = 1$), (D) fails because $\frac{Q+119}{2} = \frac{1+119}{2} = 60 \neq 120$ and (A) does not fail because $\frac{Q-1}{2} + 120 = \frac{1-1}{2} + 120 = 120$.

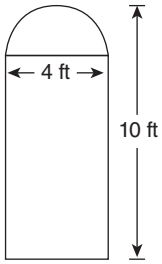


The correct answer is A.

PS02649

145. A ladder of a fire truck is elevated to an angle of 60° and extended to a length of 70 feet. If the base of the ladder is 7 feet above the ground, how many feet above the ground does the ladder reach?

(A) 35
(B) 42
(C) $35\sqrt{3}$
(D) $7 + 35\sqrt{3}$
(E) $7 + 42\sqrt{3}$



Geometry Triangles

Given the figure above, determine BC. Then add 7 to determine how far above the ground the ladder reaches.

Triangle ΔABC is a 30°–60°–90° triangle with hypotenuse $\overline{AC}$ of length 70 feet. Since the lengths of the sides of a 30°–60°–90° triangle are in the ratio $1{:}2{:}\sqrt{3}$, $\frac{AB}{AC} = \frac{1}{2}$ and so $AB = \frac{1}{2}AC = 35$, and $\frac{AB}{BC} = \frac{1}{\sqrt{3}}$ and so $BC = AB\sqrt{3} = 35\sqrt{3}$. Therefore, the ladder reaches $7 + 35\sqrt{3}$ feet above the ground.

The correct answer is D.

PS13827

146. The window in the figure above consists of a rectangle and a semicircle with dimensions as shown. What is the area, in square feet, of the window?

(A) $40 + 8\pi$
(B) $40 + 2\pi$
(C) $32 + 8\pi$
(D) $32 + 4\pi$
(E) $32 + 2\pi$

Geometry Area

The semicircle has a radius of 2 ft, and thus its area is $\frac{1}{2}\pi(2^2) = 2\pi$ ft^2. The rectangle has dimensions 4 ft by 8 ft, where $8 = 10 - 2$ is the full height of the window minus the radius of the semicircle, and thus has area $(4)(8) = 32$ ft^2. Therefore, in square feet, the area of the window is $32 + 2\pi$.

The correct answer is E.

PS00562

147. If there are fewer than 8 zeros between the decimal point and the first nonzero digit in the decimal expansion of $\left(\frac{t}{1{,}000}\right)^4$, which of the following numbers could be the value of t?

I. 3
II. 5
III. 9

(A) None
(B) I only
(C) II only
(D) III only
(E) II and III

Arithmetic Properties of numbers; Decimals

The decimal expansion of $\left(\frac{1}{1{,}000}\right)^4 = 10^{-12}$ has 11 zeros to the right of the decimal point followed by a single digit that is 1. Therefore, in the decimal expansion of $\left(\frac{t}{1{,}000}\right)^4 = t^4 \times 10^{-12}$, the number of zeros between the decimal point and the first nonzero digit is equal to 12 minus the number of digits in the integer t^4. Since this number of zeros is fewer than 8, it follows that the number of digits in the integer t^4 is greater than 4. The integer t cannot be 3, because the number of digits in $3^4 = 81$ is not greater than 4. The integer t cannot be 5, because the number of digits in $5^4 = 625$ is not greater than 4. The integer t cannot be 9, because the number of digits in $9^4 = 6{,}561$ is not greater than 4. Therefore, none of 3, 5, or 9 could be the value of t.

The correct answer is A.

PS08280

148. A three-digit code for certain locks uses the digits 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 according to the following constraints. The first digit cannot be 0 or 1, the second digit must be 0 or 1, and the second and third digits cannot both be 0 in the same code. How many different codes are possible?

(A) 144
(B) 152
(C) 160
(D) 168
(E) 176

Arithmetic Elementary combinatorics

Since the first digit cannot be 0 or 1, there are 8 digits possible for the first digit. Since the second digit must be 0 or 1, there are 2 digits possible for the second digit. If there were no other restrictions, all 10 digits would be possible for the third digit, making the total number of possible codes $8 \times 2 \times 10 = 160$. But, the additional restriction that the second and third digits cannot both be 0 in the same code eliminates the 8 codes 2-0-0, 3-0-0, 4-0-0, 5-0-0, 6-0-0, 7-0-0, 8-0-0, and 9-0-0. Therefore, there are $160 - 8 = 152$ possible codes.

The correct answer is B.

PS02903

149. Jackie has two solutions that are 2 percent sulfuric acid and 12 percent sulfuric acid by volume, respectively. If these solutions are mixed in appropriate quantities to produce 60 liters of a solution that is 5 percent sulfuric acid, approximately how many liters of the 2 percent solution will be required?

(A) 18
(B) 20
(C) 24
(D) 36
(E) 42

Algebra Simultaneous equations

Let x represent the quantity of the 2% sulfuric acid solution in the mixture, from which it follows that the 2% sulfuric acid solution contributes $0.02x$ liters of sulfuric acid to the mixture. Let y represent the quantity of the 12% sulfuric acid solution in the mixture, from which it follows that the 12% sulfuric acid solution contributes $0.12y$ liters of sulfuric acid to the mixture. Since there are 60 liters of the mixture, $x + y = 60$. The quantity of sulfuric acid in the mixture, which is 5% sulfuric acid, is then $(0.05)(60) = 3$ liters. Therefore, $0.02x + 0.12y = 3$. Substituting $60 - x$ for y gives $0.02x + 0.12(60 - x) = 3$. Then,

$$\begin{aligned} 0.02x + 0.12(60 - x) &= 3 && \text{given} \\ 0.02x + 7.2 - 0.12x &= 3 && \text{use distributive property} \\ 7.2 - 0.1x &= 3 && \text{combine like terms} \\ -0.1x &= -4.2 && \text{subtract 7.2 from both sides} \\ x &= 42 && \text{divide both sides by } -0.1 \end{aligned}$$

The correct answer is E.

PS16259

150. If Jake loses 8 pounds, he will weigh twice as much as his sister. Together they now weigh 278 pounds. What is Jake's present weight, in pounds?

(A) 131
(B) 135
(C) 139
(D) 147
(E) 188

Algebra Systems of equations

Let J represent Jake's weight and S represent his sister's weight. Then $J - 8 = 2S$ and $J + S = 278$. Solve the second equation for S and get $S = 278 - J$. Substituting the expression for S into the first equation gives

$$\begin{aligned} J - 8 &= 2(278 - J) \\ J - 8 &= 556 - 2J \\ J + 2J &= 556 + 8 \\ 3J &= 564 \\ J &= 188 \end{aligned}$$

The correct answer is E.

PS03768

151. For each student in a certain class, a teacher adjusted the student's test score using the formula $y = 0.8x + 20$, where x is the student's original test score and y is the student's adjusted test score. If the standard deviation of the original test scores of the students in the class was 20, what was the standard deviation of the adjusted test scores of the students in the class?

(A) 12
(B) 16
(C) 28
(D) 36
(E) 40

Arithmetic Statistics

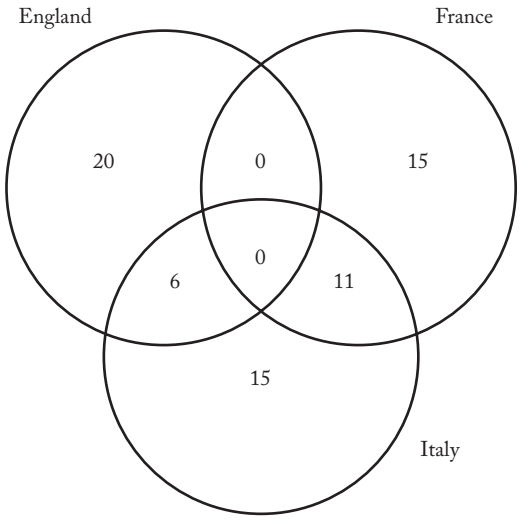
Let n be the number of students in the class, let $\mu = \frac{\sum x}{n}$ be the mean of the students' unadjusted scores. It follows that the standard deviation of the unadjusted scores is $20 = \sqrt{\frac{\sum (x - \mu)^2}{n}}$.

To find the standard deviation of the adjusted scores, first find their mean: $\frac{\sum (0.8x + 20)}{n} = \frac{0.8\sum x}{n} + \frac{20n}{n} = 0.8\mu + 20$. Then, subtract the adjusted mean from each adjusted score: $(0.8x + 20) - (0.8\mu + 20) = 0.8(x - \mu)$. Next, square each difference: $(0.8(x - \mu))^2 = 0.64(x - \mu)^2$. Next, find the average of the squared differences: $\frac{\sum 0.64(x - \mu)^2}{n} = \frac{0.64\sum (x - \mu)^2}{n}$.

Finally, take the nonnegative square root:

$$\sqrt{\frac{0.64\sum(x-\mu)^2}{n}} = 0.8\sqrt{\frac{\sum(x-\mu)^2}{n}} = 0.8(20) = 16.$$

The correct answer is B.



PS01987

152. Last year 26 members of a certain club traveled to England, 26 members traveled to France, and 32 members traveled to Italy. Last year no members of the club traveled to both England and France, 6 members traveled to both England and Italy, and 11 members traveled to both France and Italy. How many members of the club traveled to at least one of these three countries last year?

(A) 52
(B) 67
(C) 71
(D) 73
(E) 79

Arithmetic Applied problems

The numbers in the following diagram represent the numbers of members of the club who traveled to the indicated countries, and these numbers can be determined as follows. Since no members traveled to both England and France, both regions that form the overlap of England and France are labeled with 0. It follows that none of the 6 members who traveled to both England and Italy traveled to France, and so the region corresponding to England and Italy only is labeled with 6. It also follows that none of the 11 members who traveled to both France and Italy traveled to England, and so the region corresponding to France and Italy only is labeled with 11. At this point it can be determined that $26 - 6 = 20$ members traveled to England only, $26 - 11 = 15$ members traveled to France only, and $32 - (6 + 11) = 15$ members traveled to Italy only.

From the diagram it follows that $20 + 15 + 6 + 11 + 15 = 67$ members traveled to at least one of these three countries.

The correct answer is B.

PS16088

153. A store reported total sales of $385 million for February of this year. If the total sales for the same month last year was $320 million, approximately what was the percent increase in sales?

(A) 2%
(B) 17%
(C) 20%
(D) 65%
(E) 83%

Arithmetic Percents

The percent increase in sales from last year to this year is 100 times the quotient of the difference in sales for the two years divided by the sales last year. Thus, the percent increase is

$$\begin{aligned}\frac{385-320}{320}\times 100 &= \frac{65}{320}\times 100\\ &= \frac{13}{64}\times 100\\ &\approx \frac{13}{65}\times 100\\ &= \frac{1}{5}\times 100\\ &= 20\%\end{aligned}$$

The correct answer is C.

PS11065

154. When positive integer x is divided by positive integer y, the remainder is 9. If $\frac{x}{y} = 96.12$, what is the value of y?

(A) 96
(B) 75
(C) 48
(D) 25
(E) 12

Arithmetic Properties of numbers

The remainder is 9 when x is divided by y, so $x = yq + 9$ for some positive integer q.

Dividing both sides by y gives $\frac{x}{y} = q + \frac{9}{y}$.

But, $\frac{x}{y} = 96.12 = 96 + 0.12$. Equating the two expressions for $\frac{x}{y}$ gives $q + \frac{9}{y} = 96 + 0.12$.

Thus, $q = 96$ and $\frac{9}{y} = 0.12$.

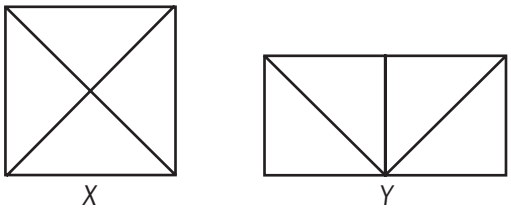
$9 = 0.12y$

$y = \frac{9}{0.12}$

$y = 75$

The correct answer is B.

PS16802



155. If $x(2x + 1) = 0$ and $\left(x + \frac{1}{2}\right)(2x - 3) = 0$, then $x =$

(A) -3
(B) $-\frac{1}{2}$
(C) 0
(D) $\frac{1}{2}$
(E) $\frac{3}{2}$

Algebra Second-degree equations; Simultaneous equations

Setting each factor equal to 0, it can be seen that the solution set to the first equation is $\left\{0, -\frac{1}{2}\right\}$ and the solution set to the second equation is $\left\{-\frac{1}{2}, \frac{3}{2}\right\}$. Therefore, $-\frac{1}{2}$ is the solution to both equations.

The correct answer is B.

PS08219

156. Figures X and Y above show how eight identical triangular pieces of cardboard were used to form a square and a rectangle, respectively. What is the ratio of the perimeter of X to the perimeter of Y?

(A) 2:3
(B) $\sqrt{2}$:2
(C) $2\sqrt{2}$:3
(D) 1:1
(E) $\sqrt{2}$:1

Geometry Perimeter

Because Figure X is a square and the diagonals of a square are the same length, are perpendicular, and bisect each other, it follows that each triangular piece is a 45°–45°–90° triangle. Thus, the length of each side of the square is $a\sqrt{2}$, and the perimeter is $4a\sqrt{2}$. The perimeter of the rectangle is $2(a + 2a) = 6a$. It follows that the ratio of the perimeter of the square to the perimeter of the rectangle is $\frac{4a\sqrt{2}}{6a} = \frac{2\sqrt{2}}{3}$, or $2\sqrt{2} : 3$.

The correct answer is C.

PS04711

157. A certain experimental mathematics program was tried out in 2 classes in each of 32 elementary schools and involved 37 teachers. Each of the classes had 1 teacher and each of the teachers taught at least 1, but not more than 3, of the classes. If the number of teachers who taught 3 classes is n, then the least and greatest possible values of n, respectively, are

(A) 0 and 13
(B) 0 and 14
(C) 1 and 10
(D) 1 and 9
(E) 2 and 8

Algebra Simultaneous equations; Inequalities

It is given that $2(32) = 64$ classes are taught by 37 teachers. Let k, m, and n be the number of teachers who taught, respectively, 1, 2, and 3 of the classes. Then $k + m + n = 37$ and $k + 2m + 3n = 64$. Subtracting these two equations gives $m + 2n = 64 - 37 = 27$, or $2n = 27 - m$, and therefore $2n \leq 27$. Because n is an integer, it follows that $n \leq 13$ and B cannot be the answer. Since $n = 0$ is possible, which can be seen by using $m = 27$ and $k = 10$ (obtained by solving $2n = 27 - m$ with $n = 0$, then by solving $k + m + n = 37$ with $n = 0$ and $m = 27$), the answer must be A.

It is not necessary to ensure that $n = 13$ is possible to answer the question. However, it is not difficult to see that $k = 23$, $m = 1$, and $n = 13$ satisfy the given conditions.

The correct answer is A.

PS16214

158. For the positive numbers, n, $n + 1$, $n + 2$, $n + 4$, and $n + 8$, the mean is how much greater than the median?

(A) 0
(B) 1
(C) $n + 1$
(D) $n + 2$
(E) $n + 3$

Algebra Statistics

Since the five positive numbers n, $n + 1$, $n + 2$, $n + 4$, and $n + 8$ are in ascending order, the median is the third number, which is $n + 2$. The mean of the five numbers is

$$\frac{n+(n+1)+(n+2)+(n+4)+(n+8)}{5}$$
$$= \frac{5n+15}{5}$$
$$= n+3$$

Since $(n + 3) - (n + 2) = 1$, the mean is 1 greater than the median.

The correct answer is B.

PS08313

159. The interior of a rectangular carton is designed by a certain manufacturer to have a volume of x cubic feet and a ratio of length to width to height of 3:2:2. In terms of x, which of the following equals the height of the carton, in feet?

(A) $\sqrt[3]{x}$
(B) $\sqrt[3]{\frac{2x}{3}}$
(C) $\sqrt[3]{\frac{3x}{2}}$
(D) $\frac{2}{3}\sqrt[3]{x}$
(E) $\frac{3}{2}\sqrt[3]{x}$

Geometry; Arithmetic Volume; Ratio and proportion

Letting c represent the constant of proportionality, the length, width, and height, in feet, of the carton can be expressed as $3c$, $2c$, and $2c$, respectively. The volume of the carton is then $(3c)(2c)(2c) = 12c^3$ cubic feet. But, the volume is x cubic feet, and so $12c^3 = x$. Then, $c^3 = \frac{x}{12}$ and $c = \sqrt[3]{\frac{x}{12}}$. The height of the carton is $2c$ and in terms of x, $2c = 2\sqrt[3]{\frac{x}{12}}$. Since $2 = \sqrt[3]{8}$ and $\left(\sqrt[3]{a}\right)\left(\sqrt[3]{b}\right) = \sqrt[3]{ab}$, the height of the carton can be expressed as $2\sqrt[3]{\frac{x}{12}} = \sqrt[3]{8\left(\frac{x}{12}\right)} = \sqrt[3]{\frac{2x}{3}}$.

The correct answer is B.

PS16810

160. The present ratio of students to teachers at a certain school is 30 to 1. If the student enrollment were to increase by 50 students and the number of teachers were to increase by 5, the ratio of students to teachers would then be 25 to 1. What is the present number of teachers?

(A) 5
(B) 8
(C) 10
(D) 12
(E) 15

Algebra Applied problems

Let s be the present number of students, and let t be the present number of teachers. According to the problem, the following two equations apply:

$$\frac{30}{1} = \frac{s}{t} \quad \text{Current student to teacher ratio}$$

$$\frac{s+50}{t+5} = \frac{25}{1} \quad \text{Future student to teacher ratio}$$

Solving the first equation for s gives $s = 30t$. Substitute this value of s into the second equation, and solve for t.

$$\frac{30t+50}{t+5} = \frac{25}{1}$$

$$30t + 50 = 25t + 125 \quad \text{multiply both sides by } t+5$$

$$5t = 75 \quad \text{simplify by subtraction}$$

$$t = 15$$

The correct answer is E.

PS16811

161. What is the smallest integer n for which $25^n > 5^{12}$?

(A) 6
(B) 7
(C) 8
(D) 9
(E) 10

Arithmetic Operations with rational numbers

Because $5^2 = 25$, a common base is 5. Rewrite the left side with 5 as a base: $25^n = (5^2)^n = 5^{2n}$. It follows that the desired integer is the least integer n for which $5^{2n} > 5^{12}$. This will be the least integer n for which $2n > 12$, or the least integer n for which $n > 6$, which is 7.

The correct answer is B.

PS16122

162. Sixty percent of the members of a study group are women, and 45 percent of those women are lawyers. If one member of the study group is to be selected at random, what is the probability that the member selected is a woman lawyer?

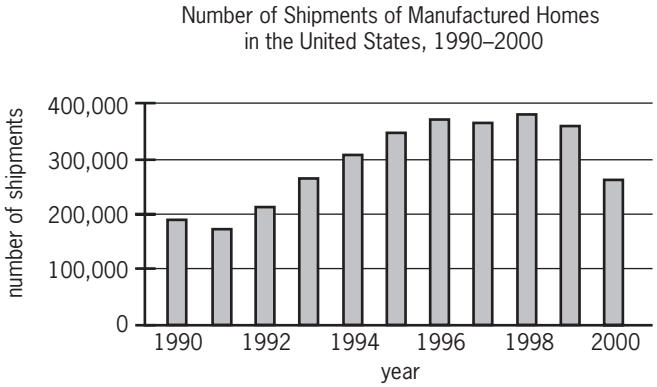
(A) 0.10
(B) 0.15
(C) 0.27
(D) 0.33
(E) 0.45

Arithmetic Probability

For simplicity, suppose there are 100 members in the study group. Since 60 percent of the members are women, there are 60 women in the group. Also, 45 percent of the women are lawyers so there are $0.45(60) = 27$ women lawyers in the study group. Therefore the probability of selecting a woman lawyer is $\frac{27}{100} = 0.27$.

The correct answer is C.

PS06570



163. Each year for 4 years, a farmer increased the number of trees in a certain orchard by $\frac{1}{4}$ of the number of trees in the orchard the preceding year. If all of the trees thrived and there were 6,250 trees in the orchard at the end of the 4-year period, how many trees were in the orchard at the beginning of the 4-year period?

(A) 1,250
(B) 1,563
(C) 2,250
(D) 2,560
(E) 2,752

Arithmetic Operations on rational numbers

Increasing the number of trees each year by $\frac{1}{4}$ of the number of trees in the orchard the preceding year is equivalent to making the number of trees increase 25% per year, compounded yearly. If there were n trees at the beginning of the 4-year period, then there will be $1.25n$ trees at the end of the first year, $1.25(1.25n) = (1.25)^2 n$ trees at the end of the second year, $1.25[(1.25)^2 n] = (1.25)^3 n$ trees at the end of the third year, and $1.25[(1.25)^3 n] = (1.25)^4 n$ trees at the end of the fourth year. Hence, $6{,}250 = (1.25)^4 n$ and $n = \frac{6{,}250}{(1.25)^4}$. The arithmetic can be greatly simplified by rewriting $(1.25)^4$ as $\left(\frac{5}{4}\right)^4 = \frac{5^4}{4^4}$ and 6,250 as $(625)(10) = (5^4)(10)$. Then $\frac{6{,}250}{(1.25)^4} = (5^4)(10)\left(\frac{4^4}{5^4}\right) = (10)(4^4) = 2{,}560$.

The correct answer is D.

PS00422

164. According to the chart shown, which of the following is closest to the median annual number of shipments of manufactured homes in the United States for the years from 1990 to 2000, inclusive?

(A) 250,000
(B) 280,000
(C) 310,000
(D) 325,000
(E) 340,000

Arithmetic Interpretation of graphs and tables; Statistics

From the chart, the approximate numbers of shipments are as follows:

Year	Number of shipments
1990	190,000
1991	180,000
1992	210,000
1993	270,000
1994	310,000
1995	350,000
1996	380,000
1997	370,000
1998	390,000
1999	360,000
2000	270,000

Since there are 11 entries in the table and 11 is an odd number, the median of the numbers of shipments is the 6th entry when the numbers of shipments are arranged in order from least to greatest. In order, from least to greatest, the first 6 entries are:

Number of shipments
180,000
190,000
210,000
270,000
270,000
310,000

The 6th entry is 310,000.

The correct answer is C.

PS08209

165. For the positive integers a, b, and k, $a^k \| b$ means that a^k is a divisor of b, but a^{k+1} is not a divisor of b. If k is a positive integer and $2^k \| 72$, then k is equal to

(A) 2
(B) 3
(C) 4
(D) 8
(E) 18

Arithmetic Property of numbers

Since $72 = (2^3)(3^2)$, it follows that 2^3 is a divisor of 72 and 2^4 is not a divisor of 72. Therefore, $2^3 \| 72$, and hence $k = 3$.

The correct answer is B.

PS06674

166. A certain characteristic in a large population has a distribution that is symmetric about the mean m. If 68 percent of the distribution lies within one standard deviation d of the mean, what percent of the distribution is less than $m + d$?

(A) 16%
(B) 32%
(C) 48%
(D) 84%
(E) 92%

Arithmetic Statistics

Since 68% lies between $m - d$ and $m + d$, a total of $(100 - 68)\% = 32\%$ lies to the left of $m - d$ and to the right of $m + d$. Because the distribution is symmetric about m, half of the 32% lies to the right of $m + d$. Therefore, 16% lies to the right of $m + d$, and hence $(100 - 16)\% = 84\%$ lies to the left of $m + d$.

The correct answer is D.

PS07459

167. Four extra-large sandwiches of exactly the same size were ordered for m students, where $m > 4$. Three of the sandwiches were evenly divided among the students. Since 4 students did not want any of the fourth sandwich, it was evenly divided among the remaining students. If Carol ate one piece from each of the four sandwiches, the amount of sandwich that she ate would be what fraction of a whole extra-large sandwich?

(A) $\frac{m+4}{m(m-4)}$

(B) $\frac{2m-4}{m(m-4)}$

(C) $\frac{4m-4}{m(m-4)}$

(D) $\frac{4m-8}{m(m-4)}$

(E) $\frac{4m-12}{m(m-4)}$

Algebra Applied problems

Since each of 3 of the sandwiches was evenly divided among m students, each piece was $\frac{1}{m}$ of a sandwich. Since the fourth sandwich was evenly divided among $m - 4$ students, each piece was $\frac{1}{m-4}$ of the fourth sandwich. Carol ate 1 piece from each of the four sandwiches, so she ate a total of

$$(3)\frac{1}{m} + \frac{1}{m-4} = \frac{3(m-4)+m}{m(m-4)} = \frac{4m-12}{m(m-4)}$$

The correct answer is E.

PS05888

168. Which of the following equations has $1 + \sqrt{2}$ as one of its roots?

(A) $x^2 + 2x - 1 = 0$

(B) $x^2 - 2x + 1 = 0$

(C) $x^2 + 2x + 1 = 0$

(D) $x^2 - 2x - 1 = 0$

(E) $x^2 - x - 1 = 0$

Algebra Second-degree equations

This problem can be solved by working backwards to construct a quadratic equation with $1 + \sqrt{2}$ as a root that does not involve radicals.

$x = 1 + \sqrt{2}$	set x to the desired value
$x - 1 = \sqrt{2}$	subtract 1 from both sides
$(x-1)^2 = 2$	square both sides
$x^2 - 2x + 1 = 2$	expand the left side
$x^2 - 2x - 1 = 0$	subtract 2 from both sides

The correct answer is D.

PS07730

169. In Country C, the unemployment rate among construction workers dropped from 16 percent on September 1, 1992, to 9 percent on September 1, 1996. If the number of construction workers was 20 percent greater on September 1, 1996, than on September 1, 1992, what was the approximate percent change in the number of unemployed construction workers over this period?

(A) 50% decrease

(B) 30% decrease

(C) 15% decrease

(D) 30% increase

(E) 55% increase

Arithmetic Percents

Let U_1 and U_2 be the numbers of unemployed construction workers on September 1, 1992, and September 1, 1996, respectively, and let N be the number of construction workers on September 1, 1992. Then, from the given information, $1.2N$ is the number of construction workers on September 1, 1996, $U_1 = 0.16N$, and $U_2 = 0.09(1.2N)$. Therefore, the percent change from September 1, 1992, to September 1, 1996, of unemployed construction workers is given by

$$\left(\frac{U_2 - U_1}{U_1} \times 100\right)\%$$
$$= \left(\frac{0.09(1.2N) - 0.16N}{0.16N} \times 100\right)\%$$
$$= \left(\frac{0.108 - 0.16}{0.16} \times 100\right)\%$$
$$= \left(\frac{108 - 160}{160} \times 100\right)\%$$
$$= \left(-\frac{13}{40} \times 100\right)\%$$
$$\approx \left(-\frac{13}{39} \times 100\right)\%$$
$$\approx \left(-\frac{1}{3} \times 100\right)\%$$
$$\approx -30\%$$

The correct answer is B.

PS06215

170. In a box of 12 pens, a total of 3 are defective. If a customer buys 2 pens selected at random from the box, what is the probability that neither pen will be defective?

(A) $\frac{1}{6}$

(B) $\frac{2}{9}$

(C) $\frac{6}{11}$

(D) $\frac{9}{16}$

(E) $\frac{3}{4}$

Arithmetic Probability

Let A represent the event that the first pen purchased is not defective and let B represent the event that the second pen purchased is not defective, where A and B are dependent events. Since there are 3 defective pens in the box of 12 pens, there are 9 pens in the box that are not defective. Using standard probability notation, $P(A) = \frac{9}{12}$ and $P(B$, given that A has occurred$) = \frac{8}{11}$. (Event A has occurred so there are 11 pens left in the box and 8 of them are not defective.) Then, using the multiplication rule for dependent events, P(neither pen is defective) $= P(A$ and $B) = P(A) \times P(B$, given that A has occurred$) = \frac{9}{12} \times \frac{8}{11} = \frac{6}{11}$.

Alternately, the probability of selecting 2 pens, neither of which is defective, from a box containing 12 pens, 3 of which are defective, and therefore, 9 of which are non-defective is the number of ways to select 2 non-defective pens from 9 non-defective pens over the number of ways to select 2 pens from 12 pens

$$= \frac{\binom{9}{2}}{\binom{12}{2}} = \frac{\frac{9 \times 8}{2}}{\frac{12 \times 11}{2}} = \frac{6}{11}.$$

The correct answer is C.

PS13244

171. At a certain fruit stand, the price of each apple is 40 cents and the price of each orange is 60 cents. Mary selects a total of 10 apples and oranges from the fruit stand, and the average (arithmetic mean) price of the 10 pieces of fruit is 56 cents. How many oranges must Mary put back so that the average price of the pieces of fruit that she keeps is 52 cents?

(A) 1

(B) 2

(C) 3

(D) 4

(E) 5

Algebra Statistics

If Mary selected x apples, then she selected $(10 - x)$ oranges. The average price of the 10 pieces of fruit is $\frac{40x + 60(10 - x)}{10} = 56$. From this,

$$\begin{aligned}
\frac{40x + 60(10 - x)}{10} &= 56 && \text{given}\\
40x + 60(10 - x) &= 560 && \text{multiply both sides by 10}\\
40x + 600 - 60x &= 560 && \text{distribution property}\\
600 - 20x &= 560 && \text{combine like terms}\\
-20x &= -40 && \text{subtract 600 from both sides}\\
x &= 2 && \text{divide both sides by } -20
\end{aligned}$$

Thus, Mary selected 2 apples and 8 oranges. Next, let y be the number of oranges Mary needs to put back, so that the average price of the $[2 + (8 - y)]$ pieces of fruit Mary keeps is 52 cents. Then,

$$\begin{aligned}
\frac{(40)(2) + (60)(8 - y)}{2 + (8 - y)} &= 52 && \text{given}\\
\frac{80 + 480 - 60y}{10 - y} &= 52 && \text{distributive property}\\
80 + 480 - 60y &= 52(10 - y) && \text{multiply both sides by } 10 - y\\
560 - 60y &= 520 - 52y && \text{distributive property}\\
8y &= 40 && \text{subtract } 520 - 60y \text{ from both sides}\\
y &= 5 && \text{divide both sides by 8}
\end{aligned}$$

Therefore, Mary must put back 5 oranges, so that the average price of the fruit she keeps (that is, the average price of 2 apples and 3 oranges) is 52 cents.

The correct answer is E.

PS04688

172. A pharmaceutical company received $3 million in royalties on the first $20 million in sales of the generic equivalent of one of its products and then $9 million in royalties on the next $108 million in sales. By approximately what percent did the ratio of royalties to sales decrease from the first $20 million in sales to the next $108 million in sales?

(A) 8%
(B) 15%
(C) 45%
(D) 52%
(E) 56%

Arithmetic Percents

The ratio of royalties to sales for the first $20 million in sales is $\frac{3}{20}$, and the ratio of royalties to sales for the next $108 million in sales is $\frac{9}{108} = \frac{1}{12}$. The percent decrease in the royalties to sales ratios is 100 times the quotient of the difference in the ratios divided by the ratio of royalties to sales for the first $20 million in sales or

$$\begin{aligned}
\frac{\frac{1}{12} - \frac{3}{20}}{\frac{3}{20}} \times 100 &= \left(\frac{1}{12} - \frac{3}{20}\right) \times \frac{20}{3} \times 100\\
&= \left(\frac{1}{12} \times \frac{20}{3} - 1\right) \times 100\\
&= \left(\frac{5}{9} - 1\right) \times 100\\
&= -\frac{4}{9} \times 100\\
&\approx -0.44 \times 100\\
&\approx 45\% \text{ decrease}
\end{aligned}$$

The correct answer is C.

Times at Which the Door Opened from 8:00 to 10:00

8:00	8:06	8:30	9:05
8:03	8:10	8:31	9:11
8:04	8:18	8:54	9:29
8:04	8:19	8:57	9:31

PS06497

173. The light in a restroom operates with a 15-minute timer that is reset every time the door opens as a person goes in or out of the room. Thus, after someone enters or exits the room, the light remains on for only 15 minutes unless the door opens again and resets the timer for another 15 minutes. If the times listed above are the times at which the door opened from 8:00 to 10:00, approximately how many minutes during this two-hour period was the light off?

(A) 10
(B) 25
(C) 35
(D) 40
(E) 70

Arithmetic Operations with integers

Look for two consecutive times that are more than 15 minutes apart

8:03 – 8:00 = 3 minutes

8:04 – 8:03 = 1 minute

8:04 – 8:04 = 0 minutes

8:06 – 8:04 = 2 minutes

8:10 – 8:06 = 4 minutes

8:18 – 8:10 = 8 minutes

8:19 – 8:18 = 1 minute

8:30 – 8:19 = 11 minutes

8:31 – 8:30 = 1 minute

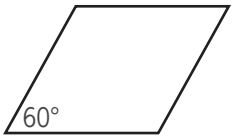
8:54 – 8:31 = 23 minutes, so the light is off for 23 – 15 = 8 minutes

8:57 – 8:54 = 3 minutes

9:05 – 8:57 = 8 minutes

9:11 – 9:05 = 6 minutes

9:29 – 9:11 = 18 minutes, so the light is off for 18 – 15 = 3 minutes



9:31 – 9:29 = 2 minutes

10:00 – 9:31 = 29 minutes, so the light is off for 29 – 15 = 14 minutes

Thus, the light is off for a total of 8 + 3 + 14 = 25 minutes during the two-hour period.

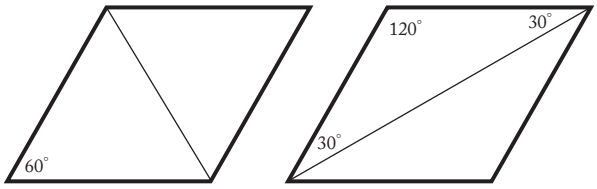
Alternatively, the light comes on at 8:00 when the door is opened and is scheduled to go off at 8:15. So, when the door is opened at 8:03, twice at 8:04, at 8:06, and 8:10, the light is still on, but by the door being opened at these times, the timer has been reset to turn the light off at 8:18, 8:19, 8:21, and 8:25, respectively. Therefore, the light is still on when the door is opened at 8:18, 8:19, 8:30, and 8:31, but the timer has been reset to turn the light off at 8:33, 8:34, 8:45, and 8:46, respectively. The light is therefore off from 8:46 until the door is opened again at 8:54, which is an interval of 8 minutes. The light is still on when the door is opened at 8:57, 9:05, and 9:11, but the timer has been reset to turn the light off at 9:12, 9:20, and 9:26, respectively. The light is off from 9:26 until the door is opened again at 9:29, which is an interval of 3 minutes. The light is still on when the door is opened again at 9:31, and the timer has been reset to turn the light off at 9:46. Since, according to the chart, the door is not opened again before 10:00, the light remains off from 9:46 until 10:00, which is an interval of 14 minutes. Thus, the light is off a total of 8 + 3 + 14 = 25 minutes during the two-hour period.

The correct answer is B.

PS07536

174. The parallelogram shown has four sides of equal length. What is the ratio of the length of the shorter diagonal to the length of the longer diagonal?

(A) $\frac{1}{2}$

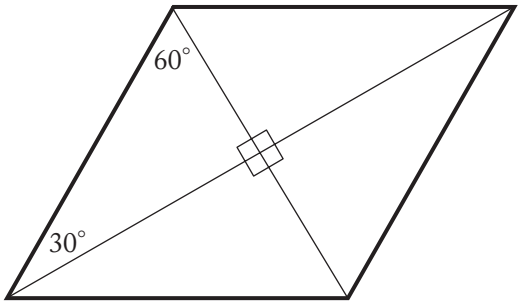


(B) $\frac{1}{\sqrt{2}}$

(C) $\frac{1}{2\sqrt{2}}$

(D) $\frac{1}{\sqrt{3}}$

(E) $\frac{1}{2\sqrt{3}}$



Geometry Quadrilaterals; Triangles

First, opposite angles of a parallelogram have equal measure, and the sum of the measures of adjacent angles is 180°. This means that each of the angles adjacent to the angle labeled 60° has measure 120°.

Since all four sides of the parallelogram have equal length, say x units, the shorter diagonal divides the parallelogram into two isosceles triangles. An isosceles triangle with one angle measuring 60° is equilateral, and so the shorter diagonal has length x units.

The longer diagonal divides the parallelogram into two isosceles triangles with one angle measuring 120° and each of the other angles measuring $\frac{180-120}{2} = 30°$, as shown in the figure above on the right.

Then, because the diagonals of a parallelogram are perpendicular and bisect each other, the two diagonals divide the parallelogram into four 30°-60°-90° triangles, each with hypotenuse x units long. The sides of a 30°-60°-90° triangle are in the ratio of $1 : \sqrt{3} : 2$ and so, if y represents the length of the side opposite the 60° angle, then $\frac{x}{2} = \frac{y}{\sqrt{3}}$ and $y = \frac{x\sqrt{3}}{2}$. But, y is half the length of the longer diagonal, so the longer diagonal has length $x\sqrt{3}$ units. Therefore, the ratio of the length of the shorter diagonal to the length of the longer diagonal is $\frac{x}{x\sqrt{3}} = \frac{1}{\sqrt{3}}$.

The correct answer is D.

PS00041

175. If p is the product of the integers from 1 to 30, inclusive, what is the greatest integer k for which 3^k is a factor of p?

(A) 10

(B) 12

(C) 14

(D) 16

(E) 18

Arithmetic Properties of numbers

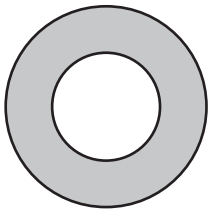
The table below shows the numbers from 1 to 30, inclusive, that have at least one factor of 3 and how many factors of 3 each has.

Multiples of 3 between 1 and 30	Number of factors of 3
3	1
$6 = 2 \times 3$	1
$9 = 3 \times 3$	2
$12 = 2 \times 2 \times 3$	1
$15 = 3 \times 5$	1
$18 = 2 \times 3 \times 3$	2
$21 = 3 \times 7$	1
$24 = 2 \times 2 \times 2 \times 3$	1
$27 = 3 \times 3 \times 3$	3
$30 = 2 \times 3 \times 5$	1

The sum of the numbers in the right column is 14. Therefore, 3^{14} is the greatest power of 3 that is a factor of the product of the first 30 positive integers.

The correct answer is C.

PS04651



176. If $n = 3^8 - 2^8$, which of the following is NOT a factor of n?

(A) 97
(B) 65
(C) 35
(D) 13
(E) 5

Arithmetic Properties of numbers

Since $3^8 - 2^8$ is the difference of the perfect squares $(3^4)^2$ and $(2^4)^2$, then $3^8 - 2^8 = (3^4 + 2^4)(3^4 - 2^4)$. But $3^4 - 2^4$ is also the difference of the perfect squares $(3^2)^2$ and $(2^2)^2$ so $3^4 - 2^4 = (3^2 + 2^2)(3^2 - 2^2)$ and therefore $3^8 - 2^8 = (3^4 + 2^4)(3^2 + 2^2)(3^2 - 2^2)$. It follows that $3^8 - 2^8$ can be factored as $(81 + 16)(9 + 4)(9 - 4) = (97)(13)(5)$. Therefore, 7 is not a factor of $3^8 - 2^8$, and hence $35 = 5 \times 7$ is not a factor of $3^8 - 2^8$. It is easy to see that each of 97, 13, and 5 is a factor of $3^8 - 2^8$, and so is 65, since $65 = 5 \times 13$, although this additional analysis is not needed to arrive at the correct answer.

The correct answer is C.

PS12078

177. In the figure shown, if the area of the shaded region is 3 times the area of the smaller circular region, then the circumference of the larger circle is how many times the circumference of the smaller circle?

(A) 4
(B) 3
(C) 2
(D) $\sqrt{3}$
(E) $\sqrt{2}$

Geometry Circles

Let R represent the radius of the larger circle and r represent the radius of the smaller circle. Then the area of the shaded region is the area of the larger circular region minus the area of the smaller circular region, or $\pi R^2 - \pi r^2$. It is given that the area of the shaded region is three times the area of the smaller circular region, and so $\pi R^2 - \pi r^2 = 3\pi r^2$. Then $R^2 - r^2 = 3r^2$, and so $R^2 = 4r^2$ and $R = 2r$. The circumference of the larger circle is $2\pi R = 2\pi(2r) = 2(2\pi r)$, which is 2 times the circumference of the smaller circle.

The correct answer is C.

PS12177

178. Club X has more than 10 but fewer than 40 members. Sometimes the members sit at tables with 3 members at one table and 4 members at each of the other tables, and sometimes they sit at tables with 3 members at one table and 5 members at each of the other tables. If they sit at tables with 6 members at each table except one and fewer than 6 members at that one table, how many members will be at the table that has fewer than 6 members?

(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

Arithmetic Properties of numbers

Let n be the number of members that Club X has. Since the members can be equally divided into groups of 4 each with 3 left over, and the members can be equally divided into groups of 5 each with 3 left over, it follows that $n - 3$ is divisible by both 4 and 5. Therefore, $n - 3$ must be a multiple of $(4)(5) = 20$. Also, because the only multiple of 20 that is greater than 10 and less than 40 is 20, it follows that $n - 3 = 20$, or $n = 23$. Finally, when these 23 members are divided into the greatest number of groups of 6 each, there will be 5 members left over, since $23 = (3)(6) + 5$.

The correct answer is E.

PS07081

179. In order to complete a reading assignment on time, Terry planned to read 90 pages per day. However, she read only 75 pages per day at first, leaving 690 pages to be read during the last 6 days before the assignment was to be completed. How many days in all did Terry have to complete the assignment on time?

(A) 15
(B) 16
(C) 25
(D) 40
(E) 46

Algebra Applied problems

Let n be the number of days that Terry read at the slower rate of 75 pages per day. Then $75n$ is the number of pages Terry read at this slower rate, and $75n + 690$ is the total number of pages Terry needs to read. Also, $n + 6$ is the total number of days that Terry will spend on the reading assignment. The requirement that Terry average 90 pages per day is equivalent to $\frac{75n+690}{n+6} = 90$. Then

$$\frac{75n+690}{n+6} = 90$$
$$75n + 690 = 90n + 540$$
$$150 = 15n$$
$$10 = n$$

Therefore, the total number of days that Terry has to complete the assignment on time is $n + 6 = 10 + 6 = 16$.

The correct answer is B.

PS13996

180. If $s > 0$ and $\sqrt{\frac{r}{s}} = s$, what is r in terms of s?

(A) $\frac{1}{s}$
(B) $\sqrt{s}$
(C) $s\sqrt{s}$
(D) s^3
(E) $s^3 - s$

Algebra Equations

Solve the equation for r as follows:

$$\sqrt{\frac{r}{s}} = s$$
$$\frac{r}{s} = s^2 \quad \text{square both sides of the equation}$$
$$r = s^3 \quad \text{multiply both sides by } s$$

The correct answer is D.

PS12536

181. If $3 < x < 100$, for how many values of x is $\frac{x}{3}$ the square of a prime number?

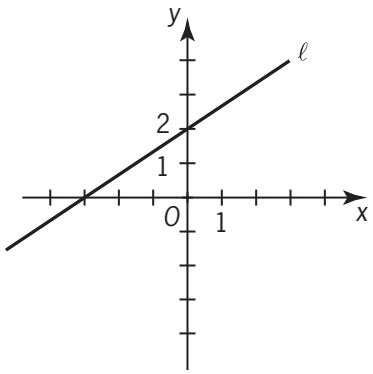
(A) Two
(B) Three
(C) Four
(D) Five
(E) Nine

Arithmetic Properties of numbers

If $\frac{x}{3}$ is the square of a prime number, then possible values of $\frac{x}{3}$ are $2^2, 3^2, 5^2, 7^2, \ldots$. Therefore, possible values of x are $3 \times 2^2 = 12$, $3 \times 3^2 = 27$, $3 \times 5^2 = 75$, $3 \times 7^2 = 147$, ... Since only three of these values, namely 12, 27, and 75, are between 3 and 100, there are three values of x such that $\frac{x}{3}$ is the square of a prime number.

The correct answer is B.

PS07547



182. A researcher plans to identify each participant in a certain medical experiment with a code consisting of either a single letter or a pair of distinct letters written in alphabetical order. What is the least number of letters that can be used if there are 12 participants, and each participant is to receive a different code?

(A) 4
(B) 5
(C) 6
(D) 7
(E) 8

Arithmetic Elementary combinatorics

None of the essential aspects of the problem is affected if the letters are restricted to be the first n letters of the alphabet, for various positive integers n. With the 3 letters a, b, and c, there are 6 codes: a, b, c, ab, ac, and bc. With the 4 letters a, b, c, and d, there are 10 codes: a, b, c, d, ab, ac, ad, bc, bd, and cd. Clearly, more than 12 codes are possible with 5 or more letters, so the least number of letters that can be used is 5.

The correct answer is B.

PS06948

183. The graph of which of the following equations is a straight line that is parallel to line ℓ in the figure above?

(A) $3y - 2x = 0$
(B) $3y + 2x = 0$
(C) $3y + 2x = 6$
(D) $2y - 3x = 6$
(E) $2y + 3x = -6$

Algebra Coordinate geometry

From the graph, line ℓ contains points $(-3,0)$ and $(0,2)$, so the slope of line ℓ is $\frac{0-2}{-3-0} = \frac{2}{3}$. Any line parallel to line ℓ has slope $\frac{2}{3}$. Rewrite each of the equations given in the answer choices in slope-intercept form $y = mx + b$, where m is the slope and b is the y-intercept, to find the equation whose graph is a line with slope $\frac{2}{3}$. For answer choice A, $3y - 2x = 0$ so $3y = 2x$ and $y = \frac{2}{3}x$. The graph of this equation is a line with slope $\frac{2}{3}$.

The correct answer is A.

PS06562

184. An object thrown directly upward is at a height of h feet after t seconds, where $h = -16(t - 3)^2 + 150$. At what height, in feet, is the object 2 seconds after it reaches its maximum height?

(A) 6
(B) 86
(C) 134
(D) 150
(E) 166

Algebra Applied problems

Since $(t - 3)^2$ is positive when $t \neq 3$ and zero when $t = 3$, it follows that the *minimum* value of $(t - 3)^2$ occurs when $t = 3$. Therefore, the *maximum* value of $-16(t - 3)^2$, and also the maximum value of $-16(t - 3)^2 + 150$, occurs when $t = 3$. Hence, the height 2 seconds after the maximum height is the value of h when $t = 5$, or $-16(5 - 3)^2 + 150 = 86$.

The correct answer is B.

PS16107

185. Which of the following is equivalent to the pair of inequalities $x + 6 > 10$ and $x - 3 \leq 5$?

(A) $2 \leq x < 16$
(B) $2 \leq x < 4$
(C) $2 < x \leq 8$
(D) $4 < x \leq 8$
(E) $4 \leq x < 16$

Algebra Inequalities

Solve the inequalities separately and combine the results.

$x + 6 > 10$

$x > 4$

$x - 3 \le 5$

$x \le 8$

Since $x > 4$, then $4 < x$. Combining $4 < x$ and $x \le 8$ gives $4 < x \le 8$.

The correct answer is D.

PS16823

186. David has d books, which is 3 times as many as Jeff and $\frac{1}{2}$ as many as Paula. How many books do the three of them have altogether, in terms of d?

(A) $\frac{5}{6}d$

(B) $\frac{7}{3}d$

(C) $\frac{10}{3}d$

(D) $\frac{7}{2}d$

(E) $\frac{9}{2}d$

Algebra Applied problems; Simultaneous equations

Let J be the number of books that Jeff has, and let P be the number of books Paula has. Then, the given information about David's books can be expressed as $d = 3J$ and $d = \frac{1}{2}P$. Solving these two equations for J and P gives $\frac{d}{3} = J$ and $2d = P$. Thus, $d + J + P = d + \frac{d}{3} + 2d = 3\frac{1}{3}d = \frac{10}{3}d$.

The correct answer is C.

PS16824

187. There are 8 teams in a certain league and each team plays each of the other teams exactly once. If each game is played by 2 teams, what is the total number of games played?

(A) 15

(B) 16

(C) 28

(D) 56

(E) 64

Arithmetic Operations on rational numbers

Since no team needs to play itself, each team needs to play 7 other teams. In addition, each game needs to be counted only once, rather than once for each team that plays that game. Since two teams play each game, $\frac{8 \times 7}{2} = 28$ games are needed.

The correct answer is C.

PS07491

188. At his regular hourly rate, Don had estimated the labor cost of a repair job as \$336 and he was paid that amount. However, the job took 4 hours longer than he had estimated and, consequently, he earned \$2 per hour less than his regular hourly rate. What was the time Don had estimated for the job, in hours?

(A) 28

(B) 24

(C) 16

(D) 14

(E) 12

Algebra Second-degree equations

Let r be Don's regular hourly rate and t be the number of hours he estimated the repair job to take. Then $rt = 336$ is Don's estimated labor cost. Since Don was paid \$336 for doing $t + 4$ hours of work at an hourly rate of $r - 2$, it also follows that $(r - 2)(t + 4) = 336$. Then

$(r-2)(t+4) = 336$

$rt - 2t + 4r - 8 = 336$

$-2t + 4r - 8 = 0$ since $rt = 336$ from above

$-2t^2 + 4rt - 8t = 0$ multiply both sides by t

$-2t^2 + 4(336) - 8t = 0$ since $rt = 336$

$t^2 + 4t - 672 = 0$ divide both sides by -2

$(t - 24)(t + 28) = 0$ factor

Alternatively, from the third line above,

$$-2t+4r-8=0$$

$$-2t+4\left(\frac{336}{t}\right)-8=0 \quad \text{since } rt=336 \text{ from above gives } r=\frac{336}{t}$$

$$-2t^2+4(336)-8t=0 \quad \text{multiply both sides by } t$$

$$t^2+4t-672=0 \quad \text{divide both sides by } -2$$

$$(t-24)(t+28)=0 \quad \text{factor}$$

So, $t-24=0$, which means $t=24$, or $t+28=0$, which means $t=-28$. Since an estimated time cannot be negative, $t=24$.

The correct answer is B.

PS16828

189. If $\frac{p}{q}<1$, and p and q are positive integers, which of the following must be greater than 1 ?

(A) $\sqrt{\frac{p}{q}}$

(B) $\frac{p}{q^2}$

(C) $\frac{p}{2q}$

(D) $\frac{q}{p^2}$

(E) $\frac{q}{p}$

Arithmetic Properties of numbers

Since p and q are positive integers, $0<\frac{p}{q}<1$.

A Since $\frac{p}{q}<1$, then $q>p$. Taking the square root of both sides of the inequality gives $\sqrt{q}>\sqrt{p}$. Then, $\sqrt{\frac{p}{q}}=\frac{\sqrt{p}}{\sqrt{q}}$, so here the denominator will still be larger than the numerator. CANNOT be greater than 1.

B Squaring the denominator increases the denominator, which decreases the value of the fraction. CANNOT be greater than 1.

C Multiplying the denominator by 2 increases the denominator, which decreases the value of the fraction. CANNOT be greater than 1.

D Since $\frac{p}{q}<1$, then $q>p$. When $p^2<q$, this expression will be greater than 1, but p^2 need not be less than q. For example, if $p=2$ and $q=100$, $\frac{p}{q}=\frac{2}{100}$ and $\frac{q}{p^2}=\frac{100}{2^2}=\frac{100}{4}=25>1$. However, if $p=3$ and $q=4$, then $\frac{p}{q}=\frac{3}{4}$ and $\frac{q}{p^2}=\frac{4}{3^2}=\frac{4}{9}<1$. NEED NOT be greater than 1.

E Again, since $\frac{p}{q}<1$, then $q>p$. Thus, the reciprocal, $\frac{q}{p}$, always has a value greater than 1 because the numerator will always be a larger positive integer than the denominator. MUST be greater than 1.

The correct answer is E.

PS16830

190. To mail a package, the rate is x cents for the first pound and y cents for each additional pound, where $x>y$. Two packages weighing 3 pounds and 5 pounds, respectively, can be mailed separately or combined as one package. Which method is cheaper, and how much money is saved?

(A) Combined, with a savings of $x-y$ cents

(B) Combined, with a savings of $y-x$ cents

(C) Combined, with a savings of x cents

(D) Separately, with a savings of $x-y$ cents

(E) Separately, with a savings of y cents

Algebra Applied problems

Shipping the two packages separately would cost $1x+2y$ for the 3-pound package and $1x+4y$ for the 5-pound package. Shipping them together (as a single 8-pound package) would cost $1x+7y$. By calculating the sum of the costs for shipping the two packages separately minus the cost for

shipping the one combined package, it is possible to determine the difference in cost, as shown.

$\big((1x+2y)+(1x+4y)\big)-(1x+7y)$ (cost for 3 lb. + cost for 5 lb.) − cost for 8 lb.

$=(2x+6y)-(1x+7y)$ combine like terms

$=2x+6y-1x-7y$ distribute the negative

$=x-y$ combine like terms

Since $x > y$, this value is positive, which means it costs more to ship two packages separately. Thus it is cheaper to mail one combined package at a cost savings of $x-y$ cents.

The correct answer is A.

PS16831

191. If money is invested at r percent interest, compounded annually, the amount of the investment will double in approximately $\frac{70}{r}$ years. If Pat's parents invested $5,000 in a long-term bond that pays 8 percent interest, compounded annually, what will be the approximate total amount of the investment 18 years later, when Pat is ready for college?

(A) $20,000
(B) $15,000
(C) $12,000
(D) $10,000
(E) $9,000

Algebra Applied problems

Since the investment will double in $\frac{70}{r}=\frac{70}{8}=8.75\approx 9$ years, the value of the investment over 18 years can be approximated by doubling its initial value twice. Therefore, the approximate value will be $(\$5,000)(2)(2)=\$20,000$.

The correct answer is A.

PS16832

192. On a recent trip, Cindy drove her car 290 miles, rounded to the nearest 10 miles, and used 12 gallons of gasoline, rounded to the nearest gallon. The actual number of miles per gallon that Cindy's car got on this trip must have been between

(A) $\frac{290}{12.5}$ and $\frac{290}{11.5}$
(B) $\frac{295}{12}$ and $\frac{285}{11.5}$
(C) $\frac{285}{12}$ and $\frac{295}{12}$
(D) $\frac{285}{12.5}$ and $\frac{295}{11.5}$
(E) $\frac{295}{12.5}$ and $\frac{285}{11.5}$

Arithmetic Estimation

The lowest number of miles per gallon can be calculated using the lowest possible miles and the highest amount of gasoline. Also, the highest number of miles per gallon can be calculated using the highest possible miles and the lowest amount of gasoline.

Since the miles are rounded to the nearest 10 miles, the number of miles is between 285 and 295. Since the gallons are rounded to the nearest gallon, the number of gallons is between 11.5 and 12.5. Therefore, the lowest number of miles per gallon is $\frac{\text{lowest miles}}{\text{highest gallons}}=\frac{285}{12.5}$ and the highest number of miles per gallon is $\frac{\text{highest miles}}{\text{lowest gallons}}=\frac{295}{11.5}$

The correct answer is D.

PS16833

193. Which of the following inequalities is an algebraic expression for the shaded part of the number line above?

(A) $|x| \le 3$
(B) $|x| \le 5$
(C) $|x-2| \le 3$
(D) $|x-1| \le 4$
(E) $|x+1| \le 4$

Algebra Inequalities

The number line above shows $-5 \le x \le 3$. To turn this into absolute value notation, as all the choices are written, the numbers need to be opposite signs of the same value.

Since the distance between −5 and 3 is 8 $(3 - (-5) = 8)$, that distance needs to be split in half with −4 to one side and 4 to the other. Each of these two values is 1 more than the values in the inequality above, so adding 1 to all terms in the inequality gives $-4 \le x + 1 \le 4$, which is the same as $|x + 1| \le 4$.

The correct answer is E.

PS16835

194. In a small snack shop, the average (arithmetic mean) revenue was $400 per day over a 10-day period. During this period, if the average daily revenue was $360 for the first 6 days, what was the average daily revenue for the last 4 days?

(A) $420
(B) $440
(C) $450
(D) $460
(E) $480

Arithmetic; Algebra Statistics; Applied problems

Let x be the average daily revenue for the last 4 days. Using the formula $\text{average} = \frac{\text{sum of values}}{\text{number of values}}$, the information regarding the average revenues for the 10-day and 6-day periods can be expressed as follows and solved for x:

$$\$400 = \frac{6(\$360) + 4x}{10}$$

$\$4,000 = \$2,160 + 4x$	multiply both sides by 10
$\$1,840 = 4x$	subtract $2,160 from both sides
$\$460 = x$	divide both sides by 4

The correct answer is D.

PS05882

195. If y is the smallest positive integer such that 3,150 multiplied by y is the square of an integer, then y must be

(A) 2
(B) 5
(C) 6
(D) 7
(E) 14

Arithmetic Properties of numbers

To find the smallest positive integer y such that $3{,}150y$ is the square of an integer, first find the prime factorization of 3,150 by a method similar to the following:

$$\begin{aligned} 3{,}150 &= 10 \times 315 \\ &= (2 \times 5) \times (3 \times 105) \\ &= 2 \times 5 \times 3 \times (5 \times 21) \\ &= 2 \times 5 \times 3 \times 5 \times (3 \times 7) \\ &= 2 \times 3^2 \times 5^2 \times 7 \end{aligned}$$

To be a perfect square, $3{,}150y$ must have an even number of each of its prime factors. At a minimum, y must have one factor of 2 and one factor of 7 so that $3{,}150y$ has two factors of each of the primes 2, 3, 5, and 7. The smallest positive integer value of y is then $(2)(7) = 14$.

The correct answer is E.

PS16116

196. If [x] is the greatest integer less than or equal to x, what is the value of $[-1.6] + [3.4] + [2.7]$?

(A) 3
(B) 4
(C) 5
(D) 6
(E) 7

Arithmetic Profit and loss

The greatest integer that is less than or equal to −1.6 is −2. It cannot be −1 because −1 is greater than −1.6. The greatest integer that is less than or equal to 3.4 is 3. It cannot be 4 because 4 is greater than 3.4. The greatest integer that is less than or equal to 2.7 is 2. It cannot be 3 because 3 is greater than 2.7. Therefore, $[-1.6] + [3.4] + [2.7] = -2 + 3 + 2 = 3$.

The correct answer is A.

PS06558

197. In the first week of the year, Nancy saved $1. In each of the next 51 weeks, she saved $1 more than she had saved in the previous week. What was the total amount that Nancy saved during the 52 weeks?

(A) $1,326
(B) $1,352
(C) $1,378
(D) $2,652
(E) $2,756

Arithmetic Operations on rational numbers

In dollars, the total amount saved is the sum of 1, (1 + 1), (1 + 1 + 1), and so on, up to and including the amount saved in the 52nd week, which was $52. Therefore, the total amount saved in dollars was $1 + 2 + 3 + \ldots + 50 + 51 + 52$. This sum can be easily evaluated by grouping the terms as $(1 + 52) + (2 + 51) + (3 + 50) + \ldots + (26 + 27)$, which results in the number 53 added to itself 26 times. Therefore, the sum is $(26)(53) = 1{,}378$.

Alternatively, the formula for the sum of the first n positive integers is $\frac{n(n+1)}{2}$. Therefore, the sum of the first 52 positive integers is $\frac{52(53)}{2} = 26(53) = 1{,}378$.

The correct answer is C.

PS16100

198. In a certain sequence, the term x_n is given by the formula $x_n = 2x_{n-1} - \frac{1}{2}(x_{n-2})$ for all $n \geq 2$. If $x_0 = 3$ and $x_1 = 2$, what is the value of x_3?

(A) 2.5
(B) 3.125
(C) 4
(D) 5
(E) 6.75

Algebra Simplifying algebraic expressions

Given the formula $x_n = 2x_{n-1} - \frac{1}{2}(x_{n-2})$ with $x_0 = 3$ and $x_1 = 2$, then

$$\begin{aligned} x_2 &= 2x_1 - \frac{1}{2}x_0 \\ &= 2(2) - \frac{1}{2}(3) \\ &= \frac{5}{2} \\ x_3 &= 2x_2 - \frac{1}{2}x_1 \\ &= 2\left(\frac{5}{2}\right) - \frac{1}{2}(2) \\ &= 5 - 1 \\ &= 4 \end{aligned}$$

The correct answer is C.

PS08570

199. During a trip, Francine traveled x percent of the total distance at an average speed of 40 miles per hour and the rest of the distance at an average speed of 60 miles per hour. In terms of x, what was Francine's average speed for the entire trip?

(A) $\frac{180 - x}{2}$
(B) $\frac{x + 60}{4}$
(C) $\frac{300 - x}{5}$
(D) $\frac{600}{115 - x}$
(E) $\frac{12{,}000}{x + 200}$

Algebra Applied problems

Assume for simplicity that the total distance of Francine's trip is 100 miles. Then the table below gives all of the pertinent information.

Distance	Rate	Time = $\frac{\text{Distance}}{\text{Rate}}$
x	40	$\frac{x}{40}$
$100 - x$	60	$\frac{100 - x}{60}$

The total time for Francine's trip is

$$\frac{x}{40}+\frac{100-x}{60}=\frac{3x}{120}+\frac{2(100-x)}{120}$$
$$=\frac{3x+2(100-x)}{120}$$
$$=\frac{3x+200-2x}{120}$$
$$=\frac{x+200}{120}$$

Francine's average speed over the entire trip is

$$\frac{\text{total distance}}{\text{total time}}=\frac{100}{\frac{x+200}{120}}=\frac{12,000}{x+200}.$$

The correct answer is E.

PS00564

200. If $n=(33)^{43}+(43)^{33}$, what is the units digit of n?

(A) 0
(B) 2
(C) 4
(D) 6
(E) 8

Arithmetic Properties of numbers

If the units digit of an integer n is 3, then the units digits of n^1, n^2, n^3, n^4, n^5, n^6, n^7, and n^8 are, respectively, 3, 9, 7, 1, 3, 9, 7, and 1. Thus, the units digit of the powers of n form the sequence in which the digits 3, 9, 7, and 1 repeat indefinitely in that order. Since $43=(10)(4)+3$, the 43rd number in the sequence is 7, and therefore the units digit of $(33)^{43}$ is 7. Since $33=(8)(4)+1$, the 33rd number of this sequence is 3, and therefore, the units digit of $(43)^{33}$ is 3. Thus, the units digit of $(33)^{43}+(43)^{33}$ is the units digit of $7+3$, which is 0.

The correct answer is A.

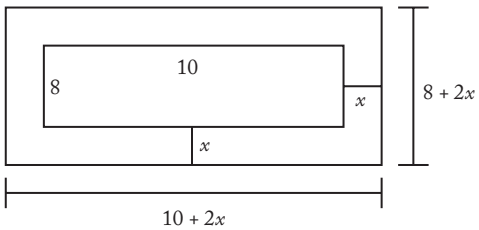
PS13691

201. Team A and Team B are competing against each other in a game of tug-of-war. Team A, consisting of 3 males and 3 females, decides to line up male, female, male, female, male, female. The lineup that Team A chooses will be one of how many different possible lineups?

(A) 9
(B) 12
(C) 15
(D) 36
(E) 720

Arithmetic Elementary combinatorics

Any of the 3 males can be first in the line, and any of the 3 females can be second. Either of the 2 remaining males can be next, followed by either of the 2 remaining females. The last 2 places in the line are filled with the only male left followed by the only female left. By the multiplication principle, there are $3\times3\times2\times2\times1\times1=36$ different lineups possible.



The correct answer is D.

PS08480

202. A border of uniform width is placed around a rectangular photograph that measures 8 inches by 10 inches. If the area of the border is 144 square inches, what is the width of the border, in inches?

(A) 3
(B) 4
(C) 6
(D) 8
(E) 9

Algebra Second-degree equations

Note: Figure not drawn to scale.

Let x be the width, in inches, of the border. The photograph with the border has dimensions $(10+2x)$ inches and $(8+2x)$ inches with an area of $(10+2x)(8+2x)=(80+36x+4x^2)$ square

inches. The photograph without the border has dimensions 10 inches and 8 inches with an area of (10)(8) = 80 square inches. The area of the border is then the difference between the areas of the photograph with and without the border or $(80 + 36x + 4x^2) - 80 = 36x + 4x^2$ square inches. It is given that the area of the border is 144 square inches so,

$$36x + 4x^2 = 144$$
$$4x^2 + 36x - 144 = 0$$
$$x^2 + 9x - 36 = 0$$
$$(x - 3)(x + 12) = 0$$

So, $x - 3 = 0$, which means $x = 3$, or $x + 12 = 0$, which means $x = -12$.

Thus, after discarding $x = -12$ since the width of the border must be positive, $x = 3$.

The correct answer is A.

PS09403

203. If $d = \dfrac{1}{2^3 \times 5^7}$ is expressed as a terminating decimal, how many nonzero digits will d have?

(A) One
(B) Two
(C) Three
(D) Seven
(E) Ten

Arithmetic Operations on rational numbers

It will be helpful to use the fact that a factor that is an integer power of 10 has no effect on the number of nonzero digits a terminating decimal has.

$$\frac{1}{2^3 \times 5^7} = \frac{1}{2^3 \times 5^3} \times \frac{1}{5^4}$$
$$= \left(\frac{1}{2 \times 5}\right)^3 \times \left(\frac{1}{5}\right)^4$$
$$= \left(\frac{1}{10}\right)^3 \times \left(\frac{1}{5}\right)^4$$
$$= 10^{-3} \times (0.2)^4$$
$$= 10^{-3} \times (0.0016)$$
$$= 0.0000016$$

The correct answer is B.

PS03513

204. For any positive integer n, the sum of the first n positive integers equals $\dfrac{n(n+1)}{2}$. What is the sum of all the even integers between 99 and 301 ?

(A) 10,100
(B) 20,200
(C) 22,650
(D) 40,200
(E) 45,150

Algebra Simplifying expressions; **Arithmetic** Computation with integers

The given formula translates into $1 + 2 + \ldots + n = \sum_{k=1}^{n} k = \dfrac{n(n+1)}{2}$. The sum of the even integers between 99 and 301 is the sum of the even integers from 100 through 300, or the sum of the 50th even integer through the 150th even integer. To get this sum, find the sum of the first 150 even integers and subtract the sum of the first 49 even integers. In symbols,

$$\sum_{k=1}^{150} 2k - \sum_{k=1}^{49} 2k = 2\sum_{k=1}^{150} k - 2\sum_{k=1}^{49} k$$
$$= 2\left(\frac{150(150+1)}{2}\right) - 2\left(\frac{49(49+1)}{2}\right)$$
$$= 150(151) - 49(50)$$
$$= 50\big(3(151) - 49\big)$$
$$= 50(453 - 49)$$
$$= 50(404)$$
$$= 20,200$$

The correct answer is B.

PS06498

205. How many prime numbers between 1 and 100 are factors of 7,150 ?

(A) One
(B) Two
(C) Three
(D) Four
(E) Five

Arithmetic Rate

To find the number of prime numbers between 1 and 100 that are factors of 7,150, find the prime factorization of 7,150 using a method similar to the following:

$$\begin{aligned} 7{,}150 &= 10 \times 715 \\ &= (2 \times 5) \times (5 \times 143) \\ &= 2 \times 5 \times 5 \times (11 \times 13) \end{aligned}$$

Thus, 7,150 has four prime factors: 2, 5, 11, and 13.

The correct answer is D.

PS08732

206. A sequence of numbers a_1, a_2, a_3, . . . is defined as follows: $a_1 = 3$, $a_2 = 5$, and every term in the sequence after a_2 is the product of all terms in the sequence preceding it, e.g., $a_3 = (a_1)(a_2)$ and $a_4 = (a_1)(a_2)(a_3)$. If $a_n = t$ and $n > 2$, what is the value of a_{n+2} in terms of t?

(A) $4t$
(B) t^2
(C) t^3
(D) t^4
(E) t^8

Algebra Sequences

It is given that $a_n = (a_1)(a_2) \ldots (a_{n-1})$ and $a_n = t$. Therefore, $a_{n+1} = (a_1)(a_2) \ldots (a_{n-1})(a_n) = (a_n)(a_n) = t^2$ and $a_{n+2} = (a_1)(a_2) \ldots (a_n)(a_{n+1}) = (a_{n+1})(a_{n+1}) = (t^2)(t^2) = t^4$.

The correct answer is D.

PS08552

207. Last year the price per share of Stock X increased by k percent and the earnings per share of Stock X increased by m percent, where k is greater than m. By what percent did the ratio of price per share to earnings per share increase, in terms of k and m?

(A) $\frac{k}{m}\%$
(B) $(k - m)\%$
(C) $\frac{100(k-m)}{100+k}\%$
(D) $\frac{100(k-m)}{100+m}\%$
(E) $\frac{100(k-m)}{100+k+m}\%$

Algebra Percents

If P and E are the price and earnings per share before the increase, then $\left(1+\frac{k}{100}\right)P$ and $\left(1+\frac{m}{100}\right)E$ are the price and earnings per share after the increase. Therefore, the percent increase in the ratio of price per share to earnings per share can be expressed as follows:

$$\left(\frac{(\text{ratio after increases})-(\text{ratio before increases})}{(\text{ratio before increases})} \times 100\right)\%$$

$$= \left(\left(\frac{(\text{ratio after increases})}{(\text{ratio before increases})} - 1\right) \times 100\right)\%$$

$$= \left(\left(\frac{\frac{\left(1+\frac{k}{100}\right)P}{\left(1+\frac{m}{100}\right)E}}{\frac{P}{E}} - 1\right) \times 100\right)\%$$

$$= \left(\left(\frac{\left(1+\frac{k}{100}\right)}{\left(1+\frac{m}{100}\right)} \times \frac{P}{E}}{\frac{P}{E}} - 1\right) \times 100\right)\%$$

$$= \left(\left(\frac{\left(1+\frac{k}{100}\right)}{\left(1+\frac{m}{100}\right)} - 1\right) \times 100\right)\%$$

$$= \left(\left(\frac{1+\frac{k}{100}}{1+\frac{m}{100}} - 1\right) \times 100\right)\%$$

$$= \left(\left(\frac{1+\frac{k}{100}}{1+\frac{m}{100}} \times \frac{100}{100} - 1 \right) \times 100 \right)\%$$

$$= \left(\left(\frac{100+k}{100+m} - 1 \right) \times 100 \right)\%$$

$$= \left(\frac{(100+k)-(100+m)}{100+m} \times 100 \right)\%$$

$$= \left(\frac{k-m}{100+m} \times 100 \right)\%$$

$$= \frac{100(k-m)}{100+m}\%$$

The correct answer is D.

PS04677

208. Of the 300 subjects who participated in an experiment using virtual-reality therapy to reduce their fear of heights, 40 percent experienced sweaty palms, 30 percent experienced vomiting, and 75 percent experienced dizziness. If all of the subjects experienced at least one of these effects and 35 percent of the subjects experienced exactly two of these effects, how many of the subjects experienced only one of these effects?

(A) 105
(B) 125
(C) 130
(D) 180
(E) 195

Arithmetic Applied problems

Let a be the number who experienced only one of the effects, b be the number who experienced exactly two of the effects, and c be the number who experienced all three of the effects. Then $a + b + c = 300$, since each of the 300 participants experienced at least one of the effects. From the given information, $b = 105$ (35% of 300), which gives $a + 105 + c = 300$, or $a + c = 195$ (Eq. 1). Also, if the number who experienced sweaty palms (40% of 300, or 120) is added to the number who experienced vomiting (30% of 300, or 90), and this sum is added to the number who experienced dizziness (75% of 300, or 225), then each participant who experienced only one of the effects is counted exactly once, each participant who experienced exactly two of the effects is counted exactly twice, and each participant who experienced all three of the effects is counted exactly 3 times. Therefore, $a + 2b + 3c = 120 + 90 + 225 = 435$. Using $b = 105$, it follows that $a + 2(105) + 3c = 435$, or $a + 3c = 225$ (Eq. 2). Then solving the system defined by Eq. 1 and Eq. 2,

$$\begin{cases} a + c = 195 \\ a + 3c = 225 \end{cases}$$ multiply 1st equation by -3

$$\begin{cases} -3a - 3c = -585 \\ a + 3c = 225 \end{cases}$$ add equations

$-2a = -360$, or $a = 180$

The correct answer is D.

PS03686

209. If $m^{-1} = -\frac{1}{3}$, then m^{-2} is equal to

(A) -9
(B) -3
(C) $-\frac{1}{9}$
(D) $\frac{1}{9}$
(E) 9

Arithmetic Negative exponents

Using rules of exponents, $m^{-2} = m^{-1\times 2} = \left(m^{-1}\right)^2$, and since $m^{-1} = -\frac{1}{3}$, $m^{-2} = \left(-\frac{1}{3}\right)^2 = \frac{1}{9}$.

The correct answer is D.

PS07555

210. A photography dealer ordered 60 Model X cameras to be sold for $250 each, which represents a 20 percent markup over the dealer's initial cost for each camera. Of the cameras ordered, 6 were never sold and were returned to the manufacturer for a refund of 50 percent of the dealer's initial cost. What was the dealer's approximate profit or loss as a percent of the dealer's initial cost for the 60 cameras?

(A) 7% loss
(B) 13% loss
(C) 7% profit
(D) 13% profit
(E) 15% profit

Arithmetic Percents

Given that \$250 is 20% greater than a camera's initial cost, it follows that the initial cost for each camera was $\left(\$\frac{250}{1.2}\right)$. Therefore, the initial cost for the 60 cameras was $60\left(\$\frac{250}{1.2}\right)$. The total revenue is the sum of the amount obtained from selling 60 – 6 = 54 cameras for \$250 each and the $\left(\frac{1}{2}\right)\left(\$\frac{250}{1.2}\right)$ refund for each of 6 cameras, or $(54)(\$250)+(6)\left(\frac{1}{2}\right)\left(\$\frac{250}{1.2}\right)$. The total profit, as a percent of the total initial cost, is $\left(\frac{(\text{total revenue})-(\text{total initial cost})}{(\text{total initial cost})}\times 100\right)\% =$ $\left(\left(\frac{(\text{total revenue})}{(\text{total initial cost})}-1\right)\times 100\right)\%$. Using the numerical expressions obtained above, $\frac{(\text{total revenue})}{(\text{total initial cost})}-1$

$$= \frac{(54)(250)+6\left(\frac{1}{2}\right)\left(\frac{250}{1.2}\right)}{(60)\left(\frac{250}{1.2}\right)}-1 \quad \text{by substitution}$$

$$= \frac{54+3\left(\frac{1}{1.2}\right)}{(60)\left(\frac{1}{1.2}\right)}-1 \quad \text{by canceling 250s}$$

$$= \frac{54(1.2)+3}{60}-1 \quad \text{by multiplying top and bottom by 1.2 and then canceling 1.2}$$

$$= \frac{67.8}{60}-1$$

$$= 1.13-1$$

$$= 0.13$$

Finally, $(0.13 \times 100)\% = 13\%$, which represents a profit since it is positive.

The correct answer is D.

PS04305

211. Seven pieces of rope have an average (arithmetic mean) length of 68 centimeters and a median length of 84 centimeters. If the length of the longest piece of rope is 14 centimeters more than 4 times the length of the shortest piece of rope, what is the maximum possible length, in centimeters, of the longest piece of rope?

(A) 82
(B) 118
(C) 120
(D) 134
(E) 152

Algebra Statistics

Let a, b, c, d, e, f, and g be the lengths, in centimeters, of the pieces of rope, listed from least to greatest. From the given information it follows that $d = 84$ and $g = 4a + 14$. Therefore, listed from least to greatest, the lengths are a, b, c, 84, e, f, and $4a + 14$. The maximum value of $4a + 14$ will occur when the maximum value of a is used, and this will be the case only if the shortest 3 pieces all have the same length. Therefore, listed from least to greatest, the lengths are a, a, a, 84, e, f, and $4a + 14$. The maximum value for $4a + 14$ will occur when e and f are as small as possible. Since e and f are to the right of the median, they must be at least 84 and so 84 is the least possible value for each of e and f. Therefore, listed from least to greatest, the lengths are a, a, a, 84, 84, 84, and $4a + 14$. Since the average length is 68, it follows that $\frac{a+a+a+84+84+84+(4a+14)}{7} = 68$, or $a = 30$.

Hence, the maximum length of the longest piece is $(4a + 14) = [4(30) + 14] = 134$ centimeters.

The correct answer is D.

PS16146

212. What is the difference between the sixth and the fifth terms of the sequence 2, 4, 7, … whose nth term is $n+2^{n-1}$?

(A) 2
(B) 3
(C) 6
(D) 16
(E) 17

Algebra Simplifying algebraic expressions

According to the given formula, the sixth term of the sequence is $6 + 2^{6-1} = 6 + 2^5$ and the fifth term is $5 + 2^{5-1} = 5 + 2^4$. Then,

$$\begin{aligned}\left(6+2^5\right)-\left(5+2^4\right) &= (6-5)+\left(2^5-2^4\right)\\ &= 1+2^4(2-1)\\ &= 1+2^4\\ &= 1+16\\ &= 17\end{aligned}$$

The correct answer is E.

PS02405

213. From the consecutive integers –10 to 10, inclusive, 20 integers are randomly chosen with repetitions allowed. What is the least possible value of the product of the 20 integers?

(A) $(-10)^{20}$
(B) $(-10)^{10}$
(C) 0
(D) $-(10)^{19}$
(E) $-(10)^{20}$

Arithmetic Properties of numbers

If –10 is chosen an odd number of times and 10 is chosen the remaining number of times (for example, choose –10 once and choose 10 nineteen times, or choose –10 three times and choose 10 seventeen times), then the product of the 20 chosen numbers will be $-(10)^{20}$. Note that $-(10)^{20}$ is less than $-(10)^{19}$, the only other negative value among the answer choices.

The correct answer is E.

PS05140

214. The letters D, G, I, I, and T can be used to form 5-letter strings such as DIGIT or DGIIT. Using these letters, how many 5-letter strings can be formed in which the two occurrences of the letter I are separated by at least one other letter?

(A) 12
(B) 18
(C) 24
(D) 36
(E) 48

Arithmetic Elementary combinatorics

There are 6 ways to select the locations of the 2 occurrences of the letter I, and this number can be determined by listing all such ways as shown below, where the symbol * is used in place of the letters D, G, and T:

I*I**, I**I*, I***I, *I*I*, *I**I, **I*I

Alternatively, the number of ways to select the locations of the 2 occurrences of the letter I can be determined by using $\binom{5}{2} - 4 = \frac{5!}{(2!)(3!)} - 4 = 10 - 4 = 6$, which is the number of ways to select 2 of the 5 locations minus the 4 ways in which the 2 selected locations are adjacent.

For each of these 6 ways to select the locations of the 2 occurrences of the letter I, there are 6 ways to select the locations of the letters D, G, and T, which can be determined by using 3! = 6 or by listing all such ways:

DGT, DTG, GDT, GTD, TDG, TGD

It follows that the number of ways to select the locations of the 5 letters to form 5-letter strings is (6)(6) = 36.

The correct answer is D.

PS00574

215. $\dfrac{0.99999999}{1.0001} - \dfrac{0.99999991}{1.0003} =$

(A) 10^{-8}
(B) $3(10^{-8})$
(C) $3(10^{-4})$
(D) $2(10^{-4})$
(E) 10^{-4}

Arithmetic Operations on rational numbers

Calculations with lengthy decimals can be avoided by writing 0.99999999 as $1 - 10^{-8}$, 0.99999991 as $1 - 9(10^{-8})$, 1.0001 as $1 + 10^{-4}$, and 1.0003 as $1 + 3\left(10^{-4}\right)$. Doing this gives

$$\frac{1-10^{-8}}{1+10^{-4}}-\frac{1-9\left(10^{-8}\right)}{1+3\left(10^{-4}\right)}$$
$$=\frac{\left[1+10^{-4}\right]\left[1-10^{-4}\right]}{1+10^{-4}}-\frac{1-9\left(10^{-8}\right)}{1+3\left(10^{-4}\right)}$$
$$=\frac{1-10^{-4}}{1}-\frac{1-9(10^{-8})}{1+3\left(10^{-4}\right)}$$
$$=\frac{\left[1-10^{-4}\right]\left[1+3\left(10^{-4}\right)\right]-\left[1-9\left(10^{-8}\right)\right]}{1+3\left(10^{-4}\right)}$$
$$=\frac{1+3\left(10^{-4}\right)-10^{-4}-3\left(10^{-8}\right)-1+9\left(10^{-8}\right)}{1+3\left(10^{-4}\right)}$$
$$=\frac{2\left(10^{-4}\right)+6\left(10^{-8}\right)}{1+3\left(10^{-4}\right)}$$
$$=\frac{\left[2\left(10^{-4}\right)\right]\left[1+3\left(10^{-4}\right)\right]}{1+3\left(10^{-4}\right)}$$
$$=2\left(10^{-4}\right)$$

The correct answer is D.

PS03144

216. Last Sunday a certain store sold copies of Newspaper A for $1.00 each and copies of Newspaper B for $1.25 each, and the store sold no other newspapers that day. If r percent of the store's revenue from newspaper sales was from Newspaper A and if p percent of the newspapers that the store sold were copies of Newspaper A, which of the following expresses r in terms of p?

(A) $\frac{100p}{125-p}$

(B) $\frac{150p}{250-p}$

(C) $\frac{300p}{375-p}$

(D) $\frac{400p}{500-p}$

(E) $\frac{500p}{625-p}$

Algebra Simultaneous equations

Let N be the total number of newspapers that the store sold. Then, the number of copies of Newspaper A the store sold was $p\%$ of $N=\left(\frac{p}{100}\right)N$ and the revenue from those copies of Newspaper A, in dollars, was $(1.00)\left(\frac{p}{100}\right)N=\left(\frac{p}{100}\right)N$. The number of copies of Newspaper B the store sold was $(100-p)\%$ of $N=\left(\frac{100-p}{100}\right)N$ and the revenue from those copies of Newspaper B, in dollars, was $(1.25)\left(\frac{100-p}{100}\right)N=\left(\frac{5}{4}\right)\left(\frac{100-p}{100}\right)N$. The store's total revenue from newspaper sales, in dollars, was $\left(\frac{p}{100}\right)N+\left(\frac{5}{4}\right)\left(\frac{100-p}{100}\right)N$, and the fraction of that revenue from the sale of Newspaper A was

$$\frac{\frac{p}{100}N}{\frac{p}{100}N+\left(\frac{5}{4}\right)\left(\frac{100-p}{100}\right)N}=\frac{\frac{p}{100}}{\frac{4p}{400}+\left(\frac{500-5p}{400}\right)}$$
$$=\frac{\frac{p}{100}}{\frac{4p+500-5p}{400}}$$
$$=\frac{\frac{p}{100}}{\frac{500-p}{400}}$$
$$=\left(\frac{p}{100}\right)\left(\frac{400}{500-p}\right)$$
$$=\frac{4p}{500-p}$$

Since r percent of the store's newspaper sales revenue was from Newspaper A, $\frac{r}{100}=\frac{4p}{500-p}$, and so $r=\frac{400p}{500-p}$.

The correct answer is D.

PS16890

217. For the past n days, the average (arithmetic mean) daily production at a company was 50 units. If today's production of 90 units raises the average to 55 units per day, what is the value of n?

(A) 30
(B) 18
(C) 10
(D) 9
(E) 7

Arithmetic; Algebra Statistics; Applied problems; Simultaneous equations

Let x be the total production of the past n days.

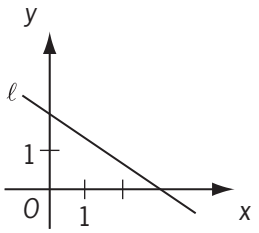
Using the formula $\text{average} = \frac{\text{sum of values}}{\text{number of values}}$, the information in the problem can be expressed in the following two equations

$50 = \frac{x}{n}$ daily average of 50 units over the past n days

$55 = \frac{x+90}{n+1}$ increased daily average when including today's 90 units

Solving the first equation for x gives $x = 50n$. Then substituting $50n$ for x in the second equation gives the following that can be solved for n:

$$55 = \frac{50n+90}{n+1}$$



$55(n+1) = 50n + 90$ multiply both sides by $(n+1)$

$55n + 55 = 50n + 90$ distribute the 55

$5n = 35$ subtract $50n$ and 55 from both sides

$n = 7$ divide both sides by 5

The correct answer is E.

PS16893

218. In the coordinate system above, which of the following is the equation of line ℓ?

(A) $2x - 3y = 6$
(B) $2x + 3y = 6$
(C) $3x + 2y = 6$
(D) $2x - 3y = -6$
(E) $3x - 2y = -6$

Geometry Simple coordinate geometry

The line is shown going through the points (0,2) and (3,0). The slope of the line can be found with the formula $\text{slope} = \frac{\text{change in } y}{\text{change in } x} = \frac{y_2 - y_1}{x_2 - x_1}$ for two points (x_1,y_1) and (x_2,y_2). Thus, the slope of this line equals $\frac{0-2}{3-0} = -\frac{2}{3}$. Using the formula for a line of $y = mx + b$, where m is the slope and b is the y-intercept (in this case, 2), an equation for this line is $y = -\frac{2}{3}x + 2$. Since this equation must be compared to the available answer choices, the following further steps should be taken:

$y = -\frac{2}{3}x + 2$

$3y = -2x + 6$ multiply both sides by 3

$2x + 3y = 6$ add $2x$ to both sides

This problem can also be solved as follows. From the graph, when $x = 0$, y is positive; when $y = 0$, x is positive. This eliminates all but B and C. Of these, B is the only line containing (0,2). Still another way is to use (0,2) to eliminate A, C, and E, and then use (3,0) to eliminate D.

The correct answer is B.

PS16894

219. If a two-digit positive integer has its digits reversed, the resulting integer differs from the original by 27. By how much do the two digits differ?

(A) 3
(B) 4
(C) 5
(D) 6
(E) 7

Algebra Applied problems

Let the one two-digit integer be represented by $10t + s$, where s and t are digits, and let the other integer with the reversed digits be represented by $10s + t$. The information that the difference between the integers is 27 can be expressed in the following equation, which can be solved for the answer.

$(10s + t) - (10t + s) = 27$

$10s + t - 10t - s = 27$ distribute the negative

$9s - 9t = 27$ combine like terms

$s - t = 3$ divide both sides by 9

Thus, it is seen that the two digits s and t differ by 3.

The correct answer is A.

PS16896

220. In an electric circuit, two resistors with resistances x and y are connected in parallel. In this case, if r is the combined resistance of these two resistors, then the reciprocal of r is equal to the sum of the reciprocals of x and y. What is r in terms of x and y?

(A) xy
(B) $x + y$
(C) $\frac{1}{x+y}$
(D) $\frac{xy}{x+y}$
(E) $\frac{x+y}{xy}$

Algebra Applied problems

Note that two numbers are reciprocals of each other if and only if their product is 1. Thus the reciprocals of r, x, and y are $\frac{1}{r}$, $\frac{1}{x}$, and $\frac{1}{y}$, respectively. So, according to the problem, $\frac{1}{r} = \frac{1}{x} + \frac{1}{y}$. To solve this equation for r, begin by creating a common denominator on the right side by multiplying the first fraction by $\frac{y}{y}$ and the second fraction by $\frac{x}{x}$:

$\frac{1}{r} = \frac{1}{x} + \frac{1}{y}$

$\frac{1}{r} = \frac{y}{xy} + \frac{x}{xy}$

$\frac{1}{r} = \frac{x+y}{xy}$ combine the fractions on the right side

$r = \frac{xy}{x+y}$ invert the fractions on both sides

The correct answer is D.

PS16897

221. Xavier, Yvonne, and Zelda each try independently to solve a problem. If their individual probabilities for success are $\frac{1}{4}$, $\frac{1}{2}$, and $\frac{5}{8}$, respectively, what is the probability that Xavier and Yvonne, but not Zelda, will solve the problem?

(A) $\frac{11}{8}$
(B) $\frac{7}{8}$
(C) $\frac{9}{64}$
(D) $\frac{5}{64}$
(E) $\frac{3}{64}$

Arithmetic Probability

Since the individuals' probabilities are independent, they can be multiplied to figure out the combined probability. The probability of Xavier's success is given as $\frac{1}{4}$, and the probability of Yvonne's success is given as $\frac{1}{2}$. Since the probability of Zelda's success is given as $\frac{5}{8}$, then the probability of her NOT solving the problem is $1 - \frac{5}{8} = \frac{3}{8}$. Thus, the combined probability is $\left(\frac{1}{4}\right)\left(\frac{1}{2}\right)\left(\frac{3}{8}\right) = \frac{3}{64}$.

The correct answer is E.

PS16898

222. If $\frac{1}{x}-\frac{1}{x+1}=\frac{1}{x+4}$, then x could be

(A) 0
(B) –1
(C) –2
(D) –3
(E) –4

Algebra Second-degree equations

Solve the equation for x. Begin by multiplying all the terms by $x(x+1)(x+4)$ to eliminate the denominators.

$$\frac{1}{x}-\frac{1}{x+1}=\frac{1}{x+4}$$

$$(x+1)(x+4)-x(x+4)=x(x+1)$$

$(x+4)(x+1-x)=x(x+1)$ factor the $(x+4)$ out front on the left side

$(x+4)(1)=x(x+1)$ simplify

$(x+4)=x^2+x$ distribute the x on the right side

$4=x^2$ subtract x from both sides

$\pm 2=x$ take the square root of both sides

Both – 2 and 2 are square roots of 4 since $(-2^2)=4$ and $(2^2)=4$. Thus, x could be – 2.

This problem can also be solved as follows. Rewrite the left side as, $\frac{(x+1)-x}{x(x+1)}=\frac{1}{x(x+1)}$, then set equal to the right side to get $\frac{1}{x(x+1)}=\frac{1}{x+4}$. Next, cross multiply: $(1)(x+4)=x(x+1)(1)$. Therefore, $x+4=x^2+x$, or $x^2=4$, so $x=\pm 2$.

The correct answer is C.

PS16899

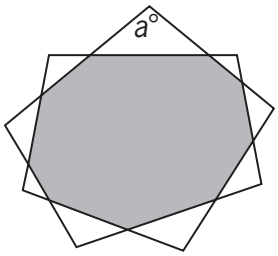
223. $\left(\frac{1}{2}\right)^{-3}\left(\frac{1}{4}\right)^{-2}\left(\frac{1}{16}\right)^{-1}=$

(A) $\left(\frac{1}{2}\right)^{-48}$
(B) $\left(\frac{1}{2}\right)^{-11}$
(C) $\left(\frac{1}{2}\right)^{-6}$
(D) $\left(\frac{1}{8}\right)^{-11}$
(E) $\left(\frac{1}{8}\right)^{-6}$

Arithmetic Operations on rational numbers

It is clear from the answer choices that all three factors need to be written with a common denominator, and they thus become

$$\left(\frac{1}{2}\right)^{-3}=\left(\frac{1}{2}\right)^{-3}$$



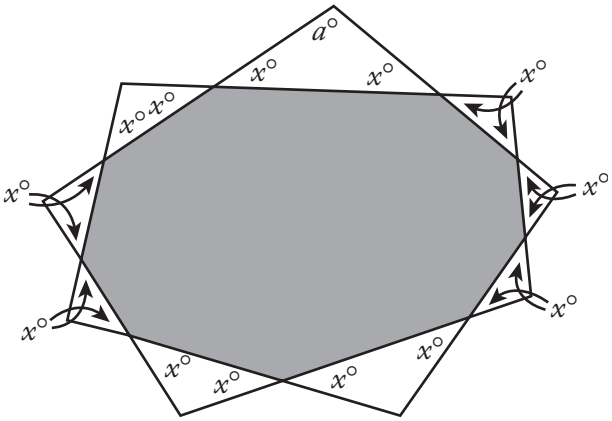
$$\left(\frac{1}{4}\right)^{-2}=\left(\left(\frac{1}{2}\right)^{2}\right)^{-2}=\left(\frac{1}{2}\right)^{-4}$$

$$\left(\frac{1}{16}\right)^{-1}=\left(\left(\frac{1}{2}\right)^{4}\right)^{-1}=\left(\frac{1}{2}\right)^{-4}$$

So, $\left(\frac{1}{2}\right)^{-3}\left(\frac{1}{4}\right)^{-2}\left(\frac{1}{16}\right)^{-1}=$

$$\left(\frac{1}{2}\right)^{-3}\left(\frac{1}{2}\right)^{-4}\left(\frac{1}{2}\right)^{-4}=\left(\frac{1}{2}\right)^{-3-4-4}=\left(\frac{1}{2}\right)^{-11}.$$

The correct answer is B.



PS00947

224. The figure shown above consists of a shaded 9-sided polygon and 9 unshaded isosceles triangles. For each isosceles triangle, the longest side is a side of the shaded polygon and the two sides of equal length are extensions of the two adjacent sides of the shaded polygon. What is the value of a?

(A) 100
(B) 105
(C) 110
(D) 115
(E) 120

Geometry Polygons

Let $x°$ represent the measure of each base angle of the triangle with vertex angle labeled $a°$. Each base angle of this triangle and one base angle of a triangle with which it shares a vertex are vertical angles and have the same measure. Thus, the base angles of these triangles also have measure $x°$. This pattern continues for the base angles of each pair of triangles that share a vertex, so each base angle of each of the 9 triangles has measure $x°$, as shown above. Also, the vertex angle of each of the 9 triangles has measure $a° = 180° - 2x°$.

Each interior angle of the shaded polygon has measure $(180 - x)°$ since each forms a straight angle with an angle that has measure $x°$, and the sum of the measures is $(9)(180 - x)°$. But the sum of the interior angles of a polygon with n sides is $(n - 2)(180°)$, so the sum of the interior angles of a 9-sided polygon is $(7)(180°) = 1{,}260°$. Therefore, $(9)(180 - x)° = 1{,}260°$ and $x = 40$. Finally, $a = 180 - 2x = 180 - 2(40) = 100$.

The correct answer is A.

PS01648

225. List T consists of 30 positive decimals, none of which is an integer, and the sum of the 30 decimals is S. The estimated sum of the 30 decimals, E, is defined as follows. Each decimal in T whose tenths digit is even is rounded up to the nearest integer, and each decimal in T whose tenths digit is odd is rounded down to the nearest integer; E is the sum of the resulting integers. If $\frac{1}{3}$ of the decimals in T have a tenths digit that is even, which of the following is a possible value of $E - S$?

I. -16
II. 6
III. 10

(A) I only
(B) I and II only
(C) I and III only
(D) II and III only
(E) I, II, and III

Arithmetic Operations on rational numbers

Since $\frac{1}{3}$ of the 30 decimals in T have an even tenths digit, it follows that $\frac{1}{3}(30) = 10$ decimals in T have an even tenths digit. Let T_E represent the list of these 10 decimals, let S_E represent the sum of all 10 decimals in T_E, and let E_E represent the estimated sum of all 10 decimals in T_E after rounding. The remaining 20 decimals in T have an odd tenths digit. Let T_O represent the list of these 20 remaining decimals, let S_O represent the sum of all 20 decimals in T_O, and let E_O represent the estimated sum of all 20 decimals in T_O after rounding. Note that $E = E_E + E_O$ and $S = S_E + S_O$ and hence $E - S = (E_E + E_O) - (S_E + S_O) = (E_E - S_E) + (E_O - S_O)$.

The least values of $E_E - S_E$ occur at the extreme where each decimal in T_E has tenths digit 8. Here, the difference between the rounded integer and the original decimal is greater than 0.1. (For example, the difference between the integer 15

and 14.899 that has been rounded to 15 is 0.101.)
Hence, $E_E - S_E > 10(0.1) = 1$. The greatest values of $E_E - S_E$ occur at the other extreme, where each decimal in T_E has tenths digit 0. Here, the difference between the rounded integer and the original decimal is less than 1. (For example, the difference between the integer 15 and 14.001 that has been rounded to 15 is 0.999.)
Hence, $E_E - S_E < 10(1) = 10$. Thus, $1 < E_E - S_E < 10$.

Similarly, the least values of $E_O - S_O$ occur at the extreme where each decimal in T_O has tenths digit 9. Here, the difference between the rounded integer and the original decimal is greater than –1. (For example, the difference between the integer 14 and 14.999 that has been rounded to 14 is –0.999.) Hence $E_O - S_O > 20(-1) = -20$.
The greatest values of $E_O - S_O$ occur at the other extreme where each decimal in T_O has tenths digit 1. Here, the difference between the rounded integer and the original decimal is less than or equal to –0.1. (For example, the difference between the integer 14 and 14.1 that has been rounded to 14 is –0.1.)
Hence, $E_O - S_O \leq 20(-0.1) = -2$.
Thus, $-20 < E_O - S_O \leq -2$.

Adding the inequalities $1 < E_E - S_E < 10$ and $-20 < E_O - S_O \leq -2$ gives $-19 < (E_E - S_E) + (E_O - S_O) < 8$.
Therefore, $-19 < (E_E + E_O) - (S_E + S_O) < 8$ and $-19 < E - S < 8$. Thus, of the values –16, 6, and 10 for $E - S$, only –16 and 6 are possible.

Note that if T contains 10 repetitions of the decimal 1.8 and 20 repetitions of the decimal 1.9, $S = 10(1.8) + 20(1.9) = 18 + 38 = 56$, $E = 10(2) + 20(1) = 40$, and $E - S = 40 - 56 = -16$.
Also, if T contains 10 repetitions of the decimal 1.2 and 20 repetitions of the decimal 1.1, $S = 10(1.2) + 20(1.1) = 12 + 22 = 34$, $E = 10(2) + 20(1) = 40$, and $E - S = 40 - 34 = 6$.

The correct answer is B.

PS16115

226. If $5 - \frac{6}{x} = x$, then x has how many possible values?

(A) None
(B) One
(C) Two
(D) A finite number greater than two
(E) An infinite number

Algebra Second-degree equations

Solve the equation to determine how many values are possible for x.

$$5 - \frac{6}{x} = x$$
$$5x - 6 = x^2$$
$$0 = x^2 - 5x + 6$$
$$0 = (x - 3)(x - 2)$$
$$x = 3 \text{ or } 2$$

The correct answer is C.

PS16904

227. Seed mixture X is 40 percent ryegrass and 60 percent bluegrass by weight; seed mixture Y is 25 percent ryegrass and 75 percent fescue. If a mixture of X and Y contains 30 percent ryegrass, what percent of the weight of the mixture is X ?

(A) 10%
(B) $33\frac{1}{3}\%$
(C) 40%
(D) 50%
(E) $66\frac{2}{3}\%$

Algebra Applied problems

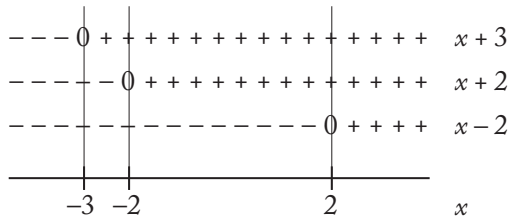
Let X be the amount of seed mixture X in the final mixture, and let Y be the amount of seed mixture Y in the final mixture. The final mixture of X and Y needs to contain 30 percent ryegrass seed, so any other kinds of grass seed are irrelevant to the solution to this problem. The information about the ryegrass percentages for X, Y, and the final mixture can be expressed in the following equation and solved for X.

$$0.40X + 0.25Y = 0.30(X + Y)$$

$0.40X + 0.25Y = 0.30X + 0.30Y$	distribute the 0.30 on the right side
$0.10X = 0.05Y$	subtract $0.30X$ and $0.25Y$ from both sides
$X = 0.5Y$	divide both sides by 0.10

Using this, the percent of the weight of the combined mixture $(X+Y)$ that is X is

$$\frac{X}{X+Y}=\frac{0.5Y}{0.5Y+Y}=\frac{0.5Y}{1.5Y}=\frac{0.5}{1.5}=0.33\overline{3}=33\frac{1}{3}\%$$



The correct answer is B.

PS14203

228. How many of the integers that satisfy the inequality $\frac{(x+2)(x+3)}{x-2}\geq 0$ are less than 5 ?

(A) 1
(B) 2
(C) 3
(D) 4
(E) 5

Algebra Inequalities

Pictorially, the number line above shows the algebraic signs of the expressions $(x+3)$, $(x+2)$, and $(x-2)$. For example, $x+3$ is 0 when $x=-3$, $x+3$ is negative when $x<-3$, and $x+3$ is positive when $x>-3$. The expression $\frac{(x+2)(x+3)}{x-2}$ will be positive in the intervals of the number line where the number of minus signs is even. Therefore $\frac{(x+2)(x+3)}{x-2}$ is positive for values of x such that $-3<x<-2$ and for values of x such that $x>2$. The only integer values of x in these intervals that are also less than 5 are 3 and 4.

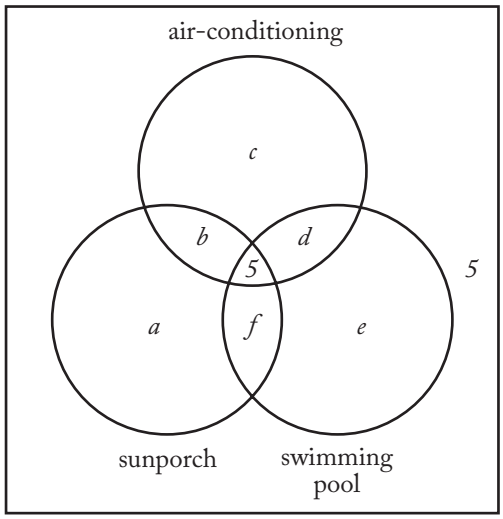
Also, $\frac{(x+2)(x+3)}{x-2}$ will be zero if and only if $(x+2)(x+3)=0$, which has two integer solutions less than 5, namely, $x=-2$ and $x=-3$.

Therefore, there are four integers less than 5 that satisfy $\frac{(x+2)(x+3)}{x-2}\geq 0$ and those integers are -3, -2, 3, and 4.

Alternatively, $\frac{(x+2)(x+3)}{x-2}$ will be zero if and only if $(x+2)(x+3)=0$, which has two integer solutions less than 5, namely, $x=-2$ and $x=-3$.

Also, $\frac{(x+2)(x+3)}{x-2}$ will be positive if $(x+2)(x+3)$ and $x-2$ are both positive or both negative, and for no other values of x. On the one hand, $(x+2)(x+3)$ will be positive when $x+2$ and $x+3$ are both positive, which will be the case when $x>-2$ and $x>-3$ and thus when $x>-2$. On the other hand, $(x+2)(x+3)$ will be positive when $x+2$ and $x+3$ are both negative, which will be the case when $x<-2$ and $x<-3$ and thus when $x<-3$. So, $(x+2)(x+3)$ will be positive when $x<-3$ or $x>-2$. (This result can also be deduced from the fact that the graph of $y=(x+2)(x+3)$ is a parabola with x-intercepts $(-2,0)$ and $(-3,0)$ that opens upward.) Since $x-2$ will be positive when $x>2$, it follows that $(x+2)(x+3)$ and $x-2$ are both positive when $x>2$, which includes exactly two integer values less than 5, namely, $x=3$ and $x=4$. There are no integer values of x such that $(x+2)(x+3)$ and $x-2$ are both negative, since $(x+2)(x+3)$ is negative if and only if x lies between -3 and -2 and there are no integers between -3 and -2. Therefore, there are exactly 4 integer values of x less than 5 such that $\frac{(x+2)(x+3)}{x-2}\geq 0$.

Two of the values, $x=-2$ and $x=-3$, arise from solutions to $\frac{(x+2)(x+3)}{x-2}=0$, and two of the values, $x=3$ and $x=4$, arise from solutions to $\frac{(x+2)(x+3)}{x-2}>0$.



The correct answer is D.

PS07712

229. Of the 150 houses in a certain development, 60 percent have air-conditioning, 50 percent have a sunporch, and 30 percent have a swimming pool. If 5 of the houses have all three of these amenities and 5 have none of them, how many of the houses have exactly two of these amenities?

(A) 10
(B) 45
(C) 50
(D) 55
(E) 65

Arithmetic Sets

Since 60% of the 150 houses have air-conditioning, $b + c + d + 5 = 0.6(150) = 90$, so $b + c + d = 85$ (i). Similarly, since 50% have a sunporch, $a + b + f + 5 = 0.5(150) = 75$, so $a + b + f = 70$ (ii). Likewise, since 30% have a swimming pool, $d + e + f + 5 = 0.3(150) = 45$, so $d + e + f = 40$ (iii). Adding equations (i), (ii), and (iii) gives $(b + c + d) + (a + b + f) + (d + e + f) = 195$, or $a + 2b + c + 2d + e + 2f = 195$ (iv). But $a + b + c + d + e + f + 5 + 5 = 150$, or $a + b + c + d + e + f = 140$ (v). Subtracting equation (v) from equation (iv) gives $b + d + f = 55$, so 55 houses have exactly two of the amenities.

The correct answer is D.

PS08886

230. The value of $\frac{2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}}{5}$ is how many times the value of $2^{(-17)}$?

(A) $\frac{3}{2}$
(B) $\frac{5}{2}$
(C) 3
(D) 4
(E) 5

Arithmetic Negative exponents

If the value of $\frac{2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}}{5}$ is x times the value of 2^{-17}, then

$$x\left(2^{-17}\right) = \frac{2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}}{5}$$

$$x = \frac{\frac{2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}}{5}}{2^{-17}}$$

$$= \frac{2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}}{5} \times 2^{17}$$

$$= \frac{\left(2^{-14} + 2^{-15} + 2^{-16} + 2^{-17}\right) \times 2^{17}}{5}$$

$$= \frac{2^{-14+17} + 2^{-15+17} + 2^{-16+17} + 2^{-17+17}}{5}$$

$$= \frac{2^3 + 2^2 + 2^1 + 2^0}{5}$$

$$= \frac{8 + 4 + 2 + 1}{5}$$

$$= 3$$

The correct answer is C.

6.0 Data Sufficiency

6.0 Data Sufficiency

Data sufficiency questions appear in the Quantitative Reasoning section of the GMAT® exam. Multiple-choice data sufficiency questions are intermingled with problem solving questions throughout the section. You will have 62 minutes to complete the Quantitative Reasoning section of the GMAT exam, or about 2 minutes to answer each question. These questions require knowledge of the following topics:

- Arithmetic
- Elementary algebra
- Commonly known concepts of geometry

Data sufficiency questions are designed to measure your ability to analyze a quantitative problem, recognize which given information is relevant, and determine at what point there is sufficient information to solve a problem. In these questions, you are to classify each problem according to the five fixed answer choices, rather than find a solution to the problem.

Each data sufficiency question consists of a question, often accompanied by some initial information, and two statements, labeled (1) and (2), which contain additional information. You must decide whether the information in each statement is sufficient to answer the question or—if neither statement provides enough information—whether the information in the two statements together is sufficient. It is also possible that the statements, in combination, do not give enough information to answer the question.

Begin by reading the initial information and the question carefully. Next, consider the first statement. Does the information provided by the first statement enable you to answer the question? Go on to the second statement. Try to ignore the information given in the first statement when you consider whether the second statement provides information that, by itself, allows you to answer the question. Now you should be able to say, for each statement, whether it is sufficient to determine the answer.

Next, consider the two statements in tandem. Do they, together, enable you to answer the question?

Look again at your answer choices. Select the one that most accurately reflects whether the statements provide the information required to answer the question.

6.1 Test-Taking Strategies

1. Do not waste valuable time solving a problem.

You only need to determine whether sufficient information is given to solve it.

2. Consider each statement separately.

First, decide whether each statement alone gives sufficient information to solve the problem. Be sure to disregard the information given in statement (1) when you evaluate the information given in statement (2). If either, or both, of the statements give(s) sufficient information to solve the problem, select the answer corresponding to the description of which statement(s) give(s) sufficient information to solve the problem.

3. Judge the statements in tandem if neither statement is sufficient by itself.

It is possible that the two statements together do not provide sufficient information. Once you decide, select the answer corresponding to the description of whether the statements together give sufficient information to solve the problem.

4. Answer the question asked.

For example, if the question asks, "What is the value of y?" for an answer statement to be sufficient, you must be able to find one and only one value for y. Being able to determine minimum or maximum values for an answer (e.g., $y = x + 2$) is not sufficient, because such answers constitute a range of values rather than the specific value of y.

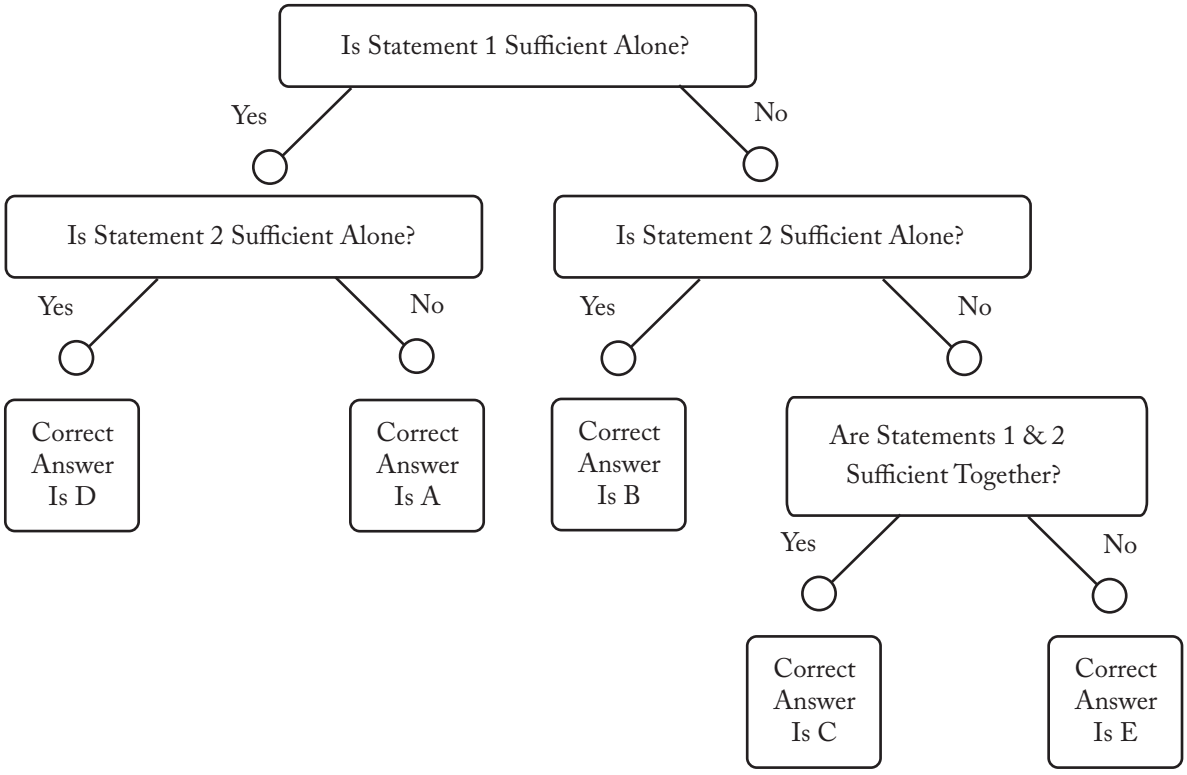
5. Be very careful not to make unwarranted assumptions based on the images represented.

Figures are not necessarily drawn to scale; they are generalized figures showing little more than intersecting line segments and the relationships of points, angles, and regions. For example, if a figure described as a rectangle looks like a square, do *not* conclude that it is actually a square just by looking at the figure.

If statement 1 is sufficient, then the answer must be **A or D.**

If statement 2 is not sufficient, then the answer must be **A.**

If statement 2 is sufficient, then the answer must be **D.**



If statement 1 is not sufficient, then the answer must be **B, C, or E.**

If statement 2 is sufficient, then the answer must be **B.**

If statement 2 is not sufficient, then the answer must be **C or E.**

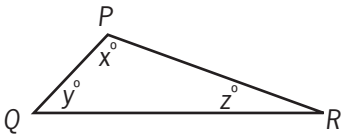
If both statements together are sufficient, then the answer must be **C.**

If both statements together are still not sufficient, then the answer must be **E.**

6.2 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

To register for the GMAT exam go to www.mba.com



6.3 Practice Questions

Each data sufficiency problem consists of a question and two statements, labeled (1) and (2), which contain certain data. Using these data and your knowledge of mathematics and everyday facts (such as the number of days in July or the meaning of the word *counterclockwise*), decide whether the data given are sufficient for answering the question and then indicate one of the following answer choices:

A Statement (1) ALONE is sufficient, but statement (2) alone is not sufficient.
B Statement (2) ALONE is sufficient, but statement (1) alone is not sufficient.
C BOTH statements TOGETHER are sufficient, but NEITHER statement ALONE is sufficient.
D EACH statement ALONE is sufficient.
E Statements (1) and (2) TOGETHER are NOT sufficient.

Note: In data sufficiency problems that ask for the value of a quantity, the data given in the statements are sufficient only when it is possible to determine exactly one numerical value for the quantity.

Example:

In, ΔPQR what is the value of x ?

(1) $PQ = PR$

(2) $y = 40$

Explanation: According to statement (1) $PQ = PR$; therefore, ΔPQR is isosceles and $y = z$. Since $x + y + z = 180$, it follows that $x + 2y = 180$. Since statement (1) does not give a value for y, you cannot answer the question using statement (1) alone. According to statement (2), $y = 40$; therefore, $x + z = 140$. Since statement (2) does not give a value for z, you cannot answer the question using statement (2) alone. Using both statements together, since $x + 2y = 180$ and the value of y is given, you can find the value of x. Therefore, BOTH statements (1) and (2) TOGETHER are sufficient to answer the questions, but NEITHER statement ALONE is sufficient.

Numbers: All numbers used are real numbers.

Figures:

- **Figures conform to the information given in the question, but will not necessarily conform to the additional information given in statements (1) and (2).**
- **Lines shown as straight are straight, and lines that appear jagged are also straight.**
- **The positions of points, angles, regions, etc., exist in the order shown, and angle measures are greater than zero.**
- **All figures lie in a plane unless otherwise indicated.**

*DS02562

231. What is the number of pages of a certain journal article?

(1) The size of each page is $5\frac{1}{2}$ inches by 8 inches.

(2) The average (arithmetic mean) number of words per page is 250.

DS10471

232. If a certain vase contains only roses and tulips, how many tulips are there in the vase?

(1) The number of roses in the vase is 4 times the number of tulips in the vase.

(2) There is a total of 20 flowers in the vase.

DS03802

233. The cost of 10 pounds of apples and 2 pounds of grapes was \$12. What was the cost per pound of apples?

(1) The cost per pound of grapes was \$2.

(2) The cost of 2 pounds of apples was less than the cost of 1 pound of grapes.

DS05863

234. What was the median annual salary for the employees at Company X last year?

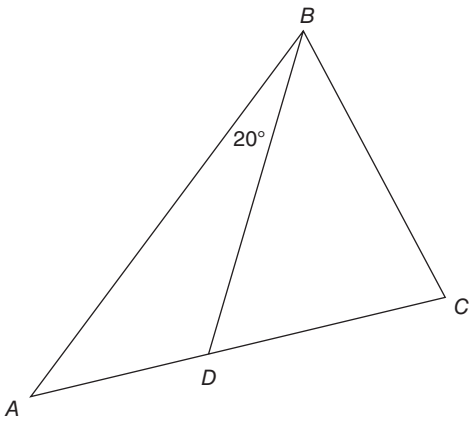
(1) Last year there were 29 employees at Company X.

(2) Last year 12 employees at Company X had an annual salary of \$24,000.

DS03422

235. How many basic units of currency X are equivalent to 250 basic units of currency Y ?

(1) 100 basic units of currency X are equivalent to 625 basic units of currency Y.



(2) 2,000 basic units of currency X are equivalent to 12,500 basic units of currency Y.

DS12265

236. A company bought 3 printers and 1 scanner. What was the price of the scanner?

(1) The total price of the printers and the scanner was \$1,300.

(2) The price of each printer was 4 times the price of the scanner.

DS17639

237. In the figure above, point D is on $\overline{AC}$. What is the degree measure of $\angle BAC$?

(1) The measure of $\angle BDC$ is 60°.

(2) The degree measure of $\angle BAC$ is less than the degree measure of $\angle BCD$.

DS07822

238. Each of the 256 solid-colored marbles in a box is either blue, green, or purple. What is the ratio of the number of blue marbles to the number of purple marbles in the box?

(1) The number of green marbles in the box is 4 times the number of blue marbles in the box.

(2) There are 192 green marbles in the box.

DS15940

239. A certain mixture of paint requires blue, yellow, and red paints in ratios of 2:3:1, respectively, and no other ingredients. If there are ample quantities of the blue and red paints available, is there enough of the yellow paint available to make the desired amount of the mixture?

(1) Exactly 20 quarts of the mixture are needed.

(2) Exactly 10 quarts of the yellow paint are available.

DS05338

240. The research funds of a certain company were divided among three departments, X, Y, and Z. Which one of the three departments received the greatest proportion of the research funds?

(1) The research funds received by departments X and Y were in the ratio 3 to 5, respectively.

(2) The research funds received by departments X and Z were in the ratio 2 to 1, respectively.

*These numbers correlate with the online test bank question number. See the GMAT Official Online Index in the back of this book.

DS03138

241. In a certain class, some students donated cans of food to a local food bank. What was the average (arithmetic mean) number of cans donated per student in the class?

(1) The students donated a total of 56 cans of food.

(2) The total number of cans donated was 40 greater than the total number of students in the class.

DS00254

242. Each of the n employees at a certain company has a different annual salary. What is the median of the annual salaries of the n employees?

(1) When the annual salaries of the n employees are listed in increasing order, the median is the 15th salary.

(2) The sum of the annual salaries of the n employees is $913,500.

DS10687

243. In a recent town election, what was the ratio of the number of votes in favor of a certain proposal to the number of votes against the proposal?

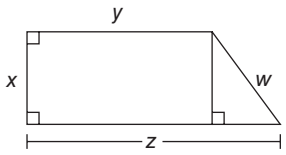
(1) There were 60 more votes in favor of the proposal than against the proposal.

(2) There were 240 votes in favor of the proposal.

DS02541

244. How many men are in a certain company's vanpool program?

(1) The ratio of men to women in the program is 3 to 2.



(2) The men and women in the program fill 6 vans.

DS08054

245. Each of the marbles in a jar is either red or white or blue. If one marble is to be selected at random from the jar, what is the probability that the marble will be blue?

(1) There are a total of 24 marbles in the jar, 8 of which are red.

(2) The probability that the marble selected will be white is $\frac{1}{2}$.

DS04594

246. In the figure above, what is the value of z?

(1) $x = y = 1$

(2) $w = 2$

DS04630

247. What is the value of 10 percent of y?

(1) 5 percent of y is 60.

(2) y is 80 percent of 1,500.

DS12062

248. Last semester, Professor K taught two classes, A and B. Each student in class A handed in 7 assignments, and each student in class B handed in 5 assignments. How many students were in class A?

(1) The students in both classes combined handed in a total of 85 assignments.

(2) There were 10 students in class B.

DS06802

249. Was the amount of John's heating bill for February greater than it was for January?

(1) The ratio of the amount of John's heating bill for February to that for January was $\frac{26}{25}$.

(2) The sum of the amounts of John's heating bills for January and February was $183.60.

DS06662

250. If sequence S has 120 terms, what is the 105th term of S?

(1) The first term of S is –8.

(2) Each term of S after the first term is 10 more than the preceding term.

DS00858

251. Machine R and machine S work at their respective constant rates. How much time does it take machine R, working alone, to complete a certain job?

(1) The amount of time that it takes machine S, working alone, to complete the job is $\frac{3}{4}$ the amount of time that it takes machine R, working alone, to complete the job.

(2) Machine R and machine S, working together, take 12 minutes to complete the job.

DS06065

252. If $u > 0$ and $v > 0$, which is greater, u^v or v^u ?

(1) $u = 1$

(2) $v > 2$

DS00660

253. What was the range of the selling prices of the 30 wallets sold by a certain store yesterday?

(1) $\frac{1}{3}$ of the wallets had a selling price of \$24 each.

(2) The lowest selling price of the wallets was $\frac{1}{3}$ the highest selling price of the wallets.

DS08723

254. Three houses are being sold through a real estate agent. What is the asking price for the house with the second-largest asking price?

(1) The difference between the greatest and the least asking price is \$130,000.

(2) The difference between the two greater asking prices is \$85,000.

DS04605

255. If $a + b + c = 12$, what is the value of b ?

(1) $a + b = 8$

(2) $b + c = 6$

DS11254

256. Is $rw = 0$?

(1) $-6 < r < 5$

(2) $6 < w < 10$

DS06633

257. Is $x = \frac{1}{y}$?

(1) $xy = 1$

(2) $\frac{1}{xy} = 1$

DS07949

258. How many people in a group of 50 own neither a fax machine nor a laser printer?

(1) The total number of people in the group who own a fax machine or a laser printer or both is less than 50.

(2) The total number of people in the group who own both a fax machine and a laser printer is 15.

DS06475

259. What is the value of w^{-2} ?

(1) $w^{-1} = \frac{1}{2}$

(2) $w^3 = 8$

DS07839

260. A certain investment earned a fixed rate of 4 percent interest per year, compounded annually, for five years. The interest earned for the third year of the investment was how many dollars greater than that for the first year?

(1) The amount of the investment at the beginning of the second year was \$4,160.00.

(2) The amount of the investment at the beginning of the third year was \$4,326.40.

DS06397

261. What is the circumference of circle C ?

(1) The radius of circle C is 2π.

(2) The center of circle C is located at point (7,8) in the xy-plane.

DS07813

262. What is the value of t ?

(1) $s + t = 6 + s$

(2) $t^3 = 216$

DS11109

263. For a certain car repair, the total charge consisted of a charge for parts, a charge for labor, and a 6 percent sales tax on both the charge for parts and the charge for labor. If the charge for parts, excluding sales tax, was \$50.00, what was the total charge for the repair?

(1) The sales tax on the charge for labor was \$9.60.

(2) The total sales tax was \$12.60.

DS06905

264. George has a total of B books in his library, 25 of which are hardcover fiction books. What is the value of B ?

(1) 40 of the B books are fiction and the rest are nonfiction.

(2) 60 of the B books are hardcovers and the rest are paperbacks.

DS12031

265. Is $w + h^4$ positive?

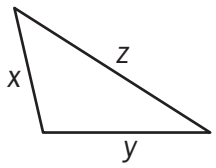
(1) h is positive.

(2) w is positive.

DS15377

266. If a is a 3-digit integer and b is a 3-digit integer, is the units digit of the product of a and b greater than 5 ?

(1) The units digit of a is 4.



(2) The units digit of b is 7.

DS02450

267. In each of the last five years, Company K donated p percent of its annual profits to a certain scholarship fund. Did Company K donate more than \$10,000 to the scholarship fund last year?

(1) Two years ago, Company K had annual profits of \$3 million and donated \$15,000 to the scholarship fund.

(2) Last year, Company K had annual profits of \$2.5 million.

DS06901

268. Is the area of the triangular region above less than 20 ?

(1) $x^2 + y^2 \neq z^2$

(2) $x + y < 13$

DS04366

269. A, B, C, and D are points on a line. If C is the midpoint of line segment AB and if D is the midpoint of line segment CB, is the length of line segment DB greater than 5 ?

(1) The length of line segment AC is greater than 8.

(2) The length of line segment CD is greater than 6.

DS11805

270. The people in a line waiting to buy tickets to a show are standing one behind the other. Adam and Beth are among the people in the line, and Beth is standing behind Adam with a number of people between them. If the number of people in front of Adam plus the number of people behind Beth is 18, how many people in the line are behind Beth?

(1) There are a total of 32 people in the line.

(2) 23 people in the line are behind Adam.

DS08730

271. Square $ABCD$ is inscribed in circle O. What is the area of square region $ABCD$?

(1) The area of circular region O is 64π.

(2) The circumference of circle O is 16π.

DS12533

272. Lines k and m are parallel to each other. Is the slope of line k positive?

(1) Line k passes through the point (3,2).

(2) Line m passes through the point (–3,2).

DS19520

273. In cross section, a tunnel that carries one lane of one-way traffic is a semicircle with radius 4.2 m. Is the tunnel large enough to accommodate the truck that is approaching the entrance to the tunnel?

(1) The maximum width of the truck is 2.4 m.

(2) The maximum height of the truck is 4 m.

DS13122

274. In a certain group of 50 people, how many are doctors who have a law degree?

(1) In the group, 36 people are doctors.

(2) In the group, 18 people have a law degree.

DS01544

275. Of a group of 50 households, how many have at least one cat or at least one dog, but not both?

(1) The number of households that have at least one cat and at least one dog is 4.

(2) The number of households that have no cats and no dogs is 14.

DS02441

276. Robin invested a total of \$12,000 in two investments, X and Y, so that the investments earned the same amount of simple annual interest. How many dollars did Robin invest in investment Y ?

(1) Investment X paid 3 percent simple annual interest, and investment Y paid 6 percent simple annual interest.

(2) Robin invested more than \$1,000 in investment X.

DS03999

277. In a real estate office that employs n salespeople, f of them are females and x of the females are new employees. What is the value of n?

(1) If an employee were randomly selected from the n employees, the probability of selecting a female would be $\frac{2}{3}$.

(2) If an employee were randomly selected from the f female employees, the probability of selecting a new employee would be $\frac{1}{2}$.

DS09315

278. Is $\frac{x+1}{y+1} > \frac{x}{y}$?

(1) $0 < x < y$

(2) $xy > 0$

DS01216

279. Do at least 60 percent of the students in Pat's class walk to school?

(1) At least 60 percent of the female students in Pat's class walk to school.

(2) The number of students in Pat's class who walk to school is twice the number of students who do not walk to school.

DS03628

280. A certain plumber charges \$92 for each job completed in 4 hours or less and \$23 per hour for each job completed in more than 4 hours. If it took the plumber a total of 7 hours to complete two separate jobs, what was the total amount charged by the plumber for the two jobs?

(1) The plumber charged \$92 for one of the two jobs.

(2) The plumber charged \$138 for one of the two jobs.

DS02585

281. If x and y are positive numbers, is $\frac{x+1}{y+1} > \frac{x}{y}$?

(1) $x > 1$

(2) $x < y$

DS01619

282. If a and b are positive integers, is $\frac{a}{b} < \frac{9}{11}$?

(1) $\frac{a}{b} < 0.818$

(2) $\frac{b}{a} > 1.223$

DS04536

283. Every object in a box is either a sphere or a cube, and every object in the box is either red or green. How many objects are in the box?

(1) There are six cubes and five green objects in the box.

(2) There are two red spheres in the box.

DS01425

284. If x and y are positive integers, is xy even?

(1) $x^2 + y^2 - 1$ is divisible by 4.

(2) $x + y$ is odd.

DS14502

285. If a and b are integers, is $a + b + 3$ an odd integer?

(1) ab is an odd integer.

(2) $a - b$ is an even integer.

DS08308

286. If x and y are positive integers, what is the value of $\sqrt{x} + \sqrt{y}$?

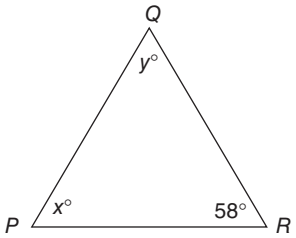
(1) $x + y = 15$

(2) $\sqrt{xy} = 6$

DS05312

287. A certain truck uses $\frac{1}{12} + kv^2$ gallons of fuel per mile when its speed is v miles per hour, where k is a constant. At what speed should the truck travel so that it uses $\frac{5}{12}$ gallon of fuel per mile?

(1) The value of k is $\frac{1}{10{,}800}$.



(2) When the truck travels at 30 miles per hour, it uses $\frac{1}{6}$ gallon of fuel per mile.

DS76502.01

288. If r and s are positive integers, is $r + s$ even?

(1) r is even.

(2) s is even.

DS27502.01

289. In the figure above, ΔPQR has angle measures as shown. Is $x < y$?

(1) $PQ = QR$

(2) $PR > QR$

DS10602.01

290. If S is a set of odd integers and 3 and –1 are in S, is –15 in S?

(1) 5 is in S.

(2) Whenever two numbers are in S, their product is in S.

DS01602.01

291. Is the integer x a 3-digit integer?

(1) x is the square of an integer.

(2) $90 < x < 150$

DS11602.01

292. If the 1st term of a sequence is 0 and the 2nd term is 1, is the 5th term 2?

(1) Each odd-numbered term is either 0 or 2.

(2) The 3rd term is 2.

DS21602.01

293. Is the sum of four particular integers even?

(1) Two of the integers are odd and two are even.

(2) The average (arithmetic mean) of the four integers is an integer.

DS70602.01

294. If a school district paid a total of \$35 per desk for x desks and a total of \$30 per table for y tables, what was the total amount that the district paid for these desks and tables?

(1) The total amount the district paid for the y tables was \$900.

(2) $x = 90$, and the total amount the district paid for the x desks was 3.5 times the total amount the district paid for the y tables.

DS90602.01

295. Three children inherited a total of X dollars. If the oldest child inherited \$7,000 more than the youngest child, and the youngest child inherited \$9,000 less than the middle child, what is the value of X?

(1) The middle child inherited \$27,000.

(2) The youngest child and the middle child together inherited a total of \$45,000.

DS41602.01

296. If $xyz \neq 0$, what is the value of $\frac{x^4z^2}{z^2y^2}$?

(1) $y^2 = x^4$

(2) $x = 2$ and $y = 4$

DS81602.01

297. If a and b are integers, and $b > 0$, does $\frac{a-1}{b+1} = \frac{a}{b}$?

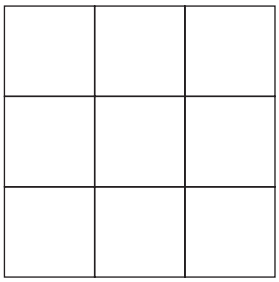
(1) $a = b - 4$

(2) $a = -b$

DS12602.01

298. In a sequence of numbers in which each term is 2 more than the preceding term, what is the fourth term?

(1) The last term is 90.



(2) The first term is 2.

DS32602.01

299. Is the integer p divisible by 5?

(1) p is divisible by 10.

(2) p is not divisible by 15.

DS52602.01

300. The 9 squares above are to be filled with x's and o's, with only one symbol in each square. How many of the squares will contain an x?

(1) More than $\frac{1}{2}$ of the number of squares will contain an o.

(2) Each of the 4 corner squares will contain an x.

DS72602.01

301. Is the sum of two integers divisible by 10 ?

(1) One of the integers is even.

(2) One of the integers is a multiple of 5.

DS22602.01

302. Is x an integer?

(1) $x^3 = 8$

(2) $x = \sqrt{4}$

DS42602.01

303. If a building has 6,000 square meters of floor space, how many offices are in the building?

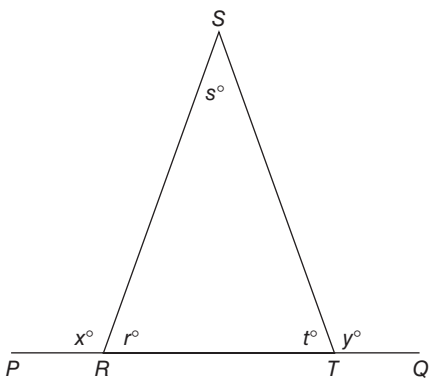
(1) Exactly $\frac{1}{4}$ of the floor space is not used for offices.

(2) There are exactly 20 executive offices and each of these occupies 3 times as much floor space as the average for all of the remaining offices.

DS43602.01

304. If p, r, and s are consecutive integers in ascending order and x is the average (arithmetic mean) of the three integers, what is the value of x ?

(1) Twice x is equal to the sum of p, r, and s.



(2) The sum of p, r, and s is zero.

DS53602.01

305. If m and n are integers, what is the value of $m + n$?

(1) $(x + m)(x + n) = x^2 + 5x + mn$ and $x \neq 0$.

(2) $mn = 4$

DS63602.01

306. In the figure above, RST is a triangle with angle measures as shown and $PRTQ$ is a line segment. What is the value of $x + y$?

(1) $s = 40$

(2) $r = 70$

DS04602.0

307. If R, S, and T are points on a line, and if R is 5 meters from T and 2 meters from S, how far is S from T ?

(1) R is between S and T.

(2) S is to the left of R, and T is to the right of R.

DS65602.01

308. Is n equal to zero?

(1) The product of n and some nonzero number is 0.

(2) The sum of n and 0 is 0.

DS45602.01

309. On a map, $\frac{1}{2}$ inch represents 100 miles. According to this map, how many miles is City X from City Y ?

(1) City X is 3 inches from City Y on the map.

(2) Cities X and Y are each 300 miles from City Z.

DS07502.01

310. What is the remainder when the positive integer n is divided by 5 ?

(1) When n is divided by 3, the quotient is 4 and the remainder is 1.

(2) When n is divided by 4, the remainder is 1.

DS37502.01

311. If r and s are positive numbers and θ is one of the operations, +, –, ×, or ÷, which operation is θ ?

(1) If $r = s$, then $r \,\theta\, s = 0$.

(2) If $r \neq s$, then $r \,\theta\, s \neq s \,\theta\, r$.

DS57502.01

312. In any sequence of n nonzero numbers, a pair of consecutive terms with opposite signs represents a sign change. For example, the sequence –2, 3, –4, 5 has three sign changes. Does the sequence of nonzero numbers s_1, s_2, s_3, . . . , s_n have an even number of sign changes?

(1) $s_k = (-1)^k$ for all positive integers k from 1 to n.

(2) n is odd.

DS86502.01

313. Jack picked 76 apples. Of these, he sold $4y$ apples to Juanita and $3t$ apples to Sylvia. If he kept the remaining apples, how many apples did he keep? (t and y are positive integers.)

(1) $y \geq 15$ and $t = 2$

(2) $y = 17$

DS47502.01

314. What number is 6 more than $x + y$?

(1) y is 3 less than x.

(2) y is twice x.

DS08502.01

315. The total price of 5 pounds of regular coffee and 3 pounds of decaffeinated coffee was $21.50. What was the price of the 5 pounds of regular coffee?

(1) If the price of the 5 pounds of regular coffee had been reduced 10 percent and the price of the 3 pounds of decaffeinated coffee had been reduced 20 percent, the total price would have been $18.45.

(2) The price of the 5 pounds of regular coffee was $3.50 more than the price of the 3 pounds of decaffeinated coffee.

DS38502.01

316. If a and b are integers, is $a^5 < 4^b$?

(1) $a^3 = -27$

(2) $b^2 = 16$

DS28502.01

317. If each side of parallelogram P has length 1, what is the area of P?

(1) One angle of P measures 45 degrees.

(2) The altitude of P is $\frac{\sqrt{2}}{2}$.

DS49502.01

318. If x is an integer greater than 0, what is the remainder when x is divided by 4?

(1) The remainder is 3 when $x + 1$ is divided by 4.

(2) The remainder is 0 when $2x$ is divided by 4.

DS00602.01

319. A certain painting job requires a mixture of yellow, green, and white paint. If 12 quarts of paint are needed for the job, how many quarts of green paint are needed?

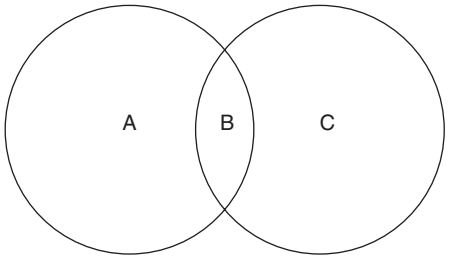
(1) The ratio of the amount of green paint to the amount of yellow and white paint combined needs to be 1 to 3.

(2) The ratio of the amount of yellow paint to the amount of green paint needs to be 3 to 2.

DS69502.01

320. Is the average (arithmetic mean) of the numbers x, y, and z greater than z?

(1) $z - x < y - z$



(2) $x < z < y$

DS30602.01

321. Is the point Q on the circle with center C?

(1) R is a point on the circle and the distance from Q to R is equal to the distance from Q to C.

(2) S is a point on the circle and the distance from Q to S is equal to the distance from S to C.

DS59502.01

322. In the figure above, if A, B, and C are the areas, respectively, of the three nonoverlapping regions formed by the intersection of two circles of equal area, what is the value of $B + C$?

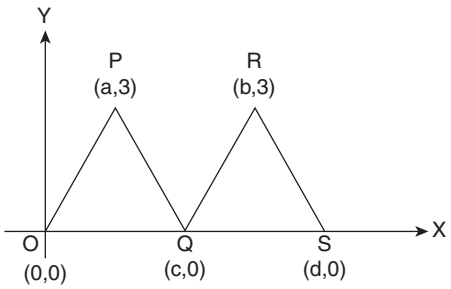
(1) $A + 2B + C = 24$

(2) $A + C = 18$ and $B = 3$

DS61602.01

323. A company produces a certain toy in only 2 sizes, small or large, and in only 2 colors, red or green. If, for each size, there are equal numbers of red and green toys in a certain production lot, what fraction of the total number of green toys is large?

(1) In the production lot, 400 of the small toys are green.



(2) In the production lot, $\frac{2}{3}$ of the toys produced are small.

DS51602.01

324. Is quadrilateral $PQRS$ a parallelogram?

(1) Adjacent sides PQ and QR have the same length.

(2) Adjacent sides RS and SP have the same length.

DS71602.01

325. In the figure above, the vertices of ΔOPQ and ΔQRS have coordinates as indicated. Do ΔOPQ and ΔQRS have equal areas?

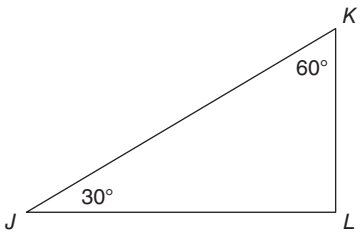
(1) $b = 2a$

(2) $d = 2c$

DS92602.01

326. After the first two terms in a sequence of numbers, each term in the sequence is formed by adding all of the preceding terms. Is 12 the fifth term in the sequence?

(1) The sum of the first 3 terms in the sequence is 6.



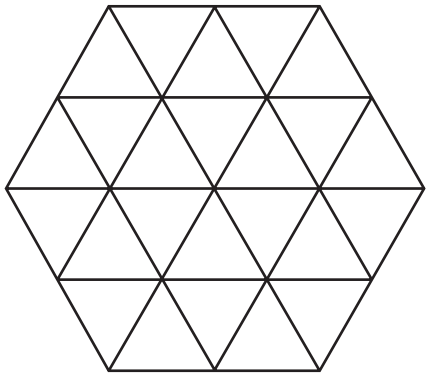
(2) The fourth term in the sequence is 6.

DS13602.01

327. Jones has worked at Firm *X* twice as many years as Green, and Green has worked at Firm *X* four years longer than Smith. How many years has Green worked at Firm *X* ?

(1) Jones has worked at Firm *X* 9 years longer than Smith.

(2) Green has worked at Firm *X* 5 years less than Jones.

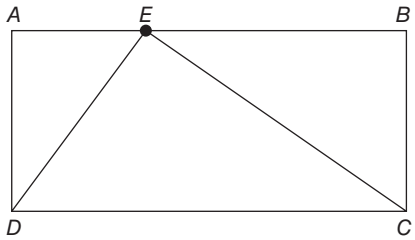


DS83602.01

328. In ΔJKL shown above, what is the length of segment *JL* ?

(1) $JK = 10$

(2) $KL = 5$



DS24602.01

329. A six-sided mosaic contains 24 triangular pieces of tile of the same size and shape, as shown in the figure above. If the sections of tile fit together perfectly, how many square centimeters of tile are in the mosaic?

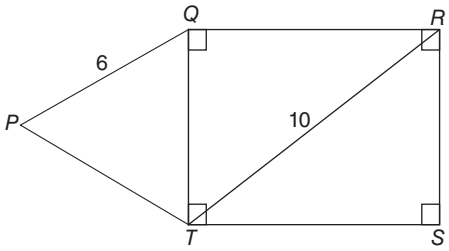
(1) Each side of each triangular piece of tile is 9 centimeters long.

(2) The mosaic can be put inside a rectangular frame that is 40 centimeters wide.

DS34602.01

330. If, in the figure above, *ABCD* is a rectangular region, what is the value of the ratio $\frac{\text{area of } \Delta EDA}{\text{area of } \Delta EBC}$?

(1) $AD = 4$



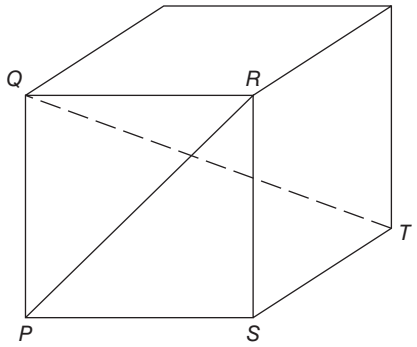
(2) $AE = 2$ and $EB = 4$

DS64602.01

331. A noncompressible ball in the shape of a sphere is to be passed through a square opening in a board. What is the perimeter of the opening?

(1) The radius of the ball is equal to 2 inches.

(2) The square opening is the smallest square opening through which the ball will fit.



DS74602.01

332. In the figure above, what is the area of region *PQRST*?

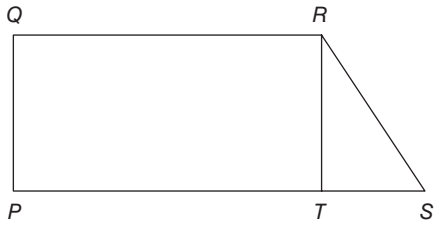
(1) $PQ = RS$

(2) $PT = QT$

DS84602.01

333. The figure above represents a box that has the shape of a cube. What is the volume of the box?

(1) $PR = 10$ cm



(2) $QT = 5\sqrt{6}$ cm

DS94602.01

334. If x and y are the lengths of the legs of a right triangle, what is the value of xy?

(1) The hypotenuse of the triangle is $10\sqrt{2}$.

(2) The area of the triangular region is 50.

DS75602.01

335. In the figure above, *PQRT* is a rectangle. What is the length of segment *PQ*?

(1) The area of region *PQRS* is 39 and $TS = 6$.

(2) The area of region *PQRT* is 30 and $QR = 10$.

DS08420

336. On June 1, Mary paid Omar $360 for rent and utilities for the month of June. Mary moved out early, and Omar refunded the money she paid for utilities, but not for rent, for the days in June after she moved out. How many dollars did Omar refund to Mary?

(1) Mary moved out on June 24.

(2) The amount Mary paid for utilities was less than $\frac{1}{5}$ the amount Mary paid for rent.

DS04057

337. If $x = 2t$ and $y = \frac{t}{3}$, what is the value of $x^2 - y^2$?

(1) $t^2 - 3 = 6$

(2) $t^3 = -27$

DS02939

338. The 10 students in a history class recently took an examination. What was the maximum score on the examination?

(1) The mean of the scores was 75.

(2) The standard deviation of the scores was 5.

DS01341

339. Last school year, each of the 200 students at a certain high school attended the school for the entire year. If there were 8 cultural performances at the school during the last school year, what was the average (arithmetic mean) number of students attending each cultural performance?

(1) Last school year, each student attended at least one cultural performance.

(2) Last school year, the average number of cultural performances attended per student was 4.

DS14569

340. A clothing manufacturer makes jackets that are wool or cotton or a combination of wool and cotton. The manufacturer has 3,000 pounds of wool and 2,000 pounds of cotton on hand. Is this enough wool and cotton to make at least 1,000 jackets?

(1) Each wool jacket requires 4 pounds of wool, and no cotton.

(2) Each cotton jacket requires 6 pounds of cotton, and no wool.

DS05377

341. If n is an integer, what is the greatest common divisor of 12 and n?

(1) The product of 12 and n is 432.

(2) The greatest common divisor of 24 and n is 12.

DS11287

342. Each month, Jim receives a base salary plus a 10 percent commission on the price of each car he sells that month. If Jim sold 15 cars last month, what was the total amount of base salary and commissions that Jim received that month?

(1) Last month, Jim's base salary was $3,000.

(2) Last month, Jim sold 3 cars whose prices totaled $60,000 and 5 cars whose prices totaled $120,000.

DS17615

343. If x is a positive integer greater than 1, what is the value of x?

(1) $2x$ is a common factor of 18 and 24.

(2) x is a factor of 6.

DS13408

344. By what percentage was the price of a certain television set discounted for a sale?

(1) The price of the television set before it was discounted for the sale was 25 percent greater than the discounted price.

(2) The price of the television set was discounted by $60 for the sale.

DS05049

345. Jack wants to use a circular rug on his rectangular office floor to cover two small circular stains, each less than $\frac{\pi}{100}$ square feet in area and each more than 3 feet from the nearest wall. Can the rug be placed to cover both stains?

(1) Jack's rug covers an area of 9π square feet.

(2) The centers of the stains are less than 4 feet apart.

DS24751.01

346. A paint mixture was formed by mixing exactly 3 colors of paint. By volume, the mixture was x% blue paint, y% green paint, and z% red paint. If exactly 1 gallon of blue paint and 3 gallons of red paint were used, how many gallons of green paint were used?

(1) $x = y$

(2) $z = 60$

×	a	b	c
a	d	e	f
b	e	g	h
c	f	h	j

DS05772

347. In the multiplication table above, each letter represents an integer. What is the value of c?

(1) $c = f$

(2) $h \neq 0$

DS09379

348. If n is an integer, is $(0.1)^n$ greater than $(10)^n$?

(1) $n > -10$

(2) $n < 10$

DS19199

349. For a basic monthly fee of F yen (¥F), Naoko's first cell phone plan allowed him to use a maximum of 420 minutes on calls during the month. Then, for each of x additional minutes he used on calls, he was charged ¥M, making his total charge for the month ¥T, where $T = F + xM$. What is the value of F?

(1) Naoko used 450 minutes on calls the first month and the total charge for the month was ¥13,755.

(2) Naoko used 400 minutes on calls the second month and the total charge for the month was ¥13,125.

DS13949

350. Is the sum of the prices of the 3 books that Shana bought less than $48?

(1) The price of the most expensive of the 3 books that Shana bought is less than $17.

(2) The price of the least expensive of the 3 books that Shana bought is exactly $3 less than the price of the second most expensive book.

