INTRODUCTION	1
About This Book	1
Foolish Assumptions	3
Icons Used in This Book	4
Beyond the Book	4
Where to Go from Here	5
 PART 1: GETTING STARTED WITH DATA SCIENCE IN THE AGE OF AI	 7
CHAPTER 1: Doing Data Science in an AI World	9
Taking a High-Level View of Data Science and Generative AI	10
Capturing rapid-fire change across the data science landscape	10
Placing AI, GenAI, machine learning, and LLMs within the conversation	11
Seeing how LLMs work	11
Understanding why ChatGPT can read your data	12
Recognizing what GenAI can and cannot do with data	13
Seeing Who Data Science Is for and Why It's Changing	14
Defining data science in plain English	14
Exploring how GenAI is reshaping data analysis	15
Comparing the old way versus the AI-assisted way	16
Getting Your Hands Dirty with Your First GenAI Data Task	17
Uploading a sample CSV to ChatGPT Advanced Data Analysis	18
Asking AI to describe columns and assess data quality	19
Interpreting the results AI gives you	19
Taking a Peek at the Traditional Path	20
Seeing what coders do	21
Identifying when you need to study coding	21
 CHAPTER 2: Understanding Data and Thinking Like an Analyst	 23
Getting to Know Different Data Types	24
Working with numbers	24
Sorting through categories and labels	25
Dealing with dates and times	26
Understanding text data	27
Understanding Essential Statistics	27
Measures of central tendency	27

Understanding spread and variability	28
Spotting relationships using correlation	30
Recognizing Data Quality Issues	31
Missing values and what they mean.	31
Determining if outliers are signal or error.	32
Duplicate records and why they matter.	32
Formatting inconsistencies	33
Cleaning Sales Data with ChatGPT	34
Using AI as Your Statistics Tutor	35
Loading your practice dataset	35
Working through calculations step-by-step.	36
Requesting plain-English interpretations.	37
Verifying AI explanations and catching mistakes	38
Building your statistics intuition over time	38
CHAPTER 3: Getting and Cleaning Data without Coding	39
Finding and Importing Data for AI Tools	40
Uploading CSV, Excel, and JSON files	40
Connecting to APIs with AI assistance	41
Querying databases with natural language.	42
Cleaning Messy Data the Easy Way	43
Handling missing values (delete, fill, or flag)	43
Standardizing dates and times	44
Cleaning up categories and text fields	45
Removing duplicates.	47
Dealing with outliers and errors	47
Putting It All Together	48
Initial assessment	49
Fixing date formats	50
Handling missing values.	50
Standardizing categories	51
Identifying and removing duplicates	51
Investigating outliers.	52
Validating your final outputs	53
Exporting clean data	54
Understanding What Coders Do (And Why You Don't Need To)	54
Cleaning data with the pandas library	54
Cleaning data with SQL scripts	56
CHAPTER 4: AI Tool Literacy — When to Trust, When to Verify	59
Building a Practical Mental Model of AI Tools.	60
Understanding what generative AI tools actually do	60
Interpreting what “confidence” means (and doesn't mean)	61
Explaining why tools give different answers	62

Matching Tools to Jobs	62
Comparing ChatGPT, Claude, and Gemini by their strengths.	62
Selecting the right tool for different tasks	63
Recognizing when to switch tools mid-task.	64
Recognizing Common Failure Modes.	65
Spotting hallucinations.	65
Catching calculation and logic errors	65
Identifying hidden assumptions and misread questions	66
Noticing data-type and unit mistakes.	66
Detecting tool and workflow failures	67
Applying a Fast Verification Toolkit.	67
Recomputing critical numbers.	68
Running sanity checks.	68
Cross-validating outputs.	69
Checking sources properly.	69
Documenting discrepancies and corrections	69
Using a Trust Rubric to Decide Next Steps	70
Identifying high-trust scenarios.	71
Treating medium-trust scenarios as “verify before acting”.	71
Flagging low-trust scenarios	71
Escalating to a human expert	72
Managing Costs, Privacy, and Security.	72
Comparing pricing models.	72
Reducing data exposure.	73
Understanding what never to share.	73
Choosing safer workflows for sensitive data.	74

