

Contents at a Glance

Introduction	1
Part 1: The Basic Concepts of Chemistry	7
CHAPTER 1: What Is Chemistry, and Why Do I Need to Know Some?	9
CHAPTER 2: Contemplating Chemical Calculations.	19
CHAPTER 3: Matter and Energy	35
CHAPTER 4: Something Smaller Than an Atom? Atomic Structure	51
CHAPTER 5: The Periodic Table (But No Chairs)	69
CHAPTER 6: Balloons, Tires, and Scuba Tanks: The Wonderful World of Gases	81
Part 2: A Cornucopia of Chemical Concepts	101
CHAPTER 7: Chemical Cooking: Chemical Reactions	103
CHAPTER 8: The Mole: Can You Dig It?	119
CHAPTER 9: Mixing Matter Up: Solutions	131
CHAPTER 10: Thermochemistry: Hot Stuff	149
CHAPTER 11: Sour and Bitter: Acids and Bases	165
Part 3: Blessed Be the Bonds That Tie	183
CHAPTER 12: Where Did I Put That Electron? Quantum Theory	185
CHAPTER 13: Opposites Do Attract: Ionic Bonding	195
CHAPTER 14: Sharing Nicely: Covalent Bonding	211
CHAPTER 15: What Do Molecules Really Look Like? Molecular Geometry and Hybridization	231
CHAPTER 16: Tackling Periodic Trends	245
CHAPTER 17: Examining the Link between Intermolecular Forces and Condensed States	255
Part 4: Environmental Chemistry: Benefits and Problems	265
CHAPTER 18: Cough! Cough! Hack! Hack! Air Pollution	267
CHAPTER 19: Examining the Ins and Outs of Water Pollution.	281
CHAPTER 20: Nuclear Chemistry: It'll Blow Your Mind	295

Part 5: The Part of Tens	315
CHAPTER 21: Ten Serendipitous Discoveries in Chemistry	317
CHAPTER 22: Ten (or So) Great Chemistry Nerds	323
CHAPTER 23: Ten Terrific Tips for Passing Chem I	329
CHAPTER 24: The Top Ten Industrial Chemicals	335
Glossary	341
Index	353

INTRODUCTION	1
About This Book	2
Foolish Assumptions	2
What Not to Read	3
How This Book Is Organized	3
Part 1: The Basic Concepts of Chemistry	3
Part 2: A Cornucopia of Chemical Concepts	4
Part 3: Blessed Be the Bonds That Tie	4
Part 4: Environmental Chemistry: Benefits and Problems	5
Part 5: The Part of Tens	5
Icons Used in This Book	5
Where to Go from Here	6
 PART 1: THE BASIC CONCEPTS OF CHEMISTRY	 7
CHAPTER 1: What Is Chemistry, and Why Do I Need to Know Some?	9
Understanding What Chemistry Is	10
Distinguishing between Science and Technology	10
Deciphering the Scientific Method	11
How the scientific method works	12
How you can use the scientific method	13
Looking at the Branches of Chemistry	15
Macroscopic versus microscopic viewpoints	16
Pure versus applied chemistry	16
Eyeing What You'll Do in Your Chemistry Class	17
 CHAPTER 2: Contemplating Chemical Calculations	 19
Grasping the SI Measurement System	20
Eyeing the basic SI prefixes	20
Units of length	21
Units of mass	21
Units of volume	22
Units of temperature	22
Units of pressure	22
Units of energy	23
Handling Really Big or Really Small Numbers	23
Exploring exponential and scientific notation	23
Adding and subtracting	24
Multiplying and dividing	25