DS12943

351. If r and t are three-digit positive integers, is r greater than t?

(1) The tens digit of r is greater than each of the three digits of t.

(2) The tens digit of r is less than either of the other two digits of r.

DS14788

352. Is the product of two positive integers x and y divisible by the sum of x and y ?

(1) $x = y$

(2) $x = 2$

DS24571.01

353. If a and b are constants, is the expression $\frac{x+b}{\sqrt{x+a}}$ defined for $x = -2$?

(1) $a = 5$

(2) $b = 6$

DS05330

354. A company makes and sells two products, P and Q. The costs per unit of making and selling P and Q are \$8.00 and \$9.50, respectively, and the selling prices per unit of P and Q are \$10.00 and \$13.00, respectively. In one month the company sold a total of 834 units of these products. Was the total profit on these items more than \$2,000.00 ?

(1) During the month, more units of P than units of Q were sold.

(2) During the month, at least 100 units of Q were sold.

DS03045

355. Jill has applied for a job with each of two different companies. What is the probability that she will get job offers from both companies?

(1) The probability that she will get a job offer from neither company is 0.3.

(2) The probability that she will get a job offer from exactly one of the two companies is 0.5.

DS01257

356. A conveyor belt moves bottles at a constant speed of 120 centimeters per second. If the conveyor belt moves a bottle from a loading dock to an unloading dock, is the distance that the conveyor belt moves the bottle less than 90 meters? (1 meter = 100 centimeters)

(1) It takes the conveyor belt less than 1.2 minutes to move the bottle from the loading dock to the unloading dock.

(2) It takes the conveyor belt more than 1.1 minutes to move the bottle from the loading dock to the unloading dock.

DS02706

357. If x, y, and z are positive numbers, what is the value of the average (arithmetic mean) of x and z ?

(1) $x - y = y - z$

(2) $x^2 - y^2 = z$

DS04428

358. The rectangular rug shown in the figure above has an accent border. What is the area of the portion of the rug that excludes the border?

(1) The perimeter of the rug is 44 feet.

(2) The width of the border on all sides is 1 foot.

DS06537

359. If $y \neq 2xz$, what is the value of $\frac{2xz + yz}{2xz - y}$?

(1) $2x + y = 3$

(2) $z = 2$

DS04852

360. In the parallelogram shown, what is the value of x ?

(1) $y = 2x$

(2) $x + z = 120$

DS06096

361. In a product test of a common cold remedy, x percent of the patients tested experienced side effects from the use of the drug and y percent experienced relief of cold symptoms. What percent of the patients tested experienced both side effects and relief of cold symptoms?

(1) Of the 1,000 patients tested, 15 percent experienced neither side effects nor relief of cold symptoms.

(2) Of the patients tested, 30 percent experienced relief of cold symptoms without side effects.

DS13588

362. Is $x < 5$?

(1) $x^2 > 5$

(2) $x^2 + x < 5$

DS72951.01

363. Three roommates—Bela, Gyorgy, and Janos—together saved money for a trip. The amount that Bela saved was equal to 8% of his monthly income. The amount that Gyorgy saved was exactly $\frac{1}{3}$ of the total amount saved by all 3 roommates. What was the total amount saved for the trip by all 3 roommates?

(1) Bela had a monthly income of $2,000.

(2) Janos saved 1.5 times as much for the trip as Bela.

DS11257

364. Is zp negative?

(1) $pz^4 < 0$

(2) $p + z^4 = 14$

DS04157

365. In each game of a certain tournament, a contestant either loses 3 points or gains 2 points. If Pat had 100 points at the beginning of the tournament, how many games did Pat play in the tournament?

(1) At the end of the tournament, Pat had 104 points.

(2) Pat played fewer than 10 games.

DS05631

366. At the beginning of the year, the Finance Committee and the Planning Committee of a certain company each had n members, and no one was a member of both committees. At the end of the year, 5 members left the Finance Committee and 3 members left the Planning Committee. How many members did the Finance Committee have at the beginning of the year?

(1) The ratio of the total number of members who left at the end of the year to the total number of members at the beginning of the year was 1:6.

(2) At the end of the year, 21 members remained on the Planning Committee.

DS15561

367. If $xy \neq 0$, is $x^3 + y^3 > 0$?

(1) $x + y > 0$

(2) $xy > 0$

DS13541

368. Max purchased a guitar for a total of $624, which consisted of the price of the guitar and the sales tax. Was the sales tax rate greater than 3 percent?

(1) The price of the guitar that Max purchased was less than $602.

(2) The sales tax for the guitar that Max purchased was less than $30.

DS75271.01

369. A pentagon with 5 sides of equal length and 5 interior angles of equal measure is inscribed in a circle. Is the perimeter of the pentagon greater than 26 centimeters?

(1) The area of the circle is 16π square centimeters.

(2) The length of each diagonal of the pentagon is less than 8 centimeters.

DS13841.01

370. If $2.00X$ and $3.00Y$ are 2 numbers in decimal form with thousandths digits X and Y, is $3(2.00X) > 2(3.00Y)$?

(1) $3X < 2Y$

(2) $X < Y - 3$

DS50351.01

371. The length, width, and height of a rectangular box, in centimeters, are L, W, and H. If the volume of this box is V cubic centimeters and the total area of the 6 sides of this box is A square centimeters, what is the value of $\frac{V}{A}$?

(1) At least 2 of L, W, and H are equal to 5.

(2) L, W, and H all have the same value.

DS06027

372. What is the sum of a certain pair of consecutive odd integers?

(1) At least one of the integers is negative.

(2) At least one of the integers is positive.

DS45530.01

373. Is $x = y$?

(1) $\frac{2x}{3} - \frac{y}{3} = \frac{1}{3}$

(2) $\frac{x}{4} - \frac{y}{4} = 0$

DS08197

374. The sum of 4 different odd integers is 64. What is the value of the greatest of these integers?

(1) The integers are consecutive odd numbers.

(2) Of these integers, the greatest is 6 more than the least.

DS13130

375. Was the number of books sold at Bookstore X last week greater than the number of books sold at Bookstore Y last week?

(1) Last week, more than 1,000 books were sold at Bookstore X on Saturday and fewer than 1,000 books were sold at Bookstore Y on Saturday.

(2) Last week, less than 20 percent of the books sold at Bookstore X were sold on Saturday and more than 20 percent of the books sold at Bookstore Y were sold on Saturday.

DS47651.01

376. A rectangular solid has length, width, and height of L cm, W cm, and H cm, respectively. If these dimensions are increased by x%, y%, and z%, respectively, what is the percentage increase in the total surface area of the solid?

(1) L, W, and H are in the ratios of 5:3:4.

(2) $x = 5$, $y = 10$, $z = 20$

DS08091.01

377. A certain list, L, contains a total of n numbers, not necessarily distinct, that are arranged in increasing order. If L_1 is the list consisting of the first n_1 numbers in L and L_2 is the list consisting of the last n_2 numbers in L, is 17 a mode for L ?

(1) 17 is a mode for L_1 and 17 is a mode for L_2.

(2) $n_1 + n_2 = n$

DS04540

378. From May 1 to May 30 in the same year, the balance in a checking account increased. What was the balance in the checking account on May 30 ?

(1) If, during this period of time, the increase in the balance in the checking account had been 12 percent, then the balance in the account on May 30 would have been \$504.

(2) During this period of time, the increase in the balance in the checking account was 8 percent.

DS08365

379. A merchant discounted the sale price of a coat and the sale price of a sweater. Which of the two articles of clothing was discounted by the greater dollar amount?

(1) The percent discount on the coat was 2 percentage points greater than the percent discount on the sweater.

(2) Before the discounts, the sale price of the coat was \$10 less than the sale price of the sweater.

DS01168

380. If the positive integer n is added to each of the integers 69, 94, and 121, what is the value of n ?

(1) $69 + n$ and $94 + n$ are the squares of two consecutive integers.

(2) $94 + n$ and $121 + n$ are the squares of two consecutive integers.

DS71521.01

381. If a merchant purchased a sofa from a manufacturer for \$400 and then sold it, what was the selling price of the sofa?

(1) The selling price of the sofa was greater than 140 percent of the purchase price.

(2) The merchant's gross profit from the purchase and sale of the sofa was $\frac{1}{3}$ of the selling price.

DS05269

382. Last year, in a certain housing development, the average (arithmetic mean) price of 20 new houses was \$160,000. Did more than 9 of the 20 houses have prices that were less than the average price last year?

(1) Last year the greatest price of one of the 20 houses was \$219,000.

(2) Last year the median of the prices of the 20 houses was \$150,000.

DS14527

383. For a certain city's library, the average cost of purchasing each new book is \$28. The library receives \$15,000 from the city each year; the library also receives a bonus of \$2,000 if the total number of items checked out over the course of the year exceeds 5,000. Did the library receive the bonus last year?

(1) The library purchased an average of 50 new books each month last year and received enough money from the city to cover this cost.

(2) The lowest number of items checked out in one month was 459.

DS89950.01

7, 9, 6, 4, 5, x

384. If x is a number in the list above, what is the median of the list?

(1) $x > 7$

(2) The median of the list equals the arithmetic mean of the list.

DS15045

385. Three dice, each of which has its 6 sides numbered 1 through 6, are tossed. The sum of the 3 numbers that are facing up is 12. Is at least 1 of these numbers 5 ?

(1) None of the 3 numbers that are facing up is divisible by 3.

(2) Of the numbers that are facing up, 2, but not all 3, are equal.

DS01324

386. On the number line, point R has coordinate r and point T has coordinate t. Is $t < 0$?

(1) $-1 < r < 0$

(2) The distance between R and T is equal to r^2.

DS06659

387. S is a set of points in the plane. How many distinct triangles can be drawn that have three of the points in S as vertices?

(1) The number of distinct points in S is 5.

(2) No three of the points in S are collinear.

DS16078

388. Stores L and M each sell a certain product at a different regular price. If both stores discount their regular price of the product, is the discount price at Store M less than the discount price at Store L ?

(1) At Store L the discount price is 10 percent less than the regular price; at Store M the discount price is 15 percent less than the regular price.

(2) At Store L the discount price is \$5 less than the regular store price; at Store M the discount price is \$6 less than the regular price.

DS16529

389. If d denotes a decimal, is $d \geq 0.5$?

(1) When d is rounded to the nearest tenth, the result is 0.5.

(2) When d is rounded to the nearest integer, the result is 1.

DS08231

390. In the two-digit integers 3■ and 2▲, the symbols ■ and ▲ represent different digits, and the product (3■)(2▲) is equal to 864. What digit does ■ represent?

(1) The sum of ■ and ▲ is 10.

(2) The product of ■ and ▲ is 24.

DS07262

391. Two points, N and Q (not shown), lie to the right of point M on line ℓ. What is the ratio of the length of QN to the length of MQ ?

(1) Twice the length of MN is 3 times the length of MQ.

(2) Point Q is between points M and N.

DS05639

392. Did the sum of the prices of three shirts exceed \$60 ?

(1) The price of the most expensive of the shirts exceeded \$30.

(2) The price of the least expensive of the shirts exceeded \$20.

DS03057

393. What is the total number of coins that Bert and Claire have?

(1) Bert has 50 percent more coins than Claire.

(2) The total number of coins that Bert and Claire have is between 21 and 28.

DS05668

394. A telephone station has x processors, each of which can process a maximum of y calls at any particular time, where x and y are positive integers. If 500 calls are sent to the station at a particular time, can the station process all of the calls?

(1) $x = 600$

(2) $100 < y < 200$

	Price per Flower
Roses	$1.00
Daisies	$0.50

DS07953

395. Kim and Sue each bought some roses and some daisies at the prices shown above. If Kim bought the same total number of roses and daisies as Sue, was the price of Kim's purchase of roses and daisies higher than the price of Sue's purchase of roses and daisies?

(1) Kim bought twice as many daisies as roses.

(2) Kim bought 4 more roses than Sue bought.

DS14406

396. Jazz and blues recordings accounted for 6 percent of the $840 million revenue from the sales of recordings in Country Y in 2000. What was the revenue from the sales of jazz and blues recordings in Country Y in 1998 ?

(1) Jazz and blues recordings accounted for 5 percent of the revenue from the sales of recordings in Country Y in 1998.

(2) The revenue from the sales of jazz and blues recordings in Country Y increased by 40 percent from 1998 to 2000.

DS06315

397. On a certain nonstop trip, Marta averaged x miles per hour for 2 hours and y miles per hour for the remaining 3 hours. What was her average speed, in miles per hour, for the entire trip?

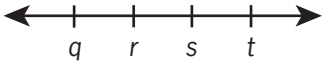
(1) $2x + 3y = 280$

(2) $y = x + 10$

DS12730

398. If x is a positive integer, what is the value of $\sqrt{x+24} - \sqrt{x}$?

(1) $\sqrt{x}$ is an integer.



(2) $\sqrt{x+24}$ is an integer.

DS13982

399. A tank is filled with gasoline to a depth of exactly 2 feet. The tank is a cylinder resting horizontally on its side, with its circular ends oriented vertically. The inside of the tank is exactly 6 feet long. What is the volume of the gasoline in the tank?

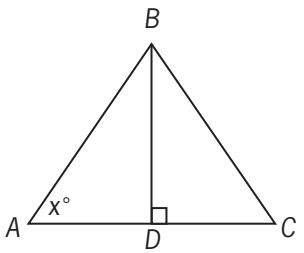
(1) The inside of the tank is exactly 4 feet in diameter.

(2) The top surface of the gasoline forms a rectangle that has an area of 24 square feet.

DS16197

400. Of the four numbers represented on the number line above, is r closest to zero?

(1) $q = -s$



(2) $-t < q$

DS18414

401. A group consisting of several families visited an amusement park where the regular admission fees were ¥5,500 for each adult and ¥4,800 for each child. Because there were at least 10 people in the group, each paid an admission fee that was 10% less than the regular admission fee. How many children were in the group?

(1) The total of the admission fees paid for the adults in the group was ¥29,700.

(2) The total of the admission fees paid for the children in the group was ¥4,860 more than the total of the admission fees paid for the adults in the group.

DS16536

402. What is the area of triangular region ABC above?

(1) The product of BD and AC is 20.

(2) $x = 45$

DS05265

403. In the xy-coordinate plane, is point R equidistant from points (–3,–3) and (1,–3) ?

(1) The x-coordinate of point R is –1.

(2) Point R lies on the line $y = -3$.

DS09603

404. What is the ratio of the average (arithmetic mean) height of students in class X to the average height of students in class Y ?

(1) The average height of the students in class X is 120 centimeters.

(2) The average height of the students in class X and class Y combined is 126 centimeters.

DS04631

405. Is the positive two-digit integer N less than 40 ?

(1) The units digit of N is 6 more than the tens digit.

(2) N is 4 less than 4 times the units digit.

DS06318

406. If $2^{x+y} = 4^8$, what is the value of y ?

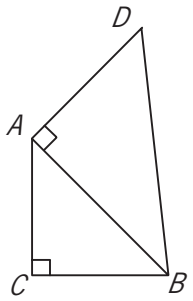
(1) $x^2 = 81$

(2) $x - y = 2$

DS03680

407. Each week a certain salesman is paid a fixed amount equal to \$300, plus a commission equal to 5 percent of the amount of his sales that week over \$1,000. What is the total amount the salesman was paid last week?

(1) The total amount the salesman was paid last week is equal to 10 percent of the amount of his sales last week.



(2) The salesman's sales last week totaled \$5,000.

DS01383

408. At a bakery, all donuts are priced equally and all bagels are priced equally. What is the total price of 5 donuts and 3 bagels at the bakery?

(1) At the bakery, the total price of 10 donuts and 6 bagels is \$12.90.

(2) At the bakery, the price of a donut is \$0.15 less than the price of a bagel.

DS06869

409. In the figure above, is the area of triangular region ABC equal to the area of triangular region DBA ?

(1) $(AC)^2 = 2(AD)^2$

(2) ΔABC is isosceles.

DS08105

410. If r and s are positive integers, can the fraction $\frac{r}{s}$ be expressed as a decimal with only a finite number of nonzero digits?

(1) s is a factor of 100.

(2) r is a factor of 100.

DS16384

411. If $r > 0$ and $s > 0$, is $\frac{r}{s} < \frac{s}{r}$?

(1) $\frac{r}{3s} = \frac{1}{4}$

(2) $s = r + 4$

DS06789

412. If k is an integer such that $56 < k < 66$, what is the value of k ?

(1) If k were divided by 2, the remainder would be 1.

(2) If $k + 1$ were divided by 3, the remainder would be 0.

DS13965

413. If x is a positive integer, then is x prime?

(1) $3x + 1$ is prime.

(2) $5x + 1$ is prime.

$k, n, 12, 6, 17$

DS00172

414. What is the value of n in the list above?

(1) $k < n$

(2) The median of the numbers in the list is 10.

DS07508

415. If x and y are integers, what is the value of $x + y$?

(1) $3 < \frac{x+y}{2} < 4$

(2) $2 < x < y < 5$

DS00764

416. Last year, if Arturo spent a total of \$12,000 on his mortgage payments, real estate taxes, and home insurance, how much did he spend on his real estate taxes?

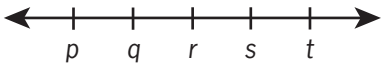
(1) Last year, the total amount that Arturo spent on his real estate taxes and home insurance was $33\frac{1}{3}$ percent of the amount that he spent on his mortgage payments.

(2) Last year, the amount that Arturo spent on his real estate taxes was 20 percent of the total amount he spent on his mortgage payments and home insurance.

DS06038

417. If a, b, c, and d are positive numbers, is $\frac{a}{b} < \frac{c}{d}$?

(1) $0 < \frac{c-a}{d-b}$



(2) $\left(\frac{ad}{bc}\right)^2 < \frac{ad}{bc}$

DS12008

418. Is the number of members of Club X greater than the number of members of Club Y?

(1) Of the members of Club X, 20 percent are also members of Club Y.

(2) Of the members of Club Y, 30 percent are also members of Club X.

DS16361

419. On the number line above, p, q, r, s, and t are five consecutive even integers in increasing order. What is the average (arithmetic mean) of these five integers?

(1) $q + s = 24$

(2) The average (arithmetic mean) of q and r is 11.

DS06657

420. If $\lceil x \rceil$ denotes the least integer greater than or equal to x, is $\lceil x \rceil = 0$?

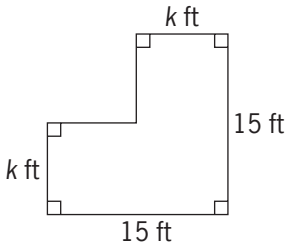
(1) $-1 < x < 1$

(2) $x < 0$

DS12718

421. If x and y are integers, is $x > y$?

(1) $x + y > 0$



(2) $y^x < 0$

DS03046

422. If r and s are the roots of the equation $x^2 + bx + c = 0$, where b and c are constants, is $rs < 0$?

(1) $b < 0$

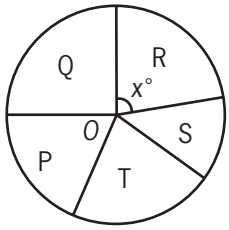
(2) $c < 0$

DS02888

423. The figure above represents an L-shaped garden. What is the value of k?

(1) The area of the garden is 189 square feet.

(2) The perimeter of the garden is 60 feet.



DS01049

424. The only articles of clothing in a certain closet are shirts, dresses, and jackets. The ratio of the number of shirts to the number of dresses to the number of jackets in the closet is 9:4:5, respectively. If there are more than 7 dresses in the closet, what is the total number of articles of clothing in the closet?

(1) The total number of shirts and jackets in the closet is less than 30.

(2) The total number of shirts and dresses in the closet is 26.

TOTAL EXPENSES FOR THE
FIVE DIVISIONS OF COMPANY H

DS16542

425. The figure above represents a circle graph of Company H's total expenses broken down by the expenses for each of its five divisions. If O is the center of the circle and if Company H's total expenses are \$5,400,000, what are the expenses for Division R?

(1) $x = 94$

(2) The total expenses for Divisions S and T are twice as much as the expenses for Division R.

DS13641

426. If x is negative, is $x < -3$?

(1) $x^2 > 9$

(2) $x^3 < -9$

DS04897

427. What is the number of cans that can be packed in a certain carton?

(1) The interior volume of this carton is 2,304 cubic inches.

(2) The exterior of each can is 6 inches high and has a diameter of 4 inches.

r	s	t
u	v	w
x	y	z

DS08301

428. Each of the letters in the table above represents one of the numbers 1, 2, or 3, and each of these numbers occurs exactly once in each row and exactly once in each column. What is the value of r?

(1) $v + z = 6$

(2) $s + t + u + x = 6$

DS00328

429. Material A costs \$3 per kilogram, and Material B costs \$5 per kilogram. If 10 kilograms of Material K consists of x kilograms of Material A and y kilograms of Material B, is $x > y$?

(1) $y > 4$

(2) The cost of the 10 kilograms of Material K is less than \$40.

DS16164

430. At what speed was a train traveling on a trip when it had completed half of the total distance of the trip?

(1) The trip was 460 miles long and took 4 hours to complete.

(2) The train traveled at an average rate of 115 miles per hour on the trip.

DS12047

431. Tom, Jane, and Sue each purchased a new house. The average (arithmetic mean) price of the three houses was \$120,000. What was the median price of the three houses?

(1) The price of Tom's house was \$110,000.

(2) The price of Jane's house was \$120,000.

DS13958

432. What is the value of x if $x^3 < x^2$?

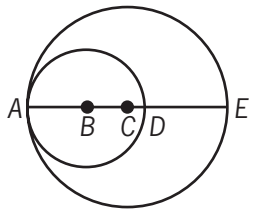
(1) $-2 < x < 2$

(2) x is an integer greater than -2.

DS08451

433. For any integers x and y, $\min(x, y)$ and $\max(x, y)$ denote the minimum and the maximum of x and y, respectively. For example, $\min(5, 2) = 2$ and $\max(5, 2) = 5$. For the integer w, what is the value of $\min(10, w)$?

(1) $w = \max(20, z)$ for some integer z



(2) $w = \max(10, w)$

DS01473

434. A certain bookcase has 2 shelves of books. On the upper shelf, the book with the greatest number of pages has 400 pages. On the lower shelf, the book with the least number of pages has 475 pages. What is the median number of pages for all of the books on the 2 shelves?

(1) There are 25 books on the upper shelf.

(2) There are 24 books on the lower shelf.

DS12070

435. In the figure above, points A, B, C, D, and E lie on a line. A is on both circles, B is the center of the smaller circle, C is the center of the larger circle, D is on the smaller circle, and E is on the larger circle. What is the area of the region inside the larger circle and outside the smaller circle?

(1) $AB = 3$ and $BC = 2$

(2) $CD = 1$ and $DE = 4$

DS08995

436. In planning for a car trip, Joan estimated both the distance of the trip, in miles, and her average speed, in miles per hour. She accurately divided her estimated distance by her estimated average speed to obtain an estimate for the time, in hours, that the trip would take. Was her estimate within 0.5 hour of the actual time that the trip took?

(1) Joan's estimate for the distance was within 5 miles of the actual distance.

(2) Joan's estimate for her average speed was within 10 miles per hour of her actual average speed.

DS12239

437. A certain list consists of 3 different numbers. Does the median of the 3 numbers equal the average (arithmetic mean) of the 3 numbers?

(1) The range of the 3 numbers is equal to twice the difference between the greatest number and the median.

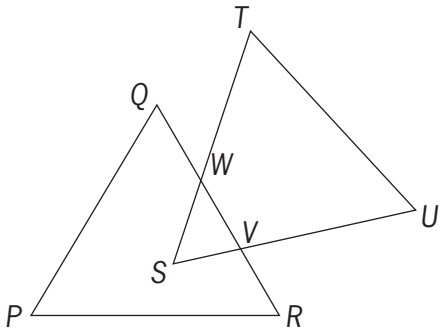
(2) The sum of the 3 numbers is equal to 3 times one of the numbers.

DS12806

438. Line ℓ lies in the xy-plane and does not pass through the origin. What is the slope of line ℓ?

(1) The x-intercept of line ℓ is twice the y-intercept of line ℓ.

(2) The x- and y-intercepts of line ℓ are both positive.



$$y = ax - 5$$
$$y = x + 6$$
$$y = 3x + b$$

DS07713

439. In the xy-plane, the straight-line graphs of the three equations above each contain the point (p,r). If a and b are constants, what is the value of b?

(1) $a = 2$

(2) $r = 17$

DS06861

440. In the figure above, PQR and STU are identical equilateral triangles, and $PQ = 6$. What is the perimeter of polygon $PQWTUVR$?

(1) Triangle SWV has perimeter 9.

(2) VW has length 3.5.

DS09973

441. The range of the numbers in set S is x, and the range of the numbers in set T is y. If all of the numbers in set T are also in set S, is x greater than y?

(1) Set S consists of 7 numbers.

(2) Set T consists of 6 numbers.

DS13857

442. The hypotenuse of a right triangle is 10 cm. What is the perimeter, in centimeters, of the triangle?

(1) The area of the triangle is 25 square centimeters.

(2) The 2 legs of the triangle are of equal length.

Shipment	S1	S2	S3	S4	S5	S6
Fraction of the Total Value of the Six Shipments	$\frac{1}{4}$	$\frac{1}{5}$	$\frac{1}{6}$	$\frac{3}{20}$	$\frac{2}{15}$	$\frac{1}{10}$

DS01427

443. Six shipments of machine parts were shipped from a factory on two trucks, with each shipment entirely on one of the trucks. Each shipment was labeled either S1, S2, S3, S4, S5, or S6. The table shows the value of each shipment as a fraction of the total value of the six shipments. If the shipments on the first truck had a value greater than $\frac{1}{2}$ of the total value of the six shipments, was S3 shipped on the first truck?

(1) S2 and S4 were shipped on the first truck.

(2) S1 and S6 were shipped on the second truck.

DS11723

444. If x, y, and z are three-digit positive integers and if $x = y + z$, is the hundreds digit of x equal to the sum of the hundreds digits of y and z ?

(1) The tens digit of x is equal to the sum of the tens digits of y and z.

(2) The units digit of x is equal to the sum of the units digits of y and z.

	Favorable	Unfavorable	Not Sure
Candidate M	40	20	40
Candidate N	30	35	35

DS05162

445. The table above shows the results of a survey of 100 voters who each responded "Favorable" or "Unfavorable" or "Not Sure" when asked about their impressions of Candidate M and of Candidate N. What was the number of voters who responded "Favorable" for both candidates?

(1) The number of voters who did not respond "Favorable" for either candidate was 40.

(2) The number of voters who responded "Unfavorable" for both candidates was 10.

DS00340

446. A school administrator will assign each student in a group of n students to one of m classrooms. If $3 < m < 13 < n$, is it possible to assign each of the n students to one of the m classrooms so that each classroom has the same number of students assigned to it?

(1) It is possible to assign each of $3n$ students to one of m classrooms so that each classroom has the same number of students assigned to it.

(2) It is possible to assign each of $13n$ students to one of m classrooms so that each classroom has the same number of students assigned to it.

DS07441

447. If q, s, and t are all different numbers, is $q < s < t$?

(1) $t - q = |t - s| + |s - q|$

(2) $t > q$

DS11538

448. What is the median number of employees assigned per project for the projects at Company Z ?

(1) 25 percent of the projects at Company Z have 4 or more employees assigned to each project.

(2) 35 percent of the projects at Company Z have 2 or fewer employees assigned to each project.

DS04409

449. Last year, a certain company began manufacturing product X and sold every unit of product X that it produced. Last year the company's total expenses for manufacturing product X were equal to $100,000 plus 5 percent of the company's total revenue from all units of product X sold. If the company made a profit on product X last year, did the company sell more than 21,000 units of product X last year?

(1) The company's total revenue from the sale of product X last year was greater than $110,000.

(2) For each unit of product X sold last year, the company's revenue was $5.

DS01641

450. Beginning in January of last year, Carl made deposits of $120 into his account on the 15th of each month for several consecutive months and then made withdrawals of $50 from the account on the 15th of each of the remaining months of last year. There were no other transactions in the account last year. If the closing balance of Carl's account for May of last year was $2,600, what was the range of the monthly closing balances of Carl's account last year?

(1) Last year the closing balance of Carl's account for April was less than $2,625.

(2) Last year the closing balance of Carl's account for June was less than $2,675.

DS16368

451. Are all of the numbers in a certain list of 15 numbers equal?

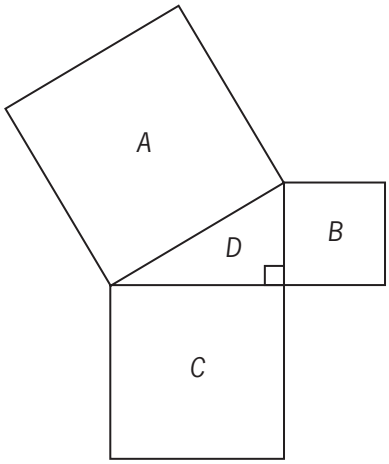
(1) The sum of all the numbers in the list is 60.

(2) The sum of any 3 numbers in the list is 12.

DS16565

452. If the average (arithmetic mean) of six numbers is 75, how many of the numbers are equal to 75 ?

(1) None of the six numbers is less than 75.



(2) None of the six numbers is greater than 75.

DS16188

453. What amount did Jean earn from the commission on her sales in the first half of 1988 ?

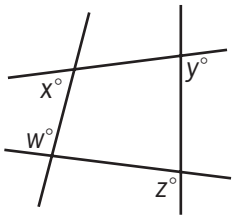
(1) In 1988 Jean's commission was 5 percent of the total amount of her sales.

(2) The amount of Jean's sales in the second half of 1988 averaged $10,000 per month more than in the first half.

DS16572

454. In the figure above, if the area of triangular region D is 4, what is the length of a side of square region A ?

(1) The area of square region B is 9.



(2) The area of square region C is $\frac{64}{9}$.

DS16168

455. If n is a positive integer and $k = 5.1 \times 10^n$, what is the value of k ?

(1) $6{,}000 < k < 500{,}000$

(2) $k^2 = 2.601 \times 10^9$

DS06875

456. What is the value of $x + y$ in the figure above?

(1) $w = 95$

(2) $z = 125$

DS16370

457. If n and k are positive integers, is $\sqrt{n+k} > 2\sqrt{n}$?

(1) $k > 3n$

(2) $n + k > 3n$

DS16589

458. In a certain business, production index p is directly proportional to efficiency index e, which is in turn directly proportional to investment index i. What is p if $i = 70$?

(1) $e = 0.5$ whenever $i = 60$.

(2) $p = 2.0$ whenever $i = 50$.

DS16085

459. If n is a positive integer, what is the tens digit of n ?

(1) The hundreds digit of $10n$ is 6.

(2) The tens digit of $n + 1$ is 7.

DS16204

460. What is the value of $\frac{2t + t - x}{t - x}$?

(1) $\frac{2t}{t - x} = 3$

(2) $t - x = 5$

6.5 Answer Explanations

The following discussion of data sufficiency is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to data sufficiency. The particular questions in this chapter are generally representative of the kinds of data sufficiency questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

*DS02562

231. What is the number of pages of a certain journal article?

(1) The size of each page is $5\frac{1}{2}$ inches by 8 inches.

(2) The average (arithmetic mean) number of words per page is 250.

Arithmetic Applied problems

(1) Given that the size of each page is $5\frac{1}{2}$ inches by 8 inches, it is clearly not possible to determine the number of pages; NOT sufficient.

(2) Given that the average number of words per page is 250, it is not possible to determine the number of pages because nothing is known about the number of words other than the number of words is a positive integer multiple of 250; NOT sufficient.

Taking (1) and (2) together, it is still not possible to determine the number of pages, because the total number of words is not known.

The correct answer is E;
both statements together are still not sufficient.

DS10471

232. If a certain vase contains only roses and tulips, how many tulips are there in the vase?

(1) The number of roses in the vase is 4 times the number of tulips in the vase.

(2) There is a total of 20 flowers in the vase.

Algebra Simultaneous equations

Let R and T, respectively, be the number of roses and tulips in the vase. What is the value of T?

(1) Given that $R = 4T$, it is not possible to determine the value of T. For example, $R = 4$ and $T = 1$ is possible. However, $R = 8$ and $T = 2$ is also possible; NOT sufficient.

(2) Given that $R + T = 20$, it is not possible to determine the value of T. For example, $R = 10$ and $T = 10$ is possible. However, $R = 15$ and $T = 5$ is also possible; NOT sufficient.

Taking (1) and (2) together, substituting $R = 4T$ into $R + T = 20$ gives $4T + T = 20$, or $5T = 20$, or $T = 4$.

The correct answer is C;
both statements together are sufficient.

DS03802

233. The cost of 10 pounds of apples and 2 pounds of grapes was \$12. What was the cost per pound of apples?

(1) The cost per pound of grapes was \$2.

(2) The cost of 2 pounds of apples was less than the cost of 1 pound of grapes.

Algebra Simultaneous equations

Let A be the cost, in dollars per pound, of the apples and let G be the cost, in dollars per pound, of the grapes. It is given that $10A + 2G = 12$. What is the value of A?

(1) Given that $G = 2$, it follows that $10A + 2(2) = 12$, or $10A = 8$, or $A = 0.8$; SUFFICIENT.

(2) Given that $2A < G$, different possible values of A can be found by using $10A + 2G = 12$, or $2G = 12 - 10A$, or $G = 6 - 5A$, and picking values for A, determining the corresponding values for G, and then determining whether the inequality $2A < G$ is true. Thus, the values of A and B could be, respectively, 0.8 and 2, since both

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

$10(0.8) + 2(2) = 8 + 4 = 12$ and $2(0.8) < 2$ are true. On the other hand, the values of A and B could be, respectively, 0.6 and 3, since both $10(0.6) + 2(3) = 6 + 6 = 12$ and $2(0.6) < 3$ are true; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS05863

234. What was the median annual salary for the employees at Company X last year?

(1) Last year there were 29 employees at Company X.

(2) Last year 12 employees at Company X had an annual salary of $24,000.

Arithmetic Statistics

(1) Given that there were 29 employees, the median salary cannot be determined because no information about the salaries is given; NOT sufficient.

(2) Given that there were 12 salaries of $24,000, the median salary cannot be determined. For example, if there were 12 salaries of $24,000 and 17 salaries of $20,000, then the median salary would be $20,000. On the other hand, if there were 12 salaries of $24,000 and 17 salaries of $30,000, then the median salary would be $30,000; NOT sufficient.

Taking (1) and (2) together is still not sufficient because the same examples used in (2) also satisfy (1).

The correct answer is E;
both statements together are still not sufficient.

DS03422

235. How many basic units of currency X are equivalent to 250 basic units of currency Y ?

(1) 100 basic units of currency X are equivalent to 625 basic units of currency Y.

(2) 2,000 basic units of currency X are equivalent to 12,500 basic units of currency Y.

Arithmetic Ratio and proportion

Let x be the number of basic units of currency X that are equivalent to 1 basic unit of currency Y. What is the value of $250x$?

(1) Given that 100 basic units of currency X are equivalent to 625 basic units of currency Y, it follows that $\frac{100}{625}$ basic units of currency X are equivalent to 1 basic unit of currency Y. Therefore, $x = \frac{100}{625}$ and $250x = 250\left(\frac{100}{625}\right)$; SUFFICIENT.

(2) Given that 2,000 basic units of currency X are equivalent to 12,500 basic units of currency Y, it follows that $\frac{2,000}{12,500}$ basic units of currency X are equivalent to 1 basic unit of currency Y. Therefore, $x = \frac{2,000}{12,500}$ and $250x = 250\left(\frac{2,000}{12,500}\right)$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

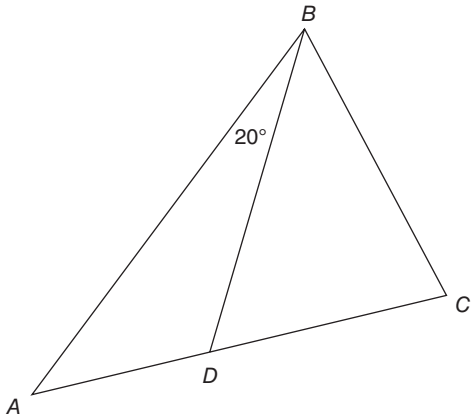
DS12265

236. A company bought 3 printers and 1 scanner. What was the price of the scanner?

(1) The total price of the printers and the scanner was $1,300.

(2) The price of each printer was 4 times the price of the scanner.

Algebra Simultaneous equations



Let P_1, P_2, and P_3 be the prices, in dollars, of the 3 printers and let S be the price, in dollars, of the scanner. What is the value of S ?

(1) Given that $P_1 + P_2 + P_3 + S = 1,300$, it is clear that the value of S cannot be determined; NOT sufficient.

(2) Given that $P_1 = P_2 = P_3 = 4S$, it is possible that $P_1 = P_2 = P_3 = 400$ and $S = 100$. On the other hand, it is also possible that $P_1 = P_2 = P_3 = 800$ and $S = 200$; NOT sufficient.

Taking (1) and (2) together, substituting $P_1 = 4S$, $P_2 = 4S$, and $P_3 = 4S$ into $P_1 + P_2 + P_3 + S = 1,300$ gives $4S + 4S + 4S + S = 1,300$, or $13S = 1,300$, and therefore $S = 100$.

The correct answer is C;
both statements together are sufficient.

DS17639

237. In the figure above, point D is on $\overline{AC}$. What is the degree measure of $\angle BAC$?

(1) The measure of $\angle BDC$ is 60°.

(2) The degree measure of $\angle BAC$ is less than the degree measure of $\angle BCD$.

Geometry Angles

(1) Given that the measure of $\angle BDC$ is 60°, it follows that the measure of $\angle BDA$ is 180° − 60° = 120°. Therefore, since the measures of the angles in a triangle add to 180°, the measure of $\angle BAC$ is 180 − (20° + 120°) = 40°; SUFFICIENT.

(2) Given that the degree measure of $\angle BAC$ is less than the degree measure of $\angle BCD$, when the line segment $\overline{AC}$ rotates a few degrees counterclockwise about point A and point D stays on $\overline{AC}$, then the degree measure of $\angle BAC$ decreases (and the degree measure of $\angle BCD$ increases, and the degree measure of $\angle ABD$ remains 20°). Therefore, the degree measure of $\angle BAC$ can vary; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS07822

238. Each of the 256 solid-colored marbles in a box is either blue, green, or purple. What is the ratio of the number of blue marbles to the number of purple marbles in the box?

(1) The number of green marbles in the box is 4 times the number of blue marbles in the box.

(2) There are 192 green marbles in the box.

Arithmetic Ratio and Proportion

Let B, G, and P be the numbers of marbles, respectively, that are blue, green, and purple. From the given information it follows that $B + G + P = 256$. What is the value of $\frac{B}{P}$?

(1) Given that $G = 4B$, it is possible that $\frac{B}{P} = \frac{1}{251}$ (choose $B = 1$, $G = 4$, and $P = 251$) and it is possible that $\frac{B}{P} = \frac{1}{123}$ (choose $B = 2$, $G = 8$, and $P = 246$); NOT sufficient.

(2) Given that $G = 192$, it is possible that $\frac{B}{P} = \frac{1}{63}$ (choose $B = 1$, $G = 192$, and $P = 63$) and it is possible that $\frac{B}{P} = \frac{1}{31}$ (choose $B = 2$, $G = 192$, and $P = 62$); NOT sufficient.

Taking (1) and (2) together, it follows from $G = 4B$ and $G = 192$ that $192 = 4B$, or $B = 48$. Thus, $B + G + P = 256$ becomes $48 + 192 + P = 256$, and so $P = 256 - 48 - 192 = 16$. Therefore, $\frac{B}{P} = \frac{48}{16}$.

The correct answer is C;
both statements together are sufficient.

DS15940

239. A certain mixture of paint requires blue, yellow, and red paints in ratios of 2:3:1, respectively, and no other ingredients. If there are ample quantities of the blue and red paints available, is there enough of the yellow paint available to make the desired amount of the mixture?

(1) Exactly 20 quarts of the mixture are needed.

(2) Exactly 10 quarts of the yellow paint are available.

Arithmetic Ratios

Given that the mixture requires blue paint, yellow paint, and red paint in the ratios 2:3:1, it follows that $\frac{3}{2 + 3 + 1} = \frac{1}{2}$ of the mixture will be yellow paint. Determining whether there is enough yellow paint available depends on how much of the mixture is needed and how much yellow paint is available.

(1) This indicates that exactly 20 quarts of the paint mixture are needed, so $\frac{1}{2}(20) = 10$ quarts of yellow paint are needed. However, there is no information about how much yellow paint is available; NOT sufficient.

(2) This indicates that exactly 10 quarts of yellow paint are available, but there is no information about how much of the mixture or how much yellow paint is needed; NOT sufficient.

Taking (1) and (2) together, 10 quarts of yellow paint are needed and 10 quarts are available.

The correct answer is C;
both statements together are sufficient.

DS05338

240. The research funds of a certain company were divided among three departments, X, Y, and Z. Which one of the three departments received the greatest proportion of the research funds?

(1) The research funds received by departments X and Y were in the ratio 3 to 5, respectively.

(2) The research funds received by departments X and Z were in the ratio 2 to 1, respectively.

Algebra Order; Ratio

Let x, y, and z be the research funds, respectively, of departments X, Y, and Z. Which of $\frac{x}{x+y+z}$, $\frac{y}{x+y+z}$, or $\frac{z}{x+y+z}$ is the greatest, or respectively, which of x, y, or z is the greatest?

(1) Given that $\frac{x}{y}=\frac{3}{5}$ where x and y are positive, it follows that $x<y$. However, nothing is known about z other than z is positive, so it cannot be determined which of x, y, or z is the greatest; NOT sufficient.

(2) Given that $\frac{x}{z}=\frac{2}{1}$ where x and z are positive, it follows that $z<x$. However, nothing is known about y other than y is positive, so it cannot be determined which of x, y, or z is the greatest; NOT sufficient.

Taking (1) and (2) together, it follows from (1) that $x<y$ and it follows from (2) that $z<x$. Therefore, $z<x<y$ and y is the greatest.

The correct answer is C;
both statements together are sufficient.

DS03138

241. In a certain class, some students donated cans of food to a local food bank. What was the average (arithmetic mean) number of cans donated per student in the class?

(1) The students donated a total of 56 cans of food.

(2) The total number of cans donated was 40 greater than the total number of students in the class.

Arithmetic Statistics

Let s be the number of students and let c be the number of cans. What is the value of $\frac{c}{s}$?

(1) Given that $c=56$, it is not possible to determine the value of $\frac{c}{s}$ because nothing is known about the value of s other than s is a positive integer; NOT sufficient.

(2) Given that $c=40+s$, it is not possible to determine the value of $\frac{c}{s}$. For example, if $c=40$ and $s=40$, then $\frac{c}{s}=1$. However, if $c=80$ and $s=40$, then $\frac{c}{s}=2$; NOT sufficient.

Taking (1) and (2) together, it follows that $40+s=c=56$, or $s=56-40=16$. Therefore, $c=56$, $s=16$, and $\frac{c}{s}=\frac{56}{16}$.

The correct answer is C;
both statements together are sufficient.

DS00254

242. Each of the n employees at a certain company has a different annual salary. What is the median of the annual salaries of the n employees?

(1) When the annual salaries of the n employees are listed in increasing order, the median is the 15th salary.

(2) The sum of the annual salaries of the n employees is $913,500.

Arithmetic Statistics

(1) Given that the median is the 15th salary when the n salaries, which are all different from each other, are listed in increasing order, it follows that n is an odd number. This is because if there were an even number of salaries, where S_k and S_{k+1} are the two

middle salaries, then the median salary would be midway between the different numbers S_k and S_{k+1}, and thus the median salary could not be any of the salaries. Also, since the 15th salary is the middle salary, there must be a total of 29 salaries, as indicated below.

first 14 salaries	15th salary	last 14 salaries
$S_1, S_2, \ldots, S_{14}$	S_{15}	$S_{16}, S_{17}, \ldots, S_{29}$

However, no explicit values are given for any of the salaries, and therefore the median of the 29 salaries cannot be determined; NOT sufficient.

(2) Given that the sum of the annual salaries is \$913,500, the median salary cannot be determined. For example, since \$913,500 = 21 × \$43,500, there could be 21 different salaries each greater than \$40,000, and so the median could be greater than \$40,000. However, since \$913,500 = 29 × \$31,500, there could be 29 different salaries each less than \$35,000, and so the median could be less than \$35,000; NOT sufficient.

Taking (1) and (2) together, it follows from (1) that there are 29 salaries and it follows from (2) that the sum of the salaries is \$913,500. However, the median salary still cannot be determined. For example, let the first 13 salaries be \$31,500 – \$1,400, \$31,500 – \$1,300, . . ., and \$31,500 – \$200; and let the last 13 salaries be \$31,500 + \$200, \$31,500 + \$300, . . ., and \$31,500 + \$1,400. Then the 3 middle salaries (the 14th, 15th, and 16th salaries) could be \$31,500 – \$100, \$31,500, and \$31,500 + \$100, and thus the median salary could be \$31,500. However, the 3 middle salaries (the 14th, 15th, and 16th salaries) could be \$31,500 – \$100, \$31,500 + \$40, and \$31,500 + \$60, and thus the median salary could be \$31,540.

The correct answer is E;
both statements together are still not sufficient.

DS10687

243. In a recent town election, what was the ratio of the number of votes in favor of a certain proposal to the number of votes against the proposal?

(1) There were 60 more votes in favor of the proposal than against the proposal.

(2) There were 240 votes in favor of the proposal.

Arithmetic Ratio and Proportion

Let F be the number of votes in favor and let A be the number of votes against. What is the value of $\frac{F}{A}$?

(1) Given that $F = 60 + A$, it is possible that $\frac{F}{A} = 2$ (choose $F = 120$ and $A = 60$) and it is possible that $\frac{F}{A} = 3$ (choose $F = 90$ and $A = 30$); NOT sufficient.

(2) Given that $F = 240$, it is possible that $\frac{F}{A} = 1$ (choose $F = 240$ and $A = 240$) and it is possible that $\frac{F}{A} = 2$ (choose $F = 240$ and $A = 120$); NOT sufficient.

Taking (1) and (2) together, substitute $F = 240$ into $F = 60 + A$ to get $240 = 60 + A$, or $A = 180$. Therefore, $\frac{F}{A} = \frac{240}{180}$.

The correct answer is C;
both statements together are sufficient.

DS02541

244. How many men are in a certain company's vanpool program?

(1) The ratio of men to women in the program is 3 to 2.

(2) The men and women in the program fill 6 vans.

Arithmetic Applied problems

Let m be the number of men in the program and let w be the number of women in the program. What is the value of m?

(1) Given that $\frac{m}{w} = \frac{3}{2}$, it is not possible to determine the value of m. For example, if $m = 3$ and $w = 2$, then $\frac{m}{w} = \frac{3}{2}$ is true; and if $m = 6$ and $w = 4$, then $\frac{m}{w} = \frac{3}{2}$ is true; NOT sufficient.

(2) Given that the men and women fill 6 vans, it is clearly not possible to determine the value of m; NOT sufficient.

Taking (1) and (2) together, it is still not possible to determine the value of m. Even if it is assumed that each van has the same maximum capacity, it is possible that $m = 18$ and $w = 12$ (a total of 30 people, which would fill 6 vans each having a capacity of 5 people) and it is possible that $m = 36$ and $w = 24$ (a total of 60 people, which would fill 6 vans each having a capacity of 10 people).

The correct answer is E;
both statements together are still not sufficient.

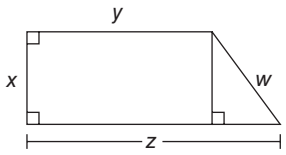
DS08054

245. Each of the marbles in a jar is either red or white or blue. If one marble is to be selected at random from the jar, what is the probability that the marble will be blue?

(1) There are a total of 24 marbles in the jar, 8 of which are red.

(2) The probability that the marble selected will be white is $\frac{1}{2}$.

Arithmetic Probability



This problem can be solved by determining the number of marbles in the jar and the number that are blue.

(1) This indicates that there are 24 marbles in the jar and 8 of them are red. The number of marbles that are blue is not known; NOT sufficient.

(2) This indicates neither the number of marbles in the jar nor the number that are blue; NOT sufficient.

Taking (1) and (2) together, there are 24 marbles in the jar, 8 of which are red and $\frac{1}{2}(24) = 12$ of which are white. Then, the number of blue marbles is $24 - 8 - 12 = 4$, and the probability that one marble selected at random will be blue is $\frac{4}{24} = \frac{1}{6}$.

The correct answer is C;
both statements together are sufficient.

DS04594

246. In the figure above, what is the value of z?

(1) $x = y = 1$

(2) $w = 2$

Geometry Triangles; Pythagorean theorem

(1) Given that $x = y = 1$, the length of the base of the triangle to the right, which equals $z - y = z - 1$, can vary, and thus the value of z can vary; NOT sufficient.

(2) Given that $w = 2$, all dimensions of the rectangle to the left can vary, and thus the value of z can vary; NOT sufficient.

Taking (1) and (2) together, then $z = y + (z - y) = 1 + (z - 1)$, and the value of $z - 1$ can be determined by applying the Pythagorean theorem to the triangle that has hypotenuse of length $w = 2$ and sides of lengths $x = 1$ and $z - 1$. Specifically, the Pythagorean theorem gives $1^2 + (z - 1)^2 = 2^2$, or $1 + (z - 1)^2 = 4$, and solving this equation gives $(z - 1)^2 = 3$, or $z - 1 = \sqrt{3}$, or $z = 1 + \sqrt{3}$.

The correct answer is C;
both statements together are sufficient.

DS04630

247. What is the value of 10 percent of y?

(1) 5 percent of y is 60.

(2) y is 80 percent of 1,500.

Arithmetic Percents

This problem can be solved by determining the value of y.

(1) If 5 percent of y is 60, then $0.05y = 60$ and $y = \frac{60}{0.05} = 1,200$; SUFFICIENT.

(2) If y is 80 percent of 1,500, then $y = (0.80)(1,500) = 1,200$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS12062

248. Last semester, Professor K taught two classes, A and B. Each student in class A handed in 7 assignments, and each student in class B handed in 5 assignments. How many students were in class A ?

(1) The students in both classes combined handed in a total of 85 assignments.

(2) There were 10 students in class B.

Algebra Simultaneous equations

Let a be the number of students in class A and let b be the number of students in class B. Then the students in class A handed in a total of $7a$ assignments and the students in class B handed in a total of $5b$ assignments. What is the value of a ?

(1) Given that $7a + 5b = 85$, it is not possible to determine the value of a. For example, it is possible that $a = 5$ and $b = 10$, since $7(5) + 5(10) = 85$. On the other hand, it is also possible that $a = 10$ and $b = 3$, since $7(10) + 5(3) = 85$; NOT sufficient.

(2) Given that $b = 10$, it is not possible to determine the value of a. For example, it is possible that $a = b = 10$; and it is also possible that $a = 5$ and $b = 10$; NOT sufficient.

Taking (1) and (2) together, substituting $b = 10$ into $7a + 5b = 85$ gives $7a + 5(10) = 85$, or $7a = 35$, or $a = 5$.

The correct answer is C;
both statements together are sufficient.

DS06802

249. Was the amount of John's heating bill for February greater than it was for January?

(1) The ratio of the amount of John's heating bill for February to that for January was $\frac{26}{25}$.

(2) The sum of the amounts of John's heating bills for January and February was $183.60.

Arithmetic Applied problems

Let J and F be the amounts, respectively and in dollars, of the heating bills for January and February. Is $F > J$?

(1) Given that $\frac{F}{J} = \frac{26}{25}$, it follows that $\frac{F}{J} > 1$. Multiplying both sides of the inequality $\frac{F}{J} > 1$ by the positive quantity J gives $F > J$; SUFFICIENT.

(2) Given that $J + F = 183.60$, it is not possible to determine whether $F > J$. For example, if $J = 83.60$ and $F = 100.00$, then $J + F = 183.60$ and $F > J$. On the other hand, if $J = 100.00$ and $F = 83.60$, then $J + F = 183.60$ and $F < J$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS06662

250. If sequence S has 120 terms, what is the 105th term of S ?

(1) The first term of S is –8.

(2) Each term of S after the first term is 10 more than the preceding term.

Arithmetic Sequences

This problem can be solved by determining at least one term of the sequence and how each term is derived from the preceding term(s).

(1) This indicates that the first term of the sequence is –8, but does not indicate how subsequent terms are derived; NOT sufficient.

(2) This indicates how each term is derived from the preceding term, but does not indicate at least one term of the sequence; NOT sufficient.

Taking (1) and (2) together, the first term is –8 and each subsequent term is 10 more than the preceding term from which the 105th term can be determined.

The correct answer is C;
both statements together are sufficient.

DS00858

251. Machine R and machine S work at their respective constant rates. How much time does it take machine R, working alone, to complete a certain job?

(1) The amount of time that it takes machine S, working alone, to complete the job is $\frac{3}{4}$ the amount of time that it takes machine R, working alone, to complete the job.

(2) Machine R and machine S, working together, take 12 minutes to complete the job.

Algebra Applied problems

For machines R and S, let r_R and r_S be their respective rates, in jobs per minute; and let t_R and t_S be their respective times, in minutes, to complete 1 job. Then $1 = r_R t_R$ (i.e. 1 job is completed by machine R working at rate r_R for t_R minutes) and $1 = r_S t_S$ (i.e. 1 job is completed by machine S working at rate r_S for t_S minutes). What is the value of t_R?

(1) Given that $t_S = \frac{3}{4} t_R$, the value of t_R cannot be determined because nothing else is known about t_R and t_S other than they are positive real numbers; NOT sufficient.

(2) Given that 1 job is completed by machines R and S working together at a combined rate $r_R + r_S$ for 12 minutes, or $1 = (r_R + r_S)(12)$, the value of t_R cannot be determined. For example, if $r_R = \frac{1}{24}$ and $r_S = \frac{1}{24}$, then $1 = (r_R + r_S)(12)$ is true and from $1 = r_R t_R$, or $1 = \left(\frac{1}{24}\right) t_R$, it follows that $t_R = 24$. However, if $r_R = \frac{1}{48}$ and $r_S = \frac{3}{48}$, then $1 = (r_R + r_S)(12)$ is true and from $1 = r_R t_R$, or $1 = \left(\frac{1}{48}\right) t_R$, it follows that $t_R = 48$; NOT sufficient.

Taking (1) and (2) together, from (1) it follows that $t_S = \frac{3}{4} t_R$ and from (2) it follows that $(r_R + r_S)(12) = 1$, or $r_R + r_S = \frac{1}{12}$. Using $r_R = \frac{1}{t_R}$ and $r_S = \frac{1}{t_S}$ (obtained from $1 = r_R t_R$ and $1 = r_S t_S$), the last equality in the previous sentence becomes $\frac{1}{t_R} + \frac{1}{t_S} = \frac{1}{12}$. Substituting $t_S = \frac{3}{4} t_R$ into $\frac{1}{t_R} + \frac{1}{t_S} = \frac{1}{12}$ gives $\frac{1}{t_R} + \frac{1}{(3/4)t_R} = \frac{1}{12}$, or $\frac{1}{t_R} + \frac{4}{3} \times \frac{1}{t_R} = \frac{1}{12}$, or $\frac{7}{3} \times \frac{1}{t_R} = \frac{1}{12}$. Therefore, $\frac{1}{t_R} = \frac{3}{7} \times \frac{1}{12} = \frac{1}{28}$, or $t_R = 28$.

The correct answer is C;
both statements together are sufficient.

DS06065

252. If $u > 0$ and $v > 0$, which is greater, u^v or v^u?

(1) $u = 1$

(2) $v > 2$

Arithmetic Exponents

(1) Given that $u = 1$, then $u^v = 1^v = 1$ and $v^u = v^1 = v$. If $v = 2$, then $u^v = 1$ is less than $v^u = 2$. However, if $v = 0.5$, then $u^v = 1$ is greater than $v^u = 0.5$; NOT sufficient.

(2) Given that $v > 2$, it is possible that u^v is less than v^u (for example, if $u = 1$ and $v = 4$, then $u^v = 1^4 = 1$ and $v^u = 4^1 = 4$), and it is possible that u^v is greater than v^u (for example, if $u = 3$ and $v = 4$, then $u^v = 3^4 = 81$ and $v^u = 4^3 = 64$); NOT sufficient.

Taking (1) and (2) together, it follows from (1) that $u^v = 1$ and $v^u = v$, and it follows from (2) that $v > 2$. Therefore, $u^v = 1 < 2 < v = v^u$, and so v^u is greater than u^v.

The correct answer is C;
both statements together are sufficient.

DS00660

253. What was the range of the selling prices of the 30 wallets sold by a certain store yesterday?

(1) $\frac{1}{3}$ of the wallets had a selling price of \$24 each.

(2) The lowest selling price of the wallets was $\frac{1}{3}$ the highest selling price of the wallets.

Arithmetic Statistics

Since the range of a data set is the greatest value in the data set minus the least value in the data set, this problem can be solved if the least selling price and the greatest selling price of the wallets sold by the store yesterday can be determined.

(1) This indicates that 10 of the wallets had a selling price of \$24 each, but does not indicate the least selling price or the greatest selling price of the wallets sold by the store yesterday; NOT sufficient.

(2) This indicates that $L = \frac{1}{3} G$, where L represents the least selling price and G represents the greatest selling price, but does

not give enough information to determine $G - L$; NOT sufficient.

Taking (1) and (2) together, the least and greatest selling prices of the wallets sold by the store yesterday could be \$10 and \$30 for a range of \$30 – \$10 = \$20, or the least and greatest selling prices of the wallets sold by the store yesterday could be \$20 and \$60 for a range of \$60 – \$20 = \$40.

The correct answer is E;
both statements together are still not sufficient.

DS08723

254. Three houses are being sold through a real estate agent. What is the asking price for the house with the second-largest asking price?

(1) The difference between the greatest and the least asking price is \$130,000.

(2) The difference between the two greater asking prices is \$85,000.

Algebra Simultaneous equations

Let x, y, and z, where $x \leq y \leq z$, be the asking prices of the three houses. This problem can be solved by determining the value of y.

(1) This indicates that $z - x = \$130{,}000$, but does not give the value of y; NOT sufficient.

(2) This indicates that $z - y = \$85{,}000$, but does not give the value of y; NOT sufficient.

Taking (1) and (2) together, x, y, and z could be \$100,000, \$145,000, and \$230,000, respectively, in which case the second highest selling price is \$145,000, or they could be \$200,000, \$245,000, and \$330,000, respectively, in which case the second highest selling price is \$245,000.

The correct answer is E;
both statements together are still not sufficient.

DS04605

255. If $a + b + c = 12$, what is the value of b?

(1) $a + b = 8$

(2) $b + c = 6$

Algebra Simultaneous equations

(1) Given that $a + b = 8$, it follows from $(a + b) + c = 12$ that $8 + c = 12$, or $c = 4$. However, the value of b still cannot be determined. For example, if $a = 6$, $b = 2$, and $c = 4$, then $a + b + c = 12$ and $a + b = 8$. On the other hand, if $a = 4$, $b = 4$, and $c = 4$, then $a + b + c = 12$ and $a + b = 8$; NOT sufficient.

(2) Given that $b + c = 6$, it follows from $a + (b + c) = 12$ that $a + 6 = 12$, or $a = 6$. However, the value of b still cannot be determined. For example, if $a = 6$, $b = 3$, and $c = 3$, then $a + b + c = 12$ and $b + c = 6$. On the other hand, if $a = 6$, $b = 2$, and $c = 4$, then $a + b + c = 12$ and $b + c = 6$; NOT sufficient.

Taking (1) and (2) together, it follows from (1) that $c = 4$ and it follows from (2) that $a = 6$. Substituting these values in $a + b + c = 12$ gives $6 + b + 4 = 12$, or $b = 2$.

The correct answer is C;
both statements together are sufficient.

DS11254

256. Is $rw = 0$?

(1) $-6 < r < 5$

(2) $6 < w < 10$

Algebra Inequalities

This problem can be solved if it can be determined that either or both of r and w is zero or that neither r nor w is zero.

(1) This indicates that r can be, but does not have to be, zero and gives no indication of the value of w; NOT sufficient.

(2) This indicates that w cannot be zero, but gives no indication of the value of r; NOT sufficient.

Taking (1) and (2) together, r could be zero, in which case $rw = 0$ **or** r could be nonzero, in which case $rw \neq 0$.

The correct answer is E;
both statements together are still not sufficient.

DS06633

257. Is $x = \frac{1}{y}$?

(1) $xy = 1$

(2) $\frac{1}{xy} = 1$

Algebra Equations

(1) This indicates that neither x nor y can be zero because if $x = 0$ or $y = 0$, then $xy = 0$. Since $xy = 1$ and $y \neq 0$, then dividing both sides by y gives $x = \frac{1}{y}$; SUFFICIENT.

(2) This indicates that neither x nor y can be zero because if $x = 0$ or $y = 0$, then $xy = 0$, and division by zero is undefined. Multiplying both sides of the equation $\frac{1}{xy} = 1$ by x gives $\frac{1}{y} = x$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS07949

258. How many people in a group of 50 own neither a fax machine nor a laser printer?

(1) The total number of people in the group who own a fax machine or a laser printer or both is less than 50.

(2) The total number of people in the group who own both a fax machine and a laser printer is 15.

Algebra Sets

(1) This indicates that the total number who own either a fax machine or a laser printer or both is less than 50, but does not indicate how much less than 50 the total number is. Thus, the number of people in the group who own neither a fax machine nor a laser printer cannot be determined; NOT sufficient.

(2) This indicates that, of the 50 people, 15 own both a fax machine and a laser printer, but does not indicate how many own one or the other. Thus, the number of people in the group who own neither a fax machine nor a laser printer cannot be determined; NOT sufficient.

Taking (1) and (2) together, it is known that 15 people own both a fax machine and a laser printer and that the total number who own either a fax machine or a laser printer or both is less than 50, but the exact number who own neither still cannot be determined. For example, if 20 people own only a fax machine and 10 people own only a laser printer, then both (1) and (2) are true and the number of people who own neither a fax machine nor a laser printer is $50 - 20 - 10 - 15 = 5$. However, if 10 people own only a fax machine and 10 people own only a laser printer, then both (1) and (2) are true and the number of people who own neither a fax machine nor a laser printer is $50 - 10 - 10 - 15 = 15$.

The correct answer is E;
both statements together are still not sufficient.

DS06475

259. What is the value of w^{-2}?

(1) $w^{-1} = \frac{1}{2}$

(2) $w^3 = 8$

Algebra Exponents

(1) Since $w^{-1} = \frac{1}{2}$, then $(w^{-1})^2 = \left(\frac{1}{2}\right)^2 = \frac{1}{4}$ or $w^{-2} = \frac{1}{4}$; SUFFICIENT.

(2) Since $w^3 = 8$, then $w = \sqrt[3]{8} = 2$ and $w^{-2} = 2^{-2} = \frac{1}{4}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS07839

260. A certain investment earned a fixed rate of 4 percent interest per year, compounded annually, for five years. The interest earned for the third year of the investment was how many dollars greater than that for the first year?

(1) The amount of the investment at the beginning of the second year was $4,160.00.

(2) The amount of the investment at the beginning of the third year was $4,326.40.

Arithmetic Applied problems; Percents

This problem can be solved by determining the dollar amount of the interest earned for the third year minus the dollar amount of interest earned in the first year, or, in symbols, $[A(1.04)^3 - A(1.04)^2] - [A(1.04)^1 - A]$, where A represents the dollar amount of the investment.

This can be determined if the value of A can be determined.

(1) This indicates that $A(1.04)^1 = \$4{,}160.00$, since the amount of the investment at the beginning of the second year is the same as the amount of the investment at the end of the first year. Thus, the value of A can be determined by dividing 4,160.00 by 1.04; SUFFICIENT.

(2) This indicates that $A(1.04)^2 = \$4{,}326.40$, since the amount of the investment at the beginning of the third year is the same as the amount of the investment at the end of the second year. Thus, the value of A can be determined by dividing 4,326.40 by $(1.04)^2$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06397

261. What is the circumference of circle C ?

(1) The radius of circle C is 2π.

(2) The center of circle C is located at point (7,8) in the xy-plane.

Geometry Circles

What is the value of $2\pi r$, where r is the radius of circle C?

(1) Given that $r = 2\pi$, the value of $2\pi r$ is $2\pi \cdot 2\pi$; SUFFICIENT.

(2) Given that the center of circle C is located at (7,8), the radius of circle C can be any positive real number, and therefore the value of $2\pi r$ cannot be determined; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS07813

262. What is the value of t ?

(1) $s + t = 6 + s$

(2) $t^3 = 216$

Algebra Equations

(1) Given that $s + t = 6 + s$, subtracting s from both sides gives $t = 6$; SUFFICIENT.

(2) Given that $t^3 = 216$, taking the cube root of both sides gives $t = 6$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS11109

263. For a certain car repair, the total charge consisted of a charge for parts, a charge for labor, and a 6 percent sales tax on both the charge for parts and the charge for labor. If the charge for parts, excluding sales tax, was $50.00, what was the total charge for the repair?

(1) The sales tax on the charge for labor was $9.60.

(2) The total sales tax was $12.60.

Arithmetic Applied problems; Percents

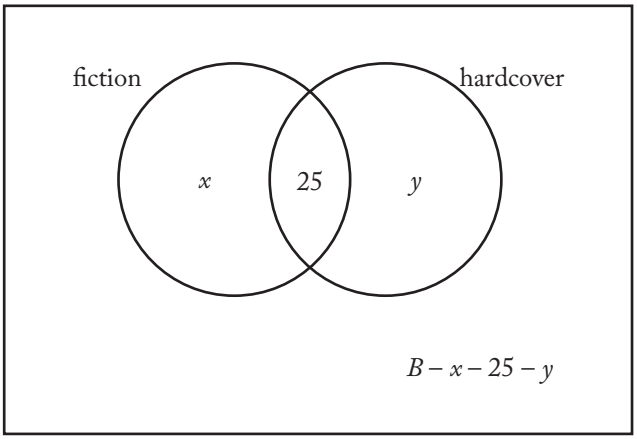
To find the total charge, T, for the repair, requires determining the value, in dollars, of $T = (1.06)(50 + L) = 53 + 1.06L$, where L represents the charge, in dollars, for labor. This value can be determined if the value of L can be determined.

(1) This indicates that $0.06L = 9.60$, from which L can be determined by dividing 9.60 by 0.06; SUFFICIENT.

(2) This indicates that $(0.06)(50 + L) = 12.60$. So, $3.00 + 0.06L = 12.60$ or $0.06L = 9.60$, which is the same as the equation in (1); SUFFICIENT.

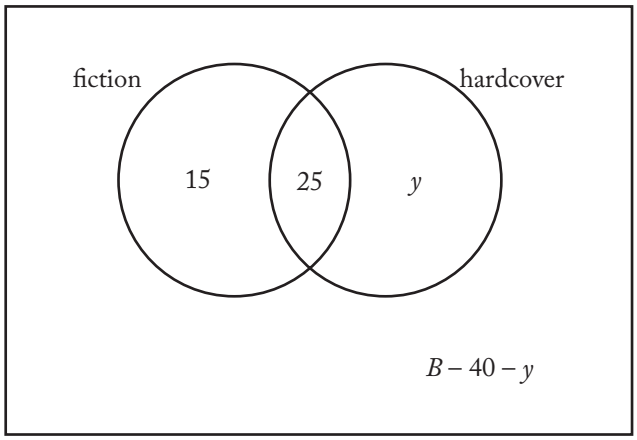
The correct answer is D;
each statement alone is sufficient.

DS06905



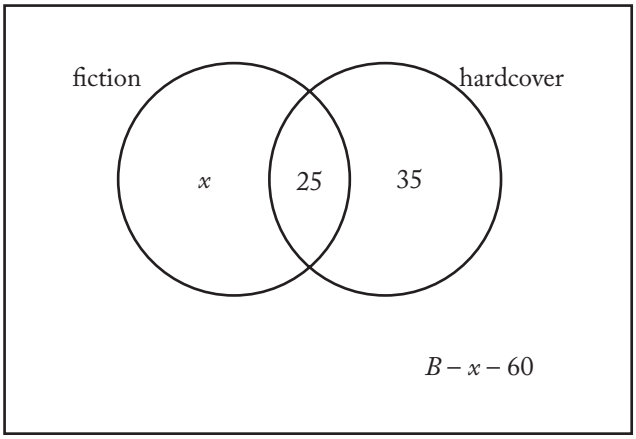
264. George has a total of B books in his library, 25 of which are hardcover fiction books. What is the value of B ?

(1) 40 of the B books are fiction and the rest are nonfiction.

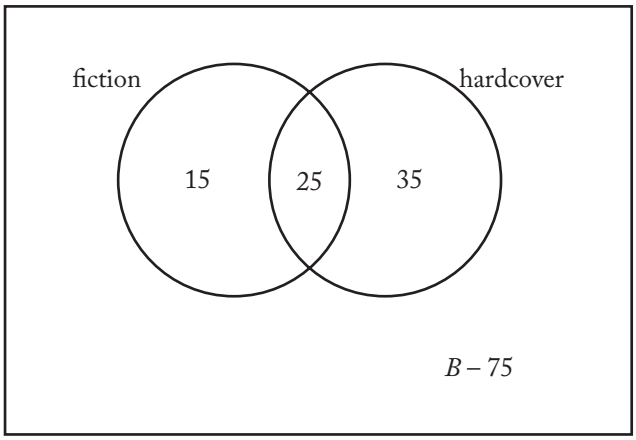


(2) 60 of the B books are hardcovers and the rest are paperbacks.

Arithmetic Applied problems



The diagram below incorporates the given information that George has a total of B books, of which 25 are both fiction and hardcover. In the diagram, x represents the number of books that are fiction and not hardcover, and y represents the number of books that are hardcover and not fiction.



(1) Given that 40 of the books are fiction, it follows that $x + 25 = 40$, or $x = 15$. Using this additional information, the diagram (shown below) clearly shows that the value of B cannot be determined. For example, $y = 35$ and $B = 80$ is possible (note that $B - 40 - y = 5$), and $y = 35$ and $B = 100$ is possible (note that $B - 40 - y = 25$); NOT sufficient.

(2) Given that 60 of the books are hardcover, it follows that $25 + y = 60$, or $y = 35$. Using this additional information, the diagram (shown below) clearly shows that the value of B cannot be determined. For example, $x = 15$ and $B = 80$ is possible (note that $B - x - 60 = 5$), and $x = 15$ and $B = 100$ is possible (note that $B - x - 60 = 25$); NOT sufficient.

Taking (1) and (2) together, there is still not enough information to determine the value of B, since in the diagram below $B = 80$ is possible and $B = 100$ is possible.

The correct answer is E;
both statements together are still not sufficient.

DS12031

265. Is $w + h^4$ positive?

(1) h is positive.

(2) w is positive.

Arithmetic Properties of numbers

(1) Given that h is positive, then $w + h^4$ can be positive (for example, when $w = 1$ and $h = 1$) and $w + h^4$ can be negative (for example, when $w = -2$ and $h = 1$); NOT sufficient.

(2) Given that w is positive, then because $h^4 \geq 0$, it follows that $w + h^4 \geq w + 0 = w$ and thus $w + h^4 > 0$ since $w > 0$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS15377

266. If a is a 3-digit integer and b is a 3-digit integer, is the units digit of the product of a and b greater than 5 ?

(1) The units digit of a is 4.

(2) The units digit of b is 7.

Arithmetic Operations with integers

Determine whether the units digit of the product of the two 3-digit integers a and b is greater than 5.

(1) It is given that the units digit of a is 4. If the units digit of b is 0 or 1, then the units digit of ab is not greater than 5. However, if the units digit of b is 2, then the units digit of ab is greater than 5; NOT sufficient.

(2) It is given that the units digit of b is 7. If the units digit of a is 0, then the units digit of ab is not greater than 5. However, if the units digit of a is 1, then the units digit of ab is greater than 5; NOT sufficient.

Taking (1) and (2) together, the units digit of a is 4 and the units digit of b is 7. Therefore, the units digit of ab is 8, which is greater than 5.

The correct answer is C;
both statements together are sufficient.

DS02450

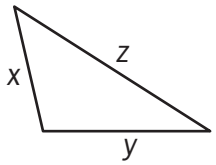
267. In each of the last five years, Company K donated p percent of its annual profits to a certain scholarship fund. Did Company K donate more than \$10,000 to the scholarship fund last year?

(1) Two years ago, Company K had annual profits of \$3 million and donated \$15,000 to the scholarship fund.

(2) Last year, Company K had annual profits of \$2.5 million.

Arithmetic Applied problems; Percents

Let $\$k$ be Company K's profit last year.



Is $\left(\frac{p}{100}\right)k > 10{,}000$?

(1) Given that $\left(\frac{p}{100}\right)(3 \text{ million}) = 15{,}000$, it follows that $p = \frac{(15{,}000)(100)}{3 \text{ million}} = \frac{1}{2}$. However, the question cannot be answered since no information is available about the value of k. For example, if $k = 3$ million, then $\left(\frac{p}{100}\right)k = 15{,}000$, and the answer to the question is yes. However, if $k = 1$ million, then $\left(\frac{p}{100}\right)k = 5{,}000$, and the answer to the question is no; NOT sufficient.

(2) Given that $k = 2.5$ million, it follows that $\left(\frac{p}{100}\right)k = \left(\frac{p}{100}\right)(2.5 \text{ million})$. However, the question cannot be answered since no information is available about the value of p. For example, if $p = 1$, then $\left(\frac{p}{100}\right)k = 25{,}000$, and the answer to the question is yes. However, if $p = 0.1$, then $\left(\frac{p}{100}\right)k = 2{,}500$, and the answer to the question is no; NOT sufficient.

Taking (1) and (2) together, the values of both p and k can be determined. Therefore, the value of $\left(\frac{p}{100}\right)k$ can be determined, and thus the answer to the question can be determined.

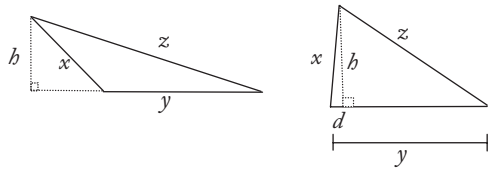
The correct answer is C;
both statements together are sufficient.

DS06901

268. Is the area of the triangular region above less than 20 ?

(1) $x^2 + y^2 \neq z^2$

(2) $x + y < 13$



Geometry Triangles; Area

Determine whether the area of the given triangle is less than 20.

(1) This indicates the triangle is not a right triangle but gives no information about the base and height or how to determine them in order to find the area; NOT sufficient.

(2) This indicates that two sides of the triangle have lengths x and y such that $x + y < 13$. If, for example, the triangle is a right triangle with $x = 3$ and $y = 4$, then $x + y = 3 + 4 = 7 < 13$ and the area of the triangle is $\frac{1}{2}(3)(4) = 6$, which is less than 20. But if the triangle is a right triangle with $x = y = \sqrt{42}$, then $x + y = \sqrt{42} + \sqrt{42} = 2\sqrt{42} = \sqrt{168} < \sqrt{169} = 13$ and the area is $\frac{1}{2}(\sqrt{42})(\sqrt{42}) = 21$, which is greater than 20; NOT sufficient.

Taking (1) and (2) together, since the triangle is not a right triangle from (1), the diagrams show two other possibilities: an obtuse triangle and an acute triangle.

For the obtuse triangle, $h < x$ since because h is a leg of a right triangle with hypotenuse x. The area A is given by $A = \frac{1}{2}yh < \frac{1}{2}xy$. If $x = y = 6$, then $x + y = 6 + 6 = 12 < 13$ and $A < \frac{1}{2}(6^2) = 18$. The area of the triangular region is less than 20 for the obtuse triangle. For the acute triangle, if $x = y = \sqrt{42}$, then $x + y = \sqrt{42} + \sqrt{42} = 2\sqrt{42} = \sqrt{168} < \sqrt{169} = 13$. Let $d = 1$. Then, $h^2 = (\sqrt{42})^2 - 1 = 42 - 1 = 41$ and $h = \sqrt{41}$. Thus, for the acute triangle, the area of the triangular region is $\frac{1}{2}yh = \frac{1}{2}(\sqrt{42})(\sqrt{41})$ and $\frac{1}{2}(\sqrt{42})(\sqrt{41}) > \frac{1}{2}(\sqrt{40})(\sqrt{40})$ or $\frac{1}{2}(\sqrt{42})(\sqrt{41}) > 20$. Therefore, it is possible that the area of the triangular region can be less than 20 (in the case of the obtuse triangle) and it is possible that the area of the triangular region can be greater than 20 (in the case of the acute triangle).

The correct answer is E;
both statements together are still not sufficient.

DS04366

269. A, B, C, and D are points on a line. If C is the midpoint of line segment AB and if D is the midpoint of line segment CB, is the length of line segment DB greater than 5 ?

(1) The length of line segment AC is greater than 8.

(2) The length of line segment CD is greater than 6.

Geometry Lines and segments

It is given that C is the midpoint of $\overline{AB}$, so $AC = CB = \frac{1}{2}(AB)$. It is given that D is the midpoint of $\overline{CB}$, so $CD = DB = \frac{1}{2}(CB)$. Determine if $DB > 5$.

(1) Given that $AC > 8$, it follows that $CB > 8$ since $AC = CB$, and so $DB = \frac{1}{2}(CB) > \frac{1}{2}(8)$ or $DB > 4$. However, this means that DB could be 6 and $6 > 5$ or DB could be 4.1 and $4.1 < 5$; NOT sufficient.

(2) Given that $CD > 6$, it follows that $DB > 6$ since $CD = DB$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS11805

270. The people in a line waiting to buy tickets to a show are standing one behind the other. Adam and Beth are among the people in the line, and Beth is standing behind Adam with a number of people between them. If the number of people in front of Adam plus the number of people behind Beth is 18, how many people in the line are behind Beth?

(1) There are a total of 32 people in the line.

(2) 23 people in the line are behind Adam.

Arithmetic Order

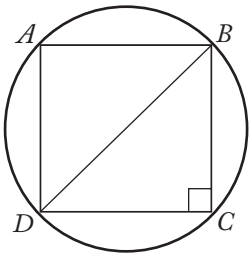
Beth is standing in line behind Adam with a number of people between them. Let x be the number of people ahead of Adam, let y be the number of people between Adam and Beth, and let z be the number of people behind Beth. It is given that $x + z = 18$. Determine z.

(1) This indicates that there are 32 people in the line. Two of these people are Adam and Beth, so there are 30 other people in line besides Adam and Beth. Therefore, $x + y + z = 30$ and $x + z = 18$. From this, $y = 12$, but z cannot be determined uniquely. For example, if $x = 5$, then $z = 13$, but if $x = 10$, then $z = 8$; NOT sufficient.

(2) This indicates that $y + 1 + z = 23$ because the people behind Adam consist of the people between Adam and Beth, Beth herself, and the people behind Beth. If, for example, $y = 4$, then $z = 18$, but if $y = 9$, then $z = 13$; NOT sufficient.

Taking (1) and (2) together, $y = 12$ from (1) and $y + z = 22$ from (2). Therefore, $z = 10$, and there are 10 people in line behind Beth.

The correct answer is C;
both statements together are sufficient.



DS08730

271. Square *ABCD* is inscribed in circle *O*. What is the area of square region *ABCD*?

(1) The area of circular region *O* is 64π.

(2) The circumference of circle *O* is 16π.

Geometry Circles; Area

Since the area of square *ABCD* is the square of its side length, to solve this problem it is necessary to determine the side length of *ABCD*. From the figure, a diameter of the circle coincides with a diagonal of the square. If the length of a diameter of the circle can be determined, then the length of a diagonal of the square can be determined, from which the side length of the square can be determined using the Pythagorean theorem.

(1) This indicates that the area of the circle is 64π, so letting r represent the radius of the circle, $\pi r^2 = 64\pi$. Thus, $r^2 = 64$, $r = 8$, and $d = 2(8) = 16$, where d represents the length of the diameter of the circle and also the diagonal of the square; SUFFICIENT.

(2) This indicates that the circumference of the circle is 16π, so letting d represent the length of the diameter of the circle as well as the diagonal of the square, $\pi d = 16\pi$. Thus, $d = 16$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS12533

272. Lines *k* and *m* are parallel to each other. Is the slope of line *k* positive?

(1) Line *k* passes through the point (3,2).

(2) Line *m* passes through the point (–3,2).

Geometry Coordinate geometry

(1) This indicates that line *k* passes through the point (3,2). One point is not enough to determine whether the slope of line *k* is positive. If, for example, line *k* also passes through the point (0,0), then the slope of line *k* is $\frac{2-0}{3-0} = \frac{2}{3}$, which is positive. But if line *k* also passes through the point (5,0),

then the slope of line k is $\frac{2-0}{3-5}=\frac{2}{-2}$, which is negative; NOT sufficient.

(2) This indicates that line m passes through the point (–3,2). One point is not enough to determine whether the slope of line m is positive. If, for example, line m also passes through the point (0,0), then the slope of line m is $\frac{2-0}{-3-0}=\frac{2}{-3}$, which is negative. In this case, the slope of line k is also negative since parallel lines k and m have the same slope. But if line m also passes through the point (0,5), then the slope of line m is $\frac{2-5}{-3-0}=\frac{-3}{-3}$, which is positive. In this case, the slope of line k is also positive since parallel lines k and m have the same slope; NOT sufficient.

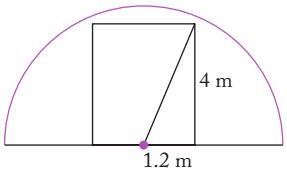
Taking (1) and (2) together gives no more information than (1) or (2) alone and so whether the slope of line k is positive cannot be determined.

The correct answer is E;
both statements together are still not sufficient.

DS19520

273. In cross section, a tunnel that carries one lane of one-way traffic is a semicircle with radius 4.2 m. Is the tunnel large enough to accommodate the truck that is approaching the entrance to the tunnel?

(1) The maximum width of the truck is 2.4 m.



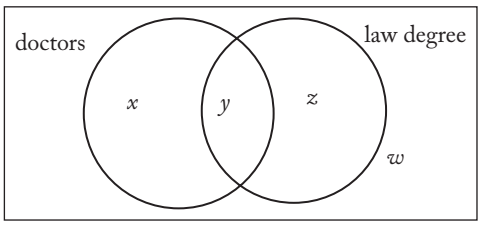
(2) The maximum height of the truck is 4 m.

Geometry Circles; Pythagorean theorem

(1) Given that the maximum width of the truck is 2.4 m, it is possible that the tunnel is large enough (for example, if the maximum height of the truck is sufficiently small) and it is possible that the tunnel is not large enough (for example, if the maximum height of the truck is sufficiently large); NOT sufficient.

(2) Given that the maximum height of the truck is 4 m, it is possible that the tunnel is large enough (for example, if the maximum width is sufficiently small) and it is possible that the tunnel is not large enough (for example, if the maximum width of the truck is sufficiently large); NOT sufficient.

Taking (1) and (2) together, it is possible for the truck to pass through the tunnel, because even if the truck were rectangular with width 2.4 m and height 4 m, the truck could pass through the tunnel if it were centered in the tunnel as shown in the diagram. In this position, it follows from the Pythagorean theorem that every point on the truck is located at most a distance of $\sqrt{(1.2)^2+4^2}$ meters from the center axis of the tunnel, and this distance is less than 4.2 meters, the radius of the tunnel, since $(1.2)^2 + 4^2 = 17.44$ is less than $(4.2)^2 = 17.64$.



The correct answer is C;
both statements together are sufficient.

DS13122

274. In a certain group of 50 people, how many are doctors who have a law degree?

(1) In the group, 36 people are doctors.

(2) In the group, 18 people have a law degree.

Arithmetic Sets

Using the labels in the Venn diagram, $w + x + y + z = 50$. Determine the value of y.

(1) This indicates that $x + y = 36$ but does not give a unique value for y. For example, if $x = 18$, then $y = 18$; but if $x = 10$, then $y = 26$; NOT sufficient.

(2) This indicates that $y + z = 18$ but does not give a unique value for y. For example, if $z = 8$, then $y = 10$; but if $z = 10$, then $y = 8$; NOT sufficient.

Taking (1) and (2) together, if $w = 6$, $x = 26$, $y = 10$, and $z = 8$, then $w + x + y + z = 50$, $x + y = 36$, and $y + z = 18$. In this case, $y = 10$. However, if $w = 2$, $x = 30$, $y = 6$, and $z = 12$, then $w + x + y + z = 50$, $x + y = 36$, and $y + z = 18$. In this case, $y = 6$.

Alternatively, this problem can be solved by means of a contingency table. Letting n represent the number of doctors with a law degree, the table with the given information is shown below.

	doctor	not a doctor	total
law degree	n		
no law degree			
total			50

(1) This indicates that there are 36 doctors, so the number of people who are not doctors is $50 - 36 = 14$. The table with this information is shown below.

	doctor	not a doctor	total
law degree	n		
no law degree			
total	36	14	50

It is obvious from the table that there is not enough information to determine the value of n, the number of doctors with a law degree; NOT sufficient.

(2) This indicates that there are 18 people with a law degree, so the number of people without a law degree is $50 - 18 = 32$. The table with this information is shown below.

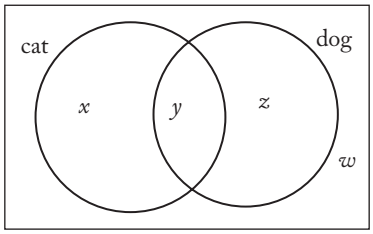
	doctor	not a doctor	total
law degree	n		18
no law degree			32
total			50

It is obvious from the table that there is not enough information to determine the value of n, the number of doctors with a law degree; NOT sufficient.

The table with the information from both (1) and (2) is shown below.

	doctor	not a doctor	total
law degree	n		18
no law degree			32
total	36	14	50

It is obvious from the table that there is still not enough information to determine the value of n, the number of doctors with a law degree.



The correct answer is E;
both statements together are still not sufficient.

DS01544

275. Of a group of 50 households, how many have at least one cat or at least one dog, but not both?

(1) The number of households that have at least one cat and at least one dog is 4.

(2) The number of households that have no cats and no dogs is 14.

Arithmetic Sets

Using the labels on the Venn diagram, $w + x + y + z = 50$. Determine the value of $x + z$.

(1) This indicates that $y = 4$, so $w + x + z = 46$, but the value of $x + z$ cannot be uniquely determined; NOT sufficient.

(2) This indicates that $w = 14$, so $x + y + z = 36$, but the value of $x + z$ cannot be uniquely determined; NOT sufficient.

Taking (1) and (2) together, $14 + x + 4 + z = 50$, so $x + z = 50 - 14 - 4 = 32$.

The correct answer is C;
both statements together are sufficient.

DS02441

276. Robin invested a total of $12,000 in two investments, X and Y, so that the investments earned the same amount of simple annual interest. How many dollars did Robin invest in investment Y ?

(1) Investment X paid 3 percent simple annual interest, and investment Y paid 6 percent simple annual interest.

(2) Robin invested more than $1,000 in investment X.

Algebra Applied problems

For investments X and Y, let r_X and r_Y be the annual percentage interest rates, respectively, and let x and y be the investment amounts, respectively and in dollars. Then $x + y = 12{,}000$ and $r_X \cdot x = r_Y \cdot y$. What is the value of y?

(1) Given that $r_X = 3$ and $r_Y = 6$, then from $r_X \cdot x = r_Y \cdot y$ it follows that $3x = 6y$, or $x = 2y$. Therefore, $x + y = 12{,}000$ becomes $2y + y = 12{,}000$, or $3y = 12{,}000$, or $y = 4{,}000$; SUFFICIENT.

(2) Given that $x > 1{,}000$, it is not possible to determine the value of y. For example, $y = 4{,}000$ is possible (choose $r_X = 3$, $r_Y = 6$, and $x = 8{,}000$) and $y = 6{,}000$ is possible (choose $r_X = 3$, $r_Y = 3$, and $x = 6{,}000$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS03999

277. In a real estate office that employs n salespeople, f of them are females and x of the females are new employees. What is the value of n?

(1) If an employee were randomly selected from the n employees, the probability of selecting a female would be $\frac{2}{3}$.

(2) If an employee were randomly selected from the f female employees, the probability of selecting a new employee would be $\frac{1}{2}$.

Arithmetic Probability

(1) Given that $\frac{f}{n} = \frac{2}{3}$, it is possible that $n = 3$ (choose $f = 2$ and $x = 1$) and it is possible that $n = 6$ (choose $f = 4$ and $x = 2$); NOT sufficient.

(2) Given that $\frac{x}{f} = \frac{1}{2}$, the value of n cannot be determined because $\frac{x}{f} = \frac{1}{2}$ is true for each of the two choices of values of n, f, and x that were used in (1); NOT sufficient.

Taking (1) and (2) together is still not sufficient because both (1) and (2) hold for each of the two choices of values of n, f, and x that were used in (1).

The correct answer is E;
both statements together are still not sufficient.

DS09315

278. Is $\frac{x+1}{y+1} > \frac{x}{y}$?

(1) $0 < x < y$

(2) $xy > 0$

Algebra Inequalities

(1) Given that $0 < x < y$, the following steps show how to obtain $\frac{x+1}{y+1} > \frac{x}{y}$.

y	$>$	x	given
$xy + y$	$>$	$xy + x$	add xy to both sides
$y(x + 1)$	$>$	$x(y + 1)$	factor
$\frac{x+1}{y+1}$	$>$	$\frac{x}{y}$	divide both sides by $y(y + 1)$

In the last step, the direction of the inequality is not changed because both y and $y + 1$ are positive, and hence the product $y(y + 1)$ is positive. These steps can be discovered by performing standard algebraic manipulations that transform $\frac{x+1}{y+1} > \frac{x}{y}$ into $y > x$, and then verifying that it is mathematically valid to reverse the steps; SUFFICIENT.

(2) Given that $xy > 0$, it is possible that $\frac{x+1}{y+1} > \frac{x}{y}$ can be true (choosing $x = 1$ and $y = 2$, the inequality becomes $\frac{2}{3} > \frac{1}{2}$) and it is possible that $\frac{x+1}{y+1} > \frac{x}{y}$ can be false (choosing $x = -1$ and $y = -2$, the inequality becomes $\frac{0}{-1} > \frac{-1}{-2}$ or $0 > \frac{1}{2}$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS01216

279. Do at least 60 percent of the students in Pat's class walk to school?

(1) At least 60 percent of the female students in Pat's class walk to school.

(2) The number of students in Pat's class who walk to school is twice the number of students who do not walk to school.

Arithmetic Percents

This problem can be solved by determining the total number of students in Pat's class and the number who walk to school.

(1) This indicates that at least 60% of the female students in Pat's class walk to school. However, it does not give any information about the other students in Pat's class; NOT sufficient.

(2) Letting x represent the number of students in Pat's class who do not walk to school, this indicates that $2x$ students in Pat's class walk to school and that the total number of students in Pat's class is $x + 2x = 3x$. From this, the percent of students in Pat's class who walk to school is $\left[\frac{2x}{3x}100\right]\% = \left[\frac{2}{3}(100)\right]\%$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS03628

280. A certain plumber charges \$92 for each job completed in 4 hours or less and \$23 per hour for each job completed in more than 4 hours. If it took the plumber a total of 7 hours to complete two separate jobs, what was the total amount charged by the plumber for the two jobs?

(1) The plumber charged \$92 for one of the two jobs.

(2) The plumber charged \$138 for one of the two jobs.

Arithmetic Applied problems

Find the total amount charged for two jobs lasting a total of 7 hours if the plumber charges \$92 for a job lasting 4 hours or less and \$23 per hour for a job lasting more than 4 hours.

(1) This indicates that one of the two jobs lasted 4 hours or less. If that job lasted 2 hours, then the other job lasted 5 hours, and the charge for that job would be (\$23)(5) = \$115, making the total for the two jobs \$92 + \$115 = \$207. However, if the jobs lasted 1 hour and 6 hours, respectively, then the total charge for the two jobs would be \$92 + (6)(\$23) = \$92 + \$138 = \$230; NOT sufficient.

(2) This indicates that one job lasted $\frac{\$138}{\$23} = 6$ hours. Therefore, the other job lasted for 1 hour and the charge for that job was \$92, making the total charge for the two jobs \$92 + \$138 = \$230; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS02585

281. If x and y are positive numbers, is $\frac{x+1}{y+1} > \frac{x}{y}$?

(1) $x > 1$

(2) $x < y$

Algebra Inequalities

Since y is positive, multiplying both sides of the inequality $\frac{x+1}{y+1} > \frac{x}{y}$ by $y(y+1)$ gives $y(x+1) > x(y+1)$ or $xy + y > xy + x$, which is equivalent to $y > x$. So, determining whether the inequality $\frac{x+1}{y+1} > \frac{x}{y}$ is true is equivalent to determining whether the inequality $y > x$ is true.

(1) This indicates that $x > 1$. If, for example, $x = 3$ and $y = 4$, then $y > x$ is true. However, if $x = 4$ and $y = 3$, then $y > x$ is not true; NOT sufficient.

(2) This indicates that $x < y$, so $y > x$ is true; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS01619

282. If a and b are positive integers, is $\frac{a}{b} < \frac{9}{11}$?

(1) $\frac{a}{b} < 0.818$

(2) $\frac{b}{a} > 1.223$.

Arithmetic Inequalities

If $11a < 9b$ and b is positive, then $\frac{11a}{b} < 9$ and $\frac{a}{b} < \frac{9}{11}$. Therefore, this problem can be solved by determining if $11a < 9b$.

(1) From this,

$\frac{a}{b} < 0.818$ given

$a < 0.818b$ multiply both sides by b, which is positive

$11a < 8.998b$ multiply both sides by 11

Then, since $8.998b < 9b$, it follows that $11a < 9b$; SUFFICIENT.

(2) From this,

$\frac{b}{a} > 1.223$ given

$b > 1.223a$ multiply both sides by a, which is positive

$9b > 11.007a$ multiply both sides by 9

Then, since $11.007a > 11a$, it follows that $9b > 11a$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS04536

283. Every object in a box is either a sphere or a cube, and every object in the box is either red or green. How many objects are in the box?

(1) There are six cubes and five green objects in the box.

(2) There are two red spheres in the box.

Arithmetic Sets

This problem can be solved using a contingency table set up as shown below, where T represents the number to be determined.

	cube	sphere	total
red			
green			
total			T

(1) The following table displays the information that there are 6 cubes and 5 green objects:

	cube	sphere	total
red			
green			5
total	6		T

It is obvious that there is not enough information to determine a unique value for T; NOT sufficient.

(2) The following table displays the information that there are 2 red spheres:

	cube	sphere	total
red		2	
green			
total			T

It is obvious that there is not enough information to determine a unique value for T; NOT sufficient.

The following table displays the information from (1) and (2) taken together:

	cube	sphere	total
red		2	
green			5
total	6		T

It is obvious that there is still not enough information to determine a unique value for T.

The correct answer is E;
both statements together are still not sufficient.

DS01425

284. If x and y are positive integers, is xy even?

(1) $x^2 + y^2 - 1$ is divisible by 4.

(2) $x + y$ is odd.

Arithmetic Properties of numbers

Determine whether the product of two positive integers, x and y, is even.

(1) This indicates that $x^2 + y^2 - 1$ is divisible by 4, so $x^2 + y^2 - 1 = 4q$ for some integer q. Then $x^2 + y^2 = 4q + 1$, which means $x^2 + y^2$ is odd. Both x^2 and y^2 cannot be even because, in that case, their sum would be even, and both cannot be odd because, in that case, their sum would also be even. Therefore, one of x^2 and y^2 is even, and the

other is odd. It follows that one of x or y is even and the other is odd, so xy is even; SUFFICIENT.

(2) If $x + y$ is odd, then one of x and y is even and the other is odd because if both were even or both were odd, the sum would be even. It follows that xy is even; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS14502

285. If a and b are integers, is $a + b + 3$ an odd integer?

(1) ab is an odd integer.

(2) $a - b$ is an even integer.

Arithmetic Properties of numbers

Determine whether $a + b + 3$ is odd for integers a and b.

(1) This indicates that, since ab is odd, both a and b are odd because if one of a or b is even or both a and b are even, then ab is even. Therefore, $a + b$ is even and $a + b + 3$ is odd; SUFFICIENT.

(2) This indicates that, since $a - b$ is even, both a and b are even or both are odd because if one of them is even and the other is odd, then $a - b$ is odd. Therefore, $a + b$ is even, and $a + b + 3$ is odd; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS08308

286. If x and y are positive integers, what is the value of $\sqrt{x} + \sqrt{y}$?

(1) $x + y = 15$

(2) $\sqrt{xy} = 6$

Algebra Operations with radicals

(1) From this, if $x = 1$ and $y = 14$, then $x + y = 15$ and $\sqrt{x} + \sqrt{y} = \sqrt{1} + \sqrt{14} = 1 + \sqrt{14}$. But $\sqrt{14} < \sqrt{16} = 4$, so $1 + \sqrt{14} < 1 + 4 = 5$. However, if $x = 9$ and $y = 6$, then $x + y = 15$ and $\sqrt{x} + \sqrt{y} = \sqrt{9} + \sqrt{6} = 3 + \sqrt{6}$. But $\sqrt{6} > \sqrt{4} = 2$ so, $3 + \sqrt{6} > 3 + 2 = 5$; NOT sufficient.

(2) From this, if $x = 1$ and $y = 36$, then $\sqrt{xy} = 6$ and $\sqrt{x} + \sqrt{y} = \sqrt{1} + \sqrt{36} = 1 + 6 = 7$. However, if $x = 4$ and $y = 9$, then $\sqrt{xy} = 6$ and $\sqrt{x} + \sqrt{y} = \sqrt{4} + \sqrt{9} = 2 + 3 = 5$; NOT sufficient.

Taking (1) and (2) together, $x + y = 15$ and $\sqrt{xy} = 6$, so

$$\begin{aligned}
\sqrt{x(15-x)} &= 6 && \text{substitute } 15 - x \text{ for } y \\
x(15-x) &= 36 && \text{square both sides} \\
15x - x^2 &= 36 && \text{use distributive property} \\
x^2 - 15x + 36 &= 0 && \text{collect like terms} \\
(x-12)(x-3) &= 0 && \text{factor}
\end{aligned}$$

Thus, $x = 12$ or $x = 3$. If $x = 12$, then $y = 3$ and $\sqrt{x} + \sqrt{y} = \sqrt{12} + \sqrt{3}$. If $x = 3$, then $y = 12$ and $\sqrt{x} + \sqrt{y} = \sqrt{3} + \sqrt{12}$.

Algebraically, if the value of $\left(\sqrt{x} + \sqrt{y}\right)^2 = \left(\sqrt{x}\right)^2 + 2\sqrt{xy} + \left(\sqrt{y}\right)^2 = x + y + 2\sqrt{xy}$ can be determined, then the value of $\sqrt{x} + \sqrt{y}$ can be determined, and conversely.

(1) From this, $\left(\sqrt{x} + \sqrt{y}\right)^2 = x + y + 2\sqrt{xy} = 15 + 2\sqrt{x(15-x)}$, but the value of x is unknown, and the value of $\left(\sqrt{x} + \sqrt{y}\right)^2$ cannot be determined; NOT sufficient.

(2) From this, $\left(\sqrt{x} + \sqrt{y}\right)^2 = x + y + 2\sqrt{xy} = x + \frac{36}{x} + 2(6)$, but the value of x is unknown, and the value of $\left(\sqrt{x} + \sqrt{y}\right)^2$ cannot be determined; NOT sufficient.

Taking (1) and (2) together, $\left(\sqrt{x} + \sqrt{y}\right)^2 = x + y + 2\sqrt{xy} = 15 + (2)(6) = 27$ and so $\sqrt{x} + \sqrt{y} = 27 = 3\sqrt{3}$. Note that in the nonalgebraic solution $\sqrt{x} + \sqrt{y} = \sqrt{3} + \sqrt{12}$ and $\sqrt{3} + \sqrt{12} = \sqrt{3} + 2\sqrt{3} = 3\sqrt{3}$.

The correct answer is C;
both statements together are sufficient.

DS05312

287. A certain truck uses $\frac{1}{12} + kv^2$ gallons of fuel per mile when its speed is v miles per hour, where k is a constant. At what speed should the truck travel so that it uses $\frac{5}{12}$ gallon of fuel per mile?

(1) The value of k is $\frac{1}{10{,}800}$.

(2) When the truck travels at 30 miles per hour, it uses $\frac{1}{6}$ gallon of fuel per mile.

Algebra Applied problems

This problem can be solved by determining the positive value of v so that $\frac{1}{12} + kv^2 = \frac{5}{12}$.

(1) This indicates the value of k and so the value of v can be determined by solving $\frac{1}{12} + \frac{1}{10{,}800}v^2 = \frac{5}{12}$ for v; SUFFICIENT.

(2) This indicates that $\frac{1}{12} + k(30)^2 = \frac{1}{6}$. The value of k can be determined by solving this equation for k. Then that value of k can be substituted into $\frac{1}{12} + kv^2 = \frac{5}{12}$, which can then be solved for the value of v; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

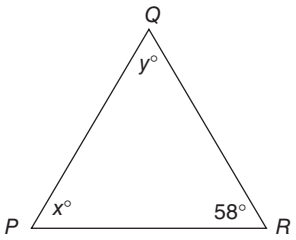
DS76502.01

288. If r and s are positive integers, is $r + s$ even?

(1) r is even.

(2) s is even.

Arithmetic Properties of integers



An integer m is even if and only if m is divisible by 2, or equivalently, if and only if $m = 2M$ for some integer M. Is $r + s$ even?

(1) Given that r is even, $r + s$ could be even (choose $r = 2$ and $s = 2$) and $r + s$ could be odd (choose $r = 2$ and $s = 1$); NOT sufficient.

(2) Given that s is even, $r + s$ could be even (choose $r = 2$ and $s = 2$) and $r + s$ could be odd (choose $r = 1$ and $s = 2$); NOT sufficient.

Taking (1) and (2) together, let R and S be integers such that $r = 2R$ and $s = 2S$. Then $r + s = 2R + 2S = 2(R + S)$, where $R + S$ is an integer. Therefore, $r + s$ is even.

The correct answer is C;
both statements together are sufficient.

DS27502.01

289. In the figure above, ΔPQR has angle measures as shown. Is $x < y$?

(1) $PQ = QR$

(2) $PR > QR$

Geometry Triangles

(1) Given that $PQ = QR$, it follows that the angle at vertex R has the same measure as the angle at vertex P, or $58 = x$. Therefore, using $x + y + 58 = 180$ gives $58 + y + 58 = 180$, or $y = 64$. Since the values of both x and y are now known, it can be determined whether $x < y$; SUFFICIENT.

(2) Given that $PR > QR$, it follows that the measure of the angle at vertex Q is greater than the measure of the angle at vertex P, or $y > x$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS10602.01

290. If S is a set of odd integers and 3 and –1 are in S, is –15 in S?

(1) 5 is in S.

(2) Whenever two numbers are in S, their product is in S.

Arithmetic Operations with integers

(1) Given that 5 is in S, it is not possible to determine whether –15 is in S. For example, if $S = \{-15, -1, 3, 5\}$, then S is a set of odd

integers, 3 and –1 are in S, and –15 is in S. However, if $S = \{-1, 3, 5\}$, then S is a set of odd integers, 3 and –1 are in S, and –15 is not in S; NOT sufficient.

(2) Given that xy is in S whenever x is in S and y is in S, it is possible that –15 is in S, since S could be the set of all odd integers, and in this case S contains 3 and –1, along with –15, and S is such that the product of any two of its members is a member (because an odd integer times an odd integer is an odd integer). However, it is also possible that –15 is not in S, since S could be the set of all nonnegative integer powers of 3, along with their negatives, namely $S = \{\ldots, -27, -9, -3, -1, 1, 3, 9, 27, \ldots\}$. In this case, S is a set of odd integers that contains 3 and –1, but not –15, and S is such that the product of any two of its members is a member (if m and n are integers, then 3^m times 3^n is 3^{m+n}); NOT sufficient.

Taking (1) and (2) together, apply (2) for $x = 3$ and $y = 5$ to get $(3)(5) = 15$ in S. Now apply (2) for $x = -1$ and $y = 15$ to get –15 in S.

The correct answer is C;
both statements together are sufficient.

DS01602.01

291. Is the integer x a 3-digit integer?

(1) x is the square of an integer.

(2) $90 < x < 150$

Arithmetic Properties of integers

(1) Given that x is the square of an integer, both $x = 16$ (not a 3-digit integer) and $x = 100$ (a 3-digit integer) are possible; NOT sufficient.

(2) Given that $90 < x < 150$, both $x = 95$ (not a 3-digit integer) and $x = 100$ (a 3-digit integer) are possible; NOT sufficient.

From (1) and (2) taken together, it follows that x is among the numbers …, 81, 100, 121, 144, 169, … and $90 < x < 150$. Therefore, x must be one of the three numbers 100, 121, 144, and hence x must be a 3-digit integer.

The correct answer is C;
both statements together are sufficient.

DS11602.01

292. If the 1st term of a sequence is 0 and the 2nd term is 1, is the 5th term 2 ?

(1) Each odd-numbered term is either 0 or 2.

(2) The 3rd term is 2.

Arithmetic Series and sequences

Let the sequence be 0, 1, a, b, c. Is $c = 2$?

(1) Given that $a = 0$ or $a = 2$, and $c = 0$ or $c = 2$, it is possible that $c = 2$ (consider the sequence 0, 1, 2, 2, 2) and it is possible that $c \neq 2$ (consider the sequence 0, 1, 2, 0, 0); NOT sufficient.

(2) Given that $a = 2$, the same examples given in (1) show that it is not possible to determine whether $c = 2$; NOT sufficient.

Taking (1) and (2) together, it is still not possible to determine whether $c = 2$ because the same examples were used for both (1) and (2).

The correct answer is E;
both statements together are still not sufficient.

DS21602.01

293. Is the sum of four particular integers even?

(1) Two of the integers are odd and two are even.

(2) The average (arithmetic mean) of the four integers is an integer.

Arithmetic Properties of integers

(1) Given that two of the integers are odd and two of the integers are even, the sum of the four integers must be the sum of an even integer (this being the sum of the two odd integers) and an even integer (this being the sum of the two even integers). Since the sum of two even integers is even, it follows that the sum of the four integers is even; SUFFICIENT.

(2) Given that the average of the four integers is an integer, it follows that the sum of the four integers divided by four is an integer, and hence the sum of the integers is four times an integer. Since four times an integer is even, it follows that the sum of the four integers is even; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS70602.01

294. If a school district paid a total of $35 per desk for x desks and a total of $30 per table for y tables, what was the total amount that the district paid for these desks and tables?

(1) The total amount the district paid for the y tables was $900.

(2) $x = 90$, and the total amount the district paid for the x desks was 3.5 times the total amount the district paid for the y tables.

Algebra Simultaneous equations

Determine the value of $35x + 30y$.

(1) Given that $30y = 900$, it follows that $y = 30$. However, it is not possible to determine the value of $35x + 30y = 35x + 900$ because more than one possible value of x is possible; NOT sufficient.

(2) Given that $x = 90$ and $35x = 3.5(30y)$, it follows that $(35)(90) = (3.5)(30)y$, or $y = \frac{35}{3.5} \times \frac{90}{30} = 10 \times 3 = 30$, and therefore $35x + 30y = 35(90) + 30(30)$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS90602.01

295. Three children inherited a total of X dollars. If the oldest child inherited $7,000 more than the youngest child, and the youngest child inherited $9,000 less than the middle child, what is the value of X?

(1) The middle child inherited $27,000.

(2) The youngest child and the middle child together inherited a total of $45,000.

Algebra Simultaneous equations

Let A, B, and C be the amounts inherited, respectively and in dollars, of the oldest, middle, and youngest child. It is given that $A = 7{,}000 + C$ and $C = B - 9{,}000$. Then $A = 7{,}000 + (B - 9{,}000) = B - 2{,}000$. Determine the value of $A + B + C$, or equivalently, determine the value of $(B - 2{,}000) + B + (B - 9{,}000) = 3B - 11{,}000$.

(1) Given that $B = 27{,}000$, it follows that $3B - 11{,}000 = 70{,}000$; SUFFICIENT.

(2) Given that $B + C = 45{,}000$, then using $C = B - 9{,}000$ it follows that $B + (B - 9{,}000) = 45{,}000$, which can be solved to obtain $B = 27{,}000$. Therefore, $3B - 11{,}000 = 70{,}000$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS41602.01

296. If $xyz \neq 0$, what is the value of $\frac{x^4z^2}{z^2y^2}$?

(1) $y^2 = x^4$

(2) $x = 2$ and $y = 4$

Algebra Simplifying algebraic expressions

What is the value of $\frac{x^4z^2}{z^2y^2}$? Equivalently (since $z \neq 0$), what is the value of $\frac{x^4}{y^2}$?

(1) Given that $y^2 = x^4$, then dividing both sides of this equation by y^2 gives $1 = \frac{x^4}{y^2}$; SUFFICIENT.

(2) Given that $x = 2$ and $y = 4$, then $\frac{x^4}{y^2} = \frac{2^4}{4^2} = \frac{16}{16} = 1$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS81602.01

297. If a and b are integers, and $b > 0$, does $\frac{a-1}{b+1} = \frac{a}{b}$?

(1) $a = b - 4$

(2) $a = -b$

Algebra Ratios

(1) Given that $a = b - 4$, then $\frac{a-1}{b+1} = \frac{a}{b}$ can be true (use $a = -2$ and $b = 2$) and $\frac{a-1}{b+1} = \frac{a}{b}$ can be false (use $a = -3$ and $b = 1$); NOT sufficient.

(2) Given that $a = -b$, then $\frac{a-1}{b+1} = \frac{-b-1}{b+1} = \frac{-(b+1)}{b+1} = -1$ and $\frac{a}{b} = \frac{-b}{b} = -1$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS12602.01

298. In a sequence of numbers in which each term is 2 more than the preceding term, what is the fourth term?

(1) The last term is 90.

(2) The first term is 2.

Arithmetic Series and sequences

(1) Given that the last term is 90, then the sequence could be 2, 4, 6, 8, …, 90 with the fourth term equal to 8, and the sequence could be 84, 86, 88, 90 with the fourth term equal to 90; NOT sufficient.

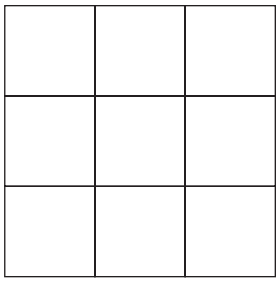
(2) Given that the first term is 2, then the second term must be $2 + 2 = 4$, the third term must be $4 + 2 = 6$, and the fourth term must be $6 + 2 = 8$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS32602.01

299. Is the integer p divisible by 5 ?

(1) p is divisible by 10.



(2) p is not divisible by 15.

Arithmetic Properties of integers

(1) If p is divisible by 10, then $p = 10q$ for some integer q. So, $p = (5)(2q)$ and p is divisible by 5; SUFFICIENT.

(2) If p is not divisible by 15, then p could be 20, for example, and 20 is divisible by 5. But, p could also be 21, for example, and 21 is not divisible by 5; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS52602.01

300. The 9 squares above are to be filled with x's and o's, with only one symbol in each square. How many of the squares will contain an x ?

(1) More than $\frac{1}{2}$ of the number of squares will contain an o.

(2) Each of the 4 corner squares will contain an x.

Arithmetic Properties of numbers

(1) If more than $\frac{1}{2}$ of the squares will contain an o, then 5, 6, 7, 8, or 9 of the squares will contain an o. The rest will contain x's, and so 4, 3, 2, 1, or 0 of the squares will contain an x; NOT sufficient.

(2) Since each of the 4 corner squares will contain an x, the number of squares that will contain an x could be 4, 5, 6, 7, 8, or 9; NOT sufficient.

Taking (1) and (2) together, from (1), the number of squares containing x's will be 4, 3, 2, 1, or 0, while from (2), the number of squares containing x's will be 4, 5, 6, 7, 8, or 9. Therefore, the number of squares containing x's will be 4.

The correct answer is C;
both statements together are sufficient.

DS72602.01

301. Is the sum of two integers divisible by 10 ?

(1) One of the integers is even.

(2) One of the integers is a multiple of 5.

Arithmetic Properties of integers

(1) If one of the integers is 10, which is even, and the other is 2, then $10 + 2 = 12$, which is not divisible by 10. However, if the other integer is 20, then $10 + 20 = 30$, which is divisible by 10; NOT sufficient.

(2) Note that the examples in (1) also satisfy (2); NOT sufficient.

Since the examples used to show that (1) is not sufficient also show that (2) is not sufficient, it follows that (1) and (2) taken together are not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS22602.01

302. Is x an integer?

(1) $x^3 = 8$

(2) $x = \sqrt{4}$

Algebra Exponents and radicals

(1) If $x^3 = 8$, then $x = \sqrt[3]{8} = 2$, which is an integer; SUFFICIENT.

(2) If $x = \sqrt{4}$, then $x = 2$, which is an integer; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS42602.01

303. If a building has 6,000 square meters of floor space, how many offices are in the building?

(1) Exactly $\frac{1}{4}$ of the floor space is not used for offices.

(2) There are exactly 20 executive offices and each of these occupies 3 times as much floor space as the average for all of the remaining offices.

Algebra Simultaneous equations

(1) If exactly $\frac{1}{4}$ of the floor space is not used for offices, then a total of $\frac{3}{4}(6{,}000) = 4{,}500$ square meters of floor space is used for offices. However, there is no information on how this floor space is divided up among the offices. There could be 10 offices each occupying 450 square meters of floor space, or there could be 100 offices each occupying 45 square meters of floor space; NOT sufficient.

(2) Since there is no information on how much of the 6,000 square meters of floor space is occupied by offices, it is not possible to determine how many offices are in the building. For example, if all 6,000 square feet of floor space is used for offices, there could be 40 non-executive offices each occupying 60 square meters and 20 executive offices each occupying (3)(60) = 180 square meters since (40)(60) + (20)(180) = 2,400 + 3,600 = 6,000. Or, if offices occupy only 4,500 square meters of floor space, there could be 30 non-executive offices each occupying 50 square meters and 20 executive offices each occupying (3)(50) = 150 square meters since (30)(50) + (20)(150) = 1,500 + 3,000 = 4,500; NOT sufficient.

With (1) and (2) taken together, (1) implies that 4,500 square meters of floor space is used for offices. If n represents the number of non-executive offices and f represents the average amount, in square meters, occupied by these offices then nf represents the total square meters of floor space occupied by the non-executive offices. By (2), there are 20 executive offices, each occupying $3f$ square meters of floor space. Thus, the total square meters of floor space occupied by all of the offices combined is $nf + (20)(3f) = 4{,}500$, or $f(n + 60) = 4{,}500$. Multiple values for n and f satisfy this equation. For example, if $n = 30$ and $f = 50$, then $(50)(30 + 60) = (50)(90) = 4{,}500$. Also, if $n = 15$ and $f = 60$, then $(60)(15 + 60) = (60)(75) = 4{,}500$.

The correct answer is E;
both statements together are still not sufficient.

DS43602.01

304. If p, r, and s are consecutive integers in ascending order and x is the average (arithmetic mean) of the three integers, what is the value of x?

(1) Twice x is equal to the sum of p, r, and s.

(2) The sum of p, r, and s is zero.

Algebra Statistics

(1) It is given that twice x is equal to the sum of p, r, and s, or $2x = p + r + s$. Because x is the average of p, r, and s, it follows that $3x = p + r + s$ and so $2x = 3x$. Therefore, $x = 0$; SUFFICIENT

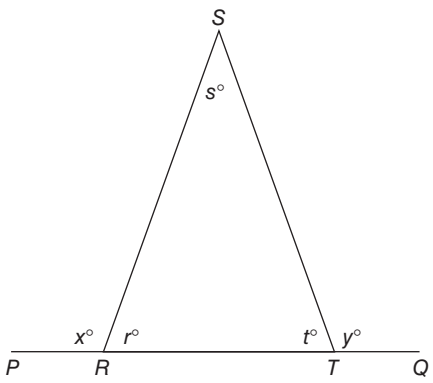
(2) It is given that $p + r + s = 0$. Since $x = \frac{p + r + s}{3}$, it follows that $x = \frac{0}{3} = 0$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS53602.01

305. If m and n are integers, what is the value of $m + n$?

(1) $(x + m)(x + n) = x^2 + 5x + mn$ and $x \neq 0$.



(2) $mn = 4$

Algebra Simplifying algebraic expressions

(1) Since it is given that $(x + m)(x + n) = x^2 + 5x + mn$ and it is also true that $(x + m)(x + n) = x^2 + (m + n)x + mn$, it follows that $m + n = 5$; SUFFICIENT.

(2) Given that $mn = 4$, it is possible that $m = 1$ and $n = 4$, which means that $m + n = 5$. But it is also possible that $m = 2$ and $n = 2$, which means that $m + n = 4$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS63602.01

306. In the figure above, RST is a triangle with angle measures as shown and $PRTQ$ is a line segment. What is the value of $x + y$?

(1) $s = 40$

(2) $r = 70$

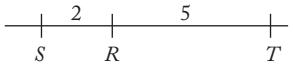
Geometry Triangles

(1) Given that $s = 40$, then $180 = 40 + r + t$ and $140 = r + t$. Also, $x + r = 180$ and $t + y = 180$, so $(x + y) + (r + t) = 360$, which means that $(x + y) + 140 = 360$. Therefore, $(x + y) = 360 - 140 = 220$; SUFFICIENT.

(2) If $r = 70$, then $x = 180 - 70 = 110$. Since $r + s + t = 180$, then $s + t = 180 - r = 180 - 70 = 110$, from which it follows that $x = s + t$. By similar reasoning, $y = r + s = 70 + s$. Therefore, the value of $x + y$ depends on the values of s and t, which can be any two positive integers whose sum is 110. For example, if $s = 70$ and $t = 40$, then $x + y = 110 + 140 = 250$, but if $s = 50$ and $t = 60$, then $x + y = 110 + 120 = 230$; NOT sufficient.

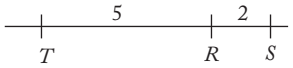
The correct answer is A;
statement 1 alone is sufficient.

DS04602.01



307. If R, S, and T are points on a line, and if R is 5 meters from T and 2 meters from S, how far is S from T?

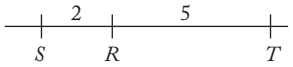
(1) R is between S and T.



(2) S is to the left of R, and T is to the right of R.

Geometry Lines and segments

(1) It is given that R is between S and T, so the placement of R, S, and T is shown by either



or

In either case, the distance from S to T is 7 meters; SUFFICIENT.

(2) It is given that S is to the left of R, and T is to the right of R, so the placement of R, S, and T is shown by

The distance from S to T is 7 meters; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS65602.01

308. Is n equal to zero?

(1) The product of n and some nonzero number is 0.

(2) The sum of n and 0 is 0.

Arithmetic Properties of numbers

(1) If x represents a nonzero number, then from (1), $nx = 0$. If the product of two numbers is 0, one or both of the numbers must be 0. Since x is nonzero, it follows that $n = 0$; SUFFICIENT.

(2) Given $n + 0 = 0$, then by a property of the integer 0, namely that $n + 0 = n$ for any number n, it follows that $n = 0$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS45602.01

309. On a map, $\frac{1}{2}$ inch represents 100 miles. According to this map, how many miles is City X from City Y ?

(1) City X is 3 inches from City Y on the map.

(2) Cities X and Y are each 300 miles from City Z.

Algebra Measurement conversion

(1) Letting d represent the distance, in miles, from City X to City Y, given that City X is 3 inches from City Y on a map where $\frac{1}{2}$ inch represents 100 miles, the following proportion can be solved for d.
$\frac{\frac{1}{2}}{3} = \frac{100}{d}$; SUFFICIENT.

(2) Given that each of Cities X and Y is 300 miles from City Z, if points X, Y, and Z representing these cities on the map are on a straight line, then the distance between Cities X and Y is $300 + 300 = 600$ miles. However, if points X, Y, and Z are the vertices of a triangle on the map, the distance is less than 600 miles because the length of the third side of a triangle is less than the sum of the lengths of the other two sides; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS07502.01

310. What is the remainder when the positive integer n is divided by 5 ?

(1) When n is divided by 3, the quotient is 4 and the remainder is 1.

(2) When n is divided by 4, the remainder is 1.

Arithmetic Properties of integers

(1) Given that the quotient is 4 and the remainder is 1 when n is divided by 3, it follows that $n = (3)(4) + 1 = 13$. Since 13 is 3 more than a multiple of 5, the remainder when n is divided by 5 is 3; SUFFICIENT.

(2) Given that the remainder is 1 when n is divided by 4, $n = 5$ is possible (has remainder 0 when divided by 5) and $n = 9$ is possible (has remainder 4 when divided by 5); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS37502.01

311. If r and s are positive numbers and θ is one of the operations, +, −, ×, or ÷, which operation is θ ?

(1) If $r = s$, then $r \,\theta\, s = 0$.

(2) If $r \neq s$, then $r \,\theta\, s \neq s \,\theta\, r$.

Arithmetic Arithmetic operations

(1) Given that 0 is always the result when the operation is applied to the same two positive numbers, then the operation can be subtraction (because $r - r = 0$ is true for all positive numbers r), but the operation cannot be addition (because $1 + 1 \neq 0$), multiplication (because $1 \times 1 \neq 0$), or division (because $1 \div 1 \neq 0$). Therefore, the operation must be subtraction; SUFFICIENT.

(2) Given that if $r \neq s$, then $r \,\theta\, s \neq s \,\theta\, r$, or equivalently (by forming the logical contrapositive), if $r \,\theta\, s = s \,\theta\, r$, then $r = s$, it is not possible to determine the operation θ. Subtraction satisfies this condition, because from $r - s = s - r$ it follows that $2r = 2s$ and $r = s$. Division satisfies this condition, because from $r \div s = s \div r$, or $\frac{r}{s} = \frac{s}{r}$, it follows that $r^2 = s^2$ and $r = s$ (the possibility $r = -s$ is excluded because r and

s are nonzero positive numbers). Therefore, both subtraction and division satisfy this condition; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS57502.01

312. In any sequence of n nonzero numbers, a pair of consecutive terms with opposite signs represents a sign change. For example, the sequence –2, 3, –4, 5 has three sign changes. Does the sequence of nonzero numbers s_1, s_2, s_3, . . . , s_n have an even number of sign changes?

(1) $s_k = (-1)^k$ for all positive integers k from 1 to n.

(2) n is odd.

Arithmetic Series and sequences

(1) Given that the sequence is a certain number of initial terms of $(-1)^1 = -1, (-1)^2 = 1, (-1)^3 = -1, (-1)^4 = 1, \ldots$, then it is possible to have an even number of sign changes (–1, 1, –1 has 2 sign changes) and it is possible to have an odd number of sign changes (–1, 1 has 1 sign change); NOT sufficient.

(2) Given that n is odd, then it is possible to have an even number of sign changes (–1, 1, –1 has 2 sign changes and $n = 3$) and it is possible to have an odd number of sign changes (1, 1, –1 has 1 sign change and $n = 3$); NOT sufficient.

Taking (1) and (2) together, then the sequence begins with –1 followed by a certain number of repetitions (possibly zero repetitions) of 1, –1. For example, if $n = 1$, then the sequence consists of the single term –1 (has 0 sign changes). If $n = 3$, then the sequence consists of the 3 terms –1, 1, –1 (has 2 sign changes). If $n = 5$, then the sequence consists of the 5 terms –1, 1, –1, 1, –1 (has 4 sign changes). Since each of these has an even number of sign changes, and each additional inclusion of the two terms 1, –1 adds 2 additional sign changes, the number of sign changes will always be even.

The correct answer is C;
both statements together are sufficient.

DS86502.01

313. Jack picked 76 apples. Of these, he sold $4y$ apples to Juanita and $3t$ apples to Sylvia. If he kept the remaining apples, how many apples did he keep? (t and y are positive integers.)

(1) $y \geq 15$ and $t = 2$

(2) $y = 17$

Algebra Simultaneous equations

Determine the value of the nonnegative integer $76 - 4y - 3t$.

(1) Given that $y \geq 15$ and $t = 2$, it follows that $76 - 4y - 3t = 76 - 4y - 6 = 70 - 4y$ could have the value $70 - 4(15) = 10$, $70 - 4(16) = 6$, or $70 - 4(17) = 2$; NOT sufficient.

(2) Given that $y = 17$, it follows that $76 - 4y - 3t = 76 - 68 - 3t = 8 - 3t$ could have the value $8 - 3(1) = 5$ or $8 - 3(2) = 2$; NOT sufficient.

Taking (1) and (2) together, it follows that $76 - 4y - 3t = 76 - 4(17) - 3(2) = 2$.

The correct answer is C;
both statements together are sufficient.

DS47502.01

314. What number is 6 more than $x + y$?

(1) y is 3 less than x.

(2) y is twice x.

Algebra Simultaneous equations

Determine the value of $x + y + 6$.

(1) Given that $y = x - 3$, $x + y + 6$ could be 15 (use $x = 6$ and $y = 3$) and $x + y + 6$ could be 21 (use $x = 9$ and $y = 6$); NOT sufficient.

(2) Given that $y = 2x$, $x + y + 6$ could be 9 (use $x = 1$ and $y = 2$) and $x + y + 6$ could be 12 (use $x = 2$ and $y = 4$); NOT sufficient.

Taking (1) and (2) together, then $y = x - 3$ and $y = 2x$ both hold. Therefore, $x - 3 = 2x$, or $x = -3$, and hence $y = 2(-3) = -6$. It follows that $x + y + 6 = (-3) + (-6) + 6 = -3$.

The correct answer is C;
both statements together are sufficient.

DS08502.01

315. The total price of 5 pounds of regular coffee and 3 pounds of decaffeinated coffee was $21.50. What was the price of the 5 pounds of regular coffee?

(1) If the price of the 5 pounds of regular coffee had been reduced 10 percent and the price of the 3 pounds of decaffeinated coffee had been reduced 20 percent, the total price would have been $18.45.

(2) The price of the 5 pounds of regular coffee was $3.50 more than the price of the 3 pounds of decaffeinated coffee.

Algebra Simultaneous equations

Let $\$x$ be the price of 5 pounds of regular coffee and let $\$y$ be the price of 3 pounds of decaffeinated coffee. Then $x + y = 21.5$. Determine the value of x.

(1) Given that $0.9x + 0.8y = 18.45$, then the values of both x and y can be determined, because $x + y = 21.5$ and $0.9x + 0.8y = 18.45$ can be interpreted as equations of nonparallel lines in the coordinate plane that have a single point of intersection. One way to determine that the lines are not parallel is to show that their slopes are different. In the case of $x + y = 21.5$, the equation can be rewritten as $y = -x + 21.5$, and hence the slope is -1. In the case of $0.9x + 0.8y = 18.45$, the equation can be rewritten as $0.8y = -0.9x + 18.45$, or $y = -\frac{0.9}{0.8}x + \frac{18.45}{0.8}$, and hence the slope is $-\frac{0.9}{0.8}$. Since $-1 \neq -\frac{0.9}{0.8}$, the slopes are different, and therefore the lines are not parallel. Although showing that the lines are not parallel is enough to show that (1) is sufficient, one may instead solve the equations simultaneously. This gives the solution $x = 12.5$ and $y = 9$; SUFFICIENT.

(2) Given that $x = 3.5 + y$, then the values of both x and y can be determined in the same way as in (1) above. The slope of $x + y = 21.5$ was shown above to be -1 and the slope of $x = 3.5 + y$ is easily seen to be 1. Since $-1 \neq 1$, the slopes are different, and therefore the lines are not parallel. Solving the equations simultaneously will give the solution $x = 12.5$ and $y = 9$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS38502.01

316. If a and b are integers, is $a^5 < 4^b$?

(1) $a^3 = -27$

(2) $b^2 = 16$

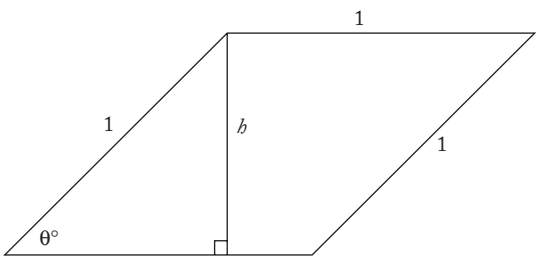
Arithmetic Exponents

(1) Given that $a^3 = -27$, it follows that $a = -3$, and hence $a < 0$. Therefore, $a^5 < 0$ (the 5th power of a negative number is negative), from which it follows that $a^5 < 4^b$ because a^5 is less than zero and 4 raised to an integer power is greater than zero; SUFFICIENT.

(2) Given that $b^2 = 16$, it follows that $b = 4$ or $b = -4$, but there is no restriction on the value of a. If $a = 1$ and $b = 4$, then $a^5 = 1$ is less than $4^b = 4^4$. However, if $a = 5$ and $b = 4$, then $a^5 = 5^5$ is greater than $4^b = 4^4$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS28502.01



317. If each side of parallelogram P has length 1, what is the area of P?

(1) One angle of P measures 45 degrees.

(2) The altitude of P is $\frac{\sqrt{2}}{2}$.

Geometry Quadrilaterals; Area

The figure below shows parallelogram P, its altitude h, and an interior angle with degree measure θ. The area of a parallelogram is its base times its altitude. Therefore, the area of parallelogram P is $(h)(1) = h$. Determine the value of h.

(1) Given that $\theta = 45$, it follows that the right triangle in the figure with hypotenuse 1 and side length h is a 45°-45°-90° triangle. Therefore, the length of each of its legs is $\frac{\sqrt{2}}{2}$ times the length of its hypotenuse, and hence $h = \frac{\sqrt{2}}{2}$; SUFFICIENT.

(2) Given that $h = \frac{\sqrt{2}}{2}$, it follows from the comments above that the area of P is $h = \frac{\sqrt{2}}{2}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS49502.01

318. If x is an integer greater than 0, what is the remainder when x is divided by 4 ?

(1) The remainder is 3 when $x + 1$ is divided by 4.

(2) The remainder is 0 when $2x$ is divided by 4.

Arithmetic Properties of integers

(1) Given that the remainder is 3 when $x + 1$ is divided by 4, or equivalently, that $x + 1$ is 3 more than a multiple of 4, then it follows that x is 2 more than a multiple of 4, or equivalently, that the remainder is 2 when $x + 1$ is divided by 4; SUFFICIENT.

(2) Given that the remainder is 0 when $2x$ is divided by 4, it is possible that the remainder when x is divided by 4 is 0 (choose $x = 4$; then $2x = 8$ has remainder 0 and $x = 4$ has remainder 0) and it is possible that the remainder when x is divided by 4 is 2 (choose $x = 6$; then $2x = 12$ has remainder 0 and $x = 6$ has remainder 2); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS00602.01

319. A certain painting job requires a mixture of yellow, green, and white paint. If 12 quarts of paint are needed for the job, how many quarts of green paint are needed?

(1) The ratio of the amount of green paint to the amount of yellow and white paint combined needs to be 1 to 3.

(2) The ratio of the amount of yellow paint to the amount of green paint needs to be 3 to 2.

Algebra Ratios; Simultaneous equations

Let Y, G, and W be the number of quarts, respectively, of yellow, green, and white paint. It is given that $Y + G + W = 12$. Determine the value of G.

(1) Given that $\frac{G}{Y+W} = \frac{1}{3}$, it follows that $Y + W = 3G$. Therefore, $Y + G + W = 12$, which can be written as $(Y + W) + G = 12$, which becomes $3G + G = 12$, or $G = 3$; SUFFICIENT.

(2) Given that $\frac{Y}{G} = \frac{3}{2}$, it is not possible to determine the value of G. For example, it is possible that $G = 2$ (using $Y = 3$, $G = 2$, and $W = 7$, then $\frac{Y}{G} = \frac{3}{2}$ and $Y + G + W = 12$) and it is possible that $G = 4$ (using $Y = 6$, $G = 4$, and $W = 2$, then $\frac{Y}{G} = \frac{3}{2}$ and $Y + G + W = 12$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS69502.01

320. Is the average (arithmetic mean) of the numbers x, y, and z greater than z ?

(1) $z - x < y - z$

(2) $x < z < y$

Algebra Inequalities

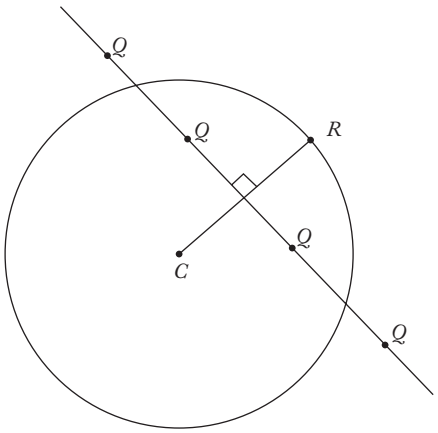
Determine whether $\frac{x + y + z}{3} > z$, or $x + y + z > 3z$. Equivalently, determine whether $x + y > 2z$.

(1) Given that $z - x < y - z$, it follows by adding $x + z$ to each side that $2z < x + y$; SUFFICIENT.

(2) Given that $x < z < y$, it is not possible to determine whether $x + y > 2z$. For example, if $x = 1$, $y = 4$, and $z = 2$, then $x < z < y$ and $x + y = 5$ is greater than $2z = 4$. However, if $x = 1$, $y = 4$, and $z = 3$, then $x < z < y$ and $x + y = 5$ is less than $2z = 6$; NOT sufficient.

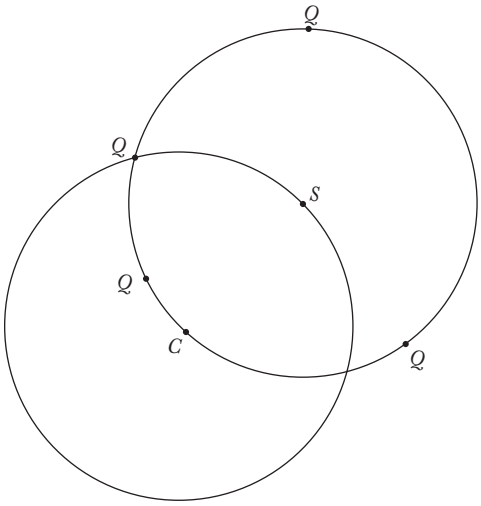
The correct answer is A;
statement 1 alone is sufficient.

DS30602.01



321. Is the point Q on the circle with center C?

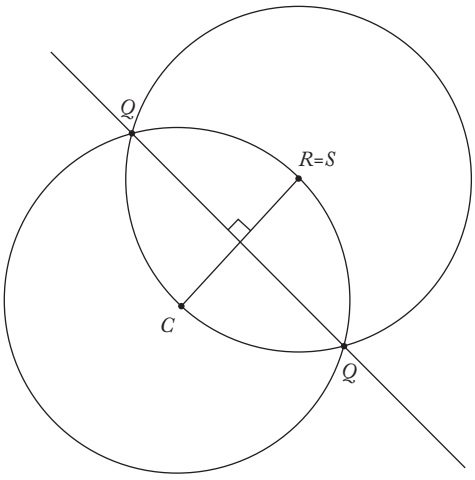
(1) R is a point on the circle and the distance from Q to R is equal to the distance from Q to C.

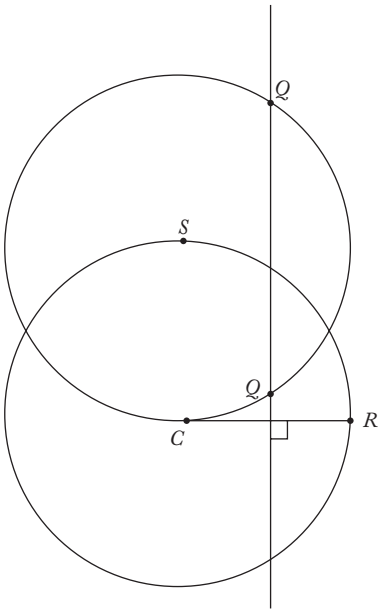


(2) S is a point on the circle and the distance from Q to S is equal to the distance from S to C.

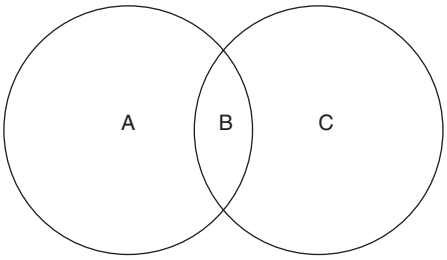
Geometry Circles

(1) Given that R is on the circle with center C and $QR = QC$, it is possible that Q is on the circle with center C and it is possible that Q is not on the circle with center C. In the figure below, several possible locations for Q are shown on the perpendicular bisector of $\overline{CR}$, and for each of these $QR = QC$; NOT sufficient.





(2) Given that S is on the circle with center C and $QS = SC$, it is possible that Q is on the circle with center C and it is possible that Q is not on the circle with center C. In the figure below, several possible locations for Q are shown on the circle with center S and radius SC, and for each of these $QS = SC$; NOT sufficient.



Taking (1) and (2) together, the figures below show that it is possible for Q to be on the circle with center C (when $R = S$) and it is possible for Q to not be on the circle with center C (when $R \neq S$). In the case $R = S$, when Q is on the perpendicular bisector of $\overline{CR}$, then $QR = QC$, and when Q is on the circle with center S, then $QS = SC$, or $QR = RC$ using $R = S$. Therefore, $QR = QC$ and $QR = RC$, hence $QC = RC$, and it follows that Q is on the circle with center C since the distance between Q and C is equal to the radius of the circle with center C (that radius being RC, since R is on the circle with center C).

In the case $R \neq S$, it is clear that it is possible for Q to not be on the circle with center C, especially when $\overline{CR}$ and $\overline{CS}$ are perpendicular.

The correct answer is E;
both statements together are still not sufficient.

DS59502.01

322. In the figure above, if A, B, and C are the areas, respectively, of the three nonoverlapping regions formed by the intersection of two circles of equal area, what is the value of $B + C$?

(1) $A + 2B + C = 24$

(2) $A + C = 18$ and $B = 3$

Geometry Circles; Area

It is given that the area of the left circle is equal to the area of the right circle, or $A + B = B + C$. Subtracting B from each side of this equation gives $A = C$. Determine the value of $B + C$.

(1) Given that $A + 2B + C = 24$, it follows from $A = C$ that $C + 2B + C = 24$, or $2B + 2C = 24$, or $B + C = 12$; SUFFICIENT.

(2) Given that $A + C = 18$ and $B = 3$, it follows from $A = C$ that the first equation is equivalent to $C + C = 18$, or $C = 9$. Therefore, $B = 3$ and $C = 9$, and hence $B + C = 12$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS61602.01

323. A company produces a certain toy in only 2 sizes, small or large, and in only 2 colors, red or green. If, for each size, there are equal numbers of red and green toys in a certain production lot, what fraction of the total number of green toys is large?

(1) In the production lot, 400 of the small toys are green.

(2) In the production lot, $\frac{2}{3}$ of the toys produced are small.

Algebra Ratios

Let x be the number of small toys of each color, and let y be the number of large toys of each color. The contingency table below gives a summary of the information given. Determine the value of $\frac{y}{x+y}$.

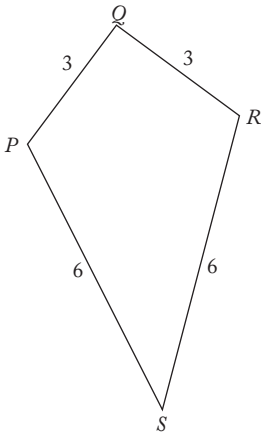
	small	large	total
red	x	y	$x+y$
green	x	y	$x+y$
total	$2x$	$2y$	$2x+2y$

(1) Given that $x = 400$, it is clearly not possible to determine the value of $\frac{y}{x+y} = \frac{y}{400+y}$; NOT sufficient.

(2) Given that $\frac{2}{3}$ of the toys are small, then because there are $(2x + 2y)$ toys altogether and $2x$ small toys, it follows that $\frac{2x}{2x+2y} = \frac{2}{3}$. Therefore, $3(2x) = 2(2x + 2y)$, or $x = 2y$, and hence $\frac{y}{x+y} = \frac{y}{2y+y} = \frac{y}{3y} = \frac{1}{3}$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS51602.01

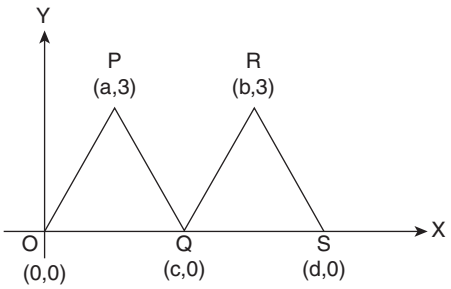


324. Is quadrilateral *PQRS* a parallelogram?

(1) Adjacent sides *PQ* and *QR* have the same length.

(2) Adjacent sides *RS* and *SP* have the same length.

Geometry Quadrilaterals



(1) Given that $PQ = QR$, it is not possible to determine whether quadrilateral *PQRS* is a parallelogram. For example, if quadrilateral *PQRS* is a square, then $PQ = QR$ and quadrilateral *PQRS* is a parallelogram. However, if quadrilateral *PQRS* is as shown in the figure below, then $PQ = QR$ and quadrilateral *PQRS* is not a parallelogram; NOT sufficient.

(2) Given that $RS = SP$, it is not possible to determine whether quadrilateral *PQRS* is a parallelogram. For example, if quadrilateral *PQRS* is a square, then $RS = SP$ and quadrilateral *PQRS* is a parallelogram. However, if quadrilateral *PQRS* is as shown in the figure above, then $RS = SP$ and quadrilateral *PQRS* is not a parallelogram; NOT sufficient.

Taking (1) and (2) together, it is not possible to determine whether quadrilateral *PQRS* is a parallelogram because the same examples used in (1) also satisfy (2).

The correct answer is E;
both statements together are still not sufficient.

DS71602.01

325. In the figure above, the vertices of ΔOPQ and ΔQRS have coordinates as indicated. Do ΔOPQ and ΔQRS have equal areas?

(1) $b = 2a$

(2) $d = 2c$

Geometry Triangles; Area

The area of ΔOPQ is $\frac{1}{2}(c-0)(3-0)=\frac{3}{2}c$ and the area of ΔQRS is $\frac{1}{2}(d-c)(3-0)=\frac{3}{2}(d-c)$. Determine whether $\frac{3}{2}c=\frac{3}{2}(d-c)$, or equivalently, whether $d = 2c$.

(1) Given that $b = 2a$, it is not possible to determine whether $d = 2c$. For example, if $a = 1$, $b = 3$, $c = 2$, and $d = 4$, then $d = 2c$. However, if $a = 1$, $b = 3$, $c = 2$, and $d = 10$, then $d \neq 2c$; NOT sufficient.

(2) Given that $d = 2c$, then as explained in the preliminary comments above, it follows that ΔOPQ and ΔQRS have equal areas; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS92602.01

326. After the first two terms in a sequence of numbers, each term in the sequence is formed by adding all of the preceding terms. Is 12 the fifth term in the sequence?

(1) The sum of the first 3 terms in the sequence is 6.

(2) The fourth term in the sequence is 6.

Algebra Series and sequences

If the first term is a and the second term is b, then the third term is $a + b$, the fourth term is $a + b + (a + b) = 2a + 2b$, and the fifth term is $a + b + (a + b) + (2a + 2b) = 4a + 4b$. Is $4a + 4b = 12$?

(1) It is given that the sum of the first 3 terms is 6, and since the sum of the first 3 terms is the fourth term, it follows that $2a + 2b = 6$. Therefore $a + b = 3$ and $4(a + b) = 4a + 4b = 12$; SUFFICIENT.

(2) It is given that the fourth term is 6. Since the fourth term is $2a + 2b$, the same reasoning used in (1) applies, and $4a + 4b = 12$; SUFFICIENT.

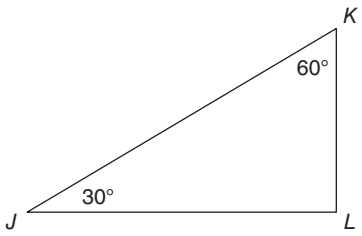
The correct answer is D;
each statement alone is sufficient.

DS13602.01

327. Jones has worked at Firm *X* twice as many years as Green, and Green has worked at Firm *X* four years longer than Smith. How many years has Green worked at Firm *X* ?

(1) Jones has worked at Firm *X* 9 years longer than Smith.

(2) Green has worked at Firm *X* 5 years less than Jones.



Algebra Simultaneous equations

Let J, G, and S be the number of years Jones, Green, and Smith, respectively, have worked at Firm X. Then $J = 2G$ and $G = 4 + S$. What is the value of G ?

(1) Given that $J = 9 + S$, then from $J = 2G$ it follows that $2G = 9 + S$. From $G = 4 + S$ it follows that $S = G - 4$, and therefore $G - 4$ can be substituted for S in the equation $2G = 9 + S$ to obtain $2G = 9 + (G - 4)$, or $G = 5$; SUFFICIENT.

(2) Given that $G = J - 5$, it follows from $J = 2G$ that $G = 2G - 5$, or $G = 5$; SUFFICIENT.

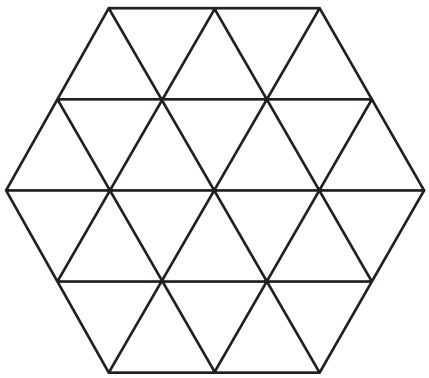
The correct answer is D;
each statement alone is sufficient.

