Contents at a Glance

Introduction 1

Part 1: Responding to the Physical Environment 5

CHAPTER 1: Making Connections with Ecology 7
CHAPTER 2: Establishing Climate 17
CHAPTER 3: Evolving in a Changing World 33
CHAPTER 4: Adapting to Different Environments 51

Part 2: Looking at the Living World 73

CHAPTER 5: Figuring Out Life Histories 75
CHAPTER 6: Painting a Picture of Populations 89
CHAPTER 7: Examining Interactions between Species 107

Part 3: Forming Communities and Ecosystems 135

CHAPTER 8: Engaging with Communities 137
CHAPTER 9: Responding to Change: Disturbance and Succession 149
CHAPTER 10: Energy Flow through Ecosystems 169
CHAPTER 11: Recycling Matter through Ecosystems 193

Part 4: Looking at the Big Picture of Global Ecology 209

CHAPTER 12: Global Climate Change 211
CHAPTER 13: Measuring Biodiversity 229
CHAPTER 14: Saving Our Future 249

Part 5: The Part of Tens 265

CHAPTER 15: Ten Methods for Ecological Research 267
CHAPTER 16: Ten Amazing Lessons from Ecology 279

INTRODUCTION 1
About This Book 1
Conventions Used in This Book 2
Foolish Assumptions 2
Icons Used in This Book 2
Beyond the Book 3
Where to Go from Here 3

PART 1: RESPONDING TO THE PHYSICAL ENVIRONMENT 5

CHAPTER 1: Making Connections with Ecology 7
Evolving to Fit the Physical World 8
Climate shapes our world 8
Living things are adaptable 9
Reproducing into Populations 10
Living your life history 10
Interacting with others 11
Forming Communities and Ecosystems 11
Establishing a community 11
Getting what you need to survive 12
The Big Picture 13
Living in changing times 14
Saving what matters 15

CHAPTER 2: Establishing Climate 17
Transmitting Energy to the Earth 17
Letting in the light 18
Balancing the energy budget 20
Blanketing the Earth with the greenhouse effect 21
Moving Energy via Air and Water 21
Forming circulation cells 22
Major air currents 23
Major water currents 27
Examining the Major Biomes 29

CHAPTER 3: Evolving in a Changing World 33
Endless Variety 34
Everyday Evolution 34
Reviewing key concepts 35
Tracking gene flow 36
Testing for equilibrium 37

Survival of the Fittest: Natural Selection 40
Establishing Darwin's principles 41
Pushing populations in different directions 42
Changing with Random Events: Genetic Drift 45
Looking for Evidence of Evolution 48

CHAPTER 4: **Adapting to Different Environments** 51
Life, the Environment, and Everything 52
Defining the boundary of life 52
Maintaining life with energy 54
Water is life 56
Evolving in Water 59
Swimming and floating 59
Dealing with salt (or the lack of it) 59
Exchanging gases 62
Learning to Live on Land 66
Getting water and nutrients 66
Preventing water loss 67
Regulating body temperature 71

PART 2: LOOKING AT THE LIVING WORLD 73

CHAPTER 5: **Figuring Out Life Histories** 75
Components of Life Histories 75
Establishing key points 76
Life in the fast or slow lane 77
Maximizing Lifetime Reproductive Success 79
The perfect family 80
When are you having kids? 82
Growing older 83
Exploring the Impact of the Environment 85
You can only reproduce if you're alive 85
Finding food 86
Feast and famine 87

CHAPTER 6: **Painting a Picture of Populations** 89
Growing a Population 90
Measuring abundance 90
Monitoring growth 91
Looking at life tables 93
Limiting growth 97
Spreading Out into the Environment 101
Distribution 102
Dispersion 102
Metapopulations 103

Diving Deeper into Population Dynamics 104
Graphing growth 105

CHAPTER 7: **Examining Interactions between Species** 107
Defining Interactions 108
Shaping evolution 109
Meeting some mutualists 111
Prowling with predators 111
Hanging out with herbivores 121
Competing with Your Neighbors 122
Getting what you need to survive 124
Figuring out your niche 126
Living Together 126
Friends with benefits 127
Parasites and free-loaders 128
Adapting to Different Lifestyles 131
Predatory offensive skills 132
Prey protections 132
Plant defenses 133