Raising a number to a power	25
Relying on a calculator	25
Deciphering the Difference between Accuracy and Precision	26
Using the Unit Conversion Method to Solve Problems	27
Knowing How to Handle Significant Figures	31
Comparing numbers: Exact and counted versus measured	31
Determining the number of significant figures in a measured number	32
Reporting the correct number of significant figures	32
Rounding off numbers	33
CHAPTER 3: Matter and Energy	35
Looking at the Facts of Matter	36
Solids	36
Liquids	37
Gases	37
Ice in Alaska, Water in Texas: Changing States of Matter	38
I'm melting away! Oh, what a world!	38
Boiling point	38
Freezing point	39
Sublimate this!	40
Classifying Pure Substances and Mixtures	40
Keeping it simple with pure substances	41
Throwing mixtures into the mix	42
Nice Properties You've Got There	43
Identifying substances by density	43
How dense are you? Measuring density	44
Keeping the World in Motion: Energy	46
Moving right along: Kinetic energy	46
Sitting pretty: Potential energy	47
Measuring Energy	47
Taking a look at temperature	48
Feeling the heat	49
CHAPTER 4: Something Smaller Than an Atom? Atomic Structure	51
Taking an Up-Close Look at the Atom: Subatomic Particles	52
Taking Center Stage: The Nucleus	53
Locating the Electrons in an Atom	55
The Bohr model — it's really not boring	55
The quantum mechanical model	57
Configuring Electrons (Bed Check for Electrons)	61
Examining the energy-level diagram	61
Eyeing electron configurations	63
Living on the edge: Valence electrons	64

	Examining Isotopes and Ions.	65
	Isolating the isotope	65
	Keeping an eye on ions.	66
CHAPTER 5:	The Periodic Table (But No Chairs)	69
	Repeating Patterns of Periodicity	70
	Understanding How Elements Are Arranged in the Periodic Table . . .	72
	Classifying metals, nonmetals, and metalloids.	72
	Organizing by periods and families	75
CHAPTER 6:	Balloons, Tires, and Scuba Tanks: The Wonderful World of Gases	81
	Taking a Microscopic View of Gases: The Kinetic Molecular Theory.	82
	Staying Under Pressure — Atmospheric Pressure, That Is	84
	Measuring atmospheric pressure: The barometer	85
	Measuring confined gas pressure: The manometer	86
	Grasping Different Gas Laws	87
	Boyle's law: Nothing to do with boiling	87
	Charles's law: Don't call me Chuck	89
	Gay-Lussac's law	91
	The combined gas law	92
	Avogadro's law.	93
	The ideal gas equation	95
	The van der Waals equation	96
	Applying Gas Laws to Stoichiometry	97
	Tackling Dalton's and Graham's Laws	98
	Dalton's law	98
	Graham's law	99
	PART 2: A CORNUCOPIA OF CHEMICAL CONCEPTS.	101
CHAPTER 7:	Chemical Cooking: Chemical Reactions	103
	Knowing What You Have and What You'll Get: Reactants and Products	104
	Understanding How Reactions Occur: The Collision Theory.	105
	Eyeing a one-step collision example.	105
	Considering an exothermic example	107
	Looking at an endothermic example	107
	Identifying Different Types of Reactions	108
	Combination reactions.	109
	Decomposition reactions	109
	Single-displacement reactions.	110
	Double-displacement reactions	111

Combustion reactions.....	113
Redox reactions.....	113
Balancing Chemical Reactions.....	114
Balancing ammonia production	114
Flicking the lighter	116
CHAPTER 8: The Mole: Can You Dig It?	119
Counting Particles by Massing.....	119
Using Moles to Count	120
Looking up Avogadro's number: Not in the phone book	121
Putting moles to work.....	121
Calculating empirical formulas	122
Understanding the Role of Moles in Chemical Reactions	124
Making the calculations	124
Determining what you need and what you'll get: Reaction stoichiometry.....	126
Figuring out the bang for your buck: Percent yield	128
Running out of something and leaving something behind: Limiting reactants	129
CHAPTER 9: Mixing Matter Up: Solutions	131
Getting Your Definitions Straight: Solutes, Solvents, and Solutions.....	131
Discussing solubility: How much solute will dissolve.....	132
Exploring saturation	133
Focusing on Solution Concentration Units	133
Percent composition: Three different ratios	134
Molarity: It's number one!	136
Molality: Another use for the mole.....	139
Parts per million: The pollution unit.....	140
Comprehending Colligative Properties of Solutions	140
Reducing the pressure: Vapor-pressure lowering	141
Using antifreeze in summer: Boiling-point elevation.....	142
Making ice cream: Freezing-point depression.....	143
Keeping blood cells alive and well: Osmotic pressure.....	144
Clearing the Air on Colloids	147
CHAPTER 10: Thermochemistry: Hot Stuff	149
Looking at Reactions and Energy Changes	150
Systems and surroundings	150
Heat.....	150
Units of energy.....	151
Heat capacities.....	151
Calorimetry.....	153