DS83602.01

328. In ΔJKL shown above, what is the length of segment JL ?

(1) $JK = 10$

(2) $KL = 5$



Geometry Triangles

Since ΔJKL is a 30°-60°-90° triangle, its side lengths are in the ratio $1:\sqrt{3}:2$. Therefore, if the length of $\overline{KL}$ is represented by x, then the length of $\overline{JL}$ is represented by $x\sqrt{3}$, and the length of $\overline{JK}$ is represented by $2x$.

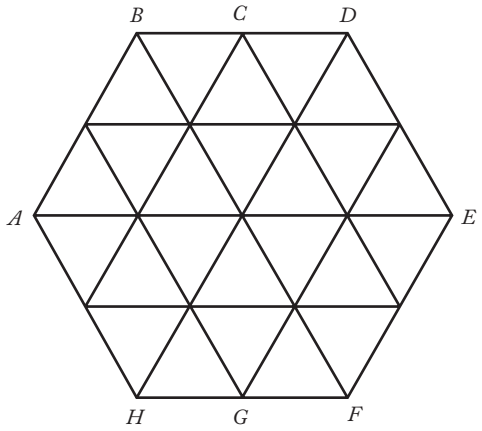
(1) $JK = 10$, so $2x = 10$ and $x = 5$. Therefore, from above, $JL = 5\sqrt{3}$; SUFFICIENT.

(2) $KL = 5$, so $x = 5$ and $JL = 5\sqrt{3}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

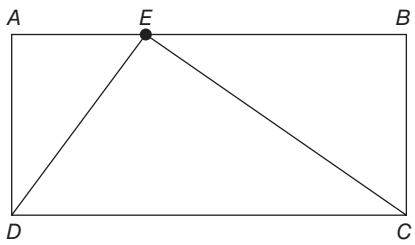
DS24602.01

329. A six-sided mosaic contains 24 triangular pieces of tile of the same size and shape, as shown in the figure above. If the sections of tile fit together perfectly, how many square centimeters of tile are in the mosaic?



(1) Each side of each triangular piece of tile is 9 centimeters long.

(2) The mosaic can be put inside a rectangular frame that is 40 centimeters wide.

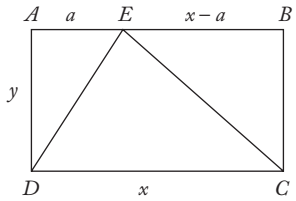


Geometry Triangles; Area

(1) It is given that each side of each triangle is 9 centimeters long. The height of each triangle can be determined using the ratios for 30°-60°-90° triangles, and thus the area of each of the 24 triangular tiles can be determined. Then, multiplying by 24 will give the area of the tile in the mosaic; SUFFICIENT.

(2) It is given that the mosaic can be put inside a rectangular frame that is 40 centimeters wide. This means that the distance from A to E on the figure below is a maximum of 40 centimeters, but no information is given on the exact width of the mosaic. There is also no information on the distance from C to G; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.



DS34602.01

330. If, in the figure above, $ABCD$ is a rectangular region, what is the value of the ratio $\frac{\text{area of } \Delta EDA}{\text{area of } \Delta EBC}$?

(1) $AD = 4$

(2) $AE = 2$ and $EB = 4$

Geometry Triangles

Using the figure above,

$$\frac{\text{area of } \Delta EDA}{\text{area of } \Delta EBC} = \frac{\frac{1}{2}ay}{\frac{1}{2}(x-a)y} = \frac{a}{x-a}.$$

(1) In the notation introduced in the figure above, this gives $y = 4$. However, the desired ratio depends only on the value of a and x and no information is given for these values; NOT sufficient.

(2) In the notation introduced in the figure above, this gives $a = 2$ and $x - a = 4$. With these values for a and $x - a$, the value of the desired ratio can be determined; SUFFICIENT.

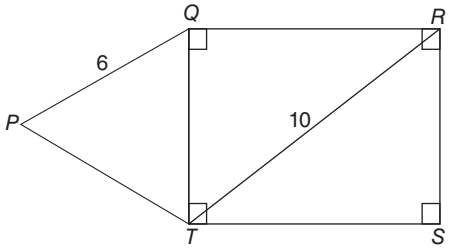
The correct answer is B;
statement 2 alone is sufficient.

DS64602.01

331. A noncompressible ball in the shape of a sphere is to be passed through a square opening in a board. What is the perimeter of the opening?

(1) The radius of the ball is equal to 2 inches.

(2) The square opening is the smallest square opening through which the ball will fit.



Geometry Quadrilaterals; Perimeter

(1) The radius of the ball is 2 inches, so the diameter of the ball is 4 inches. The square opening must be at least 4 inches on a side, so the perimeter of the opening must be at least 16 inches. However, there is not enough information to determine the exact perimeter of the opening; NOT sufficient.

(2) Knowing that the square opening is the smallest through which the ball will fit is not enough information to determine the perimeter of the opening because there is no information on the diameter of the ball; NOT sufficient.

Given (1) and (2), the perimeter of the square opening must be at least 16 inches and as small as possible. Therefore, the perimeter of the square opening is 16 inches.

The correct answer is C;
both statements together are sufficient.

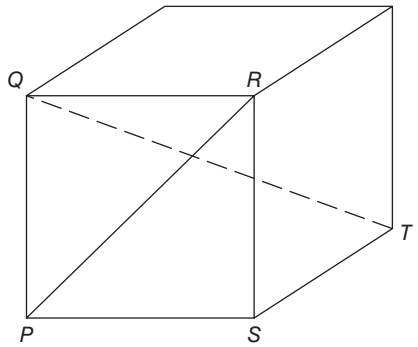
DS74602.01

332. In the figure above, what is the area of region *PQRST*?

(1) $PQ = RS$

(2) $PT = QT$

Geometry Triangles; Area



From the figure, *PQRST* is composed of ΔPQT and quadrilateral *QRST*, which is a rectangle because each of its angles is a right angle. The area of *PQRST* is the sum of the areas of ΔPQT and rectangle *QRST*.

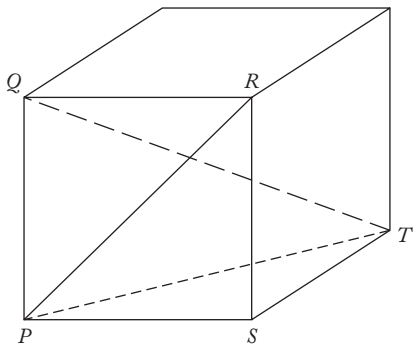
(1) It is given that $PQ = RS$, where PQ is given as 6. The length of the rectangle is $\sqrt{10^2 - 6^2} = 8$, so the area of the rectangle is then $(6)(8) = 48$. Because *QRST* is a rectangle, $QT = RS$. It follows that ΔPQT is isosceles, but no other information about ΔPQT can be obtained from (1) or what is given in the figure. If $PT = 6$, then ΔPQT is equilateral and its area is $\frac{1}{2}(6)(3\sqrt{3}) = 9\sqrt{3}$. Therefore, the area of *PQRST* is $48 + 9\sqrt{3}$. However, If $PT = 8$, then ΔPQT is isosceles ($PQ = QT$) with base 8 and area $\frac{1}{2}(8)(2\sqrt{5}) = 8\sqrt{5}$. The area of *PQRST* is $48 + 8\sqrt{5}$; NOT sufficient.

(2) It is given that $PT = QT$. It follows that ΔPQT is isosceles with base $PQ = 6$. If $PT = QT = 6$, then ΔPQT is equilateral and its area is $\frac{1}{2}(6)(3\sqrt{3}) = 9\sqrt{3}$. Since $RT = 10$, the length of the rectangle is $\sqrt{100 - 36} = 8$ and the area of the rectangle is $(6)(8) = 48$. The area of *PQRST* is $48 + 9\sqrt{3}$. However, if $PT = QT = 8$, the area of ΔPQT is $\frac{1}{2}(6)(\sqrt{64 - 9}) = 3\sqrt{55}$. Since $RT = 10$, and $QT = 8$, the length of the rectangle is $\sqrt{100 - 64} = 6$ and the area of the rectangle is $(6)(8) = 48$. The area of *PQRST* is $48 + 3\sqrt{55}$; NOT sufficient.

Taking (1) and (2) together, $PQ = RS = 6$ from (1) and $QT = RS = 6$ because *QRST* is a rectangle. From (2), $PT = QT$, so $PT = 6$. All three sides of ΔPQT are known and therefore the area of ΔPQT can be determined. Also, from the figure, $TR = 10$. Using this and the Pythagorean theorem applied to ΔTQR (or ΔTSR), which gives *QR* (or *TS*), the area of *QRST* can be determined. With both the area of ΔPQT and *QRST* known, the area of *PQRST* can be determined.

The correct answer is C;
both statements together are sufficient.

DS84602.01



333. The figure above represents a box that has the shape of a cube. What is the volume of the box?

(1) $PR = 10$ cm

(2) $QT = 5\sqrt{6}$ cm

Geometry Volume

Letting s represent the side length of the cube, if the value of s can be determined, then the volume of the cube, s^3, can be determined.

(1) It is given that $PR = 10$. Applying the Pythagorean theorem to ΔPSR, it follows that $10^2 = 2s^2$, from which the value of s can be determined; SUFFICIENT.

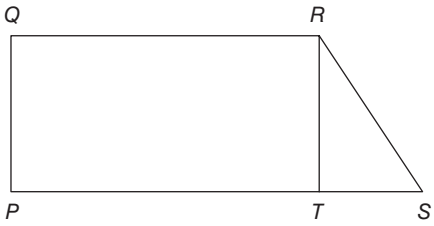
(2) It is given that $QT = 5\sqrt{6}$. Applying the Pythagorean theorem to ΔPST, it follows that $PT^2 = 2s^2$. Then applying the Pythagorean theorem to ΔQPT, it follows that $QT^2 = QP^2 + PT^2$ or $(5\sqrt{6})^2 = s^2 + 2s^2 = 3s^2$, from which the value of s can be determined; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS94602.01

334. If x and y are the lengths of the legs of a right triangle, what is the value of xy?

(1) The hypotenuse of the triangle is $10\sqrt{2}$.



(2) The area of the triangular region is 50.

Geometry Triangles; Area; Pythagorean theorem

(1) Given that the hypotenuse of the triangle is $10\sqrt{2}$, it follows that $x^2 + y^2 = (10\sqrt{2})^2 = 200$. It is possible that $x = y = 10$ ($x^2 + y^2 = 200$), in which case $xy = 100$. However, it is also possible that $x = 5\sqrt{6}$ and $y = 5\sqrt{2}$ ($(5\sqrt{6})^2 + (5\sqrt{2})^2 = 150 + 50 = 200$), in which case $xy = 50\sqrt{3}$; NOT sufficient.

(2) Given that the area of the triangle is 50, it follows that $\frac{xy}{2} = 50$, so $xy = 100$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS75602.01

335. In the figure above, $PQRT$ is a rectangle. What is the length of segment PQ?

(1) The area of region $PQRS$ is 39 and $TS = 6$.

(2) The area of region $PQRT$ is 30 and $QR = 10$.

Geometry Quadrilaterals

Since $PQRT$ is a rectangle, $\overline{QR}$ is parallel to $\overline{PT}$, and since $\overline{PT}$ is part of the same line as $\overline{PS}$, it follows that $\overline{QR}$ is parallel to $\overline{PS}$. Therefore, quadrilateral $PQRS$ is a trapezoid with area given by $\frac{1}{2}(QR + PS)(PQ)$.

(1) Given that the area of $PQRS$ is 39, it follows that $\frac{1}{2}(QR + PS)(PQ) = 39$. But, $PS = PT + TS$, where $TS = 6$, and $QR = PT$ since $PQRT$ is a rectangle. Therefore, $39 = \frac{1}{2}(2PT + 6)(PQ)$ or $78 = (2PT + 6)(PQ)$. This equation has two unknowns, namely PT and PQ, and many values for PT and PQ satisfy the equation; NOT sufficient.

(2) Since $PQRT$ is a rectangle with area given by $(QR)(QP)$, from (2), $30 = (10)(QP)$, so $QP = 3$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS08420

336. On June 1, Mary paid Omar $360 for rent and utilities for the month of June. Mary moved out early, and Omar refunded the money she paid for utilities, but not for rent, for the days in June after she moved out. How many dollars did Omar refund to Mary?

(1) Mary moved out on June 24.

(2) The amount Mary paid for utilities was less than $\frac{1}{5}$ the amount Mary paid for rent.

Algebra Applied problems; Proportions

Let R and U be the amounts, respectively and in dollars, that Mary paid for rent and utilities for the month of June. Given that $R + U = 360$, find the value of $\left(\frac{n}{30}\right)U$, where n is the number of days in June—which has 30 days—after Mary moved out.

(1) Given that $n = 6$, it follows that $\left(\frac{n}{30}\right)U = \frac{1}{5}U$. However, it is clear that more than one value of U is possible, and thus the value of $\left(\frac{n}{30}\right)U$ cannot be determined; NOT sufficient.

(2) Given that $U < \frac{1}{5}R$, it is clear that more than one value of U is possible, and thus the value of $\left(\frac{n}{30}\right)U$ cannot be determined; NOT sufficient.

Taking (1) and (2) together, the problem reduces to whether the value of $\frac{1}{5}U$, or equivalently the value of U, can be determined when $R + U = 360$ and $U < \frac{1}{5}R$. However, it is still the case that the value of U cannot be determined. For example, if $U = \frac{1}{10}(360) = 36$ and $R = \frac{9}{10}(360) = 324$, then both $R + U = 360$ and $U < \frac{1}{5}R$ are true. On the other hand, if $U = \frac{1}{36}(360) = 10$ and $R = \frac{35}{36}(360) = 350$, then both $R + U = 360$ and $U < \frac{1}{5}R$ are true.

The correct answer is E;
both statements together are still not sufficient.

DS04057

337. If $x = 2t$ and $y = \frac{t}{3}$, what is the value of $x^2 - y^2$?

(1) $t^2 - 3 = 6$

(2) $t^3 = -27$

Algebra Simplifying algebraic expressions

This problem can be solved by determining the value of $x^2 - y^2 = (2t)^2 - \left(\frac{t}{3}\right)^2 = 4t^2 - \frac{t^2}{9}$, and this can be determined if the value of t^2 or the value of t can be determined.

(1) This indicates that $t^2 - 3 = 6$ and so $t^2 = 6 + 3 = 9$; SUFFICIENT.

(2) This indicates that $t^3 = -27$ and so $t = -3$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS02939

338. The 10 students in a history class recently took an examination. What was the maximum score on the examination?

(1) The mean of the scores was 75.

(2) The standard deviation of the scores was 5.

Arithmetic Statistics

(1) Given that the mean of the scores was 75, then all 10 scores could have been 75 and the maximum score would be 75. However, it is also possible that the scores were 74, 76, and 8 scores of 75, and the maximum would be 76; NOT sufficient.

(2) Given that the standard deviation was 5, it will be helpful to use a specific value for the mean, such as 75. From the definition of standard deviation, it follows that $\sqrt{\frac{\sum(S-75)^2}{10}} = 5$, where $\sum(S-75)^2$ denotes the sum of the squares of the differences of the scores from 75. It will be useful to solve for $\sum(S-75)^2$. Doing this gives $\frac{\sum(S-75)^2}{10} = 25$, and so the condition $\sum(S-75)^2 = 250$ will ensure that the standard deviation of the scores is 5. One list of 10 scores with standard deviation 5 and mean 75 is five occurrences of 70

and five occurrences of 80, since for these scores we have $\sum(S-75)^2 = 5(70-75)^2 + 5(80-75)^2$, which equals $5(25) + 5(25) = 250$; and the mean is 75 because the sum of the differences of the scores from 75 is equal to 0. Another list of 10 scores with standard deviation 5 and mean 75 is 70, 70, 70, 70, 75, 75, 75, 80, 80, and 85, since for these scores we have $\sum(S-75)^2 = 4(70-75)^2 + 3(75-75)^2 + 2(80-75)^2 + (85-75)^2$, which equals $4(25) + 2(25) + 100 = 250$; and the mean is 75 because the sum of the differences of the scores from 75 is equal to 0. The maximum for the first list is 80, and the maximum for the second list is 85; NOT sufficient.

Taking (1) and (2) together is still not sufficient because both (1) and (2) hold for the lists used in (2).

The correct answer is E;
both statements together are still not sufficient.

DS01341

339. Last school year, each of the 200 students at a certain high school attended the school for the entire year. If there were 8 cultural performances at the school during the last school year, what was the average (arithmetic mean) number of students attending each cultural performance?

(1) Last school year, each student attended at least one cultural performance.

(2) Last school year, the average number of cultural performances attended per student was 4.

Arithmetic Statistics

Determine the average number of students attending each of 8 cultural performances at a school that has 200 students.

(1) This indicates that each student attended at least one cultural performance, but the average number of students attending each performance cannot be uniquely determined. It could be as low as $\frac{200}{8} = 25$ students if each student attended exactly one performance, or it could be as high as $\frac{200}{1} = 200$ if each student attended every performance; NOT sufficient.

(2) This indicates that, since the average number of performances attended per student was 4, $\frac{\text{total attendance at performances}}{\text{total number of students}} = 4$, so the total attendance at the performances is $(4)(200) = 800$ students. It follows that the average number of students attending each performance is $\frac{800}{8} = 100$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS14569

340. A clothing manufacturer makes jackets that are wool or cotton or a combination of wool and cotton. The manufacturer has 3,000 pounds of wool and 2,000 pounds of cotton on hand. Is this enough wool and cotton to make at least 1,000 jackets?

(1) Each wool jacket requires 4 pounds of wool, and no cotton.

(2) Each cotton jacket requires 6 pounds of cotton, and no wool.

Arithmetic Applied problems

(1) Given that each wool jacket requires 4 pounds of wool and no cotton, then at most a total of 750 wool jackets can be made (because $\frac{3,000}{4} = 750$), and possibly no other jackets. Therefore, it is possible that there is enough wool and cotton to make at least 1,000 jackets (for example, if there is enough cotton to make 250 cotton jackets) and it is possible that there is not enough wool and cotton to make at least 1,000 jackets (for example, if there is less than the amount of cotton needed to make 250 cotton jackets); NOT sufficient.

(2) Given that each cotton jacket requires 6 pounds of cotton and no wool, then at most a total of 333 cotton jackets can be made (because rounding $\frac{2,000}{6}$ down to the nearest integer gives 333), and possibly no other jackets. Therefore, it is possible that there is enough wool and cotton to make at least 1,000 jackets (for example, if there is enough wool to make 667 wool jackets), and it is possible that there is not enough wool

and cotton to make at least 1,000 jackets (for example, if there is less than the amount of wool needed to make 667 wool jackets); NOT sufficient.

Taking (1) and (2) together, there is enough wool and cotton to make 750 wool jackets and 333 cotton jackets for a total of 1,083 jackets.

The correct answer is C;
both statements together are sufficient.

DS05377

341. If n is an integer, what is the greatest common divisor of 12 and n?

(1) The product of 12 and n is 432.

(2) The greatest common divisor of 24 and n is 12.

Arithmetic Properties of integers

(1) Given that $12n = 432$, it follows that $n = 36$ and the greatest common divisor of 12 and 36 is 12. However, it is not necessary to **solve** this equation and then **calculate** the greatest common divisor of two numbers to determine whether it is possible to answer the question asked. It is sufficient to observe that the value of n can be determined by solving this equation and then observe that the greatest common divisor of 12 and the value of n can be determined; SUFFICIENT.

(2) Given that 12 is the greatest common divisor of 24 and n, it follows that 12 is a common divisor of 24 and n, and hence 12 is a divisor of n. Thus, 12 is a common divisor of 12 and n because 12 is a divisor of 12 and 12 is a divisor of n. Also, no number greater than 12 can be a common divisor of 12 and n because no number greater than 12 can be a divisor of 12. Therefore, 12 is the greatest common divisor of 12 and n; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS11287

342. Each month, Jim receives a base salary plus a 10 percent commission on the price of each car he sells that month. If Jim sold 15 cars last month, what was the total amount of base salary and commissions that Jim received that month?

(1) Last month, Jim's base salary was $3,000.

(2) Last month, Jim sold 3 cars whose prices totaled $60,000 and 5 cars whose prices totaled $120,000.

Arithmetic Applied problems

Determine the total of Jim's base salary plus a 10% commission on the price of each of the 15 cars he sold last month.

(1) This indicates that Jim's base salary was $3,000 but gives no information about the prices of the 15 cars he sold last month; NOT sufficient.

(2) This indicates that Jim's commission on 8 cars that he sold last month can be determined but gives no information about his base salary or about the prices of the other 7 cars he sold last month; NOT sufficient.

Taking (1) and (2) together gives Jim's base salary and information about the prices of 8 of the 15 cars he sold last month, but does not provide information about the selling prices of the other 7 cars he sold.

The correct answer is E;
both statements together are still not sufficient.

DS17615

343. If x is a positive integer greater than 1, what is the value of x?

(1) $2x$ is a common factor of 18 and 24.

(2) x is a factor of 6.

Arithmetic Properties of numbers

(1) Given that $2x$, where x is an integer greater than 1, is a common factor of 18 and 24, then $2x$ is an even integer greater than or equal to 4 that is a factor of 18 and 24. The factors of 18 are 1, 2, 3, 6, 9, and 18. The factors of 24 are 1, 2, 3, 4, 6, 8, 12, and 24. Since the only even integer greater than or equal to 4 that belongs to both lists is 6, it follows that $2x = 6$, or $x = 3$; SUFFICIENT.

(2) Given that x, an integer greater than 1, is a factor of 6, then x could be 2, 3, or 6; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS13408

344. By what percent was the price of a certain television set discounted for a sale?

(1) The price of the television set before it was discounted for the sale was 25 percent greater than the discounted price.

(2) The price of the television set was discounted by $60 for the sale.

Arithmetic Percents

Let B represent the price, in dollars, for the television before the sale and let D represent the discounted price, in dollars. The percent by which B was discounted to obtain D can be determined if the value of $\frac{B-D}{B}$ can be determined.

(1) This indicates that B is 25% greater than D or that $B = 1.25D$. Then, $\frac{B-D}{B} = \frac{1.25D-D}{1.25D} = \frac{0.25}{1.25} = 0.2$ or 20%; SUFFICIENT.

(2) This indicates that $D = B - 60$, but B is unknown. For example, B could be 100 and the value of $\frac{B-D}{B}$ would be $\frac{60}{100}$, or B could be 500 and the value of $\frac{B-D}{B}$ would be $\frac{60}{500}$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS05049

345. Jack wants to use a circular rug on his rectangular office floor to cover two small circular stains, each less than $\frac{\pi}{100}$ square feet in area and each more than 3 feet from the nearest wall. Can the rug be placed to cover both stains?

(1) Jack's rug covers an area of 9π square feet.

(2) The centers of the stains are less than 4 feet apart.

Geometry Applied problems; Circles

If a circle with radius r has area less than $\frac{\pi}{100}$, then $\pi r^2 < \frac{\pi}{100}$, or $r^2 < \frac{1}{100}$. Hence, $r < \frac{1}{10}$, so the circle's radius is less than $\frac{1}{10}$ ft.

(1) Given that the circular rug has area 9π ft^2, the radius of the rug, R ft, satisfies the equation $\pi R^2 = 9\pi$, and so $R^2 = 9$, or $R = 3$. If the centers of the circular stains are 4 ft apart, then the midpoint of the centers will be a distance of at most $\left(\frac{1}{10} + 2 + \frac{1}{10}\right)$ ft = 2.2 ft from any point on the stains.

Thus, if the circular rug (which has radius 3 ft) were placed so that its center lies on that midpoint, then the rug would cover both stains. However, if the centers of the circular stains are 7 ft apart, then the circular rug (which has diameter 6 ft) cannot be placed to cover both stains; NOT sufficient.

(2) Given that the centers of the circular stains are less than 4 ft apart, it is not possible to determine whether the circular rug can be placed to cover both stains since nothing is given about the size of the circular rug; NOT sufficient.

Taking (1) and (2) together, the centers of the circular stains are less than 4 ft apart and it follows from the discussion in (1) that the circular rug can be placed to cover both stains.

The correct answer is C;
both statements together are sufficient.

DS24751.01

346. A paint mixture was formed by mixing exactly 3 colors of paint. By volume, the mixture was x% blue paint, y% green paint, and z% red paint. If exactly 1 gallon of blue paint and 3 gallons of red paint were used, how many gallons of green paint were used?

(1) $x = y$

(2) $z = 60$

Algebra First-degree equations

Letting T represent the total number of gallons of the paint in the mixture, and B, G, and R the amounts of blue paint, green paint, and

red paint, respectively, in the mixture, then $B = \frac{x}{100}T$, $G = \frac{y}{100}T$, and $R = \frac{z}{100}T$. It is given that $\frac{x}{100}T = 1$ and $\frac{z}{100}T = 3$, from which it follows that $z = 3x$. Also, since there are exactly three colors of paint, $x + y + z = 100$ and $B + G + R = T$. Determine the value of G, or equivalently, the value $\frac{y}{100}T$.

(1) Given that $x = y$ and $\frac{x}{100}T = 1$, it follows that $\frac{y}{100}T = 1$; SUFFICIENT.

(2) Given that $z = 60$ and $\frac{z}{100}T = 3$, it follows that $T = 5$. Knowing that the total amount of paint in the mixture is 5 gallons of which 1 gallon is blue paint and 3 gallons are red paint, the amount of green paint can be determined; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

×	a	b	c
a	d	e	f
b	e	g	h
c	f	h	j

DS05772

347. In the multiplication table above, each letter represents an integer. What is the value of c ?

(1) $c = f$

(2) $h \neq 0$

Arithmetic Properties of numbers

(1) Given that $c = f$, the examples below, in which $a = b = 1$, show that the value of c could be 1 and the value of c could be 2; NOT sufficient.

×	1	1	1
1	1	1	1
1	1	1	1
1	1	1	1

×	1	1	2
1	1	1	2
1	1	1	2
2	2	2	4

(2) Given that $h \neq 0$, the examples in (1) show that the value of c could be 1 and the value of c could be 2; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples used to show that (1) is not sufficient also show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS09379

348. If n is an integer, is $(0.1)^n$ greater than $(10)^n$?

(1) $n > -10$

(2) $n < 10$

Arithmetic Exponents

$(0.1)^n = \frac{1}{10^n}$ will be greater than 10^n if 1 is greater than 10^{2n}, and this will be the case if and only if $n < 0$. Determine if $n < 0$.

(1) This indicates that n is greater than -10. This includes nonnegative values of n as well as negative values of n; NOT sufficient.

(2) This indicates that n is less than 10, but this includes negative values of n as well as nonnegative values of n; NOT sufficient.

Taking (1) and (2) together, n can have any value between -10 and 10 and can therefore be negative or nonnegative.

The correct answer is E;
both statements together are still not sufficient.

DS19199

349. For a basic monthly fee of F yen (¥F), Naoko's first cell phone plan allowed him to use a maximum of 420 minutes on calls during the month. Then, for each of x additional minutes he used on calls, he was charged ¥M, making his total charge for the month ¥T, where $T = F + xM$. What is the value of F?

(1) Naoko used 450 minutes on calls the first month and the total charge for the month was ¥13,755.

(2) Naoko used 400 minutes on calls the second month and the total charge for the month was ¥13,125.

Algebra Simultaneous equations

(1) Given that Naoko used 450 minutes and was charged ¥13,125, it follows that $F + (450 - 420)M = 13{,}755$, or $F + 30M = 13{,}755$. However, the value of F cannot be determined. For example, $F = 13{,}005$ and $M = 25$ is possible, and $F = 13{,}035$ and $M = 24$ is possible; NOT sufficient.

(2) Given that Naoko used 400 minutes and was charged ¥13,125, it follows that $F = 13{,}125$, since Naoko did not use more than 420 minutes; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS13949

350. Is the sum of the prices of the 3 books that Shana bought less than $48?

(1) The price of the most expensive of the 3 books that Shana bought is less than $17.

(2) The price of the least expensive of the 3 books that Shana bought is exactly $3 less than the price of the second most expensive book.

Arithmetic Operations with integers; Order

Let B_1, B_2, and B_3 be the prices, in dollars and in numerical order, of the 3 books. Thus, $B_1 \le B_2 \le B_3$. Determine whether $B_1 + B_2 + B_3 < 48$.

(1) Given that $B_3 < 17$, it is possible that $B_1 + B_2 + B_3 < 48$ (choose $B_1 = B_2 = 15$ and $B_3 = 16$) and it is possible that $B_1 + B_2 + B_3 > 48$ (choose $B_1 = B_2 = 16$ and $B_3 = 16.5$); NOT sufficient.

(2) Given that $B_1 = B_2 - 3$, it is possible that $B_1 + B_2 + B_3 < 48$ (choose $B_1 = 3$, $B_2 = 6$, and $B_3 = 10$) and it is possible that $B_1 + B_2 + B_3 > 48$ (choose $B_1 = 3$, $B_2 = 6$, and $B_3 = 48$); NOT sufficient.

Taking (1) and (2) together, from (1) and the information given it follows that $B_3 < 17$ and $B_2 \le B_3 < 17$, or $B_2 < 17$. Also, from $B_2 < 17$ and (2), it follows that $B_1 < 17 - 3$, or $B_1 < 14$. Therefore, $B_1 + B_2 + B_3$ is the sum of 3 numbers—a number less than 14, a number less than 17, and a number less than 17—and thus $B_1 + B_2 + B_3 < 14 + 17 + 17 = 48$.

The correct answer is C;
both statements together are sufficient.

DS12943

351. If r and t are three-digit positive integers, is r greater than t?

(1) The tens digit of r is greater than each of the three digits of t.

(2) The tens digit of r is less than either of the other two digits of r.

Arithmetic Properties of numbers

Let r_3, r_2, and r_1 be the hundreds, tens, and units digits, respectively, of the 3-digit integer r, and let t_3, t_2, and t_1 be the hundreds, tens, and units digits, respectively, of the 3-digit integer t.

(1) Given that r_2 is greater than each of t_3, t_2, and t_1, then r could be greater than t (for example, if $r = 242$ and $t = 222$) and r could be less than t (for example, if $r = 242$ and $t = 333$); NOT sufficient.

(2) Given that r_2 is less than either of r_1 or r_3, then r could be greater than t (for example, if $r = 212$ and $t = 111$) and r could be less than t (for example, if $r = 212$ and $t = 222$); NOT sufficient.

Taking (1) and (2) together, $r_3 > r_2$ follows from (2) and $r_2 > t_3$ follows from (1). Therefore, $r_3 > t_3$ and hence r is greater than t.

The correct answer is C;
both statements together are sufficient.

DS14788

352. Is the product of two positive integers x and y divisible by the sum of x and y ?

(1) $x = y$

(2) $x = 2$

Arithmetic Properties of numbers

(1) Given that $x = y$, then xy could be divisible by $x + y$ (for example, if $x = y = 2$, then $xy = 4$ is divisible by $x + y = 4$) and xy could fail to be divisible by $x + y$ (for example, if $x = y = 3$, then $xy = 9$ is not divisible by $x + y = 6$); NOT sufficient.

(2) Given that $x = 2$, then xy could be divisible by $x + y$ (for example, if $x = y = 2$, then $xy = 4$ is divisible by $x + y = 4$) and xy could fail to be divisible by $x + y$ (for example, if $x = 2$ and $y = 3$, then $xy = 6$ is not divisible by $x + y = 5$); NOT sufficient.

Taking (1) and (2) together, it follows that $x = y = 2$, and so $xy = 4$ is divisible by $x + y = 4$.

The correct answer is C;
both statements together are sufficient.

DS24571.01

353. If a and b are constants, is the expression $\frac{x+b}{\sqrt{x+a}}$ defined for $x = -2$?

(1) $a = 5$

(2) $b = 6$

Algebra Functions

In the set of real numbers, the radical expression $\frac{x+b}{\sqrt{x+a}}$ is defined for all values of x for which $\sqrt{x+a}$ is a nonzero real number, from which it follows that $\frac{x+b}{\sqrt{x+a}}$ is defined for all values of x such that $x > -a$. If $-2 > -a$ or equivalently if $a > 2$, then $\frac{x+b}{\sqrt{x+a}}$ is defined for $x = -2$. Determine if $a > 2$.

(1) If $a = 5$, then $a > 2$; SUFFICIENT.

(2) Given information only about the value of b, if $a = 5$, for example, then a is greater than 2. On the other hand, if $a = -5$, then a is not greater than 2; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS05330

354. A company makes and sells two products, P and Q. The costs per unit of making and selling P and Q are \$8.00 and \$9.50, respectively, and the selling prices per unit of P and Q are \$10.00 and \$13.00, respectively. In one month the company sold a total of 834 units of these products. Was the total profit on these items more than \$2,000.00 ?

(1) During the month, more units of P than units of Q were sold.

(2) During the month, at least 100 units of Q were sold.

Arithmetic Applied problems

It is given that the profit on each unit of P is \$10.00 – \$8.00 = \$2.00, and the profit on each unit of Q is \$13.00 – \$9.50 = \$3.50. Also if p and q represent the number of units of Products P and Q made and sold, then it is given that $p + q = 834$. Determining if the total profit on these items was more than \$2,000 requires determining how many units of at least one of the products were sold.

(1) This indicates that $p > q$, but does not give a specific value for p or q; NOT sufficient.

(2) This indicates that $q \geq 100$, but does not give a specific value for q; NOT sufficient.

Taking (1) and (2) together, $p > q$ and $q \geq 100$, so $p > 100$, but a specific value for p or q cannot be determined.

The correct answer is E;
both statements together are still not sufficient.

DS03045

355. Jill has applied for a job with each of two different companies. What is the probability that she will get job offers from both companies?

(1) The probability that she will get a job offer from neither company is 0.3.

(2) The probability that she will get a job offer from exactly one of the two companies is 0.5.

Arithmetic Probability

Let $P(2)$ be the probability that she will get a job offer from both companies, $P(1)$ be the probability that she will get a job offer from exactly one of the companies, and $P(0)$ be the probability that she will get a job offer from neither company. Then $P(2) + P(1) + P(0) = 1$. What is the value of $P(2)$?

(1) Given that $P(0) = 0.3$, it follows that $P(2) + P(1) + 0.3 = 1$, or $P(2) + P(1) = 0.7$. However, the value of $P(2)$ cannot be determined, since nothing is known about the value of $P(1)$ other than $0 \le P(1) \le 0.7$; NOT sufficient.

(2) (2) Given that $P(1) = 0.5$, it follows that $P(2) + 0.5 + P(0) = 1$, or $P(2) + P(0) = 0.5$. However, the value of $P(2)$ cannot be determined, since nothing is known about the value of $P(0)$ other than $0 \le P(1) \le 0.5$; NOT sufficient.

Taking (1) and (2) together, it follows that $P(2) + 0.5 + 0.3 = 1$, or $P(2) = 0.2$.

The correct answer is C;
both statements together are sufficient.

DS01257

356. A conveyor belt moves bottles at a constant speed of 120 centimeters per second. If the conveyor belt moves a bottle from a loading dock to an unloading dock, is the distance that the conveyor belt moves the bottle less than 90 meters? (1 meter = 100 centimeters)

(1) It takes the conveyor belt less than 1.2 minutes to move the bottle from the loading dock to the unloading dock.

(2) It takes the conveyor belt more than 1.1 minutes to move the bottle from the loading dock to the unloading dock.

Arithmetic Applied problems

Since the rate at which the conveyor belt moves is given as 120 centimeters per second, which is equivalent to $\frac{120}{100} = 1.2$ meters per second, the conveyor will move less than 90 meters if it moves for less than $\frac{90}{1.2} = 75$ seconds.

(1) This indicates that the length of time the conveyor belt moves is less than 1.2 minutes, which is equivalent to $(1.2)(60) = 72$ seconds and $72 < 75$; SUFFICIENT.

(2) This indicates that the length of time the conveyor belt moves is more than 1.1 minutes, which is equivalent to $(1.1)(60) = 66$ seconds, but does not indicate how much more than 66 seconds the conveyor moves. If the conveyor moves for 70 seconds ($70 > 66$), for example, it moves less than 90 meters since $70 < 75$. However, if the conveyor belt moves for 80 seconds ($80 > 66$), then it moves more than 90 meters since $80 > 75$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS02706

357. If x, y, and z are positive numbers, what is the value of the average (arithmetic mean) of x and z ?

(1) $x - y = y - z$

(2) $x^2 - y^2 = z$

Algebra Statistics; Simplifying algebraic expressions

(1) Given that $x - y = y - z$, it follows that $x + z = 2y$, or $y = \frac{x+z}{2}$. Therefore, y is the average of x and z. However, it is not possible to determine the value of y. For example, $x = y = z = 3$ gives three positive numbers that satisfy $x - y = y - z$, and $x = y = z = 4$ gives three positive numbers that satisfy $x - y = y - z$; NOT sufficient.

(2) Given that $x^2 - y^2 = z$, it is not possible to determine the value of $\frac{x+z}{2}$, the average of the x and z. For example, if $x = 3$, $y = 2$, and $z = 5$, then $x^2 - y^2 = z$ is true (because $3^2 - 2^2 = 9 - 4 = 5$) and $\frac{x+z}{2} = \frac{3+5}{2} = 4$. However, if $x = 5$, $y = 4$, and $z = 9$, then $x^2 - y^2 = z$ is true (because $5^2 - 4^2 = 25 - 16 = 9$) and $\frac{x+z}{2} = \frac{5+9}{2} = 7$; NOT sufficient.

Taking (1) and (2) together, it follows that $x + z = 2y$ and $x^2 - y^2 = z$, so $x + (x^2 - y^2) = 2y$, or $x + x^2 = y^2 + 2y$. Adding 1 to both sides of this last equation gives $x + x^2 + 1 = y^2 + 2y + 1 = (y + 1)^2$, which

simplifies the task of finding positive numbers x, y, and z that satisfy both (1) and (2) and for which the values of $\frac{x+z}{2} = y$ can be different. For one example, letting $x = 1$ gives $x + x^2 + 1 = 3$, and thus $(y+1)^2 = 3$. Solving for a positive value of y gives $y + 1 = \sqrt{3}$, or $y = \sqrt{3} - 1$, and by using $x + z = 2y$, the corresponding value of z is $2y - x = 2(\sqrt{3} - 1) - 1 = 2\sqrt{3} - 3$. Note that $2\sqrt{3} - 3$ is positive because $(2\sqrt{3})^2 = 4(3) = 12$ is greater than $3^2 = 9$. The values $x = 1$, $y = \sqrt{3} - 1$, and $z = 2\sqrt{3} - 3$ satisfy both (1) and (2), and for this choice of values of x, y, and z, the value of $\frac{x+z}{2} = y$ is $\sqrt{3} - 1$. For another example, letting $x = 2$ gives $x + x^2 + 1 = 7$, and thus $(y+1)^2 = 7$. Solving for a positive value of y gives $y + 1 = \sqrt{7}$, or $y = \sqrt{7} - 1$, and by using $x + z = 2y$, the corresponding value of z is $2y - x = 2(\sqrt{7} - 1) - 2 = 2\sqrt{7} - 4$. Note that $2\sqrt{7} - 4$ is positive because $(2\sqrt{7})^2 = 4(7) = 28$ is greater than $4^2 = 16$. The values $x = 2$, $y = \sqrt{7} - 1$, and $z = 2\sqrt{7} - 4$ satisfy both (1) and (2), and for this choice of values of x, y, and z, the value of $\frac{x+z}{2} = y$ is $\sqrt{7} - 1$; NOT sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS04428

358. The rectangular rug shown in the figure above has an accent border. What is the area of the portion of the rug that excludes the border?

(1) The perimeter of the rug is 44 feet.

(2) The width of the border on all sides is 1 foot.

Geometry Rectangles; Perimeter

(1) Given that the perimeter of the rug is 44 ft, then the rectangular rug could have area 121 ft^2 (length = 11 ft and width = 11 ft) and the rectangular rug could have area 96 ft^2 (length = 16 ft and width = 6 ft). Moreover, no information is given about the width of the accent border, so even if the area of the rectangular rug could be determined, it would still not be possible to determine the area of the portion of the rug that excludes the border; NOT sufficient.

(2) Given that the width of the border is 1 ft, the area of the portion of the rug that excludes the border is $(L-2)(W-2)$ ft^2, where L ft and W ft are the length and width, respectively, of the rug. If $L = W = 11$, then $(L-2)(W-2) = 81$. However, if $L = 16$ and $W = 6$, then $(L-2)(W-2) = 56$; NOT sufficient.

Taking (1) and (2) together, the area could be 81 ft^2 or 56 ft^2 as shown by the examples in (1) and (2).

The correct answer is E;
both statements together are still not sufficient.

DS06537

359. If $y \neq 2xz$, what is the value of $\frac{2xz + yz}{2xz - y}$?

(1) $2x + y = 3$

(2) $z = 2$

Algebra Simplifying algebraic expressions

The task is to determine the value of $\frac{2xz + yz}{2xz - y} = \frac{z(2x + y)}{2xz - y}$.

(1) This indicates $2x + y = 3$, and so $\frac{2xz + yz}{2xz - y} = \frac{3z}{2xz - y}$. However, this is not enough to determine the value of $\frac{2xz + yz}{2xz - y}$. For example, if $x = 1$, $y = 1$, and $z = 2$, then $2x + y = 3$ and $\frac{2xz + yz}{2xz - y} = 2$, but if $x = 0$, $y = 3$, and $z = 2$, then $2x + y = 3$ and $\frac{2xz + yz}{2xz - y} = -2$; NOT sufficient.

(2) This indicates that $z = 2$, and so $\frac{2xz + yz}{2xz - y} = \frac{4x + 2y}{4x - y}$. However, this is not enough to determine the value of $\frac{2xz + yz}{2xz - y}$. For example, if $x = 1$, $y = 1$, and $z = 2$, then $\frac{2xz + yz}{2xz - y} = 2$, but if $x = 0$, $y = 3$, and $z = 2$, then $\frac{2xz + yz}{2xz - y} = -2$; NOT sufficient.

Taking (1) and (2) together is not enough to determine the value of $\frac{2xz + yz}{2xz - y}$ because the same examples used to show that (1) is not sufficient were also used to show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS04852

360. In the parallelogram shown, what is the value of x?

(1) $y = 2x$

(2) $x + z = 120$

Geometry Angles

(1) Given that $y = 2x$ and the fact that adjacent angles of a parallelogram are supplementary, it follows that $180 = x + y = x + 2x = 3x$, or $180 = 3x$. Solving this equation gives $x = 60$; SUFFICIENT.

(2) Given that $x + z = 120$ and the fact that opposite angles of a parallelogram have the same measure, it follows that $120 = x + z = x + x$, or $120 = 2x$. Solving this equation gives $x = 60$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06096

361. In a product test of a common cold remedy, x percent of the patients tested experienced side effects from the use of the drug and y percent experienced relief of cold symptoms. What percent of the patients tested experienced both side effects and relief of cold symptoms?

(1) Of the 1,000 patients tested, 15 percent experienced neither side effects nor relief of cold symptoms.

(2) Of the patients tested, 30 percent experienced relief of cold symptoms without side effects.

Algebra Sets

One way to solve problems about sets is by using a contingency table. For the information given in this problem with T representing the total number of people tested, the table might be as follows:

	side effects	no side effects	totals
relief of symptoms			$\left(\frac{y}{100}\right)T$
no relief of symptoms			
totals	$\left(\frac{x}{100}\right)T$		T

(1) Using the information in (1) gives the following table, where 15% of 1,000 is 150.

	side effects	no side effects	totals
relief of symptoms			$\left(\frac{y}{100}\right)(1,000)$
no relief of symptoms		150	
totals	$\left(\frac{x}{100}\right)(1,000)$		1,000

If $x = 55$ and $y = 55$, then the table becomes

	side effects	no side effects	totals
relief of symptoms	250	300	550
no relief of symptoms	300	150	450
totals	550	450	1,000

and this gives $\frac{250}{1,000} = 25\%$ as the percent of patients tested who experienced both side effects and relief of cold symptoms.

However, if $x = 55$ and $y = 50$, then the table becomes

	side effects	no side effects	totals
relief of symptoms	200	300	500
no relief of symptoms	350	150	500
totals	550	450	1,000

and this gives $\frac{200}{1,000} = 20\%$ as the percent of patients tested who experienced both side effects and relief of cold symptoms; NOT sufficient.

(2) This indicates that 30% of the patients tested experienced relief of cold symptoms without side effects. The same examples that were used for (1) can be used here, also, to show that different values can be obtained for the percent of patients tested who experienced both side effects and relief of cold symptoms; NOT sufficient.

Since the examples satisfy both (1) and (2), these statements taken together are not sufficient to determine the percent of patients tested who experienced both side effects and relief of cold symptoms.

The correct answer is E;
both statements together are still not sufficient.

DS13588

362. Is $x < 5$?

(1) $x^2 > 5$

(2) $x^2 + x < 5$

Algebra Inequalities

(1) Given that $x^2 > 5$, then $x < 5$ can be true (for example, if $x = -3$) and $x < 5$ can be false (for example, if $x = 6$); NOT sufficient.

(2) Given that $x^2 + x < 5$, then $x < 5 - x^2$. Also, since $x^2 \geq 0$ is true for any real number x, it follows that $-x^2 \leq 0$, or after adding 5 to both sides, $5 - x^2 \leq 5$. From $x < 5 - x^2$ and $5 - x^2 \leq 5$, it follows that $x < 5$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS72951.01

363. Three roommates—Bela, Gyorgy, and Janos—together saved money for a trip. The amount that Bela saved was equal to 8% of his monthly income. The amount that Gyorgy saved was exactly $\frac{1}{3}$ of the total amount saved by all 3 roommates. What was the total amount saved for the trip by all 3 roommates?

(1) Bela had a monthly income of $2,000.

(2) Janos saved 1.5 times as much for the trip as Bela.

Algebra First-degree equations

Letting B, G, and J represent the amounts saved by Bela, Gyorgy, and Janos, respectively, then $B = 0.08I$, where I represents Bela's monthly income, $G = \frac{1}{3}(B + G + J)$, and $G = \frac{1}{2}(B + J)$. Determine the value of $B + G + J$.

(1) This allows the value of B to be determined, but gives no information about the values of G or J; NOT sufficient.

(2) This gives the relationship between the values of J and B, but no information to determine the value of either B or J; NOT sufficient.

Taking (1) and (2) together, the values of both B and J can be determined as can the value of G since $G = \frac{1}{2}(B + J)$. Thus, the value of $B + G + J$ can be determined.

The correct answer is C;
both statements together are sufficient.

DS11257

364. Is zp negative?

(1) $pz^4 < 0$

(2) $p + z^4 = 14$

Arithmetic Properties of numbers

(1) Given that $pz^4 < 0$, zp can be negative (choose $p = -2$ and $z = 2$) and zp can be nonnegative (choose $p = -2$ and $z = -2$); NOT sufficient.

(2) Given that $p + z^4 = 14$, the same examples used to show that (1) is not sufficient can be used for (2); NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples used to show that (1) is not sufficient also show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS04157

365. In each game of a certain tournament, a contestant either loses 3 points or gains 2 points. If Pat had 100 points at the beginning of the tournament, how many games did Pat play in the tournament?

(1) At the end of the tournament, Pat had 104 points.

(2) Pat played fewer than 10 games.

Arithmetic Computation with integers

Pat either lost 3 points or gained 2 points in each game she played. Therefore, since she had 100 points at the beginning of the tournament, her score at the end of the tournament was $100 - 3x + 2y$, where x and y represent, respectively, the number of games in which she lost 3 points and the number of games in which she gained 2 points. Determine the value of $x + y$.

(1) This indicates that $100 - 3x + 2y = 104$, but no information is given about the values of x or y. For example, the values of x and y could be 0 and 2, respectively, so that $x + y = 2$ or the values of x and y could be 2 and 5, respectively, so that $x + y = 7$; NOT sufficient.

(2) This indicates that Pat played fewer than 10 games, but in each of the examples above, Pat played fewer than 10 games; NOT sufficient.

Since the examples given satisfy both (1) and (2), taking (1) and (2) together does not give enough information to determine the value of $x + y$.

The correct answer is E;
both statements together are still not sufficient.

DS05631

366. At the beginning of the year, the Finance Committee and the Planning Committee of a certain company each had n members, and no one was a member of both committees. At the end of the year, 5 members left the Finance Committee and 3 members left the Planning Committee. How many members did the Finance Committee have at the beginning of the year?

(1) The ratio of the total number of members who left at the end of the year to the total number of members at the beginning of the year was 1:6.

(2) At the end of the year, 21 members remained on the Planning Committee.

Algebra Applied problems

(1) It is given that $\frac{8}{2n} = \frac{1}{6}$, since a total of $3 + 5 = 8$ members left at the end of the year and there were a total of $n + n = 2n$ members at the beginning of the year. It follows that $(8)(6) = (2n)(1)$, or $n = 24$; SUFFICIENT.

(2) It is given that $n - 3 = 21$, since 3 members from the original n members left the Planning Committee at the end of the year. It follows that $n = 21 + 3 = 24$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS15561

367. If $xy \neq 0$, is $x^3 + y^3 > 0$?

(1) $x + y > 0$

(2) $xy > 0$

Algebra Inequalities

(1) Given that $x + y > 0$, factor $x^3 + y^3$ as $(x + y)(x^2 - xy + y^2)$ and consider $x^2 - xy + y^2$. If $xy < 0$, then $x^2 - xy + y^2$ is the sum of $x^2 + y^2$ (which is greater than or equal to 0) and $-xy$ (which is greater than 0), and so $x^2 - xy + y^2 > 0$. (In fact, $x^2 + y^2 > 0$, since from $xy \neq 0$ it follows that $x \neq 0$ and $y \neq 0$.) If $xy > 0$, then $xy < 2xy$ and $2xy \leq x^2 + y^2$ (this follows from $0 \leq x^2 - 2xy + y^2$, which in turn follows from $0 \leq (x - y)^2$), and therefore $xy < x^2 + y^2$, or $x^2 - xy + y^2 > 0$. Finally, $xy = 0$ is not possible from the information given. Thus, from the information given, it is always the case that

$x^2 - xy + y^2$ is positive, and hence $x^3 + y^3$ is the product of two positive quantities, $x + y$ and $x^2 - xy + y^2$, and therefore $x^3 + y^3 > 0$.

By using ideas involving functions and their graphs, a shorter argument can be given. The function $f(x) = x^3$ is a strictly increasing function, which is evident from its graph. Thus, if $a < b$, then $f(a) < f(b)$, or $a^3 < b^3$. From (1) it follows that $x > -y$. Therefore, $x^3 < (-y)^3$, or $x^3 < -y^3$, or $x^3 + y^3 < 0$; SUFFICIENT.

(2) Given that $xy > 0$, it is possible that $x^3 + y^3 > 0$ (choose $x = y = 1$) and it is possible that $x^3 + y^3 < 0$ (choose $x = y = -1$); NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

DS13541

368. Max purchased a guitar for a total of \$624, which consisted of the price of the guitar and the sales tax. Was the sales tax rate greater than 3 percent?

(1) The price of the guitar that Max purchased was less than \$602.

(2) The sales tax for the guitar that Max purchased was less than \$30.

Arithmetic Applied problems; Percents

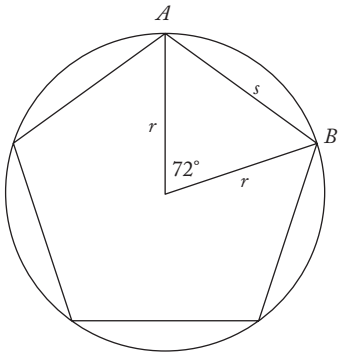
Letting P be the price, in dollars, of the guitar and r% be the sales tax rate, it is given that $P\left(1 + \frac{r}{100}\right) = 624$. Determine if $r > 3$.

(1) Given that $P < 602$, then $624 = P\left(1 + \frac{r}{100}\right) < 602\left(1 + \frac{r}{100}\right)$, and so $1 + \frac{r}{100} > \frac{624}{602}$. Therefore, $\frac{r}{100} > \frac{624}{602} - 1 = \frac{22}{602} = \frac{11}{301} > \frac{3}{100}$, because $(11)(100) > (3)(301)$, and so $r > 100\left(\frac{3}{100}\right) = 3$; SUFFICIENT.

(2) Given that the sales tax was less than \$30, it is not possible to determine whether the sales tax rate was greater than 3%. Since $(0.03)(\$624) = \$18.72$, a 3% sales tax rate on the price corresponds to a sales tax that is less than \$18.72, since the price is less than \$624. Therefore, it is possible that the sales tax is less than \$30 and the sales tax rate is less than 3%, since any sales tax rate less than 3% would give a sales tax that is less than \$18.72 (and hence less than \$30). However, it is also possible that the sales tax is less than \$30 and the sales tax rate is 4% (which is greater than 3%), since a 4% sales tax rate implies $P\left(1 + \frac{4}{100}\right) = 624$, or $P = \frac{62,400}{104} = 600$, and thus the sales tax would be $0.04(\$600) = \$24 < \$30$; NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

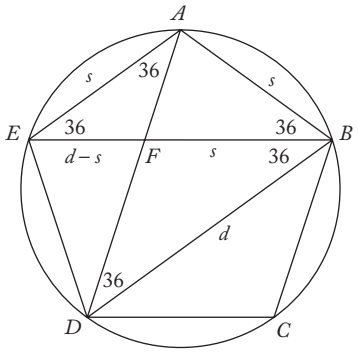
DS75271.01



369. A pentagon with 5 sides of equal length and 5 interior angles of equal measure is inscribed in a circle. Is the perimeter of the pentagon greater than 26 centimeters?

(1) The area of the circle is 16π square centimeters.

(2) The length of each diagonal of the pentagon is less than 8 centimeters.



Geometry Polygons

A regular pentagon can be partitioned into 5 isosceles triangles, one of which is shown in the figure below. The vertex angle of each of these triangles has measure 72°. If $s = r$, then each of the 5 triangles would be equilateral with vertex angle measuring 60°, not 72°. If $s < r$, then the vertex of each of the 5 triangles would measure less than 60°. Therefore, $s > r$. If P represents the perimeter, determine if $P > 26$.

(1) This gives $r = 4$, so the circumference of the circle is 8π. The length of arc $\overset{\frown}{AB}$ is

$\left(\frac{72}{360}\right)(8\pi) = \frac{8\pi}{5}$. Also, $s < \frac{8\pi}{5}$ because a straight line is the shortest distance between two points, so $P < 8\pi$, or equivalently, $\frac{P}{8} < \pi$. If $P > 26$ were true, then $\frac{P}{8} > 3.25$ would be true. But $3.25 > \pi$ so $\frac{P}{8} > \pi$, which contradicts $\frac{P}{8} < \pi$ and so contradicts $P > 26$. It follows that the answer to "Is P greater than 26?" is definitively "no"; SUFFICIENT.

(2) Diagonals $\overline{AD}$, $\overline{BD}$, and $\overline{BE}$ are shown in the figure above. Using these diagonals, each with length d, plus the facts that all the sides of the pentagon are the same length, the degree measure of each of the pentagon's interior angles is 108, and the base angles of an isosceles triangle have equal degree measures, the angle measures, in degrees, shown in the figure can be verified. Also it can be shown that ΔABF is isosceles (the degree measure of $\angle FAB$ is $108 - 36 = 72$ and the degree measure of $\angle AFB$ is $180 - (36 + 72) = 72$), so $FB = s$. It follows that ΔAFE and ΔBFD are similar and their sides are in proportion. Thus, if d represents the length of each diagonal of the pentagon, then $\frac{s}{d} = \frac{d-s}{s}$ or $s^2 = d(d-s) = d^2 - ds$. It follows that $d = \frac{s \pm \sqrt{s^2 + 4(1)s^2}}{2(1)}$, which simplifies to $d = \frac{1+\sqrt{5}}{2}s$. (Note that $d = \frac{s - \sqrt{s^2 + 4(1)s^2}}{2(1)} = \frac{1-\sqrt{5}}{2}s$ has been discarded because $\frac{1-\sqrt{5}}{2}$ is negative and $\frac{1-\sqrt{5}}{2}s$ cannot be a length.) It is given that $d < 8$ from which it follows that $\frac{1+\sqrt{5}}{2}s < 8$ and thus $s < \frac{16}{1+\sqrt{5}}$. Since $P = 5s$, it follows that $P < \frac{80}{1+\sqrt{5}} = \left(\frac{80}{1+\sqrt{5}}\right)\left(\frac{1-\sqrt{5}}{1-\sqrt{5}}\right) = \frac{80(1-\sqrt{5})}{-4} = 20(\sqrt{5} - 1)$. It is true that $20(\sqrt{5} - 1) < 26$ because if $20(\sqrt{5} - 1) \geq 26$, then $(\sqrt{5} - 1) \geq \frac{13}{10}$, and $\sqrt{5} \geq \frac{23}{10}$, from which it follows that $5 \geq \frac{529}{100}$ or $5 \geq 5.29$. But, this is not true and so $20(\sqrt{5} - 1) < 26$ and $P < 26$. Therefore, the answer to the question "Is P greater than 26?" is definitively "no"; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS13841.01

370. If $2.00X$ and $3.00Y$ are 2 numbers in decimal form with thousandths digits X and Y, is $3(2.00X) > 2(3.00Y)$?

(1) $3X < 2Y$

(2) $X < Y - 3$

Arithmetic Operations with integers

The decimals $3(2.00X)$ and $2(3.00Y)$ can also be expressed as $3\left(2 + \frac{X}{1{,}000}\right) = 6 + \frac{3X}{1{,}000}$ and $2\left(3 + \frac{Y}{1{,}000}\right) = 6 + \frac{2Y}{1{,}000}$. Then, $3(2.00X) > 2(3.00Y)$ only if $3X > 2Y$. Determine if $3X > 2Y$ is true.

(1) Given that $3X < 2Y$, it follows that $3X > 2Y$ is not true and so $3(2.00X) > 2(3.00Y)$ is not true for all integer values of X and Y from 0 through 9; SUFFICIENT.

(2) Given that $X < Y - 3$, if $X = 0$, then the possible values for Y are 4, 5, 6, 7, 8, and 9. For each of these values, $3X > 2Y$ is not true. If $X = 1$, then the possible values for

Y are 5, 6, 7, 8, and 9 and for each of these values, $3X > 2Y$ is not true. If $X = 2$, then the possible values for Y are 6, 7, 8, and 9 and for each of these values, $3X > 2Y$ is not true. If $X = 3$, then the possible values for Y are 7, 8, and 9 and for each of these values, $3X > 2Y$ is not true. If $X = 4$, then the possible values for Y are 8 and 9 and for each of these values, $3X > 2Y$ is not true. If $X = 5$, then the only possible value for Y is 9 and for this value, $3X > 2Y$ is not true. If $X \geq 6$, there are no integer values from 0 through 9 for which $X < Y - 3$. In all possible cases, $3X > 2Y$ is not true, so $3(2.00X) > 2(3.00Y)$ is not true; SUFFICIENT.

Alternatively, if $X < Y - 3$, then $X + 3 < Y$. If $3X > 2Y$ were true, or equivalently, if $Y < \frac{3}{2}X$ were true, then $X + 3 < Y < \frac{3}{2}X$ would be true, from which it follows that $X + 3 < \frac{3}{2}X$ would be true. But, this would imply $X > 6$ is true, which cannot be true because if $X + 3 < Y$, then $Y > 9$, and Y cannot be greater than 9 because Y is a digit.

The correct answer is D;
each statement alone is sufficient.

DS50351.01

371. The length, width, and height of a rectangular box, in centimeters, are L, W, and H. If the volume of this box is V cubic centimeters and the total area of the 6 sides of this box is A square centimeters, what is the value of $\frac{V}{A}$?

(1) At least 2 of L, W, and H are equal to 5.

(2) L, W, and H all have the same value.

Geometry Volume; Surface area

For a rectangular box with dimensions L, W, and H, $V = LWH$ and $A = 2(LW + LH + WH)$. Determine the value of $\frac{V}{A}$.

(1) Given that at least 2 of the dimensions are 5, if $L = W = 5$ and $H = 1$, then $\frac{V}{A} = \frac{(5)(5)(1)}{2[(5)(5)+(2)(5)(1)]} = \frac{25}{70} = \frac{5}{14}$. However, if $L = W = 5$ and $H = 2$, then $\frac{V}{A} = \frac{(5)(5)(2)}{2[(5)(5)+(2)(5)(2)]} = \frac{50}{90} = \frac{5}{9}$; NOT sufficient.

(2) Given that L, W, and H all have the same value, then letting s represent that value, $\frac{V}{A} = \frac{s^3}{2(3s^2)}$ and this value differs as s differs; NOT sufficient.

Taking (1) and (2) together, $L = W = H = 5$ and a unique value for $\frac{V}{A}$ can be determined.

The correct answer is C;
both statements together are sufficient.

DS06027

372. What is the sum of a certain pair of consecutive odd integers?

(1) At least one of the integers is negative.

(2) At least one of the integers is positive.

Arithmetic Properties of numbers

(1) Given that at least one of the integers is negative, the sum could be –4 (if the integers were –3 and –1) and the sum could be 0 (if the integers were –1 and 1); NOT sufficient.

(2) Given that at least one of the integers is positive, the sum could be 0 (if the integers were –1 and 1) and the sum could be 4 (if the integers were 1 and 3); NOT sufficient.

Taking (1) and (2) together, the smaller of the two numbers cannot be less than –1 (otherwise (2) would not be true) and the larger of the two numbers cannot be greater than 1 (otherwise (1) would not be true). Therefore, the integers must be –1 and 1, and the sum must be 0.

The correct answer is C;
both statements together are sufficient.

DS45530.01

373. Is $x = y$?

(1) $\frac{2x}{3} - \frac{y}{3} = \frac{1}{3}$

(2) $\frac{x}{4} - \frac{y}{4} = 0$

Algebra First-degree equations

(1) Given that $\frac{2x}{3} - \frac{y}{3} = \frac{1}{3}$, or equivalently $2x - y = 1$, it is not possible to determine whether $x = y$ is true. For example, if $x = 1$ and $y = 1$, then $2(1) - 1 = 1$ and $x = y$. However, if $x = 2$ and $y = 3$, then $2(2) - 3 = 1$ and $x \neq y$; NOT sufficient.

(2) Given that $\frac{x}{4} - \frac{y}{4} = 0$, then multiplying both sides by 4 gives $x - y = 0$, which means $x = y$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS08197

374. The sum of 4 different odd integers is 64. What is the value of the greatest of these integers?

(1) The integers are consecutive odd numbers.

(2) Of these integers, the greatest is 6 more than the least.

Arithmetic Properties of numbers

Determine the greatest of four odd integers whose sum is 64.

(1) This indicates that the integers are consecutive odd integers. Letting z represent the greatest of the four integers, it follows that $(z - 6) + (z - 4) + (z - 2) + z = 64$, from which a unique value of z can be determined; SUFFICIENT.

(2) Letting w, x, y, and z represent four different odd integers, where $w < x < y < z$, this indicates that $z - w = 6$ or $w = z - 6$. This means that $x = z - 4$ and $y = z - 2$ since w, x, y, and z must be different odd integers and it must be true that $w < x < y < z$. From $w + x + y + z = 64$, it follows that $(z - 6) + (z - 4) + (z - 2) + z = 64$ from which a unique value of z can be determined; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS13130

375. Was the number of books sold at Bookstore X last week greater than the number of books sold at Bookstore Y last week?

(1) Last week, more than 1,000 books were sold at Bookstore X on Saturday and fewer than 1,000 books were sold at Bookstore Y on Saturday.

(2) Last week, less than 20 percent of the books sold at Bookstore X were sold on Saturday and more than 20 percent of the books sold at Bookstore Y were sold on Saturday.

Arithmetic Inequalities

Determine if Bookstore X sold more books last week than Bookstore Y.

(1) This indicates that Bookstore X sold more books on Saturday than Bookstore Y, but it gives no information about the numbers of books sold by the two bookstores on the other days of last week; NOT sufficient.

(2) This gives information about the percents of the books sold last week that were sold on Saturday, but it gives no information about the actual numbers of books sold at the two bookstores last week. Therefore, a comparison of the numbers of books sold last week by Bookstore X and Bookstore Y is not possible; NOT sufficient.

Taking (1) and (2) together, if x represents the number of books that Bookstore X sold on Saturday and T_X represents the total number of books that Bookstore X sold last week, then $x > 1{,}000$ and $x < 0.2T_X$. It follows that $1{,}000 < 0.2T_X$ and so $T_X > 5{,}000$. Similarly, if y represents the number of books that Bookstore Y sold on Saturday and T_Y represents the total number of books that Bookstore Y sold last week, then $y < 1{,}000$ and $y > 0.2T_Y$. It follows that $0.2T_Y < 1{,}000$, and so $T_Y < 5{,}000$. Combining the inequalities gives $T_Y < 5{,}000 < T_X$, and so $T_Y < T_X$, which means that Bookstore X sold more books last week than Bookstore Y.

The correct answer is C;
both statements together are sufficient.

DS47651.01

376. A rectangular solid has length, width, and height of L cm, W cm, and H cm, respectively. If these dimensions are increased by x%, y%, and z%, respectively, what is the percentage increase in the total surface area of the solid?

(1) L, W, and H are in the ratios of 5:3:4.

(2) $x = 5$, $y = 10$, $z = 20$

Geometry Surface area

The total surface area of a rectangular solid with dimensions l, w, and h is given by $2(lw + lh + wh)$.

(1) This gives the relationships among the dimensions of the solid, but gives no information about the percentages by which the dimensions are increased; NOT sufficient.

(2) This gives the percentages by which the dimensions are increased, but gives no information about the dimensions themselves; NOT sufficient.

Taking (1) and (2) together gives both the relationships among the dimensions and the percentages by which the dimensions are increased. From the ratios given in (1) and letting the constant of proportionality be 1, which causes no loss of generality, $L = 5$, $W = 3$, and $H = 4$. The dimensions of the enlarged solid can be determined by multiplying L by 1.05, W by 1.1, and H by 1.2. The percent increase in the surface area of the solid is given by

$$\frac{\text{SA of enlarged solid} - \text{SA of original solid}}{\text{SA of original solid}} \times 100,$$

where SA is short for surface area. The total surface area of the original solid and the enlarged solid can be determined by substituting their dimensions into the formula for total surface area. Thus, the percent increase can be determined. Note that it is not necessary to do the actual calculations.

The correct answer is C;
both statements together are sufficient.

DS08091.01

377. A certain list, L, contains a total of n numbers, not necessarily distinct, that are arranged in increasing order. If L_1 is the list consisting of the first n_1 numbers in L and L_2 is the list consisting of the last n_2 numbers in L, is 17 a mode for L ?

(1) 17 is a mode for L_1 and 17 is a mode for L_2.

(2) $n_1 + n_2 = n$

Arithmetic Statistics

(1) By (1), 17 is a mode of both L_1 and L_2. Therefore, 17 must occur in L_1 and either more times or the same number of times as any other number in L_1. Similarly, 17 must occur in L_2 and either more times or the same number of times as any other number in L_2. Since the numbers in L are in ascending order, every number between the last occurrence of 17 in L_1 and the first occurrence of 17 in L_2 must be 17; otherwise the least number in L_2 would be greater than 17 and 17 would not occur in L_2. Thus, 17 occurs either more times or the same number of times as any other number in L and 17 is a mode of L; SUFFICIENT.

(2) If, for example, $n = 7$, $n_1 = 3$ and $n_2 = 4$, then L could be 1, 2, 3, 17, 17, 18, 19 where L_1 is 1, 2, 3 and L_2 is 17, 17, 18, 19, and 17 is the only mode of L. But, L could also be 5, 5, 5, 16, 17, 18, 19 where L_1 is 5, 5, 5 and L_2 is 16, 17, 18, 19, and 5 is the only mode of L; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS04540

378. From May 1 to May 30 in the same year, the balance in a checking account increased. What was the balance in the checking account on May 30 ?

(1) If, during this period of time, the increase in the balance in the checking account had been 12 percent, then the balance in the account on May 30 would have been \$504.

(2) During this period of time, the increase in the balance in the checking account was 8 percent.

Arithmetic Applied problems; Percents

(1) Given that the amount on May 30 would have been \$504 if the increase had been

12%, it follows that the amount on May 1 was $\$\frac{504}{1.12} = \$450$. However, the balance on May 30 cannot be determined because the (actual) percent increase is not given. For example, if the increase had been 10%, then the balance on May 30 would have been (1.1)($450) = $495, which is different from $504; NOT sufficient.

(2) Given that the increase was 8%, the amount on May 30 could be $108 (if the amount on May 1 was $100) and the amount on May 30 could be $216 (if the amount on May 1 was $200); NOT sufficient.

Taking (1) and (2) together, it follows that the amount on May 30 was ($450)(1.08) = $486.

The correct answer is C;
both statements together are sufficient.

DS08365

379. A merchant discounted the sale price of a coat and the sale price of a sweater. Which of the two articles of clothing was discounted by the greater dollar amount?

(1) The percent discount on the coat was 2 percentage points greater than the percent discount on the sweater.

(2) Before the discounts, the sale price of the coat was $10 less than the sale price of the sweater.

Arithmetic Applied problems; Percents

(1) Given that the discount on the coat was 2 percentage points greater than the discount on the sweater, the sweater could have been discounted by the greater dollar amount ($30 sweater with 10% discount is a discount of $3; $20 coat with 12% discount is a discount of $2.40) and the coat could have been discounted by the greater dollar amount ($110 sweater with 10% discount is a discount of $11; $100 coat with 12% discount is a discount of $12); NOT sufficient.

(2) Given that the coat's sale price was $10 less than the sweater's sale price, the same examples used to show that (1) is not sufficient can be used for (2); NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples used to show that (1) is not sufficient also show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS01168

380. If the positive integer n is added to each of the integers 69, 94, and 121, what is the value of n?

(1) $69 + n$ and $94 + n$ are the squares of two consecutive integers.

(2) $94 + n$ and $121 + n$ are the squares of two consecutive integers.

Algebra Computation with integers

Determine the value of the positive integer n.

(1) This indicates that $69 + n$ and $94 + n$ are the squares of two consecutive integers. Letting x and $(x + 1)$ represent the consecutive integers, it follows that $(x + 1)^2 - x^2 = x^2 + 2x + 1 - x^2 = 2x + 1$. Therefore, $(94 + n) - (69 + n) = 2x + 1$ or $25 = 2x + 1$, from which $x = 12$. Then $12^2 = 69 + n$ and $n = 144 - 69 = 75$ or $(12 + 1)^2 = 94 + n$ and $n = 169 - 94 = 75$; SUFFICIENT.

(2) This indicates that $94 + n$ and $121 + n$ are the squares of two consecutive integers. Letting x and $(x + 1)$ represent the consecutive integers, it follows that $(x + 1)^2 - x^2 = x^2 + 2x + 1 - x^2 = 2x + 1$. Therefore, $(121 + n) - (94 + n) = 2x + 1$ or $27 = 2x + 1$, from which $x = 13$. Then $13^2 = 94 + n$ and $n = 169 - 94 = 75$ or $(13 + 1)^2 = 121 + n$ and $n = 196 - 121 = 75$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS71521.01

381. If a merchant purchased a sofa from a manufacturer for $400 and then sold it, what was the selling price of the sofa?

(1) The selling price of the sofa was greater than 140 percent of the purchase price.

(2) The merchant's gross profit from the purchase and sale of the sofa was $\frac{1}{3}$ of the selling price.

Algebra Applied problems

Letting s represent the selling price of the sofa, in dollars, determine the value of s.

(1) The condition that the selling price of the sofa was greater than 140 percent of the purchase price is equivalent to $s > 1.4(400)$, from which it is not possible to determine the selling price; NOT sufficient.

(2) Given that the gross profit from the purchase and sale of the sofa was $\frac{1}{3}$ of the selling price, it follows that $s - 400 = \frac{1}{3}s$ since gross profit is defined to be the selling price minus the purchase price. From this, a unique value of s can be determined; SUFFICIENT.

The correct answer is B; statement 2 alone is sufficient.

DS05269

382. Last year, in a certain housing development, the average (arithmetic mean) price of 20 new houses was $160,000. Did more than 9 of the 20 houses have prices that were less than the average price last year?

(1) Last year the greatest price of one of the 20 houses was $219,000.

(2) Last year the median of the prices of the 20 houses was $150,000.

Arithmetic Statistics

(1) Given that the greatest price was $219,000, it is possible that only one of the houses had a price less than $160,000. For example, the 20 houses that have an average price of $160,000 could have been 18 houses each at $160,000, one house at $219,000 = $160,000 + $59,000 and one house at $101,000 = $160,000 – $59,000. On the other hand, it is possible that 19 of the houses had a price less than $160,000. For example, the 20 houses that have an average price of $160,000 could have been 18 houses each at $159,000 = $160,000 – $1,000, one house at $219,000 = $160,000 + $59,000 and one house at $119,000 = $160,000 – $59,000 + $18,000. Therefore, it is not possible to determine whether more than 9 of the houses had prices less than $160,000; NOT sufficient.

(2) Given that the median of the 20 prices was $150,000, then when the prices are listed in numerical order from least to greatest, it follows that at least 10 of the prices are less than or equal to $150,000, and hence more than 9 of the prices are less than $160,000. For one of these 10 prices this is true because the median is the average of the 10th and 11th prices, and so the 10th price cannot be greater than $150,000, otherwise both the 10th and 11th prices would be greater than $150,000 and their average would be greater than $150,000. The other 9 of these 10 prices are the 1st through 9th prices, since each of these is less than or equal to the 10th price; SUFFICIENT.

The correct answer is B; statement 2 alone is sufficient.

DS14527

383. For a certain city's library, the average cost of purchasing each new book is $28. The library receives $15,000 from the city each year; the library also receives a bonus of $2,000 if the total number of items checked out over the course of the year exceeds 5,000. Did the library receive the bonus last year?

(1) The library purchased an average of 50 new books each month last year and received enough money from the city to cover this cost.

(2) The lowest number of items checked out in one month was 459.

Arithmetic Applied problems

(1) Given that the library purchased an average of 50 new books each month, for the entire year the library purchased a total of (50)(12) = 600 books for a total cost of (600)($28) = $16,800. Excluding any possible bonus, the library received $15,000 from the city. Since this amount received from the city is not enough to cover the cost of the books, and the information provided in (1) says that the total amount received from the city was enough to cover the cost of the books, it follows that the library received a bonus; SUFFICIENT.

(2) Given that the least number of books checked out in one month was 459, it follows that the total number of books checked out for the year was at least (12)(459) = 5,508. Since this is greater than 5,000, it follows that the total number of books checked out for the year was greater than 5,000 and the library received a bonus; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS89950.01

7, 9, 6, 4, 5, x

384. If x is a number in the list above, what is the median of the list?

(1) $x > 7$

(2) The median of the list equals the arithmetic mean of the list.

Arithmetic Statistics

(1) The given numbers in the list, in order, are 4, 5, 6, 7, 9. From (1), $x > 7$, so the list could be 4, 5, 6, 7, x, 9 or the list could be 4, 5, 6, 7, 9, x. In either case, the two middle numbers are 6 and 7 and the median is $\frac{6+7}{2} = \frac{13}{2}$; SUFFICIENT.

(2) The mean of the list is $\frac{7+9+6+4+5+x}{6} = \frac{31+x}{6}$, which depends on the value of x. Likewise, the median depends on the value of x. If $x = 2$, then the list is 2, 4, 5, 6, 7, 9, which has median $\frac{5+6}{2} = \frac{11}{2}$ and arithmetic mean $\frac{31+2}{6} = \frac{33}{6} = \frac{11}{2}$, thereby satisfying (2). However, if $x = 8$, then the list is 4, 5, 6, 7, 8, 9, which has median $\frac{6+7}{2} = \frac{13}{2}$ and arithmetic mean $\frac{31+8}{6} = \frac{39}{6} = \frac{13}{2}$, thereby satisfying (2); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS15045

385. Three dice, each of which has its 6 sides numbered 1 through 6, are tossed. The sum of the 3 numbers that are facing up is 12. Is at least 1 of these numbers 5 ?

(1) None of the 3 numbers that are facing up is divisible by 3.

(2) Of the numbers that are facing up, 2, but not all 3, are equal.

Arithmetic Properties of integers

When three dice, each with its 6 faces numbered 1 through 6, are tossed and the sum of the three integers facing up is 12, the possible outcomes are {1, 5, 6}, {2, 4, 6}, {2, 5, 5}, {3, 3, 6}, {3, 4, 5}, and {4, 4, 4}. Determine if, in the outcome described, at least one of the numbers is 5.

(1) This indicates that none of the numbers is divisible by three. The outcome could be {4, 4, 4}. In this case, none of the three numbers is 5. On the other hand, the outcome could be {2, 5, 5}. In this case, at least one of the numbers is 5; NOT sufficient.

(2) This indicates that two of the numbers, but not all three, are equal. The outcome could be {3, 3, 6}. In this case, none of the three numbers is 5. On the other hand, the outcome could be {2, 5, 5}. In this case, at least one of the numbers is 5; NOT sufficient.

Taking (1) and (2) together, of the possible outcomes {1, 5, 6}, {2, 4, 6}, {3, 3, 6}, and {3, 4, 5} are eliminated because they do not satisfy (1), and {4, 4, 4} is eliminated because it does not satisfy (2). This leaves only {2, 5, 5}, and at least one number is 5.

The correct answer is C;
both statements together are sufficient.

DS01324

386. On the number line, point R has coordinate r and point T has coordinate t. Is $t < 0$?

(1) $-1 < r < 0$

(2) The distance between R and T is equal to r^2.

Arithmetic Number line

Determine if t, the coordinate of point T on the number line, is negative.

(1) This indicates that r, the coordinate of point R on the number line, lies between -1 and 0, but gives no information about the location of T in relation to either point R or 0; NOT sufficient.

(2) This indicates that the distance between R and T, which can be expressed as $|r - t|$, is r^2. If $r = 2$, for example, then $|2 - t| = 4$ so $2 - t = 4$ or $2 - t = -4$. If $2 - t = 4$, then $t = -2$, which is negative. If $2 - t = -4$, then $t = 6$, which is not negative; NOT sufficient.

Taking (1) and (2) together, if $r - t \geq 0$, then $r - t = r^2$ and $t = r - r^2 = r(1 - r)$. Since $-1 < r < 0$, it follows that $1 < 1 - r < 2$, and so t is the product of a negative number (r) and a positive number ($1 - r$) and is therefore negative. Similarly, if $r - t < 0$, then $|r - t| = -(r - t) = t - r = r^2$ and $t = r^2 + r = r(r + 1)$. Since $-1 < r < 0$, it follows that $0 < r + 1 < 1$, and so t is the product of a negative number (r) and the positive number ($r + 1$) and is therefore negative.

The correct answer is C;
both statements together are sufficient.

DS06659

387. S is a set of points in the plane. How many distinct triangles can be drawn that have three of the points in S as vertices?

(1) The number of distinct points in S is 5.

(2) No three of the points in S are collinear.

Arithmetic Elementary combinatorics

(1) Given that the number of points in S is 5, the number of triangles can be 0 (if the points are collinear) and the number of triangles can be greater than 0 (if the points are not all collinear); NOT sufficient.

(2) Given that no three points of S are collinear, the number of triangles can be 1 (if S consists of 3 points) and the number of triangles can be 4 (if S consists of 4 points); NOT sufficient.

Taking (1) and (2) together, the number of distinct triangles must be $\binom{5}{3} = \frac{5!}{3!(5-3)!} = 10$, which is the number of combinations of 5 points taken 3 at a time.

The correct answer is C;
both statements together are sufficient.

DS16078

388. Stores L and M each sell a certain product at a different regular price. If both stores discount their regular price of the product, is the discount price at Store M less than the discount price at Store L ?

(1) At Store L the discount price is 10 percent less than the regular price; at Store M the discount price is 15 percent less than the regular price.

(2) At Store L the discount price is \$5 less than the regular store price; at Store M the discount price is \$6 less than the regular price.

Arithmetic Percents

Let L_r and L_d be the regular and discounted prices, respectively, at Store L, and let M_r and M_d be the regular and discounted prices, respectively, at Store M. Determine if $M_d < L_d$.

(1) Knowing that $L_d = (1 - 0.10)L_r = 0.90L_r$ and that $M_d = (1 - 0.15)M_r = 0.85M_r$ gives no information for comparing M_d and L_d; NOT sufficient.

(2) Knowing that $L_d = L_r - 5$ and that $M_d = M_r - 6$ gives no information for comparing M_d and L_d; NOT sufficient.

Taking (1) and (2) together gives $0.90L_r = L_r - 5$ and $0.85M_r = M_r - 6$, from which it follows that $0.10L_r = 5$ or $L_r = 50$ and $0.15M_r = 6$ or $M_r = 40$. Then $L_d = 50 - 5 = 45$ and $M_d = 40 - 6 = 34$. Therefore, $M_d < L_d$.

The correct answer is C;
both statements together are sufficient.

DS16529

389. If d denotes a decimal, is $d \geq 0.5$?

(1) When d is rounded to the nearest tenth, the result is 0.5.

(2) When d is rounded to the nearest integer, the result is 1.

Arithmetic Rounding; Estimating

(1) In this case, for example, the value of d could range from the decimal 0.45 to 0.54. Some of these, such as 0.51 or 0.52, are greater than or equal to 0.5, and others, such as 0.47 or 0.48, are less than 0.5; NOT sufficient.

(2) When the result of rounding d to the nearest integer is 1, d could range in value from the decimal 0.50 to 1.49, which are greater than or equal to 0.5; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS08231

390. In the two-digit integers 3■ and 2▲, the symbols ■ and ▲ represent different digits, and the product (3■)(2▲) is equal to 864. What digit does ■ represent?

(1) The sum of ■ and ▲ is 10.

(2) The product of ■ and ▲ is 24.

Arithmetic Properties of numbers

(1) Given that ■ + ▲ = 10, then the possible products ■▲ are (1)(9) = (9)(1) = 9, (2)(8) = (8)(2) = 16, (3)(7) = (7)(3) = 21, (4)(6) = (6)(4) = 24, and (5)(5) = 25. Since (3■)(2▲) = 864 has units digit 4, it follows that ■▲ must also have units digit 4. Since only two of the possible products of ■▲ has units digit 4, it follows that ■ = 4 and ▲ = 6, or ■ = 6 and ▲ = 4. If ■ = 4 and ▲ = 6, then (3■)(2▲) = (34) (26) = 884 ≠ 864, and if ■ = 6 and ▲ = 4, then (3■)(2▲) = (36)(24) = 864. Therefore, ■ = 6; SUFFICIENT.

(2) Given that ■▲ = 24, and that both ■ and ▲ are digits, there are four possibilities for the values of ■ and ▲.
(a) ■ = 3 and ▲ = 8, which gives (3■)(2▲) = (33)(28) = 924 ≠ 864;
(b) ■ = 4 and ▲ = 6, which gives (3■)(2▲) = (34)(26) = 884 ≠ 864;
(c) ■ = 6 and ▲ = 4, which gives (3■)(2▲) = (36)(24) = 864;
(d) ■ = 8 and ▲ = 3, which gives (3■)(2▲) = (38)(23) = 874 ≠ 864.
Therefore, ■ = 6; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS07262

391. Two points, N and Q (not shown), lie to the right of point M on line ℓ. What is the ratio of the length of QN to the length of MQ?

(1) Twice the length of MN is 3 times the length of MQ.

(2) Point Q is between points M and N.

Algebra Order

(1) Given that twice the length of MN is 3 times the length of MQ, it follows that the points are ordered from left to right as M, Q, and N. Thus, letting $MQ = x$ and $QN = y$, it is given that $2(x + y) = 3x$ and the value of $\frac{y}{x}$ is to be determined. The given equation can be rewritten as $2x + 2y = 3x$, or $2y = x$, or $\frac{y}{x} = \frac{1}{2}$; SUFFICIENT.

(2) Given that Q is between M and N, the ratio of QN to MQ can be close to zero (if Q and N are close together and both far from M) and the ratio of QN to MQ can be large (if M and Q are close together and both far from N); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS05639

392. Did the sum of the prices of three shirts exceed $60?

(1) The price of the most expensive of the shirts exceeded $30.

(2) The price of the least expensive of the shirts exceeded $20.

Arithmetic Applied problems

(1) Given that the price of the most expensive shirt exceeded $30, the sum of the prices of the shirts can be under $60 (if the prices were $10, $10, and $35) and the sum of the prices of the shirts can be over $60 (if the prices were $10, $10, and $50); NOT sufficient.

(2) Given that the price of the least expensive shirt exceeded $20, it follows that the sum of the prices of the shirts exceeds 3($20) = $60; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS03057

393. What is the total number of coins that Bert and Claire have?

(1) Bert has 50 percent more coins than Claire.

(2) The total number of coins that Bert and Claire have is between 21 and 28.

Arithmetic Computation with integers

Determine the total number of coins Bert and Claire have. If B represents the number of coins that Bert has and C represents the number of coins that Claire has, determine $B + C$.

(1) Bert has 50% more coins than Claire, so $B = 1.5C$, and $B + C = 1.5C + C = 2.5C$, but the value of C can vary; NOT sufficient.

(2) The total number of coins Bert and Claire have is between 21 and 28, so $21 < B + C < 28$ and, therefore, $B + C$ could be 22, 23, 24, 25, 26, or 27; NOT sufficient.

Taking (1) and (2) together, $21 < 2.5C < 28$ and then $\frac{21}{2.5} < C < \frac{28}{2.5}$ or $8.4 < C < 11.2$.

If $C = 9$, then $B = (1.5)(9) = 13.5$; if $C = 10$, then $B = (1.5)(10) = 15$; and if $C = 11$, then $B = (1.5)(11) = 16.5$. Since B represents a number of coins, B is an integer. Therefore, $B = 15$, $C = 10$, and $B + C = 25$.

The correct answer is C;
both statements together are sufficient.

DS05668

394. A telephone station has x processors, each of which can process a maximum of y calls at any particular time, where x and y are positive integers. If 500 calls are sent to the station at a particular time, can the station process all of the calls?

(1) $x = 600$

(2) $100 < y < 200$

Algebra Applied problems

At a particular time, the telephone station can process a maximum of xy calls, where x and y are positive integers. Determine whether $xy \geq 500$.

(1) Given that $x = 600$, it follows that $xy \geq 600$ since $y \geq 1$ (y is a positive integer); SUFFICIENT.

(2) Given that $100 < y < 200$, $xy < 500$ is possible (if $x = 3$ and $y = 150$) and $xy \geq 500$ is possible (if $x = 10$ and $y = 150$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

	Price per Flower
Roses	\$1.00
Daisies	\$0.50

DS07953

395. Kim and Sue each bought some roses and some daisies at the prices shown above. If Kim bought the same total number of roses and daisies as Sue, was the price of Kim's purchase of roses and daisies higher than the price of Sue's purchase of roses and daisies?

(1) Kim bought twice as many daisies as roses.

(2) Kim bought 4 more roses than Sue bought.

Algebra Applied problems

Let R_K be the number of roses that Kim bought, let R_S be the number of roses that Sue bought, and let T be the total number of roses and daisies each bought. Then Kim bought $(T - R_K)$ daisies and Sue bought $(T - R_S)$ daisies.

For the roses and daisies, Kim paid a total of $\$[R_K + \frac{1}{2}(T - R_K)] = \$\frac{1}{2}(R_K + T)$ and Sue paid a total of $\$[R_S + \frac{1}{2}(T - R_S)] = \$\frac{1}{2}(R_S + T)$.

Determine whether $\frac{1}{2}(R_K + T) > \frac{1}{2}(R_S + T)$, or equivalently, determine whether $R_K > R_S$.

(1) Given that $T - R_K = 2R_K$, or $T = 3R_K$, it is not possible to determine whether $R_K > R_S$ because no information is provided about the value of R_S; NOT sufficient.

(2) Given that $R_K = R_S + 4$, it follows that $R_K > R_S$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS14406

396. Jazz and blues recordings accounted for 6 percent of the $840 million revenue from the sales of recordings in Country Y in 2000. What was the revenue from the sales of jazz and blues recordings in Country Y in 1998 ?

(1) Jazz and blues recordings accounted for 5 percent of the revenue from the sales of recordings in Country Y in 1998.

(2) The revenue from the sales of jazz and blues recordings in Country Y increased by 40 percent from 1998 to 2000.

Arithmetic Percents

It is given that jazz and blues recordings accounted for 6% of the $840 million revenue of recordings in Country Y in 2000. Determine the revenue from the sales of jazz and blues recordings in 1998.

(1) This indicates that jazz and blues recordings accounted for 5% of the revenue from the sales of recordings in Country Y in 1998. However, no information is given to indicate what the revenue from the sales of recordings was in 1998. Therefore, the revenue from sales of jazz and blues recordings in 1998 cannot be determined; NOT sufficient.

(2) This indicates that the revenue from the sales of jazz and blues recordings in Country Y increased by 40% from 1998 to 2000. Letting R_{1998} and R_{2000} represent the revenue from the sales of jazz and blues recordings in 1998 and 2000, respectively, then $R_{2000} = 1.4R_{1998}$, and so $(0.06)(\$840 \text{ million}) = 1.4R_{1998}$, from which R_{1998} can be determined; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS06315

397. On a certain nonstop trip, Marta averaged x miles per hour for 2 hours and y miles per hour for the remaining 3 hours. What was her average speed, in miles per hour, for the entire trip?

(1) $2x + 3y = 280$

(2) $y = x + 10$

Algebra Rate problems

Marta traveled a total of $(2x + 3y)$ miles in $2 + 3 = 5$ hours for an average speed of $\left(\frac{2x+3y}{5}\right)$ miles per hour. Determine the value of $\frac{2x+3y}{5}$.

(1) Given that $2x + 3y = 280$, it follows that $\frac{2x+3y}{5} = \frac{280}{5}$; SUFFICIENT.

(2) Given that $y = x + 10$, it follows that $\frac{2x+3y}{5} = \frac{2x+3(x+10)}{5} = x + 6$.
Therefore, the value of $\frac{2x+3y}{5}$ can be 56 (if $x = 50$ and $y = 60$) and the value of $\frac{2x+3y}{5}$ can be 61 (if $x = 55$ and $y = 65$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS12730

398. If x is a positive integer, what is the value of $\sqrt{x+24} - \sqrt{x}$?

(1) $\sqrt{x}$ is an integer.

(2) $\sqrt{x+24}$ is an integer.

Arithmetic Operations with radicals

Determine the value of $\sqrt{x+24} - \sqrt{x}$.

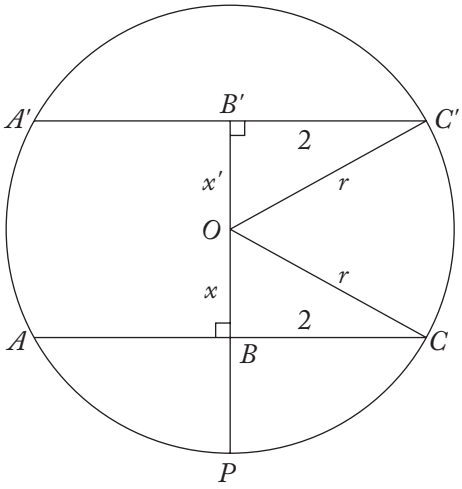
(1) This indicates that x is a perfect square. If $x = 1$, then $\sqrt{x+24} - \sqrt{x} = \sqrt{1+24} - \sqrt{1} = 5 - 1 = 4$. However, if $x = 25$, then $\sqrt{x+24} - \sqrt{x} = \sqrt{25+24} - \sqrt{25}$
$= 7 - 5 = 2$;
NOT sufficient.

(2) This indicates that $\sqrt{x+24}$ is an integer. In each of the examples above, $\sqrt{x+24}$ is an integer; NOT sufficient.

Because the same examples were used to establish that neither (1) nor (2) is sufficient, it is not possible to determine the value of $\sqrt{x+24} - \sqrt{x}$ from the given information.

The correct answer is E;
both statements together are still not sufficient.

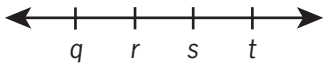
DS13982



399. A tank is filled with gasoline to a depth of exactly 2 feet. The tank is a cylinder resting horizontally on its side, with its circular ends oriented vertically. The inside of the tank is exactly 6 feet long. What is the volume of the gasoline in the tank?

(1) The inside of the tank is exactly 4 feet in diameter.

(2) The top surface of the gasoline forms a rectangle that has an area of 24 square feet.

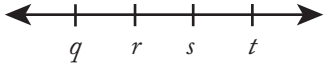


Geometry Cylinders; Volume

(1) Given that the diameter of the cylindrical tank is 4 ft, it follows that its radius is 2 ft. Therefore, the radius and height of the cylindrical tank are known, and hence the volume of the gasoline is half the volume of the cylinder, or $\frac{1}{2}\pi r^2 h = \frac{1}{2}\pi\ (2\text{ ft})^2(6\text{ ft}) = 12\pi\text{ ft}^3$; SUFFICIENT.

(2) Given that the rectangular surface of the gasoline forms a rectangle with area 24 ft^2 and length 6 ft, the width of the rectangular surface is 4 ft. Let r ft be the radius of the cylinder. The figure shows a vertical cross-section of the cylindrical tank—a circle with center O—with the two possibilities for the location of the top surface of the gasoline: the depth of the gasoline is less than or equal to r ft ($\overline{AC}$ marks the location of the top surface of the gasoline and $BP = 2$ ft is the depth of the gasoline) or the depth of the gasoline is greater than or equal to r ft ($\overline{A'C'}$ marks the location of the top surface of the gasoline and $B'P = 2$ ft is the depth of the gasoline). For the first possibility, ΔOBC is a right triangle with hypotenuse $\overline{OC}$ of length r ft, so letting $OB = x$ ft, it follows from the Pythagorean theorem that $r^2 = x^2 + 2^2 = x^2 + 4$. However, because $r = OB + BP = x + 2$, it follows that $r^2 = (x + 2)^2 = x^2 + 4x + 4$. Therefore, $x^2 + 4 = x^2 + 4x + 4$, so $4x = 0$, $x = 0$, and $\overline{AC}$ is a diameter of the circle. Thus, the diameter of the cylindrical tank is 4 ft, and by the same reasoning used in (1), the volume of the gasoline can be determined. For the second possibility, $\Delta OB'C'$ is a right triangle with hypotenuse $\overline{OC'}$ of length r ft, so letting $B'O = x'$ ft, it follows from the Pythagorean theorem that $r^2 = (x')^2 + 2^2 = (x')^2 + 4$. However, because $r = B'P - B'O = 2 - x'$, it follows that $r^2 = (2 - x')^2 = 4 - 4x' + (x')^2$. Therefore, $(x')^2 + 4 = 4 - 4x' + (x')^2$, so $0 = -4x'$, $x' = 0$, and $\overline{A'C'}$ is a diameter of the circle. Thus, the diameter of the cylindrical tank is 4 ft, and by the same reasoning used in (1), the volume of the gasoline can be determined; SUFFICIENT.

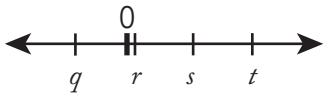
The correct answer is D; each statement alone is sufficient.



DS16197

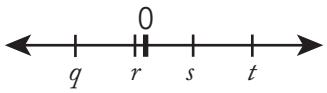
400. Of the four numbers represented on the number line above, is r closest to zero?

(1) $q = -s$



(2) $-t < q$

Algebra Order



Referring to the figure above, in which it may be assumed that q, r, s, and t are different numbers, determine if r is closest to 0.

(1) Since $q = -s$, one of q and s is positive and the other is negative. Since s is to the right of q, then s is positive and q is negative. Also, 0 is halfway between q and s, so q and s are the same distance from 0. If $r = 0$, then, of q, r, s, and t, r is closest to 0 because it IS 0. If $r \neq 0$ then either (i) $q < 0 < r < s < t$ or (ii) $q < r < 0 < s < t$.

(i) If $q < 0 < r < s < t$, as shown above, r is closer to 0 than s is because r is between 0 and s, and r is clearly closer to 0 than t is because t is farther away from 0 than s is. Also, since q and s are the same distance from 0 and r is closer to 0 than s is, then r is closer to 0 than q is. Therefore, r is closest to 0.

(ii) If $q < r < 0 < s < t$, as shown above, r is closer to 0 than q is because r is between 0 and q. Also, r is closer to 0 than s is because r is closer to 0 than q is and q and s are the same distance from 0. Moreover, r is closer to 0 than t is because t is farther away from 0 than s is. Therefore, r is closest to 0.

In each case, r is closest to 0; SUFFICIENT.

(2) If $-t < q$, then $-t$ is to the left of q. If $t = 5$, $s = 4$, $r = 3$, and $q = -2$, then $-5 < -2$, so (2) is satisfied. In this case, q is closest to 0. On the other hand, if $t = 5$, $s = 4$, $r = -1$, and $q = -2$, then $-5 < -2$, so (2) is satisfied, but r is closest to 0; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS18414

401. A group consisting of several families visited an amusement park where the regular admission fees were ¥5,500 for each adult and ¥4,800 for each child. Because there were at least 10 people in the group, each paid an admission fee that was 10% less than the regular admission fee. How many children were in the group?

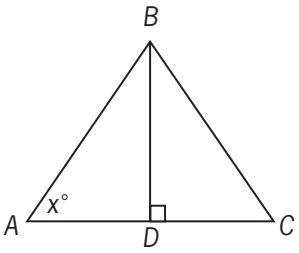
(1) The total of the admission fees paid for the adults in the group was ¥29,700.

(2) The total of the admission fees paid for the children in the group was ¥4,860 more than the total of the admission fees paid for the adults in the group.

Arithmetic Simultaneous equations

Determine the number of children in a group of at least 10 people who visited an amusement park.

(1) This indicates that $(0.9)(5{,}500)A = 29{,}700$, where A represents the number of adults in the group. From this, the number of adults can be determined. However, the number of children in the group cannot be determined without additional information about the exact number of people in the group; NOT sufficient.



(2) If C and A represent the numbers of children and adults, respectively, in the group, this indicates that $(0.9)(4{,}800)C = (0.9)(5{,}500)A + 4{,}860$, or $48C = 55A + 54$, or $48C - 55A = 54$, which is a single equation with two variables from which unique values of C and A cannot be determined, even under the assumptions that C and A are integers such that $C + A \geq 10$. For example, the values of C and A could be 8 and 6, respectively, since $(48)(8) - (55)(6) = 54$, or the values of C and A could be 63 and 54, respectively, since $(48)(63) - (55)(54) = 54$; NOT sufficient.

Taking (1) and (2) together, it follows that

$$A = \frac{29{,}700}{(0.9)(5{,}500)} = 6 \text{ and}$$

$$C = \frac{(0.9)(5{,}500)(6) + 4{,}860}{(0.9)(4{,}800)} = 8.$$

The correct answer is C;
both statements together are sufficient.

DS16536

402. What is the area of triangular region *ABC* above?

(1) The product of *BD* and *AC* is 20.

(2) $x = 45$

Geometry Triangles; Area

The area of $\Delta ABC = \frac{BD \times AC}{2}$.

(1) The product of *BD* and *AC* is given as 20, so the area of ΔABC is $\frac{20}{2}$ or 10; SUFFICIENT.

(2) With the measurement of *x* being 45, it is concluded that ΔABD is a 45–45–90 right triangle, where the length of side *BD* is equal to the length of side *AD*. However, with no lengths of any side known, there is not enough information to calculate the area; NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

DS05265

403. In the *xy*-coordinate plane, is point *R* equidistant from points (–3,–3) and (1,–3) ?

(1) The *x*-coordinate of point *R* is –1.

(2) Point *R* lies on the line $y = -3$.

Algebra Coordinate geometry

Determine if point *R* is equidistant from (–3,–3) and (1,–3). Letting $R = (x,y)$, then *R* will be equidistant from (–3,–3) and (1,–3) if and only if *R* lies on the perpendicular bisector of the line segment with endpoints (–3,–3) and (1,–3), or equivalently, if and only if *R* lies on the vertical line that consists of all points with *x*-coordinate equal to $\frac{-3+1}{2} = -1$. Therefore, determine if $x = -1$.

(1) Given that $x = -1$, then *R* will be equidistant from (–3,–3) and (1,–3); SUFFICIENT.

(2) Given that $y = -3$, then both $x = -1$ and $x \neq -1$ are possible; NOT sufficient.

Alternatively, letting $R = (x,y)$, then *R* will be equidistant from (–3,–3) and (1,–3) if and only if the distance between (x,y) and (–3,–3) is the same as the distance between (x,y) and (1,–3), or if and only if $\sqrt{(x+3)^2 + (y+3)^2} = \sqrt{(x-1)^2 + (y+3)^2}$ or if and only if $(x+3)^2 + (y+3)^2 = (x-1)^2 + (y+3)^2$, or if and only if $(x+3)^2 = (x-1)^2$.

(1) Given that $x = -1$, then $(-1+3)^2 = 4$ and $(-1-1)^2 = 4$; SUFFICIENT.

(2) Given that $y = -3$, then it is impossible to determine if $(x+3)^2 = (x-1)^2$; NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

DS09603

404. What is the ratio of the average (arithmetic mean) height of students in class X to the average height of students in class Y ?

(1) The average height of the students in class X is 120 centimeters.

(2) The average height of the students in class X and class Y combined is 126 centimeters.

Arithmetic Statistics

(1) Given that the average height of the students in class X is 120 cm, but given no information about the average height of the students in class Y, the desired ratio cannot be determined; NOT sufficient.

(2) Given that the average height of the students in class X and class Y combined is 126 cm, the ratio of the averages of the individual classes cannot be determined. For example, if class X consists of 10 students, each of whom has height 120 cm, and class Y consists of 10 students, each of whom has height 132 cm, then the average height of the students in class X and class Y combined is $\frac{10(120)+10(132)}{20} = 126$ cm

and the ratio of the averages of the individual classes is $\frac{120}{132}$. However, if class X consists of 10 students, each of whom has height 120 cm and class Y consists of 20 students, each of whom has height 129 cm, then the average height of the students in class X and class Y combined is $\frac{10(120)+20(129)}{30}=126$ cm and the ratio of the averages of the individual classes is $\frac{120}{129}$; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples used to show that (2) is not sufficient include the information from (1).

The correct answer is E;
both statements together are still not sufficient.

DS04631

405. Is the positive two-digit integer N less than 40 ?

(1) The units digit of N is 6 more than the tens digit.

(2) N is 4 less than 4 times the units digit.

Arithmetic Place value

Determine if the two-digit integer N is less than 40. Letting the tens digit be t and the units digit be u, then $N=10t+u$. Determine if $10t+u<40$.

(1) Given that $u=t+6$, then $N=10t+(t+6)=11t+6$. Since u is a digit, $u=t+6\le 9$, so $t\le 3$. Therefore, $N=11t+6\le 11(3)+6=39$; SUFFICIENT.

(2) Given that $N=4u-4$, then since u is a digit and $u\le 9$, it follows that $N=4u-4\le 4(9)-4=32$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06318

406. If $2^{x+y}=4^8$, what is the value of y ?

(1) $x^2=81$

(2) $x-y=2$

Algebra Exponents

Since $4^8=(2^2)^8=2^{16}$, the equation $2^{x+y}=4^8$ becomes $2^{x+y}=2^{16}$, which is equivalent to $x+y=16$.

(1) Given that $x^2=81$, then both $x=9$ and $x=-9$ are possible. Therefore, $y=7$ is possible (choose $x=9$) and $y=25$ is possible (choose $x=-9$); NOT sufficient.

(2) Given that $x-y=2$, it follows that $-x+y=-2$. Adding the last equation to $x+y=16$ gives $2y=14$, or $y=7$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS03680

407. Each week a certain salesman is paid a fixed amount equal to \$300, plus a commission equal to 5 percent of the amount of his sales that week over \$1,000. What is the total amount the salesman was paid last week?

(1) The total amount the salesman was paid last week is equal to 10 percent of the amount of his sales last week.

(2) The salesman's sales last week totaled \$5,000.

Algebra Applied problems

Let P be the salesman's pay for last week and let S be the amount of his sales last week. Then $P=300+0.05(S-1{,}000)$. Determine the value of P.

(1) Given $P=0.10S$, then $0.10S=300+0.05(S-1{,}000)$. This equation can be solved for a unique value of S, from which the value of P can be determined; SUFFICIENT.

(2) Given $S=5{,}000$, then $P=300+0.05(5{,}000-1{,}000)$; SUFFICIENT.

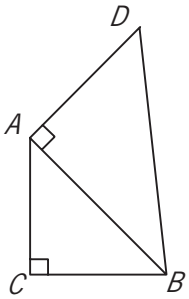
The correct answer is D;
each statement alone is sufficient.

DS01383

408. At a bakery, all donuts are priced equally and all bagels are priced equally. What is the total price of 5 donuts and 3 bagels at the bakery?

(1) At the bakery, the total price of 10 donuts and 6 bagels is $12.90.

(2) At the bakery, the price of a donut is $0.15 less than the price of a bagel.



Algebra Simultaneous equations

Let x be the price, in dollars, of each donut and let y be the price, in dollars, of each bagel. Find the value of $5x + 3y$.

(1) Given that $10x + 6y = 12.90$, since $5x + 3y = \frac{1}{2}(10x + 6y)$, it follows that $5x + 3y = \frac{1}{2}(12.90)$; SUFFICIENT.

(2) Given that $x = y - 0.15$, then $5x + 3y = 5(y - 0.15) + 3y = 8y - 0.75$, which varies as y varies; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS06869

409. In the figure above, is the area of triangular region *ABC* equal to the area of triangular region *DBA*?

(1) $(AC)^2 = 2(AD)^2$

(2) ΔABC is isosceles.

Geometry Triangles; Area

Determine whether $\frac{1}{2}(AC)(CB) = \frac{1}{2}(AD)(AB)$ or, equivalently, whether $(AC)(CB) = (AD)(AB)$.

(1) Given that $(AC)^2 = 2(AD)^2$, then $\sqrt{2}$ and 1 could be the values of AC and AD, respectively. If, for example, $CB = \sqrt{2}$, then $AB = \sqrt{\left(\sqrt{2}\right)^2 + \left(\sqrt{2}\right)^2} = 2$ by the Pythagorean theorem applied to ΔABC. Hence, $(AC)(CB) = (\sqrt{2})(\sqrt{2})$ and $(AD)(AB) = (1)(2)$, from which it follows that $(AC)(CB) = (AD)(AB)$. On the other hand, if $CB = 1$, then $AB = \sqrt{\left(\sqrt{2}\right)^2 + 1^2} = \sqrt{3}$ by the Pythagorean theorem applied to ΔABC. Hence, $(AC)(CB) = (\sqrt{2})(1)$ and $(AD)(AB) = (1)(\sqrt{3})$, from which it follows that $(AC)(CB) \neq (AD)(AB)$; NOT sufficient.

(2) Given that ΔABC is isosceles then, by varying the value of AD, the area of ΔABC may or may not be equal to the area of ΔDBA. For example, if $AC = CB = 1$, then $(AC)(CB) = (1)(1) = 1$ and $AB = \sqrt{2}$ by the Pythagorean theorem applied to ΔABC. If $AD = \frac{1}{\sqrt{2}}$, then $(AD)(AB) = \left(\frac{1}{\sqrt{2}}\right)(\sqrt{2}) = 1$, and $(AC)(CB) = (AD)(AB)$. On the other hand, if $AD = 1$, $(AD)(AB) = (1)(\sqrt{2}) = \sqrt{2}$ and $(AC)(CB) \neq (AD)(AB)$; NOT sufficient.

Given (1) and (2) together, let $AC = CB = x$ be the length of the legs of the isosceles triangle ABC. Then, from $(AC)^2 = 2(AD)^2$, it follows that $x^2 = 2(AD)^2$, and hence $AD = \frac{x}{\sqrt{2}}$. Also, by the Pythagorean theorem applied to ΔABC, it follows that $AB = \sqrt{x^2 + x^2} = x\sqrt{2}$. Therefore, it follows that $(AC)(CB) = (x)(x) = x^2$ and $(AD)(AB) = \left(\frac{x}{\sqrt{2}}\right)\left(x\sqrt{2}\right) = x^2$, and so $(AC)(CB) = (AD)(AB)$.

The correct answer is C;
both statements together are sufficient.

DS08105

410. If r and s are positive integers, can the fraction $\frac{r}{s}$ be expressed as a decimal with only a finite number of nonzero digits?

(1) s is a factor of 100.

(2) r is a factor of 100.

Arithmetic Properties of numbers

Determine if $\frac{r}{s}$, where r and s are positive integers, can be expressed as a decimal with a finite number of nonzero decimal digits.

(1) It is given that s is a factor of 100 and so $s = 1, 2, 4, 5, 10, 20, 25, 50$, or 100. This means that $\frac{r}{s}$ must be one of the quotients $\frac{r}{1}, \frac{r}{2}, \frac{r}{4}, \frac{r}{5}, \frac{r}{10}, \frac{r}{20}, \frac{r}{25}, \frac{r}{50}$ or $\frac{r}{100}$. Thus, $\frac{r}{s}$ must be one of the products $r(1)$, $r(0.5)$, $r(0.25)$, $r(0.20)$, $r(0.1)$, $r(0.05)$ $r(0.04)$, $r(0.02)$, or $r(0.01)$. In each case, $\frac{r}{s}$ is the product of an integer and a decimal with a finite number of nonzero digits, and hence, $\frac{r}{s}$ can be expressed as a decimal with a finite number of nonzero digits. In fact, it suffices to note this is true for $\frac{r}{100}$, since each of the other possibilities is a positive integer times $\frac{r}{100}$ (for example, $\frac{r}{20}$ is 5 times $\frac{r}{100}$); SUFFICIENT.

(2) It is given that r is a factor of 100. If $r = 4$ and $s = 5$, then $\frac{r}{s} = 0.8$, which is a decimal with a finite number of nonzero digits. On the other hand, if $r = 4$ and $s = 7$, then $\frac{r}{s} = 0.\overline{571428}$, which is not a decimal with a finite number of nonzero digits; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16384

411. If $r > 0$ and $s > 0$, is $\frac{r}{s} < \frac{s}{r}$?

(1) $\frac{r}{3s} = \frac{1}{4}$

(2) $s = r + 4$

Algebra Ratios

Given positive numbers r and s, determine if $\frac{r}{s} < \frac{s}{r}$.

(1) If $\frac{r}{3s} = \frac{1}{4}$, then $\frac{r}{s} = \frac{3}{4}$, $\frac{s}{r} = \frac{4}{3}$, and so $\frac{r}{s} < \frac{s}{r}$, since $\frac{3}{4} < \frac{4}{3}$; SUFFICIENT.

(2) If $s = r + 4$, then $\frac{r}{s} = \frac{r}{r+4}$ and $\frac{s}{r} = \frac{r+4}{r}$. Since $r + 4 > r$, $\frac{r}{r+4} < 1$ and $\frac{r+4}{r} > 1$, so $\frac{r}{s} < \frac{s}{r}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06789

412. If k is an integer such that $56 < k < 66$, what is the value of k?

(1) If k were divided by 2, the remainder would be 1.

(2) If $k + 1$ were divided by 3, the remainder would be 0.

Arithmetic Properties of integers

Determine the value of the integer k, where $56 < k < 66$.

(1) It is given that the remainder is 1 when k is divided by 2, which implies that k is odd. Therefore, the value of k can be 57, 59, 61, 63, or 65; NOT sufficient.

(2) It is given that the remainder is 0 when $k + 1$ is divided by 3, which implies that $k + 1$ is divisible by 3. Since $56 < k < 66$ (equivalently, $57 < k + 1 < 67$), the value of $k + 1$ can be 60, 63, or 66 so the value of k can be 59, 62, or 65; NOT sufficient.

Taking (1) and (2) together, 59 and 65 appear in both lists of possible values for k; NOT sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS13965

413. If x is a positive integer, then is x prime?

(1) $3x + 1$ is prime.

(2) $5x + 1$ is prime.

Arithmetic Properties of numbers

Determine if the positive integer x is prime.

(1) This indicates that $3x + 1$ is prime. If $x = 2$, then $3x + 1 = 7$ is prime and so is x. However, if $x = 6$, then $3x + 1 = 19$ is prime, but 6 is not prime; NOT sufficient.

(2) This indicates that $5x + 1$ is prime. If $x = 2$, then $5x + 1 = 11$ is prime and so is x. However, if $x = 6$, then $5x + 1 = 31$ is prime, but 6 is not prime; NOT sufficient.

Because the same examples were used to establish that neither (1) nor (2) is sufficient, it is not possible to determine whether x is prime from the given information.

The correct answer is E;
both statements together are still not sufficient.

$k, n, 12, 6, 17$

DS00172

414. What is the value of n in the list above?

(1) $k < n$

(2) The median of the numbers in the list is 10.

Arithmetic Statistics

Given the list $k, n, 12, 6, 17$, determine the value of n.

(1) Although $k < n$, no information is given about the value of k or n; NOT sufficient.

(2) Since the median of the numbers in the list is 10 and there are 5 numbers in the list, 10 is one of those 5 numbers. Therefore, $n = 10$ or $k = 10$. If $n = 10$, then the value of n has been determined. However, if $k = 10$, then n can be any number that is 10 or less, so the value of n cannot be determined; NOT sufficient.

Taking (1) and (2) together, if $k < n$ and the median of the list is 10, then 12 and 17 are to the right of the median and the list in ascending order is either $6, k, n, 12, 17$ or $k, 6, n, 12, 17$. In either case, n is the middle number, and since the median is 10, $n = 10$.

The correct answer is C;
both statements together are sufficient.

DS07508

415. If x and y are integers, what is the value of $x + y$?

(1) $3 < \frac{x+y}{2} < 4$

(2) $2 < x < y < 5$

Arithmetic Computation with integers

Determine the value of $x + y$ for integers x and y.

(1) Given that $3 < \frac{x+y}{2} < 4$, then $6 < x + y < 8$. Since $x + y$ is an integer and 7 is the only integer greater than 6 and less than 8, it follows that the value of $x + y$ is 7; SUFFICIENT.

(2) Given that $2 < x < y < 5$, then $2 < x < 5$, and hence $x = 3$ or $x = 4$. Likewise, $2 < y < 5$, and hence $y = 3$ or $y = 4$. With the additional restriction that $x < y$, it follows that $x = 3$ and $y = 4$, and thus $x + y = 7$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS00764

416. Last year, if Arturo spent a total of \$12,000 on his mortgage payments, real estate taxes, and home insurance, how much did he spend on his real estate taxes?

(1) Last year, the total amount that Arturo spent on his real estate taxes and home insurance was $33\frac{1}{3}$ percent of the amount that he spent on his mortgage payments.

(2) Last year, the amount that Arturo spent on his real estate taxes was 20 percent of the total amount he spent on his mortgage payments and home insurance.

Arithmetic Applied problems

Let M, R, and H be the amounts that Arturo spent last year on mortgage payments, real estate taxes, and home insurance, respectively. Given that $M + R + H = 12{,}000$, determine the value of R.

(1) Given that $R + H = \frac{1}{3}M$ and $M + R + H = 12{,}000$, then $M + \frac{1}{3}M = 12{,}000$, or $M = 9{,}000$. However, the value of R cannot be determined, since it is possible that $R = 2{,}000$ (use $M = 9{,}000$ and $H = 1{,}000$) and it is possible that $R = 1{,}000$ (use $M = 9{,}000$ and $H = 2{,}000$); NOT sufficient.

(2) Given that $R = \frac{1}{5}(M + H)$, or $5R = M + H$ and $M + R + H = 12{,}000$, which can be rewritten as $(M + H) + R = 12{,}000$, then $5R + R = 12{,}000$, or $R = 2{,}000$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS06038

417. If a, b, c, and d are positive numbers, is $\frac{a}{b} < \frac{c}{d}$?

(1) $0 < \frac{c-a}{d-b}$

(2) $\left(\frac{ad}{bc}\right)^2 < \frac{ad}{bc}$

Algebra Inequalities

Determine whether $\frac{a}{b} < \frac{c}{d}$, where a, b, c, and d are positive numbers.

(1) Given that $0 < \frac{c-a}{d-b}$, then $a = 2$, $b = 3$, $c = 6$, and $d = 8$ are possible values for a, b, c, and d because $\frac{c-a}{d-b} = \frac{6-2}{8-3} = \frac{4}{5}$ and $\frac{4}{5} > 0$. For these values, $\frac{a}{b} < \frac{c}{d}$ is true because $\frac{2}{3} < \frac{6}{8}$. On the other hand, $a = 4$, $b = 6$, $c = 2$, and $d = 3$ are also possible values of a, b, c, and d because $\frac{c-a}{d-b} = \frac{2-4}{3-6} = \frac{2}{3}$ and $\frac{2}{3} > 0$. For these values, $\frac{a}{b} < \frac{c}{d}$ is false because $\frac{4}{6} = \frac{2}{3}$; NOT sufficient.

(2) Given that $\left(\frac{ad}{bc}\right)^2 < \frac{ad}{bc}$, then

$\frac{ad}{bc} < 1$ dividing both sides by the positive number $\frac{ad}{bc}$

$\frac{ad}{b} < c$ multiplying both sides by the positive number c

$\frac{a}{b} < \frac{c}{d}$ dividing both sides by the positive number d; SUFFICIENT

The correct answer is B;
statement 2 alone is sufficient.

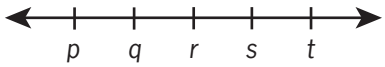
DS12008

418. Is the number of members of Club X greater than the number of members of Club Y?

(1) Of the members of Club X, 20 percent are also members of Club Y.

(2) Of the members of Club Y, 30 percent are also members of Club X.

Arithmetic Sets



Let a be the number of members in Club X that do not belong to Club Y, let b be the number of members in Club Y that do not belong to Club X, and let c be the number of members that belong to both Club X and to Club Y. Determine whether $a + c > b + c$, or equivalently, whether $a > b$.

(1) If $a = 80$, $b = 79$, and $c = 20$, then 20 percent of the members of Club X are also members of Club Y (because $c = 20$ is 20 percent of $a + c = 100$) and $a > b$ is true. However, if $a = 80$, $b = 80$, and $c = 20$, then 20 percent of the members of Club X are also members of Club Y (because $c = 20$ is 20 percent of $a + c = 100$) and $a > b$ is false. Therefore, it cannot be determined whether $a > b$; NOT sufficient.

(2) If $a = 71$, $b = 70$, and $c = 30$, then 30 percent of the members of Club Y are also members of Club X (because $c = 30$ is 30 percent of $b + c = 100$) and $a > b$ is true. However, if $a = 70$, $b = 70$, and $c = 30$, then 30 percent of the members of Club Y are also members of Club X (because $c = 30$ is 30 percent of $b + c = 100$) and $a > b$ is false. Therefore, it cannot be determined whether $a > b$; NOT sufficient.

Now assume both (1) and (2). From (1) it follows that $\frac{c}{a+c} = 0.20 = \frac{1}{5}$, or $5c = a + c$, and so $a = 4c$. From (2) it follows that $\frac{c}{b+c} = 0.30 = \frac{3}{10}$, or $10c = 3b + 3c$, and so $7c = 3b$ and $b = \frac{7}{3}c$. Since $4c > \frac{7}{3}c$ (from the statements it can be deduced that $c > 0$), it follows that $a > b$. Therefore, (1) and (2) together are sufficient.

The correct answer is C;
both statements together are sufficient.

DS16361

419. On the number line above, p, q, r, s, and t are five consecutive even integers in increasing order. What is the average (arithmetic mean) of these five integers?

(1) $q + s = 24$

(2) The average (arithmetic mean) of q and r is 11.

Arithmetic Properties of numbers

Since p, q, r, s, and t are consecutive even integers listed in numerical order, the 5 integers can also be given as $p, p+2, p+4, p+6$, and $p+8$. Determine the average of these 5 integers, which is the value of $\frac{p+(p+2)+(p+4)+(p+6)+(p+8)}{5} = \frac{5p+20}{5} = p+4$

(1) Given that $q + s = 24$, then $(p + 2) + (p + 6) = 24$. Therefore, $2p + 8 = 24$, or $p = 8$, and hence $p + 4 = 12$; SUFFICIENT.

(2) Given that $\frac{q+r}{2} = 11$, then $q + r = (2)(11) = 22$, or $(p + 2) + (p + 4) = 22$. Therefore, $2p + 6 = 22$, or $p = 8$, and hence $p + 4 = 12$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06657

420. If $\lceil x \rceil$ denotes the least integer greater than or equal to x, is $\lceil x \rceil = 0$?

(1) $-1 < x < 1$

(2) $x < 0$

Algebra Functions

Determine if $\lceil x \rceil$, the least integer greater than or equal to x, is equal to 0, which is the same as determining if x satisfies $-1 < x \leq 0$.

(1) Given that $-1 < x < 1$, then it is possible that $\lceil x \rceil = 0$ (for example, if $x = 0$, then $\lceil x \rceil = 0$) and it is possible that $\lceil x \rceil \neq 0$ (for example, if $x = \frac{1}{2}$, then $\lceil x \rceil = 1 \neq 0$); NOT sufficient.

(2) Given that $x < 0$, then it is possible that $\lceil x \rceil = 0$ (for example, if $x = -\frac{1}{2}$, then $\lceil x \rceil = 0$) and it is possible that $\lceil x \rceil \neq 0$ (for example, if $x = -5$, then $\lceil x \rceil = -5 \neq 0$); NOT sufficient.

Taking (1) and (2) together gives $-1 < x < 0$, which implies that $\lceil x \rceil = 0$.

The correct answer is C;
both statements together are sufficient.

DS12718

421. If x and y are integers, is $x > y$?

(1) $x + y > 0$

(2) $y^x < 0$

Arithmetic Properties of integers

Determine if the integer x is greater than the integer y.

(1) It is given that $x + y > 0$, and so $-x < y$. If, for example, $x = -3$ and $y = 4$, then $x + y = -3 + 4 = 1 > 0$ and $x < y$. On the other hand, if $x = 4$ and $y = -3$, then $x + y = 4 - 3 = 1 > 0$ and $x > y$; NOT sufficient.

(2) It is given that $y^x < 0$, so $y < 0$. If, for example, $x = 3$ and $y = -2$, then $(-2)^3 = -8 < 0$ and $x > y$. On the other hand, if $x = -3$ and $y = -2$, then $(-2)^{-3} = -\frac{1}{8} < 0$ and $x < y$; NOT sufficient.

Taking (1) and (2) together, from (2) y is negative and from (1) $-x$ is less than y. Therefore, $-x$ is negative, and hence x is positive. Since x is positive and y is negative, it follows that $x > y$.

The correct answer is C;
both statements together are sufficient.

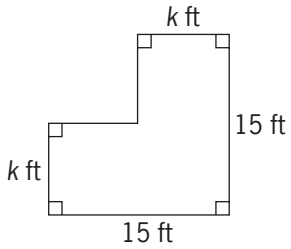
DS03046

422. If r and s are the roots of the equation $x^2 + bx + c = 0$, where b and c are constants, is $rs < 0$?

(1) $b < 0$

(2) $c < 0$

Algebra Second-degree equations



Determine whether the product of the roots to $x^2 + bx + c = 0$, where b and c are constants, is negative.

If r and s are the roots of the given equation, then $(x - r)(x - s) = x^2 + bx + c$. This implies that $x^2 - (r + s)x + rs = x^2 + bx + c$, and so $rs = c$. Therefore, rs is negative if and only if c is negative.

(1) Given that $b < 0$, then c could be negative or positive. For example, if $b = -1$ and $c = -6$, then the given equation would be $x^2 - x - 6 = (x - 3)(x + 2) = 0$, and the product of its roots would be $(3)(-2)$, which is negative. On the other hand, if $b = -6$ and $c = 5$, then the given equation would be $x^2 - 6x + 5 = (x - 5)(x - 1) = 0$, and the product of its roots would be $(5)(1)$, which is positive; NOT sufficient.

(2) Given that $c < 0$, it follows from the explanation above that $rs < 0$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS02888

423. The figure above represents an L-shaped garden. What is the value of k?

(1) The area of the garden is 189 square feet.

(2) The perimeter of the garden is 60 feet.

Geometry Polygons

(1) Given that the area of the garden is 189 ft^2, and observing that area of the garden can be calculated by imagining the garden as a square with dimensions 15 ft by 15 ft from which its upper-right square corner with dimensions $(15 - k)$ ft by $(15 - k)$ ft is removed, it follows that $189 = (15)^2 - (15 - k)^2$. Therefore, $(15 - k)^2 = 225 - 189 = 36$, so $15 - k = 6$ or $15 - k = -6$. The figure implies $15 - k > 0$, so it follows that $15 - k = 6$, or $k = 9$; SUFFICIENT.

(2) Given that the perimeter of the garden is 60 ft, and because $15 + 15 + k + (15 - k) + (15 - k) + k = 60$, any value of k between 0 and 15 is possible, since for any such value of k the sum of the lengths of all the sides would be 60 ft; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

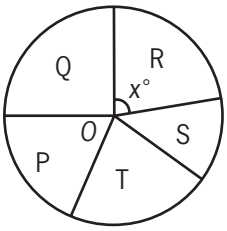
DS01049

424. The only articles of clothing in a certain closet are shirts, dresses, and jackets. The ratio of the number of shirts to the number of dresses to the number of jackets in the closet is 9:4:5, respectively. If there are more than 7 dresses in the closet, what is the total number of articles of clothing in the closet?

(1) The total number of shirts and jackets in the closet is less than 30.

(2) The total number of shirts and dresses in the closet is 26.

Arithmetic Ratio and proportion



Letting s, d, and j represent, respectively, the numbers of shirts, dresses, and jackets in the closet, then $s = 9x$, $d = 4x$, and $j = 5x$, where x is a positive integer. It is given that $4x > 7$, and so $4x \geq 8$ or $x \geq 2$ since x is an integer. Determine the value of $9x + 4x + 5x = 18x$.

(1) This indicates that $9x + 5x < 30$, and so $14x \leq 28$ or $x \leq 2$ since x is an integer. It follows from $x \geq 2$ and $x \leq 2$ that $x = 2$ and $18x = 36$; SUFFICIENT.

(2) This indicates that $9x + 4x = 26$ or $13x = 26$, or $x = 2$. It follows that $18x = 36$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

TOTAL EXPENSES FOR THE
FIVE DIVISIONS OF COMPANY H

DS16542

425. The figure above represents a circle graph of Company H's total expenses broken down by the expenses for each of its five divisions. If *O* is the center of the circle and if Company H's total expenses are \$5,400,000, what are the expenses for Division R ?

(1) $x = 94$

(2) The total expenses for Divisions S and T are twice as much as the expenses for Division R.

Geometry Circles

In this circle graph, the expenses of Division R are equal to the value of $\frac{x}{360}$ multiplied by \$5,400,000, or \$15,000x. Therefore, it is necessary to know the value of x in order to determine the expenses for Division R.

(1) The value of x is given as 94, so the expenses of Division R can be determined; SUFFICIENT.

(2) This gives a comparison among the expenses of some of the divisions of Company H, but no information is given about the value of x; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS13641

426. If x is negative, is $x < -3$?

(1) $x^2 > 9$

(2) $x^3 < -9$

Algebra Properties of numbers

(1) Given that $x^2 > 9$, it follows that $x < -3$ or $x > 3$, a result that can be obtained in a variety of ways. For example, consider the equivalent inequality $(|x|)^2 > 9$ that reduces to $|x| > 3$, or consider when the two factors of $x^2 - 9$ are both positive and when the two factors of $x^2 - 9$ are both negative, or consider where the graph of the parabola $y = x^2 - 9$ is above the x-axis, etc. Since it is also given that x is negative, it follows that $x < -3$; SUFFICIENT.

(2) Given that $x^3 < -9$, if $x = -4$, then $x^3 = -64$, and so $x^3 < -9$ and it is true that $x < -3$. However, if $x = -3$, then $x^3 = -27$, and so $x^3 < -9$, but it is not true that $x < -3$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS04897

427. What is the number of cans that can be packed in a certain carton?

(1) The interior volume of this carton is 2,304 cubic inches.

(2) The exterior of each can is 6 inches high and has a diameter of 4 inches.

Geometry Rectangular solids and cylinders

(1) No information about the size of the cans is given; NOT sufficient.

(2) No information about the size of the carton is given; NOT sufficient.

Taking (1) and (2) together, there is still not enough information to answer the question. If the carton is a rectangular solid that is 1 inch by 1 inch by 2,304 inches and the cans are cylindrical with the given dimensions, then 0 cans can be packed into the carton. However, if the carton is a rectangular solid that is 16 inches by 12 inches by 12 inches and the cans are cylindrical with the given dimensions, then 1 or more cans can be packed into the carton.

The correct answer is E;
both statements together are still not sufficient.

r	s	t
u	v	w
x	y	z

DS08301

428. Each of the letters in the table above represents one of the numbers 1, 2, or 3, and each of these numbers occurs exactly once in each row and exactly once in each column. What is the value of r?

(1) $v + z = 6$

(2) $s + t + u + x = 6$

Arithmetic Properties of numbers

In the following discussion, "row/column convention" means that each of the numbers 1, 2, and 3 appears exactly once in any given row and exactly once in any given column.

(1) Given that $v + z = 6$, then both v and z are equal to 3, since no other sum of the possible values is equal to 6. Applying the row/column convention to row 2, and then to row 3, it follows that neither u nor x can be 3. Since neither u nor x can be 3, the row/column convention applied to column 1 forces r to be 3; SUFFICIENT.

(2) If $u = 3$, then $s + t + x = 3$. Hence, $s = t = x = 1$, since the values these variables can have does not permit another possibility. However, this assignment of values would violate the row/column convention for row 1, and thus u cannot be 3. If $x = 3$, then $s + t + u = 3$. Hence, $s = t = u = 1$, since the values these variables can have does not permit another possibility. However, this assignment of values would violate the row/column convention for row 1, and thus x cannot be 3. Since neither u nor x can be 3, the row/column convention applied to column 1 forces r to be 3; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS00328

429. Material A costs \$3 per kilogram, and Material B costs \$5 per kilogram. If 10 kilograms of Material K consists of x kilograms of Material A and y kilograms of Material B, is $x > y$?

(1) $y > 4$

(2) The cost of the 10 kilograms of Material K is less than \$40.

Algebra Inequalities

Since $x + y = 10$, the relation $x > y$ is equivalent to $x > 10 - x$, or $x > 5$.

(1) The given information is consistent with $x = 5.5$ and $y = 4.5$, and the given information is also consistent with $x = y = 5$. Therefore, it is possible for $x > y$ to be true and it is possible for $x > y$ to be false; NOT sufficient.

(2) Given that $3x + 5y < 40$, or $3x + 5(10 - x) < 40$, then $3x - 5x < 40 - 50$. It follows that $-2x < -10$, or $x > 5$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS16164

430. At what speed was a train traveling on a trip when it had completed half of the total distance of the trip?

(1) The trip was 460 miles long and took 4 hours to complete.

(2) The train traveled at an average rate of 115 miles per hour on the trip.

Arithmetic Applied problems

Determine the speed of the train when it had completed half the total distance of the trip.

(1) Given that the train traveled 460 miles in 4 hours, the train could have traveled at the constant rate of 115 miles per hour for 4 hours, and thus it could have been traveling 115 miles per hour when it had completed half the total distance of the trip. However, the train could have traveled 150 miles per hour for the first 2 hours (a distance of 300 miles) and 80 miles per hour for the last 2 hours (a distance of 160 miles), and thus it could have been traveling 150 miles per hour when it had completed half the total distance of the trip; NOT sufficient.

(2) Given that the train traveled at an average rate of 115 miles per hour, each of the possibilities given in the explanation for (1) could occur, since 460 miles in 4 hours gives an average speed of $\frac{460}{4} = 115$ miles per hour; NOT sufficient.

Assuming (1) and (2), each of the possibilities given in the explanation for (1) could occur. Therefore, (1) and (2) together are not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS12047

431. Tom, Jane, and Sue each purchased a new house. The average (arithmetic mean) price of the three houses was $120,000. What was the median price of the three houses?

(1) The price of Tom's house was $110,000.

(2) The price of Jane's house was $120,000.

Arithmetic Statistics

Let T, J, and S be the purchase prices for Tom's, Jane's, and Sue's new houses. Given that the average purchase price is 120,000, or $T + J + S = 3(120{,}000)$, determine the median purchase price.

(1) Given $T = 110{,}000$, the median could be 120,000 (if $J = 120{,}000$ and $S = 130{,}000$) or 125,000 (if $J = 125{,}000$ and $S = 125{,}000$); NOT sufficient.

(2) Given $J = 120{,}000$, the following two cases include every possibility consistent with $T + J + S = (3)(120{,}000)$, or $T + S = (2)(120{,}000)$.

(i) $T = S = 120{,}000$

(ii) One of T or S is less than 120,000 and the other is greater than 120,000.

In each case, the median is clearly 120,000; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS13958

432. What is the value of x if $x^3 < x^2$?

(1) $-2 < x < 2$

(2) x is an integer greater than -2.

Algebra Inequalities

The inequality $x^3 < x^2$ is equivalent to $x^3 - x^2 < 0$, or $x^2(x - 1) < 0$. Since this inequality is false for $x = 0$, it follows that $x \neq 0$, and hence $x^2 > 0$. Therefore, $x^2(x - 1) < 0$ can only hold if $x - 1 < 0$, or if $x < 1$. Thus, the problem is equivalent to determining the value of x given that $x \neq 0$ and $x < 1$.

(1) Given that $-2 < x < 2$, it is not possible to determine the value of x. For example, the value of x could be -1 (note that $-1 < 1$) and the value of x could be 0.5 (note that $0.125 < 0.25$); NOT sufficient.

(2) Given that the value of x is an integer greater than -2, then the value of x must be among the integers $-1, 0, 1, 2, 3, \ldots$. However, from the discussion above, $x \neq 0$ and $x < 1$, so the value of x can only be -1; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS08451

433. For any integers x and y, $\min(x, y)$ and $\max(x, y)$ denote the minimum and the maximum of x and y, respectively. For example, $\min(5, 2) = 2$ and $\max(5, 2) = 5$. For the integer w, what is the value of $\min(10, w)$?

(1) $w = \max(20, z)$ for some integer z.

(2) $w = \max(10, w)$

Arithmetic Properties of numbers

If $w \geq 10$, then $(10, w) = 10$, and if $w < 10$, then $(10, w) = w$. Therefore, the value of $\min(10, w)$ can be determined if the value of w can be determined.

(1) Given that $w = \max(20, z)$ then $w \geq 20$. Hence, $w \geq 10$, and so $\min(10, w) = 10$; SUFFICIENT.

(2) Given that $w = \max(10, w)$, then $w \geq 10$, and so $\min(10, w) = 10$; SUFFICIENT.

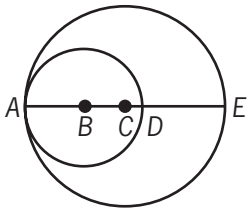
The correct answer is D;
each statement alone is sufficient.

DS01473

434. A certain bookcase has 2 shelves of books. On the upper shelf, the book with the greatest number of pages has 400 pages. On the lower shelf, the book with the least number of pages has 475 pages. What is the median number of pages for all of the books on the 2 shelves?

(1) There are 25 books on the upper shelf.

(2) There are 24 books on the lower shelf.



Arithmetic Statistics

(1) The information given says nothing about the number of books on the lower shelf. If there are fewer than 25 books on the lower shelf, then the median number of pages will be the number of pages in one of the books on the upper shelf or the average number of pages in two books on the upper shelf. Hence, the median will be at most 400. If there are more than 25 books on the lower shelf, then the median number of pages will be the number of pages in one of the books on the lower shelf or the average number of pages in two books on the lower shelf. Hence, the median will be at least 475; NOT sufficient.

(2) An analysis very similar to that used in (1) shows the information given is not sufficient to determine the median; NOT sufficient.

Given both (1) and (2), it follows that there is a total of 49 books. Therefore, the median will be the 25th book when the books are ordered by number of pages. Since the 25th book in this ordering is the book on the upper shelf with the greatest number of pages, the median is 400. Therefore, (1) and (2) together are sufficient.

The correct answer is C;
both statements together are sufficient.

DS12070

435. In the figure above, points *A*, *B*, *C*, *D*, and *E* lie on a line. *A* is on both circles, *B* is the center of the smaller circle, *C* is the center of the larger circle, *D* is on the smaller circle, and *E* is on the larger circle. What is the area of the region inside the larger circle and outside the smaller circle?

(1) $AB = 3$ and $BC = 2$

(2) $CD = 1$ and $DE = 4$

Geometry Circles

If R is the radius of the larger circle and r is the radius of the smaller circle, then the desired area is $\pi R^2 - \pi r^2$. Thus, if both the values of R and r can be determined, then the desired area can be determined.

(1) Given that $AB = r = 3$ and $BC = 2$, then $AB + BC = R = 3 + 2 = 5$; SUFFICIENT.

(2) Given that $CD = 1$ and $DE = 4$, then $CD + DE = R = 1 + 4 = 5$. Since $\overline{AE}$ is a diameter of the larger circle, then $AD + DE = 2R$. Also, since $\overline{AD}$ is a diameter of the smaller circle, then $AD = 2r$. Thus, $2r + DE = 2R$ or $2r + 4 = 10$, and so $r = 3$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS08995

436. In planning for a trip, Joan estimated both the distance of the trip, in miles, and her average speed, in miles per hour. She accurately divided her estimated distance by her estimated average speed to obtain an estimate for the time, in hours, that the trip would take. Was her estimate within 0.5 hour of the actual time that the trip took?

(1) Joan's estimate for the distance was within 5 miles of the actual distance.

(2) Joan's estimate for her average speed was within 10 miles per hour of her actual average speed.

Arithmetic Applied problems; Estimating

(1) Given that Joan's estimate for the distance was within 5 miles of the actual distance, it is not possible to determine whether her estimate for the time was within 0.5 hour without information about her estimated average speed. For example, if her estimated distance was 20 miles and was within 5 miles of the actual distance, then the actual distance would be between 15 and 25 miles. If her estimated speed was 20 miles per hour (mph) and was within, say, 10 mph of her actual speed, then her actual speed would be between 10 and 30 mph. Her estimated time would then be $\frac{20}{20} = 1.0$ hour and the actual time would be between $\frac{15}{30} = 0.5$ hour (least distance over greatest speed) and $\frac{25}{10} = 2.5$ hours (greatest distance over least speed). Since 1.0 hour is between 0.5 hour and 2.5 hours, her estimate for the time could equal the actual time, and thus it is possible that her estimate of the time is within 0.5 hour of the actual time. However, her estimate for the time could be as much as $2.5 - 1.0 = 1.5$ hours over the actual time, and thus it is possible that her estimate of the time is not within 0.5 hour; NOT sufficient.

(2) Given that Joan's estimate for her average speed was within 10 miles per hour of her actual average speed, the same examples used in (1) can be used to show that it cannot be determined whether her estimate for the time would be within 0.5 hour of the actual time; NOT sufficient.

Taking (1) and (2) together is of no more help than either (1) or (2) taken separately because the same examples used to show that (1) is not sufficient also show that (2) is not sufficient.

The correct answer is E;
both statements together are still not sufficient.

DS12239

437. A certain list consists of 3 different numbers. Does the median of the 3 numbers equal the average (arithmetic mean) of the 3 numbers?

(1) The range of the 3 numbers is equal to twice the difference between the greatest number and the median.

(2) The sum of the 3 numbers is equal to 3 times one of the numbers.

Arithmetic Statistics

Let the numbers be x, y, and z so that $x < y < z$. Determine whether $y = \frac{x+y+z}{3}$, or equivalently, whether $3y = x + y + z$, or equivalently, whether $2y = x + z$.

(1) Given that the range is equal to twice the difference between the greatest number and the median, it follows that $z - x = 2(z - y)$, or $z - x = 2z - 2y$, or $2y = x + z$; SUFFICIENT.

(2) Given that the sum of the 3 numbers equals 3 times one of the numbers, it follows that $x + y + z = 3x$ or $x + y + z = 3y$ or $x + y + z = 3z$. If $x + y + z = 3x$, then $y + z = 2x$, or $(y - x) + (z - x) = 0$. Also, if $x + y + z = 3z$, then $x + y = 2z$, or $0 = (z - x) + (z - y)$. In each of these cases, the sum of two positive numbers is zero, which is impossible. Therefore, it must be true that $x + y + z = 3y$, from which it follows that $x + z = 2y$, and hence by the initial comments, the median of the 3 numbers equals the average of the 3 numbers; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS12806

438. Line ℓ lies in the xy-plane and does not pass through the origin. What is the slope of line ℓ ?

(1) The x-intercept of line ℓ is twice the y-intercept of line ℓ.

(2) The x- and y-intercepts of line ℓ are both positive.

Geometry Coordinate geometry

Since the line does not pass through the origin, the line is either vertical and given by the equation $x = c$ for some constant c such that $c \neq 0$, or the line is not vertical and given by the equation $y = mx + b$ for some constants m and b such that $b \neq 0$. Determine whether the line is not vertical, and if so, determine the slope of the line, which is the value of m.

(1) Given that the x-intercept of the line is twice the y-intercept of the line, it follows that the line is not vertical, since a vertical line that does not pass through the origin will not have a y-intercept. Thus, the line is given by the equation $y = mx + b$. The x-intercept of the line is the solution to $0 = mx + b$, or $mx = -b$, which has solution $x = -\frac{b}{m}$, and the y-intercept of the line is b. Therefore, $-\frac{b}{m} = 2b$. Since $b \neq 0$, both sides of the last equation can be divided by b to get $-\frac{1}{m} = 2$, or $m = -\frac{1}{2}$; SUFFICIENT.

(2) Given that the x- and y-intercepts of the line are both positive, it is not possible to determine the slope of the line. For example, if the line is given by $y = -x + 1$, then the x-intercept is 1 (solve $-x + 1 = 0$), the y-intercept is 1 ($b = 1$), and the slope is -1. However, if the line is given by $y = -2x + 2$, then the x-intercept is 1 (solve $-2x + 2 = 0$), the y-intercept is 2 ($b = 2$), and the slope is -2; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

$$y = ax - 5$$
$$y = x + 6$$
$$y = 3x + b$$

DS07713

439. In the xy-plane, the straight-line graphs of the three equations above each contain the point (p,r). If a and b are constants, what is the value of b?

(1) $a = 2$

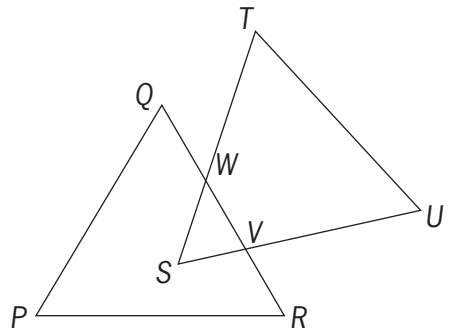
(2) $r = 17$

Algebra Coordinate geometry

Since (p,r) is on each of the lines, each of the following three equations is true:

(i) $r = ap - 5$

(ii) $r = p + 6$



(iii) $r = 3p + b$

Determine the value of b.

(1) Given that $a = 2$, Equations (i) and (ii) become $r = 2p - 5$ and $r = p + 6$. Subtracting equations gives $0 = p - 11$, or $p = 11$. Now using $r = p + 6$, it follows that $r = 11 + 6 = 17$. Finally, using $p = 11$ and $r = 17$ in Equation (iii) gives $17 = 3(11) + b$, or $b = 17 - 33 = -16$; SUFFICIENT.

(2) Given that $r = 17$, Equation (ii) becomes $17 = p + 6$, and so $p = 17 - 6 = 11$. Using $r = 17$ and $p = 11$, Equation (iii) becomes $17 = 3(11) + b$, or $b = 17 - 33 = -16$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

DS06861

440. In the figure above, PQR and STU are identical equilateral triangles, and $PQ = 6$. What is the perimeter of polygon $PQWTUVR$?

(1) Triangle SWV has perimeter 9.

(2) VW has length 3.5.

Geometry Triangles; Perimeter

(1) Given that triangle SWV has perimeter 9, the perimeter of polygon $PQWTUVR$ can be determined, since the perimeter of polygon $PQWTUVR$ equals the sum of the perimeters of the two equilateral triangles,

which is 3(6) + 3(6) = 36, minus the perimeter of triangle *SWV*; SUFFICIENT.

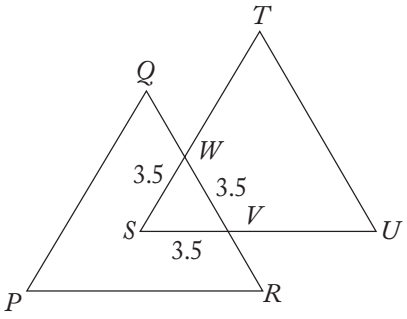


Figure 1

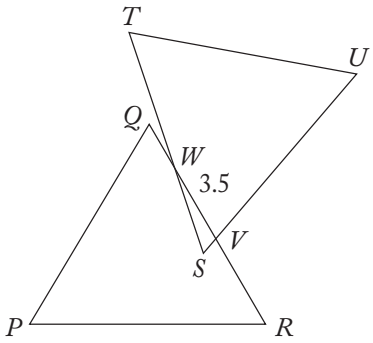

Figure 2

(2) Given that $VW = 3.5$, and using the fact that the perimeter of polygon *PQWTUVR* equals the sum of the perimeters of the two equilateral triangles, which is 3(6) + 3(6) = 36, minus the perimeter of triangle *SWV*, it is not possible to determine the perimeter of polygon *PQWTUVR*. For example, the perimeter of polygon *PQWTUVR* could be 36 − 3(3.5) = 25.5 (arrange triangles *PQR* and *STU* so that $VW = WS = SV = 3.5$, as shown in Figure 1), and the perimeter of polygon *PQWTUVR* could be greater than 25.5 (arrange triangles *PQR* and *STU* so that $VW = 3.5$, *WS* is slightly greater than 3.5, and *SV* is close to 0, as shown in Figure 2); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS09973

441. The range of the numbers in set *S* is *x*, and the range of the numbers in set *T* is *y*. If all of the numbers in set *T* are also in set *S*, is *x* greater than *y*?

