

# ***Getting Up and Running***

---

***To fill your computer screen with the animation, set your computer's screen resolution to 800 × 600. To run the animation in a window, set your computer's resolution higher.***

---

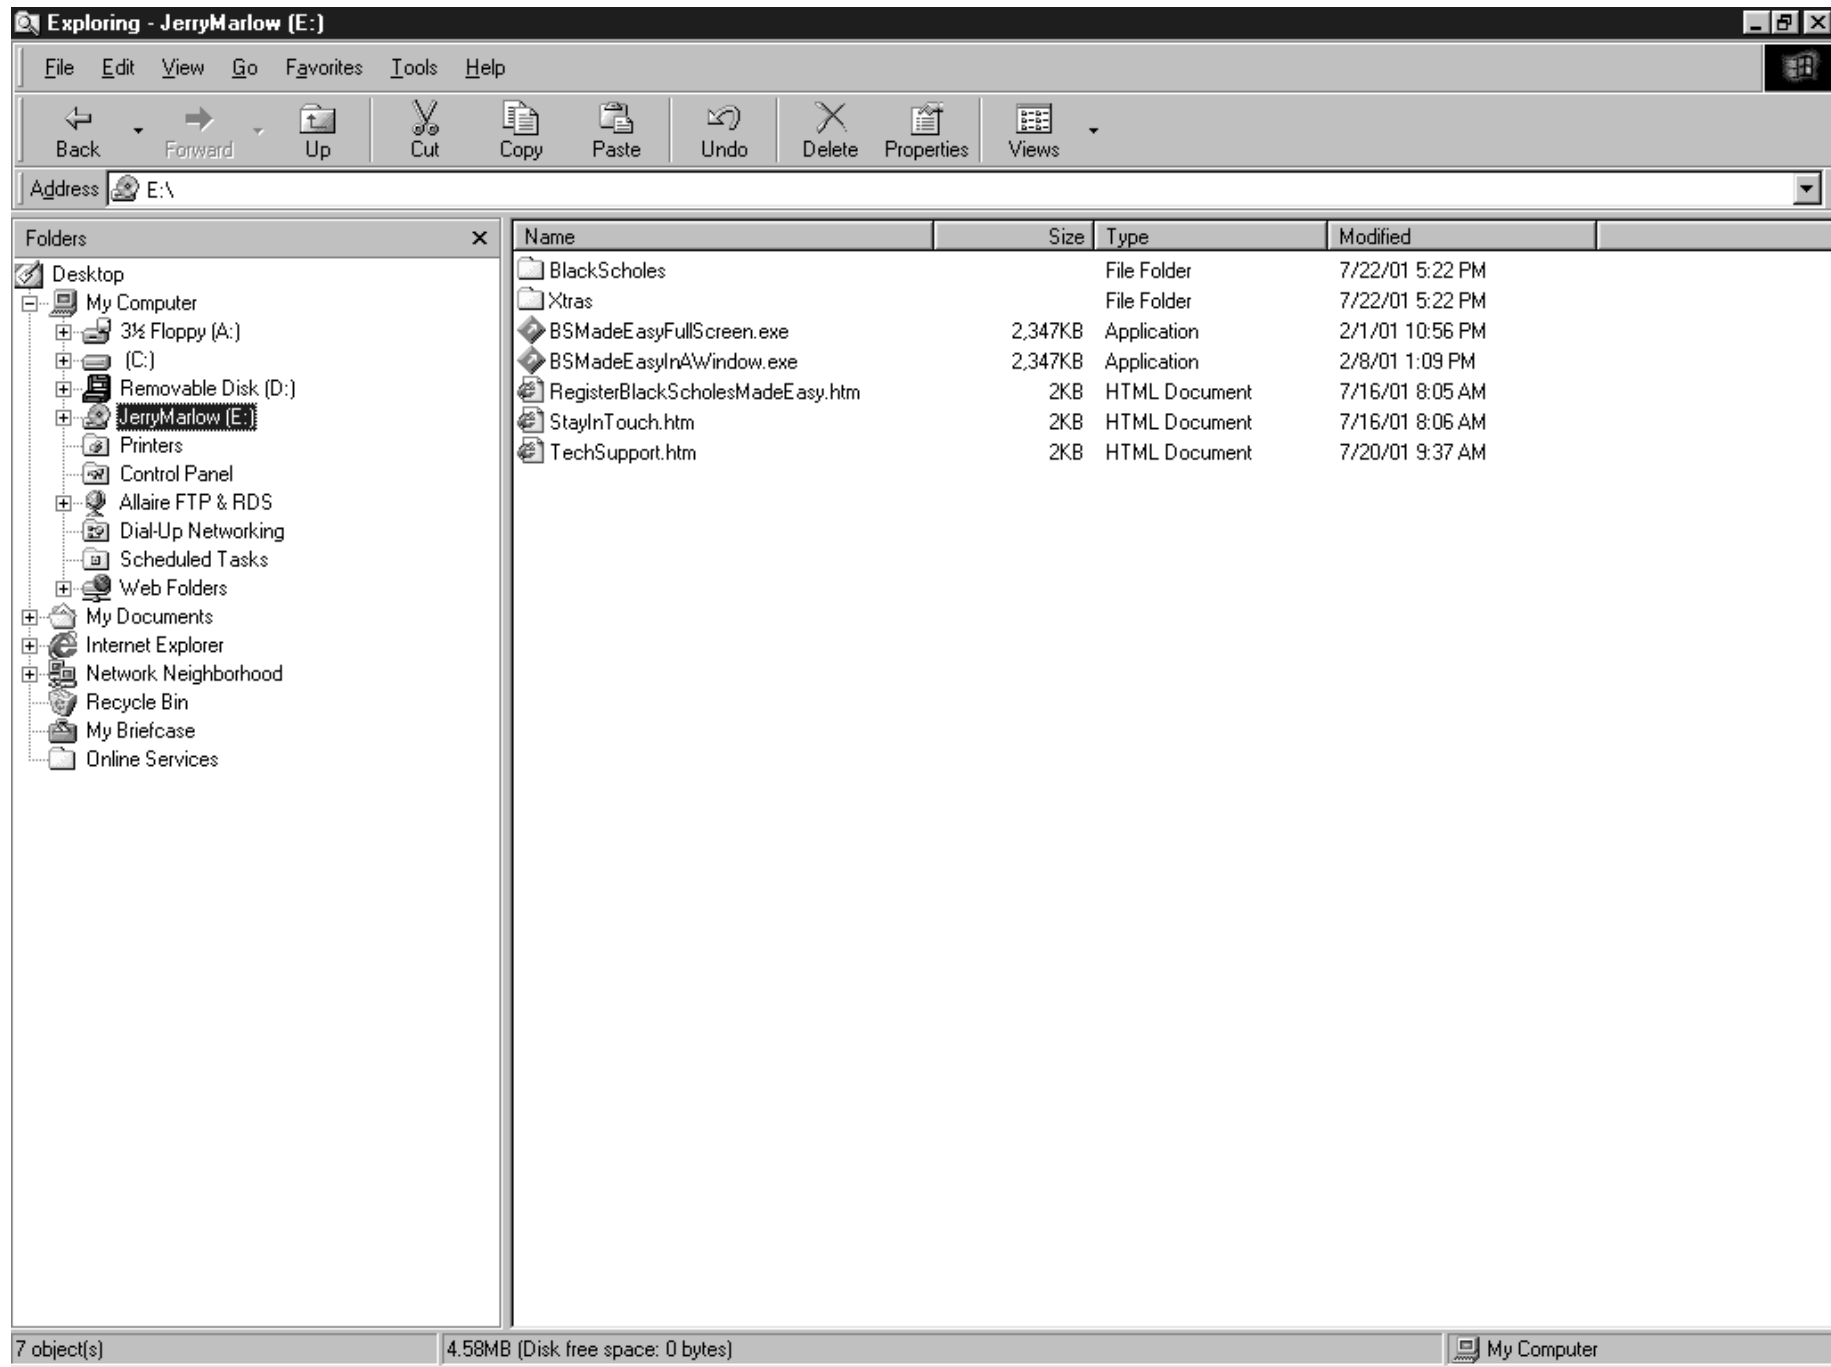

*Black-Scholes Made Easy* runs on Windows at a screen resolution of 800 × 600.