Understanding Enthalpy Changes	157
Finding Heats of Reaction	158
Doing it yourself.	158
Referring to tables.	159
Relying on Hess's law	159
Using standard heats of formation.	160
Uncovering Enthalpies and Phase Transitions	162
CHAPTER 11: Sour and Bitter: Acids and Bases	165
Getting to Know the Properties of Acids and Bases:	
Macroscopic View	166
Recognizing Acids and Bases: Microscopic View.	167
The Arrhenius theory: Must have water.	167
The Brønsted-Lowry acid-base theory: Giving and accepting. ...	169
Distinguishing between Strong and Weak Acids and Bases	169
Ionizing completely: Strong acids	170
Falling to pieces: Strong bases.	171
Ionizing partway: Weak acids.	171
Finding equilibrium with water: Weak bases.	173
Competing for protons: Brønsted-Lowry acid-base reactions ...	174
Playing both parts: Amphoteric water	174
Identifying Acids and Bases with Indicators	175
Taking a quick dip with litmus paper	176
Titrating with phenolphthalein	176
Putting Coffee and Other Substances on the pH Scale	178
Controlling pH with Buffers	181
PART 3: BLESSED BE THE BONDS THAT TIE	183
CHAPTER 12: Where Did I Put That Electron? Quantum	
 Theory	185
Facing the Concepts of Matter and Light.	186
Understanding the components.	186
Spectroscopy	188
Grasping Bohr's Atomic Model	189
De Broglie's contribution	190
Heisenberg's contribution	191
Understanding the Quantum Mechanical Model.	192
CHAPTER 13: Opposites Do Attract: Ionic Bonding	195
Magically Bonding Ions: Sodium + Chlorine = Table Salt.	196
Meeting the components.	196
Understanding the reaction.	197
Ending up with a bond	199

Identifying Positive and Negative Ions: Cations and Anions	200
Grasping Polyatomic Ions	202
Putting Ions Together: Ionic Compounds	204
Putting magnesium and bromine together	204
Applying the crisscross rule	205
Naming Ionic Compounds	207
Contrasting Electrolytes and Nonelectrolytes	208
CHAPTER 14: Sharing Nicely: Covalent Bonding	211
Eyeing Covalent Bond Basics	211
Considering a hydrogen example	212
Comparing covalent bonds with other bonds	213
Understanding multiple bonds	214
Naming Binary Covalent Compounds	216
Discovering Many Formulas in a Little Time	217
Empirical formula: Just the elements	217
Molecular or true formula: Inside the numbers	217
Structural formula: Add the bonding pattern	219
Sharing Electron Pairs — Sometimes Equally and Sometimes Not	223
Attracting electrons: Electronegativities	223
Polar covalent bonding	226
Wondering about water: A really strange molecule	227
CHAPTER 15: What Do Molecules Really Look Like? Molecular Geometry and Hybridization	231
Seeing How Shape Matters	232
Getting charged with polarity	232
Predicting polarity	234
Delving into Electron and Molecular Geometry	235
Comprehending the Valence Bond Theory (Hybridization)	238
Breaking Down Molecular Orbital Theory	240
CHAPTER 16: Tackling Periodic Trends	245
Checking Out the Importance of Size	245
Comprehending effective nuclear charge	246
Explaining changes in atomic radii	247
Tracing tendencies of ionic radii	247
Eyeing Trends in Ionization Energies	248
Noting an increase in sequential energy	249
Taking stability into consideration	250
Considering a few exceptions to the rule	251
Considering Trends in Electron Affinities	251

CHAPTER 17: Examining the Link between Intermolecular Forces and Condensed States	255
Understanding Types of Intermolecular Forces	256
Bringing ions and dipoles together	256
Mutually attracting dipoles	257
Drawing close to hydrogen	257
Uniting through the cloud	257
Bonding temporarily with London (dispersion) forces	258
Grasping the Properties of Liquids	258
Resisting an increase: Surface tension	258
Resisting flow: Viscosity	259
Climbing the walls: Capillary action	260
Warming up: Heat capacity	260
Working with Solids	260
Deciphering Phase Diagrams	262