(1) Set *S* consists of 7 numbers.

(2) Set *T* consists of 6 numbers.

Arithmetic Statistics

Set *S* has a range of *x*, set *T* has a range of *y*, and *T* is a subset of *S*. Determine if *x* is greater than *y*.

(1) It is given that *S* contains exactly 7 numbers, but nothing additional is known about *T*. Thus, if $S = \{1, 2, 3, 4, 5, 6, 7\}$ and $T = \{1, 2, 3, 4, 5, 6\}$, then $x = 7 - 1 = 6$, $y = 6 - 1 = 5$, and *x* is greater than *y*. On the other hand, if $S = \{1, 2, 3, 4, 5, 6, 7\}$ and $T = \{1, 3, 4, 5, 6, 7\}$, then $x = 7 - 1 = 6$, $y = 7 - 1 = 6$, and *x* is not greater than *y*; NOT sufficient.

(2) It is given that *T* contains exactly 6 numbers, but nothing additional is known about *T*. Since the same examples given in (1) can also be used in (2), it cannot be determined if *x* is greater than *y*; NOT sufficient.

Taking (1) and (2) together, the examples used in (1) can be used to show that it cannot be determined if *x* is greater than *y*.

The correct answer is E;
both statements together are still not sufficient.

DS13857

442. The hypotenuse of a right triangle is 10 cm. What is the perimeter, in centimeters, of the triangle?

(1) The area of the triangle is 25 square centimeters.

(2) The 2 legs of the triangle are of equal length.

Geometry Triangles

If *x* and *y* are the lengths of the legs of the triangle, then it is given that $x^2 + y^2 = 100$. Determining the value of $x + y + 10$, the perimeter of the triangle, is equivalent to determining the value of $x + y$.

(1) Given that the area is 25, then $\frac{1}{2}xy = 25$, or $xy = 50$. Since $(x + y)^2 = x^2 + y^2 + 2xy$, it follows that $(x + y)^2 = 100 + 2(50)$, or $x + y = \sqrt{200}$; SUFFICIENT.

(2) Given that $x = y$, since $x^2 + y^2 = 100$, it follows that $2x^2 = 100$, or $x = \sqrt{50}$. Hence, $x + y = x + x = 2x = 2\sqrt{50}$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

Shipment	S1	S2	S3	S4	S5	S6
Fraction of the Total Value of the Six Shipments	$\frac{1}{4}$	$\frac{1}{5}$	$\frac{1}{6}$	$\frac{3}{20}$	$\frac{2}{15}$	$\frac{1}{10}$

DS01427

443. Six shipments of machine parts were shipped from a factory on two trucks, with each shipment entirely on one of the trucks. Each shipment was labeled either S1, S2, S3, S4, S5, or S6. The table shows the value of each shipment as a fraction of the total value of the six shipments. If the shipments on the first truck had a value greater than $\frac{1}{2}$ of the total value of the six shipments, was S3 shipped on the first truck?

(1) S2 and S4 were shipped on the first truck.

(2) S1 and S6 were shipped on the second truck.

Arithmetic Operations on rational numbers

Given that the shipments on the first truck had a value greater than $\frac{1}{2}$ of the total value of the 6 shipments, determine if S3 was shipped on the first truck.

To avoid dealing with fractions, it will be convenient to create scaled values of the shipments by multiplying each fractional value by 60, which is the least common denominator of the fractions. Thus, the scaled values associated with S1, S2, S3, S4, S5, and S6 are 15, 12, 10, 9, 8, and 6, respectively. The given information is that the scaled value of the shipments on the first truck is greater than $\left(\frac{1}{2}\right)(60) = 30$.

(1) Given that the first truck includes shipments with scaled values 12 and 9, it may or may not be the case that S3 (the shipment with scaled value 10) is on the first truck. For example, the first truck could contain only S2, S3, and S4, for a total scaled value $12 + 10 + 9 = 31 > 30$. Or, the first truck could contain only S1, S2, and S4, for a total scaled value $15 + 12 + 9 = 36 > 30$; NOT sufficient.

(2) Given that the second truck includes shipments with scaled values 15 and 6, the second truck cannot contain S3. Otherwise, the second truck would contain shipments with scaled values 15, 6, and 10, for a total scaled value $15 + 6 + 10 = 31$, leaving at most a total scaled value 29 (which is not greater than 30) for the first truck; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS11723

444. If x, y, and z are three-digit positive integers and if $x = y + z$, is the hundreds digit of x equal to the sum of the hundreds digits of y and z?

(1) The tens digit of x is equal to the sum of the tens digits of y and z.

(2) The units digit of x is equal to the sum of the units digits of y and z.

Arithmetic Place value

Letting $x = 100a + 10b + c$, $y = 100p + 10q + r$, and $z = 100t + 10u + v$, where a, b, c, p, q, r, t, u, and v are digits, determine if $a = p + t$.

(1) It is given that $b = q + u$ (which implies that $c + v \leq 9$ because if $c + v > 9$, then in the addition process a ten would need to be carried over to the tens column and b would be $q + u + 1$). Since b is a digit, $0 \leq b \leq 9$. Hence, $0 \leq q + u \leq 9$, and so $0 \leq 10(q + u) \leq 90$. Therefore, in the addition process, there are no hundreds to carry over from the tens column to the hundreds column, so $a = p + t$; SUFFICIENT.

(2) It is given that $c = r + v$. If $x = 687$, $y = 231$, and $z = 456$, then, $y + z = 231 + 456 = 687 = x$, $r + v = 1 + 6 = 7 = c$, and $p + t = 2 + 4 = 6 = a$. On the other hand, if $x = 637$, $y = 392$, and $z = 245$, then $y + z = 392 + 245 = 637 = x$, $r + v = 2 + 5 = 7 = c$, and $p + t = 3 + 2 = 5 \neq 6 = a$; NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

	Favorable	Unfavorable	Not Sure
Candidate M	40	20	40
Candidate N	30	35	35

DS05162

445. The table above shows the results of a survey of 100 voters who each responded "Favorable" or "Unfavorable" or "Not Sure" when asked about their impressions of Candidate M and of Candidate N. What was the number of voters who responded "Favorable" for both candidates?

(1) The number of voters who did not respond "Favorable" for either candidate was 40.

(2) The number of voters who responded "Unfavorable" for both candidates was 10.

Arithmetic Sets

If x is the number of voters who responded "Favorable" for both candidates, then it follows from the table that the number of voters who responded "Favorable" to at least one candidate is $40 + 30 - x = 70 - x$. This is because $40 + 30$ represents the number of voters who responded "Favorable" for Candidate M added to the number of voters who responded "Favorable" for Candidate N, a calculation that counts twice each of the x voters who responded "Favorable" for both candidates.

(1) Given that there were 40 voters who did not respond "Favorable" for either candidate and there were 100 voters surveyed, the number of voters who responded "Favorable" to at least one candidate is $100 - 40 = 60$. Therefore, from the comments above, it follows that $70 - x = 60$, and hence $x = 10$; SUFFICIENT.

(2) The information given affects only the numbers of voters in the categories "Unfavorable" for Candidate M only, "Unfavorable" for Candidate N only, and "Unfavorable" for both candidates. Thus, the numbers of voters in the categories "Favorable" for Candidate M only, "Favorable" for Candidate N only, and "Favorable" for both candidates are not affected. Since these latter categories are only constrained to have certain integer values that have a total sum of $70 - x$, more than one possibility exists for the value of x. For example, the numbers of voters in the categories "Favorable" for Candidate M only, "Favorable" for Candidate N only, and "Favorable" for both candidates could be 25, 15, and 15, respectively, which gives $70 - x = 25 + 15 + 15$, or $x = 15$. However, the numbers of voters in the categories "Favorable" for Candidate M only, "Favorable" for Candidate N only, and "Favorable" for both candidates could be 30, 20, and 10, respectively, which gives $70 - x = 30 + 20 + 10$, or $x = 10$; NOT sufficient.

The correct answer is A; statement 1 alone is sufficient.

DS00340

446. A school administrator will assign each student in a group of n students to one of m classrooms. If $3 < m < 13 < n$, is it possible to assign each of the n students to one of the m classrooms so that each classroom has the same number of students assigned to it?

(1) It is possible to assign each of $3n$ students to one of m classrooms so that each classroom has the same number of students assigned to it.

(2) It is possible to assign each of $13n$ students to one of m classrooms so that each classroom has the same number of students assigned to it.

Arithmetic Properties of numbers

Determine if n is divisible by m.

(1) Given that $3n$ is divisible by m, then n is divisible by m if $m = 9$ and $n = 27$ (note that $3 < m < 13 < n$, $3n = 81$, and $m = 9$, so $3n$ is divisible by m) and n is not divisible by m if $m = 9$ and $n = 30$ (note that $3 < m < 13 < n$, $3n = 90$, and $m = 9$, so $3n$ is divisible by m); NOT sufficient.

(2) Given that $13n$ is divisible by m, then $13n = qm$, or $\frac{n}{m} = \frac{q}{13}$, for some integer q.

Since 13 is a prime number that divides qm (because $13n = qm$) and 13 does not divide m (because $m < 13$), it follows that 13 divides q.

Therefore, $\frac{q}{13}$ is an integer, and since $\frac{n}{m} = \frac{q}{13}$, then $\frac{n}{m}$ is an integer. Thus, n is divisible by m; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS07441

447. If q, s, and t are all different numbers, is $q < s < t$?

(1) $t - q = |t - s| + |s - q|$

(2) $t > q$

Algebra Absolute value

(1) It is given that $t - q = |t - s| + |s - q|$, which can be rewritten without absolute values in four mutually exclusive and collectively exhaustive cases by making use of the algebraic definition of absolute value. Recall that $|x| = x$ if $x > 0$, and $|x| = -x$ if $x < 0$. Thus, for example, if $t - s < 0$, then $|t - s| = -(t - s)$.
Case 1: $t > s$ and $s > q$. In this case, $t - s > 0$ and $s - q > 0$, and so $t - q = |t - s| + |s - q|$ is equivalent to $t - q = (t - s) + (s - q)$, which is an identity. Therefore, the case for which $t > s$ and $s > q$ is consistent with the given information and the assumption $t - q = |t - s| + |s - q|$.
Case 2: $t > s$ and $s < q$. In this case, $t - s > 0$ and $s - q < 0$, and so $t - q = |t - s| + |s - q|$ is equivalent to $t - q = (t - s) - (s - q)$, or $s = q$, which is not consistent with the assumption that q, s, and t are all different numbers. Therefore, the case for which $t > s$ and $s < q$ is not consistent with the given information and the assumption $t - q = |t - s| + |s - q|$.
Case 3: $t < s$ and $s > q$. In this case, $t - s < 0$ and $s - q > 0$, and so $t - q = |t - s| + |s - q|$ is equivalent to $t - q = -(t - s) + (s - q)$, or $t = s$, which is not consistent with the assumption that q, s, and t are all different numbers. Therefore, the case for which $t < s$ and $s > q$ is not consistent with the given information and the assumption $t - q = |t - s| + |s - q|$.
Case 4: $t < s$ and $s < q$. In this case, $t - s < 0$ and $s - q < 0$, and so $t - q = |t - s| + |s - q|$ is equivalent to $t - q = -(t - s) - (s - q)$, or $t = q$, which is not consistent with the assumption that q, s, and t are all different numbers. Therefore, the case for which $t < s$ and $s < q$ is not consistent with the given information and the assumption $t - q = |t - s| + |s - q|$. The only case that is consistent with the given information and the assumption $t - q = |t - s| + |s - q|$ is Case 1. Therefore, it follows that $t > s$ and $s > q$, and this implies $q < s < t$; SUFFICIENT.

(2) Given that $t > q$, it is possible that $q < s < t$ is true (for example, when s is between t and q) and it is possible that $q < s < t$ is false (for example, when s is greater than t); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS11538

448. What is the median number of employees assigned per project for the projects at Company Z?

(1) 25 percent of the projects at Company Z have 4 or more employees assigned to each project.

(2) 35 percent of the projects at Company Z have 2 or fewer employees assigned to each project.

Arithmetic Statistics

(1) Although 25 percent of the projects have 4 or more employees, there is essentially no information about the middle values of the numbers of employees per project. For example, if there were a total of 100 projects, then the median could be 2 (75 projects that have exactly 2 employees each and 25 projects that have exactly 4 employees each) or the median could be 3 (75 projects that have exactly 3 employees each and 25 projects that have exactly 4 employees each); NOT sufficient.

(2) Although 35 percent of the projects have 2 or fewer employees, there is essentially no information about the middle values of the numbers of employees per project. For example, if there were a total of 100 projects, then the median could be 3 (35 projects

that have exactly 2 employees each and 65 projects that have exactly 3 employees each) or the median could be 4 (35 projects that have exactly 2 employees each and 65 projects that have exactly 4 employees each); NOT sufficient.

Given both (1) and (2), 100 – (25 + 35) percent = 40 percent of the projects have exactly 3 employees. Therefore, when the numbers of employees per project are listed from least to greatest, 35 percent of the numbers are 2 or less and (35 + 40) percent = 75 percent are 3 or less, and hence the median is 3.

The correct answer is C;
both statements together are sufficient.

DS04409

449. Last year, a certain company began manufacturing product X and sold every unit of product X that it produced. Last year the company's total expenses for manufacturing product X were equal to $100,000 plus 5 percent of the company's total revenue from all units of product X sold. If the company made a profit on product X last year, did the company sell more than 21,000 units of product X last year?

(1) The company's total revenue from the sale of product X last year was greater than $110,000.

(2) For each unit of product X sold last year, the company's revenue was $5.

Algebra Applied problems

For a company that made a profit last year from selling product X and had total expenses for product X of $100,000 + 0.05$R$, where R is the total revenue for selling product X, determine whether the company sold more than 21,000 units of product X last year.

Note that since the company made a profit, revenue – cost, which is given by $R - (\$100{,}000 + 0.05R) = 0.95R - \$100{,}000$, must be positive.

(1) It is given that $R > \$110{,}000$. It is possible to vary the unit price and the number of units sold so that $R > \$110{,}000$ and *more than* 21,000 units were sold, and also so that $R > \$110{,}000$ and *less than* 21,000 units were sold. For example, if 25,000 units were sold for $10 per unit, then $R = 25{,}000(\$10) = \$250{,}000 > \$110{,}000$ and $25{,}000 > 21{,}000$. On the other hand, if 20,000 units were sold for $10 per unit, then $R = 20{,}000(\$10) = \$200{,}000 > \$110{,}000$ and $20{,}000 < 21{,}000$; NOT sufficient.

(2) It is given that the company's revenue for each unit of product X was $5. If the company manufactured and sold x units of product X, then its revenue was $\$5x$. Because the company made a profit, $0.95(\$5x) - \$100{,}000 > 0$, and so

$$\begin{aligned} 0.95(\$5x) - \$100{,}000 &> 0 \\ \$4.75x - \$100{,}000 &> 0 \\ \$4.75x &> \$100{,}000 \\ x &> 21{,}052; \text{ SUFFICIENT.} \end{aligned}$$

To avoid long division in the last step, note that $4.75(21{,}000) = 99{,}750$, and thus from $4.75x > 100{,}000$, it follows that $x > 21{,}000$.

The correct answer is B;
statement 2 alone is sufficient.

DS01641

450. Beginning in January of last year, Carl made deposits of $120 into his account on the 15th of each month for several consecutive months and then made withdrawals of $50 from the account on the 15th of each of the remaining months of last year. There were no other transactions in the account last year. If the closing balance of Carl's account for May of last year was $2,600, what was the range of the monthly closing balances of Carl's account last year?

(1) Last year the closing balance of Carl's account for April was less than $2,625.

(2) Last year the closing balance of Carl's account for June was less than $2,675.

Arithmetic Statistics

(1) If Carl began making $50 withdrawals on or before May 15, his account balance on April 16 would be at least $50 greater than it was on the last day of May. Thus, his account balance on April 16 would be at least $2,600 + $50 = $2,650, which is contrary to the information given in (1). Therefore, Carl did not begin making $50 withdrawals until June 15 or later. These observations can be used to give at least two possible ranges. Carl could have had an account balance of

$2,000 on January 1, made $120 deposits in each of the first 11 months of the year, and then made a $50 withdrawal on December 15, which gives a range of monthly closing balances of (120)(10). Also, Carl could have had an account balance of $2,000 on January 1, made $120 deposits in each of the first 10 months of the year, and then made $50 withdrawals on November 15 and on December 15, which gives a range of monthly closing balances of (120)(9); NOT sufficient.

(2) On June 1, Carl's account balance was the same as its closing balance was for May, namely $2,600. Depending on whether Carl made a $120 deposit or a $50 withdrawal on June 15, Carl's account balance on June 16 was either $2,720 or $2,550. It follows from the information given in (2) that Carl's balance on June 16 was $2,550. Therefore, Carl began making $50 withdrawals on or before June 15. These observations can be used to give at least two possible ranges. Carl could have had an account balance of $2,680 on January 1, made one $120 deposit on January 15, and then made a $50 withdrawal in each of the remaining 11 months of the year (this gives a closing balance of $2,600 for May), which gives a range of monthly closing balances of (50)(11). Also, Carl could have had an account balance of $2,510 on January 1, made $120 deposits on January 15 and on February 15, and then made a $50 withdrawal in each of the remaining 10 months of the year (this gives a closing balance of $2,600 for May), which gives a range of monthly closing balances of (50)(10); NOT sufficient.

Given both (1) and (2), it follows from the remarks above that Carl began making $50 withdrawals on June 15. Therefore, the changes to Carl's account balance for each month of last year are known. Since the closing balance for May is given, it follows that the closing balances for each month of last year are known, and hence the range of these 12 known values can be determined.

The correct answer is C;
both statements together are sufficient.

DS16368

451. Are all of the numbers in a certain list of 15 numbers equal?

(1) The sum of all the numbers in the list is 60.

(2) The sum of any 3 numbers in the list is 12.

Arithmetic Properties of numbers

(1) If there are 15 occurrences of the number 4 in the list, then the sum of the numbers in the list is 60 and all the numbers in the list are equal. If there are 13 occurrences of the number 4 in the list, 1 occurrence of the number 3 in the list, and 1 occurrence of the number 5 in the list, then the sum of the numbers in the list is 60 and not all the numbers in the list are equal; NOT sufficient.

(2) Given that the sum of any 3 numbers in the list is 12, arrange the numbers in the list in numerical order, from least to greatest: $a_1 \le a_2 \le a_3 \le \ldots \le a_{15}$.

If $a_1 < 4$, then $a_1 + a_2 + a_3 < 4 + a_2 + a_3$. Therefore, from (2), $12 < 4 + a_2 + a_3$, or $8 < a_2 + a_3$, and so at least one of the values a_2 and a_3 must be greater than 4. Because $a_2 \le a_3$, it follows that $a_3 > 4$. Since the numbers are arranged from least to greatest, it follows that $a_4 > 4$ and $a_5 > 4$. But then, $a_3 + a_4 + a_5 > 4 + 4 + 4 = 12$, contrary to (2), and so $a_1 < 4$ is not true. Therefore, $a_1 \ge 4$. Since a_1 is the least of the 15 numbers, $a_n \ge 4$ for $n = 1, 2, 3, \ldots, 15$.

If $a_{15} > 4$, then $a_{13} + a_{14} + a_{15} > a_{13} + a_{14} + 4$. Therefore, from (2), $12 > a_{13} + a_{14} + 4$, or $8 > a_{13} + a_{14}$, and so at least one of the values a_{13} and a_{14} must be less than 4. Because $a_{13} \le a_{14}$, it follows that $a_{13} < 4$. Since the numbers are arranged from least to greatest, it follows that $a_{11} < 4$ and $a_{12} < 4$. But then $a_{11} + a_{12} + a_{13} < 4 + 4 + 4 = 12$, contrary to (2). Therefore, $a_{15} \le 4$. Since a_{15} is the greatest of the 15 numbers, $a_n \le 4$ for $n = 1, 2, 3, \ldots, 15$.

It has been shown that, for $n = 1, 2, 3, \ldots, 15$, each of $a_n \ge 4$ and $a_n \le 4$ is true. Therefore, $a_n = 4$ for $n = 1, 2, 3, \ldots, 15$; SUFFICIENT.

The correct answer is B;
statement 2 alone is sufficient.

DS16565

452. If the average (arithmetic mean) of six numbers is 75, how many of the numbers are equal to 75 ?

(1) None of the six numbers is less than 75.

(2) None of the six numbers is greater than 75.

Arithmetic Statistics

If the average of six numbers is 75, then $\frac{1}{6}$ of the sum of the numbers is 75. Therefore, the sum of the numbers is (6)(75).

(1) If one of the numbers is greater than 75, then we can write that number as $75 + x$ for some positive number x. Consequently, the sum of the 6 numbers must be at least $(5)(75) + (75 + x) = (6)(75) + x$, which is greater than (6)(75), contrary to the fact that the sum is equal to (6)(75). Hence, none of the numbers can be greater than 75. Since none of the numbers can be less than 75 (given information) and none of the numbers can be greater than 75, it follows that each of the numbers is equal to 75; SUFFICIENT.

(2) If one of the numbers is less than 75, then we can write that number as $75 - x$ for some positive number x. Consequently, the sum of the 6 numbers must be at most $(5)(75) + (75 - x) = (6)(75) - x$, which is less than (6)(75), contrary to the fact that the sum is equal to (6)(75). Hence, none of the numbers can be less than 75. Since none of the numbers can be less than 75 and none of the numbers can be greater than 75 (given information), it follows that each of the numbers is equal to 75; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

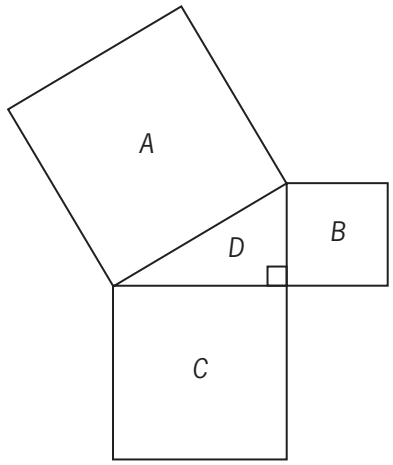
DS16188

453. What amount did Jean earn from the commission on her sales in the first half of 1988 ?

(1) In 1988 Jean's commission was 5 percent of the total amount of her sales.

(2) The amount of Jean's sales in the second half of 1988 averaged $10,000 per month more than in the first half.

Arithmetic Applied problems



Let A be the amount of Jean's sales in the first half of 1988. Determine the value of A.

(1) If the amount of Jean's sales in the first half of 1988 was $10,000, then her commission in the first half of 1988 would have been (5%)($10,000) = $500. On the other hand, if the amount of Jean's sales in the first half of 1988 was $100,000, then her commission in the first half of 1988 would have been (5%)($100,000) = $5,000; NOT sufficient.

(2) No information is given that relates the amount of Jean's sales to the amount of Jean's commission; NOT sufficient.

Given (1) and (2), from (1) the amount of Jean's commission in the first half of 1988 is (5%)A. From (2) the amount of Jean's sales in the second half of 1988 is A + $60,000. Both statements together do not give information to determine the value of A.

The correct answer is E;
both statements together are still not sufficient.

DS16572

454. In the figure above, if the area of triangular region D is 4, what is the length of a side of square region A ?

(1) The area of square region B is 9.

(2) The area of square region C is $\frac{64}{9}$.

Geometry Area

The area of the triangular region D can be represented by $\frac{1}{2}bh$, where b is the base of the triangle (and is equal to the length of a side of

the square region C) and h is the height of the triangle (and is equal to the length of a side of the square region B). The area of any square is equal to the length of a side squared. The Pythagorean theorem is used to find the length of a side of a right triangle, when the length of the other 2 sides of the triangle are known and is represented by $a^2 + b^2 = c^2$, where a and b are the lengths of the 2 perpendicular sides of the triangle and c is the length of the hypotenuse.

Although completed calculations are provided in what follows, keep in mind that completed calculations are not needed to solve this problem.

(1) If the area of B is 9, then the length of each side is 3. Therefore, $h = 3$. Then, b can be determined, since the area of the triangle is, by substitution, $4 = \frac{1}{2}(3b)$ or $8 = 3b$ or $\frac{8}{3} = b$. Once b is known, the Pythagorean theorem can be used: $\left(\frac{8}{3}\right)^2 + 3^2 = c^2$ or $\frac{64}{9} + 9 = c^2$ or $\frac{145}{9} = c^2$. The length of a side of A is thus $\sqrt{\frac{145}{9}}$; SUFFICIENT.

(2) If the area of C is $\frac{64}{9}$, then the length of each side is $\frac{8}{3}$. Therefore, $b = \frac{8}{3}$. The area of a triangle is $A = \frac{1}{2}bh$ so $4 = \frac{1}{2}\left(\frac{8}{3}h\right)$, $8 = \frac{8}{3}h$, and $3 = h$. Once h is known, the Pythagorean theorem can be used as above; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.

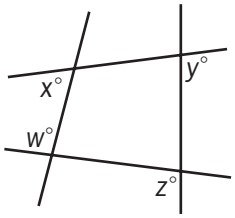
DS16168

455. If n is a positive integer and $k = 5.1 \times 10^n$, what is the value of k?

(1) $6{,}000 < k < 500{,}000$

(2) $k^2 = 2.601 \times 10^9$

Arithmetic Properties of numbers



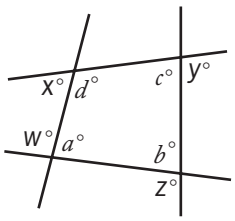
Given that $k = 5.1 \times 10^n$, where n is a positive integer, then the value of k must follow the pattern shown in the following table:

n	k
1	51
2	510
3	5,100
4	51,000
5	510,000
6	5,100,000
.	.
.	.
.	.

(1) Given that $6{,}000 < k < 500{,}000$, then k must have the value 51,000, and so $n = 4$; SUFFICIENT.

(2) Given that $k^2 = 2.601 \times 10^9$, then $k = \sqrt{2.601 \times 10^9} = \sqrt{2{,}601 \times 10^6} = \sqrt{2{,}601} \times \sqrt{10^6} = 51 \times 10^3 = 51{,}000$, and so $n = 4$; SUFFICIENT.

The correct answer is D;
each statement alone is sufficient.



DS06875

456. What is the value of $x + y$ in the figure above?

(1) $w = 95$

(2) $z = 125$

Geometry Angles

In the figure above, a, b, c, and d are the degree measures of the interior angles of the

quadrilateral formed by the four lines and $a + b + c + d = 360$. Then

$w + x + y + z$

$= (180 - a) + (180 - d) + (180 - c) + (180 - b)$

$= 720 - (a + b + c + d)$

$= 720 - 360$

$= 360.$

Determine the value of $x + y$.

(1) Given that $w = 95$, then $95 + x + y + z = 360$ and $x + y + z = 265$. If $z = 65$, for example, then $x + y = 200$. On the other hand, if $z = 100$, then $x + y = 165$; NOT sufficient.

(2) Given that $z = 125$, then $w + x + y + 125 = 360$ and $w + x + y = 235$. If $w = 35$, for example, then $x + y = 200$. On the other hand, if $w = 100$, then $x + y = 135$; NOT sufficient.

Taking (1) and (2) together, $95 + x + y + 125 = 360$, and so $x + y = 140$.

The correct answer is C;
both statements together are sufficient.

DS16370

457. If n and k are positive integers, is $\sqrt{n+k} > 2\sqrt{n}$?

(1) $k > 3n$

(2) $n + k > 3n$

Algebra Inequalities

Determine if $\sqrt{n+k} > 2\sqrt{n}$. Since each side is positive, squaring each side preserves the inequality, so $\sqrt{n+k} > 2\sqrt{n}$ is equivalent to $(\sqrt{n+k})(\sqrt{n+k}) > (2\sqrt{n})(2\sqrt{n})$, which in turn is equivalent to $n + k > 4n$, or to $k > 3n$.

(1) Given that $k > 3n$, then $\sqrt{n+k} > 2\sqrt{n}$; SUFFICIENT.

(2) Given that $n + k > 3n$, then $k > 2n$. However, it is possible for $k > 2n$ to be true and $k > 3n$ to be false (for example, $k = 3$ and $n = 1$) and it is possible for $k > 2n$ to be true and $k > 3n$ to be true (for example, $k = 4$ and $n = 1$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16589

458. In a certain business, production index p is directly proportional to efficiency index e, which is in turn directly proportional to investment index i. What is p if $i = 70$?

(1) $e = 0.5$ whenever $i = 60$.

(2) $p = 2.0$ whenever $i = 50$.

Arithmetic Proportions

(1) This gives only values for e and i, and, while p is directly proportional to e, the nature of this proportion is unknown. Therefore, p cannot be determined; NOT sufficient.

(2) Since p is directly proportional to e, which is directly proportional to i, then p is directly proportional to i. Therefore, the following proportion can be set up: $\frac{p}{i} = \frac{2.0}{50}$. If $i = 70$, then $\frac{p}{70} = \frac{2.0}{50}$. Through cross multiplying, this equation yields $50p = 140$, or $p = 2.8$; SUFFICIENT.

The preceding approach is one method that can be used. Another approach is as follows: It is given that $p = Ke = K(Li) = (KL)i$, where K and L are the proportionality constants, and the value of $70KL$ is to be determined. Statement (1) allows us to determine the value of L, but gives nothing about K, and thus (1) is not sufficient. Statement (2) allows us to determine the value of KL, and thus (2) is sufficient.

The correct answer is B;
statement 2 alone is sufficient.

DS16085

459. If n is a positive integer, what is the tens digit of n ?

(1) The hundreds digit of $10n$ is 6.

(2) The tens digit of $n + 1$ is 7.

Arithmetic Properties of numbers

(1) Given that the hundreds digit of $10n$ is 6, the tens digit of n is 6, since the hundreds digit of $10n$ is always equal to the tens digit of n; SUFFICIENT.

(2) Given that the tens digit of $n+1$ is 7, it is possible that the tens digit of n is 7 (for example, $n = 70$) and it is possible that the tens digit of n is 6 (for example, $n = 69$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

DS16204

460. What is the value of $\frac{2t+t-x}{t-x}$?

(1) $\frac{2t}{t-x}=3$

(2) $t-x=5$

Algebra Simplifying algebraic expressions

Determine the value of $\frac{2t+t-x}{t-x}$.

(1) Since $\frac{2t}{t-x}=3$ and $\frac{2t+t-x}{t-x}=\frac{2t}{t-x}+\frac{t-x}{t-x}=\frac{2t}{t-x}+1$, it follows that $\frac{2t+t-x}{t-x}=3+1$;

SUFFICIENT.

(2) Given that $t-x=5$, it follows that $\frac{2t+t-x}{t-x}=\frac{2t+5}{5}=\frac{2}{5}t+1$, which can vary when the value of t varies. For example, $\frac{2}{5}t+1=3$ if $t=5$ (choose $x=0$ to have $t-x=5$) and $\frac{2}{5}t+1=5$ if $t=10$ (choose $x=5$ to have $t-x=5$); NOT sufficient.

The correct answer is A;
statement 1 alone is sufficient.

7.0 Reading Comprehension

7.0 Reading Comprehension

Reading comprehension questions appear in the Verbal Reasoning section of the GMAT™ exam. The Verbal Reasoning section uses multiple-choice questions to measure your ability to read and comprehend written material, to reason and evaluate arguments, and to correct written material to conform to standard written English. Because the Verbal Reasoning section includes content from a variety of topics, you may be generally familiar with some of the material; however, neither the passages nor the questions assume knowledge of the topics discussed. Reading comprehension questions are intermingled with critical reasoning and sentence correction questions throughout the Verbal Reasoning section of the test.

You will have 65 minutes to complete the Verbal Reasoning section, or an average of about 1¾ minutes to answer each question. Keep in mind you will need time to read the passages, so the average time you spend on the reading comprehension questions will probably be slightly longer than the overall Verbal Reasoning section average. However, the difference will typically be offset by shorter times spent on some of the less time-consuming sentence correction questions if you work efficiently and manage your time wisely throughout the section.

Reading comprehension questions refer to written passages consisting of around 200 words or around 350 words. The passages discuss topics in the social sciences, humanities, and physical or biological sciences and such business-related fields as marketing, economics, and human resource management. Each passage is accompanied by a short series of questions that will ask you to interpret the text, apply the information you gather from the reading, and make inferences (or informed assumptions) based on the reading. For these questions, you will see a split computer screen. The written passage will remain visible on the left side as each question associated with that passage appears, in turn, on the right side. You will see only one question at a time. However, the number of questions associated with each passage may vary.

As you move through the reading comprehension sample questions, try to determine a process that works best for you. You might begin by reading a passage carefully and thoroughly. Some test-takers prefer to skim the passages the first time through, or even to read the first question before reading the passage. You may want to reread any sentences that present complicated ideas or introduce terms that are new to you. Read each question and series of answers carefully. Make sure you understand exactly what the question is asking and what the answer choices are.

If you need to, you may reread any parts of the passage that are relevant to answering the question that you are currently viewing, but you will not be able to return to other questions after you have answered them and moved on. Some questions ask explicitly about particular portions of the passages to which they refer. In some cases, the portion referred to is highlighted while the relevant question is displayed. In such cases, the question will explicitly refer to the highlighted part.

The following pages describe what reading comprehension questions are designed to measure, present the directions that will precede questions of this type, and describe the various question types. This chapter also provides test-taking strategies, sample questions, and detailed explanations of all the questions. The explanations further illustrate the ways in which reading comprehension questions evaluate basic reading skills.

7.1 What Is Measured

Reading comprehension questions measure your ability to understand, analyze, apply, and evaluate information and concepts presented in written form. All questions are to be answered on the basis of what is stated or implied in the reading material, and no specific prior knowledge of the material is required. Success in all types of GMAT questions—except those that are purely mathematical—requires strong reading skills. People without the necessary level of reading skill will be less likely than proficient readers to do well on those questions. Thus, for some examinees, critical reasoning, sentence correction, and word-based quantitative questions inevitably test reading comprehension in addition to the skills that they primarily target. But they do so only indirectly and only at the level of proficiency needed to demonstrate the skills that are directly targeted. By contrast, the reading comprehension questions are designed to focus directly on various components of reading comprehension and to measure different levels of skill in those components.

The GMAT reading comprehension questions evaluate your ability to do the following:

- **Understand complex, sophisticated nontechnical writing.**
  Effective reading involves both understanding words and phrases in context and accurately interpreting the overall messages conveyed by the writer. Although the questions do not directly measure your vocabulary knowledge (they will not ask you to show that you know the standard meanings of terms), some of them may test your ability to interpret special meanings of terms as they are used in the reading passages.
- **Understand the purposes and functions of passage components and the logical and rhetorical relationships among concepts and among pieces of information.**
  Questions that focus on this type of skill may ask you, for example, to determine how a part of a passage relates to other parts, to determine the strong and weak points of an argument, or to evaluate the relative importance of arguments and ideas in a passage.
- **Draw inferences from facts and statements.**
  Anyone who thoroughly comprehends a text should be able, with a little reflection, to determine what further information can be inferred from it. The inference questions will ask you to consider factual statements, authors' claims and opinions, or other components of a reading passage and reach conclusions on the basis of those components.
- **Understand and follow the development of quantitative concepts as they are presented in written material.**
  Reading comprehension questions do not measure mathematical knowledge. However, the passages sometimes contain quantitative information or opinions about such matters as percentages, proportions, trends, probabilities, or statistics, expressed in ways that should be understandable without technical mathematical training. You may be asked to interpret, evaluate, or apply such quantitative information or to draw inferences from it. In some cases, you might need to use some very simple arithmetic.

There are six kinds of reading comprehension questions, each of which focuses directly on a different skill. However, there is inevitably some peripheral overlap between the skills tested by one kind of question and those tested by others. For example, identifying the main point of a passage often depends on recognizing the logical or rhetorical structure of the text, and drawing inferences or applying information depends on an accurate understanding of the passage's main idea and supporting ideas.

During the test, there will be no label telling which kind of reading comprehension question you are looking at, but the wording of each question will clearly indicate what you need to do. Most of the reading comprehension question types will be represented among the several reading comprehension sets in your test, but you may not see all of the types.

The reading comprehension questions ask about the following areas:

Main idea

Each passage is a unified whole—that is, the individual sentences and paragraphs support and develop one main idea or central point and have a single unified purpose. Sometimes you will be told the central point in the passage itself, and sometimes it will be necessary for you to determine the central point from the overall organization or development of the passage. You may be asked in this kind of question to

- recognize an accurate summary, restatement, or paraphrase of the main idea of a passage
- identify the author's primary purpose or objective in writing the passage
- assign a title that summarizes, briefly and pointedly, the main idea developed in the passage.

Main idea questions are usually easy to identify as such. They generally ask explicitly about the main idea or main purpose, using phrases such as "Which of the following most accurately expresses the main idea of the passage?" "The primary purpose of the passage as a whole is to …" or "In the passage, the author seeks primarily to …"

Incorrect answer choices for these questions often take the form of ideas in the passage that are subsidiary or tangential to the main point rather than the main point of the passage as a whole, statements that are superficially similar to the main idea but are demonstrably inaccurate, or statements that are simply outside the scope of the passage discussion even though they may be conceptually related to it.

You may find it helpful, as you read through a passage, to consider the type of rhetorical strategy the author is using. For example, is the author primarily reporting facts, events, or other writers' views; arguing for a point of view; or commenting on others' views or on events or states of affairs? This is essential in answering main idea questions that ask for the passage's purpose but can also help focus your thoughts for those that ask for a main idea as such. Here are some major rhetorical types that you may encounter in the reading passages:

Argumentation (primarily presenting reasons or evidence in support of a position). In passages of this type, the correct answer to a main-idea question will typically be a paraphrase or description of the conclusion of the argument—that is, the position that the author wants readers to accept. That position is sometimes, but not always, stated explicitly in the passage. When it is not, the nature of the argumentation will make it clear to careful, perceptive readers what the author is arguing for. The correct answer choice may also include a brief reference to the reasons given in support of the position. For example, "An analysis of recent findings supports the hypothesis that …" Argumentative passages have many different purposes and follow many different reasoning strategies. Some of the major types are:

- prescriptive (primarily advocating the adoption or rejection of policies, procedures, or laws or arguing for the acceptance of ethical viewpoints)

- evaluative (primarily arguing that something is good or bad, desirable or undesirable, without advocating any particular policy or course of action)
- causal (primarily arguing for or against an account of the causes, reasons, or motivations underlying an event, condition, decision, or outcome or an account of the influences underlying a literary or artistic style or movement). In some passages of this type, the author offers reasons for or against another author's scientific, historical, or social hypothesis
- interpretive (primarily arguing for or against an account of the meaning, importance, or implications of a set of observations, a theory, an artistic or literary work, or a historical event).

Exposition (primarily presenting established facts, conveying other information, or reporting someone else's views, actions, or research findings). Like argumentative passages, expository passages follow many different strategies. Some of the major types are:

- narrative (primarily reporting or describing sequences of events). The answer to a main idea question about a narrative passage can take various forms, depending on the author's purpose and focus. For example, it may be expressed as a concise one-sentence summary of the events described or a statement of the overall outcome of the events, depending on the author's focus.
- reporting (primarily telling the views or findings of another author, researcher, theorist, or critic or reporting research findings, artistic accomplishments, innovations, etc.)
- descriptive (primarily describing the appearance, nature, or characteristics of something—for example, a place, society, artistic work, device, invention, etc.)
- informative with no further function (primarily informing readers of established scientific, historical, or other facts without arguing for any particular viewpoint regarding them).

Supporting idea

These questions measure your ability to comprehend ideas that are directly expressed in a passage and differentiate them from ideas that are neither expressed nor implied in the passage. They also measure your ability to differentiate supporting ideas from the main idea and from ideas that are implied by the author but are not explicitly stated.

Like main idea questions, supporting idea questions simply assess whether you understand the messages conveyed in the writing, without asking you to do anything further with the information. *Supporting* does not refer only to ideas that are expressed as premises supporting a main conclusion. Since each GMAT reading comprehension passage has an overall main point or purpose, every part of the writing can be thought of as supporting that main point or purpose in some way, either directly or tangentially. Therefore, supporting idea questions may ask you to understand and identify anything (other than the main point) that is said in the passage.

Correct answers to supporting idea questions almost never consist of verbatim quotations from the passage, so you will need to be able to recognize paraphrases or more abstract expressions of the passage material. Among the passage components you may be asked to understand and recognize are:

- a premise of an argument
- a tangential point such as an acknowledgment of a potential objection to the author's position or a mention of an exception to a principle or generalization
- an example given to illustrate a principle or generalization

- a counterexample intended to provide evidence against a principle or generalization
- a fact cited as background information relevant to the main idea or to a subsidiary idea
- a component of a complex explanation, description, or narration
- a brief statement of a position against which the author's reasoning is directed
- a descriptive detail used to support or elaborate on the main idea.

Whereas questions about the main idea ask you to determine the meaning of a passage as a whole, questions about supporting ideas ask you to determine the meanings of individual phrases, sentences, and paragraphs that contribute to the meaning of the passage as a whole. In many cases, these questions can be thought of as asking for the main point of one small part of the passage. Supporting idea questions often contain key phrases such as: "According to the passage …" "Which of the following does the author cite as …" "The passage mentions which of the following …" or "Which of the following does the author propose …?"

Success in answering supporting idea questions depends on remembering or quickly locating the relevant information in the passage. Occasionally, it may be possible to answer a question by quickly glancing to find the needed information without first reading through the passage, but as a general approach, that could be risky and even time-consuming. Supporting idea questions typically require a good understanding of the relationships among parts of the passage. In many cases, they will ask you to identify a piece of information that plays a specified role or is presented in a specified context. Thus, they may contain phrases such as: "Which of the following does the author offer as an objection to the theory discussed in the second paragraph?" "According to the passage, new businesses are more likely to fail if they …" "The passage compares the sea turtle's thermoregulation to …".

Inference

These questions ask about ideas that are not explicitly stated in a passage but are implied by the author or otherwise follow logically from the information in the passage. Unlike questions about supporting ideas, which ask about information that is directly expressed in a passage, inference questions ask about ideas or meanings that must be inferred from information that is directly stated.

Authors can make their points in indirect ways, suggesting ideas without actually stating them. Inference questions measure your ability to understand an author's intended meaning in parts of a passage where the meaning is only suggested. They sometimes also measure your ability to understand further implications that clearly follow from the information in the passage, even if the author does not directly intend them to be inferred. Therefore, when you read a passage, you should concentrate not only on the explicit meaning of the author's words, but also on the subtler meanings and unstated implications of those words. These questions do not ask about obscure or tenuous implications that are very remote from the passage; rather, they ask about things that any astute, observant reader should be able to infer from the passage after a little reflection.

Among the types of inferences that you may be asked to draw are:

- a likely cause of a phenomenon or situation described in the passage
- a likely effect of a phenomenon or situation described in the passage
- a specific instance or subset based on a generalization given in the passage. For example, if the passage indicates that all reptiles have a certain property and also mentions that crocodiles are reptiles, you could infer that crocodiles have the property in question

- a statement that the author (or someone referred to in the passage) likely considers true or false
- an evaluative position that the author (or someone referred to in the passage) likely holds. For example, it may be possible to infer from the author's words that she or he disapproves of something that is discussed in the passage
- the intended meaning of a word or phrase based on how it is used in the passage. However, GMAT reading comprehension questions will not ask you to define a word that is used in the passage with a standard meaning that could be accurately guessed from background vocabulary knowledge.

In some cases, the inference you are asked to draw will follow from a single statement or series of statements in the passage. In other cases, it will require consideration of two or more separate parts of the passage, and none of those parts will be sufficient when considered alone. The relevant parts may be close together or far apart, but in either case, they will be significant aspects of the passage, not irrelevant or highly obscure details. The question may refer explicitly to one or more portions of the passage or it may leave it up to you to locate or remember the relevant information.

Inference questions often contain phrases such as: "Which of the following statements about … is most strongly supported by the passage?" "It can be inferred from the passage that …" "If the claims made by the author about … are true, which of the following is most likely also true?" "The passage implies that …" "The information in the passage suggests that …".

Some of the inferences might depend on commonly known and obviously true facts in addition to the information supplied by the passage. For example, if the passage says that an event happened during a snowstorm, you could reasonably infer that the weather was not hot at that location at that time.

Incorrect answer choices for inference questions are often statements that appear superficially related to the passage but are not supported by the information in question. When the question asks what can be inferred from a specific aspect of the passage, you should be careful not to select an answer that follows from some other part of the passage but not from the part in question.

You should not expect to be able to tell which answer choice is correct on the basis of whether it is true or false. Incorrect answers are often true even though they are not supported by the information in the passage. In other cases, the correct answer could be a false statement that is implied by false information in the passage. For example, when the author explains why a theory is mistaken, you might be asked to infer that if the theory were true, such incorrect information would also have to be true.

Occasionally, it may not be possible to tell, merely from the wording of a question, whether it is asking for an inference or for recognition of something that is directly expressed. For example, "In the passage, the author suggests …" could be asking you to note that the author explicitly makes a certain suggestion in the passage. More typically, a phrase like "The passage suggests …" will be asking you about something the text implies even though the author does not directly claim that it does so. However, if you understand the passage and the relationships and implications of its parts, you will be able to find the correct answer without having to worry about how the test writers may have classified the question.

Application

Application questions measure your ability to discern relationships between situations or ideas presented in the passage and other situations or ideas beyond the direct scope of the passage. The most crucial skill involved in answering these questions is that of abstracting key features or principles from one context and applying them effectively to other contexts. This is a skill that people often need when working with scholarly, legal, professional, or business writings. The relevant features can be of various types, especially logical, practical, functional, or structural.

Application questions take many forms. They are often hypothetical or speculative, and therefore may contain words such as *would*, *could*, *might*, or *should,* or phrases such as *most clearly exemplifies*, *is most similar to*, or *is most likely ruled out by*. Some of these questions pose analogies between passage topics and other topics.

Because application questions can be about the relationships of the passage to topics outside its scope, you should not expect to be able to eliminate any answer choice based on the fact that its topic does not appear in the passage. For instance, all the answer choices for an analogy question relating to a passage's explanation of a water-treatment process might refer to book-publishing processes.

Here are some major application types that you may encounter in the test:

Analogies. These could include:

- a function or purpose that is similar to the function or purpose of something described in the passage. A question might ask, for instance, "In which of the following is the role played by a computer program most analogous to the role of the protein molecule in the pesticide discussed in the passage?"
- a method or procedure that is similar to one described in the passage even though it is used in a different context
- a goal or purpose that is similar to the goal or purpose of something discussed in the passage. For example, a protest demonstration's goal of bringing about a change in one country's environmental policies would be more analogous to a political speaker's goal of changing another country's food-safety regulations than it would to an employee's goal of finding a new job
- a part–whole relationship that is similar to a part–whole relationship described in the passage. This could be, for example, the way in which a machine or organism relates to the rest of the system or the way in which a book chapter relates to the book as a whole
- a logical relationship that is similar to the relationship between parts of the passage or between elements of someone's reasoning described in the passage.

Principles, policies, and procedures. You may be asked to identify, for example,

- a rule or policy that if enforced could help bring about a goal presented in the passage
- a principle that is not explicitly formulated in the passage but can be understood as underlying the author's reasoning
- a generalization that is likely to be true based on a range of specific instances referred to in the passage

- an action or situation that would violate or conform to a rule or policy mentioned in the passage
- a potential solution to a problem discussed in the passage
- an alternative approach that could have the same effect as one discussed in the passage.

Extensions of the author's rhetorical strategies. These include such things as:

- an example that would effectively illustrate a point made by the author
- a statement representing how the author would most likely respond to an objection to her or his position
- an additional topic that could be relevantly added to the discussion in the passage
- an idea that is not expressed in the passage but that the author would probably agree or disagree with on the basis of statements made in the passage.

What-if scenarios. You might need to identify, for example,

- a hypothetical extension of a trend or series of developments described in the passage: What would be a likely consequence if the trend continued?
- how a researcher's conclusions would have been logically affected if some observed data had been different from the data reported in the passage
- how circumstances would likely have been different if a set of developments described in the passage had not occurred
- how someone whose views are described in the passage would likely respond if that person read the passage.

Evaluation

These questions require you to analyze and evaluate the organization and logic of a passage. They fall broadly into two subcategories, analysis and critique.

Analysis-type evaluation questions require you to determine how parts of the passage work and how they relate to other parts. These are often expressed in terms of the author's purpose. Thus, they have something in common with main idea questions that ask about authors' purposes, but for main idea questions you will identify a holistic purpose of the entire passage. In those cases, you probably will not need to explicitly analyze relationships among parts. In contrast, evaluation questions target the purposes of specific elements within the passage, and those purposes usually involve relationships to other parts. Some evaluation questions may ask you to identify the logical structure of the passage or of a portion of the passage.

Critique-type evaluation questions require you to judge the strengths, weaknesses, relevance, or effectiveness of parts of the passage and their relationships to potential objections or justifications. These often involve some of the same types of reasoning that you would encounter in critical reasoning questions but with a slightly different approach and in a different context. Neither critical reasoning questions nor reading comprehension evaluation questions rely on technical knowledge of formal logic—nor do they require you to be familiar with specific terms of logic or argumentation. You can answer these using the information in the passage and careful reasoning.

Evaluation questions often contain phrases such as "The purpose of …", "Most accurately describes the structure of …", "Most strengthens …", "Would most justify …", "Is most vulnerable to the objection that …", "Which … additional information would most help …". Answer choices are often abstract and might not contain any words or concepts that appear in the passage. For example, a question that asks about the function of a paragraph might have answer choices of the form: "It rejects a theory that is presented in the preceding paragraph and offers some criteria that an alternative theory would need to meet."

Here are some major application types that you may encounter in the test:

Analysis. Answers to these questions might be, for example, statements or descriptions of:

- how the passage as a whole is constructed. In such a case, the answer will sometimes be expressed as an abstract summary of the elements that make up the passage
- how a portion of the passage is constructed
- the purpose or function of a specified part of the passage—for instance, does it define, compare or contrast, present a new idea, or refute an idea?
- how a specified portion of the passage relates logically or rhetorically to surrounding parts
- how the author tries to persuade readers to accept his or her assertions
- a likely reason or motivation for a view that the author expresses or attributes to someone

Critique. In these questions, you may be asked to identify, for example,

- an assumption that is involved in the author's reasoning or in someone else's reasoning discussed in the passage
- crucial gaps in the information provided in the passage
- a potential discovery that would help resolve an issue discussed in the passage
- a statement that, if true, would strengthen or weaken the author's reasoning or someone else's reasoning presented in the passage
- a potential counterexample to a general claim made in the passage.

Style and tone

Effective reading often depends on recognizing and evaluating the author's attitude toward a topic and the effect that the author intends the writing to have on readers. These things are often implicit in the passage's style and tone rather than stated explicitly.

Some questions focus directly and exclusively on the style or tone of the passage as a whole. They often involve phrases such as "The overall tone of the passage can be most accurately described as …", "The passage, as a whole, functions primarily as a …" or "The author's approach to … can be most accurately described as …". In the answer choices, you may be asked to select an adjective or adjective phrase that accurately describes the tone of a passage—for instance, *critical*, *questioning*, *objective*, *dismissive*, or *enthusiastic*. Answers may also take the form of nouns or noun phrases such as *advocacy for a political position*, *a sarcastic portrayal of a historical trend*, or *a journalistic exploration of some attempts to solve a problem*. They may also be more complex descriptions of the author's approach.

To answer this type of question, you will typically have to consider the language of the passage as a whole. It takes more than one pointed, critical word to make the tone of an entire passage or section critical. Sometimes, style and tone questions ask what audience the passage was probably intended for or what type of publication it would most appropriately appear in. To answer any question involving style and tone, you must ask yourself what attitudes or objectives are conveyed by the words of a passage beyond the literal meanings.

You may sometimes need to consider style and tone in answering any type of reading comprehension question, even one that does not explicitly ask about that aspect of the passage. Some question types are more likely than others to involve this type of consideration. An inference question, for example, may ask you to infer the author's attitude toward a topic, you may need to consider the passage's tone in order to confidently identify its purpose, and some evaluation questions require you to recognize the rhetorical approach the author takes in a portion of the passage.

7.2 Test-Taking Strategies

1. **Do not expect to be completely familiar with any of the material presented in reading comprehension passages.**
   You may find some passages easier to understand than others, but all passages are designed to present a challenge. If you have some familiarity with the material presented in a passage, do not let this knowledge influence your choice of answers to the questions. Answer all questions on the basis of what is *stated or implied* in the passage itself.

2. **Analyze each passage carefully, because the questions require you to have a specific and detailed understanding of the material.**
   You may find it easier to do the analysis first before moving to the questions. You may find that you prefer to skim the passage the first time and read more carefully once you understand what a question asks. You may even want to read the question before reading the passage. You should choose the method most suitable for you.

3. **Focus on key words and phrases, and make every effort to avoid losing the sense of what is discussed in the passage.**
   Keep the following in mind:
   - Note how each fact relates to an idea or an argument
   - Note where the passage moves from one idea to the next
   - Separate main ideas from supporting ideas
   - Determine what conclusions are reached and why.

4. **Read the questions carefully, making certain that you understand what is asked.**
   An answer choice that accurately restates information in the passage may be incorrect if it does not answer the question. If you need to, refer back to the passage for clarification.

5. **Read all the choices carefully.**
   Never assume that you have selected the best answer without first reading all the choices.

6. **Select the choice that answers the question best in terms of the information given in the passage.** Do not rely on outside knowledge of the material to help you answer the questions.

7. **Remember that comprehension—not speed—is the critical success factor when it comes to reading comprehension questions.**

7.3 Section Instructions

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

7.4 Practice Questions

Each of the reading comprehension questions is based on the content of a passage. After reading the passage answer all questions pertaining to it on the basis of what is stated or implied in the passage. For each question, select the best answer of the choices given.

Line Scientists long believed that two nerve clusters in the human hypothalamus, called suprachiasmatic nuclei (SCNs), were what controlled our circadian rhythms. Those rhythms are the biological cycles (5) that recur approximately every 24 hours in synchronization with the cycle of sunlight and darkness caused by Earth's rotation. Studies have demonstrated that in some animals, the SCNs control daily fluctuations in blood pressure, body (10) temperature, activity level, and alertness, as well as the nighttime release of the sleep-promoting agent melatonin. Furthermore, cells in the human retina dedicated to transmitting information about light levels to the SCNs have recently been discovered.

(15) Four critical genes governing circadian cycles have been found to be active in every tissue, however, not just the SCNs, of flies, mice, and humans. In addition, when laboratory rats that usually ate at will were fed only once a day, peak (20) activity of a clock gene in their livers shifted by 12 hours, whereas the same clock gene in the SCNs remained synchronized with light cycles. While scientists do not dispute the role of the SCNs in controlling core functions such as the regulation of (25) body temperature and blood pressure, scientists now believe that circadian clocks in other organs and tissues may respond to external cues other than light—including temperature changes—that recur regularly every 24 hours.

Questions 461–463 refer to the passage.

*RC00504-01

461. The primary purpose of the passage is to

(A) challenge recent findings that appear to contradict earlier findings

(B) present two sides of an ongoing scientific debate

(C) report answers to several questions that have long puzzled researchers

(D) discuss evidence that has caused a long-standing belief to be revised

(E) attempt to explain a commonly misunderstood biological phenomenon

RC00504-05

462. The passage mentions each of the following as a function regulated by the SCNs in some animals EXCEPT

(A) activity level

(B) blood pressure

(C) alertness

(D) vision

(E) temperature

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

RC00504-04

463. The author of the passage would probably agree with which of the following statements about the SCNs?

(A) The SCNs are found in other organs and tissues of the body besides the hypothalamus.

(B) The SCNs play a critical but not exclusive role in regulating circadian rhythms.

(C) The SCNs control clock genes in a number of tissues and organs throughout the body.

(D) The SCNs are a less significant factor in regulating blood pressure than scientists once believed.

(E) The SCNs are less strongly affected by changes in light levels than they are by other external cues.

Line In their study of whether offering a guarantee of service quality will encourage customers to visit a particular restaurant, Tucci and Talaga have found that the effect of such guarantees is mixed. For higher-priced restaurants, there is some evidence that offering a guarantee increases the likelihood of customer selection, probably reflecting the greater financial commitment involved in choosing an expensive restaurant. For lower-priced restaurants, where one expects less assiduous service, Tucci and Talaga found that a guarantee could actually have a negative effect: a potential customer might think that a restaurant offering a guarantee is worried about its service. Moreover, since customers understand a restaurant's product and know what to anticipate in terms of service, they are empowered to question its quality. This is not generally true in the case of skilled activities such as electrical work, where, consequently, a guarantee might have greater customer appeal.

For restaurants generally, the main benefit of a service guarantee probably lies not so much in customer appeal as in managing and motivating staff. Staff members would know what service standards are expected of them and also know that the success of the business relies on their adhering to those standards. Additionally, guarantees provide some basis for defining the skills needed for successful service in areas traditionally regarded as unskilled, such as waiting tables.

Questions 464–466 refer to the passage.

RC00525-01

464. The primary purpose of the passage is to

(A) question the results of a study that examined the effect of service-quality guarantees in the restaurant industry

(B) discuss potential advantages and disadvantages of service-quality guarantees in the restaurant industry

(C) examine the conventional wisdom regarding the effect of service-quality guarantees in the restaurant industry

(D) argue that only certain restaurants would benefit from the implementation of service-quality guarantees

(E) consider the impact that service-quality guarantees can have on the service provided by a restaurant

RC00525-02

465. It can be inferred that the author of the passage would agree with which of the following statements about the appeal of service guarantees to customers?

(A) Such guarantees are likely to be somewhat more appealing to customers of restaurants than to customers of other businesses.

(B) Such guarantees are likely to be more appealing to customers who know what to anticipate in terms of service.

(C) Such guarantees are likely to have less appeal in situations where customers are knowledgeable about a business's product or service.

(D) In situations where a high level of financial commitment is involved, a service guarantee is not likely to be very appealing.

(E) In situations where customers expect a high level of customer service, a service guarantee is likely to make customers think that a business is worried about its service.

RC00525-07

466. According to the passage, Tucci and Talaga found that service guarantees, when offered by lower-priced restaurants, can have which of the following effects?

(A) Customers' developing unreasonably high expectations regarding service

(B) Customers' avoiding such restaurants because they fear that the service guarantee may not be fully honored

(C) Customers' interpreting the service guarantee as a sign that management is not confident about the quality of its service

(D) A restaurant's becoming concerned that its service will not be assiduous enough to satisfy customers

(E) A restaurant's becoming concerned that customers will be more emboldened to question the quality of the service they receive

Line One proposal for preserving rain forests is to promote the adoption of new agricultural technologies, such as improved plant varieties and use of chemical herbicides, which would increase productivity and slow deforestation by reducing demand for new cropland. Studies have shown that farmers in developing countries who have achieved certain levels of education, wealth, and security of land tenure are more likely to adopt such technologies. But these studies have focused on villages with limited land that are tied to a market economy rather than on the relatively isolated, self-sufficient communities with ample land characteristic of rain-forest regions. A recent study of the Tawahka people of the Honduran rain forest found that farmers with some formal education were more likely to adopt improved plant varieties but less likely to use chemical herbicides and that those who spoke Spanish (the language of the market economy) were more likely to adopt both technologies. Nonland wealth was also associated with more adoption of both technologies, but availability of uncultivated land reduced the incentive to employ the productivity-enhancing technologies. Researchers also measured land-tenure security: in Tawahka society, kinship ties are a more important indicator of this than are legal property rights, so researchers measured it by a household's duration of residence in its village. They found that longer residence correlated with more adoption of improved plant varieties but less adoption of chemical herbicides.

Questions 467–468 refer to the passage.

RC00455-03

467. The passage suggests that in the study mentioned in line 14 the method for gathering information about security of land tenure reflects which of the following pairs of assumptions about Tawahka society?

(A) The security of a household's land tenure depends on the strength of that household's kinship ties, and the duration of a household's residence in its village is an indication of the strength of that household's kinship ties.

(B) The ample availability of land makes security of land tenure unimportant, and the lack of a need for secure land tenure has made the concept of legal property rights unnecessary.

(C) The strength of a household's kinship ties is a more reliable indicator of that household's receptivity to new agricultural technologies than is its quantity of nonland wealth, and the duration of a household's residence in its village is a more reliable indicator of that household's security of land tenure than is the strength of its kinship ties.

(D) Security of land tenure based on kinship ties tends to make farmers more receptive to the use of improved plant varieties, and security of land tenure based on long duration of residence in a village tends to make farmers more receptive to the use of chemical herbicides.

(E) A household is more likely to be receptive to the concept of land tenure based on legal property rights if it has easy access to uncultivated land, and a household is more likely to uphold the tradition of land tenure based on kinship ties if it possesses a significant degree of nonland wealth.

RC00455-05

468. According to the passage, the proposal mentioned in line 1 is aimed at preserving rain forests by encouraging farmers in rain-forest regions to do each of the following EXCEPT

(A) adopt new agricultural technologies

(B) grow improved plant varieties

(C) decrease their use of chemical herbicides

(D) increase their productivity

(E) reduce their need to clear new land for cultivation

Line The argument for "monetizing"—or putting a monetary value on—ecosystem functions may be stated thus: Concern about the depletion of natural resources is widespread, but this concern, in the (5) absence of an economic argument for conservation, has not translated into significant conservational progress. Some critics blame this impasse on environmentalists, whom they believe fail to address the economic issues of environmental degradation. (10) Conservation can appear unprofitable when compared with the economic returns derived from converting natural assets (pristine coastlines, for example) into explicitly commercial ones (such as resort hotels). But according to David Pearce, that illusion stems (15) from the fact that "services" provided by ecological systems are not traded on the commodities market, and thus have no readily *quantifiable* value. To remedy this, says Pearce, one has to show that all ecosystems have economic value—indeed, that all (20) ecological services are economic services. Tourists visiting wildlife preserves, for example, create jobs and generate income for national economies; undisturbed forests and wetlands regulate water runoff and act as water-purifying systems, saving (25) millions of dollars worth of damage to property and to marine ecosystems. In Gretchen Daily's view, monetization, while unpopular with many environmentalists, reflects the dominant role that economic considerations play in human behavior, (30) and the expression of economic value in a common currency helps inform environmental decision-making processes.

Questions 469–472 refer to the passage.

RC00344-02

469. Information in the passage suggests that David Pearce would most readily endorse which of the following statements concerning monetization?

(A) Monetization represents a strategy that is attractive to both environmentalists and their critics.

(B) Monetization is an untested strategy, but it is increasingly being embraced by environmentalists.

(C) Monetization should at present be restricted to ecological services and should only gradually be extended to such commercial endeavors as tourism and recreation.

(D) Monetization can serve as a means of representing persuasively the value of environmental conservation.

(E) Monetization should inform environmental decision-making processes only if it is accepted by environmentalist groups.

RC00344-04

470. Which of the following most clearly represents an example of an "ecological service" as that term is used in line 20 ?

(A) A resort hotel located in an area noted for its natural beauty

(B) A water-purifying plant that supplements natural processes with nontoxic chemicals

(C) A wildlife preserve that draws many international travelers

(D) A nonprofit firm that specializes in restoring previously damaged ecosystems

(E) A newsletter that keeps readers informed of ecological victories and setbacks

RC00344-05

471. According to the passage, Daily sees monetization as an indication of which of the following?

(A) The centrality of economic interests to people's actions

(B) The reluctance of the critics of environmentalism to acknowledge the importance of conservation

(C) The inability of financial interests and ecological interests to reach a common ideological ground

(D) The inevitability of environmental degradation

(E) The inevitability of the growth of ecological services in the future

RC00344-06

472. Which of the following can be inferred from the passage concerning the environmentalists mentioned in line 8 ?

(A) They are organized in opposition to the generation of income produced by the sale of ecological services.

(B) They are fewer in number but better organized and better connected to the media than their opponents.

(C) They have sometimes been charged with failing to use a particular strategy in their pursuit of conservational goals.

(D) They have been in the forefront of publicizing the extent of worldwide environmental degradation.

(E) They define environmental progress differently and more conservatively than do other organized groups of environmentalists.

Line Much research has been devoted to investigating what motivates consumers to try new products. Previous consumer research suggests that both the price of a new product and the way it is advertised (5) affect consumers' perceptions of the product's performance risk (the possibility that the product will not function as consumers expect and/or will not provide the desired benefits). Some of this research has concluded that a relatively high price will reduce (10) a consumer's perception of the performance risk associated with purchasing a particular product, while other studies have reported that price has little or no effect on perceived performance risk. These conflicting findings may simply be due to the nature (15) of product advertisements: a recent study indicates that the presentation of an advertised message has a marked effect on the relationship between price and perceived performance risk.

Researchers have identified consumers' perception (20) of the credibility of the source of an advertised message—i.e., the manufacturer—as another factor affecting perceived performance risk: one study found that the greater the source credibility, the lower the consumer's perception of the risk of purchasing (25) an advertised new product. However, past research suggests that the relationship between source credibility and perceived performance risk may be more complex: source credibility may interact with price in a subtle way to affect consumers' judgments (30) of the performance risk associated with an advertised product.

Questions 473–476 refer to the passage.

RC00359-01

473. According to the passage, the studies referred to in line 12 reported which of the following about the effect of price on consumers' perception of the performance risk associated with a new product?

(A) Although most consumers regard price as an important factor, their perception of the performance risk associated with a new product is ultimately determined by the manufacturer's reputation.

(B) Price interacts with the presentation of an advertised message to affect perceived performance risk.

(C) Price does not significantly affect consumers' perception of the performance risk associated with a new product.

(D) Consumers tend to regard price as more important than the manufacturer's credibility when they are buying from that manufacturer for the first time.

(E) Consumers are generally less concerned about a new product's performance risk when that product is relatively expensive.

RC00359-03

474. The "past research" mentioned in line 25 suggests which of the following about perceived performance risk?

(A) The more expensive a new product is, the more likely consumers may be to credit advertised claims about that product.

(B) The more familiar consumers are with a particular manufacturer, the more willing they may be to assume some risk in the purchase of a new product being advertised by that manufacturer.

(C) Consumers' perception of the performance risk associated with a new product being advertised may be influenced by an interplay between the product's price and the manufacturer's credibility.

(D) Consumers may be more likely to believe that a product will function as it is advertised to do when they have bought products from a particular manufacturer before.

(E) The price of a particular advertised product may have less impact than the manufacturer's credibility on consumers' assessment of the performance risk associated with that product.

RC00359-05

475. The passage is primarily concerned with

(A) challenging the implications of previous research into why consumers try new products

(B) suggesting new marketing strategies for attracting consumers to new products

(C) reconciling two different views about the effect of price on consumers' willingness to try new products

(D) describing a new approach to researching why consumers try new products

(E) discussing certain findings regarding why consumers try new products

RC00359-06

476. Which of the following, if true, would most tend to weaken the conclusions drawn from "some of this research" (line 8)?

(A) In a subsequent study, consumers who were asked to evaluate new products with relatively low prices had the same perception of the products' performance risk as did consumers who were shown the same products priced more expensively.

(B) In a subsequent study, the quality of the advertising for the products that consumers perceived as having a lower performance risk was relatively high, while the quality of the advertising for the products that consumers perceived as having a higher performance risk was relatively poor.

(C) In a subsequent study, the products that consumers perceived as having a lower performance risk were priced higher than the highest priced products in the previous research.

(D) None of the consumers involved in this research had ever before bought products from the manufacturers involved in the research.

(E) Researchers found that the higher the source credibility for a product, the more consumers were willing to pay for it.

Line Historians remain divided over the role of banks in facilitating economic growth in the United States in the late eighteenth and early nineteenth centuries. Some scholars contend (5) that banks played a minor role in the nation's growing economy. Financial institutions, they argue, appeared only after the economy had begun to develop, and once organized, followed conservative lending practices, providing aid to (10) established commercial enterprises but shunning those, such as manufacturing and transportation projects, that were more uncertain and capital-intensive (i.e., requiring greater expenditures in the form of capital than in (15) labor).

A growing number of historians argue, in contrast, that banks were crucial in transforming the early national economy. When state legislatures began granting more bank charters (20) in the 1790s and early 1800s, the supply of credit rose accordingly. Unlike the earliest banks, which had primarily provided short-term loans to well-connected merchants, the banks of the early nineteenth century issued credit widely. As Paul (25) Gilje asserts, the expansion and democratization of credit in the early nineteenth century became the driving force of the American economy, as banks began furnishing large amounts of capital to transportation and industrial enterprises. The (30) exception, such historians argue, was in the South; here, the overwhelmingly agrarian nature of the economy generated outright opposition to banks, which were seen as monopolistic institutions controlled by an elite group of (35) planters.

Questions 477–481 refer to the passage.

RC00419-01

477. The primary purpose of the passage is to

(A) compare the economic role played by southern banks with the economic role played by banks in the rest of the United States during the late eighteenth and early nineteenth centuries

(B) reevaluate a conventional interpretation of the role played by banks in the American economy during the late eighteenth and early nineteenth centuries

(C) present different interpretations of the role played by banks in the American economy during the late eighteenth and early nineteenth centuries

(D) analyze how the increasing number of banks in the late eighteenth and early nineteenth centuries affected the American economy

(E) examine how scholarly opinion regarding the role played by banks in the American economy during the late eighteenth and early nineteenth centuries has changed over time

RC00419-02

478. The passage suggests that the scholars mentioned in line 4 would argue that the reason banks tended not to fund manufacturing and transportation projects in the late eighteenth and early nineteenth centuries was that

(A) these projects, being well established and well capitalized, did not need substantial long-term financing from banks

(B) these projects entailed a level of risk that was too great for banks' conservative lending practices

(C) banks preferred to invest in other, more speculative projects that offered the potential for higher returns

(D) bank managers believed that these projects would be unlikely to contribute significantly to economic growth in the new country

(E) bank managers believed funding these projects would result in credit being extended to too many borrowers

RC00419-04

479. The passage suggests that Paul Gilje would be most likely to agree with which of the following claims about the lending practices of the "earliest banks" (see line 21)?

(A) These lending practices were unlikely to generate substantial profits for banks.

(B) These lending practices only benefited a narrow sector of the economy.

(C) The restrictive nature of these lending practices generated significant opposition outside of the South.

(D) The restrictive nature of these lending practices forced state legislatures to begin granting more bank charters by the early nineteenth century.

(E) These lending practices were likely to be criticized by economic elites as being overly restrictive.

RC00419-05

480. The passage suggests that the opposition to banks in the South in the early nineteenth century stemmed in part from the perception that banks

(A) did not benefit more than a small minority of the people

(B) did not support the interests of elite planters

(C) were too closely tied to transportation and industrial interests

(D) were unwilling to issue the long-term loans required by agrarian interests

(E) were too willing to lend credit widely

RC00419-06

481. Which of the following statements best describes the function of the last sentence of the passage?

(A) It provides evidence tending to undermine the viewpoint of the scholars mentioned in line 5.

(B) It resolves a conflict over the role of banks summarized in the first paragraph.

(C) It clarifies some of the reasons state legislatures began granting more bank charters.

(D) It qualifies a claim made earlier in the passage about the impact of banks on the American economy in the early nineteenth century.

(E) It supports a claim made earlier in the passage about how the expansion of credit affected the economy.

Line In recent years, Western business managers have been heeding the exhortations of business journalists and academics to move their companies toward long-term, collaborative "strategic partnerships" with their external business partners (e.g., suppliers). The experts' advice comes as a natural reaction to numerous studies conducted during the past decade that compared Japanese production and supply practices with those of the rest of the world. The link between the success of a certain well-known Japanese automaker and its effective management of its suppliers, for example, has led to an unquestioning belief within Western management circles in the value of strategic partnerships. Indeed, in the automobile sector all three United States manufacturers and most of their European competitors have launched programs to reduce their total number of suppliers and move toward having strategic partnerships with a few.

However, new research concerning supplier relationships in various industries demonstrates that the widespread assumption of Western managers and business consultants that Japanese firms manage their suppliers primarily through strategic partnerships is unjustified. Not only do Japanese firms appear to conduct a far smaller proportion of their business through strategic partnerships than is commonly believed, but they also make extensive use of "market-exchange" relationships, in which either party can turn to the marketplace and shift to different business partners at will, a practice usually associated with Western manufacturers.

Questions 482–485 refer to the passage.

RC00458-01

482. The passage is primarily concerned with

(A) examining economic factors that may have contributed to the success of certain Japanese companies

(B) discussing the relative merits of strategic partnerships as compared with those of market-exchange relationships

(C) challenging the validity of a widely held assumption about how Japanese firms operate

(D) explaining why Western companies have been slow to adopt a particular practice favored by Japanese companies

(E) pointing out certain differences between Japanese and Western supplier relationships

RC00458-02

483. According to the passage, the advice referred to in line 6 was a response to which of the following?

(A) A recent decrease in the number of available suppliers within the United States automobile industry

(B) A debate within Western management circles during the past decade regarding the value of strategic partnerships

(C) The success of certain European automobile manufacturers that have adopted strategic partnerships

(D) An increase in demand over the past decade for automobiles made by Western manufacturers

(E) Research comparing Japanese business practices with those of other nations

RC00458-03

484. The author mentions "the success of a certain well-known Japanese automaker" in lines 10–11, most probably in order to

(A) demonstrate some of the possible reasons for the success of a certain business practice

(B) cite a specific case that has convinced Western business experts of the value of a certain business practice

(C) describe specific steps taken by Western automakers that have enabled them to compete more successfully in a global market

(D) introduce a paradox about the effect of a certain business practice in Japan

(E) indicate the need for Western managers to change their relationships with their external business partners

RC00458-05

485. Which of the following is cited in the passage as evidence supporting the author's claim about what the new research referred to in line 20 demonstrates?

(A) The belief within Western management circles regarding the extent to which Japanese firms rely on strategic partnerships

(B) The surprising number of European and United States businesses that have strategic partnerships with their suppliers

(C) The response of Western automobile manufacturers to the advice that they adopt strategic partnerships with their suppliers

(D) The prevalence of "market-exchange" relationships between Japanese firms and their suppliers

(E) The success of a particular Japanese automobile manufacturer that favors strategic partnerships with its suppliers

Line In an effort to explain why business acquisitions often fail, scholars have begun to focus on the role of top executives of acquired companies. Acquired companies that retain their top executives tend to have more successful outcomes than those that do not. Furthermore, existing research suggests that retaining the highest-level top executives, such as the CEO (chief executive officer) and COO (chief operating officer), is related more positively to postacquisition success than retaining lower-ranked top executives. However, this explanation, while insightful, suffers from two limitations. First, the focus on positional rank does not recognize the variation in length of service that may exist in top executive posts across companies, nor does it address which particular top executives (with respect to length of service) should be retained to achieve a successful acquisition outcome. Second, the relationship between retained top executives and acquisition outcomes offered by existing research is subject to opposing theoretical explanations related to length of service. The resource-based view (RBV) suggests that keeping acquired company top executives with longer organizational tenure would lead to more successful outcomes, as those executives have idiosyncratic and nontransferable knowledge of the acquired company that would be valuable for the effective implementation of the acquisition. The opposing position, offered by the upper echelons perspective (UEP), suggests that retaining top executives having short organizational tenure would lead to more successful outcomes, as they would have the adaptability to manage most effectively during the uncertainty of the acquisition process.

Responding to these limitations, Bergh conducted a study of executive retention and acquisition outcome that focused on the organizational tenure of retained company top executives in 104 acquisitions, followed over 5 years. Bergh considered the acquisition successful if the acquired company was retained and unsuccessful if it was divested. Bergh's findings support the RBV position. Apparently, the benefits of long organizational tenure lead to more successful outcomes than the benefits of short organizational tenure. While longer tenured top executives may have trouble adapting to change, it appears that their perspectives and knowledge bases offer unique value after the acquisition. Although from the UEP position it seems sensible to retain less tenured executives and allow more tenured ones to leave, such a strategy appears to lower the probability of acquisition success.

Questions 486–489 refer to the passage.

RC00497-02

486. According to the passage, the research mentioned in line 6 suggests which of the following about lower-ranked top executives and postacquisition success?

(A) Given that these executives are unlikely to contribute to postacquisition success, little effort should be spent trying to retain them.

(B) The shorter their length of service, the less likely it is that these executives will play a significant role in postacquisition success.

(C) These executives are less important to postacquisition success than are more highly ranked top executives.

(D) If they have long tenures, these executives may prove to be as important to postacquisition success as are more highly ranked top executives.

(E) Postacquisition success is unlikely if these executives are retained.

RC00497-03

487. The resource-based view, as described in the passage, is based on which of the following ideas?

(A) The managerial skills of top executives become strongest after the first five years of their tenure.

(B) Company-specific knowledge is an important factor in the success of an acquisition process.

(C) The amount of nontransferable knowledge possessed by long-tenured top executives tends to be underestimated.

(D) Effective implementation of an acquisition depends primarily on the ability of executives to adapt to change.

(E) Short-tenured executives are likely to impede the implementation of a successful acquisition strategy.

RC00497-04

488. The passage suggests that Bergh and a proponent of the upper echelons perspective would be most likely to disagree over which of the following?

(A) Whether there is a positive correlation between short organizational tenure and managerial adaptability

(B) Whether there is a positive correlation between long organizational tenure and the acquisition of idiosyncratic and nontransferable knowledge

(C) Whether adaptability is a useful trait for an executive who is managing an acquisition process

(D) Whether retaining less-tenured top executives of an acquired company is an optimal strategy for achieving postacquisition success

(E) Whether retaining highest-level top executives of acquired companies is more important than retaining lower-ranked top executives

RC00497-05

489. According to the passage, prior to Bergh's study, research on the role of top executives of acquired companies in business acquisition success was limited in which of the following ways?

(A) It did not address how the organizational tenure of top executives affects postacquisition success.

(B) It did not address why some companies have longer-tenured CEOs than others.

(C) It did not consider strategies for retaining long-tenured top executives of acquired companies.

(D) It failed to differentiate between the contribution of highest-level top executives to postacquisition success and that of lower-ranked top executives.

(E) It underestimated the potential contribution that lower-level top executives can make to postacquisition success.

Line When Jamaican-born social activist Marcus Garvey came to the United States in 1916, he arrived at precisely the right historical moment. What made the moment right was the return of (5) African American soldiers from the First World War in 1918, which created an ideal constituency for someone with Garvey's message of unity, pride, and improved conditions for African American communities.

(10) Hoping to participate in the traditional American ethos of individual success, many African American people entered the armed forces with enthusiasm, only to find themselves segregated from white troops and subjected to numerous indignities. They (15) returned to a United States that was as segregated as it had been before the war. Considering similar experiences, anthropologist Anthony F. C. Wallace has argued that when a perceptible gap arises between a culture's expectations and the reality of (20) that culture, the resulting tension can inspire a revitalization movement: an organized, conscious effort to construct a culture that fulfills long-standing expectations.

Some scholars have argued that Garvey created (25) the consciousness from which he built, in the 1920s, the largest revitalization movement in African American history. But such an argument only tends to obscure the consciousness of identity, strength, and sense of history that already (30) existed in the African American community. Garvey did not create this consciousness; rather, he gave this consciousness its political expression.

Questions 490–493 refer to the passage.

RC00017-02

490. According to the passage, which of the following contributed to Marcus Garvey's success?

(A) He introduced cultural and historical consciousness to the African American community.

(B) He believed enthusiastically in the traditional American success ethos.

(C) His audience had already formed a consciousness that made it receptive to his message.

(D) His message appealed to critics of African American support for United States military involvement in the First World War.

(E) He supported the movement to protest segregation that had emerged prior to his arrival in the United States.

RC00017-03

491. The passage suggests that many African American people responded to their experiences in the armed forces in which of the following ways?

(A) They maintained as civilians their enthusiastic allegiance to the armed forces.

(B) They questioned United States involvement in the First World War.

(C) They joined political organizations to protest the segregation of African American troops and the indignities they suffered in the military.

(D) They became aware of the gap between their expectations and the realities of American culture.

(E) They repudiated Garvey's message of pride and unity.

RC00017-04

492. It can be inferred from the passage that the "scholars" mentioned in line 24 believe which of the following to be true?

(A) Revitalization resulted from the political activism of returning African American soldiers following the First World War.

(B) Marcus Garvey had to change a number of prevailing attitudes in order for his mass movement to find a foothold in the United States.

(C) The prevailing sensibility of the African American community provided the foundation of Marcus Garvey's political appeal.

(D) Marcus Garvey hoped to revitalize consciousness of cultural and historical identity in the African American community.

(E) The goal of the mass movement that Marcus Garvey helped bring into being was to build on the pride and unity among African Americans.

RC00017-05

493. According to the passage, many African American people joined the armed forces during the First World War for which of the following reasons?

(A) They wished to escape worsening economic conditions in African American communities.

(B) They expected to fulfill ideals of personal attainment.

(C) They sought to express their loyalty to the United States.

(D) They hoped that joining the military would help advance the cause of desegregation.

(E) They saw military service as an opportunity to fulfill Marcus Garvey's political vision.

Line Arboria is floundering in the global marketplace, incurring devastating losses in market position and profits. The problem is not Arboria's products, but Arboria's trade policy. Arboria faces the prospect (5) of continuing economic loss until Arborian business and political leaders recognize the fundamental differences between Arborian and foreign economic systems. Today the key trade issue is not free trade versus protectionism but diminishing trade versus (10) expanding trade.

Arboria is operating with an obsolete trade policy, an artifact of the mid-1940s when Arboria and Whorfland dominated the global economy, tariffs were the principal obstacle to trade, and Arborian (15) supremacy was uncontested in virtually all industries. In the intervening decades, economic circumstances have shifted radically. Arborian trade policy has not.

Today, Arboria's trade policy seems paralyzed by the relentless conflict between proponents of (20) "free" and "fair" trade. The free traders argue that Arborian markets should be open, and the movement of goods and services across national borders unrestrained. The fair traders assert that access to Arborian markets should be restricted until Arborian (25) businesses are granted equal access to foreign markets. They contend that free trade is impossible while other nations erect barriers to Arborian exports.

Both are correct: fair trade requires equal access and equal access leads to free trade. But both sides (30) base their positions on the same two outdated premises:

1. Global commerce is conducted under the terms of the General Agreement on Tariffs and Trade (GATT) and dominated by Arboria and similar economic (35) systems abroad.
2. Multilateral negotiations are the most effective way to resolve pressing trade issues.

Both assumptions are wrong. The 40-year-old GATT (40) now covers less than 7 percent of global commerce. World trade is no longer dominated by the free-trade economies; nearly 75 percent is conducted by economic systems operating with principles at odds with those of Arboria. Forging a multilateral (45) trade policy consensus among so many diverse economic systems has become virtually impossible. And while multilateral talks drag on, Arboria misses opportunities for trade expansion.

Questions 494–501 refer to the passage.

RC38200-01.01

494. Which of the following best states the difference between free trade and fair trade, as explained in the passage?

(A) Free trade requires no trade tariffs whatsoever, whereas fair trade assumes multilateral agreement on tariffs for goods of equal worth.

(B) Free trade is based on the unrestricted movement of goods across all national boundaries, whereas fair trade is based on a nation's restriction of commerce with each nation that erects trade barriers to the first nation's exports.

(C) The trade policies of countries like Arboria are based on the principles of free trade, whereas the trade policies of other types of world economies are based on fair trade.

(D) Free-trade nations negotiate individual trade agreements with each of their trading partners, whereas fair-trade nations conduct multilateral trade negotiations.

(E) Free trade assumes a constant level of global commerce, whereas fair trade promotes a steady expansion of international trade.

RC38200-02.01

495. It can be inferred that the author of the passage would most likely agree with which of the following statements about multilateral trade negotiations?

(A) They are the most effective way to resolve trade problems.

(B) They are most effective in dealing with fair-trade issues between nations.

(C) They have only recently begun to make an impact on world trade.

(D) Arborian reliance on multilateral trade negotiations, while appropriate in the past, is inadequate for today's global marketplace.

(E) The principles of multilateral trade negotiations are incompatible with current Arborian foreign trade policy.

RC38200-03.01

496. Which of the following statements best summarizes the author's opinion of "free traders" and "fair traders"?

(A) The free and the fair traders' continuing debate provides a healthy and effective forum for examining Arborian trade policy.

(B) The proponents of fair trade are essentially correct, while those who advocate free trade are not.

(C) The proponents of free trade are better able to deal with current economic problems than are the fair traders.

(D) Neither the free nor the fair traders can come up with a workable trade policy because neither takes multilateral negotiations into account.

(E) The proponents of both free and fair trade have based their positions on out-of-date premises that do not reflect current economic conditions.

RC38200-04.01

497. The author mentions all of the following as characteristic of world trade in the mid-1940s EXCEPT:

(A) Arboria played a major role in the global marketplace.

(B) Whorfland played a major role in the global marketplace.

(C) Tariffs were the main obstacle to trade.

(D) Fair-trade economies dominated international trade.

(E) Arborian manufacturers were unsurpassed in most industries.

RC38200-05.01

498. In presenting the argument in the passage, the author uses all of the following EXCEPT:

(A) statistical information about global commerce

(B) definitions of terms concerning world trade

(C) generalizations about Arboria's economic system

(D) historical background of Arborian trade policy

(E) an example of an economic system whose principles differ from those of Arboria

RC38200-06.01

499. The author asserts which of the following about Arboria's trade policy?

(A) A dramatic revision of Arboria's trade policy will be necessary unless Arborian manufacturers improve the quality of their goods.

(B) The most crucial issue facing Arborian trade policymakers is that of free trade versus protectionism.

(C) Arboria's current trade policy was essentially developed during the 1940s and has changed little since that time.

(D) Arboria's trade policy is widely emulated throughout the world, to the extent that most international commerce is modeled on Arboria's principles.

(E) Arboria's trade policy has evolved gradually over the last eighty years, constantly readjusting itself in response to shifts in global commerce.

RC38200-07.01

500. The passage is primarily concerned with

(A) illustrating the erosion of Arboria's position in the world marketplace

(B) examining the differences between "free" and "fair" traders

(C) advocating a reassessment of Arboria's trade policy

(D) criticizing the terms of the General Agreement on Tariffs and Trade (GATT)

(E) comparing the different economic circumstances of Arboria's trade partners

RC38200-08.01

501. The author implies that the main obstacle to a truly effective Arborian trade policy is the

(A) weak position that Arboria currently holds in the global marketplace

(B) inability of Arborian leaders to recognize that foreign economic systems are based on principles fundamentally different from their own

(C) dominance of the supporters of free trade in the conflict between free-trade and fair-trade advocates

(D) apparent inability of Arborian industries to produce goods that are competitive in the world market

(E) protectionism that characterizes the foreign trade policies of so many of Arboria's trade partners

Line In *Winters v. United States* (1908), the Supreme Court held that the right to use waters flowing through or adjacent to the Fort Berthold Indian Reservation was reserved to American Indians by the treaty establishing the reservation. Although this treaty did not mention water rights, the Court ruled that the federal government, when it created the reservation, intended to deal fairly with American Indians by reserving for them the waters without which their lands would have been useless. Later decisions, citing Winters, established that courts can find federal rights to reserve water for particular purposes if (1) the land in question lies within an enclave under exclusive federal jurisdiction; (2) the land has been formally withdrawn from federal public lands—i.e., withdrawn from the stock of federal lands available for private use under federal land use laws—and set aside or reserved; and (3) the circumstances reveal the government intended to reserve water as well as land when establishing the reservation.

Some American Indian tribes have also established water rights through the courts based on their traditional diversion and use of certain waters prior to the United States' acquisition of sovereignty. For example, the Rio Grande pueblos already existed when the United States acquired sovereignty over New Mexico in 1848. Although they at that time became part of the United States, the pueblo lands never formally constituted a part of federal public lands; in any event, no treaty, statute, or executive order has ever designated or withdrawn the pueblos from public lands as American Indian reservations. This fact, however, has not barred application of the Winters doctrine. What constitutes an American Indian reservation is a question of practice, not of legal definition, and the pueblos have always been treated as reservations by the United States. This pragmatic approach is buttressed by *Arizona v. California* (1963), wherein the Supreme Court indicated that the manner in which any type of federal reservation is created does not affect the application to it of the Winters doctrine. Therefore, the reserved water rights of Pueblo Indians have priority over other citizens' water rights as of 1848, the year in which pueblos must be considered to have become reservations.

Questions 502–509 refer to the passage.

RC74000-01.01

502. According to the passage, which of the following was true of the treaty establishing the Fort Berthold Indian Reservation?

(A) It was challenged in the Supreme Court a number of times.

(B) It was rescinded by the federal government, an action that gave rise to the Winters case.

(C) It cited American Indians' traditional use of the land's resources.

(D) It failed to mention water rights to be enjoyed by the reservation's inhabitants.

(E) It was modified by the Supreme Court in *Arizona v. California*.

RC74000-02.01

503. The passage suggests that, if the criteria discussed in lines 10–20 of the text were the only criteria for establishing a reservation's water rights, which of the following would be true?

(A) The water rights of the inhabitants of the Fort Berthold Indian Reservation would not take precedence over those of other citizens.

(B) Reservations established before 1848 would be judged to have no water rights.

(C) There would be no legal basis for the water rights of the Rio Grande pueblos.

(D) Reservations other than American Indian reservations could not be created with reserved water rights.

(E) Treaties establishing reservations would have to mention water rights explicitly in order to reserve water for a particular purpose.

RC74000-03.01

504. Which of the following most accurately summarizes the relationship between *Arizona v. California*, as that decision is described in the passage, and the criteria discussed in lines 10–20?

(A) *Arizona v. California* abolishes these criteria and establishes a competing set of criteria for applying the Winters doctrine.

(B) *Arizona v. California* establishes that the Winters doctrine applies to a broader range of situations than those defined by these criteria.

(C) *Arizona v. California* represents the sole example of an exception to the criteria as they were set forth in the Winters doctrine.

(D) *Arizona v. California* does not refer to the Winters doctrine to justify water rights, whereas these criteria do rely on the Winters doctrine.

(E) *Arizona v. California* applies the criteria derived from the Winters doctrine only to federal lands other than American Indian reservations.

RC74000-04.01

505. The "pragmatic approach" mentioned in lines 37–38 of the passage is best defined as one that

(A) grants recognition to reservations that were never formally established but that have traditionally been treated as such

(B) determines the water rights of all citizens in a particular region by examining the actual history of water usage in that region

(C) gives federal courts the right to reserve water along with land even when it is clear that the government originally intended to reserve only the land

(D) bases the decision to recognize the legal rights of a group on the practical effect such a recognition is likely to have on other citizens

(E) dictates that courts ignore precedents set by such cases as *Winters v. United States* in deciding what water rights belong to reserved land

RC74000-05.01

506. It can be inferred from the passage that the Winters doctrine has been used to establish which of the following?

(A) A rule that the government may reserve water only by explicit treaty or agreement

(B) A legal distinction between federal lands reserved for American Indians and federal lands reserved for other purposes

(C) Criteria governing when the federal government may set land aside for a particular purpose

(D) The special status of American Indian tribes' rights to reserved land

(E) The federal right to reserve water implicitly as well as explicitly under certain conditions

RC74000-06.01

507. The author cites the fact that the Rio Grande pueblos were never formally withdrawn from public lands primarily in order to do which of the following?

(A) Suggest why it might have been argued that the Winters doctrine ought not to apply to pueblo lands

(B) Imply that the United States never really acquired sovereignty over pueblo lands

(C) Argue that the pueblo lands ought still to be considered part of federal public lands

(D) Support the argument that the water rights of citizens other than American Indians are limited by the Winters doctrine

(E) Suggest that federal courts cannot claim jurisdiction over cases disputing the traditional diversion and use of water by Pueblo Indians

RC74000-07.01

508. The primary purpose of the passage is to

(A) trace the development of laws establishing American Indian reservations

(B) explain the legal bases for the water rights of American Indian tribes

(C) question the legal criteria often used to determine the water rights of American Indian tribes

(D) discuss evidence establishing the earliest date at which the federal government recognized the water rights of American Indians

(E) point out a legal distinction between different types of American Indian reservations

RC74000-08.01

509. The passage suggests that the legal rights of citizens other than American Indians to the use of water flowing into the Rio Grande pueblos are

(A) guaranteed by the precedent set in *Arizona v. California*

(B) abolished by the Winters doctrine

(C) deferred to the Pueblo Indians whenever treaties explicitly require this

(D) guaranteed by federal land-use laws

(E) limited by the prior claims of the Pueblo Indians

Line In corporate purchasing, competitive scrutiny is typically limited to suppliers of items that are directly related to end products. With "indirect" purchases (such as computers, advertising, and legal services), which are not directly related to production, corporations often favor "supplier partnerships" (arrangements in which the purchaser forgoes the right to pursue alternative suppliers), which can inappropriately shelter suppliers from rigorous competitive scrutiny that might afford the purchaser economic leverage. There are two independent variables—availability of alternatives and ease of changing suppliers—that companies should use to evaluate the feasibility of subjecting suppliers of indirect purchases to competitive scrutiny. This can create four possible situations.

In Type 1 situations, there are many alternatives and change is relatively easy. Open pursuit of alternatives—by frequent competitive bidding, if possible—will likely yield the best results. In Type 2 situations, where there are many alternatives but change is difficult—as for providers of employee health-care benefits—it is important to continuously test the market and use the results to secure concessions from existing suppliers. Alternatives provide a credible threat to suppliers, even if the ability to switch is constrained. In Type 3 situations, there are few alternatives, but the ability to switch without difficulty creates a threat that companies can use to negotiate concessions from existing suppliers. In Type 4 situations, where there are few alternatives and change is difficult, partnerships may be unavoidable.

Questions 510–514 refer to the passage.

RC00394-02

510. Which of the following can be inferred about supplier partnerships, as they are described in the passage?

(A) They cannot be sustained unless the goods or services provided are available from a large number of suppliers.

(B) They can result in purchasers paying more for goods and services than they would in a competitive-bidding situation.

(C) They typically are instituted at the urging of the supplier rather than the purchaser.

(D) They are not feasible when the goods or services provided are directly related to the purchasers' end products.

(E) They are least appropriate when the purchasers' ability to change suppliers is limited.

RC00394-03

511. Which of the following best describes the relation of the second paragraph to the first?

(A) The second paragraph offers proof of an assertion made in the first paragraph.

(B) The second paragraph provides an explanation for the occurrence of a situation described in the first paragraph.

(C) The second paragraph discusses the application of a strategy proposed in the first paragraph.

(D) The second paragraph examines the scope of a problem presented in the first paragraph.

(E) The second paragraph discusses the contradictions inherent in a relationship described in the first paragraph.

RC00394-04

512. It can be inferred that the author of the passage would be most likely to make which of the following recommendations to a company purchasing health care benefits for its employees?

(A) Devise strategies for circumventing the obstacles to replacing the current provider of health care benefits.

(B) Obtain health care benefits from a provider that also provides other indirect products and services.

(C) Obtain bids from other providers of health care benefits in order to be in a position to negotiate a better deal with the current provider.

(D) Switch providers of health care benefits whenever a different provider offers a more competitive price.

(E) Acknowledge the difficulties involved in replacing the current provider of health care benefits and offer to form a partnership with the provider.

RC00394-05

513. Which of the following is one difference between Type 2 situations and Type 4 situations, as they are described in the passage?

(A) The number of alternative suppliers available to the purchaser

(B) The most effective approach for the purchaser to use in obtaining competitive bids from potential suppliers

(C) The degree of difficulty the purchaser encounters when changing suppliers

(D) The frequency with which each type of situation occurs in a typical business environment

(E) The likelihood that any given purchase will be an indirect purchase

RC00394-06

514. According to the passage, which of the following factors distinguishes an indirect purchase from other purchases?

(A) The ability of the purchasing company to subject potential suppliers of the purchased item to competitive scrutiny

(B) The number of suppliers of the purchased item available to the purchasing company

(C) The methods of negotiation that are available to the purchasing company

(D) The relationship of the purchased item to the purchasing company's end product

(E) The degree of importance of the purchased item in the purchasing company's business operations

Line Carotenoids, a family of natural pigments, form an important part of the colorful signals used by many animals. Animals acquire carotenoids either directly (from the plants and algae that produce them) or indirectly (by eating insects) and store them in a variety of tissues. Studies of several animal species have shown that when choosing mates, females prefer males with brighter carotenoid-based coloration. Owens and Olson hypothesize that the presence of carotenoids, as signaled by coloration, would be meaningful in the context of mate selection if carotenoids were either rare or required for health. The conventional view is that carotenoids are meaningful because they are rare: healthier males can forage for more of the pigments than can their inferior counterparts. Although this may be true, there is growing evidence that carotenoids are meaningful also because they are required: they are used by the immune system and for detoxification processes that are important for maintaining health. It may be that males can use scarce carotenoids either for immune defense and detoxification or for attracting females. Males that are more susceptible to disease and parasites will have to use their carotenoids to boost their immune systems, whereas males that are genetically resistant will use fewer carotenoids for fighting disease and will advertise this by using the pigments for flashy display instead.

Questions 515–519 refer to the passage.

RC00423-01

515. According to the "conventional view" referred to in line 13 of the passage, brighter carotenoid-based coloration in certain species suggests that an individual

(A) lives in a habitat rich in carotenoid-bearing plants and insects
(B) has efficient detoxification processes
(C) has a superior immune system
(D) possesses superior foraging capacity
(E) is currently capable of reproducing

RC00423-02

516. The idea that carotenoid-based coloration is significant partly because carotenoids are required for health suggests that a lack of bright coloration in a male is most likely to indicate which of the following?

(A) Inefficient detoxification processes
(B) Immunity to parasite infestation
(C) Low genetic resistance to disease
(D) Lack of interest in mating
(E) Lack of carotenoid-storing tissues

RC00423-03

517. The passage suggests that relatively bright carotenoid-based coloration is a signal of which of the following characteristics in males of certain animal species?

(A) Readiness for mating behavior
(B) Ability to fight
(C) Particular feeding preferences
(D) Recovery from parasite infestation
(E) Fitness as a mate

RC00423-04

518. The passage implies which of the following about the insects from which animals acquire carotenoids?

(A) They do not produce carotenoids themselves.
(B) They use carotenoids primarily for coloration.
(C) They maintain constant levels of carotenoids in their tissues.
(D) They are unable to use carotenoids to boost their immune system.
(E) They are available in greater abundance than are carotenoid-bearing plants.

RC00423-05

519. Information in the passage suggests that which of the following is true of carotenoids that a male animal uses for detoxification processes?

(A) They were not acquired directly from plants and algae.

(B) They cannot be replenished through foraging.

(C) They cannot be used simultaneously to brighten coloration.

(D) They do not affect the animal's susceptibility to parasites.

(E) They increase the chances that the animal will be selected as a mate.

Line Linda Kerber argued in the mid-1980s that after the American Revolution (1775–1783), an ideology of "republican motherhood" resulted in a surge of educational opportunities for women in the United States. Kerber maintained that the leaders of the new nation wanted women to be educated in order to raise politically virtuous sons. A virtuous citizenry was considered essential to the success of the country's republican form of government; virtue was to be instilled not only by churches and schools, but by families, where the mother's role was crucial. Thus, according to Kerber, motherhood became pivotal to the fate of the republic, providing justification for an unprecedented attention to female education.

Introduction of the "republican motherhood" thesis dramatically changed historiography. Prior to Kerber's work, educational historians barely mentioned women and girls; Thomas Woody's 1929 work is the notable exception. Examining newspaper advertisements for academies, Woody found that educational opportunities increased for both girls and boys around 1750. Pointing to "An Essay on Woman" (1753) as reflecting a shift in view, Woody also claimed that practical education for females had many advocates before the Revolution. Woody's evidence challenges the notion that the Revolution changed attitudes regarding female education, although it may have accelerated earlier trends. Historians' reliance on Kerber's "republican motherhood" thesis may have obscured the presence of these trends, making it difficult to determine to what extent the Revolution really changed women's lives.

Questions 520–524 refer to the passage.

RC00349-02

520. According to the passage, Kerber maintained that which of the following led to an increase in educational opportunities for women in the United States after the American Revolution?

(A) An unprecedented demand by women for greater educational opportunities in the decades following the Revolution

(B) A new political ideology calling for equality of opportunity between women and men in all aspects of life

(C) A belief that the American educational system could be reformed only if women participated more fully in that system

(D) A belief that women needed to be educated if they were to contribute to the success of the nation's new form of government

(E) A recognition that women needed to be educated if they were to take an active role in the nation's schools and churches

RC00349-03

521. According to the passage, within the field of educational history, Thomas Woody's 1929 work was

(A) innovative because it relied on newspaper advertisements as evidence

(B) exceptional in that it concentrated on the period before the American Revolution

(C) unusual in that it focused on educational attitudes rather than on educational practices

(D) controversial in its claims regarding educational opportunities for boys

(E) atypical in that it examined the education of girls

RC00349-04

522. The passage suggests that Woody would have agreed with which of the following claims regarding "An Essay on Woman"?

(A) It expressed attitudes concerning women's education that were reflected in new educational opportunities for women after 1750.

(B) It persuaded educators to offer greater educational opportunities to women in the 1750s.

(C) It articulated ideas about women's education that would not be realized until after the American Revolution.

(D) It offered one of the most original arguments in favor of women's education in the United States in the eighteenth century.

(E) It presented views about women's education that were still controversial in Woody's own time.

RC00349-05

523. The passage suggests that, with regard to the history of women's education in the United States, Kerber's work differs from Woody's primarily concerning which of the following?

(A) The extent to which women were interested in pursuing educational opportunities in the eighteenth century

(B) The extent of the support for educational opportunities for girls prior to the American Revolution

(C) The extent of public resistance to educational opportunities for women after the American Revolution

(D) Whether attitudes toward women's educational opportunities changed during the eighteenth century

(E) Whether women needed to be educated in order to contribute to the success of a republican form of government

RC00349-06

524. According to the passage, Kerber argued that political leaders thought that the form of government adopted by the United States after the American Revolution depended on which of the following for its success?

(A) Women assuming the sole responsibility for instilling political virtue in children

(B) Girls becoming the primary focus of a reformed educational system that emphasized political virtue

(C) The family serving as one of the primary means by which children were imbued with political virtue

(D) The family assuming many of the functions previously performed by schools and churches

(E) Men and women assuming equal responsibility for the management of schools, churches, and the family

Line In the Sonoran Desert of northwestern Mexico and southern Arizona, the flowers of several species of columnar cacti—cardon, saguaro, and organ pipe—were once exclusively pollinated at night by nectar-feeding bats, as their close relatives in arid tropical regions of southern Mexico still are. In these tropical regions, diurnal (daytime) visitors to columnar cactus flowers are ineffective pollinators because, by sunrise, the flowers' stigmas become unreceptive or the flowers close. Yet the flowers of the Sonoran Desert cacti have evolved to remain open after sunrise, allowing pollination by such diurnal visitors as bees and birds. Why have these cacti expanded their range of pollinators by remaining open and receptive in daylight?

This development at the northernmost range of columnar cacti may be due to a yearly variation in the abundance—and hence the reliability—of migratory nectar-feeding bats. Pollinators can be unreliable for several reasons. They can be dietary generalists whose fidelity to a particular species depends on the availability of alternative food sources. Or, they can be dietary specialists, but their abundance may vary widely from year to year, resulting in variable pollination of their preferred food species. Finally, they may be dietary specialists, but their abundance may be chronically low relative to the availability of flowers.

Recent data reveals that during spring in the Sonoran Desert, the nectar-feeding bats are specialists feeding on cardon, saguaro, and organpipe flowers. However, whereas cactus-flower abundance tends to be high during spring, bat population densities tend to be low except near maternity roosts. Moreover, in spring, diurnal cactus-pollinating birds are significantly more abundant in this region than are the nocturnal bats. Thus, with bats being unreliable cactus-flower pollinators, and daytime pollinators more abundant and therefore more reliable, selection favors the cactus flowers with traits that increase their range of pollinators. While data suggest that population densities of nectar-feeding bats are also low in tropical areas of southern Mexico, where bats are the exclusive pollinators of many species of columnar cacti, cactus-flower density and bat population density appear to be much more evenly balanced there: compared with the Sonoran Desert's cardon and saguaro, columnar cacti in southern Mexico produce far fewer flowers per night. Accordingly, despite their low population density, bats are able to pollinate nearly 100 percent of the available flowers.

Questions 525–527 refer to the passage.

RC00633-01

525. The primary purpose of the passage is to

(A) compare the adaptive responses of several species of columnar cacti in the Sonoran Desert with those in the arid tropical regions of southern Mexico

(B) discuss some of the possible causes of the relatively low abundance of migratory nectar-feeding bats in the Sonoran Desert

(C) provide a possible explanation for a particular evolutionary change in certain species of columnar cacti in the Sonoran Desert

(D) present recent findings that challenge a particular theory as to why several species of columnar cacti in the Sonoran Desert have expanded their range of pollinators

(E) compare the effectiveness of nocturnal and diurnal pollination for several different species of columnar cacti in the Sonoran Desert

RC00633-02

526. According to the passage, which of the following types of nectar-feeding pollinators is likely to be an unreliable pollinator of a particular cactus flower?

(A) A dietary specialist whose abundance is typically high in relation to that of the flower

(B) A dietary specialist whose abundance is at times significantly lower than that of the flower

(C) A dietary generalist for whom that flower's nectar is not a preferred food but is the most consistently available food

(D) A dietary generalist for whom that flower's nectar is slightly preferred to other available foods

(E) A dietary generalist that evolved from a species of dietary specialists

RC00633-06

527. According to the passage, present-day columnar cacti in the Sonoran Desert differ from their close relatives in southern Mexico in that the Sonoran cacti

(A) have flowers that remain open after sunset

(B) are pollinated primarily by dietary specialists

(C) can be pollinated by nectar-feeding bats

(D) have stigmas that are unreceptive to pollination at night

(E) are sometimes pollinated by diurnal pollinators

Line Manufacturers have to do more than build large manufacturing plants to realize economies of scale. It is true that as the capacity of a manufacturing operation rises, costs per unit of output fall as plant size approaches "minimum efficient scale," where the cost per unit of output reaches a minimum, determined roughly by the state of existing technology and size of the potential market. However, minimum efficient scale cannot be fully realized unless a steady "throughput" (the flow of materials through a plant) is attained. The throughput needed to maintain the optimal scale of production requires careful coordination not only of the flow of goods through the production process, but also of the flow of input from suppliers and the flow of output to wholesalers and final consumers. If throughput falls below a critical point, unit costs rise sharply and profits disappear. A manufacturer's fixed costs and "sunk costs" (original capital investment in the physical plant) do not decrease when production declines due to inadequate supplies of raw materials, problems on the factory floor, or inefficient sales networks. Consequently, potential economies of scale are based on the physical and engineering characteristics of the production facilities—that is, on tangible capital—but realized economies of scale are operational and organizational, and depend on knowledge, skills, experience, and teamwork—that is, on organized human capabilities, or intangible capital.

The importance of investing in intangible capital becomes obvious when one looks at what happens in new capital-intensive manufacturing industries. Such industries are quickly dominated, not by the first firms to acquire technologically sophisticated plants of theoretically optimal size, but rather by the first to exploit the full potential of such plants. Once some firms achieve this, a market becomes extremely hard to enter. Challengers must construct comparable plants and do so after the first movers have already worked out problems with suppliers or with new production processes. Challengers must create distribution networks and marketing systems in markets where first movers have all the contacts and know-how. And challengers must recruit management teams to compete with those that have already mastered these functional and strategic activities.

Questions 528–532 refer to the passage.

RC00121-01

528. The passage suggests that in order for a manufacturer in a capital-intensive industry to have a decisive advantage over competitors making similar products, the manufacturer must

(A) be the first in the industry to build production facilities of theoretically optimal size

(B) make every effort to keep fixed and sunk costs as low as possible

(C) be one of the first to operate its manufacturing plants at minimum efficient scale

(D) produce goods of higher quality than those produced by direct competitors

(E) stockpile raw materials at production sites in order to ensure a steady flow of such materials

RC00121-02

529. The passage suggests that which of the following is true of a manufacturer's fixed and sunk costs?

(A) The extent to which they are determined by market conditions for the goods being manufactured is frequently underestimated.

(B) If they are kept as low as possible, the manufacturer is very likely to realize significant profits.

(C) They are the primary factor that determines whether a manufacturer will realize economies of scale.

(D) They should be on a par with the fixed and sunk costs of the manufacturer's competitors.

(E) They are not affected by fluctuations in a manufacturing plant's throughput.

RC00121-03

530. In the context of the passage as a whole, the second paragraph serves primarily to

(A) provide an example to support the argument presented in the first paragraph

(B) evaluate various strategies discussed in the first paragraph

(C) introduce evidence that undermines the argument presented in the first paragraph

(D) anticipate possible objections to the argument presented in the first paragraph

(E) demonstrate the potential dangers of a commonly used strategy

RC00121-05

531. The passage LEAST supports the inference that a manufacturer's throughput could be adversely affected by

(A) a mistake in judgment regarding the selection of a wholesaler

(B) a breakdown in the factory's machinery

(C) a labor dispute on the factory floor

(D) an increase in the cost per unit of output

(E) a drop in the efficiency of the sales network

RC00121-07

532. The primary purpose of the passage is to

(A) point out the importance of intangible capital for realizing economies of scale in manufacturing

(B) show that manufacturers frequently gain a competitive advantage from investment in large manufacturing facilities

(C) argue that large manufacturing facilities often fail because of inadequate investment in both tangible and intangible capital

(D) suggest that most new industries are likely to be dominated by firms that build large manufacturing plants early

(E) explain why large manufacturing plants usually do not help manufacturers achieve economies of scale

Line A small number of the forest species of lepidoptera (moths and butterflies, which exist as caterpillars during most of their life cycle) exhibit regularly recurring patterns of population growth and decline—such fluctuations in population are known as population cycles. Although many different variables influence population levels, a regular pattern such as a population cycle seems to imply a dominant, driving force. Identification of that driving force, however, has proved surprisingly elusive despite considerable research. The common approach of studying causes of population cycles by measuring the mortality caused by different agents, such as predatory birds or parasites, has been unproductive in the case of lepidoptera. Moreover, population ecologists' attempts to alter cycles by changing the caterpillars' habitat and by reducing caterpillar populations have not succeeded. In short, the evidence implies that these insect populations, if not self-regulating, may at least be regulated by an agent more intimately connected with the insect than are predatory birds or parasites.

Recent work suggests that this agent may be a virus. For many years, viral disease had been reported in declining populations of caterpillars, but population ecologists had usually considered viral disease to have contributed to the decline once it was underway rather than to have initiated it. The recent work has been made possible by new techniques of molecular biology that allow viral DNA to be detected at low concentrations in the environment. Nuclear polyhedrosis viruses are hypothesized to be the driving force behind population cycles in lepidoptera in part because the viruses themselves follow an infectious cycle in which, if protected from direct sunlight, they may remain virulent for many years in the environment, embedded in durable crystals of polyhedrin protein. Once ingested by a caterpillar, the crystals dissolve, releasing the virus to infect the insect's cells. Late in the course of the infection, millions of new virus particles are formed and enclosed in polyhedrin crystals. These crystals reenter the environment after the insect dies and decomposes, thus becoming available to infect other caterpillars.

One of the attractions of this hypothesis is its broad applicability. Remarkably, despite significant differences in habitat and behavior, many species of lepidoptera have population cycles of similar length, between eight and eleven years. Nuclear polyhedrosis viral infection is one factor these disparate species share.

Questions 533–538 refer to the passage.

RC00120-05

533. The primary purpose of the passage is to

(A) describe the development of new techniques that may help to determine the driving force behind population cycles in lepidoptera

(B) present evidence that refutes a particular theory about the driving force behind population cycles in lepidoptera

(C) present a hypothesis about the driving force behind population cycles in lepidoptera

(D) describe the fluctuating patterns of population cycles in lepidoptera

(E) question the idea that a single driving force is behind population cycles in lepidoptera

RC00120-06

534. It can be inferred from the passage that the mortality caused by agents such as predatory birds or parasites was measured in an attempt to

(A) develop an explanation for the existence of lepidoptera population cycles

(B) identify behavioral factors in lepidoptera that affect survival rates

(C) identify possible methods for controlling lepidoptera population growth

(D) provide evidence that lepidoptera populations are self-regulating

(E) determine the life stages of lepidoptera at which mortality rates are highest

RC00120-01

535. Which of the following, if true, would most weaken the author's conclusion in lines 18–22 ?

(A) New research reveals that the number of species of birds and parasites that prey on lepidoptera has dropped significantly in recent years.

(B) New experiments in which the habitats of lepidoptera are altered in previously untried ways result in the shortening of lepidoptera population cycles.

(C) Recent experiments have revealed that the nuclear polyhedrosis virus is present in a number of predators and parasites of lepidoptera.

(D) Differences among the habitats of lepidoptera species make it difficult to assess the effects of weather on lepidoptera population cycles.

(E) Viral disease is typically observed in a large proportion of the lepidoptera population.

RC00120-02

536. According to the passage, before the discovery of new techniques for detecting viral DNA, population ecologists believed that viral diseases

(A) were not widely prevalent among insect populations generally

(B) affected only the caterpillar life stage of lepidoptera

(C) were the driving force behind lepidoptera population cycles

(D) attacked already declining caterpillar populations

(E) infected birds and parasites that prey on various species of lepidoptera

RC00120-03

537. According to the passage, nuclear polyhedrosis viruses can remain virulent in the environment only when

(A) the polyhedrin protein crystals dissolve

(B) caterpillar populations are in decline

(C) they are present in large numbers

(D) their concentration in a particular area remains low

(E) they are sheltered from direct sunlight

RC00120-04

538. It can be inferred from the passage that while inside its polyhedrin protein crystals, the nuclear polyhedrosis virus

(A) is exposed to direct sunlight

(B) is attractive to predators

(C) cannot infect caterpillars' cells

(D) cannot be ingested by caterpillars

(E) cannot be detected by new techniques of molecular biology

Line Resin is a plant secretion that hardens when exposed to air; fossilized resin is called amber. Although Pliny in the first century recognized that amber was produced from "marrow discharged by trees," amber has been widely misunderstood to be a semiprecious gem and has even been described in mineralogy textbooks. Confusion also persists surrounding the term "resin," which was defined before rigorous chemical analyses were available. Resin is often confused with gum, a substance produced in plants in response to bacterial infections, and with sap, an aqueous solution transported through certain plant tissues. Resin differs from both gum and sap in that scientists have not determined a physiological function for resin.

In the 1950s, entomologists posited that resin may function to repel or attract insects. Fraenkel conjectured that plants initially produced resin in nonspecific chemical responses to insect attack and that, over time, plants evolved that produced resin with specific repellent effects. But some insect species, he noted, might overcome the repellent effects, actually becoming attracted to the resin. This might induce the insects to feed on those plants or aid them in securing a breeding site. Later researchers suggested that resin mediates the complex interdependence, or "coevolution," of plants and insects over time. Such ideas led to the development of the specialized discipline of chemical ecology, which is concerned with the role of plant chemicals in interactions with other organisms and with the evolution and ecology of plant antiherbivore chemistry (plants' chemical defenses against attack by herbivores such as insects).

Questions 539–542 refer to the passage.

RC00223-03

539. According to the passage, which of the following is true of plant antiherbivore chemistry?

(A) Changes in a plant's antiherbivore chemistry may affect insect feeding behavior.

(B) A plant's repellent effects often involve interactions between gum and resin.

(C) A plant's antiherbivore responses assist in combating bacterial infections.

(D) Plant antiherbivore chemistry plays only a minor role in the coevolution of plants and insects.

(E) Researchers first studied repellent effects in plants beginning in the 1950s.

RC00223-04

540. Of the following topics, which would be most likely to be studied within the discipline of chemical ecology as it is described in the passage?

(A) Seeds that become attached to certain insects, which in turn carry away the seeds and aid in the reproductive cycle of the plant species in question

(B) An insect species that feeds on weeds detrimental to crop health and yield, and how these insects might aid in agricultural production

(C) The effects of deforestation on the life cycles of subtropical carnivorous plants and the insect species on which the plants feed

(D) The growth patterns of a particular species of plant that has proved remarkably resistant to herbicides

(E) Insects that develop a tolerance for feeding on a plant that had previously been toxic to them, and the resultant changes within that plant species

RC00223-05

541. The author refers to "bacterial infections" (see line 11) most likely in order to

(A) describe the physiological function that gum performs in plants

(B) demonstrate that sap is not the only substance that is transported through a plant's tissues

(C) explain how modern chemical analysis has been used to clarify the function of resin

(D) show that gum cannot serve as an effective defense against herbivores

(E) give an example of how confusion has arisen with regard to the nature of resin

RC00223-07

542. The author of the passage refers to Pliny most probably in order to

(A) give an example of how the nature of amber has been misunderstood in the past

(B) show that confusion about amber has long been more pervasive than confusion about resin

(C) make note of the first known reference to amber as a semiprecious gem

(D) point out an exception to a generalization about the history of people's understanding of amber

(E) demonstrate that Pliny believed amber to be a mineral

Line During the 1980s, many economic historians studying Latin America focused on the impact of the Great Depression of the 1930s. Most of these historians argued that although the Depression began earlier in Latin America than in the United States, it was less severe in Latin America and did not significantly impede industrial growth there. The historians' argument was grounded in national government records concerning tax revenues and exports and in government-sponsored industrial censuses, from which historians have drawn conclusions about total manufacturing output and profit levels across Latin America. However, economic statistics published by Latin American governments in the early twentieth century are neither reliable nor consistent; this is especially true of manufacturing data, which were gathered from factory owners for taxation purposes and which therefore may well be distorted. Moreover, one cannot assume a direct correlation between the output level and the profit level of a given industry as these variables often move in opposite directions. Finally, national and regional economies are composed of individual firms and industries, and relying on general, sweeping economic indicators may mask substantial variations among these different enterprises. For example, recent analyses of previously unexamined data on textile manufacturing in Brazil and Mexico suggest that the Great Depression had a more severe impact on this Latin American industry than scholars had recognized.

Questions 543–545 refer to the passage.

RC00333-01

543. The primary purpose of the passage is to

(A) compare the impact of the Great Depression on Latin America with its impact on the United States

(B) criticize a school of economic historians for failing to analyze the Great Depression in Latin America within a global context

(C) illustrate the risks inherent in comparing different types of economic enterprises to explain economic phenomena

(D) call into question certain scholars' views concerning the severity of the Great Depression in Latin America

(E) demonstrate that the Great Depression had a more severe impact on industry in Latin America than in certain other regions

RC00333-02

544. Which of the following conclusions about the Great Depression is best supported by the passage?

(A) It did not impede Latin American industrial growth as much as historians had previously thought.

(B) It had a more severe impact on the Brazilian and the Mexican textile industries than it had on Latin America as a region.

(C) It affected the Latin American textile industry more severely than it did any other industry in Latin America.

(D) The overall impact on Latin American industrial growth should be reevaluated by economic historians.

(E) Its impact on Latin America should not be compared with its impact on the United States.

RC00333-04

545. Which of the following, if true, would most strengthen the author's assertion regarding economic indicators in lines 25–27 ?

(A) During an economic depression, European textile manufacturers' profits rise while their industrial output remains steady.

(B) During a national economic recession, United States microchips manufacturers' profits rise sharply while United States steel manufacturers' profits plunge.

(C) During the years following a severe economic depression, textile manufacturers' output levels and profit levels increase in Brazil and Mexico but not in the rest of Latin America.

(D) Although Japanese industry as a whole recovers after an economic recession, it does not regain its previously high levels of production.

(E) While European industrial output increases in the years following an economic depression, total output remains below that of Japan or the United States.

Line Among the myths taken as fact by the environmental managers of most corporations is the belief that environmental regulations affect all competitors in a given industry uniformly. In reality, (5) regulatory costs—and therefore compliance—fall unevenly, economically disadvantaging some companies and benefiting others. For example, a plant situated near a number of larger noncompliant competitors is less likely to attract (10) the attention of local regulators than is an isolated plant, and less attention means lower costs.

Additionally, large plants can spread compliance costs such as waste treatment across a larger revenue base; on the other hand, some smaller (15) plants may not even be subject to certain provisions such as permit or reporting requirements by virtue of their size. Finally, older production technologies often continue to generate toxic wastes that were not regulated when the (20) technology was first adopted. New regulations have imposed extensive compliance costs on companies still using older industrial coal-fired burners that generate high sulfur dioxide and nitrogen oxide outputs, for example, whereas new (25) facilities generally avoid processes that would create such waste products. By realizing that they have discretion and that not all industries are affected equally by environmental regulation, environmental managers can help their companies (30) to achieve a competitive edge by anticipating regulatory pressure and exploring all possibilities for addressing how changing regulations will affect their companies specifically.

Questions 546–549 refer to the passage.

RC00272-02

546. It can be inferred from the passage that a large plant might have to spend more than a similar but smaller plant on environmental compliance because the larger plant is

(A) more likely to attract attention from local regulators

(B) less likely to be exempt from permit and reporting requirements

(C) less likely to have regulatory costs passed on to it by companies that supply its raw materials

(D) more likely to employ older production technologies

(E) more likely to generate wastes that are more environmentally damaging than those generated by smaller plants

RC00272-04

547. According to the passage, which of the following statements about sulfur dioxide and nitrogen oxide outputs is true?

(A) Older production technologies cannot be adapted so as to reduce production of these outputs as waste products.

(B) Under the most recent environmental regulations, industrial plants are no longer permitted to produce these outputs.

(C) Although these outputs are environmentally hazardous, some plants still generate them as waste products despite the high compliance costs they impose.

(D) Many older plants have developed innovative technological processes that reduce the amounts of these outputs generated as waste products.

(E) Since the production processes that generate these outputs are less costly than alternative processes, these less expensive processes are sometimes adopted despite their acknowledged environmental hazards.

RC00272-06

548. Which of the following best describes the relationship of the statement about large plants (lines 12–17) to the passage as a whole?

(A) It presents a hypothesis that is disproved later in the passage.

(B) It highlights an opposition between two ideas mentioned in the passage.

(C) It provides examples to support a claim made earlier in the passage.

(D) It exemplifies a misconception mentioned earlier in the passage.

(E) It draws an analogy between two situations described in the passage.

RC00272-07

549. The primary purpose of the passage is to

(A) address a widespread environmental management problem and suggest possible solutions

(B) illustrate varying levels of compliance with environmental regulation among different corporations

(C) describe the various alternatives to traditional methods of environmental management

(D) advocate increased corporate compliance with environmental regulation

(E) correct a common misconception about the impact of environmental regulations

Line Two works published in 1984 demonstrate contrasting approaches to writing the history of United States women. Buel and Buel's biography of Mary Fish (1736–1818) makes little effort to place her story in the context of recent historiography on women. Lebsock, meanwhile, attempts not only to write the history of women in one southern community, but also to redirect two decades of historiographical debate as to whether women gained or lost status in the nineteenth century as compared with the eighteenth century. Although both books offer the reader the opportunity to assess this controversy regarding women's status, only Lebsock's deals with it directly. She examines several different aspects of women's status, helping to refine and resolve the issues. She concludes that while women gained autonomy in some areas, especially in the private sphere, they lost it in many aspects of the economic sphere. More importantly, she shows that the debate itself depends on frame of reference: in many respects, women lost power in relation to men, for example, as certain jobs (delivering babies, supervising schools) were taken over by men. Yet women also gained power in comparison with their previous status, owning a higher proportion of real estate, for example. In contrast, Buel and Buel's biography provides ample raw material for questioning the myth, fostered by some historians, of a colonial golden age in the eighteenth century but does not give the reader much guidance in analyzing the controversy over women's status.

Questions 550–555 refer to the passage.

RC00109-01

550. The primary purpose of the passage is to

(A) examine two sides of a historiographical debate

(B) call into question an author's approach to a historiographical debate

(C) examine one author's approach to a historiographical debate

(D) discuss two authors' works in relationship to a historiographical debate

(E) explain the prevalent perspective on a historiographical debate

RC00109-02

551. The author of the passage mentions the supervision of schools primarily in order to

(A) remind readers of the role education played in the cultural changes of the nineteenth century in the United States

(B) suggest an area in which nineteenth-century American women were relatively free to exercise power

(C) provide an example of an occupation for which accurate data about women's participation are difficult to obtain

(D) speculate about which occupations were considered suitable for United States women of the nineteenth century

(E) illustrate how the answers to questions about women's status depend on particular contexts

RC00109-03

552. With which of the following characterizations of Lebsock's contribution to the controversy concerning women's status in the nineteenth-century United States would the author of the passage be most likely to agree?

(A) Lebsock has studied women from a formerly neglected region and time period.

(B) Lebsock has demonstrated the importance of frame of reference in answering questions about women's status.

(C) Lebsock has addressed the controversy by using women's current status as a frame of reference.

(D) Lebsock has analyzed statistics about occupations and property that were previously ignored.

(E) Lebsock has applied recent historiographical methods to the biography of a nineteenth-century woman.

RC00109-04

553. According to the passage, Lebsock's work differs from Buel and Buel's work in that Lebsock's work

(A) uses a large number of primary sources

(B) ignores issues of women's legal status

(C) refuses to take a position on women's status in the eighteenth century

(D) addresses larger historiographical issues

(E) fails to provide sufficient material to support its claims

RC00109-05

554. The passage suggests that Lebsock believes that compared to nineteenth-century American women, eighteenth-century American women were

(A) in many respects less powerful in relation to men

(B) more likely to own real estate

(C) generally more economically independent

(D) more independent in conducting their private lives

(E) less likely to work as school superintendents

RC00109-06

555. The passage suggests that Buel and Buel's biography of Mary Fish provides evidence for which of the following views of women's history?

(A) Women have lost power in relation to men since the colonial era.

(B) Women of the colonial era were not as likely to be concerned with their status as were women in the nineteenth century.

(C) The colonial era was not as favorable for women as some historians have believed.

(D) Women had more economic autonomy in the colonial era than in the nineteenth century.

(E) Women's occupations were generally more respected in the colonial era than in the nineteenth century.

Line Acting on the recommendation of a British government committee investigating the high incidence in white lead factories of illness among employees, most of whom were women, the Home (5) Secretary proposed in 1895 that Parliament enact legislation that would prohibit women from holding most jobs in white lead factories. Although the Women's Industrial Defence Committee (WIDC), formed in 1892 in response to earlier legislative (10) attempts to restrict women's labor, did not discount the white lead trade's potential health dangers, it opposed the proposal, viewing it as yet another instance of limiting women's work opportunities.

Also opposing the proposal was the Society for (15) Promoting the Employment of Women (SPEW), which attempted to challenge it by investigating the causes of illness in white lead factories. SPEW contended, and WIDC concurred, that controllable conditions in such factories were responsible for (20) the development of lead poisoning. SPEW provided convincing evidence that lead poisoning could be avoided if workers were careful and clean and if already extant workplace safety regulations were stringently enforced. However, the Women's Trade (25) Union League (WTUL), which had ceased in the late 1880s to oppose restrictions on women's labor, supported the eventually enacted proposal, in part because safety regulations were generally not being enforced in white lead factories, where there were (30) no unions (and little prospect of any) to pressure employers to comply with safety regulations.

Questions 556–558 refer to the passage.

RC00558-01

556. The passage suggests that WIDC differed from WTUL in which of the following ways?

(A) WIDC believed that the existing safety regulations were adequate to protect women's health, whereas WTUL believed that such regulations needed to be strengthened.

(B) WIDC believed that unions could not succeed in pressuring employers to comply with such regulations, whereas WTUL believed that unions could succeed in doing so.

(C) WIDC believed that lead poisoning in white lead factories could be avoided by controlling conditions there, whereas WTUL believed that lead poisoning in such factories could not be avoided no matter how stringently safety regulations were enforced.

(D) At the time that the legislation concerning white lead factories was proposed, WIDC was primarily concerned with addressing health conditions in white lead factories, whereas WTUL was concerned with improving working conditions in all types of factories.

(E) At the time that WIDC was opposing legislative attempts to restrict women's labor, WTUL had already ceased to do so.

RC00558-02

557. Which of the following, if true, would most clearly support the contention attributed to SPEW in lines 17–20 ?

(A) Those white lead factories that most strongly enforced regulations concerning worker safety and hygiene had the lowest incidences of lead poisoning among employees.

(B) The incidence of lead poisoning was much higher among women who worked in white lead factories than among women who worked in other types of factories.

(C) There were many household sources of lead that could have contributed to the incidence of lead poisoning among women who also worked outside the home in the late nineteenth century.

(D) White lead factories were more stringent than were certain other types of factories in their enforcement of workplace safety regulations.

(E) Even brief exposure to the conditions typically found in white lead factories could cause lead poisoning among factory workers.

RC00558-06

558. The passage is primarily concerned with

(A) presenting various groups' views of the motives of those proposing certain legislation

(B) contrasting the reasoning of various groups concerning their positions on certain proposed legislation

(C) tracing the process whereby certain proposed legislation was eventually enacted

(D) assessing the success of tactics adopted by various groups with respect to certain proposed legislation

(E) evaluating the arguments of various groups concerning certain proposed legislation

Line It is an odd but indisputable fact that the seventeenth-century English women who are generally regarded as among the forerunners of modern feminism are almost all identified with the (5) Royalist side in the conflict between Royalists and Parliamentarians known as the English Civil Wars. Since Royalist ideology is often associated with the radical patriarchalism of seventeenth-century political theorist Robert Filmer—a patriarchalism (10) that equates family and kingdom and asserts the divinely ordained absolute power of the king and, by analogy, of the male head of the household—historians have been understandably puzzled by the fact that Royalist women wrote the earliest (15) extended criticisms of the absolute subordination of women in marriage and the earliest systematic assertions of women's rational and moral equality with men. Some historians have questioned the facile equation of Royalist ideology with Filmerian (20) patriarchalism; and indeed, there may have been no consistent differences between Royalists and Parliamentarians on issues of family organization and women's political rights, but in that case one would expect early feminists to be equally divided (25) between the two sides.

Catherine Gallagher argues that Royalism engendered feminism because the ideology of absolute monarchy provided a transition to an ideology of the absolute self. She cites the example (30) of the notoriously eccentric author Margaret Cavendish (1626–1673), duchess of Newcastle. Cavendish claimed to be as ambitious as any woman could be, but knowing that as a woman she was excluded from the pursuit of power in the real (35) world, she resolved to be mistress of her own world, the "immaterial world" that any person can create within her own mind—and, as a writer, on paper. In proclaiming what she called her "singularity," Cavendish insisted that she was a (40) self-sufficient being within her mental empire, the center of her own subjective universe rather than a satellite orbiting a dominant male planet. In justifying this absolute singularity, Cavendish repeatedly invoked the model of the absolute (45) monarch, a figure that became a metaphor for the self-enclosed, autonomous nature of the individual person. Cavendish's successors among early feminists retained her notion of woman's sovereign self, but they also sought to break free from the (50) complete political and social isolation that her absolute singularity entailed.

Questions 559–564 refer to the passage.

RC00433-02

559. The author of the passage refers to Robert Filmer (see line 9) primarily in order to

(A) show that Royalist ideology was somewhat more radical than most historians appear to realize

(B) qualify the claim that patriarchalism formed the basis of Royalist ideology

(C) question the view that most early feminists were associated with the Royalist faction

(D) highlight an apparent tension between Royalist ideology and the ideas of early feminists

(E) argue that Royalists held conflicting opinions on issues of family organization and women's political rights

RC00433-11

560. The passage suggests which of the following about the seventeenth-century English women mentioned in line 2 ?

(A) Their status as forerunners of modern feminism is not entirely justified.

(B) They did not openly challenge the radical patriarchalism of Royalist Filmerian ideology.

(C) Cavendish was the first among these women to criticize women's subordination in marriage and assert women's equality with men.

(D) Their views on family organization and women's political rights were diametrically opposed to those of both Royalist and Parliamentarian ideology.

(E) Historians would be less puzzled if more of them were identified with the Parliamentarian side in the English Civil Wars.

RC00433-04

561. The passage suggests that Margaret Cavendish's decision to become an author was motivated, at least in part, by a desire to

(A) justify her support for the Royalist cause

(B) encourage her readers to work toward eradicating Filmerian patriarchalism

(C) persuade other women to break free from their political and social isolation

(D) analyze the causes for women's exclusion from the pursuit of power

(E) create a world over which she could exercise total control

RC00433-08

562. The phrase "a satellite orbiting a dominant male planet" (lines 41–42) refers most directly to

(A) Cavendish's concept that each woman is a sovereign self

(B) the complete political and social isolation of absolute singularity

(C) the immaterial world that a writer can create on paper

(D) the absolute subordination of women in a patriarchal society

(E) the metaphorical figure of the absolute monarch

RC00433-06

563. The primary purpose of the passage is to

(A) trace the historical roots of a modern sociopolitical movement

(B) present one scholar's explanation for a puzzling historical phenomenon

(C) contrast two interpretations of the ideological origins of a political conflict

(D) establish a link between the ideology of an influential political theorist and that of a notoriously eccentric writer

(E) call attention to some points of agreement between opposing sides in an ideological debate

RC00433-09

564. Which of the following, if true, would most clearly undermine Gallagher's explanation of the link between Royalism and feminism?

(A) Because of their privileged backgrounds, Royalist women were generally better educated than were their Parliamentarian counterparts.

(B) Filmer himself had read some of Cavendish's early writings and was highly critical of her ideas.

(C) Cavendish's views were highly individual and were not shared by the other Royalist women who wrote early feminist works.

(D) The Royalist and Parliamentarian ideologies were largely in agreement on issues of family organization and women's political rights.

(E) The Royalist side included a sizable minority faction that was opposed to the more radical tendencies of Filmerian patriarchalism.

Line Frazier and Mosteller assert that medical research could be improved by a move toward larger, simpler clinical trials of medical treatments. Currently, researchers collect far more background information on patients than is strictly required for their trials—substantially more than hospitals collect—thereby escalating costs of data collection, storage, and analysis. Although limiting information collection could increase the risk that researchers will overlook facts relevant to a study, Frazier and Mosteller contend that such risk, never entirely eliminable from research, would still be small in most studies. Only in research on entirely new treatments are new and unexpected variables likely to arise.

Frazier and Mosteller propose not only that researchers limit data collection on individual patients but also that researchers enroll more patients in clinical trials, thereby obtaining a more representative sample of the total population with the disease under study. Often researchers restrict study participation to patients who have no ailments besides those being studied. A treatment judged successful under these ideal conditions can then be evaluated under normal conditions. Broadening the range of trial participants, Frazier and Mosteller suggest, would enable researchers to evaluate a treatment's efficacy for diverse patients under various conditions and to evaluate its effectiveness for different patient subgroups. For example, the value of a treatment for a progressive disease may vary according to a patient's stage of disease. Patients' ages may also affect a treatment's efficacy.

Questions 565–569 refer to the passage.

RC00312-01

565. The passage is primarily concerned with

(A) identifying two practices in medical research that may affect the accuracy of clinical trials

(B) describing aspects of medical research that tend to drive up costs

(C) evaluating an analysis of certain shortcomings of current medical research practices

(D) describing proposed changes to the ways in which clinical trials are conducted

(E) explaining how medical researchers have traditionally conducted clinical trials and how such trials are likely to change

RC00312-03

566. Which of the following can be inferred from the passage about a study of the category of patients referred to in lines 20–22 ?

(A) Its findings might have limited applicability.

(B) It would be prohibitively expensive in its attempt to create ideal conditions.

(C) It would be the best way to sample the total population of potential patients.

(D) It would allow researchers to limit information collection without increasing the risk that important variables could be overlooked.

(E) Its findings would be more accurate if it concerned treatments for a progressive disease than if it concerned treatments for a nonprogressive disease.

RC00312-04

567. It can be inferred from the passage that a study limited to patients like those mentioned in lines 20–22 would have which of the following advantages over the kind of study proposed by Frazier and Mosteller?

(A) It would yield more data and its findings would be more accurate.

(B) It would cost less in the long term, though it would be more expensive in its initial stages.

(C) It would limit the number of variables researchers would need to consider when evaluating the treatment under study.

(D) It would help researchers to identify subgroups of patients with secondary conditions that might also be treatable.

(E) It would enable researchers to assess the value of an experimental treatment for the average patient.

RC00312-05

568. The author mentions patients' ages (line 32) primarily in order to

(A) identify the most critical variable differentiating subgroups of patients

(B) cast doubt on the advisability of implementing Frazier and Mosteller's proposals about medical research

(C) indicate why progressive diseases may require different treatments at different stages

(D) illustrate a point about the value of enrolling a wide range of patients in clinical trials

(E) substantiate an argument about the problems inherent in enrolling large numbers of patients in clinical trials

RC00312-06

569. According to the passage, which of the following describes a result of the way in which researchers generally conduct clinical trials?

(A) They expend resources on the storage of information likely to be irrelevant to the study they are conducting.

(B) They sometimes compromise the accuracy of their findings by collecting and analyzing more information than is strictly required for their trials.

(C) They avoid the risk of overlooking variables that might affect their findings, even though doing so raises their research costs.

(D) Because they attempt to analyze too much information, they overlook facts that could emerge as relevant to their studies.

(E) In order to approximate the conditions typical of medical treatment, they base their methods of information collection on those used by hospitals.

Line There are recent reports of apparently drastic declines in amphibian populations and of extinctions of a number of the world's endangered amphibian species. These declines, if real, may be signs of a general trend toward extinction, and many environmentalists have claimed that immediate environmental action is necessary to remedy this "amphibian crisis," which, in their view, is an indicator of general and catastrophic environmental degradation due to human activity.

To evaluate these claims, it is useful to make a preliminary distinction that is far too often ignored. A declining population should not be confused with an endangered one. An endangered population is always rare, almost always small, and, by definition, under constant threat of extinction even without a proximate cause in human activities. Its disappearance, however unfortunate, should come as no great surprise. Moreover, chance events—which may indicate nothing about the direction of trends in population size—may lead to its extinction. The probability of extinction due to such random factors depends on the population size and is independent of the prevailing direction of change in that size.

For biologists, population declines are potentially more worrisome than extinctions. Persistent declines, especially in large populations, indicate a changed ecological context. Even here, distinctions must again be made among declines that are only apparent (in the sense that they are part of habitual cycles or of normal fluctuations), declines that take a population to some lower but still acceptable level, and those that threaten extinction (e.g., by taking the number of individuals below the minimum viable population). Anecdotal reports of population decreases cannot distinguish among these possibilities, and some amphibian populations have shown strong fluctuations in the past.

It is indisputably true that there is simply not enough long-term scientific data on amphibian populations to enable researchers to identify real declines in amphibian populations. Many fairly common amphibian species declared all but extinct after severe declines in the 1950s and 1960s have subsequently recovered, and so might the apparently declining populations that have generated the current appearance of an amphibian crisis. Unfortunately, long-term data will not soon be forthcoming, and postponing environmental action while we wait for it may doom species and whole ecosystems to extinction.

Questions 570–575 refer to the passage.

RC00229-01

570. The primary purpose of the passage is to

(A) assess the validity of a certain view
(B) distinguish between two phenomena
(C) identify the causes of a problem
(D) describe a disturbing trend
(E) allay concern about a particular phenomenon

RC00229-02

571. It can be inferred from the passage that the author believes which of the following to be true of the environmentalists mentioned in lines 5–6 ?

(A) They have wrongly chosen to focus on anecdotal reports rather than on the long-term data that are currently available concerning amphibians.
(B) Their recommendations are flawed because their research focuses too narrowly on a single category of animal species.
(C) Their certainty that population declines in general are caused by environmental degradation is not warranted.
(D) They have drawn premature conclusions concerning a crisis in amphibian populations from recent reports of declines.
(E) They have overestimated the effects of chance events on trends in amphibian populations.

RC00229-03

572. It can be inferred from the passage that the author believes which of the following to be true of the amphibian extinctions that have recently been reported?

(A) They have resulted primarily from human activities causing environmental degradation.
(B) They could probably have been prevented if timely action had been taken to protect the habitats of amphibian species.
(C) They should not come as a surprise, because amphibian populations generally have been declining for a number of years.
(D) They have probably been caused by a combination of chance events.
(E) They do not clearly constitute evidence of general environmental degradation.

RC00229-04

573. According to the passage, each of the following is true of endangered amphibian species EXCEPT:

(A) They are among the rarest kinds of amphibians.

(B) They generally have populations that are small in size.

(C) They are in constant danger of extinction.

(D) Those with decreasing populations are the most likely candidates for immediate extinction.

(E) They are in danger of extinction due to events that sometimes have nothing to do with human activities.

RC00229-05

574. Which of the following most accurately describes the organization of the passage?

(A) A question is raised, a distinction regarding it is made, and the question is answered.

(B) An interpretation is presented, its soundness is examined, and a warning is given.

(C) A situation is described, its consequences are analyzed, and a prediction is made.

(D) Two interpretations of a phenomenon are described, and one of them is rejected as invalid.

(E) Two methods for analyzing a phenomenon are compared, and further study of the phenomenon is recommended.

RC00229-06

575. Which of the following best describes the function of the sentence in lines 35–38 ?

(A) To give an example of a particular kind of study

(B) To cast doubt on an assertion made in the previous sentence

(C) To raise an objection to a view presented in the first paragraph

(D) To provide support for a view presented in the first paragraph

(E) To introduce an idea that will be countered in the following paragraph

Line While the most abundant and dominant species within a particular ecosystem is often crucial in perpetuating the ecosystem, a "keystone" species, here defined as one whose effects are much larger than would be predicted from its abundance, can also play a vital role. But because complex species interactions may be involved, identifying a keystone species by removing the species and observing changes in the ecosystem is problematic. It might seem that certain traits would clearly define a species as a keystone species; for example, *Pisaster ochraceus* is often a keystone predator because it consumes and suppresses mussel populations, which in the absence of this starfish can be a dominant species. But such predation on a dominant or potentially dominant species occurs in systems that do as well as in systems that do not have species that play keystone roles. Moreover, whereas *P. ochraceus* occupies an unambiguous keystone role on wave-exposed rocky headlands, in more wave-sheltered habitats the impact of *P. ochraceus* predation is weak or nonexistent, and at certain sites sand burial is responsible for eliminating mussels. Keystone status appears to depend on context, whether of particular geography or of such factors as community diversity (for example, a reduction in species diversity may thrust more of the remaining species into keystone roles) and length of species interaction (since newly arrived species in particular may dramatically affect ecosystems).

Questions 576–579 refer to the passage.

RC00556-03

576. The passage mentions which of the following as a factor that affects the role of *P. ochraceus* as a keystone species within different habitats?

(A) The degree to which the habitat is sheltered from waves

(B) The degree to which other animals within a habitat prey on mussels

(C) The fact that mussel populations are often not dominant within some habitats occupied by *P. ochraceus*

(D) The size of the *P. ochraceus* population within the habitat

(E) The fact that there is great species diversity within some habitats occupied by *P. ochraceus*

RC00556-04

577. Which of the following hypothetical experiments most clearly exemplifies the method of identifying species' roles that the author considers problematic?

(A) A population of seals in an Arctic habitat is counted in order to determine whether it is the dominant species in that ecosystem.

(B) A species of fish that is a keystone species in one marine ecosystem is introduced into another marine ecosystem to see whether the species will come to occupy a keystone role.

(C) In order to determine whether a species of monkey is a keystone species within a particular ecosystem, the monkeys are removed from that ecosystem and the ecosystem is then studied.

(D) Different mountain ecosystems are compared to determine how geography affects a particular species' ability to dominate its ecosystem.

(E) In a grassland experiencing a changing climate, patterns of species extinction are traced in order to evaluate the effect of climate changes on keystone species in that grassland.

RC00556-05

578. Which of the following, if true, would most clearly support the argument about keystone status advanced in the last sentence of the passage (lines 24–31)?

(A) A species of bat is primarily responsible for keeping insect populations within an ecosystem low, and the size of the insect population in turn affects bird species within that ecosystem.

(B) A species of iguana occupies a keystone role on certain tropical islands, but does not play that role on adjacent tropical islands that are inhabited by a greater number of animal species.

(C) Close observation of a savannah ecosystem reveals that more species occupy keystone roles within that ecosystem than biologists had previously believed.

(D) As a keystone species of bee becomes more abundant, it has a larger effect on the ecosystem it inhabits.

(E) A species of moth that occupies a keystone role in a prairie habitat develops coloration patterns that camouflage it from potential predators.

RC00556-06

579. The passage suggests which of the following about the identification of a species as a keystone species?

(A) Such an identification depends primarily on the species' relationship to the dominant species.

(B) Such an identification can best be made by removing the species from a particular ecosystem and observing changes that occur in the ecosystem.

(C) Such an identification is likely to be less reliable as an ecosystem becomes less diverse.

(D) Such an identification seems to depend on various factors within the ecosystem.

(E) Such an identification can best be made by observing predation behavior.

Line Conodonts, the spiky phosphatic remains (bones and teeth composed of calcium phosphate) of tiny marine animals that probably appeared about 520 million years ago, were once among the most (5) controversial of fossils. Both the nature of the organism to which the remains belonged and the function of the remains were unknown. However, since the 1981 discovery of fossils preserving not just the phosphatic elements but also other remains (10) of the tiny soft-bodied animals (also called conodonts) that bore them, scientists' reconstructions of the animals' anatomy have had important implications for hypotheses concerning the development of the vertebrate skeleton.

(15) The vertebrate skeleton had traditionally been regarded as a defensive development, champions of this view postulating that it was only with the much later evolution of jaws that vertebrates became predators. The first vertebrates, which were soft-(20) bodied, would have been easy prey for numerous invertebrate carnivores, especially if these early vertebrates were sedentary suspension feeders. Thus, traditionalists argued, these animals developed coverings of bony scales or plates, and teeth were (25) secondary features, adapted from the protective bony scales. Indeed, external skeletons of this type are common among the well-known fossils of ostracoderms, jawless vertebrates that existed from approximately 500 to 400 million years ago.