PART 3: FORMING COMMUNITIES AND ECOSYSTEMS 135

CHAPTER 8: **Engaging with Communities** 137
Defining Communities 137
Measuring species diversity 140
Identifying species composition 141
Tracing Interactions 142
Meeting some major influencers 143
Causing a trophic cascade 144
Examining human interactions in communities 147

CHAPTER 9: **Responding to Change: Disturbance and Succession** 149
Sources of Disturbance 150
Forces of nature 150
Human impacts 151
Responding to Disturbance 152
Types of Succession 152
How to succeed 153
It's the journey, not the destination 156
A recipe for species richness 157
Studying Succession 159
Watching succession in real time 159
Taking a walk into the past 160

Influencing Succession 162
Early vs. late arrivals 162
Animal helpers 163
Nitrogen-fixers 165
Invasive species 166
Human management 167

CHAPTER 10: **Energy Flow through Ecosystems** 169
Examining Ecosystems 169
Defining energy roles 170
Types of consumers 172
Finding the Energy to Power Life 174
Following the rules 176
Exploring energy changes 177
Making your own food: Photosynthesis 178
Releasing energy from food: Cellular respiration 179
Tracing the Flow of Energy 181
Inputting energy into the system 183
Keeping an eye on NPP 185
Taking energy to the next level 187
Dispersing energy through food webs 188
Releasing energy to space 191

CHAPTER 11: **Recycling Matter through Ecosystems** 193
Identifying the Building Blocks of Life 193
What makes matter? 194
Matter vs. energy 195
Tracing Elements through Biogeochemical Cycles 195
Redox reactions: Playing catch with electrons 196
Carbon cycle 198
Nitrogen cycle 200
Phosphorus cycle 204
Sulfur cycle 205

PART 4: LOOKING AT THE BIG PICTURE OF GLOBAL ECOLOGY 209

CHAPTER 12: **Global Climate Change** 211
Causing Climate Change 211
Here comes the sun 212
Living in a greenhouse 213
Changing the atmosphere 214

Tracking Changes 217
Monitoring the atmosphere 217
Inspecting ice cores 218
Predicting the Effects of Rapid Global Warming 221
Regulating Climate Change 223
Checks and balances 224
Tipping points 226

CHAPTER 13: **Measuring Biodiversity** 229
Valuing Biodiversity 229
Finding Patterns of Diversity 234
Viewing different scales 235
Considering relationships 236
Maintaining Equilibrium 237
The bigger the better 238
Finding a target 239
Living far away 239
Losing Biodiversity 240
Habitat loss 240
Invasive species 241
Pollution 242
Population growth 242
Overconsumption 243
Sounding the Alarm 244
Focusing on hotspots 246
Mass extinction 247

CHAPTER 14: **Saving Our Future** 249
Thinking about Land Use 249
Saving Populations 251
Threatened and endangered species 252
Analyzing population viability 254
Establishing breeding programs 255
Working with Landscapes 256
Defining landscapes 256
Interacting with landscapes 257
Establishing protected areas 259
Restoring Damaged Lands 260
Cleaning up pollution with bioremediation 261
Speeding up recovery with bioaugmentation 262
Searching for Sustainability 262
Traditional ecological knowledge 263
Systems thinking 263

PART 5: THE PART OF TENS 265

CHAPTER 15: Ten Methods for Ecological Research 267

Field Studies 267
Sampling Methods 269
Transects and Quadrats 270
Mark and Recapture 271
Retrospective Studies 272
Comparative Studies 273
Lab Experiments 274
GIS 275
Modeling 275
Statistics 276

CHAPTER 16: Ten Amazing Lessons from Ecology 279

Everything Is Interconnected 279
Humans Are Walking, Talking Ecosystems 280
Using Industrial Ecology to Increase Sustainability 281
The Sun Is a Safe Nuclear Reactor 282
Trash to Treasure 283
Better Together 283
Everything Changes 284
Fall Down Nine Times; Get Up Ten 284
Strength in Diversity 285
Tread Lightly 285

INDEX 287