If you want the animation to fill up the entire computer screen, set your screen resolution to 800 × 600.

If, while you're running the animation, you also want to see on-screen other software you have running, then set your screen resolution higher than 800 × 600.

If you know how to set the resolution of your computer, go ahead and do so. Otherwise, follow these steps:

1. To bring up the Windows menu, simultaneously press the Control (Ctrl) key and the Escape (Esc) key.
2. Roll your mouse cursor up to the Settings icon.
3. Click on Control Panel.
4. Double-click on the Display icon.
5. At the top of the selection, click on Settings.
6. Set the resolution to 800 × 600 or higher. (If your computer only supports a screen resolution of 640 × 480, you'll have to use the CD with a different computer.)
7. Click on OK.
8. Exit the Control Panel.

***To run *Black-Scholes Made Easy*, double-click on *BSMadeEasyFullScreen.exe* or on *BSMadeEasyInAWindow.exe*.***

---

1. Put the *Black-Scholes Made Easy* CD in the CD player of your computer.
2. Go into My Computer, Windows Explorer, or File Manager.
3. Find the CD. The CD should show up on your screen labeled JerryMarlow.
4. Click on the CD icon.
5. To run the animation full screen, double-click on *BSMadeEasyFullScreen.exe*.

To run the animation in a window, double-click on *BSMadeEasyInAWindow.exe*.

(To register as a user of *Black-Scholes Made Easy*, double-click on *RegisterBlackScholesMadeEasy.htm*. For links to the author's websites and e-mail address, double-click on *StayInTouch.htm*. For links to Tech Support, double-click on *TechSupport.htm*.)

***If the screen resolution is set correctly, the first screen will look like one of the two on top.***

---

The first screen that the animation lands on should look like one of the images on top.

If it does, great.

If, however, the first screen of the animation looks like the bottom image, then the resolution of your computer is set too low.

If the screen resolution is not set correctly, hit the Esc key on your keyboard. Go through the instructions for screen resolution on page 2.

***After you accept the licensing agreement, the animation may take a minute or so to load.***

## ***To make the command buttons visible, roll the mouse cursor around on the screen.***

---

Roll your mouse cursor around on the bottom and top left of the screen. You'll see command buttons appear when you roll over them.

Depending on what's going on on the screen, the functions of some command buttons may change.

1. To make the buttons disappear, click the Hide button three times.

## ***If you want to ignore the tutorial and just start clicking on buttons, first read the section at the end of the book entitled: Navigating through the Animations.***

---

Maybe you don't like to read and just want to click on buttons. Fine. If that's the case though, before you get started you may want to take a quick look at the section on navigating through the animations. It shows you the design principles that govern when and how things come up on screen. Your trial-and-error adventure will be less puzzling and messy.

***To save and print pictures of the simulations, use Print Screen and Ctrl+V to copy and paste screen captures into other software. Include notes to yourself.***

---

The animation does not provide a direct way to save or print pictures of the simulations you create on the screen. Nonetheless, you easily can use programs such as Word, PowerPoint, and Excel to save and print pictures of the simulations. You can use graphics software to prepare screen captures for display on the Web.

1. To capture an image of a simulation you have on your screen, press the Print Screen key on your keyboard. It's usually near the F12 key on the top right of your keyboard. It may be abbreviated Print Scrn or Prt Sc.
2. Use your mouse or press Alt+Tab to go to a Word, PowerPoint, or Excel document that you have open.
3. In your Word, PowerPoint, or Excel document, hold down the Ctrl key and press the V key (Ctrl+V).
4. If you wish to modify a screen capture or use it on a web site, instead of pasting it into a document program, use Ctrl+V to paste the screen capture onto a 800 × 600 canvas in an imaging program such as Adobe Photoshop, Macromedia Fireworks, or Microsoft Photo Editor or Paint. In these programs, you can save screen captures as .gif files and import them into your documents and web sites.

The screen includes a field in which you can type notes to yourself or to your lecture audience.

5. To get to the field in which you can type notes, keep hitting the Tab key on your keyboard until the cursor appears in the top middle of the screen.

(The message field appears on-screen only when you have other data fields on screen.)