(30) However, other paleontologists argued that many of the definitive characteristics of vertebrates, such as paired eyes and muscular and skeletal adaptations for active life, would not have evolved unless the first vertebrates were predatory. Teeth were more (35) primitive than external armor according to this view, and the earliest vertebrates were predators.

The stiffening notochord along the back of the body, V-shaped muscle blocks along the sides, and posterior tail fins help to identify conodonts as (40) among the most primitive of vertebrates. The lack of any mineralized structures apart from the elements in the mouth indicates that conodonts were more primitive than the armored jawless fishes such as the ostracoderms. It now appears that the hard parts that (45) first evolved in the mouth of an animal improved its efficiency as a predator, and that aggression rather than protection was the driving force behind the origin of the vertebrate skeleton.

Questions 580–582 refer to the passage.

RC00073-01

580. According to the passage, the anatomical evidence provided by the preserved soft bodies of conodonts led scientists to conclude that

(A) conodonts had actually been invertebrate carnivores

(B) conodonts' teeth were adapted from protective bony scales

(C) conodonts were primitive vertebrate suspension feeders

(D) primitive vertebrates with teeth appeared earlier than armored vertebrates

(E) scientists' original observations concerning the phosphatic remains of conodonts were essentially correct

RC00073-03

581. The second paragraph in the passage serves primarily to

(A) outline the significance of the 1981 discovery of conodont remains to the debate concerning the development of the vertebrate skeleton

(B) contrast the traditional view of the development of the vertebrate skeleton with a view derived from the 1981 discovery of conodont remains

(C) contrast the characteristics of the ostracoderms with the characteristics of earlier soft-bodied vertebrates

(D) explain the importance of the development of teeth among the earliest vertebrate predators

(E) present the two sides of the debate concerning the development of the vertebrate skeleton

RC00073-08

582. It can be inferred that on the basis of the 1981 discovery of conodont remains, paleontologists could draw which of the following conclusions?

(A) The earliest vertebrates were sedentary suspension feeders.

(B) Ostracoderms were not the earliest vertebrates.

(C) Defensive armor preceded jaws among vertebrates.

(D) Paired eyes and adaptations for activity are definitive characteristics of vertebrates.

(E) Conodonts were unlikely to have been predators.

Line Jon Clark's study of the effect of the modernization of a telephone exchange on exchange maintenance work and workers is a solid contribution to a debate that encompasses two lively issues in the history and sociology of technology: technological determinism and social constructivism.

Clark makes the point that the characteristics of a technology have a decisive influence on job skills and work organization. Put more strongly, technology can be a primary determinant of social and managerial organization. Clark believes this possibility has been obscured by the recent sociological fashion, exemplified by Braverman's analysis, that emphasizes the way machinery reflects social choices. For Braverman, the shape of a technological system is subordinate to the manager's desire to wrest control of the labor process from the workers. Technological change is construed as the outcome of negotiations among interested parties who seek to incorporate their own interests into the design and configuration of the machinery. This position represents the new mainstream called social constructivism.

The constructivists gain acceptance by misrepresenting technological determinism: technological determinists are supposed to believe, for example, that machinery imposes appropriate forms of order on society. The alternative to constructivism, in other words, is to view technology as existing outside society, capable of directly influencing skills and work organization.

Clark refutes the extremes of the constructivists by both theoretical and empirical arguments. Theoretically he defines "technology" in terms of relationships between social and technical variables. Attempts to reduce the meaning of technology to cold, hard metal are bound to fail, for machinery is just scrap unless it is organized functionally and supported by appropriate systems of operation and maintenance. At the empirical level Clark shows how a change at the telephone exchange from maintenance-intensive electromechanical switches to semielectronic switching systems altered work tasks, skills, training opportunities, administration, and organization of workers. Some changes Clark attributes to the particular way management and labor unions negotiated the introduction of the technology, whereas others are seen as arising from the capabilities and nature of the technology itself. Thus Clark helps answer the question: "When is social choice decisive and when are the concrete characteristics of technology more important?"

Questions 583–590 refer to the passage.

RC00013-01

583. The primary purpose of the passage is to

(A) advocate a more positive attitude toward technological change

(B) discuss the implications for employees of the modernization of a telephone exchange

(C) consider a successful challenge to the constructivist view of technological change

(D) challenge the position of advocates of technological determinism

(E) suggest that the social causes of technological change should be studied in real situations

RC00013-02

584. Which of the following statements about the modernization of the telephone exchange is supported by information in the passage?

(A) The new technology reduced the role of managers in labor negotiations.

(B) The modernization was implemented without the consent of the employees directly affected by it.

(C) The modernization had an impact that went significantly beyond maintenance routines.

(D) Some of the maintenance workers felt victimized by the new technology.

(E) The modernization gave credence to the view of advocates of social constructivism.

RC00013-03

585. Which of the following most accurately describes Clark's opinion of Braverman's position?

(A) He respects its wide-ranging popularity.

(B) He disapproves of its misplaced emphasis on the influence of managers.

(C) He admires the consideration it gives to the attitudes of the workers affected.

(D) He is concerned about its potential to impede the implementation of new technologies.

(E) He is sympathetic to its concern about the impact of modern technology on workers.

RC00013-04

586. The information in the passage suggests that which of the following statements from hypothetical sociological studies of change in industry most clearly exemplifies the social constructivists' version of technological determinism?

(A) It is the available technology that determines workers' skills, rather than workers' skills influencing the application of technology.

(B) All progress in industrial technology grows out of a continuing negotiation between technological possibility and human need.

(C) Some organizational change is caused by people; some is caused by computer chips.

(D) Most major technological advances in industry have been generated through research and development.

(E) Some industrial technology eliminates jobs, but educated workers can create whole new skills areas by the adaptation of the technology.

RC00013-05

587. The information in the passage suggests that Clark believes that which of the following would be true if social constructivism had not gained widespread acceptance?

(A) Businesses would be more likely to modernize without considering the social consequences of their actions.

(B) There would be greater understanding of the role played by technology in producing social change.

(C) Businesses would be less likely to understand the attitudes of employees affected by modernization.

(D) Modernization would have occurred at a slower rate.

(E) Technology would have played a greater part in determining the role of business in society.

RC00013-07

588. According to the passage, constructivists employed which of the following to promote their argument?

(A) Empirical studies of business situations involving technological change

(B) Citation of managers supportive of their position

(C) Construction of hypothetical situations that support their view

(D) Contrasts of their view with a misstatement of an opposing view

(E) Descriptions of the breadth of impact of technological change

RC00013-08

589. The author of the passage uses the expression "are supposed to" in line 25 primarily in order to

(A) suggest that a contention made by constructivists regarding determinists is inaccurate

(B) define the generally accepted position of determinists regarding the implementation of technology

(C) engage in speculation about the motivation of determinists

(D) lend support to a comment critical of the position of determinists

(E) contrast the historical position of determinists with their position regarding the exchange modernization

RC00013-09

590. Which of the following statements about Clark's study of the telephone exchange can be inferred from information in the passage?

(A) Clark's reason for undertaking the study was to undermine Braverman's analysis of the function of technology.

(B) Clark's study suggests that the implementation of technology should be discussed in the context of conflict between labor and management.

(C) Clark examined the impact of changes in the technology of switching at the exchange in terms of overall operations and organization.

(D) Clark concluded that the implementation of new switching technology was equally beneficial to management and labor.

(E) Clark's analysis of the change in switching systems applies only narrowly to the situation at the particular exchange that he studied.

Line Because the framers of the United States Constitution (written in 1787) believed that protecting property rights relating to inventions would encourage the new nation's economic growth, they gave Congress—the national legislature—a constitutional mandate to grant patents for inventions. The resulting patent system has served as a model for those in other nations. Recently, however, scholars have questioned whether the American system helped achieve the framers' goals. These scholars have contended that from 1794 to roughly 1830, American inventors were unable to enforce property rights because judges were "antipatent" and routinely invalidated patents for arbitrary reasons. This argument is based partly on examination of court decisions in cases where patent holders ("patentees") brought suit alleging infringement of their patent rights. In the 1820s, for instance, 75 percent of verdicts were decided against the patentee. The proportion of verdicts for the patentee began to increase in the 1830s, suggesting to these scholars that judicial attitudes toward patent rights began shifting then.

Not all patent disputes in the early nineteenth century were litigated, however, and litigated cases were not drawn randomly from the population of disputes. Therefore the rate of verdicts in favor of patentees cannot be used by itself to gauge changes in judicial attitudes or enforceability of patent rights. If early judicial decisions were prejudiced against patentees, one might expect that subsequent courts—allegedly more supportive of patent rights—would reject the former legal precedents. But pre-1830 cases have been cited as frequently as later decisions, and they continue to be cited today, suggesting that the early decisions, many of which clearly declared that patent rights were a just recompense for inventive ingenuity, provided a lasting foundation for patent law. The proportion of judicial decisions in favor of patentees began to increase during the 1830s because of a change in the underlying population of cases brought to trial. This change was partly due to an 1836 revision to the patent system: an examination procedure, still in use today, was instituted in which each application is scrutinized for its adherence to patent law. Previously, patents were automatically granted upon payment of a $30 fee.

Questions 591–595 refer to the passage.

RC00650-02

591. The passage implies that which of the following was a reason that the proportion of verdicts in favor of patentees began to increase in the 1830s ?

(A) Patent applications approved after 1836 were more likely to adhere closely to patent law.

(B) Patent laws enacted during the 1830s better defined patent rights.

(C) Judges became less prejudiced against patentees during the 1830s.

(D) After 1836, litigated cases became less representative of the population of patent disputes.

(E) The proportion of patent disputes brought to trial began to increase after 1836.

RC00650-03

592. The passage implies that the scholars mentioned in line 8 would agree with which of the following criticisms of the American patent system before 1830 ?

(A) Its definition of property rights relating to inventions was too vague to be useful.

(B) Its criteria for the granting of patents were not clear.

(C) It made it excessively difficult for inventors to receive patents.

(D) It led to excessive numbers of patent-infringement suits.

(E) It failed to encourage national economic growth.

RC00650-06

593. It can be inferred from the passage that the frequency with which pre-1830 cases have been cited in court decisions is an indication that

(A) judicial support for patent rights was strongest in the period before 1830

(B) judicial support for patent rights did not increase after 1830

(C) courts have returned to judicial standards that prevailed before 1830

(D) verdicts favoring patentees in patent-infringement suits did not increase after 1830

(E) judicial bias against patentees persisted after 1830

RC00650-07

594. It can be inferred from the passage that the author and the scholars referred to in line 21 disagree about which of the following aspects of the patents defended in patent-infringement suits before 1830 ?

(A) Whether the patents were granted for inventions that were genuinely useful

(B) Whether the patents were actually relevant to the growth of the United States economy

(C) Whether the patents were particularly likely to be annulled by judges

(D) Whether the patents were routinely invalidated for reasons that were arbitrary

(E) Whether the patents were vindicated at a significantly lower rate than patents in later suits

RC00650-08

595. The author of the passage cites which of the following as evidence challenging the argument referred to in lines 14–15 ?

(A) The proportion of cases that were decided against patentees in the 1820s

(B) The total number of patent disputes that were litigated from 1794 to 1830

(C) The fact that later courts drew upon the legal precedents set in pre-1830 patent cases

(D) The fact that the proportion of judicial decisions in favor of patentees began to increase during the 1830s

(E) The constitutional rationale for the 1836 revision of the patent system

Line Jacob Burckhardt's view that Renaissance European women "stood on a footing of perfect equality" with Renaissance men has been repeatedly cited by feminist scholars as a prelude to their (5) presentation of rich historical evidence of women's inequality. In striking contrast to Burckhardt, Joan Kelly in her famous 1977 essay, "Did Women Have a Renaissance?" argued that the Renaissance was a period of economic and social decline for women (10) relative both to Renaissance men and to medieval women. Recently, however, a significant trend among feminist scholars has entailed a rejection of both Kelly's dark vision of the Renaissance and Burckhardt's rosy one. Many recent works by these (15) scholars stress the ways in which differences among Renaissance women—especially in terms of social status and religion—work to complicate the kinds of generalizations both Burckhardt and Kelly made on the basis of their observations about (20) upper-class Italian women.

The trend is also evident, however, in works focusing on those middle- and upper-class European women whose ability to write gives them disproportionate representation in the historical (25) record. Such women were, simply by virtue of their literacy, members of a tiny minority of the population, so it is risky to take their descriptions of their experiences as typical of "female experience" in any general sense. Tina Krontiris, for example, in (30) her fascinating study of six Renaissance women writers, does tend at times to conflate "women" and "women writers," assuming that women's gender, irrespective of other social differences, including literacy, allows us to view women as a homogeneous (35) social group and make that group an object of analysis. Nonetheless, Krontiris makes a significant contribution to the field and is representative of those authors who offer what might be called a cautiously optimistic assessment of Renaissance (40) women's achievements, although she also stresses the social obstacles Renaissance women faced when they sought to raise their "oppositional voices." Krontiris is concerned to show women intentionally negotiating some power for themselves (45) (at least in the realm of public discourse) against potentially constraining ideologies, but in her sober and thoughtful concluding remarks, she suggests that such verbal opposition to cultural stereotypes was highly circumscribed; women seldom attacked (50) the basic assumptions in the ideologies that oppressed them.

Questions 596–602 refer to the passage.

RC00313-01

596. The author of the passage discusses Krontiris primarily to provide an example of a writer who

(A) is highly critical of the writings of certain Renaissance women

(B) supports Kelly's view of women's status during the Renaissance

(C) has misinterpreted the works of certain Renaissance women

(D) has rejected the views of both Burckhardt and Kelly

(E) has studied Renaissance women in a wide variety of social and religious contexts

RC00313-02

597. According to the passage, Krontiris's work differs from that of the scholars mentioned in line 12 in which of the following ways?

(A) Krontiris's work stresses the achievements of Renaissance women rather than the obstacles to their success.

(B) Krontiris's work is based on a reinterpretation of the work of earlier scholars.

(C) Krontiris's views are at odds with those of both Kelly and Burkhardt.

(D) Krontiris's work focuses on the place of women in Renaissance society.

(E) Krontiris's views are based exclusively on the study of a privileged group of women.

RC00313-03

598. According to the passage, feminist scholars cite Burckhardt's view of Renaissance women primarily for which of the following reasons?

(A) Burckhardt's view forms the basis for most arguments refuting Kelly's point of view.

(B) Burckhardt's view has been discredited by Kelly.

(C) Burckhardt's view is one that many feminist scholars wish to refute.

(D) Burckhardt's work provides rich historical evidence of inequality between Renaissance women and men.

(E) Burckhardt's work includes historical research supporting the arguments of the feminist scholars.

RC00313-04

599. It can be inferred that both Burckhardt and Kelly have been criticized by the scholars mentioned in line 12 for which of the following?

(A) Assuming that women writers of the Renaissance are representative of Renaissance women in general

(B) Drawing conclusions that are based on the study of an atypical group of women

(C) Failing to describe clearly the relationship between social status and literacy among Renaissance women

(D) Failing to acknowledge the role played by Renaissance women in opposing cultural stereotypes

(E) Failing to acknowledge the ways in which social status affected the creative activities of Renaissance women

RC00313-05

600. The author of the passage suggests that Krontiris incorrectly assumes that

(A) social differences among Renaissance women are less important than the fact that they were women

(B) literacy among Renaissance women was more prevalent than most scholars today acknowledge

(C) during the Renaissance, women were able to successfully oppose cultural stereotypes relating to gender

(D) Renaissance women did not face many difficult social obstacles relating to their gender

(E) in order to attain power, Renaissance women attacked basic assumptions in the ideologies that oppressed them

RC00313-06

601. The last sentence in the passage serves primarily to

(A) suggest that Krontiris's work is not representative of recent trends among feminist scholars

(B) undermine the argument that literate women of the Renaissance sought to oppose social constraints imposed on them

(C) show a way in which Krontiris's work illustrates a "cautiously optimistic" assessment of Renaissance women's achievements

(D) summarize Krontiris's view of the effect of literacy on the lives of upper- and middle-class Renaissance women

(E) illustrate the way in which Krontiris's study differs from the studies done by Burckhardt and Kelly

RC00313-08

602. The author of the passage implies that the women studied by Krontiris are unusual in which of the following ways?

(A) They faced obstacles less formidable than those faced by other Renaissance women.

(B) They have been seen by historians as more interesting than other Renaissance women.

(C) They were more concerned about recording history accurately than were other Renaissance women.

(D) Their perceptions are more likely to be accessible to historians than are those of most other Renaissance women.

(E) Their concerns are likely to be of greater interest to feminist scholars than are the ideas of most other Renaissance women.

Line When asteroids collide, some collisions cause an asteroid to spin faster; others slow it down. If asteroids are all monoliths—single rocks—undergoing random collisions, a graph of their rotation rates (5) should show a bell-shaped distribution with statistical "tails" of very fast and very slow rotators. If asteroids are rubble piles, however, the tail representing the very fast rotators would be missing, because any loose aggregate spinning faster than once every few (10) hours (depending on the asteroid's bulk density) would fly apart. Researchers have discovered that all but five observed asteroids obey a strict limit on rate of rotation. The exceptions are all smaller than 200 meters in diameter, with an abrupt cutoff for (15) asteroids larger than that.

The evident conclusion—that asteroids larger than 200 meters across are multicomponent structures or rubble piles—agrees with recent computer modeling of collisions, which also finds a transition at that (20) diameter. A collision can blast a large asteroid to bits, but after the collision those bits will usually move slower than their mutual escape velocity. Over several hours, gravity will reassemble all but the fastest pieces into a rubble pile. Because collisions among (25) asteroids are relatively frequent, most large bodies have already suffered this fate. Conversely, most small asteroids should be monolithic, because impact fragments easily escape their feeble gravity.

Questions 603–606 refer to the passage.

RC00524-02

603. The passage implies which of the following about the five asteroids mentioned in line 12 ?

(A) Their rotation rates are approximately the same.

(B) They have undergone approximately the same number of collisions.

(C) They are monoliths.

(D) They are composed of fragments that have escaped the gravity of larger asteroids.

(E) They were detected only recently.

RC00524-04

604. The discovery of which of the following would call into question the conclusion mentioned in line 16 ?

(A) An asteroid 100 meters in diameter rotating at a rate of once per week

(B) An asteroid 150 meters in diameter rotating at a rate of 20 times per hour

(C) An asteroid 250 meters in diameter rotating at a rate of once per week

(D) An asteroid 500 meters in diameter rotating at a rate of once per hour

(E) An asteroid 1,000 meters in diameter rotating at a rate of once every 24 hours

RC00524-06

605. According to the passage, which of the following is a prediction that is based on the strength of the gravitational attraction of small asteroids?

(A) Small asteroids will be few in number.

(B) Small asteroids will be monoliths.

(C) Small asteroids will collide with other asteroids very rarely.

(D) Most small asteroids will have very fast rotation rates.

(E) Almost no small asteroids will have very slow rotation rates.

RC00524-07

606. The author of the passage mentions "escape velocity" (see line 22) in order to help explain which of the following?

(A) The tendency for asteroids to become smaller rather than larger over time

(B) The speed with which impact fragments reassemble when they do not escape an asteroid's gravitational attraction after a collision

(C) The frequency with which collisions among asteroids occur

(D) The rotation rates of asteroids smaller than 200 meters in diameter

(E) The tendency for large asteroids to persist after collisions

Line Most attempts by physicists to send particles faster than the speed of light involve a remarkable phenomenon called quantum tunneling, in which particles travel through solid barriers that appear (5) to be impenetrable. If you throw a ball at a wall, you expect it to bounce back, not to pass straight through it. Yet subatomic particles perform the equivalent feat. Quantum theory says that there is a distinct, albeit small, probability that such a particle (10) will tunnel its way through a barrier; the probability declines exponentially as the thickness of the barrier increases. Though the extreme rapidity of quantum tunneling was noted as early as 1932, not until 1955 was it hypothesized—by Wigner and (15) Eisenbud—that tunneling particles sometimes travel faster than light. Their grounds were calculations that suggested that the time it takes a particle to tunnel through a barrier increases with the thickness of the barrier until tunneling time (20) reaches a maximum; beyond that maximum, tunneling time stays the same regardless of barrier thickness. This would imply that once maximum tunneling time is reached, tunneling speed will increase without limit as barrier thickness increases. Several recent (25) experiments have supported this hypothesis that tunneling particles sometimes reach superluminal speed. According to measurements performed by Raymond Chiao and colleagues, for example, photons can pass through an optical filter at 1.7 times the (30) speed of light.

Questions 607–609 refer to the passage.

RC00301-04

607. The author of the passage mentions calculations about tunneling time and barrier thickness in order to

(A) suggest that tunneling time is unrelated to barrier thickness

(B) explain the evidence by which Wigner and Eisenbud discovered the phenomenon of tunneling

(C) describe data recently challenged by Raymond Chiao and colleagues

(D) question why particles engaged in quantum tunneling rarely achieve extremely high speeds

(E) explain the basis for Wigner and Eisenbud's hypothesis

RC00301-03

608. The passage implies that if tunneling time reached no maximum in increasing with barrier thickness, then

(A) tunneling speed would increase with barrier thickness

(B) tunneling speed would decline with barrier thickness

(C) tunneling speed would vary with barrier thickness

(D) tunneling speed would not be expected to increase without limit

(E) successful tunneling would occur even less frequently than it does

RC00301-02

609. Which of the following statements about the earliest scientific investigators of quantum tunneling can be inferred from the passage?

(A) They found it difficult to increase barrier thickness continually.

(B) They anticipated the later results of Chiao and his colleagues.

(C) They did not suppose that tunneling particles could travel faster than light.

(D) They were unable to observe instances of successful tunneling.

(E) They made use of photons to study the phenomenon of tunneling.

7.6 Answer Explanations

The following discussion of reading comprehension is intended to familiarize you with the most efficient and effective approaches to the kinds of problems common to reading comprehension. The particular questions in this chapter are generally representative of the kinds of reading comprehension questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

Questions 461–463 refer to the passage on page 398.

*RC00504-01

461. The primary purpose of the passage is to

(A) challenge recent findings that appear to contradict earlier findings

(B) present two sides of an ongoing scientific debate

(C) report answers to several questions that have long puzzled researchers

(D) discuss evidence that has caused a long-standing belief to be revised

(E) attempt to explain a commonly misunderstood biological phenomenon

Main idea

This question depends on understanding the passage as a whole. The passage begins by describing a long-held belief regarding humans' circadian rhythms: that the SCNs control them. It then goes on to explain that new findings have led scientists to believe that other organs and tissues may be involved in regulating the body's circadian rhythms as well.

A The passage does not challenge the more-recent findings. Furthermore, the recent findings that the passage recounts do not contradict earlier findings; rather, when placed alongside those earlier findings, they have led scientists to reach additional conclusions.

B The passage does not discuss a two-sided debate; no findings or conclusions are disputed by any figures in the passages.

C There is only one question at issue in the passage: whether the SCN alone control human circadian rhythms. Furthermore, nothing in the passage suggests that researchers have been puzzled for a long time about this.

D **Correct.** The new evidence regarding circadian rhythm–related gene activity in all the body's tissue has led scientists to revise their long-standing belief that the SCN alone control circadian rhythms.

E The biological phenomenon of circadian rhythms is not, at least as far as the passage is concerned, misunderstood. Its causes are being investigated and refined.

The correct answer is D.

RC00504-05

462. The passage mentions each of the following as a function regulated by the SCNs in some animals EXCEPT

(A) activity level

(B) blood pressure

(C) alertness

(D) vision

(E) temperature

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

Supporting idea

This question asks about what is NOT specifically mentioned in the passage with regard to functions regulated by the SCN. Those functions, as identified in the passage, are blood pressure, body temperature, activity level, alertness, and the release of melatonin.

A The passage includes activity level in its list of functions regulated by the SCN.
B The passage includes blood pressure in its list of functions regulated by the SCN.
C The passage includes alertness in its list of functions regulated by the SCN.
D **Correct.** While the passage does say that cells in the human retina transmit information to the SCN, there is no suggestion that the SCN reciprocally control vision.
E The passage includes temperature in its list of functions regulated by the SCN.

The correct answer is D.

RC00504-04

463. The author of the passage would probably agree with which of the following statements about the SCNs?

(A) The SCNs are found in other organs and tissues of the body besides the hypothalamus.
(B) The SCNs play a critical but not exclusive role in regulating circadian rhythms.
(C) The SCNs control clock genes in a number of tissues and organs throughout the body.
(D) The SCNs are a less significant factor in regulating blood pressure than scientists once believed.
(E) The SCNs are less strongly affected by changes in light levels than they are by other external cues.

Main idea

The author of the passage discusses the SCN in the passage in order to explain that they are most likely not, as long believed, solely responsible for the control of our circadian rhythms.

A The author states that the SCN are nerve clusters in the hypothalamus, and nothing in the passage contradicts or undermines the supposition that they are only in the hypothalamus.
B **Correct.** The author points out in the second paragraph that the SCN control core circadian function, but that circadian clocks found elsewhere in the body have an effect as well.
C The evidence offered in the second paragraph about the activity of the clock gene in rat livers suggests that these clock genes are not under the SCN's control. The passage does not suggest that the SCN control any of the non-SCN controllers of circadian rhythms.
D The author states in the second paragraph that scientists do not dispute the idea that the SCN regulate blood pressure.
E The first paragraph indicates that the SCN respond to light levels; clock genes in other tissues are the ones that may respond to other external cues.

The correct answer is B.

Questions 464–466 refer to the passage on page 400.

RC00525-01

464. The primary purpose of the passage is to

(A) question the results of a study that examined the effect of service-quality guarantees in the restaurant industry

(B) discuss potential advantages and disadvantages of service-quality guarantees in the restaurant industry

(C) examine the conventional wisdom regarding the effect of service-quality guarantees in the restaurant industry

(D) argue that only certain restaurants would benefit from the implementation of service-quality guarantees

(E) consider the impact that service-quality guarantees can have on the service provided by a restaurant

Main idea

This question depends on understanding the passage as a whole. The first paragraph describes Tucci and Talaga's findings regarding the effect of service-quality guarantees: that they have different, more positive results for higher-priced restaurants than for lower-priced ones, which could be affected negatively. The second paragraph explains that a particular benefit from service guarantees could accrue to restaurants generally.

A The passage does not question the results of Tucci and Talaga's study; rather, the passage appears to accept the results of the study as accurate.

B **Correct.** The potential advantages involve the management and motivation of service staff, as well as, for higher-priced restaurants, a greater likelihood of being selected by customers over other restaurants. Potential disadvantages for lower-priced restaurants include the possibility that potential customers may believe that such restaurants are concerned about the quality of their service.

C The passage does not indicate whether there is any conventional wisdom regarding service-quality guarantees in the restaurant industry.

D The second paragraph of the passage suggests that restaurants in general could potentially enjoy some benefits from the implementation of service-quality guarantees. For lower-priced restaurants, these benefits could offset the possible negative effects of service-quality guarantees described in the first paragraph.

E The second paragraph of the passage indicates an effect that service-quality guarantees could have on a restaurant's staff and the service that the staff provides, but this is only one of the subsidiary points contributing to the focus of the passage as a whole. The first is more concerned with the question of what effect these guarantees would have on whether customers choose to patronize that restaurant.

The correct answer is B.

RC00525-02

465. It can be inferred that the author of the passage would agree with which of the following statements about the appeal of service guarantees to customers?

(A) Such guarantees are likely to be somewhat more appealing to customers of restaurants than to customers of other businesses.

(B) Such guarantees are likely to be more appealing to customers who know what to anticipate in terms of service.

(C) Such guarantees are likely to have less appeal in situations where customers are knowledgeable about a business's product or service.

(D) In situations where a high level of financial commitment is involved, a service guarantee is not likely to be very appealing.

(E) In situations where customers expect a high level of customer service, a service guarantee is likely to make customers think that a business is worried about its service.

Inference

This question asks for an inference from the passage about the author's view of why and how service guarantees would appeal to customers. The question does not ask specifically about service guarantees in the context of restaurants, but rather service guarantees in general. The end of the first paragraph addresses this general question: a service guarantee may appeal most to customers in the case of activities whose quality they are less likely to know how to question.

A The author states that a service guarantee might have greater appeal in the case of skilled activities than it would for restaurant customers.

B According to the author, customers who know what to expect in terms of service—a group that includes restaurant customers—would likely find service guarantees less appealing.

C **Correct.** The author makes clear that service guarantees would be less appealing to restaurant customers when they know what to expect in terms of the quality of service.

D The passage provides some evidence that where a high level of financial commitment is involved, a service guarantee may be more rather than less appealing than in other situations. In discussing higher-priced restaurants, which require a relatively high level of financial commitment, the author states that Tucci and Talaga found evidence that a service guarantee would likely appeal to customers.

E The author implies that customers of higher-priced restaurants expect a high level of service, certainly a level higher than that expected by customers of lower-priced restaurants. But it is at lower-priced restaurants that Tucci and Talaga found that a service guarantee makes customers think a given restaurant is concerned about its service.

The correct answer is C.

RC00525-07

466. According to the passage, Tucci and Talaga found that service guarantees, when offered by lower-priced restaurants, can have which of the following effects?

(A) Customers' developing unreasonably high expectations regarding service

(B) Customers' avoiding such restaurants because they fear that the service guarantee may not be fully honored

(C) Customers' interpreting the service guarantee as a sign that management is not confident about the quality of its service

(D) A restaurant's becoming concerned that its service will not be assiduous enough to satisfy customers

(E) A restaurant's becoming concerned that customers will be more emboldened to question the quality of the service they receive

Supporting ideas

This question requires identifying Tucci and Talaga's findings regarding service guarantees offered by lower-priced restaurants. The passage states directly that these researchers found in these situations that a guarantee could lead potential customers to think that the restaurant has concerns about its service.

A The passage does not report that Tucci and Talaga found that service guarantees create unreasonably high expectations regarding service.

B The passage does not report that Tucci and Talaga found that customers doubted that service guarantees would be honored.

C **Correct.** The passage explicitly indicates that Tucci and Talaga found that potential customers of lower-priced restaurants could interpret service guarantees as indicating worries about the quality of service.

D The passage indicates that Tucci and Talaga found that customers might think that lower-priced restaurants are offering service guarantees because they are concerned that the quality of their service is too low, but the passage does not indicate that service guarantees lead such restaurants to have concerns about the quality of their service, and in fact it may be that such guarantees could lead to improvements in service.

E The passage indicates that service guarantees offered at lower-priced restaurants may empower customers to question the quality of service, but it does not indicate that service guarantees lead restaurants to have concerns about this.

The correct answer is C.

Questions 467–468 refer to the passage on page 402.

RC00455-03

467. The passage suggests that in the study mentioned in line 14 the method for gathering information about security of land tenure reflects which of the following pairs of assumptions about Tawahka society?

(A) The security of a household's land tenure depends on the strength of that household's kinship ties, and the duration of a household's residence in its village is an indication of the strength of that household's kinship ties.

(B) The ample availability of land makes security of land tenure unimportant, and the lack of a need for secure land tenure has made the concept of legal property rights unnecessary.

(C) The strength of a household's kinship ties is a more reliable indicator of that household's receptivity to new agricultural technologies than is its quantity of nonland wealth, and the duration of a household's residence in its village is a more reliable indicator of that household's security of land tenure than is the strength of its kinship ties.

(D) Security of land tenure based on kinship ties tends to make farmers more receptive to the use of improved plant varieties, and security of land tenure based on long duration of residence in a village tends to make farmers more receptive to the use of chemical herbicides.

(E) A household is more likely to be receptive to the concept of land tenure based on legal property rights if it has easy access to uncultivated land, and a household is more likely to uphold the tradition of land tenure based on kinship ties if it possesses a significant degree of nonland wealth.

Evaluation

In discussing the study, the passage notes that the strength of kinship ties is a more important indicator of land-tenure security than are legal property rights. The researchers, knowing this, measured land-tenure security by indirectly measuring the strength of kinship ties. How long a household had resided in its village was taken as an indicator of the strength of kinship ties, and indirectly, of the household's degree of land-tenure security.

A **Correct.** This summarizes two assumptions that the passage suggests were made by the researchers.

B The passage notes that ample availability of land is characteristic of rain-forest communities, which presumably includes the Tawahka people on whom the study focused. However, based on the information in the passage, the study did not assume that land-tenure security was unimportant in that community.

C The passage reports that the study took a household's duration of residence in its village as a reliable indicator of the strength of the household's kinship ties. Thus, the researchers did not assume that duration of residence was a more reliable measure of land-tenure security than kinship ties.

D The passage does not indicate that the researchers assumed this. As already stated, the researchers in effect equated a household's strength of kinship ties with its length of residence in its village. Though only the latter was directly measured, both were regarded as guarantors and indicators of land-tenure security. According to the passage, the researchers found that "longer residence correlated with more adoption of improved plant varieties but with less adoption of chemical herbicides." This was a finding based on research data, not an assumption.

E The passage does not attribute to the researchers an assumption that "a household is more likely to be receptive to the concept of land tenure based on legal property rights if it has easy access to uncultivated land."

The correct answer is A.

RC00455-05

468. According to the passage, the proposal mentioned in line 1 is aimed at preserving rain forests by encouraging farmers in rain-forest regions to do each of the following EXCEPT

(A) adopt new agricultural technologies
(B) grow improved plant varieties
(C) decrease their use of chemical herbicides
(D) increase their productivity
(E) reduce their need to clear new land for cultivation

Supporting ideas

The goal of the proposal is to help preserve rain forests by encouraging the adoption of new agricultural technologies, including use of chemical herbicides. The latter would presumably help improve crop yields on existing land, reducing the need to clear portions of rain forest to expand agricultural production.

A The proposal aims to encourage farmers to adopt new agricultural technologies.
B The proposal aims to encourage farmers to grow improved plant varieties.
C **Correct.** The proposal aims to encourage farmers to adopt new agricultural technologies, such as increased use of chemical herbicides. So persuading farmers to reduce their use of chemical herbicides is not part of the proposal.
D The proposal aims to encourage farmers to increase their productivity.
E The proposal aims to encourage farmers to reduce their need to clear rain-forest land for cultivation.

The correct answer is C.

Questions 469–472 refer to the passage on page 404.

RC00344-02

469. Information in the passage suggests that David Pearce would most readily endorse which of the following statements concerning monetization?

(A) Monetization represents a strategy that is attractive to both environmentalists and their critics.
(B) Monetization is an untested strategy, but it is increasingly being embraced by environmentalists.
(C) Monetization should at present be restricted to ecological services and should only gradually be extended to such commercial endeavors as tourism and recreation.
(D) Monetization can serve as a means of representing persuasively the value of environmental conservation.
(E) Monetization should inform environmental decision-making processes only if it is accepted by environmentalist groups.

Inference

This question requires an understanding of David Pearce's view of monetization. According to the passage, Pearce finds the idea that conservation is unprofitable to be an illusion. He argues for showing the economic value of ecosystems in order to make progress in conserving those ecosystems.

A The passage attributes to Gretchen Daily the view that monetization is unpopular with environmentalists. The passage gives no reason to believe that Pearce would endorse the idea that environmentalists currently find monetization attractive.
B The passage gives no indication that monetization is increasingly being embraced by environmentalists, even if Pearce thinks it should be.
C The passage indicates Pearce's belief that some types of tourism are also types of ecological services that have economic value and that they should be monetized.
D **Correct.** Pearce believes that monetization quantifies the value of the services provided by ecological systems—and if that value is quantified, people are more likely to be persuaded to conserve those systems.
E Pearce is arguing, against some environmentalists, that monetization should inform the decision-making process with regard to preserving ecosystems.

The correct answer is D.

RC00344-04

470. Which of the following most clearly represents an example of an "ecological service" as that term is used in line 20 ?

(A) A resort hotel located in an area noted for its natural beauty

(B) A water-purifying plant that supplements natural processes with nontoxic chemicals

(C) A wildlife preserve that draws many international travelers

(D) A nonprofit firm that specializes in restoring previously damaged ecosystems

(E) A newsletter that keeps readers informed of ecological victories and setbacks

Application

Based on the passage, *ecological services* are services provided by natural assets that have not been converted into commercial assets. Thus any example of such an ecological service requires that the area providing it is natural.

A The passage mentions resort hotels as an example of explicitly commercial assets. Although some hotels might be situated in ecologically valuable natural environments, any ecological services in such cases would be contributed by the natural environments, not by the hotels themselves.

B Water purifying is *an ecological* service if it is supplied by *undisturbed forests and wetlands*. The word *plant* here must mean a technological installation, not a botanical organism, because it is said to supplement—not to be part of—the natural processes. Thus it is not a natural asset and therefore does not provide an ecological service as described in the passage.

C **Correct.** The passage states that a wildlife preserve that creates jobs and generates income would be providing an ecological service.

D A nonprofit firm that restores damaged ecosystems would be performing a valuable ecology-related service, but it would not itself be an example of a natural asset providing an ecological service.

E Environmentalists and others would most likely find such a newsletter informative, but it would not be an ecological service, because it is not a service provided by a natural asset.

The correct answer is C.

RC00344-05

471. According to the passage, Daily sees monetization as an indication of which of the following?

(A) The centrality of economic interests to people's actions

(B) The reluctance of the critics of environmentalism to acknowledge the importance of conservation

(C) The inability of financial interests and ecological interests to reach a common ideological ground

(D) The inevitability of environmental degradation

(E) The inevitability of the growth of ecological services in the future

Supporting ideas

This question asks about Daily's view of monetization, and according to the passage, she sees monetization as a practice that *reflects the dominant role that economic decisions play in human behavior*.

A **Correct.** According to the passage, Daily believes that economic interests are central to people's actions, and monetization of ecological services would take that central role realistically into account.

B Monetization, as Daily sees it, is a way of assigning value to conservation and thus acknowledging its importance. Many environmentalists, rather than their critics, are reluctant to embrace monetization, according to Daily.

C For Daily, monetization represents a way for financial interests and ecological interests to reach a common ground; by using this *common currency*, both sides can make good decisions about the environment.

D Monetization, on Daily's view, would help to prevent environmental degradation; the passage does not suggest that she regards such degradation as at all inevitable.

E Daily does not see monetization as inevitably spurring the growth of ecological services but as more likely preventing their decline by leaving those *services* undisturbed.

The correct answer is A.

RC00344-06

472. Which of the following can be inferred from the passage concerning the environmentalists mentioned in line 8 ?

(A) They are organized in opposition to the generation of income produced by the sale of ecological services.

(B) They are fewer in number but better organized and better connected to the media than their opponents.

(C) They have sometimes been charged with failing to use a particular strategy in their pursuit of conservational goals.

(D) They have been in the forefront of publicizing the extent of worldwide environmental degradation.

(E) They define environmental progress differently and more conservatively than do other organized groups of environmentalists.

Inference

The sentence in question states that critics blame environmentalists for their failure *to address the economic issues of environmental degradation*.

A The passage states that in the absence of monetization, conservation can appear unprofitable. But this does not mean that the environmentalists in question are opposed to conservation generating income.

B The passage does not address the issue of the number of environmentalists in question, the number of those opposed to them, or whether either group is better connected to the media.

C **Correct.** The passage indicates that critics of the environmentalists in question believe environmentalists are to blame for not using an effective economics-based strategy to promote conservation.

D Although it may be the case that the environmentalists in question have been prominent in publicizing worldwide environmental degradation, the passage does not provide grounds for inferring that they have been.

E The passage suggests that certain critics consider environmentalists in general to be at fault for failing to address economic issues. In this respect, the passage makes no distinctions among different environmentalist groups, organized or otherwise.

The correct answer is C.

Questions 473–476 refer to the passage on page 406.

RC00359-01

473. According to the passage, the studies referred to in line 12 reported which of the following about the effect of price on consumers' perception of the performance risk associated with a new product?

(A) Although most consumers regard price as an important factor, their perception of the performance risk associated with a new product is ultimately determined by the manufacturer's reputation.

(B) Price interacts with the presentation of an advertised message to affect perceived performance risk.

(C) Price does not significantly affect consumers' perception of the performance risk associated with a new product.

(D) Consumers tend to regard price as more important than the manufacturer's credibility when they are buying from that manufacturer for the first time.

(E) Consumers are generally less concerned about a new product's performance risk when that product is relatively expensive.

Supporting ideas

The question asks about information explicitly provided in the passage. The first paragraph explains that there are *conflicting findings* in the research about how the price of a product affects a consumer's perception of the performance risk of that product. Some studies have found that higher priced products reduce the perception of performance risk. The *other studies* referred to in line 12, however, have found little or no connection between price and perceived performance risk.

A The passage does not mention that these studies consider the manufacturer's reputation.
B The passage does not mention that these studies consider advertising messages.
C **Correct**. The passage indicates that these studies have found little or no connection between relative price and consumers' perception of performance risk.
D The passage does not mention that these studies consider the manufacturer's credibility.
E Although some studies have found that a relatively high price reduces the perception of performance risk, the passage explains that the studies referred to in line 12 have not confirmed that finding.

The correct answer is C.

RC00359-03

474. The "past research" mentioned in line 25 suggests which of the following about perceived performance risk?

(A) The more expensive a new product is, the more likely consumers may be to credit advertised claims about that product.
(B) The more familiar consumers are with a particular manufacturer, the more willing they may be to assume some risk in the purchase of a new product being advertised by that manufacturer.
(C) Consumers' perception of the performance risk associated with a new product being advertised may be influenced by an interplay between the product's price and the manufacturer's credibility.
(D) Consumers may be more likely to believe that a product will function as it is advertised to do when they have bought products from a particular manufacturer before.
(E) The price of a particular advertised product may have less impact than the manufacturer's credibility on consumers' assessment of the performance risk associated with that product.

Supporting ideas

The question asks about information explicitly provided in the passage. The second paragraph explains that, according to some research, consumers perceive a product as having less performance risk when they trust the source of advertising about that product. *Past research*, however, suggests that performance risk is affected not merely by the credibility of the source, but by an interaction between source credibility and the price of the product.

A The passage does not indicate that the past research addressed the question of how the price of a product affects consumers' perception of advertised claims. It only says that the research suggests that the two factors *interact*.
B Although the passage discusses consumers' perception of how risky a purchase might be, it does not address the relationship between familiarity and willingness to assume risk.
C **Correct.** The *past research* suggests that performance risk is affected by an interaction between the price of the product and the credibility of the source of the advertising about the product—in other words, the manufacturer.
D The *past research* suggests that consumers' beliefs about a product's performance are affected not merely by their perception of the manufacturer, but by an interplay between source credibility and product price. The passage does not mention any possible role of prior experience in this interplay.
E The passage does not discuss whether price or the manufacturer's credibility has more of an effect on perceived performance risk.

The correct answer is C.

RC00359-05

475. The passage is primarily concerned with

(A) challenging the implications of previous research into why consumers try new products
(B) suggesting new marketing strategies for attracting consumers to new products
(C) reconciling two different views about the effect of price on consumers' willingness to try new products
(D) describing a new approach to researching why consumers try new products
(E) discussing certain findings regarding why consumers try new products

Main idea

The question depends on understanding the passage as a whole. The passage begins with a statement explaining that much research has investigated *what motivates consumers to try new products*. It then defines one such motivating factor—perception of performance risk. The remainder of the passage summarizes research into how price and a manufacturer's advertising affect consumers' perception of performance risk.

A The passage summarizes research findings that conflict with one another but does not support some findings over others.
B The passage does not suggest any new marketing strategies.
C The first paragraph mentions a study that could reconcile two conflicting findings, but this is only a supporting point in the passage's larger purpose of summarizing research.
D The passage does not describe new research approaches.
E **Correct.** The passage discusses studies about performance risk, which is a factor that motivates consumers to try new products.

The correct answer is E.

RC00359-06

476. Which of the following, if true, would most tend to weaken the conclusions drawn from "some of this research" (see line 8)?

(A) In a subsequent study, consumers who were asked to evaluate new products with relatively low prices had the same perception of the products' performance risk as did consumers who were shown the same products priced more expensively.
(B) In a subsequent study, the quality of the advertising for the products that consumers perceived as having a lower performance risk was relatively high, while the quality of the advertising for the products that consumers perceived as having a higher performance risk was relatively poor.
(C) In a subsequent study, the products that consumers perceived as having a lower performance risk were priced higher than the highest priced products in the previous research.
(D) None of the consumers involved in this research had ever before bought products from the manufacturers involved in the research.
(E) Researchers found that the higher the source credibility for a product, the more consumers were willing to pay for it.

Evaluation

The question depends on evaluating the reasoning behind the conclusions of some research and deciding which evidence would weaken them. The research concludes that higher prices reduce consumers' perception of performance risk associated with a particular product. This conclusion involves a claim of cause and effect, so evidence showing that higher prices do not cause that effect would weaken the argument.

A **Correct.** If lowering prices has no effect on consumers' perception of performance risk, the conclusions of the research are called into question.
B A correlation between quality of advertising and perceived performance risk is not clearly relevant to the research conclusions about the effects of price.
C This answer choice provides no basis for comparison among prices within the subsequent study. For all we can tell, the prices that correlated with higher perceived performance risk in the subsequent study may have been lower than those that correlated with lower perceived risk. In that case, the subsequent study would tend to strengthen, not weaken, the conclusions drawn from the earlier research.
D Consumers' lack of familiarity with other products from the manufacturers is not clearly relevant to the studies' conclusions about the effects of price.
E Credibility of the source of advertisements is discussed as a separate issue in the second paragraph and is not clearly relevant to these studies' conclusions about the effects of price. To the extent that it may be obliquely relevant, it tends to strengthen, rather than to weaken, the conclusions.

The correct answer is A.

Questions 477–481 refer to the passage on page 408.

RC00419-01

477. The primary purpose of the passage is to

(A) compare the economic role played by southern banks with the economic role played by banks in the rest of the United States during the late eighteenth and early nineteenth centuries

(B) reevaluate a conventional interpretation of the role played by banks in the American economy during the late eighteenth and early nineteenth centuries

(C) present different interpretations of the role played by banks in the American economy during the late eighteenth and early nineteenth centuries

(D) analyze how the increasing number of banks in the late eighteenth and early nineteenth centuries affected the American economy

(E) examine how scholarly opinion regarding the role played by banks in the American economy during the late eighteenth and early nineteenth centuries has changed over time

Main idea

The question depends on understanding the passage as a whole. The passage describes two contrasting views about the role banks played in the economic growth of the United States around the turn of the nineteenth century. The first paragraph describes the view that banks played only a small role. The second paragraph describes the contrasting view that banks played a critical role.

A The mention of banks in the South is a small part of a larger discussion about the role of banks in the country as a whole.

B The passage describes two major views held by historians; it does not reevaluate either of those views.

C **Correct**. The passage describes two different views about the role that banks played in America's growing economy.

D The passage does not analyze any aspect of the relationship between the increasing number of banks and the economy. It alludes to the increase in numbers only within a broader description of two contrasting views about how banks affected the economy.

E The passage suggests that at the time when it was written, the two views it describes were both still held among historians.

The correct answer is C.

RC00419-02

478. The passage suggests that the scholars mentioned in line 4 would argue that the reason banks tended not to fund manufacturing and transportation projects in the late eighteenth and early nineteenth centuries was that

(A) these projects, being well established and well capitalized, did not need substantial long-term financing from banks

(B) these projects entailed a level of risk that was too great for banks' conservative lending practices

(C) banks preferred to invest in other, more speculative projects that offered the potential for higher returns

(D) bank managers believed that these projects would be unlikely to contribute significantly to economic growth in the new country

(E) bank managers believed funding these projects would result in credit being extended to too many borrowers

Inference

The question asks about information implied by the passage. According to the scholars' view described in the first paragraph, banks followed conservative lending practices: they shunned projects that were uncertain and that required substantial investments in capital. It follows that, according to those scholars, the reason banks chose not to fund certain projects was that they entailed too great a risk.

A The passage indicates that manufacturing and transportation projects were less well established than those the banks preferred to fund, not more so.

B **Correct.** Because the projects were *uncertain* and required a great deal of capital, banks considered them too risky.

C The passage indicates that banks followed conservative lending practices and avoided investments that were uncertain.

D The passage does not mention banks' beliefs about economic growth, and it does not provide any basis for inferring that the scholars in question held any particular views regarding such beliefs.

E The passage does not mention, or provide a basis for inferences about, bank managers' concerns about numbers of borrowers.

The correct answer is B.

RC00419-04

479. The passage suggests that Paul Gilje would be most likely to agree with which of the following claims about the lending practices of the "earliest banks" (see line 21) ?

(A) These lending practices were unlikely to generate substantial profits for banks.

(B) These lending practices only benefited a narrow sector of the economy.

(C) The restrictive nature of these lending practices generated significant opposition outside of the South.

(D) The restrictive nature of these lending practices forced state legislatures to begin granting more bank charters by the early nineteenth century.

(E) These lending practices were likely to be criticized by economic elites as being overly restrictive.

Inference

This question asks about conclusions that can be logically inferred from information provided in the passage. According to the second paragraph, Paul Gilje believes that a driving force in American economic growth in the early nineteenth century was banks' lending to a larger and more diverse group of borrowers. The question asks what this would imply about Gilje's view toward earlier banks—which, the passage explains, offered credit only to *well-connected merchants*.

A The profitability of banks' lending practices is not at issue in the discussion.

B **Correct**. The passage says that the earliest banks had primarily made loans only to a narrow sector—well-connected merchants—and that they began lending more broadly in the early nineteenth century. It then cites Gilje's view to corroborate and explicate this claim. This strongly suggests that Gilje agrees with the claim.

C Opposition to the earliest banks is not mentioned or alluded to in the discussion.

D The passage provides no basis for inferring that Gilje held any particular view as to why legislatures began granting more bank charters.

E The passage does not mention or provide a basis for inference about the views of economic elites regarding the lending practices of the earliest banks in the United States. It thus provides no basis for inferring that Gilje would have any particular opinion on this topic.

The correct answer is B.

RC00419-05

480. The passage suggests that the opposition to banks in the South in the early nineteenth century stemmed in part from the perception that banks

(A) did not benefit more than a small minority of the people

(B) did not support the interests of elite planters

(C) were too closely tied to transportation and industrial interests

(D) were unwilling to issue the long-term loans required by agrarian interests

(E) were too willing to lend credit widely

Inference

The question asks about statements that can be inferred from information provided in the passage. The second paragraph explains that people who opposed banks in the South saw them as monopolies controlled by elite planters. This would imply that those who opposed banks believed that most people in the South did not benefit from them.

A **Correct.** Since people opposed the banks on the grounds that they were monopolies controlled by an elite group of planters, they likely thought banks did not benefit most of the population.

B The passage implies that people believed the banks did serve the interests of elite planters.

C The passage indicates that people believed banks in the South were tied to planters, not to transportation and industrial interests.

D Southern banks' willingness to provide long-term loans is not discussed or alluded to in the passage.

E The passage does not imply that anyone believed banks in the South were willing to lend credit widely. Since people believed the banks were controlled by the elite, they more likely thought banks were unwilling to lend credit widely.

The correct answer is A.

RC00419-06

481. Which of the following statements best describes the function of the last sentence of the passage?

(A) It provides evidence tending to undermine the viewpoint of the scholars mentioned in line 5.

(B) It resolves a conflict over the role of banks summarized in the first paragraph.

(C) It clarifies some of the reasons state legislatures began granting more bank charters.

(D) It qualifies a claim made earlier in the passage about the impact of banks on the American economy in the early nineteenth century.

(E) It supports a claim made earlier in the passage about how the expansion of credit affected the economy.

Evaluation

This question asks about the function of the last sentence in relation to the rest of the passage. The first paragraph describes the view of one set of historians. The second paragraph describes the contrasting view of a second set of historians. The last sentence of the passage points out an exception mentioned by the second set of historians.

A The last sentence pertains to the view of historians described in the second paragraph, not those described in the first paragraph.

B The conflict between the two differing views is not resolved by the passage.

C The passage does not explain why legislatures began granting more bank charters.

D **Correct**. The second set of historians claim banks spurred American economic growth at the turn of the nineteenth century, but the last sentence adds an exception to that claim.

E The last sentence does not support the claim made by the second set of historians, but rather serves as an exception to that claim.

The correct answer is D.

Questions 482–485 refer to the passage on page 410.

RC00458-01

482. The passage is primarily concerned with

(A) examining economic factors that may have contributed to the success of certain Japanese companies

(B) discussing the relative merits of strategic partnerships as compared with those of market-exchange relationships

(C) challenging the validity of a widely held assumption about how Japanese firms operate

(D) explaining why Western companies have been slow to adopt a particular practice favored by Japanese companies

(E) pointing out certain differences between Japanese and Western supplier relationships

Main idea

This question asks for an assessment of what the passage as a whole is doing. The passage discusses how Western business managers have been following the advice of academics and journalists to pursue strategic partnerships with their suppliers. The advice is based on studies comparing Japanese production and supply practices with those of the rest of the world. Newer research, however, indicates that Japanese practices actually differ from those indicated in the earlier studies and are not significantly different from practices associated with Western manufacturers.

A The passage is not primarily concerned with economic factors contributing to the success of Japanese companies, but rather with whether Japanese relationships with suppliers conform to the practices recently adopted by Western business manufacturers.

B Although the passage discusses strategic partnerships and market-exchange relationships, it does not discuss their relative merits.

C **Correct**. The passage does question the view promoted by several studies regarding the relationship Japanese firms have with their suppliers.

D The passage does not indicate that Western companies have been slow to adopt any particular practice favored by Japanese companies.

E Rather than pointing out differences between Japanese and Western supplier relationships, it actually suggests that they are more similar than generally realized.

The correct answer is C.

RC00458-02

483. According to the passage, the advice referred to in line 6 was a response to which of the following?

(A) A recent decrease in the number of available suppliers within the United States automobile industry

(B) A debate within Western management circles during the past decade regarding the value of strategic partnerships

(C) The success of certain European automobile manufacturers that have adopted strategic partnerships

(D) An increase in demand over the past decade for automobiles made by Western manufacturers

(E) Research comparing Japanese business practices with those of other nations

Supporting idea

This question is concerned with identifying what the passage says about certain experts' advice. The passage indicates that the experts' advice is based on numerous studies carried out over the previous decade that compared Japanese manufacturing and supply practices with those of the rest of the world.

A The passage indicates that the major automobile manufacturers in the United States have decreased the number of suppliers they deal with, but the experts' advice was not in response to such a decrease; rather, the decrease was in response to the manufacturers' adoption of the experts' advice.

B The passage does not say anything about a debate within Western management circles regarding management partnerships.

C The passage mentions that European manufacturers have adopted strategic partnerships, but it does not indicate how successful those manufacturers have been.

D The passage does not indicate whether demand for automobiles has increased over the past decade.

E **Correct.** The passage indicates that the experts' advice was made in reaction to studies that compared Japanese business practices regarding production and suppliers with those of other companies.

The correct answer is E.

RC00458-03

484. The author mentions "the success of a certain well-known Japanese automaker" in lines 10–11, most probably in order to

(A) demonstrate some of the possible reasons for the success of a certain business practice

(B) cite a specific case that has convinced Western business experts of the value of a certain business practice

(C) describe specific steps taken by Western automakers that have enabled them to compete more successfully in a global market

(D) introduce a paradox about the effect of a certain business practice in Japan

(E) indicate the need for Western managers to change their relationships with their external business partners

Evaluation

The question requires the test-taker to determine the author's reason for mentioning *the success of a certain well-known Japanese automaker*. Most likely, the author wishes to present a specific case that was crucial in leading Western management circles to value strategic partnerships.

A The passage does not discuss reasons for the success of the business practice.

B **Correct.** The well-known success of a certain Japanese automaker is offered as a reason for Western management circles to believe in the value of the business practice of forming strategic partnerships.

C Although the passage does indicate that Western automakers have adopted strategic partnerships with suppliers, it does not indicate whether this has enabled them to become more successful globally.

D The passage does not specifically discuss any paradox related to the effects of Japanese business practices.

E Although the passage does give reason to think that the changes adopted by Western managers may have made their relationships with external business partners less, rather than more, like the relationships Japanese managers have, the passage does not indicate whether the Western managers need to make any further changes.

The correct answer is B.

RC00458-05

485. Which of the following is cited in the passage as evidence supporting the author's claim about what the new research referred to in line 20 demonstrates?

(A) The belief within Western management circles regarding the extent to which Japanese firms rely on strategic partnerships

(B) The surprising number of European and United States businesses that have strategic partnerships with their suppliers

(C) The response of Western automobile manufacturers to the advice that they adopt strategic partnerships with their suppliers

(D) The prevalence of "market-exchange" relationships between Japanese firms and their suppliers

(E) The success of a particular Japanese automobile manufacturer that favors strategic partnerships with its suppliers

Supporting idea

To answer this question, you must identify what evidence is cited in the passage regarding the author's claim that new research casts doubt on the widespread view that Japanese firms primarily manage their supplier relationships through strategic partnerships. To support this claim regarding the new research, the author points out that Japanese firms make extensive use of "market-exchange relationships," which are alternatives to the strategic relationships discussed in the preceding paragraph.

A This is the belief that the author claims that the new research casts doubt on, so it would not make sense for the author to cite this as evidence for the author's claim.

B This is cited as a result of the belief that the author claims the new research casts doubt on, not as evidence for the author's claim.

C The new research undermines the basis of the advice referred to here—advice that the Western automobile manufacturers heed—so it would make little sense for the author to cite this as evidence in support of the author's claim about the new research.

D **Correct.** The passage does cite this prevalence as evidence for the author's claim that the new research casts doubt on the widely held view about Japanese firms.

E Citing this firm's success would tend to support the widespread view about Japanese firms, not undermine that view.

The correct answer is D.

Questions 486–489 refer to the passage on page 412.

RC00497-02

486. According to the passage, the research mentioned in line 6 suggests which of the following about lower-ranked top executives and postacquisition success?

(A) Given that these executives are unlikely to contribute to postacquisition success, little effort should be spent trying to retain them.

(B) The shorter their length of service, the less likely it is that these executives will play a significant role in postacquisition success.

(C) These executives are less important to postacquisition success than are more highly ranked top executives.

(D) If they have long tenures, these executives may prove to be as important to postacquisition success as are more highly ranked top executives.

(E) Postacquisition success is unlikely if these executives are retained.

Supporting idea

The question asks about information provided by the passage. According to the third sentence, research suggests that retaining the highest-level top executives in an acquisition is more strongly associated with success than retaining lower-ranked top executives—which suggests, in turn, that lower-ranked top executives are less important than top-level executives to postacquisition success, though it does not suggest that they are unimportant to such success.

A The research indicates that lower-ranked top executives are less strongly associated with success than are higher-ranked executives but does not provide advice about retention efforts.
B The research mentioned in the third sentence does not consider length of service.
C **Correct.** The research indicates that lower-ranked top executives are less strongly associated with postacquisition success than are the highest-ranked executives.
D The research mentioned in the third sentence does not consider length of service.
E The research suggests that lower-ranked top executives are less strongly associated with postacquisition success but does not suggest that they decrease the likelihood of success.

The correct answer is C.

RC00497-03

487. The resource-based view, as described in the passage, is based on which of the following ideas?

(A) The managerial skills of top executives become strongest after the first five years of their tenure.
(B) Company-specific knowledge is an important factor in the success of an acquisition process.
(C) The amount of nontransferable knowledge possessed by long-tenured top executives tends to be underestimated.
(D) Effective implementation of an acquisition depends primarily on the ability of executives to adapt to change.
(E) Short-tenured executives are likely to impede the implementation of a successful acquisition strategy.

Evaluation

This question requires analysis of the reasoning underlying one of the two explanations described in the passage. The resource-based view (RBV) holds that retaining high-level executives with long tenure will contribute to success because those people have important company-specific knowledge. This view rests on the assumption that company-specific knowledge is valuable to postacquisition success.

A In RBV, executives with long tenure are valuable not specifically for their managerial skills but for their knowledge about the acquired company. The passage does not restrict to five years the period in which this knowledge is gained.
B **Correct.** RBV values executives' knowledge of the acquired company and is based on the belief that company-specific knowledge is valuable for postacquisition success.
C The passage does not indicate that RBV claims that executives' company-specific knowledge is generally undervalued. But the passage does indicate that RBV regards such knowledge as valuable to postacquisition success.
D In RBV, executives with long tenure are valuable not for their ability to adapt to change, but for their knowledge about the acquired company.
E RBV does not suggest that short-tenured executives impede postacquisition success, only that they are less important to success than the highest-ranked executives.

The correct answer is B.

RC00497-04

488. The passage suggests that Bergh and a proponent of the upper echelons perspective would be most likely to disagree over which of the following?

(A) Whether there is a positive correlation between short organizational tenure and managerial adaptability

(B) Whether there is a positive correlation between long organizational tenure and the acquisition of idiosyncratic and nontransferable knowledge

(C) Whether adaptability is a useful trait for an executive who is managing an acquisition process

(D) Whether retaining less-tenured top executives of an acquired company is an optimal strategy for achieving postacquisition success

(E) Whether retaining highest-level top executives of acquired companies is more important than retaining lower-ranked top executives

Inference

The question asks about conclusions that can reasonably be drawn from the information provided in the passage. Bergh's study supports the resource-based view (RBV), which suggests that top executives with long tenure are more valuable to postacquisition success than other executives. The upper echelons perspective (UEP), in contrast, suggests that top executives with shorter tenure are more valuable to postacquisition success. Thus, Bergh and a proponent of UEP would likely disagree about whether long or short tenure top executives are more valuable to a positive outcome in a postacquisition situation.

A The passage does not provide sufficiently specific information about statistical relationships to determine whether Bergh and proponents of UEP would agree or disagree about whether there is such a positive correlation.

B There is a weak suggestion in the passage that Bergh believes such a positive correlation exists, but there is no indication that a proponent of UEP would question such a correlation.

C The passage does not indicate that Bergh would disagree with proponents of UEP that adaptability is a valuable trait in an executive who is managing an acquisition.

D **Correct.** The passage suggests that proponents of UEP believe that retaining less-tenured top executives during and after an acquisition is a better strategy, while Bergh believes that retaining longer-tenured top executives is better.

E The passage suggests that Bergh and proponents of UEP agree that retaining the highest-level top executives is more important to postacquisition success than is retaining lower-ranked top executives.

The correct answer is D.

RC00497-05

489. According to the passage, prior to Bergh's study, research on the role of top executives of acquired companies in business acquisition success was limited in which of the following ways?

(A) It did not address how the organizational tenure of top executives affects postacquisition success.

(B) It did not address why some companies have longer-tenured CEOs than others.

(C) It did not consider strategies for retaining long-tenured top executives of acquired companies.

(D) It failed to differentiate between the contribution of highest-level top executives to postacquisition success and that of lower-ranked top executives.

(E) It underestimated the potential contribution that lower-level top executives can make to postacquisition success.

Supporting idea

This question asks about information explicitly provided in the passage. The first paragraph summarizes research indicating that retaining highest-level top executives during and after an acquisition is more strongly associated with successful outcomes than retaining lower-ranking top executives. The paragraph then states that this research has limitations, including failing to take into account how long the highest-ranking executives have worked for the company. The second paragraph explains that Bergh's study responds to those limitations by analyzing the role of tenure (length of service in the organization).

A **Correct.** The passage indicates that the research about the role of highest-level executives in acquisitions is limited by its failure to consider tenure.

B The passage does not portray the failure of the research to address this as a limitation of the research in question.

C The passage does not portray the failure of the research to consider this as a limitation of the research in question.

D The passage indicates that the research does, in fact, differentiate between the respective contributions of these two groups of top executives.

E Undervaluing the contributions of lower-level top executives is not one of the limitations mentioned in the passage.

The correct answer is A.

Questions 490–493 refer to the passage on page 414.

RC00017-02

490. According to the passage, which of the following contributed to Marcus Garvey's success?

(A) He introduced cultural and historical consciousness to the African American community.

(B) He believed enthusiastically in the traditional American success ethos.

(C) His audience had already formed a consciousness that made it receptive to his message.

(D) His message appealed to critics of African American support for United States military involvement in the First World War.

(E) He supported the movement to protest segregation that had emerged prior to his arrival in the United States.

Supporting idea

To answer this question, find what the passage states explicitly about how Marcus Garvey achieved his success. The passage begins by stating that Garvey arrived at the right time: that returning African American soldiers were primed to receive what he had to say about the African American community. These soldiers already held strong beliefs about their rights to opportunities for success; the passage concludes that the divide between the soldiers' expectations and their experiences led to Garvey's success.

A The passage states that African American people were in possession of a strong cultural and historical consciousness prior to Garvey's arrival in the United States.

B The passage attributes belief in the traditional American success ethos to African American people who joined the armed forces; it does not mention Garvey's beliefs on this subject.

C **Correct.** African American soldiers who had experienced segregation during the First World War were ready to hear what Garvey had to say.

D Critics of African American support for United States involvement in the First World War are not mentioned in the passage.

E While Garvey most likely would have supported a movement to protest segregation, such a movement is not discussed in the passage.

The correct answer is C.

RC00017-03

491. The passage suggests that many African American people responded to their experiences in the armed forces in which of the following ways?

(A) They maintained as civilians their enthusiastic allegiance to the armed forces.

(B) They questioned United States involvement in the First World War.

(C) They joined political organizations to protest the segregation of African American troops and the indignities they suffered in the military.

(D) They became aware of the gap between their expectations and the realities of American culture.

(E) They repudiated Garvey's message of pride and unity.

Inference

According to the passage, African Americans enthusiastically joined the armed services but were confronted with continued segregation, both in the military and when they returned home. The passage does not explicitly state their response to these experiences, but a response can be inferred. The second paragraph refers to anthropologist Anthony F. C. Wallace, who argued that a revitalization movement may be brought about by the perception of a gap between expectations and reality, and such a revitalization did occur in African American communities following the First World War; thus, many African American people may have become aware of a gap such as Wallace described.

A The passage states that African American troops experienced segregation and other indignities while in the military; these experiences could reasonably be inferred to have dampened their enthusiasm for the armed forces. Regardless, the passage does not suggest an enthusiastic allegiance.

B The passage describes African American people's enthusiasm about joining the military. Although they experienced segregation and other indignities while in the military, the passage does not suggest that their opinion about involvement in the war changed.

C While African American troops may have joined political organizations, the passage does not provide any actual evidence of this having occurred.

D **Correct.** The fact that, as the passage states, a revitalization movement occurred in the African American community following the First World War suggests that the returning soldiers did become aware of the gap between their expectations of an improved situation with regard to segregation and the reality of continued segregation in the United States.

E The passage does not suggest that African American troops repudiated Garvey's message. On the contrary, it states that Garvey built *the largest revitalization movement in African American history*. This suggests that the members of the African American community, including the returning soldiers, were extremely receptive to Garvey's message.

The correct answer is D.

RC00017-04

492. It can be inferred from the passage that the "scholars" mentioned in line 24 believe which of the following to be true?

(A) Revitalization resulted from the political activism of returning African American soldiers following the First World War.

(B) Marcus Garvey had to change a number of prevailing attitudes in order for his mass movement to find a foothold in the United States.

(C) The prevailing sensibility of the African American community provided the foundation of Marcus Garvey's political appeal.

(D) Marcus Garvey hoped to revitalize consciousness of cultural and historical identity in the African American community.

(E) The goal of the mass movement that Marcus Garvey helped bring into being was to build on the pride and unity among African Americans.

Inference

To determine what it is logical to infer regarding the scholars discussed in the third paragraph, look at the context in which they are mentioned. According to the passage, these scholars argue that Garvey was responsible for creating a particular consciousness within the African American community, a consciousness that the passage identifies as *identity, strength, and* [a] *sense of history*. Unlike the passage author, these scholars believe strongly in Garvey's responsibility for this consciousness, so they would most likely reject any suggestion that it existed prior to his arrival and activism.

A According to the passage, the scholars believe that Garvey was responsible for the creation of the consciousness that led to revitalization, which suggests that revitalization resulted from Garvey's activism, not soldiers' activism.

B **Correct.** According to the passage, the scholars believe that Garvey created the consciousness that led to his revitalization

movement. This suggests that he had to change prevailing attitudes in order to foster this new consciousness.

C According to the passage, the scholars believe that Garvey created a new consciousness in the African American community; thus, the prevailing sensibility could not have provided a foundation for his appeal.

D According to the passage, the scholars believe that Garvey built his revitalization movement on a new consciousness of cultural and historical identity, not a previously existing one.

E According to the passage, the scholars' position is that Garvey's movement was built on a new sense of pride and unity that he provided, and that that sense did not precede Garvey's work.

The correct answer is B.

RC00017-05

493. According to the passage, many African American people joined the armed forces during the First World War for which of the following reasons?

(A) They wished to escape worsening economic conditions in African American communities.

(B) They expected to fulfill ideals of personal attainment.

(C) They sought to express their loyalty to the United States.

(D) They hoped that joining the military would help advance the cause of desegregation.

(E) They saw military service as an opportunity to fulfill Marcus Garvey's political vision.

Supporting idea

This question depends on identifying what the passage states directly about African American people's reasons for joining the armed forces. The reason offered by the passage is that the African American people who entered the armed forces did so because they were *hoping to participate in the traditional American ethos of individual success*.

A Although this is a plausible reason for entering the armed forces, the passage does not discuss economic conditions.

B **Correct.** The passage states that African American people who joined the armed forces during the First World War wanted to achieve individual success.

C The passage does not discuss African American people's loyalty to the United States.

D The passage states that African American troops experienced segregation, but it does not suggest that they had hoped their joining the military would promote desegregation.

E The passage suggests that African American troops did not become aware of Marcus Garvey's political vision until after they returned from the First World War.

The correct answer is B.

Questions 494–501 refer to the passage on page 416.

RC38200-01.01

494. Which of the following best states the difference between free trade and fair trade, as explained in the passage?

(A) Free trade requires no trade tariffs whatsoever, whereas fair trade assumes multilateral agreement on tariffs for goods of equal worth.

(B) Free trade is based on the unrestricted movement of goods across all national boundaries, whereas fair trade is based on a nation's restriction of commerce with each nation that erects trade barriers to the first nation's exports.

(C) The trade policies of countries like Arboria are based on the principles of free trade, whereas the trade policies of other types of world economies are based on fair trade.

(D) Free-trade nations negotiate individual trade agreements with each of their trading partners, whereas fair-trade nations conduct multilateral trade negotiations.

(E) Free trade assumes a constant level of global commerce, whereas fair trade promotes a steady expansion of international trade.

Evaluation

This question requires you to understand how the passage explains the difference between free trade and fair trade. The passage discusses international trade as viewed from the perspective of the nation of Arboria. The distinction between free trade and fair trade is discussed in the third paragraph. Free trade between two countries is understood as free movement of goods in each direction across countries' borders. From the Arborian perspective, fair trade is understood as mutually beneficial trading arrangements, where access to the Arborian market is granted only to nations that allow Arborian exports equal access to their own markets.

A The distinction between free trade and fair trade in the passage does not hinge on the absence or presence of tariffs in a trading regime, even though the passage implies that asymmetric application of tariffs would render a trading regime unfair.

B **Correct.** As explained above, free trade implies open access to markets; fair trade implies that each of any two trading partner nations should allow the same level of access for imports from the other nation.

C Whether true or false, this is a claim of a factual kind, and does not provide anything resembling a definition of the two terms, *free trade* and *fair trade*. The passage suggests that Arboria has a free-trade economy and many other nations do not.

D The passage tells us that both the free-trade advocates and the fair-trade advocates base their positions, in part, on the idea that multilateral negotiations are the most effective way of resolving pressing trade issues.

E The passage suggests that free trade without fair trade would hinder the expansion of trade (especially Arborian trade) and that fair trade would eventually lead to free trade. But the passage also suggests that international trade between two countries can be simultaneously free and fair. As presented in the passage, the distinction between the two aspects of trade does not hinge on whether the regime promotes a steady expansion of international trade.

The correct answer is B.

RC38200-02.01

495. It can be inferred that the author of the passage would most likely agree with which of the following statements about multilateral trade negotiations?

(A) They are the most effective way to resolve trade problems.

(B) They are most effective in dealing with fair-trade issues between nations.

(C) They have only recently begun to make an impact on world trade.

(D) Arborian reliance on multilateral trade negotiations, while appropriate in the past, is inadequate for today's global marketplace.

(E) The principles of multilateral trade negotiations are incompatible with current Arborian foreign trade policy.

Inference

Answering this question requires you to infer from the given information what claim about multilateral trade negotiations the author would most likely agree with. According to the passage, the advocates of free trade and the advocates of fair trade both assume that multilateral negotiations are the most effective way to resolve trading issues. But the passage claims that this assumption is wrong and outdated for current trading conditions. The passage argues that nearly 75 percent of trade is conducted by widely divergent economic systems in countries not subscribing to the same trading principles as Arboria and that this makes negotiation of multilateral trade agreements virtually impossible.

A As explained above, the author of the passage takes a position opposed to this.

B According to the passage, it is virtually impossible to negotiate multilateral agreements with countries that do not accept the same trading principles as Arboria and that therefore may have differing notions of what makes trade fair.

C The passage suggests that the assumption concerning multilateral trade negotiations had for 40 years been accepted by the free-trade countries that dominated world trade—as well as possibly by other trading countries.

D **Correct.** As explained above, this is a part of the argument in the passage.

E The passage does not argue that a principle concerning multilateral approaches in negotiating trade policy, long accepted by Arborian trading authorities, was incompatible with "current" foreign-trade policy. Rather, the passage suggests that that principle and the associated policy should be questioned and rejected, with a view to formulating a policy more relevant to current conditions.

The correct answer is D.

RC38200-03.01

496. Which of the following statements best summarizes the author's opinion of "free traders" and "fair traders"?

(A) The free and the fair traders' continuing debate provides a healthy and effective forum for examining Arborian trade policy.

(B) The proponents of fair trade are essentially correct, while those who advocate free trade are not.

(C) The proponents of free trade are better able to deal with current economic problems than are the fair traders.

(D) Neither the free nor the fair traders can come up with a workable trade policy because neither takes multilateral negotiations into account.

(E) The proponents of both free and fair trade have based their positions on out-of-date premises that do not reflect current economic conditions.

Supporting Ideas

This question requires an understanding of what the author has to say about "free traders" and "fair traders." The final paragraph of the passage states that "both sides," i.e. the proponents of free trade and the proponents of fair trade, base their positions on two assumptions that, according to the passage, are outdated. The passage attributes this outdatedness to changes that have occurred in the composition of international trade.

A The passage implies that the debate between the free traders and the fair traders is unlikely to make progress because of two outdated assumptions that both sides make.

B The passage implies that fair trade ultimately leads to free trade. The passage implies that trade can be both free and fair.

C The passage indicates that assumptions on which the free traders and the fair traders rely are incompatible with the current realities of international trade.

D The passage argues that both free traders and fair traders wrongly assume that the best way to resolve trade issues is through the use of multilateral negotiations.

E **Correct.** This is a claim that is central to the argument in the passage, as explained above.

The correct answer is E.

RC38200-04.01

497. The author mentions all of the following as characteristic of world trade in the mid-1940s EXCEPT:

(A) Arboria played a major role in the global marketplace.

(B) Whorfland played a major role in the global marketplace.

(C) Tariffs were the main obstacle to trade.

(D) Fair-trade economies dominated international trade.

(E) Arborian manufacturers were unsurpassed in most industries.

Supporting Ideas

The word "mentions" in the question is to be taken as meaning "explicitly states" (as opposed to implies or suggests), so this question requires that you recognize what is and is NOT explicitly stated in the passage regarding world trade in the mid-1940s. The passage states that Arboria and Whorfland dominated the global economy for a long period, but no longer do so. It also states that tariffs were the main obstacle to trade during the time of Arboria's trade supremacy and that in most industries, Arboria had no close competitors. The passage neither states nor implies that at that time fair-trade economies dominated world trade.

A The passage states that this was so in the mid-1940s.

B This is stated in the passage.

C The passage states: "tariffs were the principal obstacle to trade."

D **Correct.** The passage does NOT mention this; it neither states nor implies that in the mid-1940s, fair-trade economies dominated world trade.

E The passage states: "Arborian supremacy was uncontested in virtually all industries."

The correct answer is D.

RC38200-05.01

498. In presenting the argument in the passage, the author uses all of the following EXCEPT:

(A) statistical information about global commerce

(B) definitions of terms concerning world trade

(C) generalizations about Arboria's economic system

(D) historical background of Arborian trade policy

(E) an example of an economic system whose principles differ from those of Arboria

Evaluation

This question concerns rhetorical techniques used in the passage, and we are asked to identify a technique that is NOT used.

A The passage gives some statistical information about global commerce: e.g., 75% of world trade involves countries with divergent economic systems that differ from those of Arboria.

B The passage defines free trade and fair trade.

C The passage states that the supremacy of Arboria in most industries was for a long time uncontested.

D The passage indicates how the trade regime in which Arboria participates was established 40 years previously.

E **Correct.** No individual economic system besides that of Whorfland—which has adopted the same trading principles as Arboria—is cited in the passage.

The correct answer is E.

RC38200-06.01

499. The author asserts which of the following about Arboria's trade policy?

(A) A dramatic revision of Arboria's trade policy will be necessary unless Arborian manufacturers improve the quality of their goods.

(B) The most crucial issue facing Arborian trade policymakers is that of free trade versus protectionism.

(C) Arboria's current trade policy was essentially developed during the 1940s and has changed little since that time.

(D) Arboria's trade policy is widely emulated throughout the world, to the extent that most international commerce is modeled on Arboria's principles.

(E) Arboria's trade policy has evolved gradually over the last eighty years, constantly readjusting itself in response to shifts in global commerce.

Supporting Ideas

This question asks us to identify something stated in the passage—though not necessarily in the exact words given. We should look for the statement that is the most precise paraphrase of a statement made in the passage.

A Although the passage indicates that some revision of Arborian trade policy is needed, the passage does not indicate that such a revision would be unnecessary if the quality of Arborian manufactures improved.

B The passage states: "Today the key trade issue is not free trade versus protectionism."

C **Correct.** The passage states that the current trade policy is obsolete and "an artifact of the mid-1940s," and adds that although economic circumstances have changed, Arborian trade policy has not.

D The passage states: "nearly 75 percent [of world trade] is conducted by economic systems operating with principles at odds with those of Arboria."

E The passage does not state that this is so; in fact, it emphasizes the lack of change over the previous 40 years in Arborian trade policy and the absence of readjustment in response to significant changes in conditions affecting global trade.

The correct answer is C.

RC38200-07.01

500. The passage is primarily concerned with

(A) illustrating the erosion of Arboria's position in the world marketplace

(B) examining the differences between "free" and "fair" traders

(C) advocating a reassessment of Arboria's trade policy

(D) criticizing the terms of the General Agreement on Tariffs and Trade (GATT)

(E) comparing the different economic circumstances of Arboria's trade partners

Main Point

We are asked here to select the phrase that most accurately identifies the topic that is the central theme of the passage. The discussion revolves around trade policy—specifically the way in which it has affected the interests of the nation of Arboria. In the course of exploring this central topic, several issues are touched on: the loss of Arborian dominance in global trade; the distinction between free trade and fair trade; the impact of GATT on the governance of global trade; and the percentage of total trade conducted by countries other than Arboria and Whorfland.

A Illustrating something generally involves providing a specific example. But the passage gives no example to show how the Arborian trade position has declined relative to that of other countries.

B The distinction between free trade and fair trade, as understood by the advocates of each of these, is explained in the broader context of considering Arborian trade policy. But the passage emphasizes the common assumptions relied on by both free traders and fair traders.

C **Correct.** This is the theme of the passage, which advocates a reconsideration of Arborian trade policy and the longstanding assumptions on which it has been based. This central concern prompts the discussion of other relevant, but subsidiary, topics.

D The individual terms of GATT are not examined or criticized in any detail, but the relevance of GATT to current global trade is minimized.

E No such comparison is made, even though the divergence of economic systems involved in world trade is emphasized with a view to demonstrating the difficulty in negotiating multilateral trade deals and the obsolescence of the multilateral approach.

The correct answer is C.

RC38200-08.01

501. The author implies that the main obstacle to a truly effective Arborian trade policy is the

(A) weak position that Arboria currently holds in the global marketplace

(B) inability of Arborian leaders to recognize that foreign economic systems are based on principles fundamentally different from their own

(C) dominance of the supporters of free trade in the conflict between free-trade and fair-trade advocates

(D) apparent inability of Arborian industries to produce goods that are competitive in the world market

(E) protectionism that characterizes the foreign trade policies of so many of Arboria's trade partners

Inference

Correctly answering this question requires you to infer from the given information what the main obstacle to an effective Arborian trade policy is. The correct response is to be found in the first paragraph of the passage, which contains the following sentence: "Arboria faces the prospect of continuing economic loss until Arborian business and political leaders recognize the fundamental differences between Arborian and foreign economic systems." The phrase *continuing economic loss* indicates, from the author's perspective, an ineffective trade policy. The *until*-clause signifies that a necessary condition of improving the situation is a recognition by leaders that Arborian and foreign economic systems are fundamentally different. The final paragraph emphasizes that such differences exist: "75 percent [of world trade] is conducted by economic systems operating with principles at odds with those of Arboria."

A The passage does not state or imply that Arboria has a "weak position" in global trade; rather, it emphasizes that Arboria can gain a much stronger position and "misses opportunities for trade expansion."

B **Correct.** See the detailed analysis given above.

C The passage nowhere states or implies that the free-trade advocates are dominant in the dispute with fair-trade advocates, even though the passage suggests that developed economies such as Arboria and Whorfland have long practiced free trade and been dominant in global trade.

D The passage neither states nor implies that the goods produced by Arborian industries are deficient in quality or are overpriced, but it does suggest that some countries that export to Arboria have trade barriers, such as tariffs, that impede importation of Arborian products.

E The passage suggests that some trading partners of Arboria have trade barriers impeding imports from Arboria, but the passage asserts the following: "Today the key trade issue is not free trade versus protectionism but diminishing trade versus expanding trade."

The correct answer is B.

Questions 502–509 refer to the passage on page 418.

RC74000-01.01

502. According to the passage, which of the following was true of the treaty establishing the Fort Berthold Indian Reservation?

(A) It was challenged in the Supreme Court a number of times.

(B) It was rescinded by the federal government, an action that gave rise to the Winters case.

(C) It cited American Indians' traditional use of the land's resources.

(D) It failed to mention water rights to be enjoyed by the reservation's inhabitants.

(E) It was modified by the Supreme Court in *Arizona v. California*.

Supporting Idea

This question depends on recognizing what the passage says about the treaty that established the Fort Berthold Indian Reservation. The passage indicates that the treaty does not mention water rights, but the federal government had intended, according to the Supreme Court, to reserve for the inhabitants of the reservation the waters that were essential to the usefulness of the land.

A The passage does discuss Supreme Court cases, but it does not explicitly mention any challenges in the Supreme Court to the treaty.

B The passage does not state that the federal government rescinded the treaty.

C The passage does not indicate that the treaty made any reference to the traditional use of the land's resources.

D **Correct.** The passage indicates that the treaty does not mention water rights.

E The passage's reference to *Arizona v. California* relates to the treaty that established the Fort Berthold Indian Reservation only in that *Arizona v. California* refers to the Winters doctrine, which was established in a case regarding that treaty; *Arizona v. California* does not modify that treaty in any way.

The correct answer is D.

RC74000-02.01

503. The passage suggests that, if the criteria discussed in lines 10–20 of the text were the only criteria for establishing a reservation's water rights, which of the following would be true?

(A) The water rights of the inhabitants of the Fort Berthold Indian Reservation would not take precedence over those of other citizens.

(B) Reservations established before 1848 would be judged to have no water rights.

(C) There would be no legal basis for the water rights of the Rio Grande pueblos.

(D) Reservations other than American Indian reservations could not be created with reserved water rights.

(E) Treaties establishing reservations would have to mention water rights explicitly in order to reserve water for a particular purpose.

Inference

The question requires you to make an inference based on a hypothetical situation in which the criteria discussed in lines 10–20 are the only criteria relevant to establishing a reservation's water rights. These criteria relate to any reservation that has been formally withdrawn from federal public lands, in which the circumstances of that withdrawal make clear that the government had intended to reserve both water and land when the reservation was established. Because the Rio Grande pueblos never formally constituted a part of federal public lands, they were never formally withdrawn from these lands, and so this set of criteria does not apply to these pueblos. Thus, if these were the only legal criteria for establishing water rights, then there would be no legal basis for water rights for the Rio Grande pueblos.

A The criteria, which were established on the precedent set in the *Winters v. United States* ruling, all apply to the Fort Berthold Indian Reservation.

B Although in actual fact there were no Indian reservations formally established before 1848, nothing in the passage suggests that there were not any, or that none would have met the criteria.

C **Correct.** If the criteria were the only criteria relevant for establishing water rights, then the passage suggests that, because the Rio Grande pueblos were never formally withdrawn from federal public lands, there would be no legal basis for water rights for these pueblos.

D The criteria as expressed in the passage do not restrict the type of reservation covered to American Indian reservations.

E The criteria are meant to cover any circumstances in which the government intended to reserve water rights, whether water rights are explicitly mentioned or not.

The correct answer is C.

RC74000-03.01

504. Which of the following most accurately summarizes the relationship between *Arizona v. California*, as that decision is described in the passage, and the criteria discussed in lines 10–20?

(A) *Arizona v. California* abolishes these criteria and establishes a competing set of criteria for applying the Winters doctrine.

(B) *Arizona v. California* establishes that the Winters doctrine applies to a broader range of situations than those defined by these criteria.

(C) *Arizona v. California* represents the sole example of an exception to the criteria as they were set forth in the Winters doctrine.

(D) *Arizona v. California* does not refer to the Winters doctrine to justify water rights, whereas these criteria do rely on the Winters doctrine.

(E) *Arizona v. California* applies the criteria derived from the Winters doctrine only to federal lands other than American Indian reservations.

Evaluation

This question requires you to determine how *Arizona v. California*, as it is described in the passage, relates to the criteria discussed in lines 10–20. Those criteria, which were established in various decisions based on the precedent of *Winters v. United States*, lay down conditions under which courts can uphold federal rights to reserve water. One of the criteria is related to land formally withdrawn from federal public lands. *Arizona v. California* establishes that the Winters doctrine—which stipulates that water rights need not have been granted explicitly—applies to a broader range of situations than those defined by the criteria. For instance, the doctrine can apply in cases in which the land in question was never formally withdrawn from public lands.

A The passage does not indicate that *Arizona v. California* abolishes these criteria. It merely indicates that *Arizona v. California* recognizes further situations to which the Winters doctrine can apply.

B **Correct.** The passage indicates that *Arizona v. California* applies the Winters doctrine to a situation that falls outside these criteria.

C The passage does not indicate that there are no other exceptions besides *Arizona v. California* to these criteria.

D The passage indicates that *Arizona v. California* does refer to the Winters doctrine to justify water rights.

E The passage does not indicate that *Arizona v. California* applies these criteria at all; instead, *Arizona v. California* broadens the range of situations to which the Winters doctrine applies.

The correct answer is B.

RC74000-04.01

505. The "pragmatic approach" mentioned in lines 37–38 of the passage is best defined as one that

(A) grants recognition to reservations that were never formally established but that have traditionally been treated as such

(B) determines the water rights of all citizens in a particular region by examining the actual history of water usage in that region

(C) gives federal courts the right to reserve water along with land even when it is clear that the government originally intended to reserve only the land

(D) bases the decision to recognize the legal rights of a group on the practical effect such a recognition is likely to have on other citizens

(E) dictates that courts ignore precedents set by such cases as *Winters v. United States* in deciding what water rights belong to reserved land

Evaluation

This question depends on determining how the term *pragmatic approach* is used in lines 37–38. The passage states that what constitutes an American Indian reservation is a matter not of legal definition, but of practice. The Rio Grande pueblos, though they were never formally established by a withdrawal from federal public lands, have always been treated in practice as reservations. This is what is described in the passage as a *pragmatic approach*.

A **Correct.** The passage refers to the idea that *[w]hat constitutes an American Indian reservation is a question of practice, not of legal definition* as a *pragmatic approach*. Thus, the pragmatic approach does not require that a reservation has been formally established, but only that it has been traditionally treated as such.

B The passage does not concern itself with the water rights of all citizens.

C The passage clearly indicates that determining whether the government intended to reserve water along with the land is crucial for courts.

D The passage does not specifically consider the likely practical effect of recognizing a particular group's legal rights on other citizens.

E The passage indicates that the pragmatic approach is supported by *Arizona v. California*, which used, and expanded on, the precedent set by *Winters v. United States*.

The correct answer is A.

RC74000-05.01

506. It can be inferred from the passage that the Winters doctrine has been used to establish which of the following?

(A) A rule that the government may reserve water only by explicit treaty or agreement

(B) A legal distinction between federal lands reserved for American Indians and federal lands reserved for other purposes

(C) Criteria governing when the federal government may set land aside for a particular purpose

(D) The special status of American Indian tribes' rights to reserved land

(E) The federal right to reserve water implicitly as well as explicitly under certain conditions

Inference

This question requires you to make an inference based on facts the passage cites regarding the Winters doctrine. The passage indicates that the Supreme Court ruled in *Winters v. United States* that, despite the fact that the treaty establishing the Berthold Indian Reservation made no explicit mention of water rights, the federal government had intended to reserve such rights to the American Indians living on that reservation. Later court rulings that cited the Winters ruling as precedent further refined this doctrine such that water rights can be reserved implicitly if *circumstances reveal [that] the government intended to reserve water as well as land when establishing the reservation*.

A The passage states that the Winters doctrine ruled that even if a treaty has not explicitly reserved water, water may be reserved if conditions reveal that the reservation of water had been intended.

B The passage indicates that the Winters doctrine presupposes such a legal distinction; it does not establish it.

C The passage does not give any information that suggests that the Winters doctrine has been used to establish any criteria governing when the federal government may set land aside for a particular purpose.

D The passage indicates that the Winters doctrine gives special status to the water flowing through reserved lands, but it does not suggest that the doctrine has been used to establish any special status of American Indian tribes' rights to those lands.

E **Correct.** The passage provides information suggesting that the Winters doctrine has been used to establish a federal right to implicitly reserve water under certain conditions.

The correct answer is E.

RC74000-06.01

507. The author cites the fact that the Rio Grande pueblos were never formally withdrawn from public lands primarily in order to do which of the following?

(A) Suggest why it might have been argued that the Winters doctrine ought not to apply to pueblo lands

(B) Imply that the United States never really acquired sovereignty over pueblo lands

(C) Argue that the pueblo lands ought still to be considered part of federal public lands

(D) Support the argument that the water rights of citizens other than American Indians are limited by the Winters doctrine

(E) Suggest that federal courts cannot claim jurisdiction over cases disputing the traditional diversion and use of water by Pueblo Indians

Evaluation

The passage in the first paragraph outlines a set of criteria that, through various court decisions using the Winters decision as precedent, refined what came to be known as the Winters doctrine. These decisions established that courts can uphold federal rights to reserve water (specifically, for use by American Indians) if, among other conditions, *the land has been formally withdrawn from federal public lands*. Because the Rio Grande pueblos never formally constituted a part of federal public lands, it might appear that the Winters doctrine would not apply to them. The passage indicates, however, that *Arizona v. California* established that this doctrine did apply to them.

A **Correct.** Because the Rio Grande pueblo lands were never formally withdrawn from federal public lands—because they never were a part of federal public lands—it might have appeared that the Winters doctrine did not apply to them, because that doctrine had traditionally been taken to apply only to land that had been formally withdrawn from federal public lands.

B The passage does suggest that the federal government never acquired sovereignty over the Rio Grande pueblos. But the passage indicates this not by citing the fact that the pueblos were never formally withdrawn from public lands, but by pointing out that these pueblos were never part of federal public lands in the first place.

C The passage states that the pueblo lands were never considered to be part of federal public lands.

D It is not the fact that these lands were never withdrawn from federal public lands that is cited in support of this argument; it is, rather, the fact that these lands were never part of federal public lands that is cited for this purpose.

E The passage actually suggests the opposite of what this says, namely, that federal courts can claim jurisdiction over such cases.

The correct answer is A.

RC74000-07.01

508. The primary purpose of the passage is to

(A) trace the development of laws establishing American Indian reservations

(B) explain the legal bases for the water rights of American Indian tribes

(C) question the legal criteria often used to determine the water rights of American Indian tribes

(D) discuss evidence establishing the earliest date at which the federal government recognized the water rights of American Indians

(E) point out a legal distinction between different types of American Indian reservations

Main idea

Answering this question requires identifying the primary purpose of the passage. The passage is mainly concerned with describing the legal bases of American Indian tribal water rights.

A The passage does not discuss the development of laws establishing reservations. It is concerned with American Indian water rights.

B **Correct.** The passage's primary concern is to discuss certain principles relating to American Indian water rights established in various court cases.

C The passage does not question the legal criteria it discusses.

D The passage indicates that a groundbreaking Supreme Court ruling regarding the water rights of American Indians was handed down in 1908, but that ruling suggested that the federal government had intended at an earlier stage, in the treaty establishing the Fort Berthold Indian Reservation, to recognize water rights; the passage gives no indication, though, of the date of that treaty, nor whether that treaty would have been the first recognition in law of such rights. The passage is concerned with the legal bases of American Indian water rights, not with when the federal government first recognized them.

E The passage does discuss both lands that have been explicitly created as reservations by treaty and lands that have been treated as reservations although they had never been legally constituted as such; however, (1) the passage indicates that in crucial ways there are no legal distinctions between these two different types of American reservation, and (2) this is not the primary focus of the passage, which, instead, concerns the legal bases of American Indian water rights.

The correct answer is B.

RC74000-08.01

509. The passage suggests that the legal rights of citizens other than American Indians to the use of water flowing into the Rio Grande pueblos are

(A) guaranteed by the precedent set in *Arizona v. California*

(B) abolished by the Winters doctrine

(C) deferred to the Pueblo Indians whenever treaties explicitly require this

(D) guaranteed by federal land-use laws

(E) limited by the prior claims of the Pueblo Indians

Inference

The question requires you to make an inference regarding the legal rights of citizens other than American Indians to the use of water flowing into the Rio Grande pueblos. The second paragraph of the passage discusses the Rio Grande pueblos, the rights to the water flowing into them, and the legal bases regarding those rights. Most relevantly to this question, the final sentence of the passage indicates that *the reserved water rights of Pueblo Indians have priority over other citizens' water rights*.

A The passage indicates that the precedent set in *Arizona v. California* declares that the Winters doctrine applies to the pueblos, despite their never having been explicitly set aside as a reservation. This gave the inhabitants of the pueblos priority rights to water. Thus, the legal rights of citizens other than American Indians are not guaranteed by the precedent set in that ruling.

B The passage does not rule out the possibility that citizens other than American Indians may have some rights to the water; their rights are merely limited by the prior claims of the Pueblo Indians.

C The passage does not explicitly discuss treaties to which Pueblo Indians are a party.

D The passage gives no indication that federal land-use laws guarantee the legal rights of citizens other than American Indians to water flowing into the Rio Grande pueblos.

E. **Correct.** The passage explicitly states that the reserved water rights of Pueblo Indians have priority over other citizens' water rights.

The correct answer is E.

Questions 510–514 refer to the passage on page 420.

RC00394-02

510. Which of the following can be inferred about supplier partnerships, as they are described in the passage?

(A) They cannot be sustained unless the goods or services provided are available from a large number of suppliers.

(B) They can result in purchasers paying more for goods and services than they would in a competitive-bidding situation.

(C) They typically are instituted at the urging of the supplier rather than the purchaser.

(D) They are not feasible when the goods or services provided are directly related to the purchasers' end products.

(E) They are least appropriate when the purchasers' ability to change suppliers is limited.

Inference

According to the passage, in supplier partnerships a corporate purchaser forgoes the right to pursue alternative suppliers for certain goods or services. This tends to reduce or eliminate the threat of competition for the supplier in the partnership. It can be inferred that the corporate purchaser in a supplier partnership risks paying more for goods or services than it would if the supplier had to compete for the business.

A The passage suggests something incompatible with this, i.e., that availability of the relevant goods or services from many suppliers would undermine rather than strengthen a supplier partnership.

B **Correct.** The passage indicates that supplier partnerships, by definition, reduce the supplier's exposure to competition, and it can be inferred from this that a purchaser in such a partnership could sometimes pay more for the supplied goods or services than if not in the partnership.

C The passage is silent on how supplier partnerships are initiated, and the passage gives no reason to believe that these would usually be initiated by suppliers.

D The passage indicates that supplier partnerships are usually instituted for the supply of goods or services that do not contribute directly to the company's end products, though the passage gives no reason to believe that such partnerships would never make sense for supply of items directly related to end products.

E The passage states that where alternative suppliers for certain goods or services are few and change from an existing supplier is difficult, partnerships may be "unavoidable." This seems to imply that in such cases, supplier partnerships are the most appropriate.

The correct answer is B.

RC00394-03

511. Which of the following best describes the relation of the second paragraph to the first?

(A) The second paragraph offers proof of an assertion made in the first paragraph.

(B) The second paragraph provides an explanation for the occurrence of a situation described in the first paragraph.

(C) The second paragraph discusses the application of a strategy proposed in the first paragraph.

(D) The second paragraph examines the scope of a problem presented in the first paragraph.

(E) The second paragraph discusses the contradictions inherent in a relationship described in the first paragraph.

Evaluation

The first paragraph recommends that a corporate purchaser of certain categories of goods and services should consider two variables to evaluate how, if at all, it might exert pressure on a supplier to gain economic advantage. Applying the two variables, the second paragraph identifies four different scenarios and, for each scenario, explains how the purchaser can gain some economic advantage.

A The second paragraph is not focused on proving anything; rather it conducts an analysis of the ways in which, under various conditions, a corporate purchaser can gain economic advantage from a supplier.

B The second paragraph conducts an analysis of various situations affecting the feasibility of a purchaser's exerting pressure to gain economic advantage from a supplier; it is not focused on explaining what causes the occurrence of any situation mentioned in the first paragraph.

C **Correct.** The first paragraph recommends that corporate purchasers consider two variables in analyzing the feasibility of exerting pressure on suppliers with a view to economic advantage; the second paragraph shows how purchasers can apply those variables to identify four different types of situations affecting the degree to which economic advantage can be gained by exerting competitive pressure.

D The first paragraph is not focused on presenting a problem, but rather on indicating an approach that purchasers might use in evaluating the feasibility of exerting economic pressure on suppliers with a view to economic advantage. The second paragraph elaborates on the suggested approach.

E The second paragraph does not characterize as contradictory any relationship involved in the four types of situations it discusses. The first paragraph discusses supplier partnerships and identifies a disadvantage that they sometimes involve for purchasers; but the discussion in the second paragraph does not focus exclusively on situations that involve a supplier partnership.

The correct answer is C.

RC00394-04

512. It can be inferred that the author of the passage would be most likely to make which of the following recommendations to a company purchasing health care benefits for its employees?

(A) Devise strategies for circumventing the obstacles to replacing the current provider of health care benefits.

(B) Obtain health care benefits from a provider that also provides other indirect products and services.

(C) Obtain bids from other providers of health care benefits in order to be in a position to negotiate a better deal with the current provider.

(D) Switch providers of health care benefits whenever a different provider offers a more competitive price.

(E) Acknowledge the difficulties involved in replacing the current provider of health care benefits and offer to form a partnership with the provider.

Inference

In the passage, health care benefits are used as an example of a Type 2 situation, where there are many competing providers, but where changing from one provider to another is difficult. In Type 2 situations, the author of the passage recommends that the corporate purchaser examine the alternative providers to provide leverage in bargaining with the existing provider.

A Presumably handling any obstacles to replacement would be necessary if a corporate purchaser had decided to change providers. The author of the passage does not preclude the possibility that this may sometimes be a reasonable decision but does not recommend it.

B The author of the passage does not consider such a possibility, and does not even recommend switching from the existing provider in a Type 2 situation.

C **Correct.** The recommendation offered in the passage is to review competitive alternatives to the existing provider, with a view to bargaining effectively for better terms with the existing provider.

D As already noted, the author of the passage does not recommend switching from the existing provider, but recommends reviewing competitive alternatives to exert pressure on the existing provider to grant more favorable terms.

E The author of the passage does not recommend this course of action in a Type 2 situation, which the corporate purchase

of health care benefits exemplifies. The only situation in which the author views a supplier partnership as possibly the best of a set of bad options is a Type 4 situation, where there are few competitive alternatives available and change is difficult.

The correct answer is C.

RC00394-05

513. Which of the following is one difference between Type 2 situations and Type 4 situations, as they are described in the passage?

(A) The number of alternative suppliers available to the purchaser

(B) The most effective approach for the purchaser to use in obtaining competitive bids from potential suppliers

(C) The degree of difficulty the purchaser encounters when changing suppliers

(D) The frequency with which each type of situation occurs in a typical business environment

(E) The likelihood that any given purchase will be an indirect purchase

Evaluation

According to the passage, Type 2 situations are those where there are several competitive alternative suppliers available but where changing from the existing supplier would be difficult. Type 4 situations are those where there are few competitive alternative suppliers and changing from the existing supplier would be difficult.

A **Correct.** The two types of situations differ in the number of competitive alternatives to the existing supplier that are available: in Type 2 situations there are several; in Type 4 situations there are few.

B How should the prospective purchaser ensure that potential suppliers submit truly competitive bids, or can a prospective purchaser even ensure it? The passage gives no answer to such questions that helps to identify a difference between the two types of situations.

C In both types of situations as described in the passage, changing to a new supplier is difficult, and no difference in the degree of difficulty is mentioned.

D How frequently each of the two types of situations typically occur is not addressed in the passage.

E Indirect purchases, as described in the passage, are goods or services that are not embodied in the corporation's end products. Many corporate producers currently make indirect purchases such as computers or business consultancy services. The passage does not compare the proportion of a corporation's total purchases that are indirect (the proportion would presumably vary widely depending on the nature of a corporation's production); so the passage provides no rational basis for estimating a universally applicable likelihood that a given purchase would be indirect.

The correct answer is A.

RC00394-06

514. According to the passage, which of the following factors distinguishes an indirect purchase from other purchases?

(A) The ability of the purchasing company to subject potential suppliers of the purchased item to competitive scrutiny

(B) The number of suppliers of the purchased item available to the purchasing company

(C) The methods of negotiation that are available to the purchasing company

(D) The relationship of the purchased item to the purchasing company's end product

(E) The degree of importance of the purchased item in the purchasing company's business operations

Supporting ideas

The passage characterizes a purchase of goods or services as indirect when the goods or services are not directly related to the end products of the purchasing corporation. Examples given are computers, advertising, and legal services. By implication, direct purchases by an automobile manufacturer could include steel, batteries, and tires: these would obviously be inputs embodied in the final products.

A The passage suggests that "competitive scrutiny" is typically applied only to suppliers of direct purchases, but makes the case that it could be applied also to suppliers of indirect purchases. The exposure to competitive scrutiny is not the characteristic that the passage uses to distinguish direct from indirect purchases.

B The number of available suppliers clearly can vary for both direct purchases and indirect purchases, and the passage provides no reason to think otherwise.

C The passage provides no information about the methods of negotiation that are available for direct purchases. The passage does not base the distinction between direct and indirect purchases on differences in methods of negotiation.

D **Correct.** The passage defines direct purchases as those directly related to the purchasing firm's end products; indirect purchases are purchases that are not related to the end products.

E The type of purchase—direct or indirect—is not, according to the passage, determined by the degree of importance of the purchase in facilitating the purchasing firm's business operations. For example, purchase of advertising by an accounting firm could be critically important for success of the firm's business operations, but such a purchase would likely count as indirect, given the way the passage defines indirect purchases.

The correct answer is D.

Questions 515-519 refer to the passage on page 422.

RC00423-01

515. According to the "conventional view" referred to in line 13 of the passage, brighter carotenoid-based coloration in certain species suggests that an individual

(A) lives in a habitat rich in carotenoid-bearing plants and insects

(B) has efficient detoxification processes

(C) has a superior immune system

(D) possesses superior foraging capacity

(E) is currently capable of reproducing

Supporting ideas

According to the passage, the conventional view is that carotenoids in a male animal—recognizable by brighter coloration—are meaningful in the context of mate selection because they are rare and not easily acquired. A male that displays brighter coloration than other males would appear to a female of the species to have foraged more effectively and would therefore seem healthier, and more eligible as a mate, than some less brightly colored males.

A Male animals in a carotenoid-rich environment might, on average, have brighter coloration, but the passage does not imply that this is part of the conventional view. The passage represents the conventional view as emphasizing the rarity of carotenoids, and the consequent difficulty of finding them.

B The conventional view holds that a brightly colored male might appear healthier than less brightly colored males to a female of the species. If the male were healthier, this would presumably require having efficient detoxification processes. But the passage does not treat this as part of the conventional view.

C If a male animal is healthier than other males of the species, presumably that male has a superior immune system, but the passage does not represent this as part of the conventional view.

D **Correct.** The passage represents the conventional view as holding that more brightly colored males seem to females to be more effective foragers, and therefore healthier.

E The passage does not represent the conventional view as holding that brighter coloration in a male animal would be taken by a female of the species as indicating a current ability to reproduce.

The correct answer is D.

RC00423-02

516. The idea that carotenoid-based coloration is significant partly because carotenoids are required for health suggests that a lack of bright coloration in a male is most likely to indicate which of the following?

(A) Inefficient detoxification processes
(B) Immunity to parasite infestation
(C) Low genetic resistance to disease
(D) Lack of interest in mating
(E) Lack of carotenoid-storing tissues

Inference

The passage states that carotenoids are used by the immune system and for detoxification processes that help maintain health. Males that are more susceptible to disease and parasites, i.e., males that lack high genetic resistance to such things, must use up the carotenoids they accumulate to boost their immune systems. The passage suggests that consequently male animals perceived by females of the species as having used up their carotenoids would be perceived as having relatively low genetic resistance to disease and parasites.

A Even if an animal has efficient detoxification processes, the passage suggests that carotenoids would be used up in such processes. Thus, having relatively less bright coloration (and therefore less carotenoids) would not necessarily indicate inefficient detoxification processes.

B The information in the passage suggests that having low genetic resistance to parasite infections is consistent with having immunity to at least some parasite infections, because carotenoids can be used to boost immunity. But this comes at the cost of lacking bright coloration.

C **Correct.** The passage indicates that a male's having relatively bright coloration could indicate relatively high genetic resistance to disease, and having relatively less bright coloration could indicate relatively low genetic resistance, because the carotenoids that create bright coloration would have been used to boost immunity or aid detoxification processes.

D The passage does not suggest that male animals lacking bright coloration would be perceived by a female of the species as lacking interest in mating.

E The passage does not address the issue of whether carotenoid-storing tissues may be lacking in a male of a species that would normally have such tissues. The passage only states that "many" animal species use colorful signals made possible by carotenoids.

The correct answer is C.

RC00423-03

517. The passage suggests that relatively bright carotenoid-based coloration is a signal of which of the following characteristics in males of certain animal species?

(A) Readiness for mating behavior
(B) Ability to fight
(C) Particular feeding preferences
(D) Recovery from parasite infestation
(E) Fitness as a mate

Application

According to the passage, "studies of several animal species have shown that when choosing mates, females prefer males with brighter, carotenoid-based coloration." The passage examines two mechanisms by which carotenoid-based coloration might affect mate selection: either signaling good health or signaling high genetic resistance to infection. It is implicit in the discussion that whichever mechanism is in question, bright coloration would function to signal fitness as a mate.

A The passage discusses how bright carotenoid-based coloration may affect mate selection but does not cite perceived bright coloration as signaling readiness for mating behavior.

B The passage suggests that bright carotenoid-based coloration tends to signal good health or genetic resistance to factors that cause illness. The passage does not refer to ability to fight.

C The passage does not refer to feeding preferences, but only indicates that animals with bright carotenoid-based coloration would have consumed organisms that are rich in carotenoids.

D The passage explores the possibility that bright carotenoid-based coloration could signal high genetic resistance to infection, but implies that recovery from infection could arise from strong immune resistance rather than from high genetic resistance, and could be signaled by lack of carotenoid-based brightness.

E **Correct.** The passage discussion indicates that, whatever the precise mechanism, bright carotenoid-based coloration in males of certain species functions to signal fitness as a mate.

The correct answer is E.

RC00423-04

518. The passage implies which of the following about the insects from which animals acquire carotenoids?

(A) They do not produce carotenoids themselves.

(B) They use carotenoids primarily for coloration.

(C) They maintain constant levels of carotenoids in their tissues.

(D) They are unable to use carotenoids to boost their immune system.

(E) They are available in greater abundance than are carotenoid-bearing plants.

Inference

The passage says that animals "acquire carotenoids either directly (from the plants and algae that produce them) or indirectly (by eating insects)."

A **Correct.** The passage indicates that the phrase *acquire …. directly* signifies in this context acquisition from the ultimate source of carotenoids, so the phrase *acquire … indirectly* signifies an acquisition that is not from the ultimate source. This implies that insects do not produce their own carotenoids, but derive them by consuming plants, algae, or other insects.

B This may well be true of some insects, but no information in the passage implies it.

C No information in the passage implies that carotenoid levels in insect tissue remain constant over time.

D The passage contains no information that relates to the immune system of any insect species.

E Even if this is true, the passage contains no information that implies it.

The correct answer is A.

RC00423-05

519. Information in the passage suggests that which of the following is true of carotenoids that a male animal uses for detoxification processes?

(A) They were not acquired directly from plants and algae.

(B) They cannot be replenished through foraging.

(C) They cannot be used simultaneously to brighten coloration.

(D) They do not affect the animal's susceptibility to parasites.

(E) They increase the chances that the animal will be selected as a mate.

Inference

The passage states that carotenoids are used by the immune system and for detoxification processes. To the extent that any carotenoids are used for these purposes, the passage suggests, they would not also be available for bright-colored display to potential mates.

A The passage states that animals can acquire carotenoids from insects, as well as from plants and algae. Nothing indicates that a male animal's use of the carotenoids would determine which of these sources they are acquired from.

B No information in the passage suggests this. The passage tells us that males acquire carotenoids by foraging.

C **Correct.** The passage implies that the quantity of carotenoids used for detoxification is no longer available for any other purpose, such as display of bright coloration.

D The passage suggests that carotenoids could benefit immune response; this implies the possibility of better resistance to parasitic infections.

E The passage conjectures that a male animal's use of carotenoids for detoxification processes could reduce the chances of being selected as a mate.

The correct answer is C.

Questions 520–524 refer to the passage on page 424.

RC00349-02

520. According to the passage, Kerber maintained that which of the following led to an increase in educational opportunities for women in the United States after the American Revolution?

(A) An unprecedented demand by women for greater educational opportunities in the decades following the Revolution

(B) A new political ideology calling for equality of opportunity between women and men in all aspects of life

(C) A belief that the American educational system could be reformed only if women participated more fully in that system

(D) A belief that women needed to be educated if they were to contribute to the success of the nation's new form of government

(E) A recognition that women needed to be educated if they were to take an active role in the nation's schools and churches

Supporting ideas

The passage ascribes to Linda Kerber the claim that there was "a surge of educational opportunities for women in the United States" after the American Revolution, and that this surge resulted from a new ideology of "republic motherhood." According to the passage, Kerber argued that the nation's leaders advocated education for women to equip them, in their family role, to raise politically virtuous sons.

A The passage attributes no claim to Kerber concerning a demand by women for education.

B The passage attributes no claim to Kerber concerning a new ideology calling for equality between women and men.

C Kerber's argument as represented in the passage did not claim that an increase in education opportunities for women resulted from a belief that such an increase was required for successful reform of the American educational system.

D **Correct.** According to the passage, Kerber argued that educational opportunities for women increased because the nation's leaders believed that successful democratic government would require that women raise politically virtuous sons within their families, and that women could do so only if they had access to education themselves.

E According to the passage, Kerber's thesis primarily concerns the roles that it was believed educated women could play in raising politically virtuous sons in the context of the family, not in the nation's schools or churches.

The correct answer is D.

RC00349-03

521. According to the passage, within the field of educational history, Thomas Woody's 1929 work was

(A) innovative because it relied on newspaper advertisements as evidence

(B) exceptional in that it concentrated on the period before the American Revolution

(C) unusual in that it focused on educational attitudes rather than on educational practices

(D) controversial in its claims regarding educational opportunities for boys

(E) atypical in that it examined the education of girls

Supporting ideas

According to the passage, Woody's work was a "notable exception" as contrast to the work of other educational historians, who "barely mentioned women and girls."

A Other historians prior to Woody's 1929 work may have used newspaper advertisements as evidence, but the passage provides no information as to whether this was so.

B The passage is silent as to whether educational historians besides Woody concentrated on the period before the American Revolution.

C The passage does not provide information as to the extent to which either Woody or other historians focused on educational attitudes as opposed to educational practices.

D According to the passage, Woody noted that educational opportunities increased for both girls and boys around 1750. But the passage does not indicate that this claim, or any other claim Woody may have made about educational opportunities for boys, was controversial.

E **Correct.** As stated above, the passage describes Woody's work as a "notable exception," i.e., atypical, with respect to his discussion of education for girls.

The correct answer is E.

RC00349-04

522. The passage suggests that Woody would have agreed with which of the following claims regarding "An Essay on Woman"?

(A) It expressed attitudes concerning women's education that were reflected in new educational opportunities for women after 1750.

(B) It persuaded educators to offer greater educational opportunities to women in the 1750s.

(C) It articulated ideas about women's education that would not be realized until after the American Revolution.

(D) It offered one of the most original arguments in favor of women's education in the United States in the eighteenth century.

(E) It presented views about women's education that were still controversial in Woody's own time.

Application

According to the passage, Woody characterized "An Essay on Woman" (1753) as reflecting a shift in view, and the context indicates that this shift concerned new attitudes that accompanied increased opportunities after 1750 for girls to become educated women.

A **Correct.** Based on the passage, this is a claim with which Woody would likely have agreed.

B The passage represents Woody as claiming that "An Essay on Woman" reflected changes that had already occurred around 1750. The passage does not indicate whether Woody would have agreed with this claim about a persuasive effect on educators.

C Nothing in the passage represents Woody as thinking that "An Essay on Woman" had ideas about women's education that did not come to fruition until after the American Revolution. The tenor of Woody's thinking, as the passage represents it, is that the essay reflected changes already occurring.

D The passage indicates that Woody characterizes "An Essay on Woman" as "reflecting" a view that had already gained some currency; so it is unlikely that Woody saw the essay as offering any highly original arguments in favor of women's education.

E It may be true that "An Essay on Woman" presented some views that were at least somewhat controversial even around 1929, but the passage provides no information that addresses this point.

The correct answer is A.

RC00349-05

523. The passage suggests that, with regard to the history of women's education in the United States, Kerber's work differs from Woody's primarily concerning which of the following?

(A) The extent to which women were interested in pursuing educational opportunities in the eighteenth century

(B) The extent of the support for educational opportunities for girls prior to the American Revolution

(C) The extent of public resistance to educational opportunities for women after the American Revolution

(D) Whether attitudes toward women's educational opportunities changed during the eighteenth century

(E) Whether women needed to be educated in order to contribute to the success of a republican form of government

Evaluation

The passage represents Kerber as claiming that the American Revolution led to a surge in educational opportunities for women because the nation's leaders believed women needed to be educated if they were to raise politically virtuous sons. Woody, however, is represented as claiming that there was a significant increase in such opportunities and significant advocacy for women's education well before the Revolution.

A The passage does not represent either Kerber or Woody as addressing the extent to which women were interested in pursuing educational opportunities in the eighteenth century.

B **Correct.** The passage attributes to Woody the view that "practical education for females had many advocates before the Revolution," notably in the 1750s, and that the Revolution at most accelerated an earlier trend of changing attitudes. This is contrary to the views attributed to Kerber.

C The passage gives no information as to whether Kerber or Woody addresses this issue, nor does it discuss to what extent, if any, such resistance may have occurred.

D The passage indicates that Kerber and Woody hold that there was a change in attitudes toward women's educational opportunities during the eighteenth century, disagreeing, however, as to whether the most significant change occurred before or after the Revolution.

E Neither Kerber nor Woody is represented by the passage as holding divergent views on this point, and it would be reasonable to think that they may have agreed.

The correct answer is B.

RC00349-06

524. According to the passage, Kerber argued that political leaders thought that the form of government adopted by the United States after the American Revolution depended on which of the following for its success?

(A) Women assuming the sole responsibility for instilling political virtue in children

(B) Girls becoming the primary focus of a reformed educational system that emphasized political virtue

(C) The family serving as one of the primary means by which children were imbued with political virtue

(D) The family assuming many of the functions previously performed by schools and churches

(E) Men and women assuming equal responsibility for the management of schools, churches, and the family

Supporting ideas

The passage attributes to Kerber the claim that the nation's leaders believed a virtuous citizenry was essential to the success of the nation's republican form of government, and that women would play a primary role in raising future citizens who would be politically virtuous.

A According to the passage, Kerber indicates that the nation's leaders believed churches and schools, as well as families, would work to imbue political virtue, though they emphasized the crucial role of families.

B Kerber argues that the educational system underwent reform in the sense that educational opportunities for women increased; but does not claim that schools or families would change focus to imbue girls with political virtue.

C **Correct.** Kerber argues that political leaders emphasized the family as the primary means by which future citizens would be imbued with political virtue.

D Kerber does not claim the nation's leaders proposed that the family would take over functions previously fulfilled by schools and churches.

E Kerber does not attribute to the nation's leaders the view that men and women would exercise equal roles in managing schools, churches, and the family.

The correct answer is C.

Questions 525–527 refer to the passage on page 426.

RC00633-01

525. The primary purpose of the passage is to

(A) compare the adaptive responses of several species of columnar cacti in the Sonoran Desert with those in the arid tropical regions of southern Mexico

(B) discuss some of the possible causes of the relatively low abundance of migratory nectar-feeding bats in the Sonoran Desert

(C) provide a possible explanation for a particular evolutionary change in certain species of columnar cacti in the Sonoran Desert

(D) present recent findings that challenge a particular theory as to why several species of columnar cacti in the Sonoran Desert have expanded their range of pollinators

(E) compare the effectiveness of nocturnal and diurnal pollination for several different species of columnar cacti in the Sonoran Desert

Main idea

This question depends on understanding the passage as a whole. The first paragraph discusses an evolutionary change undergone by columnar cacti in the Sonoran Desert with regard to pollination. The second paragraph offers a possible reason for this change—migratory nectar-feeding bats are unreliable pollinators—and the third paragraph goes on to provide evidence that supports the reason given in the second paragraph.

A The passage does compare the adaptations of cacti in the Sonoran Desert with those of cacti in southern Mexico, but it does so in support of a larger point about the Sonoran Desert cacti.

B The relatively low abundance of migratory nectar-feeding bats in the Sonoran Desert is important to the passage in that it provides a reason why the columnar cacti in that region have made certain adaptations. But the passage does not explain why the bats are not particularly abundant.

C **Correct.** The flowers of the columnar cacti in the Sonoran Desert have evolved to remain open after sunrise, and the passage is primarily concerned with explaining why this change may have taken place.

D The passage presents recent findings that support, rather than challenge, a theory as to why the columnar cacti of the Sonoran Desert have expanded their range of pollinators. The passage does not allude to any competing theory that may be challenged by the findings.

E Any comparison of the effectiveness of nocturnal and diurnal pollination for columnar cacti in the Sonoran Desert is made in support of the passage's primary concern: explaining why these cacti have come to remain open and receptive to pollination in daylight.

The correct answer is C.

RC00633-02

526. According to the passage, which of the following types of nectar-feeding pollinators is likely to be an unreliable pollinator of a particular cactus flower?

(A) A dietary specialist whose abundance is typically high in relation to that of the flower

(B) A dietary specialist whose abundance is at times significantly lower than that of the flower

(C) A dietary generalist for whom that flower's nectar is not a preferred food but is the most consistently available food

(D) A dietary generalist for whom that flower's nectar is slightly preferred to other available foods

(E) A dietary generalist that evolved from a species of dietary specialists

Supporting idea

This question depends on recognizing the qualities of an unreliable pollinator, as described in the passage. The second paragraph addresses this issue: it explains that the unreliability of pollinators can arise in any of three ways: they may be dietary generalists with alternative sources of food; they may be dietary specialists whose own abundance varies; or they may be dietary specialists whose abundance is chronically low in relation to the flowers.

A A dietary specialist whose abundance is high in relation to the flowers on which it feeds would likely be a reliable pollinator.

B **Correct.** A dietary specialist whose abundance is at times significantly lower than that of the flower it pollinates would be, according to the passage, unreliable.

C A dietary generalist who finds the flower of a particular species more consistently available than other suitable food sources would most likely be a reliable pollinator of that flower.

D A dietary generalist who prefers the flower's nectar would likely be a reliable pollinator of that flower compared to other flowers.

E The passage provides no reason to believe that the evolution of a pollinator's dietary preference has any bearing on its reliability as a pollinator.

The correct answer is B.

RC00633-06

527. According to the passage, present-day columnar cacti in the Sonoran Desert differ from their close relatives in southern Mexico in that the Sonoran cacti

(A) have flowers that remain open after sunset
(B) are pollinated primarily by dietary specialists
(C) can be pollinated by nectar-feeding bats
(D) have stigmas that are unreceptive to pollination at night
(E) are sometimes pollinated by diurnal pollinators

Supporting idea

This question depends on identifying a difference noted in the passage between columnar cacti in the Sonoran Desert and their relatives in southern Mexico. The first paragraph states that in southern Mexico, columnar cactus flowers are not receptive to pollination by diurnal pollinators, whereas in the Sonoran Desert, the flowers have evolved to allow diurnal pollination.

A The cacti in both the Sonoran Desert and southern Mexico have flowers that remain open after sunset, because cacti in both locations can be pollinated nocturnally.
B Sonoran Desert cacti are pollinated, at least partially, by nectar-feeding bats, which are dietary specialists. But the cacti in southern Mexico are pollinated by these specialists, too.
C Sonoran Desert cacti can be pollinated by nectar-feeding bats—but so can cacti in southern Mexico.
D Cacti in the Sonoran Desert have stigmas that have evolved to be receptive to pollination both at night and during the day.
E **Correct.** The distinction between cacti in the Sonoran Desert and those in southern Mexico is that Sonoran Desert cacti have evolved to allow pollination during the day—that is, pollination by diurnal pollinators.

The correct answer is E.

Questions 528–532 refer to the passage on page 428.

RC00121-01

528. The passage suggests that in order for a manufacturer in a capital-intensive industry to have a decisive advantage over competitors making similar products, the manufacturer must

(A) be the first in the industry to build production facilities of theoretically optimal size
(B) make every effort to keep fixed and sunk costs as low as possible
(C) be one of the first to operate its manufacturing plants at minimum efficient scale
(D) produce goods of higher quality than those produced by direct competitors
(E) stockpile raw materials at production sites in order to ensure a steady flow of such materials

Inference

This question asks for an inference about what a manufacturer in a capital-intensive industry must do to have an advantage over competitors making similar products. The passage addresses this question by stating that advantage accrues to those firms that are the first to exploit the full potential of optimally sized, technologically sophisticated plants. In this context, exploiting the full potential of such plants means operating them at *minimum efficient scale*. Based on the definition in the first paragraph, this means that the plant must have an output of such a size that the cost per unit of output is at a minimum.

A The passage says that for new capital-intensive firms to dominate the market, it is not enough for them to have optimally sized plants; the plants must also be operated in a way that fully exploits their potential.
B While keeping fixed and sunk costs low would obviously help keep overall costs low, the passage does not suggest that this is decisive in enabling a firm to have an advantage over competitors.
C **Correct.** Being among the first manufacturers to operate plants at minimum efficient scale means that those plants are being exploited to their full potential. This strategy would most likely give such manufacturers a decisive advantage over new firms hoping to compete effectively.
D The passage does not discuss the quality of goods made by manufacturers.
E The passage does not suggest that stockpiling raw materials is the most efficient way to ensure a steady flow of raw materials into the manufacturing process, though the passage states that such a steady flow is a factor in achieving minimum efficient scale.

The correct answer is C.

RC00121-02

529. The passage suggests that which of the following is true of a manufacturer's fixed and sunk costs?

(A) The extent to which they are determined by market conditions for the goods being manufactured is frequently underestimated.

(B) If they are kept as low as possible, the manufacturer is very likely to realize significant profits.

(C) They are the primary factor that determines whether a manufacturer will realize economies of scale.

(D) They should be on a par with the fixed and sunk costs of the manufacturer's competitors.

(E) They are not affected by fluctuations in a manufacturing plant's throughput.

Inference

This question asks about what the passage implies about fixed and sunk costs. The passage states that when production declines due to certain factors, such costs remain at the same level (which may be high), and the cost per unit produced (*unit costs*) rises sharply.

A The passage discusses the impact of market conditions on determining what the optimal size of a manufacturing plant is (which affects fixed and sunk costs). But it makes no claim about the frequency with which such an impact is "underestimated."

B The passage emphasizes that failing to keep throughput at an efficiently high level reduces profitability because that failure results in increased cost per unit (to which, of course, the plant's fixed and sunk costs contribute). But the passage does not claim that keeping aggregate fixed and sunk costs very low is necessary in order to have the most competitive production operation.

C The passage emphasizes that the crucial factor in achieving economies of scale is efficient operation of the production facilities, not the size of the firm's fixed and sunk costs (even though such costs are clearly in part determined by the size and design of the production facilities).

D While a manufacturer's fixed and sunk costs may be on a par with those of the manufacturer's competitors, the passage provides no grounds for inferring that there is any need for them to be (for example, physical plants that employ different technologies may have different price tags).

E **Correct.** According to the passage, "throughput" refers to the flow of materials through a plant. This flow can vary as a result of various factors, but fixed and sunk costs—financial resources already committed—remain the same regardless of such variation.

The correct answer is E.

RC00121-03

530. In the context of the passage as a whole, the second paragraph serves primarily to

(A) provide an example to support the argument presented in the first paragraph

(B) evaluate various strategies discussed in the first paragraph

(C) introduce evidence that undermines the argument presented in the first paragraph

(D) anticipate possible objections to the argument presented in the first paragraph

(E) demonstrate the potential dangers of a commonly used strategy

Evaluation

This question asks about the rhetorical function of the second paragraph. While the first paragraph argues that a crucial factor in achieving economies of scale is intangible capital, or organized human capabilities, the second paragraph uses the example of new capital-intensive manufacturing industries to help show that this is indeed the case.

A **Correct.** The second paragraph provides an example that illustrates the claims made in the first paragraph. It discusses the way in which intangible capital—e.g., distribution networks, marketing systems, smooth production processes, and qualified management teams—enables manufacturers in new capital-intensive manufacturing industries to realize economies of scale and achieve market dominance.

B The second paragraph does, in a sense, "evaluate" investment in intangible capital: it suggests that such investment is necessary. However, investment in intangible capital is the only strategy it discusses.

C The second paragraph supports rather than undermines the first paragraph's argument.

D Nothing in the second paragraph suggests that there are, or could be, any objections to the first paragraph's argument.

E The second paragraph discusses the potential positive outcomes of investing in intangible capital. It suggests that there might be negative consequences to not making such investments, but it does not indicate that avoiding such investments is a commonly used strategy.

The correct answer is A.

RC00121-05

531. The passage LEAST supports the inference that a manufacturer's throughput could be adversely affected by

(A) a mistake in judgment regarding the selection of a wholesaler

(B) a breakdown in the factory's machinery

(C) a labor dispute on the factory floor

(D) an increase in the cost per unit of output

(E) a drop in the efficiency of the sales network

Application

This question may be best approached by using an elimination strategy—first finding the four choices that can reasonably be inferred from the passage, and then checking to make sure that the remaining choice cannot reasonably be inferred. This requires understanding the information the passage gives about throughput, then making inferences about what can cause throughput to drop. The passage defines throughput generally as *the flow of materials through a plant* and goes on to explain that it involves coordination of the production process itself, as well as obtaining materials from suppliers and marketing and distributing the manufactured products. Anything that damages this flow of materials and products would be said to have an adverse effect on throughput.

A Making a poor judgment about a wholesaler would most likely have an adverse effect on throughput, in that it could affect *the flow of output to wholesalers and final consumers*.

B A breakdown in machinery would likely fall into the category of *problems on the factory floor* mentioned in the passage and would likely prove damaging to throughput because of its effect on the production process itself.

C A labor dispute would also likely fall into the category of *problems on the factory floor* mentioned in the passage and would probably cause a decline in production and thus adversely affect throughput.

D **Correct.** The passage emphasizes that changes in throughput can cause increases or decreases in costs per unit. But the passage is not committed to any claims about how changes in costs per unit might affect throughput.

E The passage suggests that inefficient sales networks could cause a decline in production. Thus a decrease in sales efficiency would most likely adversely affect a manufacturer's ability to provide goods to consumers, and thus would create problems with throughput.

The correct answer is D.

RC00121-07

532. The primary purpose of the passage is to

(A) point out the importance of intangible capital for realizing economies of scale in manufacturing

(B) show that manufacturers frequently gain a competitive advantage from investment in large manufacturing facilities

(C) argue that large manufacturing facilities often fail because of inadequate investment in both tangible and intangible capital

(D) suggest that most new industries are likely to be dominated by firms that build large manufacturing plants early

(E) explain why large manufacturing plants usually do not help manufacturers achieve economies of scale

Main idea

This question depends on understanding the passage as a whole. In general, it makes an argument for investing in intangible capital as a way for manufacturers to realize economies of scale, and it supports its argument with an example.

A **Correct.** The passage focuses on intangible capital as a crucial factor in realizing economies of scale.

B According to the passage, manufacturers gain competitive advantage by building plants of optimal size that they then fully exploit; nothing in the passage suggests that large plants are frequently optimal.

C The passage assumes that manufacturers invest appropriately in tangible capital and argues that it is important for them to invest in intangible capital as well.

D The passage states that new capital-intensive manufacturing industries are dominated not by firms that are the first to build large plants, but by firms that exploit the full potential of their plants.

E The passage indicates that economies of scale can be achieved in plants of optimal size. The passage does not suggest that large plants cannot be optimal.

The correct answer is A.

Questions 533–538 refer to the passage on page 430.

RC00120-05

533. The primary purpose of the passage is to

(A) describe the development of new techniques that may help to determine the driving force behind population cycles in lepidoptera

(B) present evidence that refutes a particular theory about the driving force behind population cycles in lepidoptera

(C) present a hypothesis about the driving force behind population cycles in lepidoptera

(D) describe the fluctuating patterns of population cycles in lepidoptera

(E) question the idea that a single driving force is behind population cycles in lepidoptera

Main idea

This question depends on understanding the passage as a whole in order to identify its purpose. The first paragraph defines population cycles of lepidoptera and discusses some ways those cycles have been studied. It suggests that a particular agent may regulate these cycles. The second paragraph describes a candidate for this agent: nuclear polyhedrosis viruses. The third paragraph explains why this hypothesis is compelling.

A The passage mentions new techniques in molecular biology, but it does so in order to explain why a particular candidate for the agent behind population cycles has come to light.

B The theory the passage presents is that there is a driving force behind lepidoptera population cycles. It does not refute this theory; rather, it offers a convincing case for nuclear polyhedrosis viruses as that force. It also discusses some previous approaches to seeking plausible hypotheses but does not focus on refuting any particular hypothesis.

C **Correct.** The passage is primarily concerned with presenting the hypothesis that nuclear polyhedrosis viruses are the driving force behind lepidoptera population cycles.

D The first paragraph describes the fluctuating patterns of lepidoptera population cycles, but it does so to explain what population cycles are, so that it can then go on to attempt to account for those cycles.

E The passage is concerned with making a case for nuclear polyhedrosis viruses as the driving force behind at least some lepidoptera population cycles, not with questioning the idea that there is a driving force.

The correct answer is C.

RC00120-06

534. It can be inferred from the passage that the mortality caused by agents such as predatory birds or parasites was measured in an attempt to

(A) develop an explanation for the existence of lepidoptera population cycles

(B) identify behavioral factors in lepidoptera that affect survival rates

(C) identify possible methods for controlling lepidoptera population growth

(D) provide evidence that lepidoptera populations are self-regulating

(E) determine the life stages of lepidoptera at which mortality rates are highest

Inference

The passage states that mortality caused by various agents, birds and parasites among them, was measured because this was the common approach to studying causes of population cycles. This in turn suggests that those scientists engaged in such measuring in the case of lepidoptera were attempting to come up with a definitive explanation for why those lepidoptera population cycles occurred.

A **Correct.** Measuring mortality caused by various agents was part of the attempt to determine the driving force behind lepidoptera population cycles.

B The passage does not indicate that behavioral factors in lepidoptera are related to their mortality as caused by agents such as predatory birds or parasites.

C The passage is concerned not with controlling lepidoptera population growth, but rather with determining why population cycles occur.

D According to the information in the passage, scientists sought to measure mortality caused by particular agents in order to determine the driving force behind lepidoptera population cycles. In suggesting that mortality caused by these agents is not that force, the measurements may have indicated that the cycles could be self-regulating, but they were not undertaken in order to provide such evidence.

E The passage discusses mortality primarily in the caterpillar stage and does not suggest that any research was directed toward comparing caterpillar mortality rates with mortality rates in other life stages of the insects.

The correct answer is A.

RC00120-01

535. Which of the following, if true, would most weaken the author's conclusion in lines 18–22 ?

(A) New research reveals that the number of species of birds and parasites that prey on lepidoptera has dropped significantly in recent years.

(B) New experiments in which the habitats of lepidoptera are altered in previously untried ways result in the shortening of lepidoptera population cycles.

(C) Recent experiments have revealed that the nuclear polyhedrosis virus is present in a number of predators and parasites of lepidoptera.

(D) Differences among the habitats of lepidoptera species make it difficult to assess the effects of weather on lepidoptera population cycles.

(E) Viral disease is typically observed in a large proportion of the lepidoptera population.

Evaluation

The sentence in question presents the author's conclusion that lepidoptera populations may be self-regulating or regulated by something more closely connected to the insects than predatory birds or parasites are. To weaken that conclusion requires weakening its support, namely, that mortality caused by predators and parasites seems not to affect population cycles, and that changing habitats and reducing populations has not altered population cycles either.

A A drop in birds and parasites preying on lepidoptera would not weaken the author's conclusion; mortality caused by these predators has not affected population cycles.

B **Correct.** New experiments involving changes in habitat that did succeed in altering population cycles would suggest that the populations are not in fact self-regulating, and that the search for another cycle-altering agent may be unnecessary.

C This finding would support the idea that the nuclear polyhedrosis virus is responsible for population cycles—that is, that the virus is the closely connected agent the author concludes is responsible.

D The suggestion that the effects of weather may not have been adequately assessed is remotely relevant to the author's conclusion, but the mere difficulty of assessing the effects provides no positive reason to suppose that weather may be the cause of the cycles. On the other hand, answer choice B does offer evidence for an alternative explanation.

E Viral disease is what the author ultimately suggests is the agent that drives the lepidoptera population cycles in question. The wide presence of viruses in lepidoptera could help support the author's conclusion.

The correct answer is B.

RC00120-02

536. According to the passage, before the discovery of new techniques for detecting viral DNA, population ecologists believed that viral diseases

(A) were not widely prevalent among insect populations generally
(B) affected only the caterpillar life stage of lepidoptera
(C) were the driving force behind lepidoptera population cycles
(D) attacked already declining caterpillar populations
(E) infected birds and parasites that prey on various species of lepidoptera

Supporting idea

This question addresses what the passage states directly about population ecologists' beliefs regarding viral diseases prior to the discovery of new viral DNA–detection techniques. The second paragraph of the passage states that these ecologists believed viral disease contributed to population decline that was already underway rather than initiating it.

A The second paragraph states that viral disease had been reported; thus, population ecologists were aware of its existence in insect populations. The passage is consistent with ecologists having believed that it was prevalent.
B The passage focuses mainly on the caterpillar life stage of lepidoptera, but there is nothing to suggest that scientists held particular beliefs regarding viral diseases' restriction to that life stage.
C It is after, not before, the discovery of new techniques for detecting viral DNA when populations ecologists came to believe that such diseases were the driving force behind the population cycles.
D **Correct.** As stated in the passage, population ecologists believed that viral diseases contributed to already occurring population decline.
E The passage does not discuss whether viral diseases may infect any lepidoptera predators.

The correct answer is D.

RC00120-03

537. According to the passage, nuclear polyhedrosis viruses can remain virulent in the environment only when

(A) the polyhedrin protein crystals dissolve
(B) caterpillar populations are in decline
(C) they are present in large numbers
(D) their concentration in a particular area remains low
(E) they are sheltered from direct sunlight

Supporting idea

The passage states in the second paragraph that these viruses remain virulent for many years if they are protected from direct sunlight. They are embedded in crystals of polyhedrin protein.

A The viruses remain virulent partially because of their being contained in polyhedrin protein crystals. They would most likely not remain virulent if those crystals dissolved.
B The viruses remain virulent even when caterpillar populations are not in decline; that is how the viruses initiate new population declines.
C According to the passage, viral DNA has been detected in the environment at low concentrations, yet the viruses are still virulent. Thus, they need not be present in large numbers.
D Nothing in the passage indicates that the concentration of these viruses must be low for them to be virulent.
E **Correct.** The passage says that if the viruses are protected from direct sunlight, they remain virulent for many years. The context strongly suggests that if they are not so protected, they do not remain virulent.

The correct answer is E.

RC00120-04

538. It can be inferred from the passage that while inside its polyhedrin protein crystals, the nuclear polyhedrosis virus

(A) is exposed to direct sunlight
(B) is attractive to predators
(C) cannot infect caterpillars' cells
(D) cannot be ingested by caterpillars
(E) cannot be detected by new techniques of molecular biology

Inference

The passage indicates that the polyhedrin protein crystals protect the nuclear polyhedrosis virus when it is in the environment. When a caterpillar ingests those crystals, they dissolve. That releases the virus, whereupon it infects the caterpillar's cells. Thus it is reasonable to infer that the virus must be released from the crystals before it can infect the caterpillar.

A The passage states that nuclear polyhedrosis viruses remain embedded in polyhedrin protein crystals if protected from direct sunlight, not that the virus is exposed to light when it is in the protein crystals.

B Nothing in the passage indicates that any organism preys on the virus itself or that it attracts predators to caterpillars that it infects.

C **Correct.** The virus must be released from the crystals before it can infect caterpillars' cells.

D The passage states that caterpillars ingest the polyhedrin protein crystals.

E According to the passage, new techniques of molecular biology enable the detection of viral DNA in the environment. The nuclear polyhedrosis virus persists in the environment inside protein crystals. The passage suggests that the new techniques are able to detect the virus inside its crystals but does not provide any evidence about whether they detect it directly or infer its presence indirectly.

The correct answer is C.

Questions 539–542 refer to the passage on page 432.

RC00223-03

539. According to the passage, which of the following is true of plant antiherbivore chemistry?

(A) Changes in a plant's antiherbivore chemistry may affect insect feeding behavior.

(B) A plant's repellent effects often involve interactions between gum and resin.

(C) A plant's antiherbivore responses assist in combating bacterial infections.

(D) Plant antiherbivore chemistry plays only a minor role in the coevolution of plants and insects.

(E) Researchers first studied repellent effects in plants beginning in the 1950s.

Supporting ideas

This question addresses what the information in the passage indicates about plant antiherbivore chemistry—that is, plants' chemical defenses against herbivore attacks. The second paragraph of the passage cites the views of various scientists regarding the possible role of resin in antiherbivore chemistry; plants could have evolved resin specifically to repel insects.

A **Correct.** According to the second paragraph, various scientists have suggested that a change in antiherbivore chemistry, here specifically involving resin, could repel insects; alternatively, some insects could have been attracted to resin, feeding more heavily on plants that produced it. Other researchers have suggested that even if resin does not directly repel or attract insects, it may indirectly affect insect-feeding behavior by mediating changes in plants' antiherbivore chemistry.

B The first paragraph states that plants produce gum in response to bacterial infections. Although this does not rule out the hypothesis that gum also contributes to plants' antiherbivore chemistry, the passage provides no evidence that it does so.

C According to the passage, a plant's antiherbivore responses have developed to combat predators, such as insects, that eat plants. The passage provides no evidence that such responses also combat bacterial infections.

D The second paragraph indicates that plant antiherbivore chemistry plays a major role in the discipline of chemical ecology, and chemical ecology concerns itself with coevolution of plants and insects.

E According to the passage, it was in the 1950s that entomologists began discussing resin's possible role in repelling and attracting insects. The passage does not suggest that this marked the beginning of their study of repellent effects more generally.

The correct answer is A.

RC00223-04

540. Of the following topics, which would be most likely to be studied within the discipline of chemical ecology as it is described in the passage?

(A) Seeds that become attached to certain insects, which in turn carry away the seeds and aid in the reproductive cycle of the plant species in question

(B) An insect species that feeds on weeds detrimental to crop health and yield, and how these insects might aid in agricultural production

(C) The effects of deforestation on the life cycles of subtropical carnivorous plants and the insect species on which the plants feed

(D) The growth patterns of a particular species of plant that has proved remarkably resistant to herbicides

(E) Insects that develop a tolerance for feeding on a plant that had previously been toxic to them, and the resultant changes within that plant species

Application

The discipline of chemical ecology, as it is described in the passage, deals with how plants use chemicals to interact with other organisms—in particular, how they defend against attack—and how those interactions have evolved. To be studied within that discipline, a specific topic would need to address some aspect of that chemical interaction.

A The passage provides no reason to suppose that the topic of seeds and how they travel would be studied within chemical ecology, given that it does not discuss how chemicals might be involved in the reproductive cycle.

B The passage provides no indication that chemical ecology would be concerned with how weed-destroying insects would aid agricultural production.

C The passage provides no indication that deforestation would involve plant chemicals or that its effects would be studied in chemical ecology.

D The passage provides no indication that a plant's resistance to herbicides would be studied in chemical ecology, but the passage does suggest that the focus of chemical ecology is on how plants chemically interact with other organisms.

E **Correct.** Chemical ecology developed to deal with the interdependence between plants and insects. Insects' developing a tolerance for feeding on a once-toxic plant, and the plants' resultant changes, is a situation of just such interdependence: plants and insects coevolving.

The correct answer is E.

RC00223-05

541. The author refers to "bacterial infections" (see line 11) most likely in order to

(A) describe the physiological function that gum performs in plants

(B) demonstrate that sap is not the only substance that is transported through a plant's tissues

(C) explain how modern chemical analysis has been used to clarify the function of resin

(D) show that gum cannot serve as an effective defense against herbivores

(E) give an example of how confusion has arisen with regard to the nature of resin

Evaluation

The author mentions *bacterial infections* in the first paragraph as the reason why plants produce the substance known as gum.

A **Correct.** The author states directly that plants produce gum in response to bacterial infections.

B The author states directly that sap is transported through plant tissues. The passage does not address the question of whether bacterial infections or anything related to them are similarly transported.

C The passage indicates that rigorous chemical analysis is now available, but scientists still do not know resin's function. The reference to bacterial infections is related to gum, not resin.

D The reference to bacterial infections indicates the actual purpose served by gum; it does not function to show ways in which gum is inadequate.

E Gum itself serves as an example of the confusion surrounding the nature of resin; bacterial infections, to which gum production is a response, do not serve as that example.

The correct answer is A.

RC00223-07

542. The author of the passage refers to Pliny most probably in order to

(A) give an example of how the nature of amber has been misunderstood in the past

(B) show that confusion about amber has long been more pervasive than confusion about resin

(C) make note of the first known reference to amber as a semiprecious gem

(D) point out an exception to a generalization about the history of people's understanding of amber

(E) demonstrate that Pliny believed amber to be a mineral

Evaluation

The passage states generally that *amber has been widely misunderstood* but cites Pliny as noting correctly, in the first century, that amber resulted from a substance discharged by trees.

A Pliny's observation was, according to the author, accurate and not a misunderstanding.

B The author equates confusion about amber with confusion about resin; the reference to Pliny does not indicate which of the two, amber or resin, has been more widely misunderstood.

C The author indicates that others, not Pliny, mischaracterized amber as a semiprecious gem—and when that mischaracterization first occurred is not identified.

D **Correct.** Pliny's recognition that amber came from a substance discharged by trees stands, in the author's account, as an exception to the widespread incorrect identifications of the substance.

E Others held the belief that amber was a mineral. The passage indicates that Pliny recognized that amber came from trees but provides no evidence that he also considered it a mineral.

The correct answer is D.

Questions 543–545 refer to the passage on page 434.

RC00333-01

543. The primary purpose of the passage is to

(A) compare the impact of the Great Depression on Latin America with its impact on the United States

(B) criticize a school of economic historians for failing to analyze the Great Depression in Latin America within a global context

(C) illustrate the risks inherent in comparing different types of economic enterprises to explain economic phenomena

(D) call into question certain scholars' views concerning the severity of the Great Depression in Latin America

(E) demonstrate that the Great Depression had a more severe impact on industry in Latin American than in certain other regions

Main idea

This question depends on understanding the passage as a whole. The passage first describes the view of many economic historians of the 1980s. It next describes the evidence on which that view is based. The remainder of the passage raises issues about the rationale for that view.

A The comparison between Latin America and the United States is only a small part of a larger argument analyzing studies of the Great Depression in Latin America.

B The passage does not discuss a global context for the Great Depression.

C The passage does not primarily aim to illustrate risks that may be generally inherent in explaining economic phenomena.

D **Correct.** The passage claims that certain scholars underestimate the severity of the Great Depression in Latin America.

E The passage does not claim that the impact of the Great Depression on Latin American industry was generally more severe than its impact on industry elsewhere.

The correct answer is D.

RC00333-02

544. Which of the following conclusions about the Great Depression is best supported by the passage?

(A) It did not impede Latin American industrial growth as much as historians had previously thought.

(B) It had a more severe impact on the Brazilian and the Mexican textile industries than it had on Latin America as a region.

(C) It affected the Latin American textile industry more severely than it did any other industry in Latin America.

(D) The overall impact on Latin American industrial growth should be reevaluated by economic historians.

(E) Its impact on Latin America should not be compared with its impact on the United States.