PART 2: EXTRACTING INSIGHTS WITHOUT CODE 75

CHAPTER 5: Prompt Engineering for Analytics	77
Understanding Why Good Prompts Matter.	78
Seeing the difference between vague and specific prompts	78
Understanding how AI interprets your requests	79
Discovering how to iterate and refine prompts	79
Asking Clear, Structured Analysis Questions.	80
Breaking complex questions into simple parts.	80
Specifying the format you want back	82
Including context and constraints.	83
Requesting explanations alongside results.	83
Building Frameworks for Reproducible Prompts	84
Creating prompt templates for common tasks.	84
Documenting successful prompts for reuse.	86
Adapting prompts across different AI tools.	87
Setting up your prompt workspace in ChatGPT Projects	88

Putting Prompt Engineering into Practice	91
Using a prompt template to identify churn drivers	91
Getting ChatGPT to generate three charts automatically	94
Refining prompts based on initial results	95
Checking Out the Traditional Path	96
Discovering how coders handle churn analysis	97
Understanding when it makes sense to code	97
CHAPTER 6: Exploring Your Data with AI	99
Understanding Exploratory Data Analysis	100
Looking for what matters first	102
Asking the right exploratory questions	106
Conducting a systematic exploration with Claude	108
Checking out the traditional path	114
CHAPTER 7: Building Machine Learning Models without Code	117
Demystifying Machine Learning	118
Getting to Know Supervised Learning	121
Using regression to predict numbers	121
Using classification to predict categories	122
Seeing real-world examples of regression and classification	123
Building Your First Model with AI	124
Understanding decision trees and what happens next	125
Getting the model to explain itself	126
Making sense of accuracy metrics	128
Knowing If Your Model Is Actually Good	129
The train/test split explained	130
When models memorize instead of learn	131
When models are too simple	132
Deciding whether to trust or escalate	134
Peeking at the Traditional Path	135
CHAPTER 8: Understanding Essential Math and Statistics	137
Understanding Correlation and Relationships	138
Seeing how variables relate to each other	138
Understanding correlation versus causation	139
Getting Comfortable with Probability Basics	142
Understanding probability distributions in simple terms	142
Seeing how AI uses probability for predictions	143
Grasping Essential Regression Concepts	144
Linear regression: Fitting a line to your data	144
Logistic regression: Predicting yes/no outcomes	147

Spotting Outliers and Unusual Data Points	149
Understanding what outliers tell you	149
Deciding when to keep or remove outliers	150
Getting Started with Time Series	151
Identifying trends and patterns over time	151
Understanding seasonality and forecasting basics	153
Checking Out the Traditional Path	153
Calculating correlation with pandas	154
Fitting regression with sklearn	154
Detecting outliers with scipy	156
CHAPTER 9: Clustering and Segmentation with AI	157
Understanding When to Group Data	158
Getting to Know Clustering Basics	159
Choosing a k Value	162
Clustering Customers with ChatGPT	163
Exploring your role as an analyst	168
Glancing at the Traditional Path	170
CHAPTER 10: Getting Predictive Analytics with Regression Analysis	173
Understanding Regression for Predictive Analytics	174
Defining regression for business applications	174
Identifying when regression is the right tool	174
Predicting Sales from Paid Ads Impressions	176
Uploading marketing data to ChatGPT ADA	176
Preparing the data for analysis	176
Building the first-pass regression model	177
Checking the Model's Predictions	179
Asking AI to explain R-squared	179
Understanding what "good fit" actually means	180
Evaluating indicators for trustworthiness	182
Interpreting the Relationship between Paid Ads Impressions and Sales	183
Planning for Future Scenarios	184
Turning Forecasts into Business Decisions	186
Using forecasts for budget planning	186
Communicating to stakeholders	187
Taking a Look Behind the Scenes	188
Exploring regression models	188
Seeing how coders do LinearRegression()	188
Looking into LogisticRegression() method	190
Evaluating models with sklearn	190