PART 4: ENVIRONMENTAL CHEMISTRY: BENEFITS AND PROBLEMS 265

CHAPTER 18: Cough! Cough! Hack! Hack! Air Pollution	267
Seeing Where This Mess Began: Civilization's Effect on the Atmosphere	267
Taking a Closer Look at the Earth's Atmosphere	268
The troposphere: What humans affect the most	268
The stratosphere: Protecting humans with the ozone layer	269
Getting the Lowdown on the Ozone Layer	269
Explaining how the ozone reacts to gases	270
Seeing how CFCs hurt the ozone layer	271
Comprehending the Greenhouse Effect	271
Breathing Brown Air: Photochemical Smog	273
London smog	273
Photochemical smog	273
"I'm Meltingggggg!" — Acid Rain	275
Don't drink the water: What's in acid rain	275
Charge them up and drop them out: Electrostatic precipitators	277
Washing water: Scrubbers	278
CHAPTER 19: Examining the Ins and Outs of Water Pollution	281
Where Does Water Come from, and Where Is It Going?	282
Evaporate, condense, repeat	282
Following the water	282
Taking a Closer Look at Water: A Most Unusual Substance	283
Identifying Some Common Water Pollutants	286
We really didn't get the lead out: Heavy metal contamination	287

Raining down acid	288
Getting sick off infectious agents	288
Leaking landfills and LUST	288
Seeping pollution from farms	290
Microplastics in you.	290
Polluting with heat: Thermal pollution.	291
Using up oxygen: BOD	291
Getting the Stink out of Wastewater	292
Primary sewage treatment.	292
Secondary sewage treatment	293
Tertiary sewage treatment.	293
Treating Drinking Water	294
CHAPTER 20: Nuclear Chemistry: It'll Blow Your Mind	295
Understanding Basic Atomic Structure: It All Starts with the Atom	296
Defining Radioactivity and Human-Made Radioactive Decay	297
Radioactively Decaying the Natural Way	298
Alpha particle emission	299
Beta particle emission.	300
Gamma radiation emission	300
Positron emission	301
Electron capture	301
Figuring out When Radioactive Decay Happens: Half-Lives	302
Determining half-lives.	303
Safe handling	304
Radioactive dating	305
Initiating Reactions: Nuclear Fission.	306
Calculating chain reactions and critical mass	306
Controlling reactions: Nuclear power plants.	308
Producing plutonium with breeder reactors.	310
Harnessing Nuclear Fusion: The Hope for Tomorrow's Energy	311
Overcoming the control issues	312
Imagining what the future holds.	313
Identifying the Effects of Radiation.	313
PART 5: THE PART OF TENS	315
CHAPTER 21: Ten Serendipitous Discoveries in Chemistry	317
Taking the Measure of Volume	317
Keeping Rubber Solid	318
Right- and Left-Handed Molecules	318
Finding a Shortcut to Color: Artificial Dye	319
Dreaming Up the Ring Structure.	319
Discovering Radioactivity	319
Finding Really Slick Stuff: Teflon	320

Stick 'Em Up! Sticky Notes	320
Growing Hair	320
Speaking of Sweet Somethings	321
CHAPTER 22: Ten (or So) Great Chemistry Nerds	323
Amedeo Avogadro	323
Niels Bohr	324
Marie Curie	324
John Dalton	324
Michael Faraday	325
Antoine Lavoisier	325
Dmitri Mendeleev	325
Linus Pauling	326
Ernest Rutherford	326
Glenn Seaborg	326
That Third-Grade Girl Experimenting with Vinegar and Baking Soda	327
CHAPTER 23: Ten Terrific Tips for Passing Chem I	329
Have a Regular Study Schedule	329
Strive for Understanding — Don't Just Memorize	330
Practice by Doing the Homework	330
Get Help from Additional Resources	331
Read the Material before Class	331
Take Good Notes	332
Recopy Your Lecture Notes	332
Ask Questions	333
Get a Good Night's Sleep before Exams	333
Pay Particular Attention to Details	333
CHAPTER 24: The Top Ten Industrial Chemicals	335
Sulfuric Acid (H_2SO_4)	335
Nitrogen (N_2)	336
Ethylene (C_2H_4)	337
Oxygen (O_2)	337
Propylene (C_3H_6)	338
Chlorine (Cl_2)	338
Ethylene Dichloride ($\text{C}_2\text{H}_2\text{Cl}_2$)	338
Phosphoric Acid (H_3PO_4)	339
Ammonia (NH_3)	339
Sodium Hydroxide (NaOH)	340
GLOSSARY	341
INDEX	353