Inference

This question asks which conclusion is most strongly supported by the passage. The passage presents the rationale of some historians for their conclusion that the Great Depression did not significantly interfere with economic growth in Latin America. It then critiques that rationale and conclusion. By questioning the historians' claims, the passage suggests that a reevaluation of the Great Depression's effect on Latin America is needed.

A The passage does not significantly support this. The passage indicates that, in fact, the Great Depression impeded Latin American economic development more than some historians had thought.

B The passage does not significantly support this. The passage does not compare the impact on the Brazilian and Mexican textile industries to the impact on the Latin American region.

C The passage does not significantly support this. The passage does not compare the effect of the Great Depression on the textile industry to its effect on other industries.

D **Correct.** As presented in the passage, the passage author's critique of the historians' rationale for their claims provides significant support for the conclusion that their claims should be reevaluated.

E The passage does not significantly support the claim that the comparison in question should not be made.

The correct answer is D.

RC00333-04

545. Which of the following, if true, would most strengthen the author's assertion regarding economic indicators in lines 25–27 ?

(A) During an economic depression, European textile manufacturers' profits rise while their industrial output remains steady.

(B) During a national economic recession, United States microchips manufacturers' profits rise sharply while United States steel manufacturers' profits plunge.

(C) During the years following a severe economic depression, textile manufacturers' output levels and profit levels increase in Brazil and Mexico but not in the rest of Latin America.

(D) Although Japanese industry as a whole recovers after an economic recession, it does not regain its previously high levels of production.

(E) While European industrial output increases in the years following an economic depression, total output remains below that of Japan or the United States.

Application

The question involves applying information from outside the passage to a claim made by the author. The text in lines 25–27 asserts that broad economic indicators pertaining to a nation or region can obscure differences between individual firms or industries within that nation or region. The question asks which evidence would most strengthen the support for that conclusion.

A This refers only to the relationship between a single industry's profits and its output, not to general economic indicators.

B **Correct.** The phrase *a national recession* refers to a general economic indicator. Suppose that in a situation described as a national recession, one industry (microchip manufacturing) prospers while another industry (steel manufacturing) does not.

This would provide some additional support, over and above that given in the passage, for the assertion that broad economic indicators may mask differences between industries.

C Economic differences between countries do not strengthen the support for the author's assertion regarding variations among different firms and industries in one country or region.

D This has no obvious bearing on how sweeping economic indicators can mask differences between industries or enterprises in a single country or region.

E A comparison of different countries does not pertain to the assertion regarding variation among firms and industries in the same country.

The correct answer is B.

Questions 546–549 refer to the passage on page 436.

RC00272-02

546. It can be inferred from the passage that a large plant might have to spend more than a similar but smaller plant on environmental compliance because the larger plant is

(A) more likely to attract attention from local regulators

(B) less likely to be exempt from permit and reporting requirements

(C) less likely to have regulatory costs passed on to it by companies that supply its raw materials

(D) more likely to employ older production technologies

(E) more likely to generate wastes that are more environmentally damaging than those generated by smaller plants

Inference

This item depends on understanding the implications of the passage's discussion of differences between large and small plants. It asks what might be true of a larger plant that would compel it to spend more than a smaller plant on environmental compliance. The passage addresses this issue by stating that smaller plants are often not subject to the same permit or reporting requirements that larger plants are.

A The likelihood of attracting regulatory attention is discussed only in the context of comparing plants that are *isolated* with small plants that are near large noncompliant ones. The passage does not suggest that size is generally the crucial determining factor in attracting regulatory attention.

B **Correct.** According to the passage, certain permit or reporting requirements may not apply to smaller plants; this suggests that larger plants are less likely than smaller plants to be exempt from these requirements, and thus that the larger plants would have to spend more to comply.

C The passage does not discuss the passing on of regulatory costs from suppliers to plants.

D The passage does not suggest that larger plants are any more likely than smaller plants to employ older production technologies.

E The passage does not distinguish between the types of wastes emitted by larger plants and those emitted by smaller plants.

The correct answer is B.

RC00272-04

547. According to the passage, which of the following statements about sulfur dioxide and nitrogen oxide outputs is true?

(A) Older production technologies cannot be adapted so as to reduce production of these outputs as waste products.

(B) Under the most recent environmental regulations, industrial plants are no longer permitted to produce these outputs.

(C) Although these outputs are environmentally hazardous, some plants still generate them as waste products despite the high compliance costs they impose.

(D) Many older plants have developed innovative technological processes that reduce the amounts of these outputs generated as waste products.

(E) Since the production processes that generate these outputs are less costly than alternative processes, these less expensive processes are sometimes adopted despite their acknowledged environmental hazards.

Supporting idea

This item depends on identifying what the passage states explicitly about outputs of sulfur dioxide and nitrogen oxide. The passage says that plants that produce these outputs are those that use older industrial coal-fired burners, and that such plants are subject to extensive compliance costs imposed by new regulations.

A The passage does not address the question of whether older production technologies might be adapted to reduce outputs of sulfur dioxide and nitrogen oxide.
B The passage states that new regulations have imposed high compliance costs on companies that produce sulfur dioxide and nitrogen oxide outputs, not that these outputs are prohibited.
C **Correct.** The passage states that some companies are still using the older kinds of burners that generate sulfur dioxide and nitrogen oxide outputs, and that new regulations have imposed high compliance costs on these companies.
D The passage does not address the question of whether older plants have developed new processes to reduce the amounts of sulfur dioxide and nitrogen oxide they produce.
E Sulfur dioxide and nitrogen oxide outputs, the passage suggests, are produced only by older industrial coal-fired burners; newer facilities (using alternative processes) do not employ this technology, the expense of which is not mentioned in the passage.

The correct answer is C.

RC00272-06

548. Which of the following best describes the relationship of the statement about large plants (lines 12–17) to the passage as a whole?

(A) It presents a hypothesis that is disproved later in the passage.
(B) It highlights an opposition between two ideas mentioned in the passage.
(C) It provides examples to support a claim made earlier in the passage.
(D) It exemplifies a misconception mentioned earlier in the passage.
(E) It draws an analogy between two situations described in the passage.

Evaluation

This question asks about the role played in the passage by the following statement: *Additionally, large plants can spread compliance costs such as waste treatment across a larger revenue base; on the other hand, some smaller plants may not even be subject to certain provisions such as permit or reporting requirements by virtue of their size*. This statement describes situations in which compliance costs for plants of different sizes may differ, which serve as evidence in support of the passage's main claim: that environmental regulations do *not* affect all competitors in a given industry uniformly.

A The statement in question is not a hypothesis; rather, it reports factors that are known to affect the varying impact of environmental regulations.
B This is too vague to be a good description of the kind of relationship the question asks about. The statement in question does present a contrast—it suggests that larger plants' compliance costs are lower under some circumstances, while smaller plants' compliance costs are lower under other circumstances. But this purports to state two facts rather than mere *ideas*; they are contrasting facts but not in any meaningful sense *opposed*, since they can easily coexist.
C **Correct.** The statement provides examples to support the initial claim made in the passage that regulatory costs fall unevenly on competitors in an industry: large plants can spread compliance costs around, and smaller plants may not even have to pay certain costs.
D This statement helps to dispel, not exemplify, a misconception mentioned earlier in the passage—i.e., the myth that environmental regulations affect all companies in an industry the same way.
E The statement does not suggest that the situation of larger and smaller plants is similar (or analogous) to any other situation mentioned in the passage.

The correct answer is C.

RC00272-07

549. The primary purpose of the passage is to

(A) address a widespread environmental management problem and suggest possible solutions

(B) illustrate varying levels of compliance with environmental regulation among different corporations

(C) describe the various alternatives to traditional methods of environmental management

(D) advocate increased corporate compliance with environmental regulation

(E) correct a common misconception about the impact of environmental regulations

Main idea

This question depends on understanding the passage as a whole. Its first sentence indicates its main purpose: to dispel a myth about environmental regulations that is often taken as fact.

A The passage is not about the management of any environmental problem, which would be a problem about how to prevent or undo damage to the environment. The passage primarily aims to dispel a belief that the passage says is widely held by environmental managers.

B The passage refers to variations in firms' levels of compliance with environmental regulations, but its primary purpose is not to illustrate those varying levels, nor does it do so.

C The passage suggests that most environmental managers are mistaken about a key concept; its primary purpose is not to describe traditional methods of environmental management or alternatives to those traditional methods, nor does it do so.

D The passage takes no position on whether companies should increase their compliance with environmental regulation.

E **Correct.** The passage primarily aims to dispel the belief that environmental regulations affect all companies in an industry uniformly.

The correct answer is E.

Questions 550–555 refer to the passage on page 438.

RC00109-01

550. The primary purpose of the passage is to

(A) examine two sides of a historiographical debate

(B) call into question an author's approach to a historiographical debate

(C) examine one author's approach to a historiographical debate

(D) discuss two authors' works in relationship to a historiographical debate

(E) explain the prevalent perspective on a historiographical debate

Main idea

This question requires understanding what the passage as a whole is attempting to do. The passage opens by introducing two books published in 1984 that both concern the history of women in the United States. The passage then makes it clear that one book deals *directly* (line 15) with the issue of women's status, while the other does not. The passage then goes on to discuss the perspective that each book takes and what each book has to offer for an assessment of women's status in the eighteenth and nineteenth centuries.

A The two books discussed in the passage do not take different sides on a particular debate but rather are described as being more or less useful to the debate itself.

B The passage focuses on how two different books contain information useful to a particular historiographical debate but does not call into question the approach of either book.

C The passage focuses on two authors' works, not one.

D **Correct.** The passage discusses what two different books have to offer in relation to a particular historiographical debate.

E The passage does not describe any perspective on a particular historiographical debate as being more prevalent than any other.

The correct answer is D.

RC00109-02

551. The author of the passage mentions the supervision of schools primarily in order to

(A) remind readers of the role education played in the cultural changes of the nineteenth century in the United States

(B) suggest an area in which nineteenth-century American women were relatively free to exercise power

(C) provide an example of an occupation for which accurate data about women's participation are difficult to obtain

(D) speculate about which occupations were considered suitable for United States women of the nineteenth century

(E) illustrate how the answers to questions about women's status depend on particular contexts

Evaluation

Answering this question depends on understanding what role a particular piece of information plays in the passage as a whole. The author implicitly supports Lebsock's contention (beginning at line 20) that different frames of reference can produce different perspectives on the debate about women's status in the eighteenth and nineteenth centuries. The author then summarizes different contexts cited by Lebsock to support the contention about frames of reference. As part of this summary, the author refers to *supervising schools* (lines 24–25) as an example of a job that apparently showed women losing power.

A The passage does not discuss the role of education in the nineteenth century.

B The passage does mention some ways in which, according to Lebsock, *women … gained power* (lines 25–26) in the nineteenth century, but *supervising schools* is not among them.

C The passage does not discuss the difficulty of obtaining data about particular occupations.

D The passage makes no judgments about the suitability for women of any jobs in the nineteenth century.

E **Correct.** The passage mentions supervising schools as part of an illustration of Lebsock's claim that the debate about women's status depends on the context being examined.

The correct answer is E.

RC00109-03

552. With which of the following characterizations of Lebsock's contribution to the controversy concerning women's status in the nineteenth-century United States would the author of the passage be most likely to agree?

(A) Lebsock has studied women from a formerly neglected region and time period.

(B) Lebsock has demonstrated the importance of frame of reference in answering questions about women's status.

(C) Lebsock has addressed the controversy by using women's current status as a frame of reference.

(D) Lebsock has analyzed statistics about occupations and property that were previously ignored.

(E) Lebsock has applied recent historiographical methods to the biography of a nineteenth-century woman.

Supporting ideas

Answering this question requires recognizing information explicitly given in the passage. The passage introduces the work of Lebsock in line 6 and then goes on to describe several characteristics of Lebsock's book. In lines 20–22, the author introduces Lebsock's claim that the historiographical debate about women's status is dependent on frame of reference and calls that claim important; the passage then gives an example showing how frame of reference affects views of women's status. In so doing, the author displays an implicit agreement with Lebsock's discussion on this point.

A The author of the passage portrays neither the place nor time period that Lebsock focuses on as having been neglected by historians.

B **Correct.** The author describes as important Lebsock's idea that frame of reference informs the debate about women's status.

C According to the passage, Lebsock's book deals with women's status in the eighteenth and nineteenth centuries, not the present status of women.

D The passage does not mention or imply that Lebsock analyzed statistics in writing her book.

E Although the passage does describe Lebsock's book as pertaining to an ongoing historiographical debate, it identifies the book's topic as *women in one southern community* (lines 7–8), not the life of a single woman.

The correct answer is B.

RC00109-04

553. According to the passage, Lebsock's work differs from Buel and Buel's work in that Lebsock's work

(A) uses a large number of primary sources
(B) ignores issues of women's legal status
(C) refuses to take a position on women's status in the eighteenth century
(D) addresses larger historiographical issues
(E) fails to provide sufficient material to support its claims

Supporting ideas

This question asks for recognition of information contained in the passage. In the first sentence, the passage states that Buel and Buel's work and Lebsock's work have *contrasting approaches.* The passage then proceeds, using descriptions of each work's approach, to illustrate how the works differ. The passage notes that Buel and Buel's work *makes little effort* to place its biographical subject *in the context of recent historiography on women* (lines 5–6), whereas Lebsock's work attempts *to redirect two decades of historiographical debate* about women's status.

A Primary sources are not mentioned in the passage in relation to either work discussed.
B The legal status of women is not mentioned in the passage.
C Lebsock's work is described in the passage as attempting to redirect the debate about women's status in the eighteenth and nineteenth centuries.
D **Correct.** The passage suggests that by not placing its subject's story in the context of historiography, Buel and Buel's work does not therefore address larger historiographical issues, as Lebsock's does.
E The passage tends to support Lebsock's views and does not refer to any lack of support for the claims made in Lebsock's work.

The correct answer is D.

RC00109-05

554. The passage suggests that Lebsock believes that compared to nineteenth-century American women, eighteenth-century American women were

(A) in many respects less powerful in relation to men
(B) more likely to own real estate
(C) generally more economically independent
(D) more independent in conducting their private lives
(E) less likely to work as school superintendents

Inference

This question requires making an inference based on information given in the passage. As part of the passage's description of Lebsock's contribution to the historiographical debate about women's status in the eighteenth and nineteenth centuries, Lebsock's conclusions about women's autonomy are described. As part of this description, the passage cites Lebsock's conclusion that nineteenth-century women lost economic autonomy when compared to eighteenth-century women (lines 17–20).

A The passage states that in many ways women in the nineteenth century *lost power in relation to men* (line 23), which would imply that in those respects eighteenth-century women had more power in relation to men, not less. The only increase mentioned in nineteenth-century women's power is associated with owning more real estate.
B The passage states that more nineteenth-century women owned real estate.
C **Correct.** As the passage states, Lebsock concluded that nineteenth-century women lost economic autonomy compared to eighteenth-century women.
D The passage states that nineteenth-century women gained more independence in their private lives.
E The passage cites school superintendents as an example of an occupation more likely to be held by eighteenth-century women.

The correct answer is C.

RC00109-06

555. The passage suggests that Buel and Buel's biography of Mary Fish provides evidence for which of the following views of women's history?

(A) Women have lost power in relation to men since the colonial era.

(B) Women of the colonial era were not as likely to be concerned with their status as were women in the nineteenth century.

(C) The colonial era was not as favorable for women as some historians have believed.

(D) Women had more economic autonomy in the colonial era than in the nineteenth century.

(E) Women's occupations were generally more respected in the colonial era than in the nineteenth century.

Inference

This question requires understanding what the passage implies. The approach that Buel and Buel's work takes is specifically described in lines 3–6 and again in lines 28–34. In lines 29–32, the passage states that Buel and Buel's work *provides ample raw material for questioning the myth … of a colonial golden age in the eighteenth century*, referring to a myth about women's status. In describing this golden age as a myth fostered by some historians, the passage suggests that this era was not as favorable to women as these historians suggest.

A The passage describes Lebsock's work as providing such evidence, not Buel and Buel's work.

B The passage does not pertain to the level of concern women had for their status.

C **Correct.** The final paragraph of the passage describes Buel and Buel's work as providing material that calls into question claims that the eighteenth century was especially favorable to women.

D The passage refers to the economic autonomy of women in relation to Lebsock's work, not Buel and Buel's work.

E The passage does not refer to whether any particular occupations held by women were more respected at one time or another.

The correct answer is C.

Questions 556–558 refer to the passage on page 440.

RC00558-01

556. The passage suggests that WIDC differed from WTUL in which of the following ways?

(A) WIDC believed that the existing safety regulations were adequate to protect women's health, whereas WTUL believed that such regulations needed to be strengthened.

(B) WIDC believed that unions could not succeed in pressuring employers to comply with such regulations, whereas WTUL believed that unions could succeed in doing so.

(C) WIDC believed that lead poisoning in white lead factories could be avoided by controlling conditions there, whereas WTUL believed that lead poisoning in such factories could not be avoided no matter how stringently safety regulations were enforced.

(D) At the time that the legislation concerning white lead factories was proposed, WIDC was primarily concerned with addressing health conditions in white lead factories, whereas WTUL was concerned with improving working conditions in all types of factories.

(E) At the time that WIDC was opposing legislative attempts to restrict women's labor, WTUL had already ceased to do so.

Inference

To answer this question you need to understand the differences between WIDC and WTUL as they are described in the passage. The only information about WTUL in the passage is that it had stopped opposing restrictions on women's labor in the late 1880s, and that, because existing safety regulations were not being enforced, it supported the proposal to prohibit women from working in white lead factories. WIDC, on the other hand, was formed in 1892 specifically to oppose restrictions on women's labor, and it opposed the proposal.

A According to the passage, WIDC did believe that existing safety regulations, if enforced, could prevent lead poisoning. WTUL may or may not have believed that the safety regulations needed to be strengthened; all the passage states is that WTUL did not believe that the safety regulations were likely to be enforced.

B The passage states that WTUL believed that because there were no unions to pressure employers, the employers would not comply with safety regulations. The passage does not present any information on which to base a conclusion about WIDC's beliefs regarding union pressure on employers.

C Based on information in the passage, both WIDC and SPEW believed that enforcing safety regulations could protect women against lead poisoning. WIDC supported SPEW's position on the matter. WTUL believed that safety regulations were unlikely to be enforced because of the lack of unions.

D The passage states that WIDC viewed the proposal to restrict women's employment in white lead factories as an instance of legislation designed to limit women's work opportunities—precisely the legislation that WIDC was formed to oppose. Thus, WIDC was not primarily concerned with the factories' health conditions.

E **Correct.** WIDC began opposing legislative attempts to restrict women's labor in 1892 and continued to do so through at least 1895, when the Home Secretary proposed prohibiting women from working in white lead factories. WTUL stopped opposing restrictions on women's labor in the late 1880s, before WIDC was even founded. Thus, the passage suggests that WTUL had stopped opposing restrictions on women's labor well before WIDC worked to oppose such legislation.

The correct answer is E.

RC00558-02

557. Which of the following, if true, would most clearly support the contention attributed to SPEW in lines 17–20 ?

(A) Those white lead factories that most strongly enforced regulations concerning worker safety and hygiene had the lowest incidences of lead poisoning among employees.

(B) The incidence of lead poisoning was much higher among women who worked in white lead factories than among women who worked in other types of factories.

(C) There were many household sources of lead that could have contributed to the incidence of lead poisoning among women who also worked outside the home in the late nineteenth century.

(D) White lead factories were more stringent than were certain other types of factories in their enforcement of workplace safety regulations.

(E) Even brief exposure to the conditions typically found in white lead factories could cause lead poisoning among factory workers.

Evaluation

This question requires the reader to find a statement that would provide additional support for the contention made in the following statement: *SPEW contended, and WIDC concurred, that controllable conditions in such factories were responsible for the development of lead poisoning.* Information suggesting that when conditions were controlled, lead poisoning was less likely to develop would provide support for SPEW's contention.

A **Correct.** If incidences of lead poisoning were low in those factories that enforced hygiene and safety regulations, that would suggest that lead poisoning was not an inevitable result of working in a white lead factory—but rather that lead poisoning was the result of poor hygiene and safety practices.

B It would not be particularly surprising for the incidence of lead poisoning to be higher among women working in white lead factories than among women working in other kinds of factories—but such a finding would say nothing about whether controllable conditions had any effect on the development of lead poisoning.

C The existence of household sources of lead that might contribute to lead poisoning would weaken, not support, SPEW's contention that controllable factory conditions were responsible for the development of lead poisoning.

D If white lead factories enforced workplace safety regulations more stringently than did some other types of factories, it might be the case that SPEW's contention was incorrect: that even controlled conditions could not prevent a high incidence of lead poisoning.

E If the conditions typically found in white lead factories were particularly bad with regard to safety and hygiene, it could conceivably be the case that SPEW's contention was true—that is, that the conditions that caused lead poisoning were controllable. But it might also be the case that an uncontrollable aspect of those conditions caused lead poisoning. Thus, this neither supports nor undermines SPEW's contention clearly.

The correct answer is A.

RC00558-06

558. The passage is primarily concerned with

(A) presenting various groups' views of the motives of those proposing certain legislation

(B) contrasting the reasoning of various groups concerning their positions on certain proposed legislation

(C) tracing the process whereby certain proposed legislation was eventually enacted

(D) assessing the success of tactics adopted by various groups with respect to certain proposed legislation

(E) evaluating the arguments of various groups concerning certain proposed legislation

Main idea

Answering this question depends on identifying the overall point of the passage. The passage is mainly concerned with explaining the reasons behind the positions taken by WIDC and SPEW, which opposed the proposal to enact legislation prohibiting women from holding most white lead factory jobs, and the reasoning of WTUL, which supported the proposal.

A The passage explains how WIDC viewed the proposal, but it does not indicate what any of the groups believed about the motivations of the Home Secretary, who made the proposal.

B **Correct.** The passage contrasts the reasoning of the WIDC and SPEW, both of which believed that enforcing safety regulations would make the proposed legislation unnecessary, with the reasoning of WTUL, which thought that safety regulations were unlikely to be enforced and thus supported the proposal.

C The passage simply states that the proposal was eventually enacted; it does not trace the process by which this occurred.

D The passage implies that WIDC and SPEW were unsuccessful in their opposition to the proposed legislation, but it identifies only one tactic used in opposition to it: SPEW's attempt to challenge it by investigating the causes of lead poisoning.

E The passage does not evaluate the groups' arguments concerning the proposed legislation; rather, it presents those arguments without comment on their quality or value.

The correct answer is B.

Questions 559–564 refer to the passage on page 442.

RC00433-02

559. The author of the passage refers to Robert Filmer (see line 9) primarily in order to

(A) show that Royalist ideology was somewhat more radical than most historians appear to realize

(B) qualify the claim that patriarchalism formed the basis of Royalist ideology

(C) question the view that most early feminists were associated with the Royalist faction

(D) highlight an apparent tension between Royalist ideology and the ideas of early feminists

(E) argue that Royalists held conflicting opinions on issues of family organization and women's political rights

Evaluation

This question asks about the role of Filmer in the passage. The author states that Filmer's radical patriarchalism is associated with Royalist ideology and then goes on to define radical patriarchalism as an ideology that asserts the power of the king and the male head of the household. Early feminists, however, questioned the subordination of women in marriage. Thus, there seems to be a conflict between these two sets of ideas.

A Although the passage refers to Filmer's view as *radical patriarchalism*, it provides no evidence regarding any differences in the degrees to which historians consider that view, or Royalism in general, to be radical.

B Filmer's work supports the claim that patriarchalism was the basis of Royalist ideology; it does not qualify such a claim.

C That Filmer's approach was one of radical patriarchalism makes it surprising that early feminists were associated with the Royalist faction, but it does not provide any grounds for questioning whether they were so associated.

D **Correct.** There is apparent tension between Filmer's radical patriarchalism, if that is indeed essential to Royalist ideology, and the ideas of early feminists, who questioned such patriarchalism.

E The author refers to Filmer in order to suggest, initially, a uniformity among Royalists regarding family and women; it is only later in the passage that this view becomes more complicated.

The correct answer is D.

RC00433-11

560. The passage suggests which of the following about the seventeenth-century English women mentioned in line 2?

(A) Their status as forerunners of modern feminism is not entirely justified.

(B) They did not openly challenge the radical patriarchalism of Royalist Filmerian ideology.

(C) Cavendish was the first among these women to criticize women's subordination in marriage and assert women's equality with men.

(D) Their views on family organization and women's political rights were diametrically opposed to those of both Royalist and Parliamentarian ideology.

(E) Historians would be less puzzled if more of them were identified with the Parliamentarian side in the English Civil Wars.

Inference

The first sentence of the passage refers to women who are both regarded as forerunners of modern feminism and identified as Royalists. The passage goes on to suggest that, given Royalist ideology's association with Filmer's radical patriarchalism (equating absolute power of the king with absolute power of the male head of household), it is surprising that feminism would find any footing within such an ideology.

A Nothing in the passage disputes the idea that the seventeenth-century English women in question should be considered the forerunners of modern feminism.
B Gallagher provides the example of Margaret Cavendish as a writer who did openly challenge radical patriarchalism—albeit only in her writings.
C The passage states that Cavendish had successors among early feminists, but it does not indicate whether she herself was the first seventeenth-century English woman to assert women's equality.
D The passage does not indicate what the Parliamentarian view of family organization and women's political rights was, so there is no way to determine whether the Royalist forerunners of modern feminism were opposed to that view.
E **Correct.** The basic puzzle the passage sets out to solve is why the forerunners of modern feminism would have been associated with the Royalist side, which seems to have been based on radical patriarchalism. Historians would most likely have been less surprised if these women had been identified with the Parliamentarian side, which presumably did not embrace radical patriarchalism.

The correct answer is E.

RC00433-04

561. The passage suggests that Margaret Cavendish's decision to become an author was motivated, at least in part, by a desire to

(A) justify her support for the Royalist cause
(B) encourage her readers to work toward eradicating Filmerian patriarchalism
(C) persuade other women to break free from their political and social isolation
(D) analyze the causes for women's exclusion from the pursuit of power
(E) create a world over which she could exercise total control

Inference

This question asks about Margaret Cavendish's reasons for becoming an author. The second paragraph describes her as someone who *insisted that she was a self-sufficient being*; she understood that, given the real-world strictures in place, she could achieve this self-sufficiency in her own mind and on paper as a writer. So her decision to become a writer can be inferred to be motivated by her desire to exercise power and control.

A The passage states that Cavendish justified her being the center of her own universe by invoking the Royalist figure of the absolute monarch; there is no suggestion in the passage that Cavendish felt the need to justify any support for the actual Royalist cause.
B The passage gives no direct indication that Cavendish was even aware of Filmerian patriarchalism.
C The second paragraph states that Cavendish's idea of absolute singularity carried with it the idea of social and political isolation; Cavendish was most likely not motivated by a desire to persuade other women to break free from such isolation.
D Cavendish took the exclusion of women from the pursuit of power for granted; the passage does not suggest that she was concerned with its causes.
E **Correct.** According to the passage, Cavendish considered herself a self-sufficient being who was at the center of her own universe; in her writing, she wanted to create a world in which this was also true.

The correct answer is E.

RC00433-08

562. The phrase "a satellite orbiting a dominant male planet" (lines 41–42) refers most directly to

(A) Cavendish's concept that each woman is a sovereign self
(B) the complete political and social isolation of absolute singularity
(C) the immaterial world that a writer can create on paper
(D) the absolute subordination of women in a patriarchal society
(E) the metaphorical figure of the absolute monarch

Evaluation

The phrase in question is *a satellite orbiting a dominant male planet*. The passage states that this was the idea that Cavendish was reacting against; she preferred instead the idea that she was the center of her own universe, her own sovereign, subject to no one.

A The idea of a satellite orbiting a dominant male planet refers not to Cavendish's idea that each woman is a sovereign self, but rather to the idea directly opposed to that: each woman must submit to a dominant male.
B A *satellite orbiting a dominant male planet* is by definition not isolated, nor is it singular.
C According to the passage, Cavendish wished to create her own world as a writer so that she did not have to be a *satellite*.
D **Correct.** The phrase refers to the idea that in a patriarchal society, women are as satellites to men, who are the dominant planets.
E While radical patriarchy does equate the monarch with the male head of the household, the in question phrase is most directly about the relationship, under patriarchy, between women and men.

The correct answer is D.

RC00433-06

563. The primary purpose of the passage is to

(A) trace the historical roots of a modern sociopolitical movement
(B) present one scholar's explanation for a puzzling historical phenomenon
(C) contrast two interpretations of the ideological origins of a political conflict
(D) establish a link between the ideology of an influential political theorist and that of a notoriously eccentric writer
(E) call attention to some points of agreement between opposing sides in an ideological debate

Main idea

This question asks about the passage as a whole. The passage is mainly concerned with outlining Catherine Gallagher's attempt to explain why, given Royalist ideology's apparent association with radical patriarchalism, Royalist women offered feminist critiques of women's subordination in marriage and asserted their equality with men.

A The passage makes no connection between early feminism and its modern form.
B **Correct.** The passage presents a puzzling historical phenomenon, that Royalist women critiqued patriarchalism, in the first paragraph, and then presents Catherine Gallagher's explanation for that phenomenon in the second paragraph.
C While the passage discusses the political conflict between the Royalists and Parliamentarians in the English Civil Wars in the first paragraph, neither this conflict, nor its ideological origins are the focus of the passage. Furthermore, the passage does not offer any interpretations of the origins of the conflict.
D The passage attempts to unlink the ideology of political theorist Robert Filmer and the eccentric author Margaret Cavendish by suggesting that Filmer's radical patriarchalism was not the only way of understanding Royalist ideology. Cavendish provided a different understanding entirely.
E While both sides of the ideological debate did agree on the absolute monarchy, the passage as a whole does not focus on this agreement, but rather on the disagreement about where, theoretically, the idea of absolute monarchy leads.

The correct answer is B.

RC00433-09

564. Which of the following, if true, would most clearly undermine Gallagher's explanation of the link between Royalism and feminism?

(A) Because of their privileged backgrounds, Royalist women were generally better educated than were their Parliamentarian counterparts.

(B) Filmer himself had read some of Cavendish's early writings and was highly critical of her ideas.

(C) Cavendish's views were highly individual and were not shared by the other Royalist women who wrote early feminist works.

(D) The Royalist and Parliamentarian ideologies were largely in agreement on issues of family organization and women's political rights.

(E) The Royalist side included a sizable minority faction that was opposed to the more radical tendencies of Filmerian patriarchalism.

Inference

This question asks about how to undermine the way in which Gallagher connects Royalism and feminism. According to Gallagher, Cavendish's work exemplifies the connection between these ideas, because Cavendish took the idea of absolute monarchy and extended that to the idea of absolute self, an idea that should, Cavendish believed, apply to women as well as men.

A Gallagher's explanation of the link between Royalism and feminism does not depend on the education level of Royalist women relative to Parliamentarian women.

B Filmer most likely would have been critical of Cavendish's ideas, had he encountered them, but the passage does not indicate that Gallagher's argument had anything to do with whether Filmer read Cavendish's writings.

C **Correct.** Gallagher uses Cavendish's work to explain how Royalism gave rise to feminism, but if Cavendish's views were completely atypical of other Royalist women, then those views cannot explain the link as Gallagher suggests they do.

D The passage states in the first paragraph that if the Royalists and Parliamentarians were in agreement *on issues of family organization and women's political rights*, then feminists should have been divided between the two sides—but they were not. So this idea, if true, would undermine that statement, but not Gallagher's argument about the link between Royalists and feminists.

E If more Royalists were opposed to Filmer's radical patriarchalism, then Cavendish's writings would seem to be more representative of tendencies in Royalist ideology, thus making Gallagher's case stronger, not weaker.

The correct answer is C.

Questions 565–569 refer to the passage on page 444.

RC00312-01

565. The passage is primarily concerned with

(A) identifying two practices in medical research that may affect the accuracy of clinical trials

(B) describing aspects of medical research that tend to drive up costs

(C) evaluating an analysis of certain shortcomings of current medical research practices

(D) describing proposed changes to the ways in which clinical trials are conducted

(E) explaining how medical researchers have traditionally conducted clinical trials and how such trials are likely to change

Main idea

This question requires an understanding of what the passage as a whole is doing. The passage introduces Frazier and Mosteller as proposing changes to the ways clinical trials in medical research are currently conducted. The rest of the passage then describes these proposed changes together with the support Frazier and Mosteller provide for adopting these changes.

A The passage identifies practices in medical research to help illustrate the basis for Frazier and Mosteller's proposed changes.

B The passage mentions medical research costs as one example within the larger description of Frazier and Mosteller's proposed changes.

C The passage is not concerned with evaluating Frazier and Mosteller's proposed changes.

D **Correct.** The passage describes the changes proposed by Frazier and Mosteller to the way clinical trials are conducted.

E The passage is not concerned with establishing the likelihood of any changes to the way medical research is conducted.

The correct answer is D.

RC00312-03

566. Which of the following can be inferred from the passage about a study of the category of patients referred to in lines 20–22 ?

(A) Its findings might have limited applicability.

(B) It would be prohibitively expensive in its attempt to create ideal conditions.

(C) It would be the best way to sample the total population of potential patients.

(D) It would allow researchers to limit information collection without increasing the risk that important variables could be overlooked.

(E) Its findings would be more accurate if it concerned treatments for a progressive disease than if it concerned treatments for a nonprogressive disease.

Inference

This question requires drawing an inference from information given in the passage. In describing the proposals put forth by Frazier and Mosteller, the passage states in lines 15–20 that they propose using more patients in clinical trials than are currently being used, and that the trials would thereby obtain *a more representative sample of the total population with the disease under study*. The passage then states that researchers often *restrict* (lines 20–22) their trials to certain types of patients, therefore limiting the applicability of their findings.

A **Correct.** The passage states that the researchers preferred to restrict the types of patients used in their studies, thereby using a less representative sample than if they used a more inclusive group of patients.

B The passage mentions the added expense of clinical trials only in relation to data storage, collection, and analysis.

C The passage describes the category of patients referred to as restricted and therefore unrepresentative of the total population.

D While the passage does mention the amount of data collected about an individual patient, that topic is not connected to the category of patients referred to in lines 20–22.

E The passage does not suggest that a study using the category of patients referred to would be more effective in investigating progressive diseases.

The correct answer is A.

RC00312-04

567. It can be inferred from the passage that a study limited to patients like those mentioned in lines 20–22 would have which of the following advantages over the kind of study proposed by Frazier and Mosteller?

(A) It would yield more data and its findings would be more accurate.

(B) It would cost less in the long term, though it would be more expensive in its initial stages.

(C) It would limit the number of variables researchers would need to consider when evaluating the treatment under study.

(D) It would help researchers to identify subgroups of patients with secondary conditions that might also be treatable.

(E) It would enable researchers to assess the value of an experimental treatment for the average patient.

Inference

This question requires understanding what the information in the passage implies. The passage explains that Frazier and Mosteller's proposal involves enrolling more patients in clinical trials (lines 18–19) than is the case with the category of patients referred to. The passage then explains that broadening the range of trial participants would allow an evaluation of particular treatments *under various conditions* and *for different patient subgroups* (line 29). This strongly suggests that limiting the patients used to those described in the referred text would limit the number of variables researchers would need to consider.

A The passage suggests that not limiting the patients used in clinical trials will yield more data than restricting them will.

B The passage refers to the costs of clinical trials only as they concern the collection, storage, and analysis of data collected from participants.

C **Correct.** By limiting the patients used to those having the ailment under study, the passage suggests that researchers need to consider fewer variables in their assessment of a treatment.

D The passage suggests that ***not*** limiting the types of patients used in clinical trials will better allow researchers to evaluate subgroups.

E The passage suggests that limiting the types of patients available for clinical trials results in data for specific, rather than average, populations.

The correct answer is C.

RC00312-05

568. The author mentions patients' ages (line 32) primarily in order to

(A) identify the most critical variable differentiating subgroups of patients

(B) cast doubt on the advisability of implementing Frazier and Mosteller's proposals about medical research

(C) indicate why progressive diseases may require different treatments at different stages

(D) illustrate a point about the value of enrolling a wide range of patients in clinical trials

(E) substantiate an argument about the problems inherent in enrolling large numbers of patients in clinical trials

Evaluation

Answering this question requires understanding how a particular piece of information functions in the passage as a whole. The passage is concerned with describing the proposals of Frazier and Mosteller. One of these proposals, described in the second paragraph, involves broadening the range of participants used in clinical trials. The passage states that in following this proposal, Frazier and Mosteller suggest that the effectiveness of treatments can be assessed for different patient subgroups. To affirm the value of broadening the range of participants, the passage then cites two examples of criteria by which relevant subgroups might be identified: disease stages and patients' ages.

A The passage makes no judgment as to the value of the subgroups it refers to in relation to broadened participation in clinical trials.

B The passage does not call into question the potential effectiveness of Frazier and Mosteller's proposals.

C The passage's example of patients' ages is not intended to be causally connected to its previous example regarding progressive diseases.

D **Correct.** Patients' ages are referred to in the passage to identify subgroups that could be evaluated if the range of participants in clinical trials were broadened.

E The passage refers to patients' ages in support of Frazier and Mosteller's proposal that more patients be used in clinical trials.

The correct answer is D.

RC00312-06

569. According to the passage, which of the following describes a result of the way in which researchers generally conduct clinical trials?

(A) They expend resources on the storage of information likely to be irrelevant to the study they are conducting.

(B) They sometimes compromise the accuracy of their findings by collecting and analyzing more information than is strictly required for their trials.

(C) They avoid the risk of overlooking variables that might affect their findings, even though doing so raises their research costs.

(D) Because they attempt to analyze too much information, they overlook facts that could emerge as relevant to their studies.

(E) In order to approximate the conditions typical of medical treatment, they base their methods of information collection on those used by hospitals.

Supporting ideas

This question asks for an identification of specific information given in the passage. The passage describes the proposals of Frazier and Mosteller as attempting to improve the way clinical trials have generally been conducted. In describing how current trials are generally conducted, the passage

states that researchers *collect far more background information on patients than is strictly required for their trials* (lines 4–6) and that they therefore escalate the costs of the trials.

A **Correct.** The passage states that researchers generally collect more information than they need to perform their clinical trials, which drives up the costs of the trials.
B The passage makes no judgment about the accuracy of the information collected by researchers who currently hold clinical trials.
C The passage states that the risk of overlooking relevant information in clinical trials is *never entirely eliminable* (line 11).
D The passage states that researchers generally collect more information than is relevant, not that they overlook relevant information.
E The passage states that, in general, researchers currently collect more information than hospitals do (line 6).

The correct answer is A.

Questions 570–575 refer to the passage on page 446.

RC00229-01

570. The primary purpose of the passage is to

(A) assess the validity of a certain view
(B) distinguish between two phenomena
(C) identify the causes of a problem
(D) describe a disturbing trend
(E) allay concern about a particular phenomenon

Main idea

This question requires understanding, in general terms, the purpose of the passage as a whole. The first paragraph identifies an area of concern: declines in amphibian populations may constitute a crisis, one that indicates humans' catastrophic effects on the environment. The rest of the passage then goes on to evaluate, as the second paragraph states, whether claims of crisis-level extinctions as a result of human activity are valid. In making this evaluation, the passage discusses the possible causes of extinctions, biologists' prioritization of population declines over extinctions, and the fact that we lack extensive long-term data on amphibian populations.

A **Correct.** The passage's main purpose is to assess whether the view that humans are causing crisis-level declines in amphibian populations is valid.
B The passage takes care, particularly in the third paragraph, to distinguish between population declines and extinctions, but this is not its primary purpose.
C The passage makes clear that it is difficult to identify the real extent of the problem facing amphibian populations, much less identify its causes.
D The first paragraph notes what may seem to be a disturbing trend—the decline in amphibian populations—but the rest of the passage is concerned not with describing that trend in greater detail, but rather with determining whether it is in fact occurring.
E While the passage provides possible grounds for concluding that concern about declining amphibian populations is overblown, it concludes by suggesting that we might, because we lack data, doom species and ecosystems to extinction. Thus, the overall purpose is not to allay concern.

The correct answer is A.

RC00229-02

571. It can be inferred from the passage that the author believes which of the following to be true of the environmentalists mentioned in lines 5–6 ?

(A) They have wrongly chosen to focus on anecdotal reports rather than on the long-term data that are currently available concerning amphibians.
(B) Their recommendations are flawed because their research focuses too narrowly on a single category of animal species.
(C) Their certainty that population declines in general are caused by environmental degradation is not warranted.
(D) They have drawn premature conclusions concerning a crisis in amphibian populations from recent reports of declines.
(E) They have overestimated the effects of chance events on trends in amphibian populations.

Inference

This question asks about the author's view of the environmentalists mentioned in the first paragraph. These environmentalists have claimed, based on amphibian population declines, that the situation is a crisis and that immediate action must be taken. The author, however, states that the declines are only *apparently* drastic and questions whether they are real, thus suggesting that the environmentalists are drawing conclusions in the absence of a complete consideration of the situation.

A The passage indicates that anecdotal reports are insufficient, but so too are other resources. The fourth paragraph of the passage makes clear that there is not enough long-term data available on which to base conclusions about amphibian populations.

B The passage does not indicate that the environmentalists under discussion have conducted research on any animal species.

C The passage does not indicate that the environmentalists in question hold, with certainty, any particular view regarding population declines in general.

D **Correct.** The author argues that the recent declines may have several different causes, and that environmentalists have jumped to a conclusion about the cause of the declines as well as their significance.

E The environmentalists, in attributing population declines to intentional human activity, have more likely underestimated than overestimated the effects of chance events on amphibian populations.

The correct answer is D.

RC00229-03

572. It can be inferred from the passage that the author believes which of the following to be true of the amphibian extinctions that have recently been reported?

(A) They have resulted primarily from human activities causing environmental degradation.

(B) They could probably have been prevented if timely action had been taken to protect the habitats of amphibian species.

(C) They should not come as a surprise, because amphibian populations generally have been declining for a number of years.

(D) They have probably been caused by a combination of chance events.

(E) They do not clearly constitute evidence of general environmental degradation.

Inference

The author suggests throughout the passage that recently reported amphibian extinctions may have several different causes: they may be due to any number of chance events, for example, or may simply be the result of a small population that finds itself unable to continue under difficult conditions, whatever causes those conditions.

A The author states in the second paragraph that extinctions may occur without a proximate cause in human activities and does not make a commitment to any particular explanation of the amphibian extinctions.

B That chance events can cause extinctions suggests that even if habitats had been protected, extinctions still might have occurred.

C In the second paragraph, the author says that extinctions *should come as no great surprise*, but this option is imprecise. The amphibian populations have not generally *been declining for a number of years*. The author says in the third paragraph that amphibian populations show strong fluctuations; further, in the fourth paragraph, the author says that there is insufficient long-term data to conclude that amphibian populations have been, or are, in decline.

D The author suggests that the extinctions may have been caused by chance events, but there is not enough data to know whether or not this is probable.

E **Correct.** The reported extinctions could have resulted from several different causes; thus, they are not clear evidence of general environmental degradation.

The correct answer is E.

RC00229-04

573. According to the passage, each of the following is true of endangered amphibian species EXCEPT:

(A) They are among the rarest kinds of amphibians.

(B) They generally have populations that are small in size.

(C) They are in constant danger of extinction.

(D) Those with decreasing populations are the most likely candidates for immediate extinction.

(E) They are in danger of extinction due to events that sometimes have nothing to do with human activities.

Application

This question asks what the passage does not say is true of endangered amphibian species. The second paragraph discusses endangered species, stating that they are *always rare, almost always small, and, by definition, under constant threat of extinction*, which may be caused by chance events. The possibility of their extinction, the passage states, depends only on the population size, and not whether that population is increasing or decreasing.

A The second paragraph mentions rarity as a characteristic of endangered amphibian species.

B According to the second paragraph, endangered amphibian species are generally those of small populations.

C The second paragraph states that an endangered population is under constant threat of extinction.

D **Correct.** The last sentence of the second paragraph states that the probability of extinction due to chance events is independent of how a population changes in size. Immediate extinction would more likely come from such events, whereas population decline is gradual, even if fairly rapid.

E Endangered species, according to the second paragraph, may become extinct due to chance events—that is, events that have nothing to do with human activities.

The correct answer is D.

RC00229-05

574. Which of the following most accurately describes the organization of the passage?

(A) A question is raised, a distinction regarding it is made, and the question is answered.

(B) An interpretation is presented, its soundness is examined, and a warning is given.

(C) A situation is described, its consequences are analyzed, and a prediction is made.

(D) Two interpretations of a phenomenon are described, and one of them is rejected as invalid.

(E) Two methods for analyzing a phenomenon are compared, and further study of the phenomenon is recommended.

Evaluation

This question asks about the organization of the passage as a whole. In the first paragraph, the author tells about a situation that has been interpreted in a particular way by environmentalists. The passage then proceeds to consider whether that interpretation is valid, and while it does not come to a definitive conclusion on that point, the final paragraph warns about the possible consequences of not taking the action recommended by the environmentalists.

A The passage does initially raise a question regarding whether the environmentalists' interpretation of events is valid, but it does not answer that question, for the appropriate long-term data are not available.

B **Correct.** The passage presents environmentalists' interpretation of recent news regarding amphibians, then examines the soundness of that interpretation. Finally, the author warns that postponing environmental action may have disastrous consequences.

C The first paragraph describes a situation of possibly drastic declines in amphibian populations but does not follow this description with an analysis of its consequences.

D The passage suggests that apparent declines in amphibian populations may or may not constitute a crisis, but it does not reject either idea.

E While the passage does imply, in its final paragraph, that long-term data on amphibian populations should be collected, the passage does not compare two methods for analyzing amphibian populations or population declines in those populations.

The correct answer is B.

RC00229-06

575. Which of the following best describes the function of the sentence in lines 35–38 ?

(A) To give an example of a particular kind of study
(B) To cast doubt on an assertion made in the previous sentence
(C) To raise an objection to a view presented in the first paragraph
(D) To provide support for a view presented in the first paragraph
(E) To introduce an idea that will be countered in the following paragraph

Evaluation

The sentence in question discusses the way in which anecdotal reports of population decreases cannot help biologists determine whether those decreases are normal fluctuations, take populations to lower levels that are not actually worrisome, or actually threaten extinctions. This indicates that the view mentioned in the first paragraph—reports of declines indicate a catastrophic crisis—may be mistaken.

A The sentence does not address a particular kind of study; it objects to the use of anecdotal reports in place of actual study.
B The previous sentence describes the possibilities referred to in the sentence in question. The sentence does not cast doubt on any of those possibilities.
C **Correct.** The view that reports of amphibian population declines indicate a crisis, as presented in the first paragraph, is countered by the objection here that there are several possible causes for population declines, and anecdotal reports cannot distinguish among those possibilities.
D The first paragraph is concerned with articulating the view that amphibian population declines constitute a crisis. This sentence does not support that view; instead, it offers reason to question it.
E The sentence introduces the idea that amphibian populations have fluctuated in the past, and the following paragraph supports this idea by stating that several amphibian species that appeared almost extinct in the 1950s and 1960s have recovered. Thus, the paragraph does not counter the sentence.

The correct answer is C.

Questions 576–579 refer to the passage on page 448.

RC00556-03

576. The passage mentions which of the following as a factor that affects the role of *P. ochraceus* as a keystone species within different habitats?

(A) The degree to which the habitat is sheltered from waves
(B) The degree to which other animals within a habitat prey on mussels
(C) The fact that mussel populations are often not dominant within some habitats occupied by *P. ochraceus*
(D) The size of the *P. ochraceus* population within the habitat
(E) The fact that there is great species diversity within some habitats occupied by *P. ochraceus*

Supporting idea

This question depends on recognizing what the passage states about the factors affecting *P. ochraceus*'s role as a keystone species, which is different in different habitats. According to the passage, *P. ochraceus* consumes and suppresses mussel populations in some habitats—specifically, those that are wave-exposed—making it a keystone predator in those habitats. But in wave-sheltered habitats, *P. ochraceus* does not play the same role in suppressing mussel populations.

A **Correct.** The passage clearly states that *P. ochraceus*'s role in wave-exposed habitats differs from its role in wave-sheltered habitats.
B The passage says that the impact of *P. ochraceus* predation on mussels is not strong in wave-sheltered habitats, but this is not—at least not at all sites—because other animals are preying on the mussels; rather, at least at some sites, it is because mussels are controlled by sand burial.
C The passage does not suggest that mussel populations are dominant in any habitats occupied by *P. ochraceus*.

D The size of the *P. ochraceus* population affects the size of the mussel population within wave-exposed habitats, but the passage does not suggest that *P. ochraceus*'s role as a keystone species depends on the size of its population within those habitats.

E The only other species the passage mentions in conjunction with *P. ochraceus* habitats is the mussel; the passage does not address species diversity in these habitats.

The correct answer is A.

RC00556-04

577. Which of the following hypothetical experiments most clearly exemplifies the method of identifying species' roles that the author considers problematic?

(A) A population of seals in an Arctic habitat is counted in order to determine whether it is the dominant species in that ecosystem.

(B) A species of fish that is a keystone species in one marine ecosystem is introduced into another marine ecosystem to see whether the species will come to occupy a keystone role.

(C) In order to determine whether a species of monkey is a keystone species within a particular ecosystem, the monkeys are removed from that ecosystem and the ecosystem is then studied.

(D) Different mountain ecosystems are compared to determine how geography affects a particular species' ability to dominate its ecosystem.

(E) In a grassland experiencing a changing climate, patterns of species extinction are traced in order to evaluate the effect of climate changes on keystone species in that grassland.

Application

Answering this question depends on recognizing what the author says about identifying species' roles in habitats and then extending that to another situation. The author considers a particular method of studying keystone species problematic: removing a suspected keystone species from its habitat and observing what happens to the ecosystem. The author finds this problematic because interactions among species are complex.

A The author does not discuss counting the members of a population as a problematic way of determining whether that population is a dominant species.

B The method that the author finds problematic has to do with observing what happens to an ecosystem when a keystone species is removed from it, not with observing what happens to a different ecosystem when the species is introduced into it.

C **Correct.** The author states explicitly that removing a species from a habitat in order to determine its keystone status is problematic. Removing the monkeys from their habitat is a clear example of this problematic practice.

D Comparison of habitats in order to determine geography's effect on a particular species' dominance would most likely find favor with the author, for this is the approach the author seems to advocate in investigating *P. ochraceus*'s keystone status.

E The author does not discuss tracing patterns of extinction or changing climates in the passage.

The correct answer is C.

RC00556-05

578. Which of the following, if true, would most clearly support the argument about keystone status advanced in the last sentence of the passage (lines 24–31)?

(A) A species of bat is primarily responsible for keeping insect populations within an ecosystem low, and the size of the insect population in turn affects bird species within that ecosystem.

(B) A species of iguana occupies a keystone role on certain tropical islands, but does not play that role on adjacent tropical islands that are inhabited by a greater number of animal species.

(C) Close observation of a savannah ecosystem reveals that more species occupy keystone roles within that ecosystem than biologists had previously believed.

(D) As a keystone species of bee becomes more abundant, it has a larger effect on the ecosystem it inhabits.

(E) A species of moth that occupies a keystone role in a prairie habitat develops coloration patterns that camouflage it from potential predators.

Evaluation

To answer this question, focus on the argument advanced in the last sentence of the passage and identify what information would support that argument. In the last sentence of the passage, the author claims that keystone status depends on context. The author then offers three contextual factors that may affect a species' keystone status: geography, community diversity (i.e., the number of species in a given habitat), and length of species interaction. Evidence supporting this argument would show that context is important to a species' keystone status.

A This scenario does not indicate anything about keystone status; this is simply a description of how species populations in a single ecosystem affect one another.

B **Correct.** That the iguana is a keystone species in a location that has limited species diversity but not a keystone species in a location that has greater species diversity suggests that keystone status does indeed depend on context. Thus, this example supports the author's argument in the last sentence of the passage.

C That biologists were mistaken about keystone species in a particular ecosystem does not have a bearing on whether keystone status is context dependent.

D It is not surprising that an increase in a species' population would lead to that species having a larger effect on its ecosystem—but this does not speak directly to the question of whether keystone status itself depends on context.

E A keystone species enhancing its ability to survive in a single ecosystem does not lend any support to the idea that keystone status depends on context. The moth's keystone status would have to undergo some change for this to have a bearing on the question of context.

The correct answer is B.

RC00556-06

579. The passage suggests which of the following about the identification of a species as a keystone species?

(A) Such an identification depends primarily on the species' relationship to the dominant species.

(B) Such an identification can best be made by removing the species from a particular ecosystem and observing changes that occur in the ecosystem.

(C) Such an identification is likely to be less reliable as an ecosystem becomes less diverse.

(D) Such an identification seems to depend on various factors within the ecosystem.

(E) Such an identification can best be made by observing predation behavior.

Inference

Answering this question requires identifying how the passage suggests that keystone species should be identified. The passage identifies a particular way in which keystone status should *not* be determined: removing a species and observing what happens to the ecosystem. The passage also argues that keystone status depends strongly on context: that is, an ecosystem's characteristics, including its geography and inhabitants, determine its keystone species.

A While the passage uses an example of a keystone species, *P. ochraceus*, which preys on a species that would, in the keystone species' absence, be dominant, there is nothing to suggest that a keystone species *must* have a particular relationship with the dominant, or potentially dominant, species in an ecosystem.

B The passage explicitly states that this method of identification would be problematic.

C A reduction in an ecosystem's diversity might alter which species occupy keystone roles in that ecosystem, the passage suggests, but there is no indication that identifying such species would become more difficult.

D **Correct.** If, as the passage suggests, keystone status for any given species depends on the context of the ecosystem in which it lives, then it is likely that identifying keystone species depends strongly on understanding what factors of the ecosystem contribute to creating keystone status. The passage

lists such factors as geography, community diversity, and species interaction.

E While the passage uses a predator, *P. ochraceus*, as its example of a keystone species, there is no indication that predation is an essential component of the actual definition of keystone species (*one whose effects are much larger than would be predicted from its abundance*).

The correct answer is D.

Questions 580–582 refer to the passage on page 450.

RC00073-01

580. According to the passage, the anatomical evidence provided by the preserved soft bodies of conodonts led scientists to conclude that

(A) conodonts had actually been invertebrate carnivores

(B) conodonts' teeth were adapted from protective bony scales

(C) conodonts were primitive vertebrate suspension feeders

(D) primitive vertebrates with teeth appeared earlier than armored vertebrates

(E) scientists' original observations concerning the phosphatic remains of conodonts were essentially correct

Supporting ideas

This question depends on understanding how a particular type of evidence—the preserved soft bodies of conodonts—supports a particular conclusion stated in the passage. The third paragraph makes this relationship explicit, explaining that certain features of conodonts show them to be more primitive than other vertebrates. Further, those features indicate that they came before ostracoderms and other armored jawless fishes. These remains support the conclusion stated in the second paragraph regarding teeth being more primitive than external armor.

A The passage states explicitly that conodonts were not invertebrates but rather vertebrates.

B This view is attributed to certain traditionalists but is contradicted by other paleontological evidence presented in the second and third paragraphs. According to the third paragraph, the evidence provided by the preserved soft bodies of conodonts undermines this traditional view.

C The final sentence of the passage indicates that the evidence in question supports the conclusion that conodonts were predators rather than suspension feeders.

D **Correct.** The third paragraph explains how conodonts' remains support the conclusion that teeth were more primitive than external armor.

E The second paragraph explains that originally, scientists thought that early vertebrates were not predators—but the remainder of the passage indicates that this idea is inconsistent with more recent evidence described in the passage.

The correct answer is D.

RC00073-03

581. The second paragraph in the passage serves primarily to

(A) outline the significance of the 1981 discovery of conodont remains to the debate concerning the development of the vertebrate skeleton

(B) contrast the traditional view of the development of the vertebrate skeleton with a view derived from the 1981 discovery of conodont remains

(C) contrast the characteristics of the ostracoderms with the characteristics of earlier soft-bodied vertebrates

(D) explain the importance of the development of teeth among the earliest vertebrate predators

(E) present the two sides of the debate concerning the development of the vertebrate skeleton

Evaluation

This question depends on understanding the second paragraph in the context of the passage as a whole. The second paragraph begins by noting the traditional view of the vertebrate skeleton—that it was a defense against predators—and then goes on to explain that other paleontologists argued against this idea, claiming instead that vertebrates began as predators and that teeth were a more primary feature than external armor.

A The second paragraph focuses on describing the debate rather than on the distinctive contribution of the 1981 discovery to that debate.

B The second paragraph does not explicitly indicate whether the opposition to the traditional view originally rested on the 1981 discovery of conodont remains. In fact, the surrounding discussion, in the first and third paragraphs, suggests that the discovery in 1981 turned out to support the opposing view, which some paleontologists already held at that time.

C The mention of ostracoderms in the second paragraph merely serves to indicate how the traditionalists' arguments might have seemed plausible. The paragraph as a whole is not devoted to contrasting the ostracoderms with earlier soft-bodied vertebrates.

D The development of teeth figures in the second paragraph, but this development is mentioned first as a feature that some believed to have been adapted from protective scales; only the final sentence of the paragraph connects teeth to early vertebrate predators.

E **Correct.** According to the passage, the debate concerning the development of the vertebrate skeleton hinges on whether vertebrates began as predators, with teeth, or whether skeletal defenses such as external armor evolved first. The primary purpose of the second paragraph is to distinguish these two sides.

The correct answer is E.

RC00073-08

582. It can be inferred that on the basis of the 1981 discovery of conodont remains, paleontologists could draw which of the following conclusions?

(A) The earliest vertebrates were sedentary suspension feeders.

(B) Ostracoderms were not the earliest vertebrates.

(C) Defensive armor preceded jaws among vertebrates.

(D) Paired eyes and adaptations for activity are definitive characteristics of vertebrates.

(E) Conodonts were unlikely to have been predators.

Inference

What could paleontologists conclude, based on the 1981 discovery of conodont remains? That discovery, according to the passage, supported the view of certain paleontologists that the earliest vertebrates were predators with teeth—unlike the ostracoderms, which had no jaws.

A According to the second paragraph, traditionalists believed that early vertebrates were sedentary suspension feeders. But the 1981 discovery supported instead the hypothesis that early vertebrates were predators instead.

B **Correct.** According to the third paragraph, the conodonts' body structures indicated that they were more primitive than the ostracoderms, so the ostracoderms must not have been the earliest vertebrates.

C Traditionalists argued that teeth were adapted from bony scales that provided defensive armor, but the 1981 discovery suggested that teeth preceded such scales.

D Paleontologists knew prior to the 1981 discovery that paired eyes and other adaptations are characteristics of vertebrates. They used this knowledge to help them interpret the 1981 discovery.

E The third paragraph indicates that conodonts, given their teeth, were most likely predators.

The correct answer is B.

Questions 583–590 refer to the passage on page 452.

RC00013-01

583. The primary purpose of the passage is to

(A) advocate a more positive attitude toward technological change

(B) discuss the implications for employees of the modernization of a telephone exchange

(C) consider a successful challenge to the constructivist view of technological change

(D) challenge the position of advocates of technological determinism

(E) suggest that the social causes of technological change should be studied in real situations

Main idea

This question asks for an assessment of what the passage as a whole is doing. The passage introduces Clark's study as a *solid contribution* (line 3) to the debate between technological determinists and social constructivists. In the second paragraph, Braverman is introduced as holding a position of social constructivism, a position that Clark takes issue with. In the final paragraph, the passage holds that *Clark refutes the extremes of the constructivists* (line 31), and Clark's arguments challenging social constructivism are then described.

A The passage takes no position on the merits of technological change but is concerned only with the role of such change in society.

B The passage mentions telephone exchange workers as an example that helps illustrate the more central debate between determinists and constructivists.

C **Correct.** The passage is mainly concerned with portraying Clark's view as a successful challenge to constructivism.

D The passage describes Clark's view as a successful challenge to social constructivism, not technological determinism.

E The passage is concerned with describing a challenge to social constructivism and not with suggesting the context in which technological change ought to be studied.

The correct answer is C.

RC00013-02

584. Which of the following statements about the modernization of the telephone exchange is supported by information in the passage?

(A) The new technology reduced the role of managers in labor negotiations.

(B) The modernization was implemented without the consent of the employees directly affected by it.

(C) The modernization had an impact that went significantly beyond maintenance routines.

(D) Some of the maintenance workers felt victimized by the new technology.

(E) The modernization gave credence to the view of advocates of social constructivism.

Supporting ideas

This question requires recognizing information contained in the passage. The passage states in the first paragraph that Clark's study focused on the modernization of a telephone exchange and the effect this had on maintenance work and workers. After describing Braverman's analysis in the second paragraph as being at odds with Clark's views, the passage discusses Clark's views in more detail in the final paragraph. As part of this discussion, the passage notes that Clark shows how a change from *maintenance-intensive electromechanical switches to semielectronic switching systems* at the telephone exchange *altered work tasks, skills, training opportunities, administration, and organization of workers* (lines 42–44). Thus, the passage shows that the modernization of the telephone exchange affected much more than maintenance routines.

A The passage does not discuss whether new technology reduces the role of managers in labor negotiations.

B The passage does not discuss the role of employee consent in the modernization of the telephone exchange.

C **Correct.** The passage states that the modernization of the telephone exchange affected tasks, skills, training, administration, and the organization of workers.

D The passage does not suggest that maintenance workers felt victimized by the modernization of the telephone exchange.

E The passage describes modernization as a fact viewable from a perspective of social constructivism or technological determinism, but that does not in itself support either view.

The correct answer is C.

RC00013-03

585. Which of the following most accurately describes Clark's opinion of Braverman's position?

(A) He respects its wide-ranging popularity.

(B) He disapproves of its misplaced emphasis on the influence of managers.

(C) He admires the consideration it gives to the attitudes of the workers affected.

(D) He is concerned about its potential to impede the implementation of new technologies.

(E) He is sympathetic to its concern about the impact of modern technology on workers.

Inference

Answering this question requires inferring what the passage's author likely believes. The passage describes Braverman's position as one of mainstream social constructivism (lines 23–24), a position that Clark takes issue with. Although it describes Braverman's position, the rest of the passage is devoted to showing how Clark's position takes issue with Braverman's. In the second paragraph, the passage describes Clark as holding that *technology can be a primary determinant of social and managerial organization* (lines 9–11), which suggests that managers are sometimes subordinate to technological change. In lines 15–17, however, Braverman is described as holding that *the shape of a technological system is subordinate to the manager's desire to wrest control of the labor process from the workers*, which shows that Clark and Braverman are at odds on this point.

A Since the passage says that Clark believes an important insight *has been obscured by the recent sociological fashion* that Braverman's views exemplify (lines 11–14), one cannot infer that Clark respects the popularity of Braverman's views.

B **Correct.** The passage shows that Clark believes managers to have less influence over how technology affects an organization than Braverman claims that they have.

C The passage does not indicate that Clark admires any aspect of Braverman's position.

D The passage does not indicate that Clark considers impediments to modernization.

E The passage does not indicate that Clark is sympathetic to any concerns attributed to Braverman.

The correct answer is B.

RC00013-04

586. The information in the passage suggests that which of the following statements from hypothetical sociological studies of change in industry most clearly exemplifies the social constructivists' version of technological determinism?

(A) It is the available technology that determines workers' skills, rather than workers' skills influencing the application of technology.

(B) All progress in industrial technology grows out of a continuing negotiation between technological possibility and human need.

(C) Some organizational change is caused by people; some is caused by computer chips.

(D) Most major technological advances in industry have been generated through research and development.

(E) Some industrial technology eliminates jobs, but educated workers can create whole new skills areas by the adaptation of the technology.

Application

This question requires understanding different points of view discussed in the passage. In the first paragraph, the passage mentions the debate involving technological determinism and social constructivism. In the second and third paragraphs, the passage uses Braverman's analysis to illustrate the social constructivists' position and in the third paragraph suggests that the constructivists are *misrepresenting technological determinism* (line 24). In lines 29–30, the constructivists are reported to hold that technological determinism views technology as *existing outside society, capable of directly influencing skills and work organization.*

A **Correct.** This statement is consistent with the constructivists' view that technological determinism sees technology as outside of society, influencing workers' skills.

B The passage states that the constructivists hold that *technological determinists are supposed to believe . . . that machinery imposes appropriate forms of order on society* (lines 25–27), suggesting that no negotiation is present.

C According to the description of them in the passage, constructivists portray technological determinists as believing that technology, not people, drives organizational change.

D The passage does not portray either constructivists or determinists as being concerned with technological research and development.

E The passage does not portray either constructivists or determinists as being concerned with technology-driven job elimination or creation.

The correct answer is A.

RC00013-05

587. The information in the passage suggests that Clark believes that which of the following would be true if social constructivism had not gained widespread acceptance?

(A) Businesses would be more likely to modernize without considering the social consequences of their actions.

(B) There would be greater understanding of the role played by technology in producing social change.

(C) Businesses would be less likely to understand the attitudes of employees affected by modernization.

(D) Modernization would have occurred at a slower rate.

(E) Technology would have played a greater part in determining the role of business in society.

Inference

Answering this question involves understanding a point of view as it is described in the passage. The passage aligns Clark's study closely with the technological determinists, summarizing his view in lines 9–11: *technology can be a primary determinant of social and managerial organization*. In the following sentence, the passage states that Clark believes that *this possibility is obscured by the recent sociological fashion, exemplified by Braverman's analysis* (lines 11–13). After illustrating Braverman's analysis, the passage then states that it represents *social constructivism*.

A According to the passage, Clark holds that constructivists obscure how modernization might have social consequences.

B **Correct.** According to the passage, Clark sees constructivism as obscuring the possibility that technology plays a primary role in social change.

C The passage does not discuss how the attitudes of employees are perceived by their employers.

D The passage describes a debate about the history and sociology of technology; it does not suggest that sociological analyses affect the pace of modernization.

E The passage describes a debate about the history and sociology of technology; it does not suggest that sociological analyses affect the role that technology plays in business.

The correct answer is B.

RC00013-07

588. According to the passage, constructivists employed which of the following to promote their argument?

(A) Empirical studies of business situations involving technological change
(B) Citation of managers supportive of their position
(C) Construction of hypothetical situations that support their view
(D) Contrasts of their view with a misstatement of an opposing view
(E) Descriptions of the breadth of impact of technological change

Supporting ideas

Answering this question involves recognizing information given in the passage. The passage indicates that a debate exists between technological determinists and social constructivists, suggesting that these views are in opposition. The passage goes on to state that *constructivists gain acceptance by misrepresenting technological determinism* (lines 23–24). This misrepresentation is presented as the *alternative to constructivism* (lines 27–28), suggesting that constructivists promoted their own view by contrasting it with a misrepresentation of determinists' views.

A The passage mentions empirical studies in relation to Clark's study but not Braverman's analysis.
B The passage does not mention that managers were supportive of any particular point of view within the sociology of technology.
C The passage does not mention any hypothetical situations as being used by the constructivists in support of their view.
D **Correct.** The passage indicates that the constructivists have come into fashion by contrasting their own views with a misrepresentation of the views of technological determinists.
E The passage does not describe the constructivists as making determinations regarding the degree of impact that technological change has on social or managerial organization.

The correct answer is D.

RC00013-08

589. The author of the passage uses the expression "are supposed to" in line 25 primarily in order to

(A) suggest that a contention made by constructivists regarding determinists is inaccurate
(B) define the generally accepted position of determinists regarding the implementation of technology
(C) engage in speculation about the motivation of determinists
(D) lend support to a comment critical of the position of determinists
(E) contrast the historical position of determinists with their position regarding the exchange modernization

Evaluation

This question requires understanding how a particular phrase functions in the passage as a whole. In the third paragraph the passage states that *constructivists gain acceptance by misrepresenting technological determinism* (lines 23–24) and follows this claim with an example of this misrepresentation, stating that *technological determinists are supposed to believe, for example* (lines 25–26). This line implies that the constructivist view of the determinists is inaccurate.

A **Correct.** The passage uses the expression in part to provide an example of the constructivists' misrepresentation of the determinists.
B The passage indicates that the view attributed to the determinists is a misrepresentation, not one that is generally accepted by determinists.
C The expression in the passage is part of a discussion about the motivation of constructivists, not determinists.
D The expression in the passage is part of a discussion that is critical of the constructivists, not the determinists.
E The passage does not describe either the historical position of determinists or their position on the exchange modernization.

The correct answer is A.

RC00013-09

590. Which of the following statements about Clark's study of the telephone exchange can be inferred from information in the passage?

(A) Clark's reason for undertaking the study was to undermine Braverman's analysis of the function of technology.

(B) Clark's study suggests that the implementation of technology should be discussed in the context of conflict between labor and management.

(C) Clark examined the impact of changes in the technology of switching at the exchange in terms of overall operations and organization.

(D) Clark concluded that the implementation of new switching technology was equally beneficial to management and labor.

(E) Clark's analysis of the change in switching systems applies only narrowly to the situation at the particular exchange that he studied.

Inference

This question requires understanding what the passage implies in its discussion of a point of view. The details of Clark's views are discussed primarily in the final paragraph. The passage states that on an empirical level, Clark demonstrates that technological change regarding switches at the telephone exchange *altered work tasks, skills, training opportunities, administration, and organization of workers* (lines 42–44). The passage goes on to state Clark's contention that these changes even influenced negotiations between management and labor unions.

A The passage indicates that Clark's study addressed the extremes of both technological determinism and social constructivism. It cites Braverman as a proponent of social constructivism but provides no evidence that Clark's motivation in beginning his study was specifically to target an analysis offered by Braverman.

B The passage indicates that Clark attributed some organizational change to the way labor and management negotiated the introduction of technology but does not mention conflict between them.

C **Correct.** According to the passage, Clark concludes that changes to the technology of switches had an influence on several aspects of the overall operations and organization of the telephone exchange.

D The passage does not indicate that Clark assesses the benefits of technological change to either labor or management.

E The passage indicates that Clark believes the change in switching technology influenced many aspects of the overall operations of the telephone exchange.

The correct answer is C.

Questions 591–595 refer to the passage on page 454.

RC00650-02

591. The passage implies that which of the following was a reason that the proportion of verdicts in favor of patentees began to increase in the 1830s ?

(A) Patent applications approved after 1836 were more likely to adhere closely to patent law.

(B) Patent laws enacted during the 1830s better defined patent rights.

(C) Judges became less prejudiced against patentees during the 1830s.

(D) After 1836, litigated cases became less representative of the population of patent disputes.

(E) The proportion of patent disputes brought to trial began to increase after 1836.

Inference

The question asks which statement can be reasonably inferred, from information provided in the passage, to be a reason for the increase in proportion of verdicts favoring patentees, starting in the 1830s. The second paragraph argues that what changed in that decade was not judges' attitudes toward patent law, but the types of patent cases that were litigated. It explains that a law passed in 1836 required that, for the first time in U.S. history, applications for patents had to be examined for their adherence to patent law before a patent would be issued. This information implies that patents granted after 1836 were more likely to adhere to patent law and were thus more likely to be upheld in court.

A **Correct**. The passage implies that patents granted after the 1836 law went into effect were more likely to adhere to patent law.

B The passage does not indicate that any law mentioned made changes to the definition of patent rights; rather, the passage indicates that the patent system was revised to require that patent applications be reviewed for adherence to existing law.

C The passage rejects the explanation that judges' attitudes toward patent rights became more favorable.

D The passage indicates that the population of disputes that were litigated changed after 1836, but it does not suggest that the population of litigated disputes differed from that of patent disputes as a whole.

E The passage does not indicate any change in the proportion of patent disputes brought to trial.

The correct answer is A.

RC00650-03

592. The passage implies that the scholars mentioned in line 8 would agree with which of the following criticisms of the American patent system before 1830?

(A) Its definition of property rights relating to inventions was too vague to be useful.

(B) Its criteria for the granting of patents were not clear.

(C) It made it excessively difficult for inventors to receive patents.

(D) It led to excessive numbers of patent-infringement suits.

(E) It failed to encourage national economic growth.

Inference

This question asks about a statement implied by the passage. The scholars mentioned in line 8 question whether U.S. patent law achieved its goal. That goal is described in the first sentence of the passage: to encourage America's economic growth. Thus, it is reasonable to conclude that the scholars would criticize the pre-1830 patent system for failing to encourage economic growth.

A The scholars contend that judges rejected patents for arbitrary reasons, not because the definition of property rights was vague.

B The passage does not indicate that the scholars were critical of the criteria for granting patents.

C The scholars are concerned with inventors' attempts to protect their patents, not the difficulty of acquiring a patent in the first place.

D The passage does not imply that the scholars in question believed that too many patent-infringement suits were brought to court, but rather that too few succeeded.

E **Correct.** The scholars doubt that patent law helped to achieve its goal, which was to encourage economic growth.

The correct answer is E.

RC00650-06

593. It can be inferred from the passage that the frequency with which pre-1830 cases have been cited in court decisions is an indication that

(A) judicial support for patent rights was strongest in the period before 1830

(B) judicial support for patent rights did not increase after 1830

(C) courts have returned to judicial standards that prevailed before 1830

(D) verdicts favoring patentees in patent-infringement suits did not increase after 1830

(E) judicial bias against patentees persisted after 1830

Inference

The question asks what is indicated by the frequency with which pre-1830 cases have been cited in court decisions. The second paragraph rejects some scholars' claims that judges prior to the 1830s were *antipatent*, while judges after that time were more accepting of patent rights. The passage supports its critique by pointing out that decisions made by judges before the 1830s have been cited as precedents by later judges just as frequently as post-1830s decisions have been. This implies that later judges' attitudes toward patent rights were similar to those of pre-1830s judges. Thus, there is no reason to believe judges' attitudes toward patent rights changed at that time.

A The passage argues that judicial support for patents did not change in the 1830s.
B **Correct**. Pre-1830s court decisions have been cited as frequently as later decisions, suggesting no change in judges' attitudes.
C The passage does not indicate that judicial standards changed from, and then returned to, those that prevailed before 1830.
D Although actual numbers of favorable verdicts are not mentioned, the passage indicates that the proportion of verdicts decided in favor of patentees did, in fact, increase beginning in the 1830s.
E The passage rejects the notion that judges were biased against patentees either before or after 1830.

The correct answer is B.

RC00650-07

594. It can be inferred from the passage that the author and the scholars referred to in line 21 disagree about which of the following aspects of the patents defended in patent-infringement suits before 1830?

(A) Whether the patents were granted for inventions that were genuinely useful
(B) Whether the patents were actually relevant to the growth of the United States economy
(C) Whether the patents were particularly likely to be annulled by judges
(D) Whether the patents were routinely invalidated for reasons that were arbitrary
(E) Whether the patents were vindicated at a significantly lower rate than patents in later suits

Inference

The question depends on recognizing differences between two explanations—one favored by the scholars mentioned in line 21, the other favored by the author—for the frequency with which patents were invalidated in U.S. courts prior to 1830. The first paragraph describes the scholars' view that judges before 1830 were *antipatent* and rejected patentees' claims for *arbitrary reasons*. The author of the passage rejects that view. As an alternate explanation, the author in the second paragraph implies that earlier patents often violated copyright law; this view is supported with reference to an 1836 revision to the patent system which instituted a procedure by which patent applications were inspected to ensure adherence to patent law.

A The author and the scholars are both focused on protecting inventors' property rights, not with their inventions' utility.
B Although the passage suggests that the scholars thought America's patent system did not help encourage economic growth, there is no suggestion that either the scholars or the author believes actual patents defended in court were irrelevant to economic growth.
C Both the scholars and the author believe that patents defended in court prior to 1830 were more likely to be invalidated than were patents in later legal disputes.
D **Correct.** The scholars claim that judges before 1830 decided against patentees for arbitrary reasons, but the passage suggests that the patents may have been invalidated because they failed to adhere to patent law.
E Both the scholars and the author accept that patents were upheld in court less often before 1830 than after.

The correct answer is D.

RC00650-08

595. The author of the passage cites which of the following as evidence challenging the argument referred to in lines 14–15 ?

(A) The proportion of cases that were decided against patentees in the 1820s
(B) The total number of patent disputes that were litigated from 1794 to 1830
(C) The fact that later courts drew upon the legal precedents set in pre-1830 patent cases
(D) The fact that the proportion of judicial decisions in favor of patentees began to increase during the 1830s
(E) The constitutional rationale for the 1836 revision of the patent system

Supporting idea

The question asks what evidence the author brings to bear against the argument referred to in lines 14–15. In the first paragraph, the author summarizes scholars' arguments to the conclusion that judges' attitudes toward patent rights shifted in the 1830s, based on the fact that judges earlier had routinely ruled against patentees in lawsuits whereas judges after that time provided more protection for patent rights. In the second paragraph the author challenges the claim that judges' attitudes shifted. The author provides evidence that judges after the 1830s cited legal precedents set in pre-1830s cases, suggesting that their views had not changed.

A The proportion of cases decided against patentees in the 1920s is cited as evidence that supports the scholars' argument in the first paragraph, not as evidence challenging their views.
B The total number of disputes litigated is not mentioned in the passage.
C **Correct.** The fact that judges after 1830 cited earlier cases as precedents is used as evidence to challenge scholars' claims that judges' attitudes shifted around 1830.
D The change in the proportion of decisions in favor of patentees is a fact that both the scholars and the author of the passage attempt to explain.
E No constitutional rationale for the 1836 law is mentioned in the passage.

The correct answer is C.

Questions 596–602 refer to the passage on page 456.

RC00313-01

596. The author of the passage discusses Krontiris primarily to provide an example of a writer who

(A) is highly critical of the writings of certain Renaissance women
(B) supports Kelly's view of women's status during the Renaissance
(C) has misinterpreted the works of certain Renaissance women
(D) has rejected the views of both Burckhardt and Kelly
(E) has studied Renaissance women in a wide variety of social and religious contexts

Evaluation

This question focuses on the author's reason for mentioning Krontiris's work. The passage states that Krontiris, in her discussion of six Renaissance women writers, is an example of scholars who are optimistic about women's achievements but also suggest that these women faced significant obstacles. She is a writer who, in other words, agrees with neither Kelly's negative views nor Burckhardt's positive approach.

A The passage indicates that Krontiris uses the Renaissance women writers' works as historical evidence, not that she offered any criticism of the works themselves.
B Krontiris's work, according to the author, is cautiously optimistic about women's achievements during the Renaissance. This contradicts Kelly's view that the status of women declined during this time.
C The author suggests that Krontiris may have erred in taking her six subjects as representative of all women during the Renaissance, not that she made any misinterpretations of their actual writing.
D **Correct.** The author uses Krontiris as an example of those feminist scholars who have rejected the overgeneralized approaches of both Kelly and Burckhardt.
E The author makes clear that Krontiris's study focuses on literate Renaissance women, who constituted a small minority.

The correct answer is D.

RC00313-02

597. According to the passage, Krontiris's work differs from that of the scholars mentioned in line 12 in which of the following ways?

(A) Krontiris's work stresses the achievements of Renaissance women rather than the obstacles to their success.
(B) Krontiris's work is based on a reinterpretation of the work of earlier scholars.
(C) Krontiris's views are at odds with those of both Kelly and Burkhardt.
(D) Krontiris's work focuses on the place of women in Renaissance society.
(E) Krontiris's views are based exclusively on the study of a privileged group of women.

Supporting idea

This question asks what the passage directly states about the difference between Krontiris's work and the feminist scholars mentioned in the first paragraph. The feminist scholars mentioned in the first paragraph explore differences among Renaissance women, particularly their social status and religion, and thus complicate Burckhardt's and Kelly's generalizations. Krontiris's work, on the other hand, focuses on Renaissance women writers, who are a distinctly privileged and small social group.

A The second paragraph makes clear that Krontiris addresses the obstacles faced by Renaissance women.
B The passage does not suggest that Krontiris is reinterpreting or drawing on reinterpretations of the work of earlier scholars.
C The second paragraph shows that Krontiris's work does complicate both Burckhardt's and Kelly's views, but in this, she is in agreement with the feminist scholars mentioned in the first paragraph.
D Both Krontiris and the feminist scholars mentioned in the first paragraph are concerned with the place of women in Renaissance society.
E **Correct.** The feminist scholars mentioned in the first paragraph are concerned with women of different social classes and religions, whereas Krontiris's work focuses on a limited social group.

The correct answer is E.

RC00313-03

598. According to the passage, feminist scholars cite Burckhardt's view of Renaissance women primarily for which of the following reasons?

(A) Burckhardt's view forms the basis for most arguments refuting Kelly's point of view.
(B) Burckhardt's view has been discredited by Kelly.
(C) Burckhardt's view is one that many feminist scholars wish to refute.
(D) Burckhardt's work provides rich historical evidence of inequality between Renaissance women and men.
(E) Burckhardt's work includes historical research supporting the arguments of the feminist scholars.

Supporting idea

This question asks what the passage says explicitly about why feminist scholars reference Burckhardt's view of Renaissance women. The first paragraph states that Burckhardt's view is that Renaissance women enjoyed *perfect equality* with men, and then follows that by noting how feminist scholars have *repeatedly cited* this view to contrast it with extensive evidence of women's inequality during the Renaissance.

A The passage does not indicate that any feminist scholars cite Burckhardt to refute Kelly's view. It uses Krontiris as an example of scholars who refute Kelly's point of view to a certain degree, but Krontiris does not use Burckhardt's view as her basis for doing so; Krontiris argues against Burckhardt as well.
B According to the first paragraph, Kelly's work was in certain ways inconsistent with Burckhardt's view, but that is not a reason why Burckhardt's view is cited by feminist scholars. Rather, according to the passage, they cite it in order to argue against it.
C **Correct.** Many feminist scholars wish to refute Burckhardt's view that Renaissance women and men were equal.
D As the first paragraph makes clear, Burckhardt's work emphasizes equality, not inequality, between Renaissance women and men.
E The passage does not discuss the historical research on which Burckhardt based his work.

The correct answer is C.

RC00313-04

599. It can be inferred that both Burckhardt and Kelly have been criticized by the scholars mentioned in line 12 for which of the following?

(A) Assuming that women writers of the Renaissance are representative of Renaissance women in general

(B) Drawing conclusions that are based on the study of an atypical group of women

(C) Failing to describe clearly the relationship between social status and literacy among Renaissance women

(D) Failing to acknowledge the role played by Renaissance women in opposing cultural stereotypes

(E) Failing to acknowledge the ways in which social status affected the creative activities of Renaissance women

Inference

Line 12 refers to feminist scholars who have rejected both Kelly's and Burckhardt's views of the status of Renaissance women. The next sentence states that the feminist scholars use class and religious differences among Renaissance women to argue against Kelly's and Burckhardt's generalizations, which were based on upper-class Italian women.

A The second paragraph suggests that Krontiris at times conflates Renaissance women writers and women in general, but the passage does not indicate that the feminist scholars believe this of Kelly or Burckhardt.

B **Correct.** The feminist scholars mentioned study different types of Renaissance women and so reject Kelly's and Burckhardt's conclusions that were based on a group that was not in fact typical.

C Krontiris, not Kelly and Burckhardt, is the scholar who, according to the passage, fails to address the relationship between literacy and social status.

D The passage provides no grounds for determining whether Kelly, Burckhardt, or the feminist scholars mentioned in the first paragraph dealt with Renaissance women's opposition to cultural stereotypes; Krontiris's work is concerned with this question.

E The first paragraph suggests that feminist scholars criticized Kelly and Burckhardt for failing to acknowledge the ways in which social status complicates any generalizations that can be made about Renaissance women's lives, not their creative activities specifically.

The correct answer is B.

RC00313-05

600. The author of the passage suggests that Krontiris incorrectly assumes that

(A) social differences among Renaissance women are less important than the fact that they were women

(B) literacy among Renaissance women was more prevalent than most scholars today acknowledge

(C) during the Renaissance, women were able to successfully oppose cultural stereotypes relating to gender

(D) Renaissance women did not face many difficult social obstacles relating to their gender

(E) in order to attain power, Renaissance women attacked basic assumptions in the ideologies that oppressed them

Inference

The first statement the author makes about Krontiris, in the second paragraph, concerns what the author characterizes as a problem with Krontiris's work. Krontiris takes the Renaissance women writers she studies as representative of all Renaissance women; the author says that designating *women* as the most important grouping fails to consider whether other social differences might make for differences in experience.

A **Correct.** The author indicates that Krontiris's error lies in assuming that women's identity as women trumps social and other differences.

B The author does not suggest that Krontiris assumes inappropriate literacy levels among Renaissance women, but rather that Krontiris does not give sufficient consideration to the idea that women who could read and write most likely led lives very different from those of women who could not read and write.

C The author says that Krontiris suggests that there were many cultural stereotypes that women were not able to oppose effectively.

D Krontiris, according to the author, acknowledges the many social obstacles faced by women on the basis of their gender.

E According to the author, Krontiris's concluding remarks suggest that Renaissance women *seldom attacked the basic assumptions in the ideologies that oppressed them.*

The correct answer is A.

RC00313-06

601. The last sentence in the passage serves primarily to

(A) suggest that Krontiris's work is not representative of recent trends among feminist scholars

(B) undermine the argument that literate women of the Renaissance sought to oppose social constraints imposed on them

(C) show a way in which Krontiris's work illustrates a "cautiously optimistic" assessment of Renaissance women's achievements

(D) summarize Krontiris's view of the effect of literacy on the lives of upper- and middle-class Renaissance women

(E) illustrate the way in which Krontiris's study differs from the studies done by Burckhardt and Kelly

Evaluation

The function of the final sentence of the passage is to indicate how Krontiris's work takes neither a completely positive nor completely negative view of Renaissance women's experiences—i.e., how her work is representative of those authors who are cautiously optimistic about the achievements of Renaissance women.

A The passage discusses Krontiris's work as an example of the trend described in the latter part of the first paragraph and mentioned in the first line of the second paragraph. The last sentence in the passage shows that Krontiris's work is in fact representative of recent trends among feminist scholars.

B The last sentence in the passage states that Renaissance women's opposition to cultural stereotypes was circumscribed, but it also suggests that these women did gain some power for themselves. Thus, the sentence does not serve primarily to undermine the argument that the women sought to oppose social constraints.

C Correct. Krontiris's work illustrates the "cautiously optimistic" view by embracing both the idea that Renaissance women could gain a certain amount of power and the idea that the extent of their opposition was limited.

D The last sentence in the passage summarizes Krontiris's view, but that view does not, according to the passage, take into account the effect of literacy on the members of a particular social class.

E The main function of the final sentence of the passage is to take up the idea of the *cautiously optimistic* assessment offered in the penultimate sentence. This does mark a significant departure from both Burckhardt and Kelly, but the distinction between their work and that of other feminist scholars is marked more clearly earlier in the passage.

The correct answer is C.

RC00313-08

602. The author of the passage implies that the women studied by Krontiris are unusual in which of the following ways?

(A) They faced obstacles less formidable than those faced by other Renaissance women.

(B) They have been seen by historians as more interesting than other Renaissance women.

(C) They were more concerned about recording history accurately than were other Renaissance women.

(D) Their perceptions are more likely to be accessible to historians than are those of most other Renaissance women.

(E) Their concerns are likely to be of greater interest to feminist scholars than are the ideas of most other Renaissance women.

Inference

The women Krontiris studied are unusual, the author suggests, because they were literate, thus putting them among the minority of Renaissance women. That they could write, however, means that their written reflections are part of the historical record, whereas the direct impressions of experiences had by Renaissance women who could not write about their lives are lost to history.

A The author implies that the obstacles faced by Krontiris's subjects may have been different from those faced by other women, not that they were less formidable.
B The author does not imply that the women studied by Krontiris are seen as more interesting; rather, the author indicates that their work is that which is available for study.
C The women Krontiris studies were able to record their own history because they, unlike most other Renaissance women, were literate. This does not imply that they were more concerned with recording history accurately.
D **Correct.** Because Krontiris's subjects were literate, they were able to write down, and thus preserve for historians, their perceptions in a way that most other Renaissance women were not.
E The author does not suggest that feminist scholars in general are more interested in the concerns of middle- and upper-class literate women than they are with women of other classes.

The correct answer is D.

Questions 603–606 refer to the passage on page 458.

RC00524-02

603. The passage implies which of the following about the five asteroids mentioned in line 12 ?

(A) Their rotation rates are approximately the same.
(B) They have undergone approximately the same number of collisions.
(C) They are monoliths.
(D) They are composed of fragments that have escaped the gravity of larger asteroids.
(E) They were detected only recently.

Inference

In line 12, *five observed asteroids*, refers to the five asteroids whose rotation rates are exceptions to the strict limit on the rate of rotation found in all other observed asteroids. These five asteroids all have diameters smaller than 200 meters. The passage indicates that if asteroids were all monoliths—that is, single rocks—then their rotation rates would form a bell curve when graphed, but if asteroids were piles of rubble, the tail of the bell curve indicating very fast rotation rates would be missing. Among asteroids larger than 200 meters, this tail is missing, and only the five asteroids described as exceptions have rotation rates falling at the very high end of the bell curve.

A All that the passage states about the rotation rates of these five asteroids is that they do not obey a strict limit. The passage does not rule out that their rates of rotation are significantly different from one another.
B According to the passage, frequent collisions occur among asteroids. But the passage does not suggest that asteroids that are of similar sizes, or that have particularly high rotation rates, will be similar in terms of the number of collisions that they have undergone to reach those distinctive states.
C **Correct.** The second paragraph states that *most small asteroids* should be monolithic, and the five observed asteroids are all smaller than 200 meters in diameter.
D The five asteroids are most likely not composed of fragments because, as the passage states, small asteroids should be monoliths.
E The passage notes that researchers have observed these five asteroids, along with others, but it does not indicate when these asteroids were originally detected.

The correct answer is C.

RC00524-04

604. The discovery of which of the following would call into question the conclusion mentioned in line 16 ?

(A) An asteroid 100 meters in diameter rotating at a rate of once per week

(B) An asteroid 150 meters in diameter rotating at a rate of 20 times per hour

(C) An asteroid 250 meters in diameter rotating at a rate of once per week

(D) An asteroid 500 meters in diameter rotating at a rate of once per hour

(E) An asteroid 1,000 meters in diameter rotating at a rate of once every 24 hours

Application

The conclusion that the text in line 16 points to is that asteroids with diameters greater than 200 meters are *multicomponent structures or rubble piles*. To call that conclusion into question, an observation would have to suggest that asteroids larger than 200 meters across are not such multicomponent structures. According to the first paragraph, rubble piles cannot be fast rotators: spinning faster than once every few hours would make them fly apart.

A Nothing in the passage suggests that the behavior of an asteroid 100 meters in diameter is relevant to a conclusion about the behavior of asteroids greater than 200 meters in diameter.

B Nothing in the passage suggests that the behavior of an asteroid 150 meters in diameter would have any effect on a conclusion about the constitution of asteroids with diameters greater than 200 meters.

C An asteroid 250 meters in diameter rotating at a rate of once per week would be rotating at a slow enough rate to hold together a pile of rubble. Thus, this observation would be entirely consistent with the conclusion about asteroids larger than 200 meters in diameter.

D **Correct.** Assuming that an asteroid composed of a pile of rubble is of a great enough density, a rotation rate greater than one revolution every few hours would make it fly apart. So a 500-meter asteroid rotating at a rate of once per hour—that is, faster than the crucial speed—would fly apart if it were not a monolith. The conclusion states that all asteroids larger than 200 meters are multicomponent structures (that is, are not monoliths), so the discovery of a 500-meter asteroid rotating at a rate of once an hour would call into question that conclusion.

E An asteroid rotating at a rate of once every 24 hours would, regardless of size, be rotating much more slowly than the *once every few hours* that the passage claims would make a pile of rubble of a sufficient density fly apart. So an asteroid with a diameter of 1,000 meters that rotated once per day could be a pile of rubble and not conflict with the conclusion.

The correct answer is D.

RC00524-06

605. According to the passage, which of the following is a prediction that is based on the strength of the gravitational attraction of small asteroids?

(A) Small asteroids will be few in number.

(B) Small asteroids will be monoliths.

(C) Small asteroids will collide with other asteroids very rarely.

(D) Most small asteroids will have very fast rotation rates.

(E) Almost no small asteroids will have very slow rotation rates.

Supporting ideas

Regarding small asteroids, the second paragraph states that they have feeble gravity. Any fragments from impacts would escape that gravity, and thus, the passage states, the small asteroids *should be monolithic*.

A Small asteroids could be few in number, but the passage does not offer such a prediction.

B **Correct.** This prediction is offered in the second paragraph, based on the fact that small asteroids do not have strong gravitational attraction. Any impact fragments will easily escape the weak gravitational attraction of the small asteroids.

C The passage discusses large asteroids collisions in more detail than small-asteroid collisions, but it provides no basis for predicting how often large and small asteroids will, comparatively, be involved in such collisions.

D The first paragraph indicates that the rotation rates of small asteroids can exceed the upper limit on the rotation rates of large asteroids, but it does not indicate that most small asteroids have rotation rates that exceed this upper limit.

E The passage only indicates that there are few observed exceptions to the upper limit on rotation rates of large asteroids, and these exceptions are all smaller than 200 meters in diameter; the passage does not indicate that there are few small asteroids that have very slow rotation rates.

The correct answer is B.

RC00524-07

606. The author of the passage mentions "escape velocity" (see line 22) in order to help explain which of the following?

(A) The tendency for asteroids to become smaller rather than larger over time

(B) The speed with which impact fragments reassemble when they do not escape an asteroid's gravitational attraction after a collision

(C) The frequency with which collisions among asteroids occur

(D) The rotation rates of asteroids smaller than 200 meters in diameter

(E) The tendency for large asteroids to persist after collisions

Evaluation

This question asks about the purpose of the author's use of the phrase *escape velocity* in the second paragraph. The author is discussing what occurs after an asteroid collision, in which a large asteroid might be blasted to bits. The bits, according to the author, will move slower than their *mutual escape velocity*—that is, the speed at which they would have to move to get away from each other and not reassemble, under the influence of gravity, into a rubble pile.

A The author is emphasizing the asteroid bits that do not escape rather than those that do. Asteroids may become smaller over time, but the fact that most bits move slower than their escape velocity would not help to explain this shrinkage.

B That the bits of asteroid move slower than their escape velocity helps explain why the fragments reassemble, but it does not help explain the speed with which they reassemble.

C According to the author, asteroid collisions occur frequently, but the escape velocity of the resulting fragments does not help to explain that frequency.

D The concept of escape velocity may help explain why small asteroids are monoliths, but it has no relevance, at least as far as the passage indicates, to those asteroids' rotation rates.

E **Correct.** After a collision, it is the asteroid fragments' failure to reach escape velocity that allows the fragments' gravitational pull to reassemble them into a rubble pile.

The correct answer is E.

Questions 607–609 refer to the passage on page 460.

RC00301-04

607. The author of the passage mentions calculations about tunneling time and barrier thickness in order to

(A) suggest that tunneling time is unrelated to barrier thickness

(B) explain the evidence by which Wigner and Eisenbud discovered the phenomenon of tunneling

(C) describe data recently challenged by Raymond Chiao and colleagues

(D) question why particles engaged in quantum tunneling rarely achieve extremely high speeds

(E) explain the basis for Wigner and Eisenbud's hypothesis

Evaluation

This question asks why the author discusses calculations about tunneling time and barrier thickness. According to the passage, these calculations provided the grounds for Wigner and Eisenbud's hypothesis that tunneling particles may travel faster than light.

A The passage states that tunneling time is related to barrier thickness, up to the point at which tunneling time reaches a maximum.

B The passage indicates that the phenomenon of tunneling was noted at least as early as 1932. It provides no evidence that Wigner and Eisenbud discovered it.

C The passage uses Chiao's work to support the idea that tunneling particles may move faster than light, not challenge it.

D The author describes calculations about tunneling time and barrier thickness in order to explain that particles engaged in quantum tunneling may in fact achieve extremely high speeds, not to explain the rarity of the phenomenon.

E **Correct.** The calculations about tunneling time and barrier thickness supported Wigner and Eisenbud's hypothesis that quantum tunneling could occur at speeds faster than that of light.

The correct answer is E.

RC00301-03

608. The passage implies that if tunneling time reached no maximum in increasing with barrier thickness, then

(A) tunneling speed would increase with barrier thickness

(B) tunneling speed would decline with barrier thickness

(C) tunneling speed would vary with barrier thickness

(D) tunneling speed would not be expected to increase without limit

(E) successful tunneling would occur even less frequently than it does

Inference

The passage states that because tunneling time reaches a maximum, then tunneling speed must increase as barrier thickness increases. But if tunneling time did not reach such a maximum, then speed need not increase without limit; the particle could have as low a speed in thicker barriers as in thinner ones and take longer to tunnel through a barrier.

A If tunneling time could not reach a maximum, then speed might increase, decrease, or remain the same as barrier thickness increases.

B If tunneling time could not reach a maximum, then speed might increase, decrease, or remain the same as barrier thickness increases.

C Tunneling speed could vary with barrier thickness if tunneling time could not reach a maximum, but there is no basis in the passage on which to conclude that this is definitely so.

D **Correct.** The tunneling particle could have as low a speed in thicker barriers as in thinner ones and simply take longer to make its way through a thicker barrier.

E The passage states that the probability of successful tunneling declines as the thickness of the barrier increases. However, it does not address the issue of whether the differences in probability of successful tunneling are due to the greater time required to go through thicker barriers.

The correct answer is D.

RC00301-02

609. Which of the following statements about the earliest scientific investigators of quantum tunneling can be inferred from the passage?

(A) They found it difficult to increase barrier thickness continually.

(B) They anticipated the later results of Chiao and his colleagues.

(C) They did not suppose that tunneling particles could travel faster than light.

(D) They were unable to observe instances of successful tunneling.

(E) They made use of photons to study the phenomenon of tunneling.

Inference

This question asks about the earliest investigators of quantum tunneling. The passage notes that quantum tunneling's *extreme rapidity* was observed in 1932; thus, the earliest investigators of this phenomenon knew of its existence at that time. Not until 1955 did Wigner and Eisenbud hypothesize that the particles traveled faster than light. Thus, it is logical to infer that the earliest investigators did not imagine such a speed.

A There is nothing in the passage to suggest that the earliest investigators of quantum tunneling had difficulty manipulating barrier thickness.

B The passage states that Chiao and his colleagues measured photons moving at 1.7 times the speed of light—but the passage does not provide evidence that the earliest investigators anticipated such speeds.

C **Correct.** The passage suggests that prior to 1955, investigators of quantum tunneling had not hypothesized that the particles could travel faster than the speed of light.

D The passage indicates that by 1932, investigators had noted the rapidity of quantum tunneling; although this does not entail that they observed the phenomenon, it is consistent with their having been able to do so.

E The passage indicates that Chiao's work involves photons, but it does not indicate the type of particles used or observed by the earliest investigators of the phenomenon.

The correct answer is C.

8.0 Critical Reasoning

8.0 Critical Reasoning

Critical reasoning questions are designed to test the reasoning skills involved in:

1. constructing an argument
2. evaluating an argument, and
3. formulating or evaluating a plan of action.

The materials on which questions are based are drawn from a variety of sources. The GMAT exam does not expect any familiarity with the subject matter of those materials beyond what is generally known.

Critical reasoning questions are based on passages that are typically less than 100 words in length, and—unlike reading comprehension passages—each critical reasoning passage has just one question associated with it. On the exam, you will see only one passage and question at a time.

Answering critical reasoning questions requires no specialized knowledge. You do not need to know the terminology or conventions of formal logic, but you do need to be familiar with such generally known logical terms as "premise," "conclusion," and "assumption." The sample critical reasoning questions in this chapter illustrate the variety of topics the test may cover, the kinds of questions it may ask, and the level of analysis it requires.

8.1 What Is Measured

A set of critical reasoning questions provides one measure of your ability to deal with reasoning.

For the purposes of the GMAT, reasoning can be thought of as any series of statements of which at least one is given as logical support (evidence) for some other statement. Some examples include reasoning for the purpose of justifying belief in a statement, justifying some plan of action, or explaining why a certain phenomenon occurs.

Many of the passages in critical reasoning questions contain or report reasoning. Some passages display no reasoning and simply present information. Every critical reasoning question, however, will require you to engage in reasoning based on the passage. You may, for example, be asked to draw a conclusion from the given information, i.e., to identify among the answer choices the one statement that is logically supported by the information. Or you may be asked to identify the one statement that most plausibly explains why a phenomenon described in the passage occurred, or to evaluate whether a particular plan of action is likely to achieve the intended goal.

Many different skills are involved in the analysis and evaluation of reasoning. The following table lists the major skills that critical reasoning questions measure:

Question type	Skill	Examples
Analyzing reasoning structure	Ability to identify premises, conclusions, explanations, plan rationales, or background information in passages that contain reasoning	• [in a dialogue] "Ming uses which of the following techniques in responding to Wei?" • Which of the following most accurately describes the functions of each boldfaced part of the passage?
Drawing conclusions (inference)	Ability to infer a statement (draw a conclusion) from given information	• Which of the following is most strongly supported by the information provided? • Which of the following follows logically from the information provided?
Identifying sufficient or required assumptions	Ability to recognize an assumption that can help to complete a logical gap in a piece of reasoning associated with an explanation or the rationale for a policy or plan	• Which of the following is an assumption that Fang's reasoning requires? [or "on which Fang's reasoning depends"] • The conclusion follows logically if which of the following is assumed? • The plan will fail unless which of the following occurs?
Evaluating hypotheses	Ability to identify a hypothesis that most plausibly explains the occurrence of a phenomenon or event	• Which of the following, if true, most helps explain the failure to achieve the plan's objective? • Which of the following is most likely to contribute to the occurrence of the phenomenon observed? • In order to evaluate the force of the archaeologists' evidence, it would be most useful to determine which of the following?
Resolving apparent inconsistency	Ability to reconcile two apparently conflicting states of affairs	• Which of the following most helps to resolve the discrepancy between the reported level of rainfall and the occurrence of flooding in City X?
Identifying information that strengthens or weakens reasoning	Ability to identify information that either provides additional support or undermines reasoning	• Which of the following, if discovered, would cast the most doubt on the engineer's reasoning? • Which of the following, if true, would most strengthen the support for the physician's diagnosis?

Question type	Skill	Examples
Recognizing and describing logical flaws	Ability to identify errors in reasoning such as confusing correlation with causation or confusing a sufficient condition with a necessary one	• Which of the following, if true, most strongly indicates the existence of a flaw in the reasoning? • The reasoning attributed to the executive is most vulnerable to which of the following criticisms?
Identifying a point of disagreement	Ability to precisely identify the key issue on which two parties disagree, based on the statements they have made	• Which of the following is the main point of disagreement between Mandeep and Saumya?
Finding a solution to a practical problem	Ability to recognize a strategy for solving a practical problem	• Which of the following would most help the polling specialists overcome the difficulty they encountered in surveying a sample of likely voters?

8.2 Test-Taking Strategies

To answer critical reasoning questions, you must analyze and logically evaluate the passage on which each question is based, and then select the answer choice that most appropriately answers the question. Begin by carefully reading the passage and the question asked about the passage, then reading the five answer choices. If the correct answer is not immediately obvious to you, see whether you can eliminate some of the wrong answers. Reading the passage a second time may help illuminate subtleties not evident on first reading.

1. **Decide whether you benefit most from reading the passage or the question first.**

   Some test-takers may want to read the passage very carefully first and then read the question. But it can be advantageous to read the question first. Doing so can orient you toward noticing the content or structural features of the passage that are relevant to answering the question. Working through the practice questions in this guide should help you get a good feel for the approach that suits you best.

   Be careful to respond to the question asked. For example, here are two questions that, in a hurried reading, could easily be confused:

   (a) Which of the following is valued by most citizens of Nation X?

   (b) Which of the following is most valued by the citizens of Nation X?

   Something that is valued by most citizens of Nation X may not be the same as what is generally most valued by the citizens of Nation X. For example, the most justified answer to (a) could be "wealth" and the most justified answer to (b) could be "good community relations."

2. **Determine whether the passage contains reasoning or merely provides information.**

   To determine whether the passage contains reasoning, consider whether one or more of the statements are intended to support the truth of any other statement provided, or to justify a plan of action, or to explain some phenomenon. To help determine this, look for certain sorts of words or

phrases, sometimes called "inference indicators," that authors may provide when they are presenting a piece of reasoning. For instance, the word *therefore* is frequently used to indicate a conclusion, and the word *because* is frequently used to indicate a premise or reason. Here are other examples (the list is not exhaustive):

- Conclusion indicators: *consequently*, *it follows that*, *so*, *hence*
- Premise indicators: *since*, *as*, *for*, *as is shown by*, *follows from*

Some of these words have other uses; for example, *since* can signify time or can signify causation. Also, keep in mind that a passage may contain reasoning even if no such indicators are present. Ask yourself whether any of the statements support the truth of another statement, help explain a phenomenon described in the passage, or help support a plan proposed in the passage.

3. Identify the purpose and structure of any reasoning given in a passage.

A good first step in analyzing passages that contain reasoning is to determine the purpose of the reasoning. Does the reasoning aim to provide logical support for a conclusion? If so, then identifying that conclusion will help. Or perhaps the reasoning aims to explain a phenomenon, i.e., to indicate what has caused the phenomenon to occur. If so, identifying the statement that predicts or hypothesizes the occurrence of the phenomenon will help. A third possibility is that the reasoning provides a rationale for a plan or policy. If so, identifying a statement that indicates the goal of the plan or policy will help.

Once you have identified the purpose of the reasoning, then you can look at the structure of the reasoning (i.e., *how* the author makes the argument). Pay attention to how sentences relate to one another. For example, the passage may begin with a conclusion followed by a premise that supports that conclusion—or the premise may come first. An intermediate conclusion may, in turn, be used as a premise to support a larger, final conclusion. Consider the following:

> Among people currently employed, those who wish to retire early will probably not be able to afford to do so. Most people these days are spending almost all their income, and therefore few people are saving enough for early retirement.

In this argument, "Few people are saving enough for early retirement" is an intermediate conclusion, because it is both a conclusion (for which "Most people these days are spending almost all of their income" is a premise) and a premise for the argument's main conclusion ("Among people currently employed, those who wish to retire early will probably not be able to afford to do so").

4. To test reasoning, try to imagine scenarios where the premises are true and the conclusion false.

Many critical reasoning questions will require you to evaluate the soundness of the reasoning presented in a passage. To evaluate reasoning, you do not need to decide whether premises or conclusions are actually true. Determining actual truth is beyond the scope of the test: no test-taker could determine the truth or falsity of every assertion present in critical reasoning passages. Moreover, many critical reasoning passages refer to fictional scenarios. Normally, in evaluating a piece of reasoning, you should try to *imagine* a situation in which the premises would all be true with the conclusion false. If such a situation would be very unlikely to occur, then the reasoning is strong. On the other hand, if such a situation could likely occur, then the reasoning is poor.

This does not mean that considerations of what you know to be true about the real world will not at times be helpful in evaluating reasoning. Consider the following:

> Medical procedure A is as effective and cost-efficient as medical procedure B but has fewer unwanted side-effects than B. Therefore, medical procedure A should be preferred over medical procedure B.

In evaluating this reasoning, you can use the obvious fact that, all else being equal, the procedure with fewer unwanted side-effects is preferable.

There are degrees of logical support. A piece of reasoning can be very weak, moderately weak, moderately strong, or even absolutely certain. Even if you are not directly asked to do so, it is good practice to evaluate any reasoning in a passage, including the plausibility of an explanation or the persuasiveness of the rationale for a plan's success. Also, note that reasoning can be strengthened by adding new information that, along with the already given information, increases the likelihood that the conclusion inferred would be true provided that all the supporting information is true. Similarly, reasoning can be weakened by adding information that increases the likelihood of the conclusion being false provided that the supporting information is true.

8.3 Reasoning Concepts to Know for the GMAT Exam

The following is intended to provide some pointers to help you analyze the critical reasoning issues you may encounter on the GMAT exam.

1. Be alert to any unstated assumption on which the reasoning may depend.

A statement that helps fill a "gap" in the information offered to support the conclusion is an unstated assumption. If the reasoning depends on such an assumption and the assumption is highly implausible, the reasoning would be subject to criticism on that basis. Note that assumptions can be of two kinds:

- **Necessary assumptions:** unstated facts or opinions that must be assumed if the reasoning is to succeed logically. The GMAT question will often contain phrases like *an assumption that the argument (reasoning) requires, an assumption on which the argument depends (relies).*

  > Mario has booked a flight scheduled to arrive at 5:00 pm—which should allow him to get here around 6:30 pm. So by 7:00 pm we will be going out to dinner with Mario.

  Assumption: The plane Mario is booked on will arrive not significantly later than the scheduled time. This assumption, though necessary, is not sufficient; for example, we also need to assume that Mario managed to catch his flight.

- **Sufficient assumptions:** unstated facts or opinions that, if assumed, allow reasoning to succeed logically. One GMAT question form for sufficient assumptions is: *Which of the following, if assumed, would allow the conclusion to follow logically.*

  > The study of poetry is entirely without value, since poetry has no practical use.

  Assumption: The study of what has no practical use is entirely without value. This assumption, along with the premise given, provides sufficient support for the conclusion: if both the premise and the assumption are true, then the conclusion must also be true. But the following, more complex, assumption would also be sufficient:

  > Anything with no practical use is entirely without value, and the study of anything that is entirely without value is also entirely without value.

  This shows that two distinct assumptions can each be sufficient, neither of them being necessary.

2. Understand the logic of *if-then* statements and associated inferences.

A conditional statement is a compound statement consisting of the part that expresses a condition (the "if" portion) and a part that expresses a supposed consequence: for example, "If it has rained today, then the ground is wet." (The order can be reversed, and the word *then* omitted: "The ground is wet if it has rained today.")

There are certain errors that people often make in drawing inferences from conditional (*if-then*) statements. Consider the following:

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. But the jury will not find him guilty of embezzlement. So the executive is unlikely to receive a prison sentence. (Pattern: if A occurs, then B occurs. A does not occur. Therefore, B does not occur.)

A little consideration will indicate that, in the absence of additional information (e.g., that the executive will not be found guilty of any other crime), the inference is faulty. Similarly, the following argument is in error:

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. He will, I believe, receive a prison sentence. Therefore, the jury will find him guilty of embezzlement. (Pattern: If A occurs, then B occurs. B occurs. Therefore, A occurs.)

On the other hand, the following argument is logically correct (i.e., if both premises are true, then the conclusion must be true):

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. But he will not, I believe, receive a prison sentence. Therefore, the jury will not find him guilty of embezzlement. (Pattern: If A occurs, then B occurs. B does not occur. Therefore, A does not occur.)

The following argument is also logically correct:

> *Attorney:* If the jury finds the executive guilty of embezzlement, he will receive a prison sentence. And the jury will find him guilty of embezzlement, I believe. So he will receive a prison sentence. (Pattern: If A occurs, then B occurs. A occurs. Therefore, B occurs.)

In each of these cases, the second premise in the pattern is crucial: for correct reasoning, that premise should either affirm the *if*-clause, or deny the *then*-clause.

To thoroughly understand the logic of *if-then* statements, it is useful to note the structural equivalence displayed in the following simple pair of examples:

> In daytime, if the sky is entirely clear, then there is sunshine.
>
> In daytime, if there is no sunshine, the sky is not entirely clear.

The statements contain the same information, even if they can, in context, have differing rhetorical impacts. They are necessarily either both true or both false. Note, however, that we can easily imagine a situation where each of these statements is true but the following statement false:

> In daytime, if the sky is not entirely clear, then there is no sunshine.

Therefore, this third statement does not follow logically from either of the others.

Conditional Statements: Correct and Incorrect Inference Patterns

Premise(s)	Conclusion
If A occurs, B occurs. A does occur.	B occurs (correct)
If A occurs, B occurs. B does not occur.	A does not occur (correct)
If A occurs, B occurs. B does occur.	A occurs (incorrect)
If A occurs, B occurs. A does not occur	B does not occur (incorrect)

3. Pay attention to statements that indicate a necessary condition or a sufficient condition.

There are many ways to indicate that something is necessary or sufficient for the occurrence of another event or phenomenon. Here is an example:

Unless you sleep well tonight, you will not compete well in tomorrow's track events.

This indicates that sleeping well tonight is a necessary condition of competing well in tomorrow's track events. This could be expressed by "Sleeping well tonight is necessary in order that you compete well in tomorrow's track events" or by "You will compete well in tomorrow's track events only if you sleep well tonight." *If-then* statements are sometimes used to indicate that something is a necessary condition or a sufficient condition, with the *if*-clause indicating a sufficient condition or the *then*-clause indicating a necessary condition. The statement "If you sleep well tonight, then you will compete well in tomorrow's track event" indicates that sleeping well tonight is a sufficient condition of competing well in tomorrow's track event—in the sense that, given the truth of the *if-then* statement, the situation where you sleep well tonight but do not compete well in tomorrow's track event will not occur.

Fulfillment of an accurately expressed sufficient condition "guarantees" that something else will occur, but the fulfillment of a necessary condition is no guarantee that something else will occur. Suppose sleeping well tonight is a necessary (but not a sufficient) condition of competing well tomorrow in the track events. Then even if you do sleep well tonight (and therefore fulfill the condition said to be necessary), you may still not compete well tomorrow; there may be one or more other necessary conditions that have not been fulfilled (e.g., the condition that you will be in fine form with adequate energy).

4. Be careful with negatives applied to AND statements and OR statements.

When someone denies an *and*-statement or denies an *or*-statement, it is quite easy to make an incorrect inference from a mistaken understanding of what the denial implies. Consider the following dialogue:

John: Humidity is high today and the temperature is high today.

Joanna: I believe that's not correct.

Is Joanna committed to the claim that humidity is not high today? Is she committed to the claim that the temperature is not high today? No. She is committed to the claim that humidity and temperature are *not both* high today—but not to the claim that neither is high today. Instead, her position can be paraphrased as: "At least one of the two, humidity and temperature, is not high today." To affirm the negation of an *and*-statement is, in effect, to affirm an *or*-statement—a principle that we could represent as follows:

> "It is false that both statement 1 AND statement 2 are true" is equivalent to "Statement 1 is false OR statement 2 is false, OR both are false."

A related point—in reverse—can be made about *or*-statements. Consider the following dialogue:

> *Economist 1:* Inflation will rise next year or equities will decline.
>
> *Economist 2:* I believe that's incorrect.

Economist 2 denies the statement made by Economist 1. Economist 2 is committed to the view that there will *neither* be increased inflation *nor* a decline in equities—or equivalently, to the view that inflation will not rise and equities will not decline. If Economist 1 had said "Either inflation will rise next year or equities will decline," the meaning would be that one but not both effects will occur. Since the statement was not an *either-or* statement, just a simple *or*-statement, it asserts that at least one of the effects will occur, i.e., it leaves open the possibility that both effects could occur.

5. Be aware of issues concerning general statements.

Statements about *all* or *some* members of a class are called "general statements." Some tempting inferences are incorrect—and sometimes obviously so, as in: "All primes are odd numbers. Therefore, all odd numbers are primes." The premise tells us that the subject class (primes) is entirely contained in the predicate class (odd numbers)—but there are odd numbers that are not primes, such as the number fifteen. So the premise is correct but the conclusion is false, and the following inference, which has an identical logical structure, is also incorrect: "All geniuses are exceptionally creative thinkers, so all exceptionally creative thinkers are geniuses."

A similar point can be made regarding certain statements of the form *some As are not Bs.* From the premise "Some citizens of India are not residents of Mumbai," can it be correctly inferred that "Some residents of Mumbai are not citizens of India"? No—this inference is incorrect, since it has a true premise and a false conclusion, just as in "Some odd numbers are not primes, so some primes are not odd numbers." Compare with the following: "Some biologists are not researchers, so some researchers are not biologists." Based on common knowledge, both the premise and conclusion are true—but the structure of the argument is the same as in the preceding two examples, and the argument is therefore flawed.

Even though "some" can sometimes be read, depending on the context, as meaning "some but not all," it should often be read as meaning "at least one"—even if a plural noun follows "some." If I say "Some voters are critical thinkers," that claim will be true whether all, or only one or two, voters are critical thinkers.

Some confusion can arise in cases where general statements are negated or denied. Consider the following dialogue:

Jana: Some voters in modern democracies are critical thinkers.

Julio: I wonder about that—in fact I think it's not true at all.

Julio's statement commits him to the claim that no voters in modern democracies are critical thinkers—not just to the weaker claim that some voters in modern democracies are not critical thinkers. And consider the following:

Jana: Every voter in modern democracies is a critical thinker.

Julio: I wonder about that—in fact I think that's not true at all.

Julio's statement commits him to the claim that some voters—one or more—in modern democracies are not critical thinkers—but not to the more sweeping claim that no such voters are (his claim will be true, of course, if no such voters are).

Not every general statement carries an implication that the subject class is not empty, i.e., contains at least one member. Consider the following:

Every *life-form native only to planets other than Earth is carbon-based.*

For all we know, the subject class—designated by the italicized phrase—may in reality be an "empty" class (equivalent to the null set), so we cannot correctly infer from this statement the following:

Some life-forms native only to planets other than Earth are carbon-based.

A s*ome*-statement always carries the implication that the subject class is non-empty, i.e., has at least one member.

Some general statements can easily be misread. Learn to distinguish carefully the following statements:

Some food is the favorite of every adult in Nation X.

Every adult in Nation X has some favorite food.

These statements are not equivalent. The first says something that is unlikely to be true: that there is a particular food that is a *universal* favorite among adults in Nation X. The second says only that each adult in Nation X has some food that is his or her favorite—which may well be true.

6. Note ways in which definitions can be defective.

Definitions serve various purposes, but all have the goal of making things adequately clear. A definition can simply give a conventional dictionary meaning—but many ordinary words have more than one meaning, and a definition may be needed if the meaning is not clear enough from context. Sometimes a new term needs to be introduced or an existing term needs to have a precise definition for a special (perhaps technical) purpose. Definitions are flawed if they are too vague for the intended purpose—when it is not sufficiently clear whether a given entity would fall inside or outside the class of things apparently targeted by the defined term. Also, a definition can be too broad or too narrow—when the definition incorrectly includes or excludes one or more items.

Consider the following: "An athlete is a fast runner or a high jumper." This is both too narrow and too imprecise—and perhaps too broad (depending on context): for example, does it include racehorses? A definition can be circular: "Atmospheric pressure is the air pressure in the earth's atmosphere." This is both circular and vague—and useless for scientific purposes.

7. Understand how hypotheses are confirmed.

A hypothesis is a proposed explanation that serves as a starting point for further investigation. On the GMAT exam, you may be asked to identify or evaluate a hypothesis that most plausibly explains a phenomenon or event. To do so, you should look for evidence that either supports or goes against the hypothesis.

Imagine the following research study designed to test the efficacy of a new teaching method for ten-year-old girls and boys. Sixty ten-year-old children are divided into two groups that are matched relative to gender distribution, measured performance in mathematics achievement, and all other factors presumed relevant. Method M, a new instructional method for teaching a set of designated mathematical skills, is applied to one of the groups, and an established method, Method E, for the same skills is applied to the other. Performance on the skills after ten weeks of instruction is measured for both groups, and a comparison made between the two data sets is appropriately processed. The goal is to discover whether the data confirms the following hypothesis (in the form of a prediction):

> If Method M is applied to groups of children like these, there will be a significantly larger gain in mathematical performance than if Method E is applied.

Suppose the data shows that the group subjected to Method M has a significantly larger gain in performance than the other group (the "control group"). This information provides some support for the hypothesis, provided that adequate scientific controls and statistical processing have been correctly executed (ensuring these two conditions are met is not always easy). The confirmatory evidence supports the superior efficacy of Method M, but it is not conclusive. What the evidence shows is that the experimental results for these children are *consistent with* the hypothesis that Method M generally has superior efficacy for such children. The *if*-clause is true of one of these groups of children—presumed typical of a larger population of ten-year-old children—and so is the *then*-clause. It is one piece of evidence that the hypothetical statement given above has not been falsified—and therefore is quite possibly correct. If the *then*-clause turned out false, this would be evidence against the hypothesis. Accumulation of confirmatory evidence through replicated experiments will greatly strengthen the confirmation of the hypothesis.

The finding of Method M's efficacy can be validly generalized only to groups of children that resemble in relevant respects the children featured in the study. In other words, the groups of children must be typical, i.e., *representative*, of the large population of ten-year-old children to whom Method M may be applied if it is scientifically validated. A similar principle of representativeness must govern sample selection in any study that aims to establish scientific results generalizable to a larger group or population.

Go to www.mba.com/tutorial to view instructions for the section and get a feel for what the test center screens will look at on the actual GMAT exam.

8.5 Practice Questions

Each of the critical reasoning questions is based on a short argument, a set of statements, or a plan of action. For each question, select the best answer of the choices given.

*CR700041.01

610. Arts advocate: Few universities require that students who are specializing in science and technology take many art courses. However, real progress in science and technology requires an element of creativity, which the arts foster. Thus, to help science and technology students succeed in their careers, universities should increase the number of art courses required for them.

Which of the following would, if true, most strengthen the argument above?

(A) Universities required more art courses for science and technology students in the past.

(B) Participation in art courses increases students' creative thinking in their science and technology courses.

(C) More students who are interested in art would specialize in science and technology if the number of art courses required for those programs were increased.

(D) Some of the most prominent scientists began their careers as artists.

(E) Discussion of science and technology topics in art courses increases creative thinking among students in those courses.

CR48541.01

611. A successful coffee stand that serves the workers in a large office building plans to increase its profits by adding oatmeal—a hot cereal popular among the workers—to its menu. The manager says that oatmeal is "the ultimate convenience food" because it can be served by the cup, as coffee is; further, offering oatmeal will enable the stand to get into the breakfast business without making a large investment, because it does not require elaborate cooking equipment.

Which of the following would, if true, most strengthen the likelihood that the manager's plan will achieve its goal?

(A) Some of the office building's businesses have recently begun providing free coffee to their employees.

(B) The ingredients needed to make oatmeal are inexpensive and do not spoil easily the way many fresh breakfast foods typically sold at coffee stands do.

(C) In order to offer more flexible schedules to their workers, several businesses in the office building will soon be expanding their hours.

(D) Supermarket sales of oatmeal and other cereals slowed this year following large gains last year.

(E) Oatmeal manufacturers have recently reduced their oatmeal offerings, which had included oatmeal in microwaveable cups and convenient cereal bars made with rolled oats.

CR53631.01

612. Ramirez: The film industry claims that pirated DVDs, which are usually cheaper than legitimate DVDs and become available well before a film's official DVD release date, adversely affect its bottom line. But the industry should note what the spread of piracy indicates: consumers want lower prices and faster DVD releases. Lowering prices of DVDs and releasing them sooner would mitigate piracy's negative effect on film industry profits.

The argument above relies on which of the following assumptions?

(A) Releasing legitimate DVDs earlier would not cause any reduction in the revenue the film industry receives from the films' theatrical release.

(B) Some people who would otherwise purchase pirated DVDs would be willing to purchase legitimate DVDs if they were less expensive and released earlier than they are now.

(C) The film industry will in the future be able to produce DVDs more cheaply than is currently the case.

(D) Some current sellers of pirated DVDs would likely discontinue their businesses if legitimate DVDs were released faster and priced lower.

(E) Current purchasers of pirated DVDs are aware that those DVDs are not authorized by the film industry.

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

CR79041.01

613. Harunia Province has a relatively dry climate and is attracting a fast-growing population that has put increasing demands on its water supply. The two companies that supply water to the region have struggled to keep up with demand and still remain profitable. Yet now they are asking Harunian authorities to write residential water-use regulations that could reduce their revenues and restrict their future flexibility in supplying water profitably.

Which of the following would, if true, most logically help explain why the water-supply companies are asking the authorities to regulate residential water use?

(A) The companies are planning large water-transportation and irrigation systems that require the approval of neighboring provinces.

(B) The companies believe regulation is inevitable and that having it in place now will allow better planning and thus future profitability.

(C) Few, if any, Harunian government officials have investments in the companies or serve on their boards of directors.

(D) The companies believe that the population is not likely to continue to grow.

(E) Long-term climate projections suggest that greater rainfall will eventually increase the amount of water available.

CR31551.01

614. Loss of the Gocha mangrove forests has caused coastal erosion, reducing fish populations and requiring the Gocha Fishing Cooperative (GFC) to partially fund dredging and new shore facilities. However, as part of its subsidiary businesses, the GFC has now invested in a program to replant significant parts of the coast with mangrove trees. Given income from a controlled harvest of wood with continuing replanting, the mangrove regeneration effort makes it more likely that the cooperative will increase its net income.

Which of the following, if true, would most strengthen the argument that mangrove replanting will increase the Gocha cooperative's net income?

(A) The cost of dredging and shore facilities was shared with the local government.

(B) The GFC will be able to hire local workers to assist with the mangrove replanting.

(C) The GFC derives 10 percent of its revenue from salt-production facilities in an area previously cleared of mangroves.

(D) Mangrove forests tend to increase the commercial fish populations in coastal fishing grounds.

(E) A controlled harvesting of mangrove wood by the GFC would have little effect on coastal erosion.

CR07651.01

615. Executives at the Fizzles Beverage Company plan to boost profits in Country X on their range of fruit-flavored drinks by introducing new flavors based on tropical fruits that are little known there. The executives reason that since the fruit drinks of other companies have none of these flavors, Fizzles will not have to compete for customers and thus will be able to sell the drinks at a higher price.

Which of the following, if true, presents the most serious potential weakness of the plan?

(A) The new fruit drinks would be priced significantly higher than other Fizzles fruit drinks with more conventional flavors.

(B) In a telephone survey, at least one of the consumers contacted said that they preferred many of the new flavors to all of the more familiar flavors.

(C) To build widespread demand for the new flavors, Fizzles would have to launch an advertising campaign to familiarize consumers with them.

(D) Consumers choosing among fruit-flavored drinks of different brands generally buy on the basis of name recognition and price rather than the specific fruit flavor.

(E) Few consumers who are loyal to a specific brand of fruit-flavored drinks would willingly switch to another brand that costs more.

CR33061.01

616. Economist: In 2015, the average per-person amount paid for goods and services purchased by consumers in Country X was the equivalent of $17,570 in United States dollars, just 30 percent of the corresponding figure of $58,566 for Country Y. Yet in 2015, there was already a substantial middle class in Country X that had discretionary income for middle-class consumer goods such as new vehicles, computers, or major household appliances, while a significant portion of the middle class in Country Y did not have sufficient income to purchase such items.

Which of the following, if true, most helps explain the discrepancy in the relationships described by the economist?

(A) There are many consumer goods, such as household appliances, that are produced in Country X to be sold in the Country Y market.

(B) The volume of trade between Country X and Country Y is increasing rapidly in both directions.

(C) The economy of Country Y is recovering from a downturn that affected both Country Y and Country X.

(D) Country X residents pay much less than their Country Y counterparts for housing, transportation, and child care.

(E) In Country Y as well as in Country X, there are few assembly-line jobs in factories that pay a middle-class wage.

CR09616

617. Neuroscientist: Memory evolved to help animals react appropriately to situations they encounter by drawing on the past experience of similar situations. But this does not require that animals perfectly recall every detail of all their experiences. Instead, to function well, memory should generalize from past experiences that are similar to the current one.

The neuroscientist's statements, if true, most strongly support which of the following conclusions?

(A) At least some animals perfectly recall every detail of at least some past experiences.

(B) Perfectly recalling every detail of all their past experiences could help at least some animals react more appropriately than they otherwise would to new situations they encounter.

(C) Generalizing from past experiences requires clear memories of most if not all the details of those experiences.

(D) Recalling every detail of all past experiences would be incompatible with any ability to generalize from those experiences.

(E) Animals can often react more appropriately than they otherwise would to situations they encounter if they draw on generalizations from past experiences of similar situations.

CR52061.01

618. In Country X's last election, the Reform Party beat its main opponent, the Conservative Party, although pollsters, employing in-person interviews shortly before the vote, had projected a Conservative Party victory. Afterwards, the pollsters determined that, unlike Conservative Party supporters, Reform Party supporters were less likely to express their party preference during in-person interviews than they were during telephone interviews. Therefore, using only telephone interviews instead would likely result in more accurate projections for the next election.

Which of the following statements, if true, would most support the argument in the passage?

(A) The number of voters in Country X's next election will be significantly larger than the number of voters in the last election.

(B) The Conservative Party will win the next election.

(C) For each person interviewed in telephone polls before the next election, pollsters will be able to reasonably determine the likelihood of that person voting.

(D) People who expressed no party preference during the in-person interviews shortly before Country X's last election did not outnumber the people who expressed a preference for the Conservative Party.

(E) In the next election, pollsters will be able to conduct more in-person interviews than telephone interviews.

CR40751.01

619. A company that manufactures plastic products from recyclable plastic is, surprisingly, unconcerned that economic conditions may worsen, despite analysts' belief that consumers would then consider ecofriendly plastic products an expensive luxury. But the company reasons that it will be able to lower its prices because, in a weakened economy, other ecofriendly plastic

manufacturers are likely to fail. Demand among manufacturers for recyclable plastics as raw materials would then plummet, creating an oversupply of such materials, making them less expensive for the manufacturer to purchase and thus lowering the company's costs.

Which of the following, if true, most weakens the company's reasoning?

(A) Smaller ecofriendly plastic manufacturers are more likely to fail in a weakened economy than larger ecofriendly manufacturers are.

(B) Some retailers whose sales include various companies' ecofriendly plastic products have struggled in recent years despite the overall good economy.

(C) Consumers would likely soon learn of the oversupply of recyclable plastics and cease recycling them, significantly raising manufacturers' raw-material costs.

(D) Retailers, including retailers that cater to consumers seeking certain types of ecofriendly products, may lose some business if economic conditions worsen.

(E) The plastics used by the company in its products were, after a recent investigation by a regulatory body, declared to be safe for consumers.

CR73241.01

620. Researchers asked volunteers to imagine they were running a five-kilometer race against 50 people and then against 500 people, races in each of which the top 10 percent would receive a $1,000 prize. Asked about the effort they would apply in the respective cases, the volunteers indicated, on average, that they would run slower in the race against the greater number of people. A likely explanation of this result is that those of the volunteers who were most *comparatively inclined*—those who most tended to compare themselves with others in the social environment—determined (perhaps unconsciously) that extreme effort would not be worthwhile in the 500-competitor race.

Which of the following would, if known to be true, most help justify the explanation offered above?

(A) The volunteers who were most comparatively inclined were also those that had the greatest desire to win a $1,000 prize.

(B) The volunteers who were the least comparatively inclined had no greater desire to win the $1,000 than those who were the most comparatively inclined.

(C) The volunteers who were most comparatively inclined were likely to indicate that they would run the two races at the same speed.

(D) The most comparatively inclined volunteers believed that they were significantly less likely to finish in the top 10 percent in the race against 500 than in the race against 50.

(E) Volunteers were chosen for participation in the study on the basis of answers to various questions designed to measure the degree to which the volunteers were comparatively inclined.

CR41141.01

621. According to a study, after a week of high-altitude living, twenty men had slimmed down. The men, middle-aged residents of low-altitude areas, had been taken to a research station at 2,650 meters (8,694 feet) above sea level. They had unrestricted access to food and were forbidden vigorous exercise, yet they lost an average of 1.5 kilograms (3.3 pounds) during their one-week stay. Clearly, the lower availability of oxygen at higher altitudes, or hypobaric hypoxia, can be said to have caused the weight loss, since _____.

Which of the following would, if true, most logically complete the argument?

(A) a decrease in oxygen intake has been shown to depress appetite

(B) the men all participated in the same kinds of exercise during their stay

(C) the foods available to the men had fewer calories than the foods they usually ate

(D) exercise at higher altitudes is more difficult than exercise at lower altitudes is

(E) several weeks after returning home, the men still weighed less than they had before the study

CR11741.01

622. Editorial: Our city's public transportation agency is facing a budget shortfall. The fastest growing part of the budget has been employee retirement benefits, which are exceptionally generous. Unless the budget shortfall is resolved, transportation service will be cut, and many transportation employees will lose their jobs. Thus, it would be in the employees' best interest for their union to accept cuts in retirement benefits.

Which of the following is an assumption the editorial's argument requires?

(A) The transportation employees' union should not accept cuts in retirement benefits if doing so would not be in the employees' best interest.

(B) The only feasible way for the agency to resolve the budget shortfall would involve cutting transportation service and eliminating jobs.

(C) Other things being equal, it is in the transportation employees' interest to have exceptionally generous retirement benefits.

(D) Cutting the retirement benefits would help resolve the agency's budget shortfall.

(E) The transportation employees' union will not accept cuts in retirement benefits if doing so will not allow more transportation employees to keep their jobs.

CR94231.01

623. Researchers hope to find clues about the A'mk peoples who lived in the Kaumpta region about one thousand years ago but who left few obvious traces. The researchers plan to hire the few remaining shamans of the modern-day indigenous people in Kaumpta, who are believed to be descended from the A'mk, to lead them to ancestral sites that may be the remains of A'mk buildings or ceremonial spaces. The shamans were taught the location of such sites as part of their traditional training as youths, and their knowledge of traditional Kaumpta customs may help determine the nature of any sites the researchers find.

Which of the following is an assumption on which the success of the plan depends?

(A) The researchers have reliable evidence that the A'mk of one thousand years ago built important ceremonial spaces.

(B) The shamans have a reasonably accurate memory of A'mk sites they learned about as youths.

(C) Kaumpta shamans are generally held in high esteem for their traditional knowledge.

(D) Modern technologies available to the researchers are likely to be able to find some A'mk sites easily.

(E) Most or all A'mk sites are likely to be found within the Kaumpta region.

CR09994

624. Astronomer: Most stars are born in groups of thousands, each star in a group forming from the same parent cloud of gas. Each cloud has a unique, homogeneous chemical composition. Therefore, whenever two stars have the same chemical composition as each other, they must have originated from the same cloud of gas.

Which of the following, if true, would most strengthen the astronomer's argument?

(A) In some groups of stars, not every star originated from the same parent cloud of gas.

(B) Clouds of gas of similar or identical chemical composition may be remote from each other.

(C) Whenever a star forms, it inherits the chemical composition of its parent cloud of gas.

(D) Many stars in vastly different parts of the universe are quite similar in their chemical compositions.

(E) Astronomers can at least sometimes precisely determine whether a star has the same chemical composition as its parent cloud of gas.

CR08017

625. With employer-paid training, workers have the potential to become more productive not only in their present employment but also in any number of jobs with different employers. To increase the productivity of their workforce, many firms are planning to maintain or even increase their investments in worker training. But some training experts object that if a trained worker is hired away by another firm, the employer that paid for the training has merely subsidized a competitor. They note that such hiring has been on the rise in recent years.

Which of the following would, if true, contribute most to defeating the training experts' objection to the firms' strategy?

(A) Firms that promise opportunities for advancement to their employees get, on average, somewhat larger numbers of job applications from untrained workers than do firms that make no such promise.

(B) In many industries, employees who take continuing-education courses are more competitive in the job market.

(C) More and more educational and training institutions are offering reduced tuition fees to firms that subsidize worker training.

(D) Research shows that workers whose training is wholly or partially subsidized by their employer tend to get at least as much training as do workers who pay for all their own training.

(E) For most firms that invest in training their employees, the value added by that investment in employees who stay exceeds the value lost through other employees' leaving to work for other companies.

CR93241.01

626. In emerging economies in Africa and other regions, large foreign banks that were set up during the colonial era have long played a major economic role. These institutions have tended to confine their business to the wealthier of banks' potential customers. But development of these countries' economies requires financing of the small businesses that dominate their manufacturing, farming, and services sectors. So economic growth will be likely to occur if local banks take on this portion of the financial services markets, since _____.

Which of the following completions would produce the strongest argument?

(A) local banks tend not to strive as much as large foreign banks to diversify their investments

(B) small farming and manufacturing businesses contribute to economic growth if they obtain adequate investment capital

(C) large foreign banks in emerging economies could, with local employees and appropriate local consultation, profitably expand their business to less wealthy clients

(D) some small businesses are among the wealthier customers of foreign banks in emerging economies

(E) local banks in emerging economies tend to be less risk-averse than foreign banks

CR49551.01

627. Exporters in Country X are facing lower revenues due to a shortage of the large metal shipping containers in which they send their goods by sea to other countries. Fewer containers arrive in Country X due to reductions in imports. This has meant lost orders, costly delays, and a scramble for alternatives, such as air freight, all of which are costlier. Moreover, the revenues of exporters in Country X will probably continue to decline in the near future. This is because other countries are likely to find it increasingly unprofitable to export their goods to Country X, and because _____.

Which of the following would most logically complete the passage?

(A) production of shipping containers in Country X is growing rapidly as a response to the shortage

(B) shipping companies are willing to move containers from country to country only when the containers are full

(C) the cost of shipping alternatives such as air freight is likely to stabilize in the near future

(D) consumers in Country X are purchasing more products than ever before

(E) the worldwide demand for goods made in Country X has only recently begun to rise after a long decline

CR01107

628. Candle Corporation's television stations are likely to have more income from advertisers than previously. This is because advertisers prefer to reach people in the 18- to 49-year-old age group and the number of people in that group watching Candle television is increasing. Furthermore, among Candle viewers, the percentage of viewers 18 to 49 years old is increasing.

Which of the following, if true, would most strengthen the argument that Candle Corporation will receive more income from advertisers?

(A) Advertisers carefully monitor the demographic characteristics of television audiences and purchase advertising time to reach the audiences they prefer to reach.

(B) Among people over 49 years old, fewer viewers of Candle stations buy products advertised on television than do viewers of other stations.

(C) There will be increasingly more advertisements on television that are directed at viewers who are over 49 years old.

(D) Candle stations plan to show reruns of television shows during hours when other stations run shows for the first time.

(E) People 18 to 49 years old generally have less disposable income to spend than do people over 49 years old.

CR12584

629. A provincial government plans to raise the gasoline tax to give people an incentive to drive less, reducing traffic congestion in the long term. However, skeptics point out that most people in the province live in areas where cars are the only viable transportation to jobs and stores and therefore cannot greatly change their driving habits in response to higher gasoline prices.

In light of the skeptics' objection, which of the following, if true, would most logically support the prediction that the government's plan will achieve its goal of reducing traffic congestion?

(A) The revenue from the tax will be used to make public transportation a viable means of transportation to jobs and stores for far more people.

(B) The tax will encourage many residents to switch to more fuel-efficient cars, reducing air pollution and other problems.

(C) Because gasoline has been underpriced for decades, the province has many neighborhoods where cars are the only viable means of transportation.

(D) Most residents who cannot greatly change their driving habits could compensate for high gasoline prices by reducing other expenses.

(E) Traffic congestion is an especially serious problem for people for whom cars are the only viable means of transportation.

CR03940

630. Editorial: The roof of Northtown's municipal equipment-storage building collapsed under the weight of last week's heavy snowfall. The building was constructed recently and met local building-safety codes in every particular, except that the nails used for attaching roof supports to the building's columns were of a smaller size than the codes specify for this purpose. Clearly, this collapse exemplifies how even a single, apparently insignificant departure from safety standards can have severe consequences.

Which of the following, if true, most seriously weakens the editorial's argument?

(A) The only other buildings to suffer roof collapses from the weight of the snowfall were older buildings constructed according to less exacting standards than those in the codes.

(B) The amount of snow that accumulated on the roof of the equipment-storage building was greater than the predicted maximum that was used in drawing up the safety codes.

(C) Because the equipment-storage building was not intended for human occupation, some safety-code provisions that would have applied to an office building did not apply to it.

(D) The municipality of Northtown itself has the responsibility for ensuring that buildings constructed within its boundaries meet the provisions of the building-safety codes.

(E) Because the equipment-storage building was used for storing snow-removal equipment, the building was almost completely empty when the roof collapsed.

CR12078

631. Political theorist: Even with the best spies, area experts, and satellite surveillance, foreign policy assessments can still lack important information. In such circumstances intuitive judgment is vital. A national leader with such judgment can make good decisions about foreign policy even when current information is incomplete, since _____.

Which of the following, if true, most logically completes the argument?

(A) the central reason for failure in foreign policy decision making is the absence of critical information

(B) those leaders whose foreign policy decisions have been highly ranked have also been found to have good intuitive judgment

(C) both intuitive judgment and good information are required for sound decision making

(D) good foreign policy decisions often lead to improved methods of gathering information

(E) intuitive judgment can produce good decisions based on past experience, even when there are important gaps in current information

CR51141.01

632. Supply shortages and signs of growing demand are driving cocoa prices upward. Unusually severe weather in cocoa-producing regions—too much rain in Brazil and too little in West Africa—has limited production. Further, Europe and North America recently reported stronger demand for cocoa. In the first quarter, grinding of cocoa beans—the first stage in processing cocoa for chocolate—rose 8.1 percent in Europe and 16 percent in North America. Analysts have concluded that cocoa's price will continue to rise at least into the near future.

Which of the following would, if true, most strengthen the reasoning above?

(A) Ground cocoa beans can be stored for long periods before they spoil.

(B) Several European and North American manufacturers that use cocoa have recently improved their processing capacity.

(C) It takes new cocoa trees five or six years before they start bearing fruit.

(D) Governments in Europe and North America are likely to change current restrictions on cocoa imports.

(E) Historically, cocoa production has varied widely from year to year.

CR01295

633. During the earliest period of industrialization in Britain, steam engines were more expensive to build and operate than either windmills or water mills, the other practicable sources of power for factories. Yet despite their significant cost disadvantage, steam-powered factories were built in large numbers well before technical improvements brought their cost down. Furthermore, they were built even in regions where geographical conditions permitted the construction of wind- and water-powered factories close to major markets.

Which of the following, if true, most helps to explain the proliferation of steam-powered factories during the earliest period of industrialization in Britain?

(A) In many areas of Britain, there were fewer steam-powered factories than wind- or water-powered factories in the earliest period of industrialization.

(B) Unlike wind- or water-powered factories, steam-powered factories were fueled with coal, which sometimes had to be transported significant distances from the mine to the site of the factory.

(C) It was both difficult and expensive to convert a factory from wind power or water power to steam power.

(D) In the early period of industrialization, many goods sold in towns and cities could not be mass-produced in factories.

(E) In Britain, the number of sites where a wind- or water-powered factory could be built was insufficient to provide for all of the demand for factory-produced goods at the time.

CR03938

634. Snowmaking machines work by spraying a mist that freezes immediately on contact with cold air. Because the sudden freezing kills bacteria, QuickFreeze is planning to market a wastewater purification system that works on the same principle. The process works only when temperatures are cold, however, so municipalities using it will still need to maintain a conventional system.

Which of the following, if true, provides the strongest grounds for a prediction that municipalities will buy QuickFreeze's purification system despite the need to maintain a conventional purification system as well?

(A) Bacteria are not the only impurities that must be removed from wastewater.

(B) Many municipalities have old wastewater purification systems that need to be replaced.

(C) Conventional wastewater purification systems have not been fully successful in killing bacteria at cold temperatures.

(D) During times of warm weather, when it is not in use, QuickFreeze's purification system requires relatively little maintenance.

(E) Places where the winters are cold rarely have a problem of water shortage.

CR05080

635. **Plant scientists have used genetic engineering on seeds to produce crop plants that are highly resistant to insect damage**. Unfortunately, the seeds themselves are quite expensive, and the plants require more fertilizer and water to grow well than normal ones. Accordingly, **for most farmers the savings on pesticides would not compensate for the higher seed costs and the cost of additional fertilizer**. However, since consumer demand for grains, fruits, and vegetables grown without the use of pesticides continues to rise, the use of genetically engineered seeds of this kind is likely to become widespread.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first supplies a context for the argument; the second is the argument's main conclusion.

(B) The first introduces a development that the argument predicts will have a certain outcome; the second is a state of affairs that, according to the argument, contributes to bringing about that outcome.

(C) The first presents a development that the argument predicts will have a certain outcome; the second acknowledges a consideration that tends to weigh against that prediction.

(D) The first provides evidence to support a prediction that the argument seeks to defend; the second is that prediction.

(E) The first and the second each provide evidence to support the argument's main conclusion.

CR04159

636. Which of the following most logically completes the passage?

Leptin, a protein occurring naturally in the blood, appears to regulate how much fat the body carries by speeding up the metabolism and decreasing the appetite when the body has too much fat. Mice that do not naturally produce leptin have more fat than other mice, but lose fat rapidly when they are given leptin injections. Unfortunately, however, leptin cannot be used as a dietary supplement to control fat, since _____.

(A) the digestive system breaks down proteins before they can enter the bloodstream

(B) there are pharmaceuticals already available that can contribute to weight loss by speeding up the metabolism

(C) people with unusually low levels of leptin in their blood tend to have a high percentage of body fat

(D) the mice that do not naturally produce leptin were from a specially bred strain of mice

(E) mice whose bodies did produce leptin also lost some of their body fat when given leptin injections

CR05452

637. Suncorp, a new corporation with limited funds, has been clearing large sections of the tropical Amazon forest for cattle ranching. This practice continues even though greater profits can be made from rubber tapping, which does not destroy the forest, than from cattle ranching, which does destroy the forest.

Which of the following, if true, most helps to explain why Suncorp has been pursuing the less profitable of the two economic activities mentioned above?

(A) The soil of the Amazon forest is very rich in nutrients that are important in the development of grazing lands.

(B) Cattle-ranching operations that are located in tropical climates are more profitable than cattle-ranching operations that are located in cold-weather climates.

(C) In certain districts, profits made from cattle ranching are more heavily taxed than profits made from any other industry.

(D) Some of the cattle that are raised on land cleared in the Amazon are killed by wildcats.

(E) The amount of money required to begin a rubber-tapping operation is twice as high as the amount needed to begin a cattle ranch.

CR09963

638. Archaeologists use technology to analyze ancient sites. It is likely that this technology will advance considerably in the near future, allowing archaeologists to gather more information than is currently possible. If they study certain sites now, they risk contaminating or compromising them for future studies. Therefore, in order to maximize the potential for gathering knowledge in the long run, a team of archaeologists plans to delay the examination of a newly excavated site.

Which of the following would be most useful to investigate for the purpose of evaluating the plan's prospects for achieving its goal?