CHAPTER 11: Building Dashboards with AI	193
Choosing the Right BI Tool	194
Comparing Power BI, Tableau, and Looker	194
Leveraging AI copilots in modern BI tools	197
Applying Dashboard Design Fundamentals	197
Designing for your audience	198
Choosing the right metrics to display	199
Organizing information hierarchically	200
Balancing detail with clarity	200
Vibe-coding a dashboard	201
Vibe-Coding Your First Dashboard in Lovable	202
Examining the dataset	202
Building a dashboard	203
Coding Up Dashboards with Plotly	209
 CHAPTER 12: Data Storytelling and Visualization in the Age of AI	213
Data Visualizations: The Big Three	214
Data storytelling for decision-makers	214
Data showcasing for analysts	215
Designing data art for activists	215
Designing to Meet the Needs of Your Target Audience	216
Step 1: Brainstorming (about Brenda)	216
Step 2: Defining the purpose	218
Step 3: Choosing the most functional visualization type for your purpose	218
Picking the Most Appropriate Design Style	219
Inducing a calculating, exacting response	219
Eliciting a strong emotional response	220
Applying Color and Clarity Principles	221
Selecting the Appropriate Data Graphic Type	222
Standard chart graphics	224
Comparative graphics	225
Statistical plots	226
Topology structures	227
Spatial plots and maps	228
Testing Out Data Graphics and Adding Context	229
Adding Context	231
Creating context with data	231
Creating context with annotations	231
Creating context with graphical elements	232

PART 3: DRIVING BUSINESS VALUE WITH AI AND ANALYTICS	235
CHAPTER 13: Developing Your Business Acumen	237
Bridging the Business Gap.....	237
Contrasting business acumen with subject matter expertise. . . .	238
Defining business acumen.....	239
Traversing the Business Landscape	240
Knowing who cares about what	240
Leveling up your business acumen.....	242
Connecting Data Work to Revenue and Strategy	244
Seeing how analysis drives decision-making.....	244
Understanding profit, loss, and operational efficiency	244
Speaking the language of executives and stakeholders	245
Framing insights in terms of business impact.....	246
Turning Data Findings into Business Language	246
The scenario.....	246
Step 1: Map your stakeholders before you touch AI	247
Step 2: Use AI to draft three versions of the same finding	247
Step 3: Add the human context layer.....	248
CHAPTER 14: Improving Operations with Data and AI	251
Establishing Context for Operational Improvements	252
Understanding operations in manufacturing, logistics, and services	252
Identifying common operational pain points	252
Recognizing opportunities for efficiency gains.....	253
Making Major Improvements to Traditional Manufacturing.....	254
Optimizing Business Processes with AI	255
Creating Logistical Efficiencies with Real-Time Data	256
Reducing Waste and Improving Resource Allocation.....	256
Prompting AI with Operational Fluency.....	257
Writing operationally fluent prompts.....	257
Exploring the anatomy of an operationally fluent prompt.....	257
Practicing with a logistics cost-savings demonstration	258
Finding Cost Savings with ChatGPT	261
Uploading operations data for analysis.....	262
Interpreting AI recommendations	262
Prioritizing suggestions based on impact and feasibility.....	263
CHAPTER 15: Making Marketing Improvements with AI	265
Exploring Popular Use Cases for Data Science in Marketing	266
Turning Web Analytics into Dollars and Sense	268
Getting acquainted with omnichannel analytics.....	269
Mapping your channels	269

Building analytics around channel performance	270
Scoring your channels for effectiveness	271
Getting Marketing Spend Recommendations from ChatGPT	273
Uploading your campaign performance data	274
Writing a marketing-fluent prompt.	275
Interpreting the reallocation recommendation	276
Testing AI suggestions with small experiments	277
Building Data and AI Products That Increase Marketing ROI	278
Creating customer segmentation models	279
Developing lead scoring systems	280
CHAPTER 16: Decision Support and BI Copilots	283
Understanding Modern Business Intelligence	284
Seeing how BI has evolved with AI assistance.	285
Querying databases using natural language.	286
Recognizing when BI copilots add value	287
Using Data Analytics to Support Decision-Making	287
Identifying types of analytics: Descriptive, diagnostic, predictive, prescriptive	288
Looking at common challenges in analytics	289
Overcoming data wrangling obstacles	289
Querying Databases with Natural Language.	290
Understanding how SQL works.	291
Using AI to generate SQL queries	291
Glancing at the Traditional Path	296
Seeing SQL SELECT, JOIN, and GROUP BY in action	296
Knowing when to learn SQL.	297
CHAPTER 17: Risk and Fraud Detection with AI	299
Overviewing Risk and Fraud Detection	300
Recognizing common fraud patterns.	300
Understanding anomaly detection basics	301
Balancing false positives with true fraud catches.	302
Spotting Anomalies and Fraud with Generative AI.	303
Understanding how AI identifies unusual patterns	303
Recognizing limitations in fraud detection	304
Combining AI insights with human judgment.	305
Identifying Unusual Transactions with ChatGPT.	305
Uploading transaction data for analysis	306
Prompting AI to flag suspicious activities.	306
Investigating flagged transactions	307
Building processes around AI-assisted fraud detection	308

PART 4: IMPLEMENTING DATA SCIENCE IN YOUR ORGANIZATION 311

CHAPTER 18: Gathering Important Information about Your Company 313

Unifying Your Data Science Team under a Single Business Vision	314
Framing Data Science around the Company's Vision, Mission, and Values.	315
Taking Stock of Data Technologies	317
Inventorying Your Company's Data Resources	319
Requesting your data dictionary and inventory	320
Confirming what's officially on file	321
Unearthing data silos and data quality issues	322
People-Mapping.	324
Requesting organizational charts	324
Surveying the skillsets of relevant personnel	324
Avoiding Classic Data Science Project Pitfalls	325
Staying focused on the business, not on the technology	326
Drafting best practices to protect your data science project	326
Tuning In to Your Company's Data Ethos	327
Collecting the official data privacy policy	328
Taking AI ethics into account	328
Making Information-Gathering Efficient	329

CHAPTER 19: Narrowing In on the Optimal Data Science Use Case 333

Reviewing the Documentation	334
Selecting Your Quick-Win Data Science Use Cases	334
Zeroing in on the quick win	335
Producing a POTI model	336
Picking between Plug-and-Play Assessments	338
Carrying out a data skill gap analysis for your company	338
Assessing the ethics of your company's AI projects and products	340
Assessing data governance and data privacy policies	345

CHAPTER 20: Planning for Future Data Science Project Success 349

Preparing an Implementation Plan	350
Supporting Your Data Science Project Plan	357
Analyzing your alternatives	358
Interviewing intended users and designing accordingly	359
POTI modeling the future state	360
Executing on Your Data Science Project Plan	362

CHAPTER 21: Becoming an AI-Driven Data Professional	363
Navigating the Data Science Career Matrix	364
The analytics leader path	364
The AI product manager path	365
The machine learning engineer path	366
Landing Your AI-Driven Data Job	367
Building your portfolio	367
Developing your personal brand	368
Networking in an authentic manner	369
Reaching out for interviews	369
Turning Any Completed Project into a Portfolio Package	369
Defining “portfolio-ready”	370
Building Your Portfolio Pack	372
Presenting Your Portfolio to Others	376
Taking Your Skills to the Next Level	378
 PART 5: THE PART OF TENS	381
 CHAPTER 22: Ten Prompts Every Analytics Power User Should Master	383
Auditing Your Data Quality	384
Kicking Off an Exploratory Analysis	384
Setting Up a Predictive Model	385
Designing a Visualization	386
Blueprinting a Dashboard	387
Interpreting Statistical Results	387
Converting an Analysis into a Report	388
Debugging an Incorrect Analysis	389
Translating a Technical Concept	390
Decoding AI-Generated Code	391
 CHAPTER 23: Ten Reliable AI and Data Science Tools	393
ChatGPT Advanced Data Analysis	394
Claude by Anthropic	394
Google Gemini	395
Microsoft Power BI with Copilot	396
Tableau with Tableau AI	396
Google BigQuery with Gemini	397
Excel with Copilot	397
Notion AI for Documentation	398
Perplexity AI for Research	399
DataCamp and Kaggle for Learning	399
 INDEX	401