(A) Whether any of the contents of the site will significantly deteriorate before the anticipated technology is available

(B) Whether there will continue to be improvements on the relevant technology

(C) Whether the team can study a site other than the newly excavated site for the time being

(D) Whether the site was inhabited by a very ancient culture

(E) Whether the anticipated technology will damage objects under study

CR01102

639. More and more law firms specializing in corporate taxes are paid on a contingency-fee basis. Under this arrangement, if a case is won, the firm usually receives more than it would have received if it had been paid on the alternate hourly rate basis. If the case is lost, the firm receives nothing. Most firms are likely to make more under the contingency-fee arrangement.

Which of the following, if true, would most strengthen the prediction above?

(A) Firms that work exclusively under the hourly rate arrangement spend, on average, fewer hours on cases that are won than on cases that are lost.

(B) Some litigation can last for years before any decision is reached, and, even then, the decision may be appealed.

(C) Firms under the contingency-fee arrangement still pay their employees on an hourly basis.

(D) Since the majority of firms specialize in certain kinds of cases, they are able to assess accurately their chances of winning each potential case.

(E) Firms working under the contingency-fee arrangement take in fewer cases per year than do firms working under the hourly rate arrangement.

CR00766

640. Beginning in 1966 all new cars sold in Morodia were required to have safety belts and power steering. Previously, most cars in Morodia were without these features. Safety belts help to prevent injuries in collisions, and power steering helps to avoid collisions in the first place. But even though in 1966 one-seventh of the cars in Morodia were replaced with new cars, the number of car collisions and collision-related injuries did not decline.

Which of the following, if true about Morodia, most helps to explain why the number of collisions and collision-related injuries in Morodia failed to decline in 1966?

(A) Because of a driver-education campaign, most drivers and passengers in cars that did have safety belts used them in 1966.

(B) Most of the new cars bought in 1966 were bought in the months of January and February.

(C) In 1965, substantially more than one-seventh of the cars in Morodia were replaced with new cars.

(D) An excessive reliance on the new safety features led many owners of new cars to drive less cautiously in 1966 than before.

(E) The seat belts and power steering put into new cars sold in 1966 had to undergo strict quality-control inspections by manufacturers, whether the cars were manufactured in Morodia or not.

CR04882

641. Enterprise Bank currently requires customers with checking accounts to maintain a minimum balance or pay a monthly fee. Enterprise plans to offer accounts with no monthly fee and no minimum-balance requirement; to cover their projected administrative costs of $3 per account per month they plan to charge $30 for overdrawing an account. Since each month on average slightly more than 10 percent of Enterprise's customers overdraw their accounts, bank officials predict the new accounts will generate a profit.

Which of the following, if true, most strongly supports the bank officials' prediction?

(A) Some of Enterprise Bank's current checking account customers are expected to switch to the new accounts once they are offered.

(B) One third of Enterprise Bank's revenues are currently derived from monthly fees tied to checking accounts.

(C) Many checking account customers who occasionally pay a fee for not maintaining a minimum balance in their account generally maintain a balance well above the minimum.

(D) Customers whose checking accounts do not have a minimum-balance requirement are more likely than others to overdraw their checking accounts.

(E) Customers whose checking accounts do not have a minimum-balance requirement are more likely than others to write checks for small amounts.

CR05667

642. In virtually any industry, technological improvements increase labor productivity, which is the output of goods and services per person-hour worked. In Parland's industries, labor productivity is significantly higher than it is in Vergia's industries. Clearly, therefore, Parland's industries must, on the whole, be further advanced technologically than Vergia's are.

The argument is most vulnerable to which of the following criticisms?

(A) It offers a conclusion that is no more than a paraphrase of one of the pieces of information provided in its support.

(B) It presents as evidence in support of a claim information that is inconsistent with other evidence presented in support of the same claim.

(C) It takes one possible cause of a condition to be the actual cause of that condition without considering any other possible causes.

(D) It takes a condition to be the effect of something that happened only after the condition already existed.

(E) It makes a distinction that presupposes the truth of the conclusion that is to be established.

CR08471

643. Chaco Canyon, a settlement of the ancient Anasazi culture in North America, had massive buildings. **It must have been a major Anasazi center**. Analysis of wood samples shows that some of the timber for the buildings came from the Chuska and San Mateo mountains, 50 miles from Chaco Canyon. **Only a major cultural center would have the organizational power to import timber from 50 miles away**.

In the argument given, the two portions in boldface play which of the following roles?

(A) The first is a premise used to support the argument's main conclusion; the second is the argument's main conclusion.

(B) The first is the argument's main conclusion; the second is a premise used to support that conclusion.

(C) The first is one of two premises used to support the argument's main conclusion; the second is the other of those two premises.

(D) The first is a premise used to support the argument's main conclusion; the second is a premise used to support another conclusion drawn in the argument.

(E) The first is inferred from another statement in the argument; the second is inferred from the first.

CR04364

644. The Maxilux car company's design for its new luxury model, the Max 100, included a special design for the tires that was intended to complement the model's image. The winning bid for supplying these tires was submitted by Rubco. Analysts concluded that the bid would only just cover Rubco's costs on the tires, but Rubco executives claim that winning the bid will actually make a profit for the company.

Which of the following, if true, most strongly justifies the claim made by Rubco's executives?

(A) In any Maxilux model, the spare tire is exactly the same make and model as the tires that are mounted on the wheels.

(B) Rubco holds exclusive contracts to supply Maxilux with the tires for a number of other models made by Maxilux.

(C) The production facilities for the Max 100 and those for the tires to be supplied by Rubco are located very near each other.

(D) When people who have purchased a carefully designed luxury automobile need to replace a worn part of it, they almost invariably replace it with a part of exactly the same make and type.

(E) When Maxilux awarded the tire contract to Rubco, the only criterion on which Rubco's bid was clearly ahead of its competitors' bids was price.

CR05186

645. Which of the following most logically completes the passage?

Most bicycle helmets provide good protection for the top and back of the head, but little or no protection for the temple regions on the sides of the head. A study of head injuries resulting from bicycle accidents showed that a large proportion were caused by blows to the temple area. Therefore, if bicycle helmets protected this area, the risk of serious head injury in bicycle accidents would be greatly reduced, especially since _____.

(A) among the bicyclists included in the study's sample of head injuries, only a very small proportion had been wearing a helmet at the time of their accident

(B) even those bicyclists who regularly wear helmets have a poor understanding of the degree and kind of protection that helmets afford

(C) a helmet that included protection for the temples would have to be somewhat larger and heavier than current helmets

(D) the bone in the temple area is relatively thin and impacts in that area are thus very likely to cause brain injury

(E) bicyclists generally land on their arm or shoulder when they fall to the side, which reduces the likelihood of severe impacts on the side of the head

CR01867

646. Which of the following most logically completes the argument?

In a typical year, Innovair's airplanes are involved in 35 collisions while parked or being towed in airports, with a resulting yearly cost of $1,000,000 for repairs.

To reduce the frequency of ground collisions, Innovair will begin giving its ground crews additional training, at an annual cost of $500,000. Although this will cut the number of ground collisions by about half at best, the drop in repair costs can be expected to be much greater, since _____.

(A) most ground collisions happen when ground crews are rushing to minimize the time a delayed airplane spends on the ground

(B) a ground collision typically occurs when there are no passengers on the airplane

(C) the additional training will focus on helping ground crews avoid those kinds of ground collisions that cause the most costly damage

(D) the $500,000 cost figure for the additional training of ground crews includes the wages that those crews will earn during the time spent in actual training

(E) most ground collisions have been caused by the least experienced ground-crew members

CR12558

647. Many agriculturally intensive areas of the world are beginning to encounter water scarcity problems. As a result, many farmers in these areas are likely to reduce their output as the water supply they need in order to maintain production shrinks. However, one group of farmers in such a region plans to increase their production by implementing techniques for water conservation.

Which of the following, if true, would most strongly support the prediction that the group's plan will succeed?

(A) Farmers that can gain a larger share of the food market in their regions will be better positioned to control more water resources.

(B) Most agricultural practices in areas with water shortages are water-intensive.

(C) Other regions of the world not facing water shortages are likely to make up for the reduction in agricultural output.

(D) Demand for agricultural products in the group's region is not expected to decline.

(E) More than half the water used for agriculture in the farmers' region is lost to evaporation or leakage from irrigation channels.

CR03367

648. Hollywood restaurant is replacing some of its standard tables with tall tables and stools. The restaurant already fills every available seat during its operating hours, and the change in seating arrangements will not result in an increase in the restaurant's seating capacity. Nonetheless, the restaurant's management expects revenue to increase as a result of the seating change without any concurrent change in menu, prices, or operating hours.

Which of the following, if true, provides the best reason for the expectation?

(A) One of the taller tables takes up less floor space than one of the standard tables.

(B) Diners seated on stools typically do not linger over dinner as long as diners seated at standard tables.

(C) Since the restaurant will replace only some of its standard tables, it can continue to accommodate customers who do not care for the taller tables.

(D) Few diners are likely to avoid the restaurant because of the new seating arrangement.

(E) The standard tables being replaced by tall tables would otherwise have to be replaced with new standard tables at a greater expense.

CR07660

649. A major network news organization experienced a drop in viewership in the week following the airing of a controversial report on the economy. The network also received a very large number of complaints regarding the report. The network, however, maintains that negative reactions to the report had nothing to do with its loss of viewers.

Which of the following, if true, most strongly supports the network's position?

(A) The other major network news organizations reported similar reductions in viewership during the same week.

(B) The viewers who registered complaints with the network were regular viewers of the news organization's programs.

(C) Major network news organizations publicly attribute drops in viewership to their own reports only when they receive complaints about those reports.

(D) This was not the first time that this network news organization has aired a controversial report on the economy that has inspired viewers to complain to the network.

(E) Most network news viewers rely on network news broadcasts as their primary source of information regarding the economy.

CR04366

650. Only a reduction of 10 percent in the number of scheduled flights using Greentown's airport will allow the delays that are so common there to be avoided. Hevelia airstrip, 40 miles away, would, if upgraded and expanded, be an attractive alternative for fully 20 percent of the passengers using Greentown airport. Nevertheless, experts reject the claim that turning Hevelia into a full-service airport would end the chronic delays at Greentown.

Which of the following, if true, most helps to justify the experts' position?

(A) Turning Hevelia into a full-service airport would require not only substantial construction at the airport itself, but also the construction of new access highways.

(B) A second largely undeveloped airstrip close to Greentown airport would be a more attractive alternative than Hevelia for many passengers who now use Greentown.

(C) Hevelia airstrip lies in a relatively undeveloped area but would, if it became a full-service airport, be a magnet for commercial and residential development.

(D) If an airplane has to wait to land, the extra jet fuel required adds significantly to the airline's costs.

(E) Several airlines use Greentown as a regional hub, so that most flights landing at Greentown have many passengers who then take different flights to reach their final destinations.

CR07712

651. Farmer: Worldwide, just three grain crops—rice, wheat, and corn—account for most human caloric intake. To maintain this level of caloric intake and also keep pace with global population growth, yields per acre from each of these crops will have to increase at least 1.5 percent every year, given that the supply of cultivated land is diminishing. Therefore, the government should increase funding for research into new ways to improve yields.

Which of the following is an assumption on which the farmer's argument depends?

(A) It is solely the government's responsibility to ensure that the amount of rice, wheat, and corn produced worldwide keeps pace with global population growth.

(B) Increasing government funding for research into new ways to improve the yields per acre of rice, wheat, and corn crops would help to increase total worldwide annual production of food from these crops.

(C) Increasing the yields per acre of rice, wheat, and corn is more important than increasing the yields per acre of other crops.

(D) Current levels of funding for research into ways of improving grain crop yields per acre have enabled grain crop yields per acre to increase by more than 1.5 percent per year worldwide.

(E) In coming decades, rice, wheat, and corn will become a minor part of human caloric intake, unless there is government-funded research to increase their yields per acre.

CR08770

652. The air quality board recently informed Coffee Roast, a small coffee roasting firm, of a complaint regarding the smoke from its roaster. Recently enacted air quality regulations require machines roasting more than 10 pounds of coffee to be equipped with expensive smoke-dissipating afterburners. The firm, however, roasts only 8 pounds of coffee at a time. Nevertheless, the company has decided to purchase and install an afterburner.

Which of the following, if true, most strongly supports the firm's decision?

(A) Until settling on the new air quality regulations, the board had debated whether to require afterburners for machines roasting more than 5 pounds of coffee at a time.

(B) Coffee roasted in a machine equipped with an afterburner has its flavor subtly altered.

(C) The cost to the firm of an afterburner is less than the cost of replacing its roaster with a smaller one.

(D) Fewer complaints are reported in areas that maintain strict rules regarding afterburners.

(E) The firm has reason to fear that negative publicity regarding the complaints could result in lost sales.

CR03695

653. People who do regular volunteer work tend to live longer, on average, than people who do not. It has been found that "doing good," a category that certainly includes volunteer work, releases endorphins, the brain's natural opiates, which induce in people a feeling of well-being. Clearly, there is a connection: Regular releases of endorphins must in some way help to extend people's lives.

Which of the following, if true, most seriously undermines the force of the evidence given as support for the hypothesis that endorphins promote longevity?

(A) People who do regular volunteer work are only somewhat more likely than others to characterize the work they do for a living as "doing good."

(B) Although extremely high levels of endorphins could be harmful to health, such levels are never reached as a result of the natural release of endorphins.

(C) There are many people who have done some volunteer work but who do not do such work regularly.

(D) People tend not to become involved in regular volunteer work unless they are healthy and energetic to begin with.

(E) Releases of endorphins are responsible for the sense of well-being experienced by many long-distance runners while running.

CR04140

654. A study compared a sample of Swedish people older than 75 who needed in-home assistance with a similar sample of Israeli people. The people in the two samples received both informal assistance, provided by family and friends, and formal assistance, professionally provided. Although Sweden and Israel have equally well-funded and comprehensive systems for providing formal assistance, the study found that the people in the Swedish sample received more formal assistance, on average, than those in the Israeli sample.

Which of the following, if true, does most to explain the difference that the study found?

(A) A companion study found that among children needing special in-home care, the amount of formal assistance they received was roughly the same in Sweden as in Israel.

(B) More Swedish than Israeli people older than 75 live in rural areas where formal assistance services are sparse or nonexistent.

(C) Although in both Sweden and Israel much of the funding for formal assistance ultimately comes from the central government, the local structures through which assistance is delivered are different in the two countries.

(D) In recent decades, the increase in life expectancy of someone who is 75 years old has been greater in Israel than in Sweden.

(E) In Israel, people older than 75 tend to live with their children, whereas in Sweden people of that age tend to live alone.

CR05077

655. Film Director: It is true that certain characters and plot twists in my newly released film *The Big Heist* are similar to characters and plot twists in *Thieves*, a movie that came out last year. Pointing to these similarities, the film studio that produced *Thieves* is now accusing me of taking ideas from that film. The accusation is clearly without merit. All production work on *The Big Heist* was actually completed months before *Thieves* was released.

Which of the following, if true, provides the strongest support for the director's position?

(A) Before *Thieves* began production, its script had been circulating for several years among various film studios, including the studio that produced *The Big Heist*.

(B) The characters and plot twists that are most similar in the two films have close parallels in many earlier films of the same genre.

(C) The film studio that produced *Thieves* seldom produces films in this genre.

(D) The director of *Thieves* worked with the director of *The Big Heist* on several earlier projects.

(E) Production work on *Thieves* began before production work on *The Big Heist* was started.

CR05412

656. In Mernia commercial fossil hunters often sell important fossils they have found, not to universities or museums, but to individual collectors, who pay much better but generally do not allow researchers access to their collections. To increase the number of fossils available for research, some legislators propose requiring all fossils that are found in Mernia to be sold only to universities or museums.

Which of the following, if true, most strongly indicates that the legislators' proposal will fail to achieve its goal?

(A) Some fossil hunters in Mernia are not commercial fossil hunters, but rather are amateurs who keep the fossils that they find.

(B) Most fossils found in Mernia are common types that have little scientific interest.

(C) Commercial fossil hunters in Mernia currently sell some of the fossils they find to universities and museums.

(D) Many universities in Mernia do not engage in fossil research.

(E) Most fossils are found by commercial fossil hunters, and they would give up looking for fossils if they were no longer allowed to sell to individual collectors.

CR02702

657. Economist: Tropicorp, which constantly seeks profitable investment opportunities, has been buying and clearing sections of tropical forest for cattle ranching, although pastures newly created there become useless for grazing after just a few years. The company has not gone into rubber tapping, even though greater profits can be made from rubber tapping, which leaves the forest intact. Thus, some environmentalists argue that **Tropicorp's actions do not serve even its own economic interest**. However, the initial investment required for a successful rubber-tapping operation is larger than that needed for a cattle ranch; there is a shortage of workers employable in rubber-tapping operations; and taxes are higher on profits from rubber tapping than on profits from cattle ranching. Consequently, **the environmentalists' conclusion is probably wrong**.

In the economist's argument, the two **boldface** portions play which of the following roles?

(A) The first supports the conclusion of the economist's argument; the second calls that conclusion into question.

(B) The first states the conclusion of the economist's argument; the second supports that conclusion.

(C) The first supports the conclusion of the environmentalists' argument; the second states that conclusion.

(D) The first states the conclusion of the environmentalists' argument; the second states the conclusion of the economist's argument.

(E) Each supports the conclusion of the economist's argument.

CR74231.01

658. Marketing executive for Magu Corporation: Whenever Magu opens a manufacturing facility in a new city, the company should sponsor, or make donations to, a number of nonprofit organizations in that city. Doing so would improve Magu's image in the community, and thus the money spent on such charitable ventures would lead to increased sales.

Which statement would, if true, point to the most serious weakness in the marketing executive's advice?

(A) Magu sells its products internationally, so sales in any one city represent only a small portion of total revenue.

(B) Spending on charitable ventures would require Magu to decrease direct advertisements, which are the most effective means of reaching its target customers.

(C) If market conditions change, Magu may have to close any such facility or relocate it.

(D) Some nonprofit organizations are poorly organized, so money donated to them would be of little benefit to the community.

(E) If workers at the manufacturing facility believed their wages or working conditions were poor, their complaints would outweigh any good impressions generated by Magu's donations or sponsorships.

CR08831

659. Although the school would receive financial benefits if it had soft drink vending machines in the cafeteria, we should not allow them. Allowing soft drink machines there would not be in our students' interest. If our students start drinking more soft drinks, they will be less healthy.

The argument depends on which of the following?

(A) If the soft drink vending machines were placed in the cafeteria, students would consume more soft drinks as a result.

(B) The amount of soft drinks that most students at the school currently drink is not detrimental to their health.

(C) Students are apt to be healthier if they do not drink soft drinks at all than if they just drink small amounts occasionally.

(D) Students will not simply bring soft drinks from home if the soft drink vending machines are not placed in the cafeteria.

(E) The school's primary concern should be to promote good health among its students.

CR01112

660. Many athletes inhale pure oxygen after exercise in an attempt to increase muscular reabsorption of oxygen. Measured continuously after exercise, however, the blood lactate levels of athletes who inhale pure oxygen are practically identical, on average, to those of athletes who breathe normal air. The lower the blood lactate level is, the higher the muscular reabsorption of oxygen is.

If the statements above are all true, they most strongly support which of the following conclusions?

(A) Athletes' muscular reabsorption of oxygen is not increased when they inhale pure oxygen instead of normal air.

(B) High blood lactate levels cannot be reduced.

(C) Blood lactate levels are a poor measure of oxygen reabsorption by muscles.

(D) The amount of oxygen reabsorbed by an athlete's muscles always remains constant.

(E) The inhaling of pure oxygen has no legitimate role in athletics.

CR79751.01

661. Historian: Fifteenth-century advances in mapmaking contributed to the rise of modern nation-states. In medieval Europe (from the fifth to the fifteenth century), sovereignty centered in cities and towns and radiated outward, with boundaries often ambiguously defined. The conceptual shift toward the modern state began in the late fifteenth century, when mapmakers learned to reflect geography accurately by basing maps on latitude-longitude grids. By the mid-seventeenth century, nearly all maps showed boundary lines.

Which of the following would, if true, most strengthen the historian's reasoning?

(A) Borders did not become codified in Europe until certain treaties were signed in the early nineteenth century.

(B) During the medieval period, various authorities in Europe claimed power over collections of cities and towns, not contiguous territories.

(C) Many members of the political elite collected maps as a hobby during the late sixteenth and early seventeenth centuries.

(D) Seventeenth-century treatises and other sources of political authority describe areas of sovereignty rather than illustrate them using maps.

(E) During the fifteenth century in Europe, mapmakers simplified the borders of sovereignty by drawing clear lines of demarcation between political powers.

CR11751.01

662. Sascha: The attempt to ban parliament's right to pass directed-spending bills—bills that contain provisions specifically funding the favorite projects of some powerful politicians—is antidemocratic. Our nation's constitution requires that money be drawn from our treasury only when so stipulated by laws passed by parliament, the branch of government most directly representative of the citizens. This requirement is based on the belief that exercising the power to spend public resources involves the ultimate exercise of state authority and that therefore _____.

Which of the following most logically completes Sascha's argument?

(A) designating funding specifically for the favorite projects of some powerful politicians should be considered antidemocratic

(B) the right to exercise such a power should belong exclusively to the branch of government most directly representative of the citizens

(C) exercising the power to spend public resources is in most cases—but not all—protected by the constitution

(D) modifications to any spending bills should be considered expenditures authorized by law

(E) only officials who are motivated by concerns for reelection should retain that power

CR02143

663. Boreal owls range over a much larger area than do other owls of similar size. Scientists have hypothesized that **it is scarcity of prey that leads the owls to range so widely**. This hypothesis would be hard to confirm directly, since it is not possible to produce a sufficiently accurate count of the populations of small mammals inhabiting the forests where boreal owls live. Careful study of owl behavior has, however, shown that **boreal owls do range over larger areas when they live in regions where food of the sort eaten by small mammals is comparatively sparse**. This indicates that the scientists' hypothesis is not sheer speculation.

In the argument given, the two **boldfaced** portions play which of the following roles?

(A) The first presents an explanatory hypothesis; the second states the main conclusion of the argument.

(B) The first presents an explanatory hypothesis; the second presents evidence tending to support this hypothesis.

(C) The first presents an explanatory hypothesis; the second presents evidence to support an alternative explanation.

(D) The first describes a position that the argument opposes; the second presents evidence to undermine the support for the position being opposed.

(E) The first describes a position that the argument opposes; the second states the main conclusion of the argument.

CR18731.01

664. Cognitive scientist: Using the pioneering work of comparative psychologist Gordon Gallup as a model, several studies have investigated animals' capacity for mirror self-recognition (MSR). Most animals exposed to a mirror respond only with social behavior, such as aggression. However, in the case of the great apes, repeated exposure to mirrors leads to self-directed behaviors, such as exploring the inside of the mouth, suggesting that these animals recognize the reflection as an image of self. The implication of these studies is that the great apes have a capacity for self-awareness unique among nonhuman species.

The cognitive scientist makes which of the following assumptions in the argument above?

(A) Gallup's work has established that the great apes have a capacity for MSR unique among nonhuman species.

(B) If an animal does not have the capacity for MSR, it does not have the capacity for self-awareness.

(C) If a researcher exposes an animal to a mirror and that animal exhibits social behavior, that animal is incapable of being self-aware.

(D) When exposed to a mirror, all animals display either social behavior or self-directed behavior.

(E) Animals that do not exhibit MSR may demonstrate a capacity for self-awareness in other ways.

CR02888

665. Last year a record number of new manufacturing jobs were created. Will this year bring another record? Well, any new manufacturing job is created either within an existing company or by the start-up of a new company. **Within existing firms, new jobs have been created this year at well below last year's record pace**. At the same time, there is considerable evidence that the number of new companies starting up will be no higher this year than it was last year and **there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups**. So clearly, the number of new jobs created this year will fall short of last year's record.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first is a claim that the argument challenges; the second is an explicit assumption on which that challenge is based.

(B) The first is a claim that the argument challenges; the second is a judgment advanced in support of the main conclusion of the argument.

(C) The first provides evidence in support of the main conclusion of the argument; the second is an objection that has been raised against that main conclusion.

(D) The first provides evidence in support of the main conclusion of the argument; the second is a judgment advanced in support of that main conclusion.

(E) The first and the second are each claims that have been advanced in support of a position that the argument opposes.

CR07809

666. A study of ticket sales at a summer theater festival found that people who bought tickets to individual plays had a no-show rate of less than 1 percent, while those who paid in advance for all ten plays being performed that summer had a no-show rate of nearly 30 percent. This may be at least in part because the greater the awareness customers retain about the cost of an item, the more likely they are to use it.

Which of the following would, if true, best serve as an alternative explanation of the results of the study?

(A) The price per ticket was slightly cheaper for those who bought all ten tickets in advance.

(B) Many people who attended the theater festival believed strongly that they should support it financially.

(C) Those who attended all ten plays became eligible for a partial refund.

(D) Usually, people who bought tickets to individual plays did so immediately prior to each performance that they attended.

(E) People who arrived just before the performance began could not be assured of obtaining seats in a preferred location.

CR12019

667. Although there is no record of poet Edmund Spenser's parentage, we do know that as a youth Spenser attended the Merchant Tailors' School in London for a period between 1560 and 1570. Records from this time indicate that the Merchant Tailors' Guild then had only three members named Spenser: Robert Spenser, listed as a gentleman; Nicholas Spenser, elected the Guild's Warden in 1568; and John Spenser, listed as a "journeyman cloth-maker." Of these, the last was likely the least affluent of the three—and most likely Edmund's father, since school accounting records list Edmund as a scholar who attended the school at a reduced fee.

Which of the following is an assumption on which the argument depends?

(A) Anybody in sixteenth-century London who made clothing professionally would have had to be a member of the Merchant Tailors' Guild.

(B) The fact that Edmund Spenser attended the Merchant Tailors' School did not necessarily mean that he planned to become a tailor.

(C) No member of the Guild could become Guild warden in sixteenth-century London unless he was a gentleman.

(D) Most of those whose fathers were members of the Merchant Tailors' Guild were students at the Merchant Tailors' School.

(E) The Merchant Tailors' School did not reduce its fees for the children of the more affluent Guild members.

CR20831.01

668. Hea Sook: One should not readily believe urban legends. Most legends are propagated because the moral lesson underlying them supports a political agenda. People will repeat a tale if it fits their purpose. They may not deliberately spread untruths, but neither are they particularly motivated to investigate deeply to determine if the tale they are telling is true.

Kayla: But people would not repeat stories that they did not believe were true. Therefore, one can safely assume that if a story has been repeated by enough people then it is more likely to be true.

Kayla's reply is most vulnerable to the criticism that it

(A) does not specify how many people need to repeat a story before someone is justified believing it

(B) overstates the significance of political agendas in the retelling of stories

(C) fails to address the claim that people will not verify the truth of a story that fits their purpose

(D) implicitly supports the claim that the people repeating legends are not deliberately spreading untruths

(E) cannot distinguish people's motivations for repeating urban legends from their motivations for repeating other types of story

CR03749

669. Rainwater contains hydrogen of a heavy form called deuterium. The deuterium content of wood reflects the deuterium content of rainwater available to trees during their growth. Wood from trees that grew between 16,000 and 24,000 years ago in North America contains significantly more deuterium than wood from trees growing today. But water trapped in several North American caves that formed during that same early period contains significantly less deuterium than rainwater in North America contains today.

Which of the following, if true, most helps to reconcile the two findings?

(A) There is little deuterium in the North American caves other than the deuterium in the water trapped there.

(B) Exposure to water after a tree has died does not change the deuterium content of the wood.

(C) Industrialization in North America over the past 100 years has altered the deuterium content of rain.

(D) Trees draw on shallow groundwater from rain that falls during their growth, whereas water trapped in caves may have fallen as rainwater thousands of years before the caves formed.

(E) Wood with a high deuterium content is no more likely to remain preserved for long periods than is wood with a low deuterium content.

CR04925

670. Enforcement of local speed limits through police monitoring has proven unsuccessful in the town of Ardane. In many nearby towns, speed humps (raised areas of pavement placed across residential streets, about 300 feet apart) have reduced traffic speeds on residential streets by 20 to 25 percent. In order to reduce traffic speed and thereby enhance safety in residential neighborhoods, Ardane's transportation commission plans to install multiple speed humps in those neighborhoods.

Which of the following, if true, identifies a potentially serious drawback to the plan for installing speed humps in Ardane?

(A) On residential streets without speed humps, many vehicles travel at speeds more than 25 percent above the posted speed limit.

(B) Because of their high weight, emergency vehicles such as fire trucks and ambulances must slow almost to a stop at speed humps.

(C) The residential speed limit in Ardane is higher than that of the nearby towns where speed humps were installed.

(D) Motorists who are not familiar with the streets in Ardane's residential districts would be likely to encounter the speed humps unawares unless warned by signs and painted indicators.

(E) Bicyclists generally prefer that speed humps be constructed so as to leave a space on the side of the road where bicycles can travel without going over the humps.

CR00748

671. Which of the choices most logically completes the following argument?

NowNews, although still the most popular magazine covering cultural events in Kalopolis, has recently suffered a significant drop in advertising revenue because of falling circulation. Many readers have begun buying a competing magazine that, at 50 cents per copy, costs less than *NowNews* at $1.50 per copy. In order to boost circulation and thus increase advertising revenue, *NowNews's* publisher has proposed making it available at no charge. However, this proposal has a serious drawback, since _____.

(A) those Kalopolis residents with the greatest interest in cultural events are regular readers of both magazines.

(B) one reason *NowNews's* circulation fell was that its competitor's reporting on cultural events was superior.

(C) the newsstands and stores that currently sell *NowNews* will no longer carry it if it is being given away for free.

(D) at present, 10 percent of the total number of copies of each issue of *NowNews* are distributed free to students on college campuses in the Kalopolis area.

(E) *NowNews's* competitor would begin to lose large amounts of money if it were forced to lower its cover price.

CR07304

672. Archaeologist: Researchers excavating a burial site in Cyprus found a feline skeleton lying near a human skeleton. Both skeletons were in the same sediment at the same depth and equally well-preserved, suggesting that the feline and human were buried together about 9,500 years ago. This shows that felines were domesticated around the time farming began, when they would have been useful in protecting stores of grain from mice.

Which of the following, if true, would most seriously weaken the archaeologist's argument?

(A) Archaeologists have not found any remains of stores of grain in the immediate vicinity of the burial site.

(B) The burial site in Cyprus is substantially older than any other known burial site in which a feline skeleton and a human skeleton appear to have been buried together.

(C) Paintings found near the burial site seem to show people keeping felines as domestic companions, but do not show felines hunting mice.

(D) In Cyprus, there are many burial sites dating from around 9,500 years ago in which the remains of wild animals appear to have been buried alongside human remains.

(E) Before felines were domesticated, early farmers had no effective way to protect stores of grain from mice.

CR90061.01

673. Farmer: Several people in the past few years have claimed to have seen a mountain lion in the suburban outskirts—the latest just last month—and, while mountain lions were thought to have been driven from this entire region about twenty years ago, there is no reason for the people who reported seeing a mountain lion to have deliberately concocted a false report. Therefore, local wildlife managers should begin to urgently address the mountain lion's presence.

Which of the following would, if true, most seriously weaken the farmer's argument?

(A) Farmers in the suburban outskirts mostly raise cattle and hogs, which when fully grown are generally not attacked by mountain lions.

(B) Mountain lions are dissimilar in size and color to other wild animals found near the suburban outskirts.

(C) No person who claimed to have seen a mountain lion had anyone else with them at the purported sighting.

(D) There have been no regional reports in the past year of mountain lions migrating to the area.

(E) Recent surveys show that more than half of the people in the region report that they have never seen a mountain lion before.

CR09117

674. The heavy traffic in Masana is a growing drain on the city's economy—the clogging of the streets of the central business district alone cost the economy more than $1.2 billion over the past year. In order to address this problem, officials plan to introduce congestion pricing, by which drivers would pay to enter the city's most heavily trafficked areas during the busiest times of the day.

Which of the following, if true, would most strongly indicate that the plan will be a success?

(A) Approximately one-fifth of the vehicles in the central business district are in transit from one side of the city to the other.

(B) Planners expect that, without congestion pricing, traffic in Masana is likely to grow by 6 percent in the next five years.

(C) In other urban areas, congestion pricing has strongly encouraged carpooling (sharing of rides by private commuters).

(D) Several studies have shown that a reduction in traffic of 15 percent in Masana could result in 5,500 or more new jobs.

(E) Over 30 percent of the vehicles in the city's center are occupied by more than one person.

CR09151

675. Economist: The most economically efficient way to reduce emissions of air pollutants is to tax them in proportion to the damage they are likely to cause. But in Country Y, many serious pollutants are untaxed and unregulated, and policy makers strongly oppose new taxes. Therefore, the best way to achieve a reduction in air pollutant emissions in Country Y would be to institute fixed upper limits on them.

Which of the following is an assumption of the economist's argument?

(A) Policy makers in Country Y oppose all new taxes equally strongly, regardless of any benefits they may provide.

(B) Country Y's air pollutant emissions would not fall significantly if they were taxed in proportion to the damage they are likely to cause.

(C) Policy makers in Country Y strongly favor reductions in air pollutant emissions.

(D) Country Y's policy makers believe that air pollutant emissions should be reduced with maximum economic efficiency.

(E) Policy makers in Country Y do not oppose setting fixed upper limits on air pollutant emissions as strongly as they oppose new taxes.

CR04986

676. Humans get Lyme disease from infected ticks. Ticks get infected by feeding on animals with Lyme disease, but the ease of transmission from host animal to tick varies. With most species of host animal, transmission of Lyme disease to ticks is extremely rare, but white-footed mice are an exception, readily passing Lyme disease to ticks. And white-footed mouse populations greatly expand, becoming the main food source for ticks, in areas where biodiversity is in decline.

The information in the passage most strongly supports which of the following?

(A) In areas where many humans are infected with Lyme disease, the proportion of ticks infected with Lyme disease is especially high.

(B) Very few animals that live in areas where there are no white-footed mice are infected with Lyme disease.

(C) Humans are less at risk of contracting Lyme disease in areas where biodiversity is high.

(D) Ticks feed on white-footed mice only when other host species are not available to them.

(E) The greater the biodiversity of an area, the more likely any given host animal in that area is to pass Lyme disease to ticks.

CR04935

677. Many industrialized nations are trying to reduce atmospheric concentrations of carbon dioxide, a gas released by the burning of fossil fuels. One proposal is to replace conventional cement, which is made with calcium carbonate, by a new "eco-cement." This new cement, made with magnesium carbonate, absorbs large amounts of carbon dioxide when exposed to the atmosphere. Therefore, using eco-cement for new concrete building projects will significantly help reduce atmospheric concentrations of carbon dioxide.

Which of the following, if true, most strengthens the argument?

(A) The cost of magnesium carbonate, currently greater than the cost of calcium carbonate, probably will fall as more magnesium carbonate is used in cement manufacture.

(B) Eco-cement is strengthened when absorbed carbon dioxide reacts with the cement.

(C) Before the development of eco-cement, magnesium-based cement was considered too susceptible to water erosion to be of practical use.

(D) The manufacture of eco-cement uses considerably less fossil fuel per unit of cement than the manufacture of conventional cement does.

(E) Most building-industry groups are unaware of the development or availability of eco-cement.

CR00895

678. Advertisement: When your car's engine is running at its normal operating temperature, any major brand of motor oil will protect it about as well as Tuff does. When the engine is cold, it is a different story: Tuff motor oil flows better at lower temperatures than its major competitors do. So, if you want your car's engine to have maximum protection, you should use Tuff.

Which of the following, if true, most strengthens the argument in the advertisement?

(A) Tuff motor oil provides above-average protection for engines that happen to overheat.

(B) Tuff motor oil is periodically supplied free of charge to automobile manufacturers to use in factory-new cars.

(C) Tuff motor oil's share of the engine oil market peaked three years ago.

(D) Tuff motor oil, like any motor oil, is thicker and flows less freely at cold temperatures than at hot temperatures.

(E) Tuff motor oil is manufactured at only one refinery and shipped from there to all markets.

CR55541.01

679. Linguist: In English, the past is described as "behind" and the future "ahead," whereas in Aymara the past is "ahead" and the future "behind." Research indicates that English speakers sway backward when discussing the past and forward when discussing the future. Conversely, Aymara speakers gesture forward with their hands when discussing the past and backward when discussing the future. These bodily movements, therefore, suggest that the language one speaks affects how one mentally visualizes time.

The linguist's reasoning depends on assuming which of the following?

(A) At least some Aymara speakers sway forward when discussing the past and backward when discussing the future.

(B) Most people mentally visualize time as running either forward or backward.

(C) Not all English and Aymara speakers tend to sway or gesture forward or backward when discussing the present.

(D) How people move when discussing the future correlates to some extent with how they mentally visualize time.

(E) The researchers also examined the movements of at least some speakers of languages other than English and Aymara discussing the past and the future.

CR13108

680. *The Testament of William Thorpe* was published around 1530 as an appendix to Thorpe's longer *Examination*. Many scholars, however, doubt the attribution of the *Testament* to Thorpe because, whereas the *Examination* is dated 1406, the *Testament* is dated 1460. One scholar has recently argued that the 1460 date be amended to 1409, based on the observation that when these numbers are expressed as Roman numerals, MCCCCLX and MCCCCIX, it becomes easy to see how the dates might have become confused through scribal error.

Which of the following, if true, would most support the scholar's hypothesis concerning the date of the *Testament*?

(A) The sole evidence that historians have had that William Thorpe died no earlier than 1460 was the presumed date of publication of the *Testament*.

(B) In the preface to the 1530 publication, the editor attributes both works to William Thorpe.

(C) Few writers in fifteenth-century England marked dates in their works using only Roman numerals.

(D) The *Testament* alludes to a date, "Friday, September 20," as apparently contemporaneous with the writing of the *Testament*, and September 20 fell on a Friday in 1409 but not in 1460.

(E) The *Testament* contains few references to historical events that occurred later than 1406.

CR00777

681. A prominent investor who holds a large stake in the Burton Tool Company has recently claimed that the company is mismanaged, citing as evidence the company's failure to slow down production in response to a recent rise in its inventory of finished products. It is doubtful whether an investor's sniping at management can ever be anything other than counterproductive, but in this case, it is clearly not justified. It is true that **an increased inventory of finished products often indicates that production is outstripping demand**, but in Burton's case it indicates no such thing. Rather, **the increase in inventory is entirely attributable to products that have already been assigned to orders received from customers**.

In the argument given, the two **boldfaced** portions play which of the following roles?

(A) The first states a generalization that underlies the position that the argument as a whole opposes; the second provides evidence to show that the generalization does not apply in the case at issue.

(B) The first states a generalization that underlies the position that the argument as a whole opposes; the second clarifies the meaning of a specific phrase as it is used in that generalization.

(C) The first provides evidence to support the conclusion of the argument as a whole; the second is evidence that has been used to support the position that the argument as a whole opposes.

(D) The first provides evidence to support the conclusion of the argument as a whole; the second states that conclusion.

(E) The first and the second each provide evidence against the position that the argument as a whole opposes.

CR10028

682. To reduce productivity losses from employees calling in sick, Corporation X implemented a new policy requiring employees to come into work unless they were so sick that they had to go to a doctor. But a year after the policy was implemented, a study found that Corporation X's overall productivity losses due to reported employee illnesses had increased.

Which of the following, if true, would best explain why the policy produced the reverse of its intended effect?

(A) After the policy was implemented, employees more frequently went to the doctor when they felt sick.

(B) Before the policy was implemented, employees who were not sick at all often called in sick.

(C) Employees coming into work when sick often infect many of their coworkers.

(D) Unusually few employees became genuinely sick during the year after the policy was implemented.

(E) There are many other factors besides employee illness that can adversely affect productivity.

CR08443

683. Advertising by mail has become much less effective, with fewer consumers responding. Because consumers are increasingly overwhelmed by the sheer amount of junk mail they receive, most discard almost all offers without considering them. Thus, an effective way for corporations to improve response rates would be to more carefully target the individuals to whom they mail advertising, thereby cutting down on the amount of junk mail each consumer receives.

Which of the following, if true, would most support the recommendation above?

(A) There are cost-effective means by which corporations that currently advertise by mail could improve response rates.

(B) Many successful corporations are already carefully targeting the individuals to whom they mail advertising.

(C) Any consumer who, immediately after receiving an advertisement by mail, merely glances at it, is very likely to discard it.

(D) Improvements in the quality of the advertising materials used in mail that is carefully targeted to individuals can improve the response rate for such mail.

(E) Response rates to carefully targeted advertisements by mail are considerably higher, on average, than response rates to most other forms of advertising.

CR01905

684. Petrochemical industry officials have said that the extreme pressure exerted on plant managers during the last five years to improve profits by cutting costs has done nothing to impair the industry's ability to operate safely. However, environmentalists contend that the recent rash of serious oil spills and accidents at petrochemical plants is traceable to cost-cutting measures.

Which of the following, if true, would provide the strongest support for the position held by industry officials?

(A) The petrochemical industry benefits if accidents do not occur, since accidents involve risk of employee injury as well as loss of equipment and product.

(B) Petrochemical industry unions recently demanded that additional money be spent on safety and environmental protection measures, but the unions readily abandoned those demands in exchange for job security.

(C) Despite major cutbacks in most other areas of operation, the petrochemical industry has devoted more of its resources to environmental and safety measures in the last five years than in the preceding five years.

(D) There is evidence that the most damaging of the recent oil spills would have been prevented had cost-cutting measures not been instituted.

(E) Both the large fines and the adverse publicity generated by the most recent oil spill have prompted the petrochemical industry to increase the resources devoted to oil-spill prevention.

CR01368

685. A company has developed a new sensing device that, according to the company's claims, detects weak, ultralow-frequency electromagnetic signals associated with a beating heart. These signals, which pass through almost any physical obstruction, are purportedly detected by the device even at significant distances. Therefore, if the company's claims are true, their device will radically improve emergency teams' ability to locate quickly people who are trapped within the wreckage of collapsed buildings.

Which of the following, if true, most strengthens the argument?

(A) People trapped within the wreckage of collapsed buildings usually have serious injuries that require prompt medical treatment.

(B) The device gives a distinctive reading when the signals it detects come from human beings rather than from any other living beings.

(C) Most people who have survived after being trapped in collapsed buildings were rescued within two hours of the building's collapse.

(D) Ultralow-frequency signals are not the only electromagnetic signals that can pass through almost any physical obstruction.

(E) Extensive training is required in order to operate the device effectively.

CR11639

686. Economist: The price of tap water in our region should be raised drastically. **Supplies in local freshwater reservoirs have been declining for years** because water is being used faster than it can be replenished. Since the price of tap water has been low, **few users have bothered to adopt even easy conservation measures**.

The two sections in boldface play which of the following roles in the economist's argument?

(A) The first is a conclusion for which support is provided, and which in turn supports the main conclusion; the second is the main conclusion.

(B) The first is an observation for which the second provides an explanation; the second is the main conclusion but not the only conclusion.

(C) The first is a premise supporting the argument's main conclusion; so is the second.

(D) The first is the only conclusion; the second provides an explanation for the first.

(E) The first is the main conclusion; the second is a conclusion for which support is provided, and which in turn supports the first.

CR13127

687. Politician: Hybrid cars use significantly less fuel per kilometer than nonhybrids. And fuel produces air pollution, which contributes to a number of environmental problems. Motorists can save money by driving cars that are more fuel efficient, and they will be encouraged to drive hybrid cars if we make them aware of that fact. Therefore, we can help reduce the total amount of pollution emitted by cars in this country by highlighting this advantage of hybrid cars.

Which of the following, if true, would most indicate a vulnerability of the politician's argument?

(A) People with more fuel-efficient cars typically drive more than do those with less fuel-efficient cars.

(B) Not all air pollution originates from automobiles.

(C) Hybrid cars have already begun to gain popularity.

(D) Fuel-efficient alternatives to hybrid cars will likely become available in the future.

(E) The future cost of gasoline and other fuel cannot be predicted with absolute precision or certainty.

CR99530.01

688. Mayor: False alarms from home security systems waste so much valuable police time that in many communities police have stopped responding to alarms from homes whose systems frequently produce false alarms. This policy reduces wastage of police time but results in a loss of protection for some residents. To achieve a comparable reduction in wastage without reducing protection for residents, the council has enacted a measure to fine residents for repeated false alarms.

Which of the following, if true, casts the most doubt on whether the measure enacted by the council will achieve its goal?

(A) A fine in the amount planned by the council will not cover the expenses police typically incur when they respond to a false alarm.
(B) Homes equipped with security systems are far less likely to be broken into than are homes without security systems.
(C) The threat of fines is likely to cause many residents to deactivate their security systems.
(D) The number of home security systems is likely to increase dramatically over the next five years.
(E) Many home security systems have never produced false alarms.

CR53341.01

689. Excavation of the house of a third-century Camarnian official revealed that he had served four magistrates—public officials who administer the law—over his thirty-year public career, in four provincial capital cities. However, given the Camarnian administrative system of that era, it is unclear whether he served them simultaneously, as a traveling administrator living for part of the year in each provincial capital, or else did so sequentially, leaving one magistrate after several years to join another.

Which of the following would, if found in the excavation, most likely help reveal the pattern of the official's administrative service?

(A) Maps and documents describing each of the four provincial capitals
(B) A cache of the official's documents related to work from early in his career
(C) A set of cups of a type made only in the city of the first magistrate whom the official is known to have served
(D) Several pieces of furniture in the styles of two of the provincial capital cities
(E) Heavy clothing appropriate only for the coldest of the four cities

CR80531.01

690. In 1563, in Florence's Palazzo Vecchio, Giorgio Vasari built in front of an existing wall a new wall on which he painted a mural. Investigators recently discovered a gap between Vasari's wall and the original, large enough to have preserved anything painted on the original. Historians believe that Leonardo da Vinci had painted, but left unfinished, a mural on the original wall; some historians had also believed that by 1563 the mural had been destroyed. However, it is known that in the late 1560s, when renovating another building, Santa Maria Novella, Vasari built a façade over its frescoes, and the frescoes were thereby preserved. Thus, Leonardo's Palazzo Vecchio mural probably still exists behind Vasari's wall.

Which of the following is an assumption on which the argument depends?

(A) Leonardo rarely if ever destroyed artworks that he left unfinished.
(B) Vasari was likely unaware that the mural in the Palazzo Vecchio had willingly been abandoned by Leonardo.
(C) Vasari probably would not have built the Palazzo Vecchio wall with a gap behind it except to preserve something behind the new wall.
(D) Leonardo would probably have completed the Palazzo Vecchio mural if he had had the opportunity to do so.
(E) When Vasari preserved the frescoes of Santa Maria Novella he did so secretly.

CR09534

691. Coffee shop owner: A large number of customers will pay at least the fair market value for a cup of coffee, even if there is no formal charge. Some will pay more than this out of appreciation of the trust that is placed in them. And our total number of customers is likely to increase. We could therefore improve our net cash flow by implementing an honor system in which customers pay what they wish for coffee by depositing money in a can.

Manager: We're likely to lose money on this plan. Many customers would cheat the system, paying a very small sum or nothing at all.

Which of the following, if true, would best support the owner's plan, in light of the manager's concern?

(A) The new system, if implemented, would increase the number of customers.

(B) By roasting its own coffee, the shop has managed to reduce the difficulties (and cost) of maintaining an inventory of freshly roasted coffee.

(C) Many customers stay in the cafe for long stretches of time.

(D) The shop makes a substantial profit from pastries and other food bought by the coffee drinkers.

(E) No other coffee shop in the area has such a system.

CR01900

692. The city of Workney, in raising bus fares from $1.00 to $1.25, proposed that 18 fare tokens be sold for $20.00 to alleviate the extra burden of the fare increase on the city's poor people. Critics suggested alternatively that 9 fare tokens be sold for $10.00, because a $20.00 outlay would be prohibitive for poor riders.

The alternative proposal depends on which of the following assumptions?

(A) Poor residents of Workney will continue to ride the buses in the same numbers despite the fare increase.

(B) Riders who are poor would be more likely to take advantage of the savings afforded by the 9-token offer than would riders who are not poor.

(C) The outlay of $10.00 for the purchase of 9 fare tokens would not be prohibitive for bus riders who are poor.

(D) The proposed fare increase is needed for the purchase of new buses for the city's bus system.

(E) Fewer riders would regularly purchase 18 fare tokens at once than would purchase only 9 fare tokens at once.

CR03272

693. Birds have been said to be descended from certain birdlike dinosaur species with which they share distinctive structural features. The fossil record, however, shows that this cannot be so, since there are bird fossils that are much older than the earliest birdlike dinosaur fossils that have been found.

Which of the following is an assumption on which the argument relies?

(A) The birdlike dinosaurs have no living descendants.

(B) There are no flightless dinosaur species that have the distinctive structural features shared by birds and birdlike dinosaurs.

(C) There are no birdlike dinosaur fossils that are older than the bird fossils but have not yet been unearthed.

(D) It could not have been the case that some birds were descended from one of the birdlike dinosaur species and other birds from another.

(E) Birds cannot have been descended from dinosaur species with which the birds do not share the distinctive structural features.

CR08239

694. City council member: Demand for electricity has been increasing by 1.5 percent a year, and there simply is no more space to build additional power plants to meet future demand increases. We must therefore begin to curtail usage, which is why I propose passing ordinances requiring energy-conservation measures in all city departments.

The city council member's proposal assumes which of the following?

(A) Existing power plants do not have the capacity to handle all of the projected increase in demand for electricity.

(B) No city departments have implemented energy-conservation measures voluntarily.

(C) Passing ordinances designed to curtail electricity usage will not have negative economic consequences for the city.

(D) Residential consumers are not responsible for the recent increases in demand for electricity.

(E) City departments that successfully conserve energy will set a good example for residential and industrial consumers of electricity.

CR32441.01

695. Certain groups of Asian snails include both "left-handed" and "right-handed" species, with shells coiling to the left and right, respectively. Some left-handed species have evolved from right-handed ones. Also, researchers found that snail-eating snakes in the same habitat have asymmetrical jaws, allowing them to grasp right-handed snail shells more easily. If these snakes ate more right-handed snails over time, this would have given left-handed snails an evolutionary advantage over right-handed snails, with the left-handed snails eventually becoming a new species. Thus, the snakes' asymmetrical jaws probably helped drive the emergence of the left-handed snail species.

Which of the following would, if true, most strengthen the argument that asymmetrical snake jaws helped drive left-handed snail evolution?

(A) In one snake species, the snakes with asymmetrical jaws eat snails, while the snakes with symmetrical jaws do not eat snails.

(B) Some species of Asian snails contain either all right-handed snails, or all left-handed snails.

(C) Anatomical differences prevent left-handed snails from mating easily with right-handed snails.

(D) Some right-handed snails in this habitat have shells with a very narrow opening that helps prevent snakes from extracting the snails from inside their shells.

(E) Experiments show that the snail-eating snakes in this habitat fail more often in trying to eat left-handed snails than in trying to eat right-handed snails.

CR95631.01

696. A moderately large city is redesigning its central downtown area and is considering a plan that would reduce the number of lanes for automobiles and trucks and increase those for bicycles and pedestrians. The intent is to attract more workers and shoppers to downtown businesses by making downtown easier to reach and more pleasant to move around in.

Which of the following would, if true, most strongly support the prediction that the plan would achieve its goal?

(A) People who make a habit of walking or bicycling whenever feasible derive significant health benefits from doing so.

(B) Most people who prefer to shop at suburban malls instead of downtown urban areas do so because parking is easier and cheaper at the former.

(C) In other moderately sized cities where measures were taken to make downtowns more accessible for walkers and cyclists, downtown businesses began to thrive.

(D) If the proposed lane restrictions on drivers are rigorously enforced, more people will likely be attracted to downtown businesses than would otherwise be.

(E) Most people who own and frequently ride bicycles for recreational purposes live at a significant distance from downtown urban areas.

CR00713

697. Previously, Autoco designed all of its cars itself and then contracted with specialized parts suppliers to build parts according to its specifications. Now it plans to include its suppliers in designing the parts they are to build. Since many parts suppliers have more designers with specialized experience than Autoco has, Autoco expects this shift to reduce the overall time and cost of the design of its next new car.

Which of the following, if true, most strongly supports Autoco's expectation?

(A) When suppliers provide their own designs, Autoco often needs to modify its overall design.

(B) In order to provide designs for Autoco, several of the parts suppliers will have to add to their existing staffs of designers.

(C) Parts and services provided by outside suppliers account for more than 50 percent of Autoco's total costs.

(D) When suppliers built parts according to specifications provided by Autoco, the suppliers competed to win contracts.

(E) Most of Autoco's suppliers have on hand a wide range of previously prepared parts designs that can readily be modified for a new car.

CR02830

698. In response to viral infection, the immune systems of mice typically produce antibodies that destroy the virus by binding to proteins on its surface. Mice infected with the herpesvirus generally develop keratitis, a degenerative disease affecting part of the eye. Since proteins on the surface of cells in this part of the eye

closely resemble those on the herpesvirus surface, scientists hypothesize that these cases of keratitis are caused by antibodies to the herpesvirus.

Which of the following, if true, most helps to support the scientists' reasoning?

(A) Other types of virus have surface proteins that closely resemble proteins found in various organs of mice.

(B) Mice that are infected with the herpesvirus but do not develop keratitis produce as many antibodies as infected mice that do develop keratitis.

(C) Mice infected with a new strain of the herpesvirus that has different surface proteins did not develop keratitis.

(D) Mice that have never been infected with the herpesvirus can sometimes develop keratitis.

(E) There are mice that are unable to form antibodies in response to herpes infections, and these mice contract herpes at roughly the same rate as other mice.

CR38931.01

699. One might expect that within a particular species, any individuals that managed to slow down the aging process would leave more offspring. Natural selection should therefore favor extreme longevity—but this does not seem to be the case. A possible explanation is that aging is a product of the inevitable wear and tear of living, similar to how household appliances generally accumulate faults that lead to their eventual demise. However, most researchers do not find this analogy satisfactory as an explanation.

Which of the following would, if true, provide the strongest explanation for the researchers' reaction?

(A) Some organisms are capable of living much longer than other organisms.

(B) Some organisms reproduce very quickly despite having short lifespans.

(C) There are several ways of defining "extreme longevity," and according to some definitions it occurs frequently.

(D) Organisms are capable of maintenance and self-repair and can remedy much of the damage that they accumulate.

(E) Some organisms generate much more wear and tear on their bodies than others.

CR02885

700. Last year a record number of new manufacturing jobs were created. Will this year bring another record? Well, **any new manufacturing job is created either within an existing company or by the start-up of a new company**. Within existing firms, new jobs have been created this year at well below last year's record pace. At the same time, there is considerable evidence that the number of new companies starting up this year will be no higher than it was last year and **there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups**. So clearly, the number of new jobs created this year will fall short of last year's record.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first provides evidence in support of the main conclusion of the argument; the second is a claim that the argument challenges.

(B) The first is a generalization that the argument seeks to establish; the second is a conclusion that the argument draws in order to support that generalization.

(C) The first is a generalization that the argument seeks to establish; the second is a judgment that has been advanced in order to challenge that generalization.

(D) The first is presented as an obvious truth on which the argument is based; the second is a claim that has been advanced in support of a position that the argument opposes.

(E) The first is presented as an obvious truth on which the argument is based; the second is a judgment advanced in support of the main conclusion of the argument.

CR02886

701. Last year a record number of new manufacturing jobs were created. Will this year bring another record? Well, **any new manufacturing job is created either within an existing company or by the start-up of a new company**. Within existing firms, new jobs have been created this year at well below last year's record pace. At the same time, there is considerable evidence that the number of new companies starting up will be no higher this year than it was last year and there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups. So clearly, **the number of new jobs created this year will fall short of last year's record**.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first is presented as an obvious truth on which the argument is based; the second is the main conclusion of the argument.

(B) The first is presented as an obvious truth on which the argument is based; the second is a conclusion drawn in order to support the main conclusion of the argument.

(C) The first and the second each provide evidence in support of the main conclusion of the argument.

(D) The first is a generalization that the argument seeks to establish; the second is the main conclusion of the argument.

(E) The first is a generalization that the argument seeks to establish; the second is a conclusion that has been drawn in order to challenge that generalization.

CR00827

702. In Stenland, many workers have been complaining that they cannot survive on minimum wage, the lowest wage an employer is permitted to pay. The government is proposing to raise the minimum wage. Many employers who pay their workers the current minimum wage argue that if it is raised, unemployment will increase because they will no longer be able to afford to employ as many workers.

Which of the following, if true in Stenland, most strongly supports the claim that raising the minimum wage there will not have the effects that the employers predict?

(A) For any position with wages below a living wage, the difficulty of finding and retaining employees adds as much to employment costs as would raising wages.

(B) Raising the minimum wage does not also increase the amount employers have to contribute in employee benefits.

(C) When inflation is taken into account, the proposed new minimum wage is not as high as the current one was when it was introduced.

(D) Many employees currently being paid wages at the level of the proposed new minimum wage will demand significant wage increases.

(E) Many employers who pay some workers only the minimum wage also pay other workers wages that are much higher than the minimum.

CR07810

703. Biologists with a predilection for theory have tried—and largely failed—to define what it is that makes something a living thing. Organisms take in energy-providing materials and excrete waste products, but so do automobiles. Living things replicate and take part in evolution, but so do some computer programs. We must be open to the possibility that there are living things on other planets. Therefore, we will not be successful in defining what it is that makes something a living thing merely by examining living things on Earth—the only ones we know. Trying to do so is analogous to trying to specify _____.

Which of the following most logically completes the passage?

(A) the laws of physics by using pure mathematics

(B) what a fish is by listing its chemical components

(C) what an animal is by examining a plant

(D) what a machine is by examining a sketch of it

(E) what a mammal is by examining a zebra

CR74541.01

704. For the period from the eighth century through the eleventh century, the shifting boundaries between Kingdom F and Kingdom G have not been well charted. Although a certain village in a border region between the two kingdoms usually belonged to Kingdom G, ninth-century artifacts found in the village were in the typical Kingdom F style of that time. It is unclear whether the village was actually a part of Kingdom F in the ninth century or whether it was a part of Kingdom G but had merely adopted Kingdom F's artistic styles under Kingdom F's cultural influence.

Which of the following would, if found in ninth-century sites in the village, best help in determining whether the village was a part of Kingdom F or Kingdom G in the ninth century?

(A) A trading contract written in the Kingdom G dialect

(B) A drawing of a dwelling complex known to have existed on the border of Kingdom F and Kingdom G in the ninth century

(C) Knives and other utensils made from metal typical of ninth-century mining sites in Kingdom F

(D) Some fragments of pottery made in the Kingdom G style from the seventh century out of materials only found in Kingdom F

(E) Numerous teeth from the ninth century with a chemical signature typical only of teeth from people who had grown up in the heart of Kingdom F

CR02829

705. Sammy: For my arthritis, I am going to try my aunt's diet: large amounts of wheat germ and garlic. She was able to move more easily right after she started that diet.

Pat: When my brother began that diet, his arthritis got worse. But he has been doing much better since he stopped eating vegetables in the nightshade family, such as tomatoes and peppers.

Which of the following, if true, would provide a basis for explaining the fact that Sammy's aunt and Pat's brother had contrasting experiences with the same diet?

(A) A change in diet, regardless of the nature of the change, frequently brings temporary relief from arthritis symptoms.

(B) The compounds in garlic that can lessen the symptoms of arthritis are also present in tomatoes and peppers.

(C) Arthritis is a chronic condition whose symptoms improve and worsen from time to time without regard to diet.

(D) In general, men are more likely to have their arthritis symptoms alleviated by avoiding vegetables in the nightshade family than are women.

(E) People who are closely related are more likely to experience the same result from adopting a particular diet than are people who are unrelated.

CR05756

706. Infotek, a computer manufacturer in Katrovia, has just introduced a new personal computer model that sells for significantly less than any other model. Market research shows, however, that very few Katrovian households without personal computers would buy a computer, regardless of its price. Therefore, introducing the new model is unlikely to increase the number of computers in Katrovian homes.

Which of the following is an assumption on which the argument depends?

(A) Infotek achieved the lower price of the new model by using components of lower quality than those used by other manufacturers.

(B) The main reason cited by consumers in Katrovia for replacing a personal computer is the desire to have an improved model.

(C) Katrovians in households that already have computers are unlikely to purchase the new Infotek model as an additional computer for home use.

(D) The price of other personal computers in Katrovia is unlikely to drop below the price of Infotek's new model in the near future.

(E) Most personal computers purchased in Katrovia are intended for home use.

CR05501

707. Fast-food restaurants make up 45 percent of all restaurants in Canatria. Customers at these restaurants tend to be young; in fact, studies have shown that the older people get, the less likely they are to eat in fast-food restaurants. Since the average age of the Canatrian population is gradually rising and will continue to do so, the number of fast-food restaurants is likely to decrease.

Which of the following, if true, most seriously weakens the argument?

(A) Fast-food restaurants in Canatria are getting bigger, so each one can serve more customers.

(B) Some older people eat at fast-food restaurants more frequently than the average young person.

(C) Many people who rarely eat in fast-food restaurants nevertheless eat regularly in restaurants.

(D) The overall population of Canatria is growing steadily.

(E) As the population of Canatria gets older, more people are eating at home.

CR04805

708. Last year a chain of fast-food restaurants, whose menu had always centered on hamburgers, added its first vegetarian sandwich, much lower in fat than the chain's other offerings. Despite heavy marketing, the new sandwich accounts for a very small proportion of the chain's sales. The sandwich's sales would have to quadruple to cover the costs associated with including it on the menu. Since such an increase is unlikely, the chain would be more profitable if it dropped the sandwich.

Which of the following, if true, most seriously weakens the argument?

(A) Although many of the chain's customers have never tried the vegetarian sandwich, in a market research survey most of those who had tried it reported that they were very satisfied with it.

(B) Many of the people who eat at the chain's restaurants also eat at the restaurants of competing chains and report no strong preference among the competitors.

(C) Among fast-food chains in general, there has been little or no growth in hamburger sales over the past several years as the range of competing offerings at other restaurants has grown.

(D) When even one member of a group of diners is a vegetarian or has a preference for low-fat food, the group tends to avoid restaurants that lack vegetarian or low-fat menu options.

(E) An attempt by the chain to introduce a lower-fat hamburger failed several years ago, since it attracted few new customers and most of the chain's regular customers greatly preferred the taste of the regular hamburgers.

CR03727

709. Transportation expenses accounted for a large portion of the total dollar amount spent on trips for pleasure by residents of the United States in 1997, and about half of the total dollar amount spent on transportation was for airfare. However, the large majority of United States residents who took trips for pleasure in 1997 did not travel by airplane but used other means of transportation.

If the statements above are true, which of the following must also be true about United States residents who took trips for pleasure in 1997?

(A) Most of those who traveled by airplane did so because the airfare to their destination was lower than the cost of other available means of transportation.

(B) Most of those who traveled by airplane did so because other means of transportation to their destination were unavailable.

(C) Per mile traveled, those who traveled by airplane tended to spend more on transportation to their destination than did those who used other means of transportation.

(D) Overall, people who did not travel by airplane had lower average transportation expenses than people who did.

(E) Those who traveled by airplane spent about as much, on average, on other means of transportation as they did on airfare.

CR12051

710. Voters commonly condemn politicians for being insincere, but politicians often must disguise their true feelings when they make public statements. If they expressed their honest views—about, say, their party's policies—then achieving politically necessary compromises would be much more difficult. Clearly, the very insincerity that people decry shows that our government is functioning well.

Which of the following, if true, most seriously undermines this reasoning?

(A) Achieving political compromises is not all that is necessary for the proper functioning of a government.

(B) Some political compromises are not in the best long-term interest of the government.

(C) Voters often judge politicians by criteria other than the sincerity with which they express their views.

(D) A political party's policies could turn out to be detrimental to the functioning of a government.

(E) Some of the public statements made by politicians about their party's policies could in fact be sincere.

CR06728

711. To reduce waste of raw materials, the government of Sperland is considering requiring household appliances to be broken down for salvage when discarded. To cover the cost of salvage, the government is planning to charge a fee, which would be imposed when the appliance is first sold. Imposing the fee at the time of salvage would reduce waste more effectively, however, because consumers tend to keep old appliances longer if they are faced with a fee for discarding them.

Which of the following, if true, most seriously weakens the argument?

(A) Increasing the cost of disposing of an appliance properly increases the incentive to dispose of it improperly.

(B) The fee provides manufacturers with no incentive to produce appliances that are more durable.

(C) For people who have bought new appliances recently, the salvage fee would not need to be paid for a number of years.

(D) People who sell their used, working appliances to others would not need to pay the salvage fee.

(E) Many nonfunctioning appliances that are currently discarded could be repaired at relatively little expense.

CR02866

712. When there is less rainfall than normal, the water level of Australian rivers falls and the rivers flow more slowly. Because algae whose habitat is river water grow best in slow-moving water, the amount of algae per unit of water generally increases when there has been little rain. By contrast, however, following a period of extreme drought, algae levels are low even in very slow-moving river water.

Which of the following, if true, does most to explain the contrast described above?

(A) During periods of extreme drought, the populations of some of the species that feed on algae tend to fall.

(B) The more slowly water moves, the more conducive its temperature is to the growth of algae.

(C) When algae populations reach very high levels, conditions within the river can become toxic for some of the other species that normally live there.

(D) Australian rivers dry up completely for short intervals in periods of extreme drought.

(E) Except during periods of extreme drought, algae levels tend to be higher in rivers in which the flow has been controlled by damming than in rivers that flow freely.

CR04924

713. Increased use of incineration is sometimes advocated as a safe way to dispose of chemical waste. But opponents of incineration point to the 40 incidents involving unexpected releases of dangerous chemical agents that were reported just last year at two existing incinerators commissioned to destroy a quantity of chemical waste material. Since designs for proposed new incinerators include no additional means of preventing such releases, leaks will only become more prevalent if use of incineration increases.

Which of the following, if true, most seriously weakens the argument?

(A) At the two incinerators at which leaks were reported, staff had had only cursory training on the proper procedures for incinerating chemical waste.

(B) Other means of disposing of chemical waste, such as chemical neutralization processes, have not been proven safer than incineration.

(C) The capacity of existing incinerators is sufficient to allow for increased incineration of chemical waste without any need for new incinerators.

(D) The frequency of reports of unexpected releases of chemical agents at newly built incinerators is about the same as the frequency at older incinerators.

(E) In only three of the reported incidents of unexpected chemical leaks did the releases extend outside the property on which the incinerators were located.

CR10049

714. Public health expert: **Increasing the urgency of a public health message may be counterproductive.** In addition to irritating the majority who already behave responsibly, **it may undermine all government pronouncements on health by convincing people that such messages are overly cautious.** And there is no reason to believe that those who ignore measured voices will listen to shouting.

The two sections in boldface play which of the following roles in the public health expert's argument?

(A) The first is a conclusion for which support is provided, but is not the argument's main conclusion; the second is an unsupported premise supporting the argument's main conclusion.

(B) The first is a premise supporting the only explicit conclusion; so is the second.

(C) The first is the argument's main conclusion; the second supports that conclusion and is itself a conclusion for which support is provided.

(D) The first is a premise supporting the argument's only conclusion; the second is that conclusion.

(E) The first is the argument's only explicit conclusion; the second is a premise supporting that conclusion.

CR01163

715. Several industries have recently switched at least partly from older technologies powered by fossil fuels to new technologies powered by electricity. It is thus evident that less fossil fuel is being used as a result of the operations of these industries than would have been used if these industries had retained their older technologies.

Which of the following, if true, most strengthens the argument above?

(A) Many of the industries that have switched at least partly to the new technologies have increased their output.

(B) Less fossil fuel was used to manufacture the machinery employed in the new technologies than was originally used to manufacture the machinery employed in the older technologies.

(C) More electricity is used by those industries that have switched at least partly to the new technologies than by those industries that have not switched.

(D) Some of the industries that have switched at least partly to the new technologies still use primarily technologies that are powered by fossil fuels.

(E) The amount of fossil fuel used to generate the electricity needed to power the new technologies is less than the amount that would have been used to power the older technologies.

CR00792

716. The difference in average annual income in favor of employees who have college degrees, compared with those who do not have such degrees, doubled between 1980 and 1990. Some analysts have hypothesized that increased competition between employers for employees with college degrees drove up income for such employees.

Which of the following, if true, most seriously undermines the explanation described above?

(A) During the 1980s a growing percentage of college graduates, unable to find jobs requiring a college degree, took unskilled jobs.

(B) The average age of all employees increased slightly during the 1980s.

(C) The unemployment rate changed very little throughout most of the 1980s.

(D) From 1980 to 1990 the difference in average income between employees with advanced degrees and those with bachelor's degrees also increased.

(E) During the 1980s there were some employees with no college degree who earned incomes comparable to the top incomes earned by employees with a college degree.

CR01239

717. Which of the following most logically completes the passage?

According to the last pre-election poll in Whippleton, most voters believe that the three problems government needs to address, in order of importance, are pollution, crime, and unemployment. Yet in the election, candidates from parties perceived as strongly against pollution were defeated, while those elected were all from parties with a history of opposing legislation designed to reduce pollution. These results should not be taken to indicate that the poll was inaccurate, however, since _____.

(A) some voters in Whippleton do not believe that pollution needs to be reduced

(B) every candidate who was defeated had a strong antipollution record

(C) there were no issues other than crime, unemployment, and pollution on which the candidates had significant differences of opinion

(D) all the candidates who were elected were perceived as being stronger against both crime and unemployment than the candidates who were defeated

(E) many of the people who voted in the election refused to participate in the poll

CR01153

718. Manufacturing plants in Arundia have recently been acquired in substantial numbers by investors from abroad. Arundian politicians are proposing legislative action to stop such investment, justifying the proposal by arguing that foreign investors, opportunistically exploiting a recent fall in the value of the Arundian currency, were able to buy Arundian assets at less than their true value.

Which of the following, if true, casts the most serious doubt on the adequacy of the Arundian politicians' justification for the proposed legislation?

(A) The Arundian government originally welcomed the fall in the value of the Arundian currency because the fall made Arundian exports more competitive on international markets.

(B) Foreign investors who acquired Arundian manufacturing plants generally did so with no intention of keeping and running those plants over the long term.

(C) Without the recent fall in the value of the Arundian currency, many of the Arundian assets bought by foreign investors would have been beyond the financial reach of those investors.

(D) In Concordia, a country broadly similar to Arundia, the share of manufacturing assets that is foreign-controlled is 60 percent higher than it is in Arundia.

(E) The true value of an investment is determined by the value of the profits from it, and the low value of the Arundian currency has depressed the value of any profits earned by foreign investors from Arundian assets.

CR04964

719. Proposed new safety rules for Beach City airport would lengthen considerably the minimum time between takeoffs from the airport. In consequence, the airport would be able to accommodate 10 percent fewer flights than currently use the airport daily. The city's operating budget depends heavily on taxes generated by tourist spending, and most of the tourists come by plane. Therefore, the proposed new safety rules, if adopted, will reduce the revenue available for the operating budget.

The argument depends on assuming which of the following?

(A) There are no periods of the day during which the interval between flights taking off from the airport is significantly greater than the currently allowed minimum.

(B) Few, if any, of the tourists who use Beach City airport do so when their main destination is a neighboring community and not Beach City itself.

(C) If the proposed safety rules are adopted, the reduction in tourist numbers will not result mainly from a reduction in the number of tourists who spend relatively little in Beach City.

(D) Increasing the minimum time between takeoffs is the only way to achieve necessary safety improvements without a large expenditure by the city government on airport enhancements.

(E) The response to the adoption of the new safety rules would not include a large increase in the number of passengers per flight.

CR01096

720. The introduction of new drugs into the market is frequently prevented by a shortage of human subjects for the clinical trials needed to show that the drugs are safe and effective. Since the lives and health of people in future generations may depend on treatments that are currently experimental, practicing physicians are morally in the wrong when, in the absence of any treatment proven to be effective, they fail to encourage suitable patients to volunteer for clinical trials.

Which of the following, if true, casts most doubt on the conclusion of the argument?

(A) Many drugs undergoing clinical trials are intended for the treatment of conditions for which there is currently no effective treatment.

(B) Patients do not share the physician's professional concern for public health, but everyone has a moral obligation to alleviate suffering when able to do so.

(C) Usually, half the patients in a clinical trial serve as a control group and receive a nonactive drug in place of the drug being tested.

(D) An experimental drug cannot legally be made available to patients unless those patients are subjects in clinical trials of the drug.

(E) Physicians have an overriding moral and legal duty to care for the health and safety of their current patients.

CR01285

721. As a construction material, bamboo is as strong as steel and sturdier than concrete. Moreover, in tropical areas bamboo is a much less expensive construction material than either steel or concrete and is always readily available. In tropical areas, therefore, building with bamboo makes better economic sense than building with steel or concrete, except where land values are high.

Which of the following, if true, most helps to explain the exception noted above?

(A) Buildings constructed of bamboo are less likely to suffer earthquake damage than are steel and concrete buildings.

(B) Bamboo is unsuitable as a building material for multistory buildings.

(C) In order to protect it from being damaged by termites and beetles, bamboo must be soaked, at some expense, in a preservative.

(D) In some tropical areas, bamboo is used to make the scaffolding that is used during large construction projects.

(E) Bamboo growing in an area where land values are increasing is often cleared to make way for construction.

CR00788

722. Newspaper editors should not allow reporters to write the headlines for their own stories. The reason for this is that, while the headlines that reporters themselves write are often clever, what typically makes them clever is that they allude to little-known information that is familiar to the reporter but that never appears explicitly in the story itself.

Which of the following, if true, most strengthens the argument?

(A) The reporter who writes a story is usually better placed than the reporter's editor is to judge what the story's most newsworthy features are.

(B) To write a headline that is clever, a person must have sufficient understanding of the story that the headline accompanies.

(C) Most reporters rarely bother to find out how other reporters have written stories and headlines about the same events that they themselves have covered.

(D) For virtually any story that a reporter writes, there are at least a few people who know more about the story's subject matter than does the reporter.

(E) The kind of headlines that newspaper editors want are those that anyone who has read a reporter's story in its entirety will recognize as clever.

CR03251

723. Scientists have modified feed corn genetically, increasing its resistance to insect pests. Farmers who tried out the genetically modified corn last season applied less insecticide to their corn fields and still got yields comparable to those they would have gotten with ordinary corn. Ordinary corn seed, however, costs less, and what these farmers saved on insecticide rarely exceeded their extra costs for seed. Therefore, for most feed-corn farmers, switching to genetically modified seed would be unlikely to increase profits.

Which of the following would it be most useful to know in order to evaluate the argument?

(A) Whether there are insect pests that sometimes reduce feed-corn yields, but against which commonly used insecticides and the genetic modification are equally ineffective

(B) Whether the price that farmers receive for feed corn has remained steady over the past few years

(C) Whether the insecticides typically used on feed corn tend to be more expensive than insecticides typically used on other crops

(D) Whether most of the farmers who tried the genetically modified corn last season applied more insecticide than was actually necessary

(E) Whether, for most farmers who plant feed corn, it is their most profitable crop

CR07318

724. Debater: The average amount of overtime per month worked by an employee in the manufacturing division of the Haglut Corporation is 14 hours. Most employees of the Haglut Corporation work in the manufacturing division. Furthermore, the average amount of overtime per month worked by any employee in the company generally does not fluctuate much from month to month. Therefore, each month, most employees of the Haglut Corporation almost certainly work at least some overtime.

The debater's argument is most vulnerable to criticism on which of these grounds?

(A) It takes for granted that the manufacturing division is a typical division of the corporation with regard to the average amount of overtime its employees work each month.

(B) It takes for granted that if a certain average amount of overtime is worked each month by each employee of the Haglut Corporation, then approximately the same amount of overtime must be worked each month by each employee of the manufacturing division.

(C) It confuses a claim from which the argument's conclusion about the Haglut Corporation would necessarily follow with a claim that would follow from the argument's conclusion only with a high degree of probability.

(D) It overlooks the possibility that even if, on average, a certain amount of overtime is worked by the members of some group, many members of that group may work no overtime at all.

(E) It overlooks the possibility that even if most employees of the corporation work some overtime each month, any one corporate employee may, in some months, work no overtime.

CR05446

725. Proponents of the recently introduced tax on sales of new luxury boats had argued that a tax of this sort would be an equitable way to increase government revenue because the admittedly heavy tax burden would fall only on wealthy people and neither they nor anyone else would suffer any economic hardship. In fact, however, 20 percent of the workers employed by manufacturers of luxury boats have lost their jobs as a direct result of this tax.

The information given, if true, most strongly supports which of the following?

(A) The market for luxury boats would have collapsed even if the new tax on luxury boats had been lower.

(B) The new tax would produce a net gain in tax revenue for the government only if the yearly total revenue that it generates exceeds the total of any yearly tax-revenue decrease resulting from the workers' loss of jobs.

(C) Because many people never buy luxury items, imposing a sales tax on luxury items is the kind of legislative action that does not cost incumbent legislators much popular support.

(D) Before the tax was instituted, luxury boats were largely bought by people who were not wealthy.

(E) Taxes can be equitable only if their burden is evenly distributed over the entire population.

CR05191

726. In Wareland last year, 16 percent of licensed drivers under 21 and 11 percent of drivers ages 21–24 were in serious accidents. By contrast, only 3 percent of licensed drivers 65 and older were involved in serious accidents. These figures clearly show that the greater experience and developed habits of caution possessed by drivers in the 65-and-older group make them far safer behind the wheel than the younger drivers are.

Which of the following is an assumption on which the argument depends?

(A) Drivers 65 and older do not, on average, drive very many fewer miles per year than drivers 24 and younger.

(B) Drivers 65 and older do not constitute a significantly larger percentage of licensed drivers in Wareland than drivers ages 18–24 do.

(C) Drivers 65 and older are less likely than are drivers 24 and younger to drive during weather conditions that greatly increase the risk of accidents.

(D) The difference between the accident rate of drivers under 21 and of those ages 21–24 is attributable to the greater driving experience of those in the older group.

(E) There is no age bracket for which the accident rate is lower than it is for licensed drivers 65 and older.

CR05614

727. In the past the country of Malvernia has relied heavily on imported oil. Malvernia recently implemented a program to convert heating systems from oil to natural gas. Malvernia currently produces more natural gas each year than it uses, and oil production in Malvernian oil fields is increasing at a steady pace. If these trends in fuel production and usage continue, therefore, Malvernian reliance on foreign sources for fuel is likely to decline soon.

Which of the following would it be most useful to establish in evaluating the argument?

(A) When, if ever, will production of oil in Malvernia outstrip production of natural gas?

(B) Is Malvernia among the countries that rely most on imported oil?

(C) What proportion of Malvernia's total energy needs is met by hydroelectric, solar, and nuclear power?

(D) Is the amount of oil used each year in Malvernia for generating electricity and fuel for transportation increasing?

(E) Have any existing oil-burning heating systems in Malvernia already been converted to natural-gas-burning heating systems?

CR03618

728. Exposure to certain chemicals commonly used in elementary schools as cleaners or pesticides causes allergic reactions in some children. Elementary school nurses in Renston report that the proportion of schoolchildren sent to them for treatment of allergic reactions to those chemicals has increased significantly over the past ten years. Therefore, either Renston's schoolchildren have been exposed to greater quantities of the chemicals, or they are more sensitive to them than schoolchildren were ten years ago.

Which of the following is an assumption on which the argument depends?

(A) The number of school nurses employed by Renston's elementary schools has not decreased over the past ten years.

(B) Children who are allergic to the chemicals are no more likely than other children to have allergies to other substances.

(C) Children who have allergic reactions to the chemicals are not more likely to be sent to a school nurse now than they were ten years ago.

(D) The chemicals are not commonly used as cleaners or pesticides in houses and apartment buildings in Renston.

(E) Children attending elementary school do not make up a larger proportion of Renston's population now than they did ten years ago.

CR01854

729. Normally, the pineal gland governs a person's sleep-wake cycle by secreting melatonin in response to the daily cycle of light and darkness as detected by the eye. Nonetheless, many people who are totally blind due to lesions in the visual cortex of the brain easily maintain a 24-hour sleep-wake cycle. So the neural pathway by which the pineal gland receives information from the eye probably does not pass through the visual cortex.

For purposes of evaluating the argument it would be most useful to establish which of the following?

(A) Whether melatonin supplements help people who have difficulty maintaining a 24-hour sleep cycle to establish such a pattern

(B) Whether the melatonin levels of most totally blind people who successfully maintain a 24-hour sleep-wake cycle change in response to changes in exposure to light and darkness

(C) Whether melatonin is the only substance secreted by the pineal gland

(D) Whether most people who do not have a 24-hour sleep-wake cycle nevertheless have a cycle of consistent duration

(E) Whether there are any people with normal vision whose melatonin levels respond abnormally to periods of light and darkness

CR00942

730. **In countries where automobile insurance includes compensation for whiplash injuries sustained in automobile accidents, reports of having suffered such injuries are twice as frequent as they are in countries where whiplash is not covered.** Presently, no objective test for whiplash exists, so it is true that spurious reports of whiplash injuries cannot be readily identified. Nevertheless, these facts do not warrant the conclusion drawn by some commentators that in the countries with the higher rates of reported whiplash injuries, half of the reported cases are spurious. Clearly, **in countries where automobile insurance does not include compensation for whiplash, people often have little incentive to report whiplash injuries that they actually have suffered.**

In the argument given, the two boldfaced portions play which of the following roles?

(A) The first is a claim that the argument disputes; the second is a conclusion that has been based on that claim.

(B) The first is a claim that has been used to support a conclusion that the argument accepts; the second is that conclusion.

(C) The first is evidence that has been used to support a conclusion for which the argument provides further evidence; the second is the main conclusion of the argument.

(D) The first is a finding whose implications are at issue in the argument; the second is a claim presented in order to argue against deriving certain implications from that finding.

(E) The first is a finding whose accuracy is evaluated in the argument; the second is evidence presented to establish that the finding is accurate.

CR03859

731. Last year Comfort Airlines had twice as many delayed flights as the year before, but the number of complaints from passengers about delayed flights went up three times. It is unlikely that this disproportionate increase in complaints was rooted in an increase in overall dissatisfaction with the service Comfort Airlines provides, since the airline made a special effort to improve other aspects of its service last year.

Which of the following, if true, most helps to explain the disproportionate increase in customer complaints?

(A) Comfort Airlines had more flights last year than the year before.

(B) Last year a single period of unusually bad weather caused a large number of flights to be delayed.

(C) Some of the improvements that Comfort Airlines made in its service were required by new government regulations.

(D) The average length of a flight delay was greater last year than it was the year before.

(E) The average number of passengers per flight was no higher last year than the year before.

CR01337

732. Last year a global disturbance of weather patterns disrupted harvests in many of the world's important agricultural areas. Worldwide production of soybeans, an important source of protein for people and livestock alike, was not adversely affected, however. Indeed, last year's soybean crop was actually slightly larger than average. Nevertheless, the weather phenomenon is probably responsible for a recent increase in the world price of soybeans.

Which of the following, if true, provides the strongest justification for the attribution of the increase in soybean prices to the weather phenomenon?

(A) Last year's harvest of anchovies, which provide an important protein source for livestock, was disrupted by the effects of the weather phenomenon.

(B) Most countries that produce soybeans for export had above-average harvests of a number of food crops other than soybeans last year.

(C) The world price of soybeans also rose several years ago, immediately after an earlier occurrence of a similar global weather disturbance.

(D) Heavy rains attributable to the weather phenomenon improved grazing pastures last year, allowing farmers in many parts of the world to reduce their dependence on supplemental feed.

(E) Prior to last year, soybean prices had been falling for several years.

CR03541

733. Most of the year, the hermit thrush, a North American songbird, eats a diet consisting mainly of insects, but in autumn, as the thrushes migrate to their Central and South American wintering grounds, they feed almost exclusively on wild berries. Wild berries, however, are not as rich in calories as insects, yet thrushes need to consume plenty of calories in order to complete their migration. One possible explanation is that berries contain other nutrients that thrushes need for migration and that insects lack.

Which of the following, if true, most seriously calls into question the explanation given for the thrush's diet during migration?

(A) Hermit thrushes, if undernourished, are unable to complete their autumn migration before the onset of winter.

(B) Insect species contain certain nutrients that are not found in wild berries.

(C) For songbirds, catching insects requires the expenditure of significantly more calories than eating wild berries does.

(D) Along the hermit thrushes' migration routes, insects are abundant throughout the migration season.

(E) There are some species of wild berries that hermit thrushes generally do not eat, even though these berry species are exceptionally rich in calories.

CR01879

734. The kinds of hand and wrist injuries that result from extended use of a computer while maintaining an incorrect posture are common among schoolchildren in Harnville. Computers are important to the school curriculum there, so instead of reducing the amount their students use computers, teachers plan to bring about a sharp reduction in the number of these injuries by carefully monitoring their students' posture when using computers in the classroom.

Which of the following would it be most useful to know in order to assess the likelihood that the teachers' plan will be successful?

(A) Whether extended use of a computer while maintaining incorrect posture can cause injuries other than hand and wrist injuries

(B) Whether hand and wrist injuries not caused by computer use are common among schoolchildren in Harnville

(C) What proportion of schoolchildren in Harnville with hand and wrist injuries use computers extensively outside the classroom

(D) Whether changes in the curriculum could reduce the schools' dependence on computers

(E) What proportion of schoolchildren in Harnville already use correct posture while using a computer

CR04718

735. A certain cultivated herb is one of a group of closely related plants that thrive in soil with high concentrations of metals that are toxic to most other plants. Agronomists studying the growth of this herb have discovered that it produces large amounts of histidine, an amino acid that, in test-tube solutions, renders these metals chemically inert. Hence, the herb's high histidine production must be the key feature that allows it to grow in metal-rich soils.

In evaluating the argument, it would be most important to determine which of the following?

(A) Whether the herb can thrive in soil that does not have high concentrations of the toxic metals

(B) Whether others of the closely related group of plants also produce histidine in large quantities

(C) Whether the herb's high level of histidine production is associated with an unusually low level of production of some other amino acid

(D) Whether growing the herb in soil with high concentrations of the metals will, over time, reduce their concentrations in the soil

(E) Whether the concentration of histidine in the growing herb declines as the plant approaches maturity

CR01293

736. Many people suffer an allergic reaction to certain sulfites, including those that are commonly added to wine as preservatives. However, since there are several winemakers who add sulfites to none of the wines they produce, people who would like to drink wine but are allergic to sulfites can drink wines produced by these winemakers without risking an allergic reaction to sulfites.

Which of the following is an assumption on which the argument depends?

(A) These winemakers have been able to duplicate the preservative effect produced by adding sulfites by means that do not involve adding any potentially allergenic substances to their wine.

(B) Not all forms of sulfite are equally likely to produce the allergic reaction.

(C) Wine is the only beverage to which sulfites are commonly added.

(D) Apart from sulfites, there are no substances commonly present in wine that give rise to an allergic reaction.

(E) Sulfites are not naturally present in the wines produced by these winemakers in amounts large enough to produce an allergic reaction in someone who drinks these wines.

CR11447

737. A new law gives ownership of patents—documents providing exclusive right to make and sell an invention—to universities, not the government, when those patents result from government-sponsored university research. Administrators at Logos University plan to sell any patents they acquire to corporations in order to fund programs to improve undergraduate teaching.

Which of the following, if true, would cast the most doubt on the viability of the college administrators' plan described above?

(A) Profit-making corporations interested in developing products based on patents held by universities are likely to try to serve as exclusive sponsors of ongoing university research projects.

(B) Corporate sponsors of research in university facilities are entitled to tax credits under new federal tax-code guidelines.

(C) Research scientists at Logos University have few or no teaching responsibilities and participate little if at all in the undergraduate programs in their field.

(D) Government-sponsored research conducted at Logos University for the most part duplicates research already completed by several profitmaking corporations.

(E) Logos University is unlikely to attract corporate sponsorship of its scientific research.

CR01848

738. Since it has become known that **several of a bank's top executives have been buying shares in their own bank,** the bank's depositors, who had been worried by rumors that the bank faced impending financial collapse, have been greatly relieved. They reason that, since top executives evidently have faith in the bank's financial soundness, those worrisome rumors must be false. Such reasoning might well be overoptimistic, however, since **corporate executives have been known to buy shares in their own company in a calculated attempt to dispel negative rumors about the company's health.**

In the argument given, the two boldfaced portions play which of the following roles?

(A) The first describes evidence that has been taken as supporting a conclusion; the second gives a reason for questioning that support.

(B) The first describes evidence that has been taken as supporting a conclusion; the second states a contrary conclusion that is the main conclusion of the argument.

(C) The first provides evidence in support of the main conclusion of the argument; the second states that conclusion.

(D) The first describes the circumstance that the argument as a whole seeks to explain; the second gives the explanation that the argument seeks to establish.

(E) The first describes the circumstance that the argument as a whole seeks to explain; the second provides evidence in support of the explanation that the argument seeks to establish.

CR03814

739. Between 1980 and 2000 the sea otter population of the Aleutian Islands declined precipitously. There were no signs of disease or malnutrition, so there was probably an increase in the number of otters being eaten by predators. Orcas will eat otters when seals, their normal prey, are unavailable, and the Aleutian Islands seal population declined dramatically in the 1980s. Therefore, orcas were most likely the immediate cause of the otter population decline.

Which of the following, if true, most strengthens the argument?

(A) The population of sea urchins, the main food of sea otters, has increased since the sea otter population declined.

(B) Seals do not eat sea otters, nor do they compete with sea otters for food.

(C) Most of the surviving sea otters live in a bay that is inaccessible to orcas.

(D) The population of orcas in the Aleutian Islands has declined since the 1980s.

(E) An increase in commercial fishing near the Aleutian Islands in the 1980s caused a slight decline in the population of the fish that seals use for food.

CR05960

740. Studies in restaurants show that the tips left by customers who pay their bill in cash tend to be larger when the bill is presented on a tray that bears a credit-card logo. Consumer psychologists hypothesize that simply seeing a credit-card logo makes many credit-card holders willing to spend more because it reminds them that their spending power exceeds the cash they have immediately available.

Which of the following, if true, most strongly supports the psychologists' interpretation of the studies?

(A) The effect noted in the studies is not limited to patrons who have credit cards.

(B) Patrons who are under financial pressure from their credit-card obligations tend to tip less when presented with a restaurant bill on a tray with a credit-card logo than when the tray has no logo.

(C) In virtually all of the cases in the studies, the patrons who paid bills in cash did not possess credit cards.

(D) In general, restaurant patrons who pay their bills in cash leave larger tips than do those who pay by credit card.

(E) The percentage of restaurant bills paid with a given brand of credit card increases when that credit card's logo is displayed on the tray with which the bill is presented.

CR11633

741. In an experiment, each volunteer was allowed to choose between an easy task and a hard task and was told that another volunteer would do the other task. Each volunteer could also choose to have a computer assign the two tasks randomly. Most volunteers chose the easy task for themselves and under questioning later said they had acted fairly. But when the scenario was described to another group of volunteers, almost all said choosing the easy task would be unfair. This shows that most people apply weaker moral standards to themselves than to others.

Which of the following is an assumption required by this argument?

(A) At least some volunteers who said they had acted fairly in choosing the easy task would have said that it was unfair for someone else to do so.

(B) The most moral choice for the volunteers would have been to have the computer assign the two tasks randomly.

(C) There were at least some volunteers who were assigned to do the hard task and felt that the assignment was unfair.

(D) On average, the volunteers to whom the scenario was described were more accurate in their moral judgments than the other volunteers were.

(E) At least some volunteers given the choice between assigning the tasks themselves and having the computer assign them felt that they had made the only fair choice available to them.

CR08527

742. Country X's recent stock-trading scandal should not diminish investors' confidence in the country's stock market. For one thing, **the discovery of the scandal confirms that Country X has a strong regulatory system**, as the following considerations show. In any stock market, some fraudulent activity is inevitable. If a stock market is well regulated, any significant stock-trading fraud in it will very likely be discovered. This deters potential perpetrators and facilitates improvement in regulatory processes.

In the argument, the portion in boldface plays which of the following roles?

(A) It is the argument's only conclusion.

(B) It is a conclusion for which the argument provides support and which itself is used to support the argument's main conclusion.

(C) It is the argument's main conclusion and is supported by another explicitly stated conclusion for which further support is provided.

(D) It is an assumption for which no explicit support is provided and is used to support the argument's only conclusion.

(E) It is a compound statement containing both the argument's main conclusion and an assumption used to support that conclusion.

CR05644

743. **Delta Products Inc. has recently switched at least partly from older technologies using fossil fuels to new technologies powered by electricity.** The question has been raised whether it can be concluded that **for a given level of output Delta's operation now causes less fossil fuel to be consumed than it did formerly.** The answer, clearly, is yes, since the amount of fossil fuel used to generate the electricity needed to power the new technologies is less than the amount needed to power the older technologies, provided level of output is held constant.

In the argument given, the two boldfaced portions play which of the following roles?

(A) The first identifies the content of the conclusion of the argument; the second provides support for that conclusion.

(B) The first provides support for the conclusion of the argument; the second identifies the content of that conclusion.

(C) The first states the conclusion of the argument; the second calls that conclusion into question.

(D) The first provides support for the conclusion of the argument; the second calls that conclusion into question.

(E) Each provides support for the conclusion of the argument.

CR00907

744. Theater Critic: The play *La Finestrina,* now at Central Theater, was written in Italy in the eighteenth century. The director claims that this production is as similar to the original production as is possible in a modern theater. Although the actor who plays Harlequin the clown gives a performance very reminiscent of the twentieth-century American comedian Groucho Marx, Marx's comic style was very much within the comic acting tradition that had begun in sixteenth-century Italy.

The considerations given best serve as part of an argument that

(A) modern audiences would find it hard to tolerate certain characteristics of a historically accurate performance of an eighteenth-century play

(B) Groucho Marx once performed the part of the character Harlequin in *La Finestrina*

(C) in the United States the training of actors in the twentieth century is based on principles that do not differ radically from those that underlay the training of actors in eighteenth-century Italy

(D) the performance of the actor who plays Harlequin in *La Finestrina* does not serve as evidence against the director's claim

(E) the director of *La Finestrina* must have advised the actor who plays Harlequin to model his performance on comic performances of Groucho Marx

CR07257

745. Although the discount stores in Goreville's central shopping district are expected to close within five years as a result of competition from a SpendLess discount department store that just opened, those locations will not stay vacant for long. In the five years since the opening of Colson's, a nondiscount department store, a new store has opened at the location of every store in the shopping district that closed because it could not compete with Colson's.

Which of the following, if true, most seriously weakens the argument?

(A) Many customers of Colson's are expected to do less shopping there than they did before the SpendLess store opened.

(B) Increasingly, the stores that have opened in the central shopping district since Colson's opened have been discount stores.

(C) At present, the central shopping district has as many stores operating in it as it ever had.

(D) Over the course of the next five years, it is expected that Goreville's population will grow at a faster rate than it has for the past several decades.

(E) Many stores in the central shopping district sell types of merchandise that are not available at either SpendLess or Colson's.

CR05685

746. Last year all refuse collected by Shelbyville city services was incinerated. This incineration generated a large quantity of residual ash. In order to reduce the amount of residual ash Shelbyville generates this year to half of last year's total, the city has revamped its collection program. This year city services will separate for recycling enough refuse to reduce the number of truckloads of refuse to be incinerated to half of last year's number.

Which of the following is required for the revamped collection program to achieve its aim?

(A) This year, no materials that city services could separate for recycling will be incinerated.

(B) Separating recyclable materials from materials to be incinerated will cost Shelbyville less than half what it cost last year to dispose of the residual ash.

(C) Refuse collected by city services will contain a larger proportion of recyclable materials this year than it did last year.

(D) The refuse incinerated this year will generate no more residual ash per truckload incinerated than did the refuse incinerated last year.

(E) The total quantity of refuse collected by Shelbyville city services this year will be no greater than that collected last year.

CR01801

747. Veterinarians generally derive some of their income from selling several manufacturers' lines of pet-care products. Knowing that pet owners rarely throw away mail from their pet's veterinarian unread, one manufacturer of pet-care products offered free promotional materials on its products to veterinarians for mailing to their clients. Very few veterinarians accepted the offer, however, even though the manufacturer's products are of high quality.

Which of the following, if true, most helps to explain the veterinarians' reaction to the manufacturer's promotional scheme?

(A) Most of the veterinarians to whom the free promotional materials were offered were already selling the manufacturer's pet-care products to their clients.

(B) The special promotional materials were intended as a supplement to the manufacturer's usual promotional activities rather than as a replacement for them.

(C) The manufacturer's products, unlike most equally good competing products sold by veterinarians, are also available in pet stores and in supermarkets.

(D) Many pet owners have begun demanding quality in products they buy for their pets that is as high as that in products they buy for themselves.

(E) Veterinarians sometimes recommend that pet owners use products formulated for people when no suitable product specially formulated for animals is available.

CR00778

748. The average hourly wage of television assemblers in Vernland has long been significantly lower than that in neighboring Borodia. Since Borodia dropped all tariffs on Vernlandian televisions three years ago, the number of televisions sold annually in Borodia has not changed. However, recent statistics show a drop in the number of television assemblers in Borodia. Therefore, updated trade statistics will probably indicate that the number of televisions Borodia imports annually from Vernland has increased.

Which of the following is an assumption on which the argument depends?

(A) The number of television assemblers in Vernland has increased by at least as much as the number of television assemblers in Borodia has decreased.

(B) Televisions assembled in Vernland have features that televisions assembled in Borodia do not have.

(C) The average number of hours it takes a Borodian television assembler to assemble a television has not decreased significantly during the past three years.

(D) The number of televisions assembled annually in Vernland has increased significantly during the past three years.

(E) The difference between the hourly wage of television assemblers in Vernland and the hourly wage of television assemblers in Borodia is likely to decrease in the next few years.

CR05725

749. Guidebook writer: I have visited hotels throughout the country and have noticed that in those built before 1930 the quality of the original carpentry work is generally superior to that in hotels built afterward. Clearly carpenters working on hotels before 1930 typically worked with more skill, care, and effort than carpenters who have worked on hotels built subsequently.

Which of the following, if true, most seriously weakens the guidebook writer's argument?

(A) The quality of original carpentry in hotels is generally far superior to the quality of original carpentry in other structures, such as houses and stores.

(B) Hotels built since 1930 can generally accommodate more guests than those built before 1930.

(C) The materials available to carpenters working before 1930 were not significantly different in quality from the materials available to carpenters working after 1930.

(D) The better the quality of original carpentry in a building, the less likely that building is to fall into disuse and be demolished.

(E) The average length of apprenticeship for carpenters has declined significantly since 1930.

CR02997

750. Scientists typically do their most creative work before the age of forty. It is commonly thought that this happens because aging by itself brings about a loss of creative capacity. However, studies show that **of scientists who produce highly creative work beyond the age of forty, a disproportionately large number entered their field at an older age than is usual**. Since by the age of forty the large majority of scientists have been working in their field for at least fifteen years, the studies' finding strongly suggests that the real reason why scientists over forty rarely produce highly creative work is not that they have aged but rather that **scientists over forty have generally spent too long in their field**.

In the argument given, the two portions in boldface play which of the following roles?

(A) The first is a claim, the accuracy of which is at issue in the argument; the second is a conclusion drawn on the basis of that claim.

(B) The first is an objection that has been raised against a position defended in the argument; the second is that position.

(C) The first is evidence that has been used to support an explanation that the argument challenges; the second is that explanation.

(D) The first is evidence that has been used to support an explanation that the argument challenges; the second is a competing explanation that the argument favors.

(E) The first provides evidence to support an explanation that the argument favors; the second is that explanation.

CR03818

751. NorthAir charges low fares for its economy-class seats, but it provides very cramped seating and few amenities. Market research shows that economy passengers would willingly pay more for wider seating and better service, and additional revenue provided by these higher ticket prices would more than cover the additional cost of providing these amenities. Even though NorthAir is searching for ways to improve its profitability, it has decided not to make these improvements.

Which of the following, if true, would most help to explain NorthAir's decision in light of its objectives?

(A) None of NorthAir's competitors offers significantly better seating and service to economy-class passengers than NorthAir does.

(B) On many of the routes that NorthAir flies, it is the only airline to offer direct flights.

(C) A few of NorthAir's economy-class passengers are satisfied with the service they receive, given the low price they pay.

(D) Very few people avoid flying on NorthAir because of the cramped seating and poor service offered in economy class.

(E) The number of people who would be willing to pay the high fares NorthAir charges for its business-class seats would decrease if its economy-class seating were more acceptable.

CR00774

752. Which of the following most logically completes the argument given?

Asthma, a chronic breathing disorder, is significantly more common today among adult competitive swimmers than it is among competitive athletes who specialize in other sports. Although chlorine is now known to be a lung irritant and swimming pool water is generally chlorinated, it would be rash to assume that frequent exposure to chlorine is the explanation of the high incidence of asthma among these swimmers, since _____.

(A) young people who have asthma are no more likely to become competitive athletes than are young people who do not have asthma

(B) competitive athletes who specialize in sports other than swimming are rarely exposed to chlorine

(C) competitive athletes as a group have a significantly lower incidence of asthma than do people who do not participate in competitive athletics

(D) until a few years ago, physicians routinely recommended competitive swimming to children with asthma, in the belief that this form of exercise could alleviate asthma symptoms

(E) many people have asthma without knowing they have it and thus are not diagnosed with the condition until they begin engaging in very strenuous activities, such as competitive athletics

CR01289

753. In the country of Marut, the Foreign Trade Agency's records were reviewed in 1994 in light of information then newly available about neighboring Goro. The review revealed that in every year since 1963, the agency's projection of what Goro's gross national product (GNP) would be five years later was a serious underestimate. The review also revealed that in every year since 1963, the agency estimated Goro's GNP for the previous year—a Goro state secret—very accurately.

Of the following claims, which is most strongly supported by the statements given?

(A) Goro's GNP fluctuated greatly between 1963 and 1994.

(B) Prior to 1995, Goro had not released data intended to mislead the agency in making its five-year projections.

(C) The amount by which the agency underestimated the GNP it projected for Goro tended to increase over time.

(D) Even before the new information came to light, the agency had reason to think that at least some of the five-year projections it had made were inaccurate.

(E) The agency's five-year projections of Goro's GNP had no impact on economic planning in Marut.

CR05082

754. Vargonia has just introduced a legal requirement that student-teacher ratios in government-funded schools not exceed a certain limit. All Vargonian children are entitled to education, free of charge, in these schools. When a recession occurs and average incomes fall, the number of children enrolled in government-funded schools tends to increase. Therefore, though most employment opportunities contract in economic recessions, getting a teaching job in Vargonia's government-funded schools will not be made more difficult by a recession.

Which of the following would be most important to determine in order to evaluate the argument?

(A) Whether in Vargonia there are any schools not funded by the government that offer children an education free of charge

(B) Whether the number of qualified applicants for teaching positions in government-funded schools increases significantly during economic recessions

(C) What the current student-teacher ratio in Vargonia's government-funded schools is

(D) What proportion of Vargonia's workers currently hold jobs as teachers in government-funded schools

(E) Whether in the past a number of government-funded schools in Vargonia have had student-teacher ratios well in excess of the new limit

CR09951

755. In Colorado subalpine meadows, nonnative dandelions co-occur with a native flower, the larkspur. Bumblebees visit both species, creating the potential for interactions between the two species with respect to pollination. In a recent study, researchers selected 16 plots containing both species; all dandelions were removed from eight plots; the remaining eight control plots were left undisturbed. The control plots yielded significantly more larkspur seeds than the dandelion-free plots, leading the researchers to conclude that the presence of dandelions facilitates pollination (and hence seed production) in the native species by attracting more pollinators to the mixed plots.

Which of the following, if true, most seriously undermines the researchers' reasoning?

(A) Bumblebees preferentially visit dandelions over larkspurs in mixed plots.

(B) In mixed plots, pollinators can transfer pollen from one species to another to augment seed production.

(C) If left unchecked, nonnative species like dandelions quickly crowd out native species.

(D) Seed germination is a more reliable measure of a species' fitness than seed production.

(E) Soil disturbances can result in fewer blooms, and hence lower seed production.

CR11453

756. An experiment was done in which human subjects recognize a pattern within a matrix of abstract designs and then select another design that completes that pattern. The results of the experiment were surprising. The lowest expenditure of energy in neurons in the brain was found in those subjects who performed most successfully in the experiments.

Which of the following hypotheses best accounts for the findings of the experiment?

(A) The neurons of the brain react less when a subject is trying to recognize patterns than when the subject is doing other kinds of reasoning.

(B) Those who performed best in the experiment experienced more satisfaction when working with abstract patterns than did those who performed less well.

(C) People who are better at abstract pattern recognition have more energy-efficient neural connections.

(D) The energy expenditure of the subjects' brains increases when a design that completes the initially recognized pattern is determined.

(E) The task of completing a given design is more capably performed by athletes, whose energy expenditure is lower when they are at rest.

CR01202

757. With seventeen casinos, Moneyland operates the most casinos in a certain state. Although intent on expanding, it was outmaneuvered by Apex Casinos in negotiations to acquire the Eldorado chain. To complete its acquisition of Eldorado, Apex must sell five casinos to comply with a state law forbidding any owner to operate more than one casino per county. Since Apex will still be left operating twenty casinos in the state, it will then have the most casinos in the state.

Which of the following, if true, most seriously undermines the prediction?

(A) Apex, Eldorado, and Moneyland are the only organizations licensed to operate casinos in the state.

(B) The majority of Eldorado's casinos in the state will need extensive renovations if they are to continue to operate profitably.

(C) Some of the state's counties do not permit casinos.

(D) Moneyland already operates casinos in the majority of the state's counties.

(E) Apex will use funds it obtains from the sale of the five casinos to help fund its acquisition of the Eldorado chain.

CR05093

758. It is widely assumed that people need to engage in intellectual activities such as solving crossword puzzles or mathematics problems in order to maintain mental sharpness as they age. In fact, however, simply talking to other people—that is, participating in social interaction, which engages many mental and perceptual skills—suffices. Evidence to this effect comes from a study showing that the more social contact people report, the better their mental skills.

Which of the following, if true, most seriously weakens the force of the evidence cited?

(A) As people grow older, they are often advised to keep exercising their physical and mental capacities in order to maintain or improve them.

(B) Many medical conditions and treatments that adversely affect a person's mental sharpness also tend to increase that person's social isolation.

(C) Many people are proficient both in social interactions and in solving mathematical problems.

(D) The study did not itself collect data but analyzed data bearing on the issue from prior studies.

(E) The tasks evaluating mental sharpness for which data were compiled by the study were more akin to mathematics problems than to conversation.

8.7 Answer Explanations

The following discussion is intended to familiarize you with the most efficient and effective approaches to critical reasoning questions. The particular questions in this chapter are generally representative of the kinds of critical reasoning questions you will encounter on the GMAT exam. Remember that it is the problem solving strategy that is important, not the specific details of a particular question.

*CR70041.01

610. Arts advocate: Few universities require that students who are specializing in science and technology take many art courses. However, real progress in science and technology requires an element of creativity, which the arts foster. Thus, to help science and technology students succeed in their careers, universities should increase the number of art courses required for them.

Which of the following would, if true, most strengthen the argument above?

(A) Universities required more art courses for science and technology students in the past.
(B) Participation in art courses increases students' creative thinking in their science and technology courses.
(C) More students who are interested in art would specialize in science and technology if the number of art courses required for those programs were increased.
(D) Some of the most prominent scientists began their careers as artists.
(E) Discussion of science and technology topics in art courses increases creative thinking among students in those courses.

Argument Evaluation

Situation The arts advocate argues that universities should increase the number of art courses required for students specializing in science and technology, with the goal of helping these students succeed in their careers. Few universities require students in these fields to take many art courses.

Reasoning *What piece of information, if true and added to the argument, would most strengthen it?* One of the arts advocate's premises is that progress in science and technology requires creativity. Another premise is that courses in the arts foster creativity. The conclusion is that universities should, for the sake of promoting career success, require students specializing in science and technology to take more courses in art. Suppose that participation in art courses enriches students' participation in the science and technology courses: that would be a further reason for universities to require that the students take more art courses.

A This does not indicate that increasing art offerings now for science and technology students is the most prudent course of action. Universities' past decision to offer fewer art courses for science and technology students may have resulted from review of data, careful analysis, and prudent policy assumptions. For example, the decision may have been required in order to finance provision of more science and technology courses.

B **Correct.** This suggests that participation in art courses increases the value of science and technology courses, an additional piece of information that strengthens the argument.

C The argument does not suggest that the goal of requiring science and technology students to take more art courses is to persuade more students interested in art to specialize in science and technology. This information is therefore largely irrelevant to the arts advocate's Reasoning.

D This information does not address the role art may have played in the scientists' achievements in science and technology. Several of these scientists may well have been aspiring artists who failed or became disenchanted and discovered that they could better exploit their talents in science and technology.

E The arts advocate does not advocate that science and technology topics be addressed in art courses. The arts advocate's Reasoning focuses on the value of art courses in fostering creativity.

The correct answer is B.

*These numbers correlate with the online test bank question number. See the GMAT Official Guide Online Index in the back of this book.

CR48541.01

611. A successful coffee stand that serves the workers in a large office building plans to increase its profits by adding oatmeal—a hot cereal popular among the workers—to its menu. The manager says that oatmeal is "the ultimate convenience food" because it can be served by the cup, as coffee is; further, offering oatmeal will enable the stand to get into the breakfast business without making a large investment, because it does not require elaborate cooking equipment.

Which of the following would, if true, most strengthen the likelihood that the manager's plan will achieve its goal?

(A) Some of the office building's businesses have recently begun providing free coffee to their employees.

(B) The ingredients needed to make oatmeal are inexpensive and do not spoil easily the way many fresh breakfast foods typically sold at coffee stands do.

(C) In order to offer more flexible schedules to their workers, several businesses in the office building will soon be expanding their hours.

(D) Supermarket sales of oatmeal and other cereals slowed this year following large gains last year.

(E) Oatmeal manufacturers have recently reduced their oatmeal offerings, which had included oatmeal in microwaveable cups and convenient cereal bars made with rolled oats.

Evaluation of a Plan

Situation Hoping to increase profits, a successful coffee stand plans to add hot cereal, specifically oatmeal, to its menu. Oatmeal can be added without making a large investment, and it is convenient because it can be served by the cup.

Reasoning *What statement would most support the claim that the coffee stand's plan will achieve its goal?* We are told that the initial investment involved in offering oatmeal would not be large, but it would be helpful to know whether the regular costs of offering oatmeal are low. If the ingredients are not expensive, and they are unlikely to spoil before they can be sold to a customer, then there is a greater chance that the coffee stand can sell oatmeal profitably.

A If the businesses at the office building have started providing free coffee to their workers, and those workers are the coffee stand's primary customers, it is quite possible that the coffee stand's profits will decline even if its offering of hot cereal proves popular. Any profits made from the sale of hot cereal may be outweighed by decreases in profits from coffee sales.

B **Correct.** Although the information given provides some reason to think that the cost of offering hot cereal will not be prohibitive to profitability, the fact that the ingredients needed to make oatmeal are inexpensive and do not spoil easily lends even more support to the belief that offering hot cereal could increase profits.

C Because we are not told what the current work hours are for the workers in the building, it is unclear whether giving workers more flexible schedules would increase or decrease the number of workers in the building at breakfast time.

D A decline in the sales of oatmeal and other cereals at supermarkets might indicate an overall decrease in demand for such cereals, which would suggest that the coffee stand's plan may not be useful in achieving the goal of increased profitability.

E Oatmeal manufacturers may have reduced their oatmeal offerings because of a decline in demand for oatmeal, which would suggest that the coffee stand's plan may not be useful in achieving the goal of increased profitability.

The correct answer is B.

CR53631.01

612. Ramirez: The film industry claims that pirated DVDs, which are usually cheaper than legitimate DVDs and become available well before a film's official DVD release date, adversely affect its bottom line. But the industry should note what the spread of piracy indicates: consumers want lower prices and faster DVD releases. Lowering prices of DVDs and releasing them sooner would mitigate piracy's negative effect on film industry profits.

The argument above relies on which of the following assumptions?

(A) Releasing legitimate DVDs earlier would not cause any reduction in the revenue the film industry receives from the films' theatrical release.

(B) Some people who would otherwise purchase pirated DVDs would be willing to purchase legitimate DVDs if they were less expensive and released earlier than they are now.

(C) The film industry will in the future be able to produce DVDs more cheaply than is currently the case.

(D) Some current sellers of pirated DVDs would likely discontinue their businesses if legitimate DVDs were released faster and priced lower.

(E) Current purchasers of pirated DVDs are aware that those DVDs are not authorized by the film industry.

Argument Construction

Situation Pirated DVDs of films are released earlier than the film's official DVD release day. They are also sold more cheaply. These practices cut into the revenue expected from a film's official DVD sales. According to Ramirez, the prevalence of piracy indicates that consumers want lower prices and earlier release. He concludes that if the official DVDs were sold more cheaply and released earlier, the impact of piracy on film industry profits might be reduced.

Reasoning *What must Ramirez assume for his argument to be logically correct?* Suppose none of the current purchasers of pirated film DVDs were to purchase the official DVDs even if these were released earlier and at a significantly lower price. If that were to occur, then the measures Ramirez suggests would not mitigate piracy.

A This does not have to be assumed for Ramirez's reasoning to be logically good. Earlier release of the official DVDs at a lower price could somewhat reduce revenue from movie theater showings of the films. But if the revenue from official DVDs released earlier and priced lower were greatly boosted through greatly increased official DVD sales, overall revenue for each film could be higher than would be the case with widespread piracy.

B **Correct.** If all existing purchasers of pirated film DVDs continued to purchase such DVDs even after implementation of the changes Ramirez advocates, then the changes would not mitigate the destructive consequences of piracy. Thus, Ramirez's reasoning must assume that the changes he recommends would cause at least some former purchasers of pirated DVDs to begin purchasing the official DVDs.

C This might improve profits provided revenue did not also decline. Ramirez's argument does not depend on the assumption that the cost of producing DVDs will decline. His reasoning assumes that total sales volume for official DVDs would increase if piracy were reduced.

D Ideally this would occur with the change Ramirez recommends, but it does not have to be assumed for his reasoning to be logically good. For example, the result Ramirez predicts could occur if all existing sellers of pirated DVDs continued to sell them but sold fewer.

E This is likely true but is not an assumption that Ramirez needs to make for his reasoning to be logically good. Even if some DVDs sold by DVD sellers were pirated without the sellers being aware of it, e.g., if they purchased them from a fraudulent wholesaler, the fact that the pirated DVDs are sold more cheaply and before the release of the official DVD would reduce the filmmakers' total revenue.

The correct answer is B.

CR79041.01

613. Harunia Province has a relatively dry climate and is attracting a fast-growing population that has put increasing demands on its water supply. The two companies that supply water to the region have struggled to keep up with demand and still remain profitable. Yet now they are asking Harunian authorities to write residential water-use regulations that could reduce their revenues and restrict their future flexibility in supplying water profitably.

Which of the following would, if true, most logically help explain why the water-supply companies are asking the authorities to regulate residential water use?

(A) The companies are planning large water-transportation and irrigation systems that require the approval of neighboring provinces.

(B) The companies believe regulation is inevitable and that having it in place now will allow better planning and thus future profitability.

(C) Few, if any, Harunian government officials have investments in the companies or serve on their boards of directors.

(D) The companies believe that the population is not likely to continue to grow.

(E) Long-term climate projections suggest that greater rainfall will eventually increase the amount of water available.

Argument Construction

Situation Two water-supply companies are asking the authorities in Harunia Province to regulate residential water use, even though regulation could reduce their revenues and restrict their flexibility in supplying water profitably in the future.

Reasoning *Which piece of information would most help explain why the companies are advocating water-use regulations that would restrict their operations?* The companies are already struggling to keep up with demand from a fast-growing population in the region. So why would they advocate regulations that could, at least in the immediate term, reduce their profits and restrict them? Is there any advantage that the companies perceive—an advantage that would outweigh any disadvantages—in getting regulations instituted soon?

A It is unclear how this information bears on the companies' request for regulations in Harunia Province, since neighboring provinces seem primarily involved.

B **Correct.** The companies presumably must strategically plan their capital investments to cope with increasing water demand in Harunia Province and to receive adequate return on that investment. In that context it seems critically important for the companies to have certainty at the planning stage about future regulatory requirements. Moreover, given possible shortfalls in water supply, the companies would reasonably expect government regulation even if they did not request it.

C This suggests that, in framing water regulations, Harunian government officials will not be influenced by financial interests, so the companies cannot expect to obtain special favors from the regulatory authorities in the framing of water regulations.

D If anything, this suggests that the companies could continue to operate without any regulatory regime that might restrict their operations.

E This would presumably result in a weakening of the case for residential water-use regulation and would also make it easier for the water-supply companies to meet demand.

The correct answer is B.

CR31551.01

614. Loss of the Gocha mangrove forests has caused coastal erosion, reducing fish populations and requiring the Gocha Fishing Cooperative (GFC) to partially fund dredging and new shore facilities. However, as part of its subsidiary businesses, the GFC has now invested in a program to replant significant parts of the coast with mangrove trees. Given income from a controlled harvest of wood with continuing replanting, the mangrove regeneration effort makes it more likely that the cooperative will increase its net income.

Which of the following, if true, would most strengthen the argument that mangrove replanting will increase the Gocha cooperative's net income?

(A) The cost of dredging and shore facilities was shared with the local government.

(B) The GFC will be able to hire local workers to assist with the mangrove replanting.

(C) The GFC derives 10 percent of its revenue from salt-production facilities in an area previously cleared of mangroves.

(D) Mangrove forests tend to increase the commercial fish populations in coastal fishing grounds.

(E) A controlled harvesting of mangrove wood by the GFC would have little effect on coastal erosion.

Argument Evaluation

Situation A subsidiary business of the Gocha Fishing Cooperative (GFC) has invested in a program to replant significant parts of the coast with mangrove trees.

Reasoning *What additional information, if true, would most strengthen the argument's support for the conclusion that the mangrove regeneration effort will increase the GFC's net income?* If the regeneration effort helped the GFC's fishing operations, this could lead to an increase in GFC's income.

A If the local government helped with the cost of dredging and shore facilities, that would help reduce the GFC's costs, but that is not directly related to the impact of the GFC's mangrove regeneration effort on GFC's net income.

B It is unclear whether hiring local workers to assist with mangrove replanting would be less costly than hiring workers from elsewhere, so it is unclear whether this would help the GFC increase its net income.

C The information provided does not indicate whether the mangrove regeneration effort will have any effect on its salt-production facilities, or any revenue or profit that it derives from these facilities, so this does not strengthen the argument.

D **Correct.** If the mangrove restoration effort helps increase the commercial fish population in coastal fishing grounds, then there is a good chance that the GFC's income from its fishing operations will increase as a result.

E The information provided does not indicate what, if any, effect coastal erosion has on GFC's net income, so the fact that controlled harvesting of mangrove wood would have little effect on coastal erosion does not strengthen the argument.

The correct answer is D.

CR07651.01

615. Executives at the Fizzles Beverage Company plan to boost profits in Country X on their range of fruit-flavored drinks by introducing new flavors based on tropical fruits that are little known there. The executives reason that since the fruit drinks of other companies have none of these flavors, Fizzles will not have to compete for customers and thus will be able to sell the drinks at a higher price.

Which of the following, if true, presents the most serious potential weakness of the plan?

(A) The new fruit drinks would be priced significantly higher than other Fizzles fruit drinks with more conventional flavors.

(B) In a telephone survey, at least one of the consumers contacted said that they preferred many of the new flavors to all of the more familiar flavors.

(C) To build widespread demand for the new flavors, Fizzles would have to launch an advertising campaign to familiarize consumers with them.

(D) Consumers choosing among fruit-flavored drinks of different brands generally buy on the basis of name recognition and price rather than the specific fruit flavor.

(E) Few consumers who are loyal to a specific brand of fruit-flavored drinks would willingly switch to another brand that costs more.

Evaluation of a Plan

Situation Fizzle Beverage Company's executives plan to offer drinks with tropical fruit flavors that are little known in Country X in the hope that doing so will boost profits in that country. They reason that because their competitors in that country do not offer drinks with these flavors, Fizzle will be able to sell the drinks at a premium price.

Reasoning *What casts the most doubt on the claim that the executive's plan will effectively allow them to sell fruit-flavored drinks at a higher price?* The executives believe that the lack of a direct competitor to these drinks will allow the company to sell the drinks for a higher price. But any information indicating that something other than the specific fruit flavor of the drink drives sales of fruit-flavored drinks would cast doubt on the plan.

A We have already been told that the prices will be higher. The question is whether they will be able to sell the drink successfully at these higher prices as a result of the plan.

B This provides at least some very slight support for the belief that the plan would succeed (if no one at all preferred the new drinks, then the plan would almost certainly fail); however, the question asks for something that would cast doubt on the effectiveness of the plan.

C When introducing a new product, companies usually have to launch advertising campaigns, and quite frequently such campaigns effectively create demand for the product, so the fact that Fizzles will have to launch an advertising campaign does not cast doubt on the plan.

D **Correct.** The plan depends on consumers wanting the drinks because of their unique, unfamiliar flavors, and being willing to pay a higher price for them because of their uniqueness in the market. If price (presumably a lower one) and name recognition, rather than the specific fruit flavor, are what generally drive sales, then it seems unlikely that the executives' plan will succeed.

E Nothing in the information provided indicates how many consumers are loyal to any specific brand of fruit-flavored drinks. Perhaps the vast majority of consumers are willing to switch brands. If that is so, then the fact that the very few who are loyal to a specific brand would not be willing to switch would not cast much doubt on the effectiveness of the plan.

The correct answer is D.

CR33061.01

616. Economist: In 2015, the average per-person amount paid for goods and services purchased by consumers in Country X was the equivalent of $17,570 in United States dollars, just 30 percent of the corresponding figure of $58,566 for Country Y. Yet in 2015, there was already a substantial middle class in Country X that had discretionary income for middle-class consumer goods such as new vehicles, computers, or major household appliances, while a significant portion of the middle class in Country Y did not have sufficient income to purchase such items.

Which of the following, if true, most helps explain the discrepancy in the relationships described by the economist?

(A) There are many consumer goods, such as household appliances, that are produced in Country X to be sold in the Country Y market.

(B) The volume of trade between Country X and Country Y is increasing rapidly in both directions.

(C) The economy of Country Y is recovering from a downturn that affected both Country Y and Country X.

(D) Country X residents pay much less than their Country Y counterparts for housing, transportation, and child care.

(E) In Country Y as well as in Country X, there are few assembly-line jobs in factories that pay a middle-class wage.

Argument Construction

Situation An economist points out that even though in 2015 the average per-person amount paid for goods and services in Country X was only 30 percent of the corresponding figure in Country Y, a substantial middle class in Country X had discretionary income for consumer goods whereas a substantial portion of the middle class in Country Y did not.

Reasoning *What, if true, would most help explain the discrepancies described by the economist?* Information indicating that residents in Country X pay much less for nondiscretionary items than do residents of Country Y would help explain why, even though people in Country Y pay on average three times more for goods and services than people in Country X, Country X has a more substantial middle class capable of buying discretionary goods than does Country Y.

A That many consumer goods produced in Country X are intended to be sold in Country Y does not help explain why many people in Country Y are not able to afford such goods.

B An increasing volume of trade between Country X and Country Y—which, for all we know, is perfectly balanced—would not help explain any discrepancies between the two countries.

C That the economies of both Country X and Country Y both suffered a downturn, and Country Y is recovering, could not plausibly explain why many people in Country Y have trouble paying for discretionary goods unless we had the information that Country Y's recovery was significantly slower than Country X's; but we do not have that information.

D **Correct.** That people in one nation pay far less for nondiscretionary goods than people in another nation would potentially be helpful in explaining how the people in the former nation would more easily be able to afford discretionary goods.

E If a claim is true of both Country X and Country Y, it would not help explain a discrepancy between the two countries.

The correct answer is D.

CR09616

617. Neuroscientist: Memory evolved to help animals react appropriately to situations they encounter by drawing on the past experience of similar situations. But this does not require that animals perfectly recall every detail of all their experiences. Instead, to function well, memory should generalize from past experiences that are similar to the current one.

The neuroscientist's statements, if true, most strongly support which of the following conclusions?

(A) At least some animals perfectly recall every detail of at least some past experiences.

(B) Perfectly recalling every detail of all their past experiences could help at least some animals react more appropriately than they otherwise would to new situations they encounter.

(C) Generalizing from past experiences requires clear memories of most if not all the details of those experiences.

(D) Recalling every detail of all past experiences would be incompatible with any ability to generalize from those experiences.

(E) Animals can often react more appropriately than they otherwise would to situations they encounter if they draw on generalizations from past experiences of similar situations.

Argument Construction

Situation A neuroscientist claims that memory evolved to help animals learn how to react appropriately by generalizing from past experiences but that this does not require animals to remember all details of those experiences.

Reasoning *What conclusion would the neuroscientist's theory about memory most strongly support?* The neuroscientist asserts that the evolutionary function of memory is to help animals learn to react appropriately by drawing on generalizations from similar experiences they have had. If memory is to serve this function, drawing on generalizations must actually help animals learn to react more appropriately than they otherwise would, even when they do not remember all the details of past experiences.

A Even if no animal ever recalls all the details of any past experience, animals could still learn through generalizations, as the neuroscientist claims.

B This statement could be false even if all of what the neuroscientist says is true. Even if it were never helpful for any animal to recall every detail of all its past experiences, animals could still benefit by learning through generalizations.

C Generalizations from experiences might be made while the experiences are occurring, so that only the generalizations and not the details need to be remembered.

D The neuroscientist only claims that remembering perfect details is not required for memory to serve its function, not that such perfect recall is incompatible with memory serving its function.

E **Correct.** If the evolutionary function of memory is to help animals react more appropriately by drawing on generalizations from past experiences, it follows that animal memories can often successfully serve this function in this manner.

The correct answer is E.

CR52061.01

618. In Country X's last election, the Reform Party beat its main opponent, the Conservative Party, although pollsters, employing in-person interviews shortly before the vote, had projected a Conservative Party victory. Afterwards, the pollsters determined that, unlike Conservative Party supporters, Reform Party supporters were less likely to express their party preference during in-person interviews than they were during telephone interviews. Therefore, using only telephone interviews instead would likely result in more accurate projections for the next election.

Which of the following statements, if true, would most support the argument in the passage?

(A) The number of voters in Country X's next election will be significantly larger than the number of voters in the last election.

(B) The Conservative Party will win the next election.

(C) For each person interviewed in telephone polls before the next election, pollsters will be able to reasonably determine the likelihood of that person voting.

(D) People who expressed no party preference during the in-person interviews shortly before Country X's last election did not outnumber the people who expressed a preference for the Conservative Party.

(E) In the next election, pollsters will be able to conduct more in-person interviews than telephone interviews.

Argument Evaluation

Situation Pollsters, using in-person interviews shortly before the last election in Country X, incorrectly predicted that the Conservative Party would win that election, whereas the Reform Party won instead. The pollsters determined that Reform Party supporters, unlike Conservative Party supporters, are less likely to give their party preference in person than in telephone interviews.

Reasoning *What additional information, if true, would most strengthen the support, in light of the given information, for the prediction that using only telephone interviews would result in more accurate projections in the next election in Country X?* Even if in telephone interviews pollsters are more likely to get accurate information about which party a person interviewed supports, the pollsters' projections may not be accurate if the pollsters are unable to determine whether that person is actually likely to vote. So, information indicating that pollsters will be able to determine the likelihood that a person will vote would strengthen support for the conclusion.

A If this larger number of voters in the next election is not anticipated by pollsters, then it may affect the accuracy of their predictions. However, the effect would likely be a decrease, rather than an increase, in accuracy. If the pollsters are able to accurately predict voter turnout, then their predictions for the next election could be more accurate. But we have no indication as to whether their turnout predictions will be accurate.

B If the Conservative Party will win the next election, an underestimate of Reform Party support will be less important for the accuracy of the projection of which party will win.

C **Correct.** It would certainly be helpful if the pollsters were able to determine how likely the person they were interviewing would be to vote.

D This is irrelevant to the argument. The conclusion concerns the relative accuracy of telephone interviews in predicting voting numbers in the next election.

E If pollsters are able to do more in-person interviews than telephone interviews for the next election, that at least weakly suggests that they might not be able to conduct a sufficient number of telephone interviews to get a representative sample—which would weaken support for the conclusion, not strengthen it.

The correct answer is C.

CR40751.01

619. A company that manufactures plastic products from recyclable plastic is, surprisingly, unconcerned that economic conditions may worsen, despite analysts' belief that consumers would then consider ecofriendly plastic products an expensive luxury. But the company reasons that it will be able to lower its prices because, in a weakened economy, other ecofriendly plastic manufacturers are likely to fail. Demand among manufacturers for recyclable plastics as raw materials would then plummet, creating an oversupply of such materials, making them less expensive for the manufacturer to purchase and thus lowering the company's costs.

Which of the following, if true, most weakens the company's reasoning?

(A) Smaller ecofriendly plastic manufacturers are more likely to fail in a weakened economy than larger ecofriendly manufacturers are.

(B) Some retailers whose sales include various companies' ecofriendly plastic products have struggled in recent years despite the overall good economy.

(C) Consumers would likely soon learn of the oversupply of recyclable plastics and cease recycling them, significantly raising manufacturers' raw-material costs.

(D) Retailers, including retailers that cater to consumers seeking certain types of ecofriendly products, may lose some business if economic conditions worsen.

(E) The plastics used by the company in its products were, after a recent investigation by a regulatory body, declared to be safe for consumers.

Argument Evaluation

Situation A company that manufactures products from recyclable plastics believes that if economic conditions worsen it will be able to lower its prices. It believes its costs will decline because other ecofriendly plastic manufacturers will fail, thereby reducing the demand for recyclable plastics as raw materials.

Reasoning *What would most weaken the reasoning?* Suppose the company's costs did not decline and the company consequently could not reduce its prices. Even if demand for recyclable plastics as raw materials weakens in an economic downturn, the company's costs may nonetheless not decline if for some reason the supply of recyclable plastics also declines. If so, then the company may well not be able to lower its prices and stay profitable.

A We are not told whether the company in question is a smaller ecofriendly plastic manufacturer or a larger one. Given that, the fact that smaller such companies are more likely to fail than larger ones may strengthen the argument rather than weaken it (assuming the company in question is a larger such company).

B If some retailers whose sales include various companies' ecofriendly plastic products have struggled in a healthy economy, they may well struggle even more in a weak economy. This could help drive the company's competitors out of business, which is what the company argues is likely to happen in an economic downturn; so rather than weakening the argument, this arguably strengthens it.

C **Correct.** Suppose consumers learn of the oversupply of recyclable plastics and stop recycling them as a result; the oversupply may therefore not last long, and indeed a shortage might arise. This would lead not to lower raw-material costs, as the company argues, but to higher raw-material costs.

D The information that retailers' lost business might result in a decrease in sales of the competing products does not weaken the argument. A loss of business due to worsening economic conditions is a presupposition of the argument.

E The fact that the plastics used by the company have been declared safe has probably helped boost demand for the company's products, and perhaps for the competing products as well, yet an economic downturn could still hurt the company's competitors. So, this does little to weaken the company's argument.

The correct answer is C.

CR73241.01

620. Researchers asked volunteers to imagine they were running a five-kilometer race against 50 people and then against 500 people, races in each of which the top 10 percent would receive a $1,000 prize. Asked about the effort they would apply in the respective cases, the volunteers indicated, on average, that they would run slower in the race against the greater number of people. A likely explanation of this result is that those of the volunteers who were most *comparatively inclined*—those who most tended to compare themselves with others in the social environment—determined (perhaps unconsciously) that extreme effort would not be worthwhile in the 500-competitor race.

Which of the following would, if known to be true, most help justify the explanation offered above?

(A) The volunteers who were most comparatively inclined were also those that had the greatest desire to win a $1,000 prize.

(B) The volunteers who were the least comparatively inclined had no greater desire to win the $1,000 than those who were the most comparatively inclined.

(C) The volunteers who were most comparatively inclined were likely to indicate that they would run the two races at the same speed.

(D) The most comparatively inclined volunteers believed that they were significantly less likely to finish in the top 10 percent in the race against 500 than in the race against 50.

(E) Volunteers were chosen for participation in the study on the basis of answers to various questions designed to measure the degree to which the volunteers were comparatively inclined.

Argument Construction

Situation Volunteers were asked how much effort they would expend when running a five-kilometer race against 50 people and how much they would expend in such a race against 500 people, when the prize for each race is $1,000 for finishing in the top 10 percent. The volunteers indicated, on average, that they would run more slowly in the race against 500 people than in the race against 50 people. This result is likely because comparatively inclined volunteers believed that extreme effort would not have been worthwhile in the race against 500 competitors.

Reasoning *What would most help to justify the explanation proposed above?* If comparatively inclined volunteers thought it was at least as likely that they would finish in the top 10 percent in the race against 500 as in the race against 50, the proposed explanation would fail. Thus, it would help justify the explanation if we knew that the comparatively inclined volunteers believed they were less likely to win in the race against 500 than in the race against 50.

A If one knew that the volunteers who were most comparatively inclined had the greatest desire to win the $1,000, one might actually be more puzzled about why these volunteers said they would expend less effort against the 500 competitors. If they expended less effort, they would probably be less likely to finish in the top 10 percent.

B If one knew that the volunteers who were more comparatively inclined had no less desire to win a $1,000 prize than those who were least comparatively inclined, one would have at least some reason to think the comparatively inclined volunteers wanted to win the $1,000; this clearly cannot explain why they would not expend as much effort in the 500-competitor race as in the 50-competitor race.

C If the most comparatively inclined volunteers were likely to indicate that they would run the two races at the same speed, then the proposed explanation cannot be correct.

D **Correct.** If the most comparatively inclined volunteers believed they would be far less likely to finish in the top 10 percent in the race against 500 than in the race against 50, then they would likely believe that extreme effort would not be worthwhile in the race with more people. This therefore is likely to be at least part of the explanation.

E Even if volunteers were chosen on the basis of answers to questions designed to measure how comparatively inclined they were, we are not told whether the volunteers were chosen because of the degree to which they were comparatively inclined.

The correct answer is D.

CR41141.01

621. According to a study, after a week of high-altitude living, twenty men had slimmed down. The men, middle-aged residents of low-altitude areas, had been taken to a research station at 2,650 meters (8,694 feet) above sea level. They had unrestricted access to food and were forbidden vigorous exercise, yet they lost an average of 1.5 kilograms (3.3 pounds) during their one-week stay. Clearly, the lower availability of oxygen at higher altitudes, or hypobaric hypoxia, can be said to have caused the weight loss, since _____.

Which of the following would, if true, most logically complete the argument?

(A) a decrease in oxygen intake has been shown to depress appetite

(B) the men all participated in the same kinds of exercise during their stay

(C) the foods available to the men had fewer calories than the foods they usually ate

(D) exercise at higher altitudes is more difficult than exercise at lower altitudes is

(E) several weeks after returning home, the men still weighed less than they had before the study

Argument Construction

Situation Twenty middle-aged men lived at a high-altitude research station for one week. They had unrestricted access to food but did no vigorous exercise. By the end of their stay they had lost an average 1.5 kilograms (3.3 pounds) of weight.

Reasoning *Which additional information, if true, would most help support the claim that lower availability of oxygen at higher altitudes caused the weight loss?* The puzzlement arises from the fact that the twenty men had free access to food and did no vigorous exercise. And consuming less of the types of food they would normally eat would have caused weight loss. But suppose one or both of these behaviors had not occurred?

A **Correct.** This information helps support the explanatory hypothesis that lower oxygen levels accounted for the weight loss. The men's intake of oxygen certainly decreased at an altitude of 2,650 meters (8694 feet), since they normally lived in low-altitude areas. Moreover, reduced appetite would provide a mechanism by which weight loss could have occurred.

B The men were forbidden vigorous exercise and we can assume that, in a research context, they followed this restriction. Mild exercise would be unlikely to explain the weight loss.

C This does not support the explanatory hypothesis concerning the role of oxygen reduction in the weight loss.

D Even if this is generally true, it does not support the hypothesis that lower oxygen levels accounted for the weight loss.

E This provides no support for the explanatory hypothesis that lower oxygen levels accounted for the weight loss. It might even cast some doubt on the hypothesis, since over a period of several weeks following the study, the men's weight did not increase with their return to their normal oxygen levels.

The correct answer is A.

CR11741.01

622. Editorial: Our city's public transportation agency is facing a budget shortfall. The fastest growing part of the budget has been employee retirement benefits, which are exceptionally generous. Unless the budget shortfall is resolved, transportation service will be cut, and many transportation employees will lose their jobs. Thus, it would be in the employees' best interest for their union to accept cuts in retirement benefits.

Which of the following is an assumption the editorial's argument requires?

(A) The transportation employees' union should not accept cuts in retirement benefits if doing so would not be in the employees' best interest.

(B) The only feasible way for the agency to resolve the budget shortfall would involve cutting transportation service and eliminating jobs.

(C) Other things being equal, it is in the transportation employees' interest to have exceptionally generous retirement benefits.

(D) Cutting the retirement benefits would help resolve the agency's budget shortfall.

(E) The transportation employees' union will not accept cuts in retirement benefits if doing so will not allow more transportation employees to keep their jobs.

Argument Construction

Situation An editorial indicates that the fastest growing part of a particular city's public transportation agency's budget is employee retirement benefits. The agency's budget has a shortfall. If the shortfall is not resolved, transportation service will be cut and many of the employees will lose their jobs.

Reasoning *What must be true if we are to accept the editorial's conclusion, that it is in the employee's best interest to accept cuts in retirement benefits?* If cutting the employees' retirement benefits would not be sufficient to resolve the budget shortfall, then it may well not be in employees' best interest to accept such cuts. The reasons given for accepting the cuts are related to the undesirable consequences of a continued shortfall.

A The argument is about whether the union's accepting the cuts is in fact in the employees' best interest, and does not require any assumption about whether employees should accept what is in their best interest.

B This is incompatible with an assumption made by the argument. The argument assumes that cutting the retirement benefits of the employees would help resolve the budget shortfall.

C The argument would actually be stronger if it were NOT the case that it is in the employees' interest to have exceptionally generous retirement benefits.

D **Correct.** If cutting retirement benefits would not help resolve the agency's budget shortfall, then cutting those benefits would not help the employees avoid job cuts.

E The argument does not depend on assuming anything regarding what factors would motivate the union's acceptance.

The correct answer is D.

CR94231.01

623. Researchers hope to find clues about the A'mk peoples who lived in the Kaumpta region about one thousand years ago but who left few obvious traces. The researchers plan to hire the few remaining shamans of the modern-day indigenous people in Kaumpta, who are believed to be descended from the A'mk, to lead them to ancestral sites that may be the remains of A'mk buildings or ceremonial spaces. The shamans were taught the location of such sites as part of their traditional training as youths, and their knowledge of traditional Kaumpta customs may help determine the nature of any sites the researchers find.

Which of the following is an assumption on which the success of the plan depends?

(A) The researchers have reliable evidence that the A'mk of one thousand years ago built important ceremonial spaces.

(B) The shamans have a reasonably accurate memory of A'mk sites they learned about as youths.

(C) Kaumpta shamans are generally held in high esteem for their traditional knowledge.

(D) Modern technologies available to the researchers are likely to be able to find some A'mk sites easily.

(E) Most or all A'mk sites are likely to be found within the Kaumpta region.

Evaluation of a Plan

Situation Researchers wish to find sites of an ancient people, the A'mk, who lived in the Kaumpta region one thousand years ago. Indigenous people believed to be descended from the A'mk live in that region today. Their shamans, as youths, were taught about such sites. To discover some of these sites, the researchers plan to hire the shamans.

Reasoning *What must be true for the success of the researchers' plan to find the sites by relying on the shamans' assistance?* The plan would fail, for example, if there were no such sites in the Kaumpta region. Therefore, the researchers' plan depends on assuming that Kaumpta have some such sites—but not that most of the sites are there. The plan also requires that the shamans collectively have reasonably accurate recall of what they learned about the sites as youths.

A The researchers hope to find buildings or ceremonial spaces or both. However, the plan does not require ceremonial spaces to be found or that the researchers have evidence of them.

B **Correct.** If the shamans collectively have no "reasonably accurate memory" of what they learned of the location of such sites, then the researchers' plan is not a useful one and can have no reasonable expectation of success.

C This is likely to be so if the indigenous group from which they come is still committed to maintaining their traditional knowledge. But the plan does not rely on the shamans being honored among their own people. It must be assumed, of course, that the shamans currently possess "traditional knowledge" and are willing to share it.

D The researchers' reliance on the shamans' assistance suggests that it is not so easy for the researchers to rely entirely on "modern technologies" in this case.

E The plan can succeed even if this is not correct. What must be assumed is that at least some of the A'mk sites are within the Kaumpta region; it need not be assumed that most or all are.

The correct answer is B.

CR09994

624. Astronomer: Most stars are born in groups of thousands, each star in a group forming from the same parent cloud of gas. Each cloud has a unique, homogeneous chemical composition. Therefore, whenever two stars have the same chemical composition as each other, they must have originated from the same cloud of gas.

Which of the following, if true, would most strengthen the astronomer's argument?

(A) In some groups of stars, not every star originated from the same parent cloud of gas.

(B) Clouds of gas of similar or identical chemical composition may be remote from each other.

(C) Whenever a star forms, it inherits the chemical composition of its parent cloud of gas.

(D) Many stars in vastly different parts of the universe are quite similar in their chemical compositions.

(E) Astronomers can at least sometimes precisely determine whether a star has the same chemical composition as its parent cloud of gas.

Argument Evaluation

Situation Most stars are born in groups, any one of which forms from a parent gas cloud with a unique, homogenous chemical composition.

Reasoning What would be additional evidence that any two stars with the same chemical composition originated from the same gas cloud? The implicit reasoning is that since the chemical composition of each gas cloud is unique and homogenous, any two stars that formed from gas with the same chemical composition must have originated from the same cloud. The astronomer then infers that if two stars have the same composition now, they must have originated from the same cloud. This inference requires the assumption that the composition each star has now depends only on the composition of the cloud in which it originated. Any evidence that supports this assumption will strengthen the argument.

A Whether or not stars born in different clouds of gas are ever in the same "group" is not clearly relevant to whether or not they ever have the same chemical composition.

B How remote clouds of similar compositions are from each other is not clearly relevant to whether stars that have the same chemical composition may have formed from different clouds of gas. Also, the suggestion that different gas clouds may have identical compositions conflicts with the astronomer's premise that the composition of each cloud from which stars form is unique.

C **Correct.** If each star's composition is identical to that of its parent cloud, and each cloud's composition is unique, then any two stars identical in composition must have formed from the same parent cloud.

D If anything, this would suggest that stars with the same composition might have formed from different clouds, so it would weaken rather than strengthen the argument.

E If astronomers could do this, they might be able to obtain additional evidence for or against the position taken in the argument, but this, in itself, provides no reason to suppose that the evidence would support, rather than weaken, that position. They might find that the stars' compositions do not precisely correlate with the compositions of the stars' parent gas clouds.

The correct answer is C.

CR08017

625. With employer-paid training, workers have the potential to become more productive not only in their present employment but also in any number of jobs with different employers. To increase the productivity of their workforce, many firms are planning to maintain or even increase their investments in worker training. But some training experts object that if a trained worker is hired away by another firm, the employer that paid for the training has merely subsidized a competitor. They note that such hiring has been on the rise in recent years.

Which of the following would, if true, contribute most to defeating the training experts' objection to the firms' strategy?

(A) Firms that promise opportunities for advancement to their employees get, on average, somewhat larger numbers of job applications from untrained workers than do firms that make no such promise.

(B) In many industries, employees that take continuing-education courses are more competitive in the job market.

(C) More and more educational and training institutions are offering reduced tuition fees to firms that subsidize worker training.

(D) Research shows that workers whose training is wholly or partially subsidized by their employer tend to get at least as much training as do workers who pay for all their own training.

(E) For most firms that invest in training their employees, the value added by that investment in employees who stay exceeds the value lost through other employees' leaving to work for other companies.

Evaluation of a Plan

Situation Many firms pay to train their workers in order to increase their workforces' productivity. But in recent years firms have been increasingly hiring away from each other workers who have had such training.

Reasoning *What would most help address the concern that firms that pay to train workers are thereby subsidizing competitors that hire away those workers?* In order for the employer-paid training to be worthwhile for a given firm despite the risk of subsidizing competitors that may hire away the trained workers, that firm has to gain more benefits from the training than it loses by subsidizing such competitors. Any evidence that this is true for most firms would help to address the experts' concern.

A A typical firm does not necessarily want larger numbers of applications from unqualified workers. And if hired, those workers can still be hired away by competitors after the firm has paid to train them, just as the experts warned.

B This suggests that in many industries, companies, rather than investing in employee training, prefer to hire employees who already have specifically relevant training (perhaps funded by other companies). If anything, this slightly supports, rather than defeats, the training experts' view. No firm has an interest in making its own employees more competitive in the job market unless the firm is likely to benefit from their being so.

C Even firms that pay reduced tuition fees for worker training may lose the money they pay for those fees and effectively subsidize competitors that hire the trained employees away. So this does not defeat the training experts' objection.

D The more highly trained workers—regardless of whether their training was company subsidized or not—would presumably be prime targets for recruitment by competing firms, just as the experts warned. The research finding in question does not help defeat the experts' objection.

E **Correct.** This explicitly indicates that most firms gain more than they lose from the general practice of firms paying to train their workers.

The correct answer is E.

CR93241.01

626. In emerging economies in Africa and other regions, large foreign banks that were set up during the colonial era have long played a major economic role. These institutions have tended to confine their business to the wealthier of banks' potential customers. But development of these countries' economies requires financing of the small businesses that dominate their manufacturing, farming, and services sectors. So economic growth will be likely to occur if local banks take on this portion of the financial services markets, since _____.

Which of the following completions would produce the strongest argument?

(A) local banks tend not to strive as much as large foreign banks to diversify their investments

(B) small farming and manufacturing businesses contribute to economic growth if they obtain adequate investment capital

(C) large foreign banks in emerging economies could, with local employees and appropriate local consultation, profitably expand their business to less wealthy clients

(D) some small businesses are among the wealthier customers of foreign banks in emerging economies

(E) local banks in emerging economies tend to be less risk-averse than foreign banks

Argument Construction

Situation Large foreign banks have long played an economic role in emerging economies, but they have typically confined their business to wealthier customers. Economic development in these countries requires the financing of small businesses that dominate their manufacturing, farming, and services sectors.

Reasoning *What would most help support the claim that growth in emerging economies will likely occur if local banks help finance small businesses in the relevant sectors of these emerging markets?* If it were the case that these small businesses would actually be likely to contribute to economic growth, given adequate investment capital, then economic growth would indeed be likely to occur if local banks provided the investment capital.

A It could be the case that whatever sorts of investments local banks make—diversified or not—economic growth will not tend to occur; for instance, it could be that the businesses they invest in do not use the capital wisely. So, this claim does not help support the conclusion.

B **Correct.** If small farming and manufacturing businesses will contribute to economic growth if they obtain adequate investment capital, then we have fairly good reason to think that economic growth is likely to occur if local banks take on the financing of such small businesses (we merely need to also assume that they will provide adequate investment capital when they take on this financing).

C Even if large foreign banks could profitably expand their businesses to less-wealthy clients, we have been given no reason to think they will. Furthermore, the claim in need of support is that economic growth will occur if local, rather than foreign, banks financially support these small businesses.

D The claim that economic growth will occur if local banks finance small business in certain sectors is not supported by the claim that there are some small businesses supported by foreign banks. If these businesses are already financially supported and yet there is not the sort of economic growth discussed, then that might even suggest that economic growth is unlikely to occur.

E It could be that, if local banks are less risk-averse than foreign banks, they will invest in risky businesses that fail, which would not tend to support the claim that economic growth will likely result if local banks in emerging counties provide financial support for the relevant sectors.

The correct answer is B.

CR49551.01

627. Exporters in Country X are facing lower revenues due to a shortage of the large metal shipping containers in which they send their goods by sea to other countries. Fewer containers arrive in Country X due to reductions in imports. This has meant lost orders, costly delays, and a scramble for alternatives, such as air freight, all of which are costlier. Moreover, the revenues of exporters in Country X will probably continue to decline in the near future. This is because other countries are likely to find it increasingly unprofitable to export their goods to Country X, and because _____.

Which of the following would most logically complete the passage?

(A) production of shipping containers in Country X is growing rapidly as a response to the shortage

(B) shipping companies are willing to move containers from country to country only when the containers are full

(C) the cost of shipping alternatives such as air freight is likely to stabilize in the near future

(D) consumers in Country X are purchasing more products than ever before

(E) the worldwide demand for goods made in Country X has only recently begun to rise after a long decline

Argument Construction

Situation Exporters in Country X are finding that there is an insufficient number of shipping containers for them to use for their exports, because the number of such containers arriving in Country X has declined because of reduced imports. Also, alternative methods of shipping are relatively costly. Furthermore, other countries will likely find shipping goods to Country X to be less and less profitable.

Reasoning *What would most support the prediction that Country X's exporters' revenues will likely see further declines in revenue in the near future?* If the number of shipping containers available to exporters is likely to decrease, then the prediction would have further support. We know that other countries exporting to Country X will find it increasingly unprofitable, so there is reason to believe their exports will decline further—meaning there will be fewer imports into Country X, which means fewer shipping containers arriving in Country X carrying imported goods, unless the shipping containers shipped in the future are less full than when they are shipped now. If shipping companies are willing to move such containers to another country only when the containers are full, then that will not occur.

A If production of shipping containers in Country X were rapidly increasing, then the reason given for the decline in revenue for exporters in Country X—that there is an insufficient number of shipping containers—would be undermined, and so therefore would be the conclusion.

B **Correct.** If shipping companies are unwilling to move containers from country to country unless the containers are full, then, given Country X's decline in imports, there will likely be fewer shipping containers available to Country X's exporters, which provides support for the claim that their revenues will likely decline.

C If the cost of shipping alternatives such as air freight is likely to stabilize, then those alternative methods of shipping might become economically viable, which would undermine rather than support the conclusion.

D The fact that consumers in Country X are purchasing more goods than ever before does not affect how much revenue is generated by exporting goods from Country X.

E If there is increased demand for goods from Country X, then the price of such goods might increase sufficiently to make alternative methods of shipping economically viable, which would undermine rather than support the conclusion.

The correct answer is B.

CR01107

628. Candle Corporation's television stations are likely to have more income from advertisers than previously. This is because advertisers prefer to reach people in the 18- to 49-year-old age group and the number of people in that group watching Candle television is increasing. Furthermore, among Candle viewers, the percentage of viewers 18 to 49 years old is increasing.

Which of the following, if true, would most strengthen the argument that Candle Corporation will receive more income from advertisers?

(A) Advertisers carefully monitor the demographic characteristics of television audiences and purchase advertising time to reach the audiences they prefer to reach.

(B) Among people over 49 years old, fewer viewers of Candle stations buy products advertised on television than do viewers of other stations.

(C) There will be increasingly more advertisements on television that are directed at viewers who are over 49 years old.

(D) Candle stations plan to show reruns of television shows during hours when other stations run shows for the first time.

(E) People 18 to 49 years old generally have less disposable income to spend than do people over 49 years old.

Argument Evaluation

Situation Both the number and the percentage of Candle television viewers who are 18 to 49 years old are increasing. Advertisers prefer to reach people in this age group.

Reasoning *What evidence, when combined with the cited facts, would most support the prediction that Candle will receive more income from advertisers?* The argument assumes that the increasing number and percentage of Candle viewers in the age group that advertisers prefer to reach will probably encourage advertisers to spend more on advertising with Candle. This assumption could be supported by evidence that the advertisers realize that Candle is getting more viewers in that preferred age range or by evidence that this awareness will influence the advertisers' purchase of advertising time.

A **Correct.** Advertisers monitoring demographics will probably realize that Candle has increasing numbers of viewers in their preferred age range. If they purchase advertising to reach viewers in that age range, then they will probably purchase more advertising time with Candle.

B This gives advertisers less reason to advertise on Candle to reach viewers over 49 years old. Other things being equal, that makes Candle likely to receive less income from advertisers, not more income.

C Since the percentage of Candle viewers 18 to 49 years old is growing, the percentage over 49 years old is probably shrinking. This could make advertisers seeking to reach older viewers less inclined to advertise on Candle even as they increase their overall television advertising.

D Advertisers are not necessarily inclined to purchase more advertising during showings of reruns than during original airings of television shows and may even be inclined to purchase less advertising during such showings.

E This gives advertisers less incentive to try to reach audiences between 18 and 49 years old and hence less reason to purchase advertising on Candle.

The correct answer is A.

CR12584

629. A provincial government plans to raise the gasoline tax to give people an incentive to drive less, reducing traffic congestion in the long term. However, skeptics point out that most people in the province live in areas where cars are the only viable transportation to jobs and stores and therefore cannot greatly change their driving habits in response to higher gasoline prices.

In light of the skeptics' objection, which of the following, if true, would most logically support the prediction that the government's plan will achieve its goal of reducing traffic congestion?

(A) The revenue from the tax will be used to make public transportation a viable means of transportation to jobs and stores for far more people.

(B) The tax will encourage many residents to switch to more fuel-efficient cars, reducing air pollution and other problems.

(C) Because gasoline has been underpriced for decades, the province has many neighborhoods where cars are the only viable means of transportation.

(D) Most residents who cannot greatly change their driving habits could compensate for high gasoline prices by reducing other expenses.

(E) Traffic congestion is an especially serious problem for people for whom cars are the only viable means of transportation.

Evaluation of a Plan

Situation A provincial government plans to raise the gasoline tax in order to reduce traffic congestion by discouraging people from driving. But skeptics point out that most people in the province have no viable form of transportation other than driving.

Reasoning *What would suggest that raising the gasoline tax will reduce traffic congestion even though most people in the province have no viable form of transportation other than driving?* The skeptics point out that since most people in the province have no way to reach jobs or stores except by car, they will not be able to reduce their driving much even if the gasoline tax increases. Any evidence that raising the gasoline tax would reduce traffic congestion despite this obstacle would help to support the plan in light of the skeptics' objection.

A **Correct.** If the tax will fund these public transit improvements, then far more people will have a viable means of transportation other than driving, undermining the basis of the skeptics' objection.

B People switching to fuel-efficient cars would not reduce traffic congestion.

C This essentially only tends to support the skeptics' objection. Unless the plan somehow helps to alleviate the necessity of driving (by, for example, making alternative transportation available), the information provided gives no reason to suppose that the higher costs would significantly reduce traffic congestion.

D If residents cannot greatly change their driving habits, then the tax will not reduce traffic congestion.

E This suggests that many residents in the province could benefit if the plan did reduce traffic congestion, but it does not provide a reason to believe the plan will have that effect.

The correct answer is A.

CR03940

630. Editorial: The roof of Northtown's municipal equipment-storage building collapsed under the weight of last week's heavy snowfall. The building was constructed recently and met local building-safety codes in every particular, except that the nails used for attaching roof supports to the building's columns were of a smaller size than the codes specify for this purpose. Clearly, this collapse exemplifies how even a single, apparently insignificant departure from safety standards can have severe consequences.

Which of the following, if true, most seriously weakens the editorial's argument?

(A) The only other buildings to suffer roof collapses from the weight of the snowfall were older buildings constructed according to less exacting standards than those in the codes.

(B) The amount of snow that accumulated on the roof of the equipment-storage building was greater than the predicted maximum that was used in drawing up the safety codes.

(C) Because the equipment-storage building was not intended for human occupation, some safety-code provisions that would have applied to an office building did not apply to it.

(D) The municipality of Northtown itself has the responsibility for ensuring that buildings constructed within its boundaries meet the provisions of the building-safety codes.

(E) Because the equipment-storage building was used for storing snow-removal equipment, the building was almost completely empty when the roof collapsed.

Argument Evaluation

Situation The roof of a recently constructed building collapsed under heavy snowfall. The only way the building did not meet safety standards was that some nails for the roof supports were smaller than prescribed by the building codes.

Reasoning *What would make it less likely that the building's collapse resulted from a single, apparently minor departure from safety standards?* The building met safety standards except for the size of the nails. So if the collapse exemplifies how a departure from safety standards can have severe consequences, as the conclusion claims, then the size of the nails had to be responsible for the collapse. Thus, evidence that a factor other than the size of the nails could fully account for the collapse would weaken the argument.

A This suggests that the snow would not have been heavy enough to collapse the roof if the construction had completely met the safety standards, so it strengthens, rather than weakens, the argument.

B **Correct.** This suggests that the snow could have collapsed the roof even if the nails had met the safety standards, thus casting doubt on the assumption that the nails' inadequacy was responsible for the collapse.

C The claim that the safety requirements for this building were weaker than some others tends slightly to strengthen, rather than weaken, the hypothesis that the bad consequences resulted partly from a failure to comply. Even if safety-code provisions for an equipment-storage building differ from those for an office building, they may still be adequate to ensure the roof's stability.

D The question of who was responsible for ensuring compliance with the safety codes is irrelevant to whether a failure to comply was responsible for the roof's collapse.

E This suggests that the alleged consequences of failing to meet safety standards were less severe than they could have been, but it is irrelevant to determining the cause of the collapse.

The correct answer is B.

CR12078

631. Political theorist: Even with the best spies, area experts, and satellite surveillance, foreign policy assessments can still lack important information. In such circumstances intuitive judgment is vital. A national leader with such judgment can make good decisions about foreign policy even when current information is incomplete, since _____.

Which of the following, if true, most logically completes the argument?

(A) the central reason for failure in foreign policy decision making is the absence of critical information

(B) those leaders whose foreign policy decisions have been highly ranked have also been found to have good intuitive judgment

(C) both intuitive judgment and good information are required for sound decision making

(D) good foreign policy decisions often lead to improved methods of gathering information

(E) intuitive judgment can produce good decisions based on past experience, even when there are important gaps in current information

Argument Construction

Situation National leaders sometimes must make foreign policy decisions while lacking important information.

Reasoning *What would most help support the claim that a national leader with intuitive judgment can make good foreign policy decisions without complete information?* The word *since* preceding the blank indicates that the blank should be filled with a premise supporting the statement immediately before the blank. So an observation that supports the claim that a national leader with intuitive judgment can make good foreign policy decisions without complete information would logically complete the argument.

A This gives us no reason to suppose that intuitive judgment helps national leaders avoid such failures.

B This does not specify who ranked the foreign policy decisions, nor how they determined the rankings, so it gives us no reason to accept those rankings. For all we know, the anonymous rankers may have used the dubious rankings they created as the sole evidence for their so-called findings about which leaders have good intuitive judgment.

C This implies that intuitive judgment alone is inadequate without good information, so it undermines rather than supports the claim that national leaders can make good foreign policy decisions with intuitive judgment while lacking complete information.

D This gives us no reason to suppose that good foreign policy decisions can be made in the first place by leaders lacking important information.

E **Correct.** This suggests that national leaders can make good foreign policy decisions using intuitive judgment based on their past foreign policy experience, even without complete information about the current situations they're facing.

The correct answer is E.

CR51141.01

632. Supply shortages and signs of growing demand are driving cocoa prices upward. Unusually severe weather in cocoa-producing regions—too much rain in Brazil and too little in West Africa—has limited production. Further, Europe and North America recently reported stronger demand for cocoa. In the first quarter, grinding of cocoa beans—the first stage in processing cocoa for chocolate—rose 8.1 percent in Europe and 16 percent in North America. Analysts have concluded that cocoa's price will continue to rise at least into the near future.

Which of the following would, if true, most strengthen the reasoning above?

(A) Ground cocoa beans can be stored for long periods before they spoil.

(B) Several European and North American manufacturers that use cocoa have recently improved their processing capacity.

(C) It takes new cocoa trees five or six years before they start bearing fruit.

(D) Governments in Europe and North America are likely to change current restrictions on cocoa imports.

(E) Historically, cocoa production has varied widely from year to year.

Argument Evaluation

Situation There has been limited production of cocoa beans due to severe weather and also increased demand for cocoa; as a result, cocoa prices have risen.

Reasoning *What would help support the analysts' inference that cocoa prices will continue to rise at least into the near future?* If the price of cocoa is to continue to rise, then the conditions that have led to the recent increase in price must not be ameliorated. They would be ameliorated if demand for cocoa beans declined, e.g., because price increases made people less likely to want ground cocoa; they would also be ameliorated if supply increased, e.g., because many new cocoa trees were planted and very quickly started bearing fruit. If we had reason to believe that one or more of these ameliorating factors is unlikely to happen, then we have more reason to think that prices might stay high, and possibly even rise further.

A That ground cocoa beans can be stored for long periods without spoiling does not tell us whether supply and demand conditions will stay stable, improve, or get worse.

B The fact that these manufacturers have recently improved their processing capacity might help explain why the grinding of cocoa beans has increased recently; but it does not indicate that this increased capacity will be fully utilized. Often, if end-product demand decreases, industrial capacity will become underutilized.

C **Correct.** If it takes new cocoa trees several years to start bearing fruit, then it is less likely that supply can quickly be increased, which in turn makes it less likely that supply can quickly meet any increased demand and thereby relieve pricing pressures.

D These governments may change current restrictions on cocoa imports, but for all we know they may make them more restrictive rather than less restrictive. If they made them more restrictive, demand might decrease, in which case prices might actually fall.

E If cocoa production varies from year to year, it could be that next year cocoa production increases, in which case, as long as demand does not increase as well, prices might fall.

The correct answer is C.

CR01295

633. During the earliest period of industrialization in Britain, steam engines were more expensive to build and operate than either windmills or water mills, the other practicable sources of power for factories. Yet despite their significant cost disadvantage, steam-powered factories were built in large numbers well before technical improvements brought their cost down. Furthermore, they were built even in regions where geographical conditions permitted the construction of wind- and water-powered factories close to major markets.

Which of the following, if true, most helps to explain the proliferation of steam-powered factories during the earliest period of industrialization in Britain?

(A) In many areas of Britain, there were fewer steam-powered factories than wind- or water-powered factories in the earliest period of industrialization.

(B) Unlike wind- or water-powered factories, steam-powered factories were fueled with coal, which sometimes had to be transported significant distances from the mine to the site of the factory.

(C) It was both difficult and expensive to convert a factory from wind power or water power to steam power.

(D) In the early period of industrialization, many goods sold in towns and cities could not be mass-produced in factories.

(E) In Britain, the number of sites where a wind- or water-powered factory could be built was insufficient to provide for all of the demand for factory-produced goods at the time.

Argument Construction

Situation Although steam engines were more expensive than windmills and water mills in early industrial Britain, many steam-powered factories were built even in regions where the construction of wind- and water-powered factories was geographically feasible.

Reasoning *Why might steam-powered factories have proliferated despite their cost disadvantage?* Early industrialists would have needed some positive reason to choose steam over less expensive power sources for their factories. For example, steam engines might have operated faster or more effectively than windmills or water mills. Or steam engines might have received government subsidies. Or conditions restricting the number or locations of windmills and water mills might have forced industrialists to use steam power instead.

A This suggests that the steam-powered factories did not initially proliferate as widely as they might have, but it does not explain why they proliferated to the extent that they did.

B The inconvenience of transporting coal for steam-powered factories would have made those factories less likely to proliferate, not more likely.

C The difficulty of converting factories to steam power would have made steam-powered factories less likely to proliferate, not more likely.

D The technological inability to mass-produce popular products in factories would have made factories in general less likely to proliferate, including steam-powered factories.

E **Correct.** The inadequate number of sites for wind- and water-powered factories might have encouraged early industrialists to build steam-powered factories instead, since the high demand for factory-produced goods could have made these factories profitable despite their cost disadvantage.

The correct answer is E.

CR03938

634. Snowmaking machines work by spraying a mist that freezes immediately on contact with cold air. Because the sudden freezing kills bacteria, QuickFreeze is planning to market a wastewater purification system that works on the same principle. The process works only when temperatures are cold, however, so municipalities using it will still need to maintain a conventional system.

Which of the following, if true, provides the strongest grounds for a prediction that municipalities will buy QuickFreeze's purification system despite the need to maintain a conventional purification system as well?

(A) Bacteria are not the only impurities that must be removed from wastewater.

(B) Many municipalities have old wastewater purification systems that need to be replaced.

(C) Conventional wastewater purification systems have not been fully successful in killing bacteria at cold temperatures.

(D) During times of warm weather, when it is not in use, QuickFreeze's purification system requires relatively little maintenance.

(E) Places where the winters are cold rarely have a problem of water shortage.

Evaluation of a Plan

Situation QuickFreeze is planning to market wastewater purification systems that work by spraying a mist that freezes on contact with cold air. The sudden freezing kills bacteria. Because the system works only at cold temperatures, municipalities using it will still need to maintain a conventional system.

Reasoning *Which statement provides the strongest grounds for thinking that at least some municipalities will buy the purification system despite the need to maintain a conventional purification system as well?* The passage tells us why a municipality using a QuickFreeze wastewater purification system would still need a conventional system. But why would a municipality want the QuickFreeze system *in addition* to a conventional system? If conventional systems are not fully effective at cold temperatures, the QuickFreeze system would allow municipalities that sometimes experience cold temperatures to purify their wastewater more effectively.

A There is no basis in the passage for determining whether the QuickFreeze system will help remove impurities other than bacteria from wastewater. If it does not, this answer choice implies that the QuickFreeze system would not be sufficient for purifying wastewater. This would actually undermine the prediction.

B The passage states that municipalities using the QuickFreeze system would still need a conventional system. Thus, the old conventional wastewater systems would still need to be replaced with new conventional systems. This answer choice provides no reason to think municipalities would buy the QuickFreeze system.

C **Correct.** This statement, if true, would strengthen the prediction, because it provides a valid reason why the QuickFreeze system could be needed alongside conventional ones: it is more effective in cold weather.

D Although this claim does undercut one reason for thinking municipalities might *not* be likely to purchase the QuickFreeze system, it provides little reason to think that they will purchase such a system. Perhaps in times of cold weather, the QuickFreeze system is very expensive to maintain.

E The issue of whether or not there are water shortages in places where winters are cold is not directly relevant. If conventional wastewater systems are sufficient to purify water in such places, municipalities would not need the QuickFreeze system (as they would still need to maintain a conventional purification system).

The correct answer is C.

CR05080

635. **Plant scientists have used genetic engineering on seeds to produce crop plants that are highly resistant to insect damage**. Unfortunately, the seeds themselves are quite expensive, and the plants require more fertilizer and water to grow well than normal ones. Accordingly, **for most farmers the savings on pesticides would not compensate for the higher seed costs and the cost of additional fertilizer**. However, since consumer demand for grains, fruits, and vegetables grown without the use of pesticides continues to rise, the use of genetically engineered seeds of this kind is likely to become widespread.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first supplies a context for the argument; the second is the argument's main conclusion.

(B) The first introduces a development that the argument predicts will have a certain outcome; the second is a state of affairs that, according to the argument, contributes to bringing about that outcome.

(C) The first presents a development that the argument predicts will have a certain outcome; the second acknowledges a consideration that tends to weigh against that prediction.

(D) The first provides evidence to support a prediction that the argument seeks to defend; the second is that prediction.

(E) The first and the second each provide evidence to support the argument's main conclusion.

Argument Construction

Situation Seeds genetically engineered by plant scientists produce crops highly resistant to insect damage and require less use of pesticides. The seeds would be costly to use and would not help most farmers increase their profitability. Nonetheless, consumer demand for pesticide-free food materials is increasing, so genetically engineered seeds are likely to become widely used.

Reasoning *What function is served by the statement that plant scientists have used genetic engineering on seeds to produce insect-resistant crop plants? What function is served by the statement that for most farmers the savings on pesticides would not outweigh other associated costs?* The first describes an innovation—genetically engineered seeds—that allows crops to be grown with little or no use of pesticides. The second notes that despite savings on pesticide use, most farmers would not increase their profits by using the new seeds. The argument's main conclusion, however, is the prediction that use of such genetically engineered seeds will become widespread.

A The second statement is a conclusion—but not the main conclusion—that has the first statement as partial support.

B This correctly characterizes the first statement but not the second. The second statement is not meant to indicate a factor that contributes to the predicted outcome; it indicates, rather, a factor that somewhat counts against the argument's prediction.

C **Correct.** This correctly characterizes both statements.

D The first statement provides partial support for the prediction stated in the argument's main conclusion; the second statement does not state that prediction.

E The second cannot accurately be described as giving evidence to support the prediction stated in the argument's main conclusion.

The correct answer is C.

CR04159

636. Which of the following most logically completes the passage?

Leptin, a protein occurring naturally in the blood, appears to regulate how much fat the body carries by speeding up the metabolism and decreasing the appetite when the body has too much fat. Mice that do not naturally produce leptin have more fat than other mice, but lose fat rapidly when they are given leptin injections. Unfortunately, however, leptin cannot be used as a dietary supplement to control fat, since _____.

(A) the digestive system breaks down proteins before they can enter the bloodstream

(B) there are pharmaceuticals already available that can contribute to weight loss by speeding up the metabolism

(C) people with unusually low levels of leptin in their blood tend to have a high percentage of body fat

(D) the mice that do not naturally produce leptin were from a specially bred strain of mice

(E) mice whose bodies did produce leptin also lost some of their body fat when given leptin injections

Argument Construction

Situation Leptin, a protein naturally occurring in the bloodstream, speeds up metabolism to induce loss of excessive fat. Mice that lack leptin have more fat than other mice, but lose fat when given leptin injections. However, leptin cannot be used as a dietary supplement to control fat.

Reasoning *What would explain the fact that a dietary supplement of leptin will not help to control fat?* Leptin injected into the bloodstream—but not leptin taken as a dietary supplement—helps control fat. So leptin taken as a dietary supplement is either inactivated in the gastrointestinal system or for some other reason fails to enter the bloodstream.

A **Correct.** The digestive system breaks down proteins and would therefore break down leptin, which is a protein. This means that leptin given as a dietary supplement would never reach the bloodstream.

B The question concerns leptin alone, and this new information fails to explain why leptin cannot help control fat if administered as a dietary supplement.

C It is unsurprising that this would be so, but this information does nothing to explain why leptin consumed as a supplement would fail to control fat.

D Presumably leptin administered as a dietary supplement was first tested on mice bred to lack leptin. However, the question about leptin does not concern only mice, but presumably humans and other mammals.

E This suggests that boosting existing normal leptin levels with injections can induce further fat loss. However, this has no obvious relevance to the question raised about why dietary supplements of leptin fail to produce fat loss.

The correct answer is A.

CR05452

637. Suncorp, a new corporation with limited funds, has been clearing large sections of the tropical Amazon forest for cattle ranching. This practice continues even though greater profits can be made from rubber tapping, which does not destroy the forest, than from cattle ranching, which does destroy the forest.

Which of the following, if true, most helps to explain why Suncorp has been pursuing the less profitable of the two economic activities mentioned above?

(A) The soil of the Amazon forest is very rich in nutrients that are important in the development of grazing lands.

(B) Cattle-ranching operations that are located in tropical climates are more profitable than cattle-ranching operations that are located in cold-weather climates.

(C) In certain districts, profits made from cattle ranching are more heavily taxed than profits made from any other industry.

(D) Some of the cattle that are raised on land cleared in the Amazon are killed by wildcats.

(E) The amount of money required to begin a rubber-tapping operation is twice as high as the amount needed to begin a cattle ranch.

Argument Construction

Situation Suncorp is a new corporation with limited funds. It has been clearing large sections of the tropical Amazon forest for ranching, even though rubber-tapping would be more profitable.

Reasoning *What would explain why Suncorp is clearing sections of the rain forest for ranching, even though rubber tapping would be more profitable?* Because Suncorp has limited funds, if rubber tapping has much higher start-up costs, Suncorp might not have enough money to start rubber-tapping operations. If cattle ranching has much lower start-up costs than rubber tapping, Suncorp might be able to afford such an operation.

A This statement gives a reason why cattle ranching in the Amazon might be more profitable than one might otherwise think it would be. However, we already know from the passage that rubber tapping would be more profitable than cattle ranching. So, this answer choice does not help explain why cattle ranching might be preferable to rubber tapping.

B The comparison between the profitableness of cattle ranching in tropical climates and in cold-weather climates is irrelevant. The passage only covers cattle ranching in the tropical Amazon forest. This answer choice would at most explain why Suncorp is undertaking cattle ranching in the Amazon rather than in some cold-weather location.

C This statement makes what needs to be explained harder to understand, for it indicates that cattle ranching in the Amazon might be less profitable than one would otherwise think.

D Like answer choice (C), this statement indicates a disadvantage of cattle ranching in the Amazon. So, it does not explain why cattle ranching would be preferred to some other economic activity.

E **Correct.** Because it costs less to begin cattle ranching than it does to begin rubber tapping, Suncorp—which has limited funds—would have a reason to pursue cattle ranching over a potentially more profitable activity.

The correct answer is E.

CR09963

638. Archaeologists use technology to analyze ancient sites. It is likely that this technology will advance considerably in the near future, allowing archaeologists to gather more information than is currently possible. If they study certain sites now, they risk contaminating or compromising them for future studies. Therefore, in order to maximize the potential for gathering knowledge in the long run, a team of archaeologists plans to delay the examination of a newly excavated site.

Which of the following would be most useful to investigate for the purpose of evaluating the plan's prospects for achieving its goal?

(A) Whether any of the contents of the site will significantly deteriorate before the anticipated technology is available

(B) Whether there will continue to be improvements on the relevant technology

(C) Whether the team can study a site other than the newly excavated site for the time being

(D) Whether the site was inhabited by a very ancient culture

(E) Whether the anticipated technology will damage objects under study

Evaluation of a Plan

Situation To avoid prematurely compromising a newly excavated site, an archaeological team plans to postpone examining it until more advanced technology is developed that will let them gather more information from it. Their goal is to maximize the potential for gathering knowledge.

Reasoning *What would be most helpful to investigate in order to assess how likely it is that delaying examination of the site will maximize the potential for gathering knowledge from it?* In order to maximize (or even increase) the potential for gathering knowledge from the site by delaying its examination, the risk of compromising the site by examining it now has to be greater than the risk that the site will be compromised as much or more by delaying the examination. The delay might also increase the risk that the site will never be examined at all—for example, the team might lose its funding while it delays, or changes in local political conditions might prevent the site's future examination. Investigating any of these risks could be helpful in assessing the likelihood that the team's plan will achieve its goal.

A **Correct.** If any of the site's contents will significantly deteriorate before the technology becomes available, that could reduce the ability to gather future information from the site even more than examining and compromising the site now would.

B The passage already tells us that it is likely the technology *will advance considerably in the near future*. Given this information, further inquiry into whether there will be any ongoing (perhaps minor) improvements is somewhat redundant and probably of minimal value with respect to evaluating the plan's likelihood of success.

C Even if the team can study a second site in the meanwhile, they might maximize the overall potential for gathering knowledge by delaying the examination of either site, both sites, or neither site until more advanced technology is available.

D The age of the culture that inhabited the site is irrelevant to assessing the risks of delaying the site's examination until more advanced technology is available.

E Even if the anticipated technology will damage or destroy the objects under study, it might still maximize the amount of knowledge that can be gathered from those objects. Without any comparison between the damage risk that would be incurred by proceeding with the current technology and the damage risk that would be incurred by waiting, the mere fact that some damage would occur is irrelevant.

The correct answer is A.

CR01102

639. More and more law firms specializing in corporate taxes are paid on a contingency-fee basis. Under this arrangement, if a case is won, the firm usually receives more than it would have received if it had been paid on the alternate hourly rate basis. If the case is lost, the firm receives nothing. Most firms are likely to make more under the contingency-fee arrangement.

Which of the following, if true, would most strengthen the prediction above?

(A) Firms that work exclusively under the hourly rate arrangement spend, on average, fewer hours on cases that are won than on cases that are lost.

(B) Some litigation can last for years before any decision is reached, and, even then, the decision may be appealed.

(C) Firms under the contingency-fee arrangement still pay their employees on an hourly basis.

(D) Since the majority of firms specialize in certain kinds of cases, they are able to assess accurately their chances of winning each potential case.

(E) Firms working under the contingency-fee arrangement take in fewer cases per year than do firms working under the hourly rate arrangement.

Argument Evaluation

Situation Law firms of a certain type are increasingly working on a contingency-fee basis, whereby the firm is only paid if the case won. For the individual cases that are thus taken and won, the payments are generally greater than the total payments would have been if the firms had been paid on an hourly basis. Furthermore, although cases taken on a contingency-fee basis present a significant risk of working for many hours on a case and not being paid, the passage claims that most firms are likely to make more money, on average, than they would if they took their cases on an hourly basis.

Reasoning *What would most strongly indicate that, despite the risks, the law firms working on a contingency fee basis are likely to make more money, on average, than they would have otherwise?* Our task is to find the statement that would most strongly support this prediction.

A Supposing that the firms mentioned in this option changed from working on an hourly-rate basis to working on a contingency-fee basis, we would not have enough information to predict what the results would be. For example, we may have no reason to expect that the firm would accept the same cases that they would have accepted if they were working on an hourly-rate basis. As such, patterns of work on cases taken on an hourly basis may be irrelevant for determining how much the firms would make if they were to take their cases on a contingency-fee basis.

B This option indicates that firms taking cases on a contingency-fee basis can work on the cases for years without payment. Rather than supporting the point that firms would make more money if they worked on a contingency-fee basis, the option illustrates an aspect of the risks associated with this payment arrangement.

C This option also helps to illustrate the risk associated with taking cases on a contingency-fee basis. Even though firms working on such cases will only be paid if they win and not until then, they will still incur significant costs when working on their cases.

D **Correct.** This option suggests that firms working on a contingency-fee basis would be able to select cases that they would be likely to win and therefore be paid for. This makes it more likely that the firms would make more money working on a contingency-fee basis than they would if working on an hourly basis.

E Although the difference in numbers of cases described in this option could, given certain possible facts, be relevant to the prediction made by the argument, we have not been given any such facts.

The correct answer is D.

CR00766

640. Beginning in 1966 all new cars sold in Morodia were required to have safety belts and power steering. Previously, most cars in Morodia were without these features. Safety belts help to prevent injuries in collisions, and power steering helps to avoid collisions in the first place. But even though in 1966 one-seventh of the cars in Morodia were replaced with new cars, the number of car collisions and collision-related injuries did not decline.

Which of the following, if true about Morodia, most helps to explain why the number of collisions and collision-related injuries in Morodia failed to decline in 1966?

(A) Because of a driver-education campaign, most drivers and passengers in cars that did have safety belts used them in 1966.

(B) Most of the new cars bought in 1966 were bought in the months of January and February.

(C) In 1965, substantially more than one-seventh of the cars in Morodia were replaced with new cars.

(D) An excessive reliance on the new safety features led many owners of new cars to drive less cautiously in 1966 than before.

(E) The seat belts and power steering put into new cars sold in 1966 had to undergo strict quality-control inspections by manufacturers, whether the cars were manufactured in Morodia or not.

Argument Construction

Situation Starting in 1966, new cars sold in Morodia were required to have safety belts and power steering. But the numbers of car collisions and collision-related injuries did not decline that year.

Reasoning *What could explain why the newly required safety features did not reduce the numbers of collisions and collision-related injuries in 1966?* The passage says that power steering helps to prevent collisions and that safety belts help to prevent collision-related injuries. Since most Morodian cars previously lacked these features, and one-seventh of them were replaced with new cars in 1966, the proportion of cars with these features must have increased that year. This should have reduced the numbers of collisions and collision-related injuries unless some other factor counteracted the reductions. Evidence of any such countervailing factor would help to explain why the numbers did not decrease.

A Increased usage of safety belts should have reduced the number of collision-related injuries, so it would not help explain why this number did not decrease.

B If the new cars bought in 1966 were mostly purchased early in the year, the increased proportion of cars with the newly required safety features should have started more significantly reducing the numbers of collisions and collision-related injuries early in the year, producing greater reductions for the year as a whole.

C However, many cars were replaced in the year before the safety features were required, in 1966 the replacement of one-seventh of all Morodian cars should still have increased the overall proportion of Morodian cars with the safety features and thus reduced the numbers of collisions and collision-related injuries.

D **Correct.** If many owners of the cars with the new safety features drove less cautiously, their recklessness could have increased the overall numbers of collisions and collision-related injuries despite any benefits from the safety features.

E Strict quality-control inspections should have made the safety features more reliable, further reducing the numbers of collisions and collision-related injuries.

The correct answer is D.

CR04882

641. Enterprise Bank currently requires customers with checking accounts to maintain a minimum balance or pay a monthly fee. Enterprise plans to offer accounts with no monthly fee and no minimum-balance requirement; to cover their projected administrative costs of $3 per account per month they plan to charge $30 for overdrawing an account. Since each month on average slightly more than 10 percent of Enterprise's customers overdraw their accounts, bank officials predict the new accounts will generate a profit.

Which of the following, if true, most strongly supports the bank officials' prediction?

(A) Some of Enterprise Bank's current checking account customers are expected to switch to the new accounts once they are offered.

(B) One third of Enterprise Bank's revenues are currently derived from monthly fees tied to checking accounts.

(C) Many checking account customers who occasionally pay a fee for not maintaining a minimum balance in their account generally maintain a balance well above the minimum.

(D) Customers whose checking accounts do not have a minimum-balance requirement are more likely than others to overdraw their checking accounts.

(E) Customers whose checking accounts do not have a minimum-balance requirement are more likely than others to write checks for small amounts.

Evaluation of a Plan

Situation Enterprise Bank gives customers checking accounts with no monthly fee provided they maintain a certain minimum balance. However, the bank plans to offer accounts with no minimum-balance requirement and no monthly fee. It plans to cover the bank's $3 per account per month administrative cost by charging a $30 penalty for overdrafts. Only slightly more than 10 percent of customers, on average, overdraw their accounts in a month. The bank officials predict the new accounts will generate a profit.

Reasoning *What new information, if accurate, would most strongly support the prediction?* If about only one customer in ten, on average, currently has an overdraft in a month, and if this trend continues among customers who sign up for the new account, then the proposed $30 penalty per overdraft will cover the $30 cost of maintaining checking accounts for 10 customers per month. Would removing the minimum-balance requirement significantly increase the 10 percent overdraft rate? If so, then significantly more than one in ten customers, on average, would pay a $30 penalty. If this were so, then the new plan would yield a profit, as predicted.

A "Some" might mean only a few, and this would probably not be sufficient to make the new plan significantly profitable.

B This suggests that many customers with the current minimum-balance no-monthly-fee account do not maintain the minimum-balance requirement and pay fees instead. However, this information by itself seems to have little bearing on the new plan.

C Such customers would be likely to overdraw their accounts less frequently. This suggests that if a preponderance of the customers for the proposed new account were such customers, the overdraft rate would decrease, and the proposed new account would be less profitable, or even unprofitable.

D **Correct.** This information provides strong support for the bank officials' prediction. It indicates that the currently roughly 10 percent overdraft rate might increase drastically with the no-minimum-balance account and, on average, cause the imposition of a $30 penalty on significantly more than 10 percent of customers per month. This would make the new account significantly profitable.

E This suggests that a check written by one of these customers is more likely to be for a small amount and is therefore somewhat less likely to cause an overdraft (unless such customers typically have small checking balances, which we are not told). If there were many such customers for the proposed new account, the overdraft rate might be less than 10 percent; this would indicate that the new account might not turn out to be profitable.

The correct answer is D.

CR05667

642. In virtually any industry, technological improvements increase labor productivity, which is the output of goods and services per person-hour worked. In Parland's industries, labor productivity is significantly higher than it is in Vergia's industries. Clearly, therefore, Parland's industries must, on the whole, be further advanced technologically than Vergia's are.

The argument is most vulnerable to which of the following criticisms?

(A) It offers a conclusion that is no more than a paraphrase of one of the pieces of information provided in its support.

(B) It presents as evidence in support of a claim information that is inconsistent with other evidence presented in support of the same claim.

(C) It takes one possible cause of a condition to be the actual cause of that condition without considering any other possible causes.

(D) It takes a condition to be the effect of something that happened only after the condition already existed.

(E) It makes a distinction that presupposes the truth of the conclusion that is to be established.

Argument Evaluation

Situation Technological improvements in nearly every industry increase labor productivity, which is the output of goods and services per person-hour worked. Because labor productivity is significantly higher in Parland than Vergia, Parland's industries are, in general, more technologically advanced than Vergia's.

Reasoning *To which criticism is the argument most vulnerable?* Though one factor, such as technological advancements, may lead to greater labor productivity, it may not be the only such factor, or even a necessary factor, leading to great labor productivity. Therefore, the mere fact that one region's labor is more productive than another's is not sufficient to establish that the former region is more technologically advanced than the latter region is.

A The conclusion is not merely a paraphrase of the pieces of information provided in its support. Indeed, the problem with the argument is that the conclusion goes too far beyond what the premises merit.

B The premises of the argument are not inconsistent with one another.

C **Correct.** This accurately describes the flaw in the argument because the reasons given in the argument for its conclusion would be good reasons only if there were no other plausible explanations for Parland's greater labor productivity.

D The argument does not mention how long Parland has had more productive labor, or when technological improvements would have occurred.

E Neither of the premises contains anything that presupposes the conclusion to be true.

The correct answer is C.

CR08471

643. Chaco Canyon, a settlement of the ancient Anasazi culture in North America, had massive buildings. **It must have been a major Anasazi center**. Analysis of wood samples shows that some of the timber for the buildings came from the Chuska and San Mateo mountains, 50 miles from Chaco Canyon. **Only a major cultural center would have the organizational power to import timber from 50 miles away**.

In the argument given, the two portions in boldface play which of the following roles?

(A) The first is a premise used to support the argument's main conclusion; the second is the argument's main conclusion.

(B) The first is the argument's main conclusion; the second is a premise used to support that conclusion.

(C) The first is one of two premises used to support the argument's main conclusion; the second is the other of those two premises.

(D) The first is a premise used to support the argument's main conclusion; the second is a premise used to support another conclusion drawn in the argument.

(E) The first is inferred from another statement in the argument; the second is inferred from the first.

Argument Construction

Situation The ancient Anasazi settlement at Chaco Canyon had massive buildings, for which some of the timber came from mountains 50 miles away.

Reasoning *What roles do the statement that Chaco Canyon must have been a major Anasazi center and the statement that only a major center would have the organizational power to import timber from 50 miles away play in the argument?* The first and third sentences in the passage are both factual observations. Since no further support is provided for either of them, neither can be a conclusion in the argument. The fourth sentence is a speculative generalization about major cultural centers. None of the other statements gives us any reason to think this generalization is true, so it cannot be a conclusion in the argument, either. However, the third and fourth sentences together imply that Chaco Canyon was a major cultural center, and the first sentence indicates that it was Anasazi. So together, the first, third, and fourth sentences all support the claim that Chaco Canyon was a major Anasazi cultural center and thus more generally a major Anasazi center, as the second sentence asserts. Therefore, the first, third, and fourth sentences are all premises that jointly support the second sentence as a conclusion.

A As explained above, the first boldface sentence is a conclusion supported by the latter, not the other way around.

B **Correct.** As explained above, the first boldface sentence is the argument's only stated conclusion, and in that sense its main conclusion, while all the other sentences are premises used to support it.

C As explained above, the first boldface sentence is the argument's conclusion, not a premise used to support the conclusion.

D As explained above, the first boldface sentence is the argument's only stated conclusion, and there is no reason to suppose that the argument is intended to lead to any other tacit conclusion that the second boldface sentence is intended to support.

E As explained above, the first boldface sentence is inferred from the three other statements in the argument together, not from any one of them alone. The second boldface sentence is a speculative generalization that cannot be, and is not meant to be, inferred from the former or from any other statement in the argument.

The correct answer is B.

CR04364

644. The Maxilux car company's design for its new luxury model, the Max 100, included a special design for the tires that was intended to complement the model's image. The winning bid for supplying these tires was submitted by Rubco. Analysts concluded that the bid would only just cover Rubco's costs on the tires, but Rubco executives claim that winning the bid will actually make a profit for the company.

Which of the following, if true, most strongly justifies the claim made by Rubco's executives?

(A) In any Maxilux model, the spare tire is exactly the same make and model as the tires that are mounted on the wheels.

(B) Rubco holds exclusive contracts to supply Maxilux with the tires for a number of other models made by Maxilux.

(C) The production facilities for the Max 100 and those for the tires to be supplied by Rubco are located very near each other.

(D) When people who have purchased a carefully designed luxury automobile need to replace a worn part of it, they almost invariably replace it with a part of exactly the same make and type.

(E) When Maxilux awarded the tire contract to Rubco, the only criterion on which Rubco's bid was clearly ahead of its competitors' bids was price.

Argument Construction

Situation Rubco won a bid for supplying tires for the Max 100, a new luxury model by Maxilux. The bid would barely cover the cost of the tires, but Rubco executives claim that winning the bid will be profitable.

Reasoning *What would support the executives' claim?* Rubco is not expected to make a profit from supplying the tires for the new cars, so we must look for some other way that Rubco could derive a profit as a result of winning the bid. If by winning the bid Rubco created an inevitable market for itself in replacement tires—on which Rubco could earn a profit—then the executives' claim may be justified.

A We have already been told that the bid is expected to barely cover the costs of supplying the tires on the new cars, so the analysts mentioned in the passage have presumably already taken into account that there is a spare tire supplied for the Max 100.

B If winning the bid led Rubco to win more exclusive contracts with the Maxilux, that might help support the executives' claim. But this statement indicates only that Rubco already has several exclusive contracts to supply Maxilux with tires, not that winning the bid has led to, or will lead to, more such contracts, which is what would be needed.

C As in answer choice (A), this is relevant to the costs of supplying the tires for the Max 100, but presumably this was taken into account by the analysts when they concluded that the bid would barely cover Rubco's costs on the tires.

D **Correct.** This indicates that by winning the bid Rubco has created a way to profit from the contract with Maxilux, specifically, by creating a market for replacement tires.

E This is likely one of the reasons that Rubco's bid only just covers Rubco's costs on the tires; it does nothing to justify the executives' claims that the bid will lead to a profit for Rubco.

The correct answer is D.

CR05186

645. Which of the following most logically completes the passage?

Most bicycle helmets provide good protection for the top and back of the head, but little or no protection for the temple regions on the sides of the head. A study of head injuries resulting from bicycle accidents showed that a large proportion were caused by blows to the temple area. Therefore, if bicycle helmets protected this area, the risk of serious head injury in bicycle accidents would be greatly reduced, especially since _____.

(A) among the bicyclists included in the study's sample of head injuries, only a very small proportion had been wearing a helmet at the time of their accident

(B) even those bicyclists who regularly wear helmets have a poor understanding of the degree and kind of protection that helmets afford

(C) a helmet that included protection for the temples would have to be somewhat larger and heavier than current helmets

(D) the bone in the temple area is relatively thin and impacts in that area are thus very likely to cause brain injury

(E) bicyclists generally land on their arm or shoulder when they fall to the side, which reduces the likelihood of severe impacts on the side of the head

Argument Construction

Situation Bicycle helmets protect the top and back of the head, but not the sides or temples. A study found that a large proportion of head injuries caused by biking accidents were caused by blows to the temple area.

Reasoning *Why would the risk of serious head injury in bicycle accidents be greatly reduced if bicycle helmets protected the temple regions?* If for some reason a serious head injury is particularly likely when there is impact to the temple area, then bicycle helmets that protect that area would be apt to reduce the number of serious head injuries from bicycle accidents. One such reason is that the bone in the temple area is relatively thin.

A This point is irrelevant because it gives us no information about the seriousness or the likelihood of injuries due to impact to the temple area.

B Whether bicyclists who regularly wear helmets have a good understanding of what protection their helmets afford is not relevant as to whether serious head injuries are particularly likely to occur from impact to the temple area.

C This point is relevant only to what a helmet that protected the temple area would be like, not to the seriousness of injuries resulting from impact to that area. If anything, this point counts as a reason *against* the conclusion, not *for* it. If such helmets are heavier and larger, they may be used less than they otherwise would be. If fewer helmets are used, then improvements to helmet design will have less of an effect in reducing serious head injuries.

D **Correct.** This statement provides a reason why the temple area of the rider's head needs protection: impacts to this area are very likely to cause brain injuries.

E This is largely irrelevant. Even if it suggests that head injuries do not generally result from bicyclists falling to the side, it does not indicate that such injuries are rare or that there is not great risk of serious injury in those cases in which there is impact to the temple area.

The correct answer is D.

CR01867

646. Which of the following most logically completes the argument?

In a typical year, Innovair's airplanes are involved in 35 collisions while parked or being towed in airports, with a resulting yearly cost of $1,000,000 for repairs.

To reduce the frequency of ground collisions, Innovair will begin giving its ground crews additional training, at an annual cost of $500,000. Although this will cut the number of ground collisions by about half at best, the drop in repair costs can be expected to be much greater, since _____.

(A) most ground collisions happen when ground crews are rushing to minimize the time a delayed airplane spends on the ground

(B) a ground collision typically occurs when there are no passengers on the airplane

(C) the additional training will focus on helping ground crews avoid those kinds of ground collisions that cause the most costly damage

(D) the $500,000 cost figure for the additional training of ground crews includes the wages that those crews will earn during the time spent in actual training

(E) most ground collisions have been caused by the least experienced ground-crew members

Evaluation of a Plan

Situation An airline will give its ground crews additional training to reduce the frequency of the collisions its airplanes are involved in while parked or being towed in airports.

Reasoning *What premise would most logically support the conclusion that the additional training will reduce repair costs from ground collisions much more than it reduces the number of such collisions?* The key word *since* before the blank shows that the argument should be completed with a premise that supports the preceding claim that the *drop in repair costs can be expected to be much greater*. A suitable premise might provide evidence that the training will disproportionately help to prevent the ground collisions that result in the higher repair costs as opposed to the less serious collisions that result in lower repair costs.

A We are given no reason to believe that the additional training would affect how much ground crews rush to minimize delays.

B The number of passengers is not clearly relevant to the repair costs resulting from a ground collision and in any case would not be affected by additional ground crew training.

C **Correct.** If the training especially helps the ground crews avoid those kinds of collisions that cause the most costly damage, then it will probably reduce repair costs even more than it reduces the number of collisions.

D Whether the cited expense for training includes wages is irrelevant to whether the training will reduce repair costs more than it reduces the number of collisions.

E This suggests that the additional training may help reduce the number of collisions, not that it will reduce repair costs more than it reduces the number of collisions.

The correct answer is C.

CR12558

647. Many agriculturally intensive areas of the world are beginning to encounter water scarcity problems. As a result, many farmers in these areas are likely to reduce their output as the water supply they need in order to maintain production shrinks. However, one group of farmers in such a region plans to increase their production by implementing techniques for water conservation.

Which of the following, if true, would most strongly support the prediction that the group's plan will succeed?

(A) Farmers who can gain a larger share of the food market in their regions will be better positioned to control more water resources.

(B) Most agricultural practices in areas with water shortages are water-intensive.

(C) Other regions of the world not facing water shortages are likely to make up for the reduction in agricultural output.

(D) Demand for agricultural products in the group's region is not expected to decline.

(E) More than half the water used for agriculture in the farmers' region is lost to evaporation or leakage from irrigation channels.

Evaluation of a Plan

Situation Farmers in many agriculturally intensive regions will probably reduce their output because the regions' water supplies are dwindling, but one group of farmers in such a region plans to use water conservation techniques to increase their output.

Reasoning *What would provide evidence that water conservation techniques will help the farmers increase production despite their region's dwindling water supplies?* In order for the water conservation techniques to be effective, they must result in significantly more water becoming available for the farmers to use. Because overall supplies are shrinking, rather than growing, that can only happen if the farmers are currently losing or wasting a great deal of water in ways that could be prevented with water conservation techniques.

A This suggests an advantage the farmers will gain if their water conservation plan enables them to increase production, but it provides no evidence that the plan actually will enable them to increase production.

B This suggests that the plan would have to yield quite a lot of conserved water in order for the farmers to increase production, but it offers no evidence that the plan will do so. Thus, it provides some reason to question whether the plan will succeed.

C Whether regions without water shortages will increase production is not directly relevant to the question of whether a particular measure would lead to increased production in one region that does have a water shortage.

D This has some slight, indirect relevance to the question of whether the farmers' plan will succeed: it suggests that if the farmers do manage to increase production, they will continue to have a market for what they produce. However, it does not address the issue of whether they will be able to increase production. Furthermore, even if demand for agricultural products in the group's region were expected to decline, it could still remain high enough to support the farmers' increased output from their water conservation plan.

E **Correct.** This suggests that the farmers are losing a lot of water in ways that the water conservation techniques might prevent, so it provides evidence that employing some such techniques could enable the farmers to save enough water to increase their output.

The correct answer is E.

CR03367

648. Hollywood restaurant is replacing some of its standard tables with tall tables and stools. The restaurant already fills every available seat during its operating hours, and the change in seating arrangements will not result in an increase in the restaurant's seating capacity. Nonetheless, the restaurant's management expects revenue to increase as a result of the seating change without any concurrent change in menu, prices, or operating hours.

Which of the following, if true, provides the best reason for the expectation?

(A) One of the taller tables takes up less floor space than one of the standard tables.

(B) Diners seated on stools typically do not linger over dinner as long as diners seated at standard tables.

(C) Since the restaurant will replace only some of its standard tables, it can continue to accommodate customers who do not care for the taller tables.

(D) Few diners are likely to avoid the restaurant because of the new seating arrangement.

(E) The standard tables being replaced by tall tables would otherwise have to be replaced with new standard tables at a greater expense.

Argument Construction

Situation Hollywood restaurant is replacing some of its tables with taller tables and stools, and the management expects this will increase revenue, despite the fact that the restaurant already fills all of its available seats and that this change will not increase seating capacity. Furthermore, there will not be any change in menu, prices, or operating hours.

Reasoning *What would strongly support the management's expectation?* Since the new seating will not increase the restaurant's seating capacity, the management's expectations must be based on a belief that the change to taller tables and stools will somehow change diners' behavior, perhaps by leading them to order more food, or to stay at their tables for a shorter time, thereby allowing the restaurant to serve more diners during its operating hours without increasing seating capacity. If diners seated at tall tables and on tall stools spend less time lingering over their dinners, then they will leave sooner, opening up the tables for more diners. Because the restaurant, before the change, already fills every available seat during its operating hours, it is reasonable to think that it will be able to serve more diners than it currently does, thereby selling more food and thus increasing revenue.

A This would be relevant if we could infer from it that seating capacity will increase. However, the passage indicates that the new seating arrangement will not result in greater capacity.

B **Correct.** Because the restaurant will be able to serve more meals during its operating hours, the restaurant's revenue can be expected to increase.

C This may indicate that the restaurant is less likely to alienate customers who do not care for tall tables and stools, but that only supports the claim that the restaurant will not lose customers and therefore lose revenue; it does not indicate that the restaurant will see revenue increase.

D Again, this merely indicates that there will not be a loss—or much loss—of revenue, not that there will be an increase in revenue.

E Less expensive tables will decrease the restaurant's costs, but it will not increase the restaurant's revenue.

The correct answer is B.

CR07660

649. A major network news organization experienced a drop in viewership in the week following the airing of a controversial report on the economy. The network also received a very large number of complaints regarding the report. The network, however, maintains that negative reactions to the report had nothing to do with its loss of viewers.

Which of the following, if true, most strongly supports the network's position?

(A) The other major network news organizations reported similar reductions in viewership during the same week.

(B) The viewers who registered complaints with the network were regular viewers of the news organization's programs.

(C) Major network news organizations publicly attribute drops in viewership to their own reports only when they receive complaints about those reports.

(D) This was not the first time that this network news organization has aired a controversial report on the economy that has inspired viewers to complain to the network.

(E) Most network news viewers rely on network news broadcasts as their primary source of information regarding the economy.

Argument Construction

Situation A major network news organization aired a controversial report on the economy, and the following week the network's viewership declined. The network claims that the loss of viewers was not connected with negative reactions to the report.

Reasoning *Which statement most strongly supports the network's position?* If other major news network organizations had similar drops in viewership, it is implausible to think that the controversial report accounted for the other organizations' drops in viewership. On the other hand, it is not implausible to suppose that whatever did cause the drop in the viewership experienced by other network news organizations—e.g., holidays, weather, popular non-news programming—also had that effect on the organization that ran the controversial report. This would give some reason to believe that it was not the report that accounts for the organization's drop in viewership.

A **Correct.** This statement indicates that something other than the airing of the report could account for the subsequent drop in the organization's viewership.

B If anything, this statement tends to undermine the network's claim, because it suggests that the report offended people who otherwise might have continued to watch the organization's programming.

C Since the network did in fact receive complaints about the report, this statement is irrelevant.

D The fact that the network has received complaints before about controversial reports on the economy that the network's news organization has aired tells us nothing about whether this recent report caused a subsequent drop in viewership.

E The fact that viewers turn to network news broadcasts as their primary source of information about the economy tells us nothing about whether viewers might stop watching a particular network news organization's programs as a result of its airing a controversial report on the economy.

The correct answer is A.

CR04366

650. Only a reduction of 10 percent in the number of scheduled flights using Greentown's airport will allow the delays that are so common there to be avoided. Hevelia airstrip, 40 miles away, would, if upgraded and expanded, be an attractive alternative for fully 20 percent of the passengers using Greentown airport. Nevertheless, experts reject the claim that turning Hevelia into a full-service airport would end the chronic delays at Greentown.

Which of the following, if true, most helps to justify the experts' position?

(A) Turning Hevelia into a full-service airport would require not only substantial construction at the airport itself, but also the construction of new access highways.

(B) A second largely undeveloped airstrip close to Greentown airport would be a more attractive alternative than Hevelia for many passengers who now use Greentown.

(C) Hevelia airstrip lies in a relatively undeveloped area but would, if it became a full-service airport, be a magnet for commercial and residential development.

(D) If an airplane has to wait to land, the extra jet fuel required adds significantly to the airline's costs.

(E) Several airlines use Greentown as a regional hub, so that most flights landing at Greentown have many passengers who then take different flights to reach their final destinations.

Evaluation of a Plan

Situation To avoid the delays now common at Greentown's airport, the number of scheduled flights there would need to be reduced by 10 percent. If the nearby Hevelia airstrip were expanded and upgraded, it would be an attractive alternative for 20 percent of Greentown airport's passengers. Still, experts do not believe that the delays at Greentown would end even if Hevelia were turned into a full-service airport.

Reasoning *Which statement most supports the experts' position?* If the number of flights at Greentown's airport did not drop by at least 10 percent, despite the fact that 20 percent of the passengers who currently use Greentown's airport would find nearby Hevelia airstrip an attractive alternative, then the delays would not be avoided. Airlines generally use certain airports as regional hubs—an airport through which an airline routes most of its traffic—so, even if many passengers would be willing to use Hevelia airstrip, the number of flights at Greentown may not decline significantly, or at all.

A The experts' position concerns what would happen to the flight delays at Greentown airport if the Hevelia airstrip were converted into a full-service airport. So the fact that there are great costs involved in making such a conversion—possibly making such a conversion unlikely—has no bearing on the effects such a conversion would have on flight delays at Greentown if the conversion were to be carried out.

B This statement indicates that the undeveloped airstrip near Greentown might be a better way to alleviate flight delays at Greentown, but it tells us nothing about the effects that converting the Hevelia airstrip to a full-service airport would have were it to be carried out.

C This in no way explains why converting the Hevelia airstrip into a full-service airport would not alleviate the problem with flight delays at Greentown.

D This provides a reason to think that reducing the number of flights at Greentown might make the airport more efficient. But that has no bearing on the effect that converting the Hevelia airstrip to a full-service airport might have on flight delays at Greentown.

E **Correct.** This statement provides support for the experts' position because it gives a reason for thinking that the number of scheduled flights at Greentown would not be reduced, even if Hevelia airstrip became an attractive alternative for some 20 percent of Greentown's passengers.

The correct answer is E.

CR07712

651. Farmer: Worldwide, just three grain crops—rice, wheat, and corn—account for most human caloric intake. To maintain this level of caloric intake and also keep pace with global population growth, yields per acre from each of these crops will have to increase at least 1.5 percent every year, given that the supply of cultivated land is diminishing. Therefore, the government should increase funding for research into new ways to improve yields.

Which of the following is an assumption on which the farmer's argument depends?

(A) It is solely the government's responsibility to ensure that the amount of rice, wheat, and corn produced worldwide keeps pace with global population growth.

(B) Increasing government funding for research into new ways to improve the yields per acre of rice, wheat, and corn crops would help to increase total worldwide annual production of food from these crops.

(C) Increasing the yields per acre of rice, wheat, and corn is more important than increasing the yields per acre of other crops.

(D) Current levels of funding for research into ways of improving grain crop yields per acre have enabled grain crop yields per acre to increase by more than 1.5 percent per year worldwide.

(E) In coming decades, rice, wheat, and corn will become a minor part of human caloric intake, unless there is government-funded research to increase their yields per acre.

Argument Construction

Situation The farmer states that although the worldwide human population is increasing, the supply of cultivated land is decreasing. We thus need to increase yields for the food crops that account for most of human caloric intake—rice, wheat, and corn—if we are to maintain our existing caloric intake. The increase in yields, according to the farmer, would need to be at least 1.5 percent every year.

Reasoning *What must be true if we are to accept the farmer's conclusion, that the government should increase funding for research into new ways to improve crop yields, on the basis of the above statements?* The farmer uses the above statements as premises of an argument for an increase in government funding for research on crop yields. Supposing that the farmer's statements are true, we need to find in the available options the statement that, if added to the argument, may allow us to accept the farmer's conclusion, based on the argument.

A Whether or not nongovernmental entities such as NGOs (nongovernmental organizations) are responsible for helping to ensure that humans have an adequate amount of food, governments may or may not also have this responsibility.

B **Correct.** If government funding of this research does not increase crop yields, then the premises of the argument provide no support for the conclusion that the government should provide such funding. The cogency of the argument thus depends on this statement.

C Crops in addition to rice, wheat, and corn could also be very important, and perhaps essential for human existence. However, this would not diminish the importance of food crops such as rice, wheat, and corn.

D This option may suggest that current levels of funding of research into crop yields are sufficient for purposes of our obtaining the necessary crop yields.

E This option suggests that rice, wheat, and corn may be replaced by other crops, because the other crops have better yields. Because we might thus have a means for increasing crop yields that does not involve an increase in government research funding, this option may actually decrease the support for the conclusion.

The correct answer is B.

CR08770

652. The air quality board recently informed Coffee Roast, a small coffee roasting firm, of a complaint regarding the smoke from its roaster. Recently enacted air quality regulations require machines roasting more than 10 pounds of coffee to be equipped with expensive smoke-dissipating afterburners. The firm, however, roasts only 8 pounds of coffee at a time. Nevertheless, the company has decided to purchase and install an afterburner.

Which of the following, if true, most strongly supports the firm's decision?

(A) Until settling on the new air quality regulations, the board had debated whether to require afterburners for machines roasting more than 5 pounds of coffee at a time.

(B) Coffee roasted in a machine equipped with an afterburner has its flavor subtly altered.

(C) The cost to the firm of an afterburner is less than the cost of replacing its roaster with a smaller one.

(D) Fewer complaints are reported in areas that maintain strict rules regarding afterburners.

(E) The firm has reason to fear that negative publicity regarding the complaints could result in lost sales.

Evaluation of a Plan

Situation After being informed of a complaint about smoke from its coffee roaster, a firm decided to purchase and install an afterburner to reduce or eliminate emissions of smoke, even though the roaster roasts too little coffee at a time for an afterburner to be legally required.

Reasoning *What would have been a good reason for the firm to buy and install the afterburner?* The only factors mentioned that might give the firm reason to buy an afterburner are the complaint about smoke and the regulations requiring an afterburner. Since the regulations do not apply in this case, the complaint is more likely to have motivated the firm's decision. Any serious potential consequences the firm might have faced from failure to address the complaint could have provided a good reason to buy and install the afterburner.

A If this debate had still been ongoing when the firm made its decision, uncertainty about the pending regulations might have justified the decision. But the debate had already been settled before the firm decided to purchase the afterburner, and the regulations clearly did not require one.

B An unspecified alteration in flavor is not clearly a good reason to use an afterburner—the afterburner might worsen the flavor.

C The firm's roaster was already small enough that the regulations did not require it to be replaced, even without an afterburner.

D This reason relates only to rules regarding afterburners, not to Coffee Roast's purchase of an afterburner, which was not mandated by regulations. Furthermore, it could be that the air quality regulations recently enacted are among the strictest in any region, which could result in fewer complaints regardless of whether Coffee Roast installs an afterburner.

E **Correct.** Since installing an afterburner is a plausible way to address the complaint and prevent future complaints, the firm has plausible reasons to believe this strategy will help it avoid the negative publicity and lost sales it fears. These considerations could have reasonably justified its decision.

The correct answer is E.

CR03695

653. People who do regular volunteer work tend to live longer, on average, than people who do not. It has been found that "doing good," a category that certainly includes volunteer work, releases endorphins, the brain's natural opiates, which induce in people a feeling of well-being. Clearly, there is a connection: Regular releases of endorphins must in some way help to extend people's lives.

Which of the following, if true, most seriously undermines the force of the evidence given as support for the hypothesis that endorphins promote longevity?

(A) People who do regular volunteer work are only somewhat more likely than others to characterize the work they do for a living as "doing good."

(B) Although extremely high levels of endorphins could be harmful to health, such levels are never reached as a result of the natural release of endorphins.

(C) There are many people who have done some volunteer work but who do not do such work regularly.

(D) People tend not to become involved in regular volunteer work unless they are healthy and energetic to begin with.

(E) Releases of endorphins are responsible for the sense of well-being experienced by many long-distance runners while running.

Argument Evaluation

Situation People who volunteer regularly live longer on average than people who do not. Doing good work, including volunteer work, releases endorphins, which induce a feeling of well-being.

Reasoning *What additional findings would suggest that the cited evidence does not indicate that endorphins increase longevity?* The argument implicitly assumes that the reason regular volunteers tend to live longer is that volunteering lengthens their lives. It further assumes that no factor that is correlated with volunteering, other than the endorphin release, would plausibly explain how volunteering could have this effect. Findings that cast doubt on either of these assumptions would undermine the connection between the cited evidence and the conclusion that endorphins promote longevity.

A Volunteering might greatly boost volunteers' endorphin levels even if the work the volunteers do for a living is no different from other people's work.

B Even if unnaturally high endorphin levels could harm health, the levels attainable through volunteer work may promote health.

C The argument is about an observed correlation in a certain group of people (those who regularly do volunteer work). How many people are outside that group (i.e., do not regularly do volunteer work) is independent of the question of what causes the observed correlation. Even if some people volunteer only occasionally, volunteering regularly may promote longevity by causing regular releases of endorphins.

D **Correct.** This suggests that the initially better health of people who choose to volunteer could fully explain the cited correlation between volunteering and longevity.

E Unless we are also given evidence that long-distance runners tend not to live longer than other people, this does not undermine the purported evidence in the argument. Endorphins might promote longevity in both regular volunteers and long-distance runners.

The correct answer is D.

CR04140

654. A study compared a sample of Swedish people older than 75 who needed in-home assistance with a similar sample of Israeli people. The people in the two samples received both informal assistance, provided by family and friends, and formal assistance, professionally provided. Although Sweden and Israel have equally well-funded and comprehensive systems for providing formal assistance, the study found that the people in the Swedish sample received more formal assistance, on average, than those in the Israeli sample.

Which of the following, if true, does most to explain the difference that the study found?

(A) A companion study found that among children needing special in-home care, the amount of formal assistance they received was roughly the same in Sweden as in Israel.

(B) More Swedish than Israeli people older than 75 live in rural areas where formal assistance services are sparse or nonexistent.

(C) Although in both Sweden and Israel much of the funding for formal assistance ultimately comes from the central government, the local structures through which assistance is delivered are different in the two countries.

(D) In recent decades, the increase in life expectancy of someone who is 75 years old has been greater in Israel than in Sweden.

(E) In Israel, people older than 75 tend to live with their children, whereas in Sweden people of that age tend to live alone.

Argument Construction

Situation A study of elder care in Israel and Sweden found that in Sweden, of the total amount of care that people older than 75 and needing in-home assistance received, the proportion of care that was formal, i.e., provided by professional care personnel, was greater than in Israel. Both Sweden and Israel had equally good systems for providing formal care, and in both countries, the elderly also received informal care, i.e., care provided by friends and family.

Reasoning *Among the factors given, which would most contribute to explaining the difference the study found between Sweden and Israel with respect to elder care?* A good guess would be that there is a difference in some societal factor that affects the difference the study found. For example, perhaps elders in one of the countries regard maintaining independence as a higher priority than elders in the other and consequently try to rely less on friends and family? Perhaps patterns of decline in ability to remain independent are different in the two countries? Or perhaps a greater proportion of elders live alone in one of the countries than in the other?

A The difference to be explained concerns only elder care, not care of children.

B The fact that formal elder care is less available in Swedish rural areas than in Israeli rural areas might suggest that there would be a greater reliance on informal care in such areas in Sweden. But this new information throws little light on how the overall proportions of formal and informal care in each country would be affected.

C This information is not specific enough to help explain the precise difference found in the study. It is reasonable to assume that the study was conducted with sufficient rigor to take account of any relevant structural differences in the delivery of formal elder care.

D This could suggest either that the greater proportion of informal elder care in Israel contributes to greater life expectancy or that greater life expectancy signals greater fitness during old age that would make it more practical for friends and family to provide informal elder care.

E **Correct.** The prevalence in Israel of elders living in family settings—in contrast to Sweden, where elders tend to live alone—offers a plausible explanation of the difference that the study found in the patterns of elder care in Israel and Sweden. It seems reasonable to think that, all things being equal, elders living alone would use formal elder care services more often than elders living with friends or family.

The correct answer is E.

CR05077

655. Film Director: It is true that certain characters and plot twists in my newly released film *The Big Heist* are similar to characters and plot twists in *Thieves*, a movie that came out last year. Pointing to these similarities, the film studio that produced *Thieves* is now accusing me of taking ideas from that film. The accusation is clearly without merit. All production work on *The Big Heist* was actually completed months before *Thieves* was released.

Which of the following, if true, provides the strongest support for the director's position?

(A) Before *Thieves* began production, its script had been circulating for several years among various film studios, including the studio that produced *The Big Heist*.

(B) The characters and plot twists that are most similar in the two films have close parallels in many earlier films of the same genre.

(C) The film studio that produced *Thieves* seldom produces films in this genre.

(D) The director of *Thieves* worked with the director of *The Big Heist* on several earlier projects.

(E) Production work on *Thieves* began before production work on *The Big Heist* was started.

Argument Evaluation

Situation The director of the film *The Big Heist* has been accused, by the studio that produced the film *Thieves*, of taking ideas from the film. The director responds that the accusation lacks merit, since all production work on *The Big Heist* was completed before *Thieves* appeared last year in theaters.

Reasoning *Which of the five statements most strongly supports the director's position?* Crime thrillers, as a film genre, are likely to have stock characters and plot lines that reflect a long tradition. So it would be no surprise if some of the characters or plot twists in one such film would resemble, to a greater or lesser extent, the characters and plot twists in another. The studio might be correct in identifying such resemblances between *The Big Heist* and *Thieves*. But it would not necessarily be correct that characters or plot lines in *The Big Heist* were derived from *Thieves*.

A This undercuts the director's position, since it provides information that indicates an opportunity for the director to copy ideas from the script for *Thieves*.

B **Correct.** This information strengthens the support for the director's claim that the studio's accusation lacks merit. Since both *Thieves* and *The Big Heist* fall within a long tradition of crime thriller films, the characters and plot lines in both films reflect that tradition, and so any resemblances do not imply deliberate copying of the ideas in *Thieves* by the director of *The Big Heist*.

C This information seems largely irrelevant to the issue raised and does not strengthen support for the director's conclusion.

D This does little to indicate that the director's conclusion is correct. For example, the then-future director of *Thieves* might have discussed with the future director of *The Big Heist* specific ideas about character and plot for a planned crime thriller film.

E This does not support the director's claim. For example, it raises the possibility that information about *Thieves* leaked during the early stages of production—information that could have been exploited in the production of *The Big Heist*.

The correct answer is B.

CR05412

656. In Mernia commercial fossil hunters often sell important fossils they have found, not to universities or museums, but to individual collectors, who pay much better but generally do not allow researchers access to their collections. To increase the number of fossils available for research, some legislators propose requiring all fossils that are found in Mernia to be sold only to universities or museums.

Which of the following, if true, most strongly indicates that the legislators' proposal will fail to achieve its goal?

(A) Some fossil hunters in Mernia are not commercial fossil hunters, but rather are amateurs who keep the fossils that they find.

(B) Most fossils found in Mernia are common types that have little scientific interest.

(C) Commercial fossil hunters in Mernia currently sell some of the fossils they find to universities and museums.

(D) Many universities in Mernia do not engage in fossil research.

(E) Most fossils are found by commercial fossil hunters, and they would give up looking for fossils if they were no longer allowed to sell to individual collectors.

Evaluation of a Plan

Situation Fossil hunters in Mernia often sell important fossils to collectors who do not make them accessible to researchers. To increase the number of fossils available for research, some legislators propose requiring all fossils found in Mernia to be sold only to universities or museums.

Reasoning *What would most strongly suggest that requiring all fossils found in Mernia to be sold only to universities or museums would not increase the number of fossils available for research?* To increase the number of fossils available for research, the proposed requirement will have to be implemented and effectively enforced. It will presumably have to increase the total number of fossils sold to universities and museums. And those institutions will have to make more of the fossils in their collections available to researchers than the private collectors do. Evidence that any of those conditions will not be fulfilled would suggest that the legislators' proposal will fail to achieve its goal.

A Even if the legislation does not affect fossils kept by amateurs, it might still result in many more fossils being sold to universities or museums rather than to private collectors, and thus might still increase the number of fossils available for research.

B Even if few Mernian fossils are interesting to researchers, the legislation could still achieve its goal of making more fossils available for research.

C Even if commercial fossil hunters already sell a few fossils to universities and museums, the legislation could encourage them to sell many more fossils.

D The universities that do not engage in fossil research presumably will not be interested in buying fossils even if the legislation passes. But the fossil hunters can just sell their fossils to other universities and museums that do engage in fossil research.

E **Correct.** This suggests that if the legislation passes, fossils will simply be left in the ground rather than sold to private collectors. That would not increase the total number of fossils available for research.

The correct answer is E.

CR02702

657. Economist: Tropicorp, which constantly seeks profitable investment opportunities, has been buying and clearing sections of tropical forest for cattle ranching, although pastures newly created there become useless for grazing after just a few years. The company has not gone into rubber tapping, even though greater profits can be made from rubber tapping, which leaves the forest intact. Thus, some environmentalists argue that **Tropicorp's actions do not serve even its own economic interest**. However, the initial investment required for a successful rubber-tapping operation is larger than that needed for a cattle ranch; there is a shortage of workers employable in rubber-tapping operations; and taxes are higher on profits from rubber tapping than on profits from cattle ranching. Consequently, **the environmentalists' conclusion is probably wrong**.

In the economist's argument, the two **boldface** portions play which of the following roles?

(A) The first supports the conclusion of the economist's argument; the second calls that conclusion into question.

(B) The first states the conclusion of the economist's argument; the second supports that conclusion.

(C) The first supports the conclusion of the environmentalists' argument; the second states that conclusion.

(D) The first states the conclusion of the environmentalists' argument; the second states the conclusion of the economist's argument.

(E) Each supports the conclusion of the economist's argument.

Argument Construction

Situation According to an economist, the firm Tropicorp has been investing in tropical forest that it has cleared for cattle ranching. But its new pastures are useless for grazing after a few years. In contrast, rubber tapping—which would avoid cutting trees—could be more profitable. According to the economist, environmentalists consequently argue that Tropicorp's investment does not serve the firm's economic interest. However, the economist argues, investing in rubber tapping involves some potential costs and risks greater than those that investing in cattle ranching involves. Consequently, the economist argues, the environmentalists' conclusion is probably wrong.

Reasoning *What function is served by the statement that Tropicorp's actions do not serve even its own economic interest? What function is served by the statement that the environmentalists' conclusion is probably wrong?* The first statement is a conclusion that the economist attributes to environmentalists. The second statement is the conclusion of an argument presented by the economist.

A The first states the conclusion of the argument that is attributed to environmentalists; it does not support—nor is it meant to—the conclusion of the economist.

B The second statement, not the first, is the conclusion of the economist's argument.

C The first is the conclusion attributed to environmentalists and is not meant merely as support for that conclusion.

D **Correct.** The first states the conclusion of the environmentalists' argument as the economist presents it; the second is the conclusion of the economist's argument.

E Neither statement is meant as support for the economist's conclusion, nor does it offer such support.

The correct answer is D.

CR74231.01

658. Marketing executive for Magu Corporation: Whenever Magu opens a manufacturing facility in a new city, the company should sponsor, or make donations to, a number of nonprofit organizations in that city. Doing so would improve Magu's image in the community, and thus the money spent on such charitable ventures would lead to increased sales.

Which statement would, if true, point to the most serious weakness in the marketing executive's advice?

(A) Magu sells its products internationally, so sales in any one city represent only a small portion of total revenue.

(B) Spending on charitable ventures would require Magu to decrease direct advertisements, which are the most effective means of reaching its target customers.

(C) If market conditions change, Magu may have to close any such facility or relocate it.

(D) Some nonprofit organizations are poorly organized, so money donated to them would be of little benefit to the community.

(E) If workers at the manufacturing facility believed their wages or working conditions were poor, their complaints would outweigh any good impressions generated by Magu's donations or sponsorships.

Evaluation of a Plan

Situation A marketing executive for Magu Corporation argues that Magu can increase its sales if it sponsors or donates to nonprofit organizations in any city in which it opens a new manufacturing facility, because doing so would improve its image in that city and increase sales.

Reasoning *What would most strongly suggest that Magu would not increase sales even if it followed the plan proposed by the marketing executive?* Sponsoring or donating to nonprofit organizations would require the use of financial assets that therefore cannot be spent elsewhere. If as a result Magu had to cut other expenditures that drive sales more effectively than funding nonprofit organizations drives sales, the plan may not succeed.

A Because Magu sells its products internationally and no one city represents more than a small portion of revenue, any increase in sales in any given city will have only a slight effect on total sales; nonetheless, sales could still rise.

B **Correct.** If sponsoring or donating to a nonprofit would require Magu to reduce advertising, and advertising is the most effective means of reaching its target customers, then any positive influence on sales resulting from the charitable venture might be overwhelmed by a decrease in sales because of the advertising cuts.

C The fact that Magu might have to close or relocate one of these new facilities does not suggest that the marketing executive's plan would not work; Magu's image could, nonetheless, improve and sales could increase as a result.

D Even if some nonprofit organizations are poorly organized, others may not be, and Magu could limit its support to those.

E Even if such complaints from workers would outweigh any benefit arising from Magu's support of nonprofit organizations, this does not indicate that the marketing executive's plan will not work, because we have no reason to think that the workers will in fact be dissatisfied with their wages or working conditions.

The correct answer is B.

CR08831

659. Although the school would receive financial benefits if it had soft drink vending machines in the cafeteria, we should not allow them. Allowing soft drink machines there would not be in our students' interest. If our students start drinking more soft drinks, they will be less healthy.

The argument depends on which of the following?

(A) If the soft drink vending machines were placed in the cafeteria, students would consume more soft drinks as a result.

(B) The amount of soft drinks that most students at the school currently drink is not detrimental to their health.

(C) Students are apt to be healthier if they do not drink soft drinks at all than if they just drink small amounts occasionally.

(D) Students will not simply bring soft drinks from home if the soft drink vending machines are not placed in the cafeteria.

(E) The school's primary concern should be to promote good health among its students.

Argument Construction

Situation Allowing soft drink vending machines in a school cafeteria would financially benefit the school, but students who drink more soft drinks would become less healthy.

Reasoning *What must be true in order for the claim that students drinking more soft drinks would cause them to become less healthy to justify the conclusion that soft drink vending machines should not be allowed in the cafeteria?* The argument is that because drinking more soft drinks would be unhealthy for the students, allowing the vending machines would not be in the students' interest, so the vending machines should not be allowed. This reasoning depends on the implicit factual assumption that allowing the vending machines would result in the students drinking more soft drinks. It also depends on the implicit value judgment that receiving financial benefits should be less important to the school than preventing a situation that would make the students less healthy.

A **Correct.** If the cafeteria vending machines would not result in students consuming more soft drinks, then allowing the machines would not harm the students' health in the way the argument assumes.

B Even if the amount of soft drinks the students currently drink were unhealthy, enabling the students to drink more could make them even less healthy.

C Even if drinking small amounts of soft drinks occasionally would not harm the students, vending machines in the cafeteria could lead the students to drink excessive amounts.

D Even if students who cannot buy soft drinks in the cafeteria sometimes bring them from home instead, adding vending machines in the cafeteria could increase the students' overall soft drink consumption.

E A concern does not have to be the primary one in order to be valid and important. It could be held that promoting students' good health should not be the schools' primary concern but should still be a more important concern than the financial benefits from the vending machines.

The correct answer is A.

CR01112

660. Many athletes inhale pure oxygen after exercise in an attempt to increase muscular reabsorption of oxygen. Measured continuously after exercise, however, the blood lactate levels of athletes who inhale pure oxygen are practically identical, on average, to those of athletes who breathe normal air. The lower the blood lactate level is, the higher the muscular reabsorption of oxygen is.

If the statements above are all true, they most strongly support which of the following conclusions?

(A) Athletes' muscular reabsorption of oxygen is not increased when they inhale pure oxygen instead of normal air.

(B) High blood lactate levels cannot be reduced.

(C) Blood lactate levels are a poor measure of oxygen reabsorption by muscles.

(D) The amount of oxygen reabsorbed by an athlete's muscles always remains constant.

(E) The inhaling of pure oxygen has no legitimate role in athletics.

Argument Construction

Situation Blood lactate levels after exercise are practically identical in athletes who breathe normal air and in those who inhale pure oxygen after exercise. The lower the blood lactate level, the higher the muscular reabsorption of oxygen.

Reasoning *What conclusion do the stated facts most strongly support?* We are told that lower blood lactate levels correspond consistently to higher muscular reabsorption of oxygen. Since athletes who breathe pure oxygen after exercise have blood lactate levels practically identical to those in athletes who breathe normal air, probably muscular reabsorption of oxygen does not differ significantly between athletes who breathe pure oxygen and those who breathe pure air.

A **Correct.** As explained above, the stated facts suggest that muscular reabsorption of oxygen does not differ significantly between athletes who breathe pure oxygen and those who breathe pure air. So breathing pure oxygen instead of normal air after exercise probably does not increase athletes' muscular reabsorption of oxygen.

B None of the statements indicates that blood lactate levels cannot be reduced by means other than inhaling pure oxygen.

C We are told that blood lactate levels are negatively correlated with muscular reabsorption of oxygen. This negative correlation might allow muscular reabsorption of oxygen to be precisely determined by measuring blood lactate levels.

D Muscular reabsorption of oxygen might vary for reasons unrelated to whether an athlete has been inhaling pure oxygen.

E Inhaling pure oxygen might have some legitimate role unrelated to muscular reabsorption of oxygen.

The correct answer is A.

CR79751.01

661. Historian: Fifteenth-century advances in mapmaking contributed to the rise of modern nation-states. In medieval Europe (from the fifth to the fifteenth century), sovereignty centered in cities and towns and radiated outward, with boundaries often ambiguously defined. The conceptual shift toward the modern state began in the late fifteenth century, when mapmakers learned to reflect geography accurately by basing maps on latitude-longitude grids. By the mid-seventeenth century, nearly all maps showed boundary lines.

Which of the following would, if true, most strengthen the historian's reasoning?

(A) Borders did not become codified in Europe until certain treaties were signed in the early nineteenth century.

(B) During the medieval period, various authorities in Europe claimed power over collections of cities and towns, not contiguous territories.

(C) Many members of the political elite collected maps as a hobby during the late sixteenth and early seventeenth centuries.

(D) Seventeenth-century treatises and other sources of political authority describe areas of sovereignty rather than illustrate them using maps.

(E) During the fifteenth century in Europe, mapmakers simplified the borders of sovereignty by drawing clear lines of demarcation between political powers.

Argument Evaluation

Situation A historian claims that fifteenth-century advances in mapmaking contributed to the rise of modern nation states. In earlier centuries boundaries of sovereignty in Europe were poorly defined but in the fifteenth century maps were made based on grids showing latitude and longitude.

Reasoning *What additional piece of information, if true and added to the argument, would most improve the support offered for the conclusion that improved mapping contributed to the rise of nation states?* The historian claims that there was a cause–effect relationship between progress in mapmaking and the rise of the nation state. This claim is supported by information that territories of sovereignty were vague and ill-defined before the fifteenth century, when latitude-longitude grids began to allow progressively greater accuracy in the delineation of territories on maps. The argument assumes that the rise of nation states would have required a high degree of clarity about each state's non-overlapping area of sovereignty.

A This indicates the role of treaties in the evolution of nation states but provides no additional support for the historian's causal claim.

B This information is consistent with the historian's belief that nothing resembling the modern state existed before the fifteenth century, but it provides no additional support for the historian's causal claim.

C The relevance of this information to the argument is tenuous at best. There could be many non-political explanations for the interest of political elites in collecting maps. Many people other than political elites may also have collected maps during the period mentioned.

D This information tends to minimize the role of maps in defining areas of sovereignty and to cast some doubt on the historian's causal claim.

E **Correct.** This information makes explicit the role of mapmakers in providing clarity about the geographical boundaries of each political entity's sovereignty. It thus provides additional evidence for the historian's causal claim and strengthens the historian's reasoning.

The correct answer is E.

CR11751.01

662. Sascha: The attempt to ban parliament's right to pass directed-spending bills—bills that contain provisions specifically funding the favorite projects of some powerful politicians—is antidemocratic. Our nation's constitution requires that money be drawn from our treasury only when so stipulated by laws passed by parliament, the branch of government most directly representative of the citizens. This requirement is based on the belief that exercising the power to spend public resources involves the ultimate exercise of state authority and that therefore _____.

Which of the following most logically completes Sascha's argument?

(A) designating funding specifically for the favorite projects of some powerful politicians should be considered antidemocratic

(B) the right to exercise such a power should belong exclusively to the branch of government most directly representative of the citizens

(C) exercising the power to spend public resources is in most cases—but not all—protected by the constitution

(D) modifications to any spending bills should be considered expenditures authorized by law

(E) only officials who are motivated by concerns for reelection should retain that power

Argument Construction

Situation According to Sascha, restricting parliament's ability to direct public money to the projects favored by powerful politicians would be undemocratic. Sascha argues that such a restriction on directed spending would be inconsistent with constitutional requirements.

Reasoning *What piece of information would most logically complete Sascha's argument?* What piece of information would most strongly associate parliament's spending authority with the concept of democracy? A good guess would be: some information that connects parliament's public representation role with its spending authority.

A Sascha believes that democratic constitutional principles require that parliament remain free to do what is described in this sentence.

B **Correct.** This statement makes explicit the connection, implicitly relied on by Sascha's argument, between parliament's spending authority and its role in representing the public.

C This statement may be true but fails to associate parliament's spending authority under the constitution with the notion of democracy.

D Bills are merely works-in-progress, texts of proposed laws. Modifications of bills do not in themselves provide legal authority for any public spending item.

E Sascha opposes restrictions on parliament's spending power, and this would seem to imply that Sascha believes every parliamentary representative should be free to vote on such measures regardless of their levels of concern for reelection.

The correct answer is B.

CR02143

663. Boreal owls range over a much larger area than do other owls of similar size. Scientists have hypothesized that **it is scarcity of prey that leads the owls to range so widely**. This hypothesis would be hard to confirm directly, since it is not possible to produce a sufficiently accurate count of the populations of small mammals inhabiting the forests where boreal owls live. Careful study of owl behavior has, however, shown that **boreal owls do range over larger areas when they live in regions where food of the sort eaten by small mammals is comparatively sparse**. This indicates that the scientists' hypothesis is not sheer speculation.

In the argument given, the two **boldfaced** portions play which of the following roles?

(A) The first presents an explanatory hypothesis; the second states the main conclusion of the argument.

(B) The first presents an explanatory hypothesis; the second presents evidence tending to support this hypothesis.

(C) The first presents an explanatory hypothesis; the second presents evidence to support an alternative explanation.

(D) The first describes a position that the argument opposes; the second presents evidence to undermine the support for the position being opposed.

(E) The first describes a position that the argument opposes; the second states the main conclusion of the argument.

Argument Construction

Situation The boreal owl range over a much larger area than owls of similar size. Scientists hypothesize they do so because of prey scarcity. Counting the owls' prey—small mammals—in the boreal owls' habitat is inherently difficult. This makes the scientists' hypothesis hard to confirm directly. However, it has been found that boreal owls range widely when they inhabit regions with relatively little food for the small mammals they prey on.

Reasoning *What function is served by the statement that it is scarcity of prey that leads the owls to range so widely? What function is served by the statement that boreal owls range widely if food for their small-mammal prey is relatively sparse in the region they inhabit?* The first statement expresses a hypothesis that seeks to explain the comparatively wide range of boreal owls. The second statement serves to provide some indirect evidence for the scientists' hypothesis.

A The main conclusion of the argument is that the scientists' hypothesis is not sheer speculation, i.e., that the scientists have based their hypothesis on some evidence that they have discovered. The first statement presents the scientists' hypothesis. The second statement cites some evidence for the hypothesis and is not the main conclusion of the argument.

B **Correct.** As stated, the first presents an explanatory hypothesis, while the second cites some indirect evidence for the hypothesis.

C The second statement cites some indirect evidence for the scientists' hypothesis, not for some other hypothesis.

D The argument does not oppose the scientists' hypothesis, presented in the first statement; the second statement cites evidence for the hypothesis, and does not cite evidence for a position the argument opposes.

E The second statement does not present the argument's main conclusion. The main conclusion is that the scientists' hypothesis is not mere speculation.

The correct answer is B.

CR18731.01

664. Cognitive scientist: Using the pioneering work of comparative psychologist Gordon Gallup as a model, several studies have investigated animals' capacity for mirror self-recognition (MSR). Most animals exposed to a mirror respond only with social behavior, such as aggression. However, in the case of the great apes, repeated exposure to mirrors leads to self-directed behaviors, such as exploring the inside of the mouth, suggesting that these animals recognize the reflection as an image of self. The implication of these studies is that the great apes have a capacity for self-awareness unique among nonhuman species.

The cognitive scientist makes which of the following assumptions in the argument above?

(A) Gallup's work has established that the great apes have a capacity for MSR unique among nonhuman species.

(B) If an animal does not have the capacity for MSR, it does not have the capacity for self-awareness.

(C) If a researcher exposes an animal to a mirror and that animal exhibits social behavior, that animal is incapable of being self-aware.

(D) When exposed to a mirror, all animals display either social behavior or self-directed behavior.

(E) Animals that do not exhibit MSR may demonstrate a capacity for self-awareness in other ways.

Argument Construction

Situation A cognitive scientist claims that several studies, modeled on Gordon Gallup's work, have investigated animals' capacity for mirror self-recognition (MSR), and found that, whereas most animals exposed to a mirror exhibit only social behavior in response, great apes can come to respond with self-directed behavior. The cognitive scientist infers from this that the great apes, unique among nonhumans, have a capacity for self-awareness.

Reasoning *What must be true for the studies to support the cognitive scientist's conclusion?* The implicit reasoning is that an animal has self-awareness only if the animal has the capacity for MSR; if the latter is lacking, so is the capacity for self-awareness.

A The studies the cognitive scientist's inference is based on were not necessarily conducted by Gallup himself. We are told only that they are modeled on his work.

B **Correct.** If it were possible for an animal to have the capacity for self-awareness even if the animal lacks the capacity for MSR, then the studies would not imply that the great apes have a capacity for self-awareness that other nonhuman animal species lack.

C The cognitive scientist's reasoning does not require that an animal with the capacity for self-awareness never exhibits social behavior when exposed to a mirror; it merely requires that it does not exhibit only such behavior.

D The cognitive scientist's reasoning is compatible with an animal's displaying no behavior in response to exposure to a mirror.

E The cognitive scientist's reasoning is compatible with the claim that an animal that does not exhibit MSR has no capacity at all for self-awareness.

The correct answer is B.

CR02888

665. Last year a record number of new manufacturing jobs were created. Will this year bring another record? Well, any new manufacturing job is created either within an existing company or by the start-up of a new company. **Within existing firms, new jobs have been created this year at well below last year's record pace**. At the same time, there is considerable evidence that the number of new companies starting up will be no higher this year than it was last year and **there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups**. So clearly, the number of new jobs created this year will fall short of last year's record.

In the argument given, the two portions in **boldface** play which of the following roles?

(A) The first is a claim that the argument challenges; the second is an explicit assumption on which that challenge is based.

(B) The first is a claim that the argument challenges; the second is a judgment advanced in support of the main conclusion of the argument.

(C) The first provides evidence in support of the main conclusion of the argument; the second is an objection that has been raised against that main conclusion.

(D) The first provides evidence in support of the main conclusion of the argument; the second is a judgment advanced in support of that main conclusion.

(E) The first and the second are each claims that have been advanced in support of a position that the argument opposes.

Argument Construction

Situation Manufacturing jobs are created either within existing companies or in start-ups. Manufacturing jobs are being created at a much slower rate this year than last year. It seems likely that the number of new start-ups will not exceed last year's number and that the average number of manufacturing jobs per start-up will not exceed last year's number. So fewer manufacturing jobs are likely to be created this year than last year.

Reasoning *What function is served by the statement that within existing firms, new jobs have been created this year at well below last year's record pace? What function is served by the statement that there is no reason to think that the new companies starting up this year will create more jobs per company than did last year's start-ups?* The first statement is one of the statements used as support for the argument's main conclusion (the prediction about this year's job creation). The second statement gives another premise used as support for that prediction.

A The argument does not challenge the claim made by the first statement; it uses the first and the second statement as support for the argument's main conclusion, the prediction about this year's job creation.

B The argument does not challenge the claim made by the first statement, but uses the first and second statements as support for the argument's main conclusion.

C The first provides evidence in support of the main conclusion of the argument; the second is not an objection that has been raised against the main conclusion.

D **Correct.** The first provides evidence in support of the main conclusion of the argument; the second also provides support for the main conclusion.

E Neither the first nor the second is meant to support a position that the argument opposes; rather, they are both meant to support the argument's main conclusion.

The correct answer is D.

CR07809

666. A study of ticket sales at a summer theater festival found that people who bought tickets to individual plays had a no-show rate of less than 1 percent, while those who paid in advance for all ten plays being performed that summer had a no-show rate of nearly 30 percent. This may be at least in part because the greater the awareness customers retain about the cost of an item, the more likely they are to use it.

Which of the following would, if true, best serve as an alternative explanation of the results of the study?

(A) The price per ticket was slightly cheaper for those who bought all ten tickets in advance.

(B) Many people who attended the theater festival believed strongly that they should support it financially.

(C) Those who attended all ten plays became eligible for a partial refund.

(D) Usually, people who bought tickets to individual plays did so immediately prior to each performance that they attended.

(E) People who arrived just before the performance began could not be assured of obtaining seats in a preferred location.

Argument Construction

Situation People who bought tickets to individual plays at a theater festival had a much lower no-show rate than did people who paid in advance for all ten plays.

Reasoning *What factor other than greater awareness of the ticket costs could explain why people who bought tickets individually were more likely to attend the plays?* The passage suggests that people who bought tickets individually were more likely to attend the plays because they were more vividly aware of what they had paid for each ticket. But there are other possible explanations—perhaps the people who bought the tickets individually were more eager to attend each play for its own sake, or had other characteristics or incentives that made them more likely to attend the plays.

A A slight price difference would not plausibly explain why the no-show rate was thirty times greater among those who bought all the tickets in advance than among those who bought them individually.

B This could be true of many people who bought their tickets individually as well as many who bought them in advance.

C This would provide an added incentive for those who bought tickets in advance to attend all the plays.

D **Correct.** If people who bought individual tickets usually did so right before each performance, they would have much less time after buying the tickets to change their minds about whether to attend than would people who bought all the tickets in advance.

E If anything, this might present an additional difficulty for those who bought individual tickets without advance planning, so it would not help to explain the lower no-show rate among buyers of individual tickets.

The correct answer is D.

CR12019

667. Although there is no record of poet Edmund Spenser's parentage, we do know that as a youth Spenser attended the Merchant Tailors' School in London for a period between 1560 and 1570. Records from this time indicate that the Merchant Tailors' Guild then had only three members named Spenser: Robert Spenser, listed as a gentleman; Nicholas Spenser, elected the Guild's Warden in 1568; and John Spenser, listed as a "journeyman cloth-maker." Of these, the last was likely the least affluent of the three—and most likely Edmund's father, since school accounting records list Edmund as a scholar who attended the school at a reduced fee.

Which of the following is an assumption on which the argument depends?

(A) Anybody in sixteenth century London who made clothing professionally would have had to be a member of the Merchant Tailors' Guild.

(B) The fact that Edmund Spenser attended the Merchant Tailors' School did not necessarily mean that he planned to become a tailor.

(C) No member of the Guild could become Guild warden in sixteenth century London unless he was a gentleman.

(D) Most of those whose fathers were members of the Merchant Tailors' Guild were students at the Merchant Tailors' School.

(E) The Merchant Tailors' School did not reduce its fees for the children of the more affluent Guild members.

Argument Construction

Situation Records indicate that the poet Edmund Spenser attended the Merchant Tailors' School for a reduced fee as a youth. There is no record of his parentage, but at the time the Merchant Tailors' Guild had only three members named Spenser, of whom the least affluent was probably John Spenser.

Reasoning *What must be true in order for the cited facts to support the conclusion that John Spenser was probably Edmund Spenser's father?* The implicit reasoning is that since Edmund Spenser attended the Merchant Tailors' School at a reduced fee, his father must have been poor. And since John Spenser was probably the poorest of the three men named Spenser in the Merchant Tailors' Guild, he was probably Edmund Spenser's father. This reasoning assumes that only the children of poor parents had reduced fees at the Merchant Tailors' School, that the children at the school generally had fathers in the Merchant Tailors' Guild, that children in that time and place generally shared their fathers' surnames, and that the two other Spensers in the Merchant Tailors' Guild were not poor enough for their children to qualify for reduced fees.

A John Spenser, as a tailor and member of the guild, could have been Edmund Spenser's father even if some other professional tailors did not belong to the guild and did not have children at the school.

B Although Edmund Spenser became a poet as an adult, he and all his classmates might have attended the school as children because they planned to become tailors.

C The argument assumes that a Guild's Warden probably would have been wealthier than a journeyman cloth-maker, but that might have been probable even if the Guild's Warden were not a "gentleman."

D Even if most children of fathers in the guild did not attend the school, all the children who did attend the school might have had fathers in the guild.

E **Correct.** If the school reduced its fees for children of wealthier guild members, then the fact that Edmund Spenser's fees were reduced would not provide evidence that his father was the poorest of the three Spensers in the guild, as the argument requires.

The correct answer is E.

CR20831.01

668. Hea Sook: One should not readily believe urban legends. Most legends are propagated because the moral lesson underlying them supports a political agenda. People will repeat a tale if it fits their purpose. They may not deliberately spread untruths, but neither are they particularly motivated to investigate deeply to determine if the tale they are telling is true.

Kayla: But people would not repeat stories that they did not believe were true. Therefore, one can safely assume that if a story has been repeated by enough people then it is more likely to be true.

Kayla's reply is most vulnerable to the criticism that it

(A) does not specify how many people need to repeat a story before someone is justified believing it

(B) overstates the significance of political agendas in the retelling of stories

(C) fails to address the claim that people will not verify the truth of a story that fits their purpose

(D) implicitly supports the claim that the people repeating legends are not deliberately spreading untruths

(E) cannot distinguish people's motivations for repeating urban legends from their motivations for repeating other types of story

Argument Evaluation

Situation Hea Sook and Kayla have a difference of opinion on how likely urban legends are to be true.

Reasoning *What criticism is Kayla's reply most vulnerable to?* Hea Sook argues that because urban legends generally are propagated for political purposes, people are not particularly motivated to carefully investigate whether the story they are telling is true. These people may not be deliberately telling an untruth, but they have not taken care to establish whether the story is true. Kayla responds that people would not repeat a story that they did not believe to be true, but Hea Sook not only does not attempt to deny that, but she suggests that it may be true. Kayla ignores the fact that sometimes people believe that something is true without carefully determining whether it actually is true, and that they are less likely to verify whether it is true when the story fits their purposes.

A Kayla does not specify how many people need to repeat a story before one is justified in believing it, but she does not need to. Her claim—that there is some number sufficient for such belief to be justified—could be true even if she does not specify what that number is.

B It is Hea Sook, not Kayla, who asserts that political agendas are a significant factor in whether one retells a story.

C **Correct.** Kayla does not address whether people are unlikely to verify whether a story is true if the story fits their purpose.

D Kayla does not merely implicitly claim that people who repeat legends are not deliberately spreading untruths; she explicitly states this, but in this she and Hea Sook agree.

E We have no reason to think that Kayla cannot distinguish people's motivations for repeating urban legends from their motivations for repeating other types of stories. She may well be able to do this.

The correct answer is C.

CR03749

669. Rainwater contains hydrogen of a heavy form called deuterium. The deuterium content of wood reflects the deuterium content of rainwater available to trees during their growth. Wood from trees that grew between 16,000 and 24,000 years ago in North America contains significantly more deuterium than wood from trees growing today. But water trapped in several North American caves that formed during that same early period contains significantly less deuterium than rainwater in North America contains today.

Which of the following, if true, most helps to reconcile the two findings?

(A) There is little deuterium in the North American caves other than the deuterium in the water trapped there.

(B) Exposure to water after a tree has died does not change the deuterium content of the wood.

(C) Industrialization in North America over the past 100 years has altered the deuterium content of rain.

(D) Trees draw on shallow groundwater from rain that falls during their growth, whereas water trapped in caves may have fallen as rainwater thousands of years before the caves formed.

(E) Wood with a high deuterium content is no more likely to remain preserved for long periods than is wood with a low deuterium content.

Argument Construction

Situation In North America, wood from trees that grew 16,000 to 24,000 years ago contains more deuterium than wood from trees growing today. But water in caves that formed during that same period contains less deuterium than rainwater contains today.

Reasoning *What could explain the puzzling discrepancy between the observed deuterium levels in wood and in caves?* Since the deuterium content of wood from trees reflects the deuterium content of rainwater available to the trees while they grew, the deuterium levels observed in wood suggests that North American rainwater contained more deuterium 16,000 to 24,000 years ago than it contains today. But this conclusion seems at odds with the low deuterium levels in water in caves that formed 16,000 to 24,000 years ago. Several factors might explain the discrepancy: the water in those caves might not be rainwater from the period when the caves formed; or some natural process might have altered the deuterium levels in the cave water or the wood; or the wood or caves in which deuterium levels were measured might be statistically abnormal somehow.

A If the caves had absorbed deuterium out of the rainwater trapped in them, there would probably be deuterium in the cave walls. So the observation that there is little deuterium in the caves apart from that in the water eliminates one possible explanation for the oddly low deuterium levels in the cave water.

B This suggests that the deuterium levels in the wood accurately reflect higher deuterium levels in rainwater that fell 16,000 to 24,000 years ago, but it does not explain why the deuterium levels are so low in water in the caves that formed then.

C This could explain why deuterium levels in rainwater have changed, but it does not help explain the discrepancy between the high deuterium levels in the wood and the low deuterium levels in the cave water.

D **Correct.** If the water in the caves fell as rainwater thousands of years before the caves formed, it may date from a period when rainwater contained much less deuterium than during the period 16,000 to 24,000 years ago, and much less than today.

E If wood with high deuterium content were more likely to be preserved, then wood from 16,000 to 24,000 years ago might have a high deuterium content even if the rainwater then had a low deuterium content. So the observation that wood with more deuterium is not more likely to be preserved eliminates one possible explanation for the discrepancy.

The correct answer is D.

CR04925

670. Enforcement of local speed limits through police monitoring has proven unsuccessful in the town of Ardane. In many nearby towns, speed humps (raised areas of pavement placed across residential streets, about 300 feet apart) have reduced traffic speeds on residential streets by 20 to 25 percent. In order to reduce traffic speed and thereby enhance safety in residential neighborhoods, Ardane's transportation commission plans to install multiple speed humps in those neighborhoods.

Which of the following, if true, identifies a potentially serious drawback to the plan for installing speed humps in Ardane?

(A) On residential streets without speed humps, many vehicles travel at speeds more than 25 percent above the posted speed limit.

(B) Because of their high weight, emergency vehicles such as fire trucks and ambulances must slow almost to a stop at speed humps.

(C) The residential speed limit in Ardane is higher than that of the nearby towns where speed humps were installed.

(D) Motorists who are not familiar with the streets in Ardane's residential districts would be likely to encounter the speed humps unawares unless warned by signs and painted indicators.

(E) Bicyclists generally prefer that speed humps be constructed so as to leave a space on the side of the road where bicycles can travel without going over the humps.

Evaluation of a Plan

Situation Ardane's difficulty in getting compliance with speed limits has led it to propose the installation of speed humps to slow traffic. In nearby towns, speed humps have reduced speeds in residential areas by up to 25 percent.

Reasoning *Which one of the statements presented identifies a major disadvantage of the proposed installation of speed humps?* Is it possible that they might slow traffic too much? Clearly, there is a general need for traffic to flow smoothly. Would speed humps affect all types of traffic equally? Perhaps not. For example, certain emergency vehicles must sometimes need to travel quickly through residential neighborhoods. A problem with speed humps is that some heavier vehicles must go very slowly over speed humps.

A This indicates a drawback of not installing speed humps.

B **Correct.** This information indicates a significant drawback—possibly leading to loss of life and property—of the plan to install the speed humps.

C This suggests that installing speed humps might lower speeds significantly below the current speed limits. If speeds became very low, the result could be traffic gridlock that would have unforeseen consequences. However, we have insufficient information to evaluate such possibilities.

D This is unlikely to be a drawback, since such warning signs are typically put in place whenever speed humps are installed.

E This information provides no evidence of a drawback in Ardane's plan for speed humps, since the design of Ardane's planned speed humps is not indicated.

The correct answer is B.

CR00748

671. Which of the following most logically completes the argument below?

NowNews, although still the most popular magazine covering cultural events in Kalopolis, has recently suffered a significant drop in advertising revenue because of falling circulation. Many readers have begun buying a competing magazine that, at 50 cents per copy, costs less than *NowNews* at $1.50 per copy. In order to boost circulation and thus increase advertising revenue, *NowNews's* publisher has proposed making it available at no charge, but this proposal has a serious drawback, since _____.

(A) Those Kalopolis residents with the greatest interest in cultural events are regular readers of both magazines.

(B) One reason *NowNews's* circulation fell was that its competitor's reporting on cultural events was superior.

(C) The newsstands and stores that currently sell *NowNews* will no longer carry it if it is being given away for free.

(D) At present, 10 percent of the total number of copies of each issue of *NowNews* are distributed free to students on college campuses in the Kalopolis area.

(E) *NowNews's* competitor would begin to lose large amounts of money if it were forced to lower its cover price.

Argument Construction

Situation *NowNews* is suffering declines in circulation and advertising revenue due to competition from a lower-priced magazine. The publisher proposes offering *NowNews* for free to reverse these declines.

Reasoning *What would suggest that the publisher's proposal will fail to increase circulation and advertising revenue?* The proposal's intended effect is simply to increase advertising revenue by increasing circulation. Any evidence that offering the magazine for free will not result in more copies being circulated or will not attract advertisers would therefore be evidence of a drawback in the proposal. So a statement offering such evidence would logically complete the argument.

A The fact that certain highly motivated Kalopolis residents still read *NowNews* even at a cost of $1.50 per issue leaves open the possibility that providing the magazine free might still boost readership.

B This suggests that improving its cultural reporting might help *NowNews* increase its circulation, not that the publisher's proposal will fail to do so.

C **Correct.** If the proposal leads newsstands and stores to stop carrying *NowNews*, circulation and advertising revenue would probably decline as a result.

D Even if 10 percent of the copies of *NowNews* are already distributed for free, distributing the remaining 90 percent for free could still increase circulation and advertising revenue as the publisher intends.

E Forcing a competing magazine to lower its cover price and lose lots of money would be an advantage rather than a drawback of the proposal, as far as the publisher of *NowNews* was concerned.

The correct answer is C.

CR07304

672. Archaeologist: Researchers excavating a burial site in Cyprus found a feline skeleton lying near a human skeleton. Both skeletons were in the same sediment at the same depth and equally well-preserved, suggesting that the feline and human were buried together about 9,500 years ago. This shows that felines were domesticated around the time farming began, when they would have been useful in protecting stores of grain from mice.

Which of the following, if true, would most seriously weaken the archaeologist's argument?

(A) Archaeologists have not found any remains of stores of grain in the immediate vicinity of the burial site.

(B) The burial site in Cyprus is substantially older than any other known burial site in which a feline skeleton and a human skeleton appear to have been buried together.

(C) Paintings found near the burial site seem to show people keeping felines as domestic companions, but do not show felines hunting mice.

(D) In Cyprus, there are many burial sites dating from around 9,500 years ago in which the remains of wild animals appear to have been buried alongside human remains.

(E) Before felines were domesticated, early farmers had no effective way to protect stores of grain from mice.

Argument Evaluation

Situation A human skeleton and a feline skeleton were apparently buried together in Cyprus about 9,500 years ago.

Reasoning *What would most strongly suggest that the skeletons do not show that felines were domesticated around the time farming began?* The argument implicitly assumes that farming in Cyprus began around 9,500 years ago, so evidence against that assumption would weaken the argument. The argument could also be weakened by evidence that felines were domesticated much earlier, that the feline skeleton was not from a domesticated cat, or that the two skeletons were not actually buried together around 9,500 years ago.

A Even if archaeologists searched for evidence of a grain store, the fact that no such evidence was found near the burial site is at best only weak evidence that no grain store existed there or slightly farther away.

B The lack of corroborating evidence from other burial sites would weaken the argument slightly but would still be compatible with the hypothesis that this site revealed one of the very first burials of a domesticated cat.

C This would cast doubt on the hypothesis that cats were domesticated mainly to protect stores of grain, but not on the argument's conclusion that cats were domesticated around the time farming began.

D **Correct.** If many wild animals were buried alongside humans in Cyprus around 9,500 years ago, then the feline skeleton is just as likely to be that of a wild animal than that of a domesticated cat.

E Since this would provide an additional reason why early farmers might have domesticated the local cats, it would strengthen rather than weaken the argument.

The correct answer is D.

CR90061.01

673. Farmer: Several people in the past few years have claimed to have seen a mountain lion in the suburban outskirts—the latest just last month—and, while mountain lions were thought to have been driven from this entire region about twenty years ago, there is no reason for the people who reported seeing a mountain lion to have deliberately concocted a false report. Therefore, local wildlife managers should begin to urgently address the mountain lion's presence.

Which of the following would, if true, most seriously weaken the farmer's argument?

(A) Farmers in the suburban outskirts mostly raise cattle and hogs, which when fully grown are generally not attacked by mountain lions.

(B) Mountain lions are dissimilar in size and color to other wild animals found near the suburban outskirts.

(C) No person who claimed to have seen a mountain lion had anyone else with them at the purported sighting.

(D) There have been no regional reports in the past year of mountain lions migrating to the area.

(E) Recent surveys show that more than half of the people in the region report that they have never seen a mountain lion before.

Argument Evaluation

Situation A farmer argues that, because several people in recent years, including someone just last month, have claimed to have seen a mountain lion in the suburban outskirts, local wildlife managers need to address the mountain lion's presence. The farmer claims that people would not intentionally create a false story about seeing a mountain lion.

Reasoning *What would most seriously call into question the farmer's argument that because there have been reports of mountain lion sightings, wildlife managers should address the issue?* Even if it is true that people would not intentionally create a false report of having seen a mountain lion, it is possible that people have mistakenly believed they have seen a mountain lion when in fact what they saw was something else. If some fact called into question the accuracy of the reports of mountain lion sightings, then the farmer's conclusion would have weaker support.

A Even if most fully grown animals raised by farmers would not be attacked by mountain lions, there could still be good reason to be concerned about the presence of mountain lions in the suburban outskirts. The mountain lion might attack animals before they are fully grown.

B A dissimilarity in size and color between mountain lions and other wild animals in the area where the mountain lions were purportedly sighted would make it less likely that people mistakenly believed that an animal they spotted was a mountain lion. So, this would strengthen the farmer's argument, not weaken it.

C **Correct.** If there actually were at least one mountain lion in the area, and several people over a period of a few years accurately claim to have seen one, then it seems likely that on at least some occasions a person would have been in the presence of someone else at the time, given the frequency with which people are in the company of others. So, if there have been no instances of a person reporting seeing a mountain lion when in the company of another, perhaps that is because when someone has mistakenly believed that an animal is a mountain lion, the other person helps correct the mistaken belief. With no one else present, an illusory sighting would be less likely to be corrected.

D There have been purported sightings of a mountain lion in the area for several years, so presumably, if the sightings are accurate, there has been at least one mountain lion for several years, so the sightings could be accurate even if no mountain lion has migrated to the area in the past year.

E It might be likely that most people living in the area would not have seen a mountain lion even if one lived in the area. For instance, the mountain lion might intentionally try to avoid people.

The correct answer is C.

CR09117

674. The heavy traffic in Masana is a growing drain on the city's economy—the clogging of the streets of the central business district alone cost the economy more than $1.2 billion over the past year. In order to address this problem, officials plan to introduce congestion pricing, by which drivers would pay to enter the city's most heavily trafficked areas during the busiest times of the day.

Which of the following, if true, would most strongly indicate that the plan will be a success?

(A) Approximately one-fifth of the vehicles in the central business district are in transit from one side of the city to the other.

(B) Planners expect that, without congestion pricing, traffic in Masana is likely to grow by 6 percent in the next five years.

(C) In other urban areas, congestion pricing has strongly encouraged carpooling (sharing of rides by private commuters).

(D) Several studies have shown that a reduction in traffic of 15 percent in Masana could result in 5,500 or more new jobs.

(E) Over 30 percent of the vehicles in the city's center are occupied by more than one person.

Evaluation of a Plan

Situation Traffic congestion in Masana has been harming the city's economy. To address the problem, officials plan to make drivers pay to enter the city's most heavily trafficked areas during the busiest times of day.

Reasoning *What would most strongly suggest that the plan will reduce the harm to Masana's economy from traffic congestion?* In order to succeed, the plan will have to be implemented and effectively enforced. Furthermore, the prices drivers pay will have to be high enough to significantly change their behavior in ways that reduce the amount of traffic congestion in the city. Finally, the economic benefits from the reduced traffic congestion will have to substantially outweigh any economically damaging side effects of the congestion pricing. Any evidence that any of these conditions will hold would provide at least some support for the prediction that the plan will succeed.

A This provides no evidence that the congestion pricing would affect the behavior of either the one-fifth of drivers whose vehicles traverse the city or of the other four-fifths of drivers, nor does it give any evidence that the plan would produce overriding economic benefits.

B This indicates that the traffic problem will grow worse if the plan is not implemented, but it does not provide any evidence that the plan will help address the problem.

C **Correct.** This indicates that similar plans have successfully changed drivers' behavior in other cities in a way likely to reduce the number of cars on the road in heavily trafficked areas at busy times of day without producing harmful economic side effects. Thus, it provides evidence that the strategy could also be successful in Masana.

D Although this suggests that reducing traffic congestion would be economically beneficial, it doesn't provide any evidence that the plan will succeed in reducing traffic congestion.

E This suggests that many drivers in the city center are already carpooling, which, if anything, indicates that the plan will be less able to further affect those drivers' behavior and thus could be less effective than it might otherwise be.

The correct answer is C.

CR09151

675. Economist: The most economically efficient way to reduce emissions of air pollutants is to tax them in proportion to the damage they are likely to cause. But in Country Y, many serious pollutants are untaxed and unregulated, and policy makers strongly oppose new taxes. Therefore, the best way to achieve a reduction in air pollutant emissions in Country Y would be to institute fixed upper limits on them.

Which of the following is an assumption of the economist's argument?

(A) Policy makers in Country Y oppose all new taxes equally strongly, regardless of any benefits they may provide.

(B) Country Y's air pollutant emissions would not fall significantly if they were taxed in proportion to the damage they are likely to cause.

(C) Policy makers in Country Y strongly favor reductions in air pollutant emissions.

(D) Country Y's policy makers believe that air pollutant emissions should be reduced with maximum economic efficiency.

(E) Policy makers in Country Y do not oppose setting fixed upper limits on air pollutant emissions as strongly as they oppose new taxes.

Argument Construction

Situation Although taxing air pollution emissions in proportion to the damage they cause is the most economically efficient way to reduce those emissions, many serious pollutants in Nation Y are untaxed and unregulated, and the nation's policy makers strongly oppose new taxes. Therefore, fixed upper limits on such emissions would more effectively reach this goal.

Reasoning *What must be true in order for the factors the economist cites to support the claim that fixing upper limits on air pollutant emissions in Nation Y would be the best way to reduce those emissions?* Political opposition to taxation in Nation Y is the only factor the economist cites to support the argument's conclusion that it would be best to institute fixed upper limits on air pollutants. In order for the premise to support the conclusion, there must be less political opposition in Nation Y to instituting such limits than there would be to the proportional taxation approach the economist prefers.

A Even if the policy makers oppose some new taxes less than others, they could still oppose the proportional taxation approach strongly enough for it to be utterly infeasible.

B Even if the proportional taxation scheme would significantly reduce emissions, it still might not be the best approach for Nation Y if it would generate too much political opposition to be viable there.

C Even if policy makers in Nation Y do not strongly favor reducing emissions, fixing upper limits on emissions might still be a better and more politically feasible way to reduce emissions than any alternative is.

D Since fixing upper emissions limits would be no more economically efficient than the proportional taxation scheme, the policy makers' support for economic efficiency would not make the former approach any more politically feasible than the latter.

E **Correct.** If the policy makers opposed fixing upper emissions limits as strongly as they oppose new taxes, then their opposition to new taxes would no longer support the conclusion that fixing the emissions limits is a better way to reduce emissions.

The correct answer is E.

CR04986

676. Humans get Lyme disease from infected ticks. Ticks get infected by feeding on animals with Lyme disease, but the ease of transmission from host animal to tick varies. With most species of host animal, transmission of Lyme disease to ticks is extremely rare, but white-footed mice are an exception, readily passing Lyme disease to ticks. And white-footed mouse populations greatly expand, becoming the main food source for ticks, in areas where biodiversity is in decline.

The information in the passage most strongly supports which of the following?

(A) In areas where many humans are infected with Lyme disease, the proportion of ticks infected with Lyme disease is especially high.

(B) Very few animals that live in areas where there are no white-footed mice are infected with Lyme disease.

(C) Humans are less at risk of contracting Lyme disease in areas where biodiversity is high.

(D) Ticks feed on white-footed mice only when other host species are not available to them.

(E) The greater the biodiversity of an area, the more likely any given host animal in that area is to pass Lyme disease to ticks.

Argument Construction

Situation White-footed mice readily pass Lyme disease to ticks, which pass it to humans. White-footed mouse populations expand where biodiversity is declining.

Reasoning *What conclusion do the stated facts support?* Since declining biodiversity causes white-footed mouse populations to increase, and white-footed mice are especially likely to pass Lyme disease to ticks, and ticks pass it to humans, declining biodiversity could reasonably be expected to increase the incidence of Lyme disease in both ticks and humans.

A In areas where many humans are infected with Lyme disease, the total number of ticks may be unusually high, so even if the number of infected ticks is unusually high, the proportion of infected ticks may not be unusually high

B Most animals with Lyme disease may get it from sources other than ticks that have fed on infected mice.

C **Correct.** If biodiversity is high, then any biodiversity decline that has already begun has likely not yet reached a point where white-footed mouse populations have greatly expanded, so the risk of people contracting Lyme disease is still relatively less than in areas where biodiversity is low and where significant decline in biodiversity has likely already occurred.

D Even if ticks feed on white-footed mice when few other species are available for them to feed on, they may also sometimes feed on white-footed mice when there are many other species for them to feed on.

E The passage suggests that the overall incidence of Lyme disease is probably lower in more biodiverse areas, so any given host animal in those areas would probably be less likely to pass Lyme disease to a tick.

The correct answer is C.

CR04935

677. Many industrialized nations are trying to reduce atmospheric concentrations of carbon dioxide, a gas released by the burning of fossil fuels. One proposal is to replace conventional cement, which is made with calcium carbonate, by a new "eco-cement." This new cement, made with magnesium carbonate, absorbs large amounts of carbon dioxide when exposed to the atmosphere. Therefore, using eco-cement for new concrete building projects will significantly help reduce atmospheric concentrations of carbon dioxide.

Which of the following, if true, most strengthens the argument?

(A) The cost of magnesium carbonate, currently greater than the cost of calcium carbonate, probably will fall as more magnesium carbonate is used in cement manufacture.

(B) Eco-cement is strengthened when absorbed carbon dioxide reacts with the cement.

(C) Before the development of eco-cement, magnesium-based cement was considered too susceptible to water erosion to be of practical use.

(D) The manufacture of eco-cement uses considerably less fossil fuel per unit of cement than the manufacture of conventional cement does.

(E) Most building-industry groups are unaware of the development or availability of eco-cement.

Argument Evaluation

Situation Many nations are trying to reduce atmospheric concentrations of carbon dioxide. One proposed method is to use a new type of "eco-cement" that absorbs carbon dioxide from air.

Reasoning *What evidence, combined with the cited facts, would most support the prediction that using eco-cement will significantly help reduce atmospheric concentrations of carbon dioxide?* The prediction assumes that the use of eco-cement would be an effective way to reduce carbon dioxide levels. Any evidence supporting this assumption will support the prediction.

A Since eco-cement uses magnesium carbonate, the prediction that magnesium carbonate prices will fall suggests that a potential financial barrier to widespread eco-cement use will diminish. However, those prices may not fall enough to make eco-cement cost-competitive with regular cement.

B Even if absorbed carbon dioxide strengthens eco-cement, the strengthened eco-cement might still be much weaker than regular cement and thus might never become widely used, in which case it will not significantly help reduce atmospheric concentrations of carbon dioxide.

C Even if eco-cement is less susceptible to water erosion than earlier forms of magnesium-based cement were, it might still be much more susceptible to water erosion than regular cement is, and thus might never become widely used.

D **Correct.** This suggests that manufacturing eco-cement produces much less carbon dioxide than manufacturing regular cement does, so it supports the claim that widespread use of eco-cement would be an effective way to reduce carbon dioxide levels.

E If anything, this lack of awareness makes it less likely that eco-cement will become widely used, which in turn makes it less likely that eco-cement will significantly help reduce atmospheric concentrations of carbon dioxide.

The correct answer is D.

CR00895

678. Advertisement: When your car's engine is running at its normal operating temperature, any major brand of motor oil will protect it about as well as Tuff does. When the engine is cold, it is a different story: Tuff motor oil flows better at lower temperatures than its major competitors do. So, if you want your car's engine to have maximum protection, you should use Tuff.

Which of the following, if true, most strengthens the argument in the advertisement?

(A) Tuff motor oil provides above-average protection for engines that happen to overheat.

(B) Tuff motor oil is periodically supplied free of charge to automobile manufacturers to use in factory-new cars.

(C) Tuff motor oil's share of the engine oil market peaked three years ago.

(D) Tuff motor oil, like any motor oil, is thicker and flows less freely at cold temperatures than at hot temperatures.

(E) Tuff motor oil is manufactured at only one refinery and shipped from there to all markets.

Argument Evaluation

Situation An advertisement argues that since Tuff motor oil flows better than its major competitors at low temperatures and works about as well as they do at normal temperatures, it provides *maximum protection* for car engines.

Reasoning *What additional evidence would suggest that Tuff motor oil provides the best available protection for car engines?* The argument requires the assumptions that no type of motor oil other than the "major brands" provides superior protection, that flowing better at lower temperatures ensures superior protection at those temperatures, and that Tuff protects car engines at least as well as its competitors do at above-normal temperatures. Any evidence supporting any of these assumptions would strengthen the argument.

A **Correct.** If Tuff provides above-average protection when engines overheat, in addition to the solid protection it provides at normal and low temperatures, it may well provide the best available protection overall.

B The company that makes Tuff might give automobile manufacturers free motor oil as a promotional gimmick even if Tuff is an inferior product.

C Tuff's sales might have declined over the past three years because consumers have realized that Tuff is an inferior product.

D The similar responses of Tuff and other motor oils to temperature changes do not suggest that Tuff provides better protection overall than those other motor oils do.

E Even if Tuff is manufactured at only one refinery, it may still be an inferior product.

The correct answer is A.

CR55541.01

679. Linguist: In English, the past is described as "behind" and the future "ahead," whereas in Aymara the past is "ahead" and the future "behind." Research indicates that English speakers sway backward when discussing the past and forward when discussing the future. Conversely, Aymara speakers gesture forward with their hands when discussing the past and backward when discussing the future. These bodily movements, therefore, suggest that the language one speaks affects how one mentally visualizes time.

The linguist's reasoning depends on assuming which of the following?

(A) At least some Aymara speakers sway forward when discussing the past and backward when discussing the future.

(B) Most people mentally visualize time as running either forward or backward.

(C) Not all English and Aymara speakers tend to sway or gesture forward or backward when discussing the present.

(D) How people move when discussing the future correlates to some extent with how they mentally visualize time.

(E) The researchers also examined the movements of at least some speakers of languages other than English and Aymara discussing the past and the future.

Argument Construction

Situation A linguist argues that the language one speaks affects how one mentally visualizes time. The linguist's argument is based on the fact that English speakers, who refer to the past as "behind" and the future as "ahead," display backward and forward bodily movements when speaking of the past and the future, while speakers of Aymara, who refer to the past as "ahead" and the future as "behind" display correspondingly different body movements.

Reasoning *What must be true if we are to accept the linguist's conclusion from the given information that the language one speaks affects how one mentally visualizes time?* The linguist's evidence will support the conclusion only if there is some correlation between people's bodily movements and how they mentally visualize time. So, the linguist's reasoning requires an assumption to that effect.

A The linguist's reasoning is based on the differences in bodily movements discussed in the argument—that is, that Aymara speakers gesture in certain ways and that English speakers sway in certain ways; thus, the linguist's reasoning does not require that Aymara speakers sway in any way whatsoever when they discuss the past or future.

B The linguist's reasoning is based only on speakers of English and Aymara, so no claim related to speakers of other languages—who make up a majority of people—is required.

C The linguist's argument would actually be stronger if all English and Aymara speakers sway or gesture in the ways discussed, so the argument certainly does not depend on assuming that not all such speakers sway or gesture in these ways.

D **Correct.** The fact that English and Aymara speakers sway or gesture in the ways described would be irrelevant to the linguist's conclusion if how people move when discussing the future does not correlate at least to some extent with how they visualize time.

E It might be helpful to the linguist's argument to examine the movements of speakers of other languages when they discuss the past and the future, but the linguist's argument does not require this.

The correct answer is D.

CR13108

680. *The Testament of William Thorpe* was published around 1530 as an appendix to Thorpe's longer Examination. Many scholars, however, doubt the attribution of the *Testament* to Thorpe because, whereas the *Examination* is dated 1406, the *Testament* is dated 1460. One scholar has recently argued that the 1460 date be amended to 1409, based on the observation that when these numbers are expressed as Roman numerals, MCCCCLX and MCCCCIX, it becomes easy to see how the dates might have become confused through scribal error.

Which of the following, if true, would most support the scholar's hypothesis concerning the date of the *Testament*?

(A) The sole evidence that historians have had that William Thorpe died no earlier than 1460 was the presumed date of publication of the *Testament*.

(B) In the preface to the 1530 publication, the editor attributes both works to William Thorpe.

(C) Few writers in fifteenth-century England marked dates in their works using only Roman numerals.

(D) The *Testament* alludes to a date, "Friday, September 20," as apparently contemporaneous with the writing of the *Testament*, and September 20 fell on a Friday in 1409 but not in 1460.

(E) The *Testament* contains few references to historical events that occurred later than 1406.

Argument Construction

Situation *The Testament of William Thorpe*, dated 1460, was published around 1530 as an appendix to Thorpe's *Examination*, dated 1406. But when expressed in Roman numerals, 1460 could easily be confused with 1409.

Reasoning *Given the facts cited, what would provide additional evidence that Thorpe's* Testament *dates from 1409 rather than 1460?* The scholar's hypothesis that the work dates from 1409 is based on the observation that in Roman numerals, 1409 might easily have been improperly transcribed as 1460. This hypothesis could be supported by evidence that the manuscripts were dated in Roman numerals, or by any independent evidence that 1409 is a more likely date for the *Testament* than 1460.

A This suggests that scholars have no biographical evidence that the *Testament* was published in 1460, but they could still have abundant evidence of other types to support that date, such as the text's cultural allusions or references to other works.

B The editor of the 1530 publication could easily have been mistaken about the authorship of one or both works. And even if the editor were correct, Thorpe might have lived long enough to write one work in 1406 and the other in 1460.

C This would cast doubt on the scholar's argument by providing evidence that the original manuscripts were not dated only in Roman numerals.

D **Correct.** This provides strong evidence directly supporting the hypothesis that the *Testament* dates from 1409 specifically.

E Even if the *Testament* contained only one reference to a historical event that occurred later than 1406 (for example, one event in 1459), that reference alone could provide strong evidence that the work dates from 1460 rather than 1409.

The correct answer is D.

CR00777

681. A prominent investor who holds a large stake in the Burton Tool Company has recently claimed that the company is mismanaged, citing as evidence the company's failure to slow down production in response to a recent rise in its inventory of finished products. It is doubtful whether an investor's sniping at management can ever be anything other than counterproductive, but in this case, it is clearly not justified. It is true that **an increased inventory of finished products often indicates that production is outstripping demand**, but in Burton's case it indicates no such thing. Rather, **the increase in inventory is entirely attributable to products that have already been assigned to orders received from customers**.

In the argument given, the two **boldfaced** portions play which of the following roles?

(A) The first states a generalization that underlies the position that the argument as a whole opposes; the second provides evidence to show that the generalization does not apply in the case at issue.

(B) The first states a generalization that underlies the position that the argument as a whole opposes; the second clarifies the meaning of a specific phrase as it is used in that generalization.

(C) The first provides evidence to support the conclusion of the argument as a whole; the second is evidence that has been used to support the position that the argument as a whole opposes.

(D) The first provides evidence to support the conclusion of the argument as a whole; the second states that conclusion.

(E) The first and the second each provide evidence against the position that the argument as a whole opposes.

Argument Construction

Situation An investor has criticized a company, based on the company's recent increase in inventory and on its not decreasing production as a result of this increase.

Reasoning *What roles do the two boldfaced statements play in the argument?* The argument suggests that the investor's criticism is based on a principle that increased inventory of finished products often indicates that production is faster than it should be, given the existing demand for a company's products. However, the argument then states that the increase in inventory at the company in question is "entirely attributable" to existing orders of products. The argument thus suggests that the investor's criticism is misplaced, based on a suggestion as to (1) a principle that the investor could be using to support her argument and (2) an explanation as to why the principle does not apply to the company. The two boldfaced portions state these respective elements.

A **Correct.** The first boldfaced portion states the principle that may provide the basis of the investor's criticism, which the argument as a whole opposes. The second boldfaced portion is a statement that, if true, the generalization would not apply to the company in question.

B This option correctly describes the first of the boldfaced portions. However, rather than clarifying an aspect of the meaning of the first generalization, the second boldfaced portion indicates why the first generalization may not apply to the company.

C This option incorrectly describes both of the boldfaced portions. The first boldfaced portion states a general principle that could support the position that the argument *opposes*. The second boldfaced portion then criticizes the application of the principle.

D Because the second boldfaced portion describes a fundamental premise rather than the conclusion, the description in this option of the second boldfaced portion is incorrect.

E If we think of an argument as a set of statements that are meant to support, or provide evidence for, a conclusion, then, because the boldfaced statements are indeed part of the argument, they may be seen as providing evidence for the position the argument opposes. However, a description of the roles of the boldfaced statements in this argument would need to provide more detail, such as what option A provides.

The correct answer is A.

CR10028

682. To reduce productivity losses from employees calling in sick, Corporation X implemented a new policy requiring employees to come into work unless they were so sick that they had to go to a doctor. But a year after the policy was implemented, a study found that Corporation X's overall productivity losses due to reported employee illnesses had increased.

Which of the following, if true, would best explain why the policy produced the reverse of its intended effect?

(A) After the policy was implemented, employees more frequently went to the doctor when they felt sick.

(B) Before the policy was implemented, employees who were not sick at all often called in sick.

(C) Employees coming into work when sick often infect many of their coworkers.

(D) Unusually few employees became genuinely sick during the year after the policy was implemented.

(E) There are many other factors besides employee illness that can adversely affect productivity.

Evaluation of a Plan

Situation After a company started requiring employees to come to work unless they were sick enough to have to go to a doctor, the company's productivity losses from reported employee illness increased.

Reasoning *What would explain why the policy increased productivity losses from reported employee illness?* Any factors that could have plausibly caused the policy to increase employee absenteeism from reported illness or to reduce the employees' productivity at work as a result of reported illness could explain why the policy increased productivity losses from reported illness.

A Even though the policy required sick employees to consult a doctor, there is no reason to think that employees' doing so would have made them less productive than they would otherwise have been when absent from work.

B This suggests that the policy made it more difficult for employees to falsely claim illness as an excuse for a work absence. Reduction in absences should result in productivity gains rather than losses.

C **Correct.** This could have been a result of the policy and would have led to productivity losses possibly greater than those seen before the policy was introduced.

D This would help to explain lower productivity losses from reported illness after the policy was implemented, not higher productivity losses.

E The question is what could explain how the policy increased productivity losses from reported employee illness specifically, not productivity losses from any other factors.

The correct answer is C.

CR08443

683. Advertising by mail has become much less effective, with fewer consumers responding. Because consumers are increasingly overwhelmed by the sheer amount of junk mail they receive, most discard almost all offers without considering them. Thus, an effective way for corporations to improve response rates would be to more carefully target the individuals to whom they mail advertising, thereby cutting down on the amount of junk mail each consumer receives.

Which of the following, if true, would most support the recommendation above?

(A) There are cost-effective means by which corporations that currently advertise by mail could improve response rates.

(B) Many successful corporations are already carefully targeting the individuals to whom they mail advertising.

(C) Any consumer who, immediately after receiving an advertisement by mail, merely glances at it is very likely to discard it.

(D) Improvements in the quality of the advertising materials used in mail that is carefully targeted to individuals can improve the response rate for such mail.

(E) Response rates to carefully targeted advertisements by mail are considerably higher, on average, than response rates to most other forms of advertising.

Evaluation of a Plan

Situation Advertising by mail has become less effective because consumers overwhelmed with the amount of junk mail they receive discard almost all of it without considering it.

Reasoning *What would most help to support the claim that making mail advertising more carefully targeted would improve response rates?* The passage recommends targeted advertising, reasoning that since targeted advertising would reduce the total amount of junk mail consumers receive, it would generate higher response rates. Any additional evidence for the claim that carefully targeted advertising would improve response rates would support this recommendation.

A Even if targeted advertising and every other means of improving response rates were too expensive to be cost-effective, targeted advertising could still be effective for any corporation willing to pay the expense.

B If many corporations already mail targeted advertising, and mail advertising is nonetheless yielding declining response rates, that suggests that targeted mail is an ineffective way to increase response rates.

C This could be equally true for targeted and untargeted mail advertising, so it does not suggest that the former is more effective.

D The question under consideration is whether more carefully targeted mail advertising would in itself increase response rates, not whether higher quality advertising would do so.

E **Correct.** This provides some evidence that carefully targeted mail advertising is associated with higher response rates than untargeted mail advertising is, and therefore that targeting mail advertising more carefully would improve response rates.

The correct answer is E.

CR01905

684. Petrochemical industry officials have said that the extreme pressure exerted on plant managers during the last five years to improve profits by cutting costs has done nothing to impair the industry's ability to operate safely. However, environmentalists contend that the recent rash of serious oil spills and accidents at petrochemical plants is traceable to cost-cutting measures.

Which of the following, if true, would provide the strongest support for the position held by industry officials?

(A) The petrochemical industry benefits if accidents do not occur, since accidents involve risk of employee injury as well as loss of equipment and product.

(B) Petrochemical industry unions recently demanded that additional money be spent on safety and environmental protection measures, but the unions readily abandoned those demands in exchange for job security.

(C) Despite major cutbacks in most other areas of operation, the petrochemical industry has devoted more of its resources to environmental and safety measures in the last five years than in the preceding five years.

(D) There is evidence that the most damaging of the recent oil spills would have been prevented had cost-cutting measures not been instituted.

(E) Both the large fines and the adverse publicity generated by the most recent oil spill have prompted the petrochemical industry to increase the resources devoted to oil-spill prevention.

Argument Evaluation

Situation Petrochemical industry officials claim that pressure on plant managers to cut costs over the past five years has not made the industry's operations any less safe. Environmentalists claim that recent oil spills and accidents show otherwise.

Reasoning *What evidence would most strongly suggest that the cost-cutting pressure was not responsible for the recent rash of oil spills and accidents?* Evidence that the plant managers did not cut costs in any specific ways likely to have increased the likelihood of oil spills and accidents would support the industry officials' position that the cost-cutting pressure has not made petrochemical operations any less safe.

A Even if the petrochemical industry has good reasons to try to prevent accidents, the recent rash of serious accidents suggests that it is failing to do so and that the cost-cutting pressure might be responsible.

B This suggests that the unions, whose members could directly observe the cost-cutting pressure's effects, share the environmentalists' belief that this pressure contributed to the oil spills and accidents. Because the unions abandoned their demands, their concerns probably have not been addressed.

C **Correct.** This suggests that, as the industry officials claim, the cost-cutting pressure has not in itself reduced the industry's effectiveness at preventing oil spills and accidents. Thus, it suggests that other factors are probably responsible for the recent problems.

D This clearly suggests that the cost-cutting measures have indeed caused the industry to operate less safely, as the environmentalists claim.

E Although this suggests that the industry is now trying to address the recent problems, the cost-cutting measures might nonetheless have caused all those problems.

The correct answer is C.

CR01368

685. A company has developed a new sensing device that, according to the company's claims, detects weak, ultralow-frequency electromagnetic signals associated with a beating heart. These signals, which pass through almost any physical obstruction, are purportedly detected by the device even at significant distances. Therefore, if the company's claims are true, their device will radically improve emergency teams' ability to locate quickly people who are trapped within the wreckage of collapsed buildings.

Which of the following, if true, most strengthens the argument?

(A) People trapped within the wreckage of collapsed buildings usually have serious injuries that require prompt medical treatment.

(B) The device gives a distinctive reading when the signals it detects come from human beings rather than from any other living beings.

(C) Most people who have survived after being trapped in collapsed buildings were rescued within two hours of the building's collapse.

(D) Ultralow-frequency signals are not the only electromagnetic signals that can pass through almost any physical obstruction.

(E) Extensive training is required in order to operate the device effectively.

Argument Evaluation

Situation A new sensing device can detect—at significant distances and even behind obstructions such as walls—weak, ultralow-frequency electromagnetic signals that are characteristic of heartbeats. It is predicted, based on this information, that the new device will shorten the time it currently takes to locate people buried under collapsed buildings but still alive.

Reasoning *What new information, if accurate, would provide further evidence that would support the prediction?* The existing evidence fails to tell us whether the new device can distinguish between human heartbeats and heartbeats from other species. If the device does not quickly provide signals characteristic of human heartbeats, then the prediction might not be correct; even if the prediction eventually turns out to be correct, the evidence given for it is insufficient. Any new information that implies the signals provided by the device can discern a human heartbeat from those of nonhuman species will strengthen support for the prediction.

A This implies that prompt rescue of people trapped under collapsed buildings is vitally important. The prediction is that the new device will speed rescue of such people, but the new information here does nothing to indicate that the prediction is accurate.

B **Correct.** This information fills an important gap (already discussed) in the evidence for the prediction.

C Even if this is true, shortening the time for locating and rescuing people from collapsed buildings would clearly be beneficial. However, the new information given here does not make it more likely that the prediction is correct.

D If this is correct, then if anything, it somewhat undermines the evidence given for the prediction, since it raises the possibility that the detection ability of the device might be impeded by "noise" from irrelevant electromagnetic signals near the collapsed building.

E This could lead to practical obstacles when using the device even in emergency situations, with the result that the device might never actually be used by competent personnel to "improve emergency teams' ability" because the "extensive training" would cost too much.

The correct answer is B.

CR11639

686. Economist: The price of tap water in our region should be raised drastically. **Supplies in local freshwater reservoirs have been declining for years** because water is being used faster than it can be replenished. Since the price of tap water has been low, **few users have bothered to adopt even easy conservation measures**.

The two sections in boldface play which of the following roles in the economist's argument?

(A) The first is a conclusion for which support is provided, and which in turn supports the main conclusion; the second is the main conclusion.

(B) The first is an observation for which the second provides an explanation; the second is the main conclusion but not the only conclusion.

(C) The first is a premise supporting the argument's main conclusion; so is the second.

(D) The first is the only conclusion; the second provides an explanation for the first.

(E) The first is the main conclusion; the second is a conclusion for which support is provided, and which in turn supports the first.

Argument Construction

Situation Local water supplies have been declining for years because of excessive water use and low prices. Few users have adopted even easy conservation measures.

Reasoning *What roles do the two boldface statements play in the argument?* Both are factual observations. Since no further evidence or support is provided for either, neither can be a conclusion in the argument. However, interconnected causal explanations, signaled by *because* and *since,* are provided for both. The observation in the first boldface statement is causally explained by the further observation that water is being used faster than it can be replenished, which in turn is causally explained by the entire final sentence. The observation in the second boldface statement is causally explained by the observation that the price of tap water has been low. The only remaining portion of the argument is the initial sentence, a recommendation supported by these four observations together, and by the causal claims in which they are embedded. Thus, the four observations (including the two boldface statements) and the causal claims containing them are all premises, and the initial statement is the argument's only conclusion.

A As explained above, the two boldface statements are premises of the argument. Although causal explanations are provided for both, no support or evidence is provided for either.

B As explained above, the second boldface statement does provide part of the causal explanation for the observation in the first boldface statement. But no support is provided for either statement, so neither is a conclusion.

C **Correct.** As explained above, each of the statements is a premise that serves along with other claims to support the recommendation in the initial sentence, which is the argument's only conclusion, and in that sense its main conclusion.

D As explained above, the second boldface statement does provide part of the causal explanation for the observation in the first boldface statement. But no support is provided for either statement, so neither is a conclusion in the argument.

E As explained above, the two boldface statements are premises of the argument. Although causal explanations are provided for both, no support or evidence is provided for either.

The correct answer is C.

CR13127

687. Politician: Hybrid cars use significantly less fuel per kilometer than nonhybrids. And fuel produces air pollution, which contributes to a number of environmental problems. Motorists can save money by driving cars that are more fuel efficient, and they will be encouraged to drive hybrid cars if we make them aware of that fact. Therefore, we can help reduce the total amount of pollution emitted by cars in this country by highlighting this advantage of hybrid cars.

Which of the following, if true, would most indicate a vulnerability of the politician's argument?

(A) People with more fuel-efficient cars typically drive more than do those with less fuel-efficient cars.

(B) Not all air pollution originates from automobiles.

(C) Hybrid cars have already begun to gain popularity.

(D) Fuel-efficient alternatives to hybrid cars will likely become available in the future.

(E) The future cost of gasoline and other fuel cannot be predicted with absolute precision or certainty.

Argument Evaluation

Situation According to a politician, hybrid cars use less fuel per kilometer than nonhybrids, and fuel produces air pollution. Motorists can save money by driving fuel-efficient cars, and will be encouraged to do so if made aware of the fact. The politician concludes that highlighting this fact will result in a reduction in air pollution.

Reasoning *What would suggest that telling motorists they can save money by driving fuel-efficient cars would not reduce automotive air pollution, despite the facts cited by the politician?* The politician's implicit reasoning is that since hybrid cars use less fuel per kilometer, and fuel produces air pollution, motorists who drive hybrid cars must produce less air pollution than those who drive nonhybrids. The politician concludes that encouraging motorists to drive hybrid cars by telling them they would save money on fuel will therefore reduce automotive air pollution. Evidence that motorists who drive hybrid cars produce just as much automotive air pollution as those who drive nonhybrids would undermine this argument.

A **Correct.** If drivers of hybrid cars tend to drive more kilometers than drivers of nonhybrids, then they may consume just as much fuel and produce just as much air pollution as the nonhybrid car drivers do, despite their lower fuel use per kilometer.

B The politician's argument is only about air pollution from cars specifically, not air pollution from all sources.

C Even if hybrid cars are beginning to gain popularity, informing motorists of the cost savings from fuel efficiency could help these cars become more popular than they would otherwise be.

D Encouraging motorists to switch to hybrid cars now could reduce fuel use and automotive air pollution in the near future even if other, more fuel-efficient vehicles will become available further in the future.

E Even if the future cost of fuel cannot be predicted accurately, encouraging motorists to switch to hybrid cars could reduce air pollution as the politician argues.

The correct answer is A.

CR99530.01

688. Mayor: False alarms from home security systems waste so much valuable police time that in many communities police have stopped responding to alarms from homes whose systems frequently produce false alarms. This policy reduces wastage of police time but results in a loss of protection for some residents. To achieve a comparable reduction in wastage without reducing protection for residents, the council has enacted a measure to fine residents for repeated false alarms.

Which of the following, if true, casts the most doubt on whether the measure enacted by the council will achieve its goal?

(A) A fine in the amount planned by the council will not cover the expenses police typically incur when they respond to a false alarm.

(B) Homes equipped with security systems are far less likely to be broken into than are homes without security systems.

(C) The threat of fines is likely to cause many residents to deactivate their security systems.

(D) The number of home security systems is likely to increase dramatically over the next five years.

(E) Many home security systems have never produced false alarms.

Evaluation of a Plan

Situation In many communities, police have been responding to false home-security alarms but have ceased to respond to alarms from homes that often have such false alarms. To reduce wastage of police time without compromising residents' home protection, one town council has enacted a new measure that will fine home residents for repeated false alarms.

Reasoning *What fact or occurrence would most reduce the likelihood that the town council's newly enacted measure would achieve its goal, which is to reduce wastage of police time without compromising home protection?* Note that the goal is not to eliminate all wastage of police time or to pay all the costs of it; some random wastage is to be expected. But if many residents deactivated their security alarms (even well-functioning systems) because they wish to avoid being fined, this could reduce the level of home protection for those residents.

A The goal is to reduce wastage of police time resulting from false security-system alarms, not necessarily to cover all the costs in police time for such alarms.

B This seems obviously true, but it is also irrelevant to the frequency of false home-security alarms. It is therefore irrelevant, also, to whether the council's measure will effectively address wastage of police time stemming from such alarms.

C **Correct.** If this occurred, it would result in a lower level of home protection for some residents and would mean that the town council's measure would have failed to achieve its goal.

D This scenario does not make the council's measure more likely to fail to achieve its goal. If the increase in alarm systems occurs, it will likely result in more protection for the homes of more residents. Assuming vigorous enforcement of the new measure, we have no reason to believe that the number of false alarms would increase.

E This has little bearing on the likelihood of the council's measure succeeding. Any home-security system that has never produced a false alarm could do so tomorrow, for all kinds of reasons.

The correct answer is C.
